Dance followed dance, jig, shuffle, song, and refrain, and the hours glided by. A tiny silver crescent was the moon, but it had long since sunk behind the hill. Old Morris nodded, but his bow kept moving. "Wake up, old man," shouted a voice as the rout went round. "Hush yo' mouf, nigger," he answered back. "Dis fiddle knows me, an' hit 'u'd keep er-singin' ef I uz to go plum ter sleep"; and the livelier wave in "Sallie Gooden," which the interruption had stimulated, faded away into monotony again.

So went the night. But a gaunt specter stood unseen on the black bank piled up beyond the gum-tree. Into these old plantation dances, harmless once and picturesque, had come, with the new freedom, a new element. On the porch in the shadow, where he had rolled over unnoticed, stupid with drink, lay Ben Thomas, the host. A heavy, brawny negro, he seemed some forty years old when the stirred logs flashed a light upon him. At the far end of the little porch his young mulatto wife was tossing small coins amidst groups of men, who applauded when she won and were silent when she lost. Suddenly the game ended, the woman empty-handed.

What stirred the sleeper? Who can tell? But stir he did, then waked, and gazed about him. The last throw of the coin attracted his attention. He felt in his pocket; then letting his feet to the ground, he staggered forward and supported his wavering form against a post.

"Mandy," he said gently, and he seemed to sober as he spoke, "did you tek my money?"

"Yes," she laughed, "I did." Her tones were careless and defiant.

"Whar hit, Mandy?"

"Whar you reck'n?"

"Whar hit, Mandy?" The man's voice was still calm. Silence had fallen on the group.

"Los'."

"Oh, w'at yer mekin' er fuss erbout er littl' money fur? Ain' er man's wife got er right ter hit ef hit 's his 'n?" The speaker was a low-browed, vicious-looking negro, Mandy's late opponent. Ben did not notice him, but returned to his query:

"Who got dat money, Mandy?"

The gambler contemptuously threw three silver quarters into her lap, for she was still sitting.

"Heah, Mandy, I len' you nuff ter pay 'im. Dern er man w'at 'll 'buse es wife 'fo' folks, an' en 'er own house." The gambler looked around for indorsement, but got none. All eyes were upon the husband. He stooped forward and took the coins, placing them in his pocket.

"No man kin len' money ter my wife," he said gently, for the first time addressing the gambler; "an' hit ain' len'in' w'en money w'at 's stole comes back."

"Who stole hit? Who stole hit?" A savage look gleamed in the gambler's eye.

"Fuss she stole hit," said the husband, "an' den you stole hit; fur ter cheat er ooman es des same es stealin'."

Quick as the spring of a panther was the movement of the gambler as he threw himself upon the now sober man who had accused him. There was a brief struggle; the gambler clasped one hand over his breast and staggered. A knife dropped from his hand as he suddenly extended his arm, and with a deep sigh he sank lifeless in his tracks.

The crowd opened, letting the red firelight flood the scene. Ben stood with folded arms, gazing upon the corpse, but like a shadow falling, the woman glided from the low porch by the prostrate figure and snatched the bloody knife from the ground. For an instant she crouched, her yellow face upturned to her husband, a strange light in her eyes, and her

long black hair tumbling down upon her shoulders. She seemed about to spring at his throat. But only for an instant. The knife vanished in the folds of her dress, and she pointed straight into the black depths of the swamp.

"Run, run!" she whispered. Ben gazed about him defiantly, then turned and strode away into the shadow. None pursued. His arms dropped as he disappeared, but no eye was strong enough to follow and see the faint flash of light that trembled for an instant upon the steel in his hands, like the glimmer of a glow-worm through the texture of a dead leaf that sheltered him.

The woman still crouched by the corpse, but she saw it not. Her eyes were fixed upon the shadow that had closed over her husband. Horror and fear seemed to have frozen her. The wondering group discussed the tragedy, and constructed a rude litter for the dead. But as they bore the body off, a man approached her and asked to see the knife. She turned her yellow face to his for an instant, then bounded by him and was swallowed up in the swamp. Forward she went through brake and bramble. A great gnarled oak reached out to stop her, but in vain; and from the grasp of the bushes that clutched her she rushed madly. Suddenly the silent stretch of a great lagoon was before her. She lifted her arm and frantically hurled the knife far out into the night. No sound came back, though she held her breath until her eyes started from their sockets. But yes, at last — a far, faint splash, as when a cooter glides from his log and seeks his couch in the slime below.

"Ben!" she whispered, "Ben!" There was no answer. "Ben!" This time it was a scream. A thousand echoes darted here and there in the sounding swamp, and as they died away a strange, sad sigh was wafted out of the depths. Turning, she fled back to life, pursued by a host of terrors. How she reached it she knew not, but presently she fell prostrate upon the floor of the cabin. Crouching there in the shadow was the aged form of her husband's mother, crooning to his babe. Neither spake, and lying on her face the young woman spent the remaining hours of the night. But ever and anon she heard the splash of the knife in the waters, the echoes calling "Ben," and that strange, sad sigh of the spirit as it left the dead man's body.

II.

WEEKS passed. The little brown baby fell to the care of its grandmammy. A spell was upon Mandy. With her long hair down upon her shoulders, elbows upon her knees, and face in her hands, she sat by the hour under the great black-gum, gazing down into the shadowy depths of the swamp. With an intuition and refinement of kindness not uncommon to the race, the elder woman kept silent upon the events of that dreadful night. Not once did she refer to the tragedy, not once to the wild life of the young wife of which it was the culmination,— wild, for it had been the same old story of mismated ages and foolish playing with fire. Quietly she had gone on doing the cooking and the washing, and the little brown baby, as she toiled, played with its rag doll and preached to the sleepy cat. When the baby cried for food she placed it in its mother's arms, where, as it lay, Mandy studied the round face vaguely. But no tear fell upon the child, and the old mammy wondered as she watched the two.

"Mandy ain' come 'roun' yit," she said to a neighbor once. "De Lord es 'flictin' her mighty hebby; but she'll come bimeby, she'll come bimeby." Yet the time seemed long.

One day, as thus they sat, the Rev. Kesiah Toomer, or "Unc' 'Siah," as he was called, leaned over the split-oak picket. His aged face, full of wrinkles, and its white eyebrows, beamed down kindly upon them.

"Mornin', Aunt Charlotte," he said, touching the battered old straw hat that kept the sun from his bald head and its kinky fringe of snowy hair; "how you do des mornin'?" His was a soft, flexible voice, full of conciliatory curves.

"I 'm tolerable," replied the woman simply.

"How Mandy?"

"She 's tolerable." The young woman was dreaming into the depths, and heard nothing.

"How littl' Ben?"

"He 's tolerable."

"How Sis Harriet?"

"She 's tolerable."

"Yes 'm." Unc' 'Siah's face mellowed a little more, and he shifted his weight to the other foot.

"How you, Unc' 'Siah?"

"I 'm tolerable, bless God!"

"How Phyllis?"

"She 's tolerable."

"The chillun all got well?"

"Yes 'm, dey all tolerable."

"Won't yer come en an' res'?"

Unc' 'Siah replied by limping slowly into the yard. He had a leg that was stiff with rheumatism and gave him a painful-looking gait. He seated himself in the splint-bottom chair proffered him. For some time he was silent. Every now and then his eye rested upon the sleeping child and the brooding mother. Charlotte knew that he had something to say.

"You seen Ben?" she asked quietly. The old man stirred in his seat.

"Yes 'm," he said; "seen him yestiddy."

There was a slight change in the face of Mandy; no movement, but the eyes seemed to lose their far-away look and fix themselves on something nearer.

"W'at 'e say?"

"Well," replied the old man, thrusting out his stiffened limb, "he ain' say much. Hit 's mighty nigh unto fo' weeks sence he uz put en jail, an' dey es gointer have es trial next Chuesday." Then presently: "You bin deir, Mandy?" Mandy turned her hunted eyes upon him.

"Yes," she whispered, after awhile; "an' he druv me 'way." Silence fell upon the little group. The old woman was studying the face of the man, turned towards the ground. The other had sunk again into hopelessness above the baby. Presently Unc' 'Siah spoke:

"He do say dat dem lyyers 'low dat deir 's mighty littl' chance fur 'im 'less 'n dat knife er Bill's 'd been picked up by somebody w'at uz leanin' ter our side er de case, 'cause Bill's name uz on hit ef hit uz Bill's, an' 'u'd show fur hitse'f. Plenny uv 'em seed Mandy snatch hit fum de groun', an' sum ses es how et uz Ben's an' she uz erfraid ter show hit, an' sum ses es how hit uz Bill's an' she uz er-hidin' hit 'cause she liked Bill more 'n Ben; an' so hit goes. Now, ses I, deir ain' nuth'n' en dat, an' Mandy 'll sw'ar in de court-house she flung hit en de swamp fur Ben's 'thout lookin' at hit,— des like you say, honey,— but dey 'low, does dem lyyers, es how Mandy, bein' de prisoner's wife, can't sw'ar en de case. But ef de knife uz deir, ses dey, hit 'u'd tork fur hitse'f 'cause deir ain' no 'sputin' de name, an' Sam Toliver an' Bob Johnsin knowed hit by sight. You could n't fin' hit, you reck'n, Sis Mandy?" The woman shuddered. "No," she said, "I bin deir en de day, but de place es changed fum en de night; an' et night,— I can't go deir, Unc' 'Siah! I can't go deir! An' hit ain' no use ter go en de dark, an' hit en de water." Unc' 'Siah was silent a moment. Presently he added:

"Ben ses, ses he, 'Ef Marse Bob uz heah hit 'u'd be all right.' But deir ain' no chance now, fur 'e live 'way off yander sebenty odd mile an' no railroad half-way. An' heah 't is er Thu'sday 'bout sundown." Mandy turned her face to his, but his eyes looked away, and he had given himself up to reflection. Presently he said, as if addressing no one in particular:

"My ole Mis' tell me oncet, 'Siah,' ses she, des so, 'w'en de heart es sick an' lonesome, deir ain' no med'cin' like work. Ef you got ter set down an' study 'bout hit, hit 's gointer eat, es dis heah sickness; but ef you es er-workin', hit gits out into suthin' else.' Lord, but she live up ter hit too; an' w'en Marse Sam uz shot et Chinck'nhominy, es dey say, she tu'n en an' cut up cyarpets fur de sogers, an' knit socks, an' scrape lint twell bimeby hit uz all done; an' one day I seen 'er pickin' cotton in de orchud patch like er common nigger, an' I ses den, 'Ole Mis', hit 's er sin an' er shame fur you ter do like dat.' An' right deir she lif' up 'er han's, dat de sun almos' shine troo, an' say, 'Gimme work ter do, 'Siah; gimme work ter do!' An' lemme tell yer right deir too I broke down. But hit kep' 'er up, an' she ain' dead yit, but as peart as anybody. Yes, sir, work es er big t'ing for hebby eyes."

On the face of the yellow woman over her babe a thought was dawning. A new spirit shone in her eyes, and a quickening breath shook her form. As she gazed upon the old man he took a pair of silver-rimmed spectacles from his pocket and adjusted them. Then he drew out a worn Bible. The woman sank back again, but the thought in her eyes remained.

"Sis Mandy," said he, "let de Lord speak, fur deir 's trouble in sto' fur you an' yourn." Charlotte rested her chin upon her hand, and her knitting, which she had drawn out, dropped to the ground. The old man began, but his progress was slow. He had to spell out many words, and explain as he read:

"'*De Lord es my sheppud, I shall not want.*' Bless de Lord fur dat! 'Shall not want'; you heah dat, Sis Mandy; not want fur nuth'n'. Don' care w'at hit es, you shall not want hit long, sha'n't keep on er-want'n' hit ef de Lord es yo' sheppud,— an' you es one er de flock. No, chile!

"'*He makes me to lay down in green pastures, 'e leads me beside de still waters,*'— yes, Lord, we know w'at dat means fur er sheep,— whar de grass es long an' green an' de water es cole, an' deir es shade all day long; dat 's de place fur yo' sheep an' yo' lam's.

"'*He resto'ith my soul, he leads up de paf er de righteous fur es name' sake.*' Des heah dat! Hit makes no diffunce whar dat paf es er-goin'; by de big road, or ercross de corn-rows, or troo de swamp hitse'f,— he 's gointer lead de way; an' hit 's all de same ef hit 's day or night; hit 's all one wid de Lord.

"'*Yea, though I walk troo de valley er de shadder er death, I 'll fear no devil,*'— no sir-r-r! No devil gointer hu't you deir, fur deir 's er han' en de shadder an' hit 's more 'n er match fur *him* an' his kind; dat hit es!

"'*Fur thou art wid me, thy rod an' thy staff dey comforts me.*' Oh, yes, chillun, Jesus es deir by de side er de troo berlievers, ef dey only knowed hit. An' w'en dey es come out er de valley an' de shadder, w'at den?

"'*Thou prepares er table fur me en de presunce uv my enemies: thou a-n-o-i-n-t-e-t-h my*

head with oil, an' my cup hit runs over'— Dat 'll be er happy day den! Oh, yes, oh, yes, w'en de cup es full de heart es full, an' de eyes dey runs ober, 'cause uv de fullness erway down below; yes, ma'am. W'en dat tayble es spread hit 'll make anybody's eyes run over; barbecued shote, br'iled chicken, fat ham, biscuits, white bread, 'simmun beer, all spread right deir en de presunce er de enemy, de ole devil hisse'f fairly bustin' wid hunger an' spite, but pow'less, pow'less 'cause de sheppud es deir ter guard de lam's.

"An' w'en hit's all done w'at ses de prophet? W'en de hard heart done lay down hits load an' de feet been en de valley an' de shadder, an' by de waters an' 'cross de pastures erfearin' nuth'n', w'at den?

"'*Sholy!*' ses he, '*sholy!*'—oh, hit 's er great word is dat sholy,—'*sholy goodness an' mussy shall foller me all de days er my life, an I'll dwell den en de house er de Lord.*' Bless him fur de promise!"

'Siah closed his book, and drew off his glasses, and wiped them carefully upon the lining of his coat. But the young woman stood up with the new thought fairly speaking in her round brown eyes, and a new vigor trembling in her frame.

"Tek de baby, Mammy," she almost shouted, placing little Ben in the other's lap. "I'm er-goin',— don't you heah?— I'm goin' troo de valley an' de shadder an' by de waters an' 'cross de pastures twell He show me Marse Bob! I bin bline, Mammy, I bin bline, but I ain't bline now! He done op'n my eyes an' I see de way—Good-bye! Good-bye, Mammy! Good-bye, Unc' 'Siah! Keep de baby en yo' bed, Mammy, en de night, an' don't let 'im cry fur me.— En de valley an' de shadder an' by de pastures!— En yo' bed, Mammy—"

She turned away. Her voice died out as she passed beyond the live-oaks. Then, and then only, did Unc' 'Siah lift up his face from his hands and fix it skyward.

"De Lord, he has spoke at las'. Hit 's all right, Sis Charlotte. De Lord's han' es erreachin' out fur Ben. Dat es Bill's knife."

Charlotte spoke not. Bending until her head rested against the one ragged garment of the sleeping child, she rocked him in silence. The old man gazed upon her doubtfully, but presently he rose, and in silence too limped out across the field.

III.

On went the young woman, her straight, strong limbs bearing her bravely; on into the great road, on through the village with its lazy groups sitting about in the afternoon shade, on past the jail, never stopping. She moved as one in a trance, and the strange light shone from her eyes.

"'En de valley an' de shadder,' Ben," she shouted, "but er-fearin' nuth'n'. An' I 'm comin' back leanin' on His rod an' His staff; I'm er-comin' back." People looked at her curiously, but she stopped for none. The shadows fell; night found her upon the lonely highway. The tall pines crooned above; it seemed as though a spirit sighed from the lips of the dying man. A whippoorwill called from the depths of the forest; to her it was a voice from the past, and strange things caught at her dress as she glided by.

"'En de valley an' de shadder,'" she whispered, "'an' leanin' on His rod an' staff.'" No moon rose to comfort her, but a mocking-bird sang as he used to sing in the haw-bush by the cabin when the baby was rolling on its back in the sand and she was sewing. On, never faltering; tired of limb, hungry and athirst, but onward still.

At dawn of day she dropped down by a friendly door in the city's suburbs, and told her story. The hospitality of the South animates the humblest dwelling, and the humbler the roof the broader the unquestioning hospitality. Her thirst quenched, her hunger appeased, she dragged her stiffening limbs into a new road, and continued her journey. The sun came forth and parched the ground, but the trees lent her shade here and there. Thirst came back, but the sparkling brook danced across her way. Hunger too came again, yet the hospitable cabin followed it,— night; and sleep, when, far in the night, she sank in a fence-corner murmuring, "'En de valley an' de shadder.'" And as she slept, nothing evil passed the sentinel that there stood guard beside her.

With the dawn the blistered feet resumed their weary way. The history of one day was the history of the next. She started on Thursday; on Monday morning she passed through the great white columns of a princely home, and told her story for the last time; and at 10 o'clock the next morning the trial of Ben Thomas for murder was to begin at Jeffersonville, in Twiggs county, seventy odd miles away.

The evening of the same day found Mandy back in the city, and with her was a gray-haired man — Marse Bob, she called him; and the people who passed him on the street touched their hats to him, and looked back as his tall form went by. A buggy was to bear him to Jeffersonville in the early morning, but for her there was work yet to be done.

"W'en you pass Black Ankle," she said to him, "I 'll be deir." Before he could stop her she had gone.

Not a voice broke the stillness of the ham-

"EN DE VALLEY AN' DE SHADDER AN' BY DE PASTURES."

let as she entered among the brooding cabins, save the far barking of Bill Fowler's dog. She had heard that animals see spirits: was he barking at his master's ghost come back again? Her flesh crept, and she almost screamed as she trod unawares on the spot where the man died. There was no light in the little house, no sound: should she enter? The wail of a baby came out to her,—a feeble wail, as of one sick or starving. She laid her hand upon the latch.

"No," she moaned, "not now. Hit 's de las' chance, de las'." She passed down into the black swamp, lying there in the clouded moon like the grave itself.

"'En de valley an' de shadder,'" she whispered, "'an' er-fearin' nuth'n'.'" As she entered there, that other night came back, and its horrors rose about her. There was the bush that clasped her knees, there the crooked tree that barred the way, and there the tangled brake.

Then the lagoon, with its wide, still stretch of water, lay at her feet.

"Ben!" she called; but the name died in her throat. She raised her head again and threw the knife with all her might,—aye, for the handle seemed in her grasp as hard and bloody as on that fatal night! Yonder it will fall, she thought, straining her eyes to where the black

night rested upon the cold, pale sheen of waters, and lo! so it seemed to fall. There came back from the carpeted gloom the same splash! She gasped, and clutched an overhanging vine.

"'En de valley an' de shadder, thy rod an' thy staff, an' er-fearin' nuth'n','" she whispered brokenly; and so, half moaning, she let herself down into the silent water. The chilly flood rose to her armpits, but she moved forward straight into the gloom. Once she stumbled, and the flood rolled over her, but straight on she passed with a precision seemingly supernatural. As she moved she felt with her bruised and torn feet in the soft ooze and in the slime; slowly and patiently, for she fancied she could tread every foot of the dark depths until the knife was found.

But there is a limit to human progress in Black Ankle Swamp; and just as the spot was reached to which she had calculated that her strength could have hurled the bloody weapon, the ground passed from under her feet. Frantically she clutched at a cypress knee to draw back, when instantly a sharp, swift pain ran along her arm. She had touched a snake, and he had struck his fangs into her clenched hand! She must not lose her hold; she did not. But her lips opened and sent up one wild, frenzied cry from that dreadful place,—"O my God!"

But what was that? There was no serpent in her grasp; only the long, keen blade of a knife, thrust into the tender cypress. Ignorant and superstitious, her frame trembled with terror; then the truth was upon her. The weapon she had hurled out into the night had stuck where it had struck; the splash was the plunge of a startled cooter. She drew it from its rest and rushed from the place, as when a brown deer, the hounds pressing hard, breaks through the swamp and the cane and the treacherous ooze into the clear fields beyond.

But gone now fatigue! The woman passed the cabin, with its crib and its memories, almost without knowing it, and took the road back to the city. It would have been as well to crouch there and wait for the buggy or to have sought the village, but wait she could not. The fever was upon her; she must move. So she ran cityward to meet the gray-haired rescuer. Mile after mile passed, hour after hour, and still he came not. Day broke, and the sun rose. A prescience of mortal danger was upon her, faintly at first, a terror at last; and mastering the fevered energy of her great struggle, it slew her strength and hurled her by the wayside,—to lie with her hunted eyes fixed upon the tree-arched lane overhead.

As thus she lay, an old man riding a flying gray horse rose in the shadowed light of the lane and presently burst into the full sunlight there before her. The thundering feet of the animal were almost upon her as she staggered dizzily to her feet and thrust upward the knife. Wonder shone in the face of the rider as, divining the truth, he caught the weapon and passed swiftly from her view. A smile came over her wan face. "'En de valley an' de shadder,'" she whispered feebly, then set her feet towards home.

Tired? Yes, tired near unto death, but leaning upon a rod and a staff that mortal vision could not compass.

IV.

It was a sultry noon, and Jeffersonville was brisk. As Jeffersonville is brisk only during the court week, when the lawyers from Macon ride down to look after the warehousemen's mortgages, and the leading attorneys from the adjoining counties run over to look after the Macon lawyers and attend to the criminal docket, it may be inferred that court was in session.

About the large, white, square frame building with its green blinds and three entrances, little groups of farmers were gathered and many unhitched teams were visible. Within the one great room that takes up the whole of the first floor, and from which ascend steps to the various county offices above, were the usual court-house habitués,—jurors who hope in vain to "get off," and citizens of limited income who yet hope to "get on." In front of the door was the judge's elevated desk, with the clerk lower down, whose feet rested in a chair while his mouth twisted a tooth-pick. The midday meal had just ended, and the court had not reëntered. To the right and left were the jury benches. The front half of the room was devoted to the Bar, which by courtesy included all leading citizens, and the rear to negroes and the promiscuous crowd on curiosity bent.

Apparently there was nothing exciting on hand just then, though a murder trial had been interrupted by a temporary adjournment. But the defendant was a negro, and a negro murderer is not a novelty. While the court was assembling, the curious might have noted the prisoner's points. His face, if it had any marked characteristics, was noted chiefly for its singularly inexpressive lines, and his attitude was one of supreme indifference. His stout, heavy frame was clad in a common jean suit stained with months of wear, and his kinky hair was liberally sprinkled over with gray. He sat quietly in his place, not even affecting stolidity, but suffering his eyes to roam from face to face as the genial conversation drifted about in the group around him. He was evidently not impressed by any sense of peril, though when the court had adjourned, a clear

case of murder had been proved against him, and only his statement and the argument remained.

Slowly the court assembled. The prisoner's counsel had introduced no testimony. A man had been stabbed by his client, had fallen dead, his hand clasped over the wound; and from beneath this hand, when convulsively loosened, a knife had dropped, which the defendant's wife seized and concealed. This had been proved by the state's witnesses.

The prisoner took the stand to make his statement. He declared emphatically that the deceased, knife in hand, had assaulted him and that he had killed him in self-defense; that the knife which fell from the relaxing hand was the dead man's. He told the story simply, and as he began it a tall, thick-set gentleman in a gray suit, with iron-gray hair, and walking with the aid of a stout stick, entered the room and stood silent by the door,—heard him through, losing never a word. As the prisoner resumed his seat the new-comer entered within the rail. He shook hands gravely with several of the older lawyers, and took the hand that the court extended over the desk. Then he turned and, to the astonishment of every one, shook hands with the defendant, into whose face a light had suddenly dawned, which resolved itself into a broad, silent grin. This done, the old gentleman seated himself near the defendant's lawyer, and, resting his hand upon his massive cane, listened attentively to the speech.

The speaker was not verbose. He rapidly summed up, and laid his case before the jury in its best light. Really there was not a great deal to say, and he soon reached his peroration. He pictured the blasted home of the poor negro, his wife and babe deprived of his labor, and dwelt long upon the good name he had always borne. In the midst of the most eloquent periods, wherein he referred to the prisoner "sitting before you, gentlemen of the jury, broken-hearted and borne down by the weight of this horrible tragedy," he turned and extended his hand to where his client sat. A sight met his glance that sent the flush of confusion to his face and started a ripple of laughter around the room. The "broken-hearted" was calmly munching away on an enormous ginger-cake, the liberal moon in which proved the vigor of his appetite. The eloquence of the speaker was fatally chilled. He stammered, repeated, hesitated, and was lost. After an awkward summing up, he took his hat and books and precipitately retired to a secluded part of the room. He had been appointed by the court to defend the prisoner and had made considerable preparation, even to the extent of training his client when to weep.

The solicitor arose, and with a few cold words swept away the cobwebs of the case. The man had stabbed another wantonly. If the knife was the property of the deceased, why was it not produced in court? — the defendant's wife had picked it up.

He passed the case to the jury, and the judge prepared to deliver his charge, when the old gentleman in gray rose to his feet.

"If your Honor please," he said in a deep tone, the honesty and purpose of which drew every eye upon him, "the prisoner is entitled to the closing, and in the absence of other counsel I beg that you mark my name for the defense. With the permission of my young friend who has so cleverly stated the defense, I will speak upon the case."

"Mr. Clerk," said the court, "mark General Robert Thomas for the defense." The silence was absolute. The jurymen moved in their seats. Something new was coming. The old gentleman laid his hat and stick upon the table, and drawing himself up to his great height fixed his bright eye upon first one and then another of the jury, looking down into their very hearts. Only this old man, grim, gray, and majestically defiant, stood between the negro behind him and the grave. The fact seemed to speak out of the silence to every man on that bench. Suddenly his lips opened, and he said with quick but quiet energy:

"The knife that was found by the dead man's side was his own. He had drawn it before he was stabbed. Ben Thomas is a brave man, a strong man; he would not have used a weapon upon him unarmed!" As he spoke he drew from his bosom a long, keen knife, and gently rested its point upon the table. The solicitor's watchful eye was upon him. The attention of all was gained, and the silence was intense. "It has been asked, Where is the dead man's knife? Let me give you my theory: When Bill Fowler staggered back under the blow of Ben Thomas, clutching his wound, and the knife fell to the ground, the lightning's flash was not quicker than the change born in a moment in the bosom of that erring woman, the unwitting cause of the tragedy. Up to that moment she had been weak and yielding; she had turned aside from the little home, that should have been her all, to gamble with strange men; to tread the dangerous paths which beset the one safe road a true woman's feet may know. It had thrown a shadow over the humble home; the husband drunk upon its porch was the mute evidence of its presence. In the awful moment of that tragedy, when the dancers stood horrified, this woman became, as by an inspiration, a wife again. Deceived herself, she caught up

"LOOK!" HE CRIED, "AND BLESS THE SIGHT, FOR THAT SCAR WAS WON BY A SLAVE."

the tell-tale knife and hurled it into the swamp, destroying the evidence of her husband's innocence when she sought to conceal one evidence of his guilt. This, I say, is a theory. You remember her cry was, '*Run!*'" His listeners stirred, and a whisper went round the room.

"But there is other evidence, gentlemen of the jury. Should I be forced to ask for a new trial, it will be developed that this poor woman, repentant now, thank God! walked in three days from the scene of that tragedy to my home, seventy miles away, to ask my aid and counsel; that, eluding me in Macon, though footsore and weary and crazed with grief she returned by night to that swamp, and laboring under an excitement as intense as the first, that brought the scene before her so vividly that she was enabled to find the knife, did find it, and but that an accident to my vehicle delayed me it would have been offered here in evidence—"

"May it please your Honor," said the solicitor, "much as I dislike to interrupt the honorable gentleman, I do not think it is proper to introduce with the argument evidence that has not been offered upon trial."

"If your Honor please,"—and the speaker turned to the prosecuting officer with quiet dignity and gentleness that disarmed him at once,—"a decision upon such a proposition is not needed. I willingly admit what is claimed. But, sir, I offer no evidence, not even this knife, with the name of the deceased upon it, though it comes to me direct from the hand of the woman who, it has been proved, snatched almost from under his hand a weapon, when he fell to the ground. I am but arguing a theory to account for the facts that have been proved. But, gentlemen of the jury,"—and the knife fell to the table as he turned away from it,—"not upon this theory, not upon these facts, do I base the assertion that the deceased had a knife in his hand when he made the assault,—I speak from a knowledge of men. Ben Thomas would never have stabbed an unarmed man." The General looked around

slowly and searched the court-house with his eye, as if daring contradiction. "Why do I say this?" he continued, turning to the court. "Because I know he is as brave a man as ever faced death; a faithful man; a powerful man, and conscious of his power. Such men do not use weapons upon unarmed assailants." The audience stirred in their seats. The speaker turned again to the jury. "I speak to men who reason. True reasoning with such is as strong as proof. A brave man who is full of strength never draws a weapon to repel a simple assault. The defendant drew when he saw a glittering knife in the hand of his foe,— not from fear, because he could have fled, but to equalize the combat. He was cool and calm; you know the result.

"Why do I say he is brave? Every man on this jury shouldered his musket during the war. Most of you followed the lamented Pickett. Some perhaps were at Gettysburg." Two or three heads nodded assent. "I was there too!" A murmur of applause ran round the room,— the old man's war record was a household legend. It is even said that the court joined in. "I, and the only brother God ever gave me." The veteran bowed his head; his voice sank to a whisper. "A part of him is there yet,"— his hand shook slightly as he moved his cane farther on the desk, and rested upon the Code,—"a part of him, but not all; for, God be praised, we picked up whatever was left of him and brought it back to Georgia.

"I well remember that fight. The enemy stood brave and determined, and met our charges with a courage and grit that could not be shaken. Line after line melted away during those days, and at last came Pickett's charge. When that magnificent command went in, a negro man, an humble African, a captain's body-servant, stood behind it, shading his eyes with his hand, waiting. You know the result. Out of that vortex of flame and that storm of lead and iron a handful drifted back. From one to another this man of black skin ran, then turned and followed in the track of the charge. On, on, he went, under my very glass, for it was my misfortune to stay behind; on through the smoke and the flame; gone one moment and in sight the next; on up to the flaming cannon themselves. Then there he bent and lifted a form from the ground. Together they fell and rose, and this three times, until, meeting them half-way, I took the burden from the hero and myself bore it on to safety. That burden was the senseless form of my brother,"— here he turned and walked rapidly to the prisoner, his hand lifted on high, his voice ringing like a trumpet,— "gashed, and bleeding, and mangled, but alive, thank God! And the man who bore him out, who came to me with him in his arms as a mother would carry a sick child, himself shot with the fragment of a shell until his great heart was almost dropping from his breast,— that man, O my friends, sits here under my hand! See, if I speak not the truth!" He tore open the prisoner's shirt and laid bare his breast, on which the silent splendor of the afternoon sun streamed. A great ragged seam marked it from left to right. "Look!" he cried, "and bless the sight, for that scar was won by a slave in an hour that tried the souls of freemen and put to its highest test the best manhood of the South. No man who wins such wounds can thrust a knife into an unarmed assailant. I have come seventy miles in my old age to say it."

It may have been contrary to the evidence, but the jury, without leaving their seats, returned a verdict of "not guilty," and the solicitor, who bore a scar on his own face, smiled as he received it.

"The prisoner," said the court, rapping for order, "is discharged."

"Yes, sah," said Ben, rising and flashing a set of dazzling ivories at the judge. "I knowed hit uz all right soon es I laid eyes on Marse Bob's ole gray head."

. . . . .

THE evening shadows gather over Black Ankle. A young woman with a baby at her breast sits, weary of eye and limb, under the spreading gum-tree by the spring. Slowly the yellow rooster leads his followers up the rail to the shed, and the lean cow at the picket-gate lows for entrance. Suddenly out of the valley of the shadow — of death itself — a man comes and rests his hand upon the woman's head. Then the twilight deepens, and we see them no more.

H. S. Edwards.

MEMORANDA ON THE CIVIL WAR.

Union War Songs and Confederate Officers.

THE reading of Mr. Brander Matthews's "Songs of the War," in the August number of THE CENTURY, vividly recalls to mind an incident of my own experience which seems to me so apt an illustration of the effect of army songs upon men that I venture to send it to you, as I remember it, after twenty-two years.

A day or two after Lee's surrender in April, 1865, I left our ship at "Dutch Gap," in the James River, for a run up to Richmond, where I was joined by the ship's surgeon, the paymaster, and one of the junior officers. After "doing" Richmond pretty thoroughly we went in the evening to my rooms for dinner. Dinner being over and the events of the day recounted, the doctor, who was a fine player, opened the piano, saying: "Boys, we've got our old quartette here; let's have a sing." As the house opposite was occupied by paroled Confederate officers, no patriotic songs were sung. Soon the lady of the house handed me this note: "Compliments of General —— and Staff. Will the gentlemen kindly allow us to come over and hear them sing?" Of course we consented, and they came. As the general entered the room, I recognized instantly the face and figure of one who stood second only to Lee or Jackson, in the whole Confederacy. After introductions and the usual interchange of civilities, we sang for them glees and college songs, until at last the general said: "Excuse me, gentlemen, you sing delightfully, but what *we* want to hear is your army songs." Then we gave them the army songs with unction, the "Battle Hymn of the Republic," "John Brown's Body," "We 're Coming, Father Abraham," "Tramp, Tramp, Tramp, the Boys are Marching," through the whole catalogue, to the "Star-spangled Banner,"— to which many a foot beat time as if it had never stepped to any but the "music of the Union,"— and closed our concert with "Rally Round the Flag, Boys." When the applause had subsided, a tall, fine-looking fellow in a major's uniform exclaimed, "Gentlemen, if we 'd had your songs we 'd have licked you out of your boots! Who could n't have marched or fought with such songs? While we had nothing, absolutely nothing, except a bastard 'Marseillaise,' the 'Bonny Blue Flag,' and 'Dixie,' which were nothing but jigs. 'Maryland, my Maryland' was a splendid song, but the true, old 'Lauriger Horatius' was about as inspiring as the 'Dead March in Saul,' while every one of these Yankee songs is full of marching and fighting spirit." Then turning to the general he said: "I shall never forget the first time I heard 'Rally Round the Flag.' 'T was a nasty night during the 'Seven Days' Fight,' and if I remember rightly it was raining. I was on picket, when, just before 'taps,' some fellow on the other side struck up that song and others joined in the chorus until it seemed to me the whole Yankee army was singing. Tom B——, who was with me, sung out, 'Good heavens, Cap, what are those fellows made of, anyway? Here we 've licked 'em six days running and now, on the eve of the seventh, they 're singing "Rally Round the Flag."' I am not naturally superstitious, but I tell you that song sounded to me like the 'knell of doom,' and my heart went down into my boots; and though I 've tried to do my duty, it has been an up-hill fight with me ever since that night."

The little company of Union singers and Confederate auditors, after a pleasant and interesting interchange of stories of army experiences, then separated, and as the general shook hands at parting, he said to me: "Well, the time *may* come when we can *all* sing the 'Star-spangled Banner' again." I have not seen him since.

Richard Wentworth Browne.

General Edwards's Brigade at Spotsylvania.

IN the interesting article in the June CENTURY, entitled "Hand-to-Hand Fighting at Spotsylvania," the author, while generally accurate and graphic, unaccountably omits any reference to that brigade of the Sixth Corps which was first engaged there, which was holding the key to the position when his own (Upton's) brigade came upon the field, and which, without egotism, can claim to have fought longer and more effectively than any other brigade of the Sixth Corps engaged. This honorable claim is made for the Fourth Brigade, Second Division, commanded by Colonel Oliver Edwards, which on that day had present for duty three small regiments, the 10th and 37th Massachusetts and the 2d Rhode Island. This claim is based upon the following facts:

When the two divisions of the Sixth Corps, which had been massed the previous evening, were summoned to the support of General Hancock, whose Second Corps had penetrated the Confederate lines, General Wright, who had just assumed command of the Sixth Corps, directed that the first brigade under arms and ready to move should lead the way. Edwards's brigade was first in line and led the march of the corps. It moved to the vicinity of the Landrum House, passing the Confederate generals and some of the prisoners who had been captured by Hancock, and, reaching the edge of woods facing the scene of action, came into line of battle facing by the rear rank, and advanced toward the captured works with the 10th Massachusetts on the right, the 2d Rhode Island in the center, and the 37th Massachusetts on the left.

The situation at this time was simply this,— the force of the Second Corps' attack had of itself broken up the organization of that command; the mass of men had been withdrawn to the outer face of the Confederate works and re-formed as well as possible under the circumstances. By the time this was accomplished the Confederates were prepared to undertake the recapture of the works they had lost. Then it was that Edwards's brigade moved forward and occupied the outer face of the intrenchments, relieving some troops already there

and connecting with the Excelsior Brigade. As the command came into position, it covered the nose or apex of the angle with the Rhode Island regiment, the 10th Massachusetts extending along the right face.

The brigade was scarcely in position when the Confederates advanced to the attack, the ground being extremely favorable for their purpose. On their side of the works it was wooded, and, in addition, scarcely forty yards to the rear of the fortifications was a hollow or a ravine which formed a natural siege approach. In that ravine, almost within pistol-shot of the Union lines, they were enabled to form columns of assault entirely screened from view, and the resulting attack had the appearance of lines of battle suddenly springing from the bosom of the earth. Three times in rapid succession their columns formed and rushed upon the angle held by Edwards and his nine hundred men, and as often did the deliberate fire of the Fourth Brigade repel the attack with terrible slaughter. To the right of Edwards's position, however, the defense was not so successful; the Union troops were driven back from the intrenchments, a force of Confederates crossing the works and taking position in a piece of woods, which gave them an enfilading fire on Edwards's right, so severe and well directed that it threw his 10th Regiment into confusion. It was at this time that Upton's brigade came upon the field and, in the words of that officer himself, encountered so severe a fire that he was unable to occupy the intrenchments, but resting his left upon them, near Edwards's right, his brigade lay down and opened fire.

Thus three assaults had been repulsed by Edwards's brigade before any other troops of the Sixth Corps came upon the field. As soon as the development of the Union line to the right relieved the flank fire somewhat, the 10th Regiment was returned to its place in the works, and throughout the remainder of that memorable day the brigade held its position with a fire so deadly and well directed that no hostile lines of battle could live to cross the few yards between the works and the ravine spoken of. Once, indeed, by the use of a white flag the Confederates came near accomplishing by stratagem what they had failed to do by force of arms. This emblem of peace being displayed in front of the Fourth Brigade, an officer ranking Edwards, but himself ranked by General Eustis, who was present, unjustifiably ordered the Fourth Brigade to cease firing. Instantly the purpose of the movement was shown by the dash of the Confederate line of battle for the coveted works. Fortunately, however, Edwards and his command were on the alert, and repulsed the attack, but not until the hostile colors were for a moment planted on the works,—the only instance during the day in which anything like a line of battle was enabled to advance so far at that point.

Near night the brigade was relieved, but the 37th Regiment was almost immediately ordered back to hold the works which had been unceremoniously vacated by a regiment of the Second Corps out of ammunition. The guns of the 37th also were empty, but the brave fellows pushed their bayonets under the head log, and thus held the works until a fresh supply of ammunition could be procured, when the firing was resumed and continued until 3 o'clock on the morning of the 13th.

This regiment was thus in action continually for more than twenty hours, during which time it fired over four hundred rounds per man. At one time its guns became so foul that they could no longer be used, many of them bursting in the hands of the men. As it was impossible to relieve the line, a regiment from the Second Corps exchanged guns with the 37th, enabling the latter to continue their fire without interruption. It was in front of the right wing of this regiment and almost directly in the rear of the apex that the oak-tree, twenty-one inches in diameter, was cut down by bullets and fell within the Confederate lines.* I believe every regiment that fought anywhere in that part of the field claims to have shot down this particular tree; but in truth no single organization is entitled to all the credit. Certainly the Fourth Brigade, and especially its 37th Regiment, may claim the lion's share. Not only was this command engaged longer than any other, but all day the fire of the entire brigade was delivered under the head log, deliberately and well directed, and from the position of the troops a large portion of their fire concentrated at this point. Another fact, which would seem to settle the matter, was that the tree fell during the night, near midnight in fact, and hours after the firing had practically ceased on all parts of the line save at this vital point.

James L. Bowen.

SPRINGFIELD, MASS.

The Lost War Maps of the Confederates

IN several published articles, and in several books by Confederate generals and civilians, there have been severe criticisms (some just and some unjust) in regard to the want of suitable maps for the guidance of our commanders. General D. H. Hill in THE CENTURY, and General Dick Taylor and Mr. Jefferson Davis in their books, have made special mention of this want, and General Long in his recent "Memoirs of Robert E. Lee" comes to the defense of that distinguished general from this implied blame, and remarks that "the want of maps should be placed where it properly belongs,—with the war-directing authority at Richmond," and he further states that "the blunders complained of were more the result of inattention to orders and want of proper energy on the part of a few subordinate commanders than any lack of knowledge of the country." These remarks of General Long are substantially true. The writer has the best of reasons from personal knowledge and observation, and from an interview with General Lee a little after daybreak on Sunday morning, June 29th, 1862, for confirming the truth of the latter remarks as to "inattention to orders and want of proper energy," in this particular campaign up to that date. The escape of McClellan's army from White Oak Swamp was undoubtedly due to these short-comings, and I am persuaded that General Long and others have proved conclusively that the same cause prevented the concentration of Lee's army at the proper time before Gettysburg and occasioned its defeat there. It is one of the many failings of humanity to shift blame from one shoulder to another, as it is also to claim the merit of success where it is not due. Any simpleton can now untie a Gordian knot, knowing how Alexander did it.

*Several trees were cut down.—See foot-note, page 306, of THE CENTURY magazine for June, 1887.—EDITOR.

It is true that there were no maps of any account in existence at the time when General Lee assumed the command, that were of use to the Army of Northern Virginia, June 1st, 1862. Incomplete tracings or fragments of the old "Nine-Sheet" map of Virginia were probably all that our commanders had for guidance. General Long has, therefore, seemingly made an error in asserting in his note at the close of chapter ten of his book that the map accompanying that chapter was "used by General Lee during this campaign," as will be seen by reference to the indorsements on the map itself. The "Seven Days' Fight" occurred in June–July, 1862. This map was approved by me April 3d, and was "sent from the Engineer Bureau with letter of April 4th, 1863." It may, as alleged in the note, have been *filed* subsequent to these dates, but it was not in existence at the time stated by General Long, as will be seen further on.

Up to this period the blame, if any is due, must lie with the "war-directing power at Richmond." It is probable that weightier matters filled the minds of the higher authorities at this time, and that too much reliance was placed by commanders in the field in the efficiency of local guides and the insane and ridiculous notion that was affected that one Southern man could lick three Yankees under any and all circumstances; and besides, our armies as yet had not had sufficient battlings and unnecessary losses of men, to develop the indispensable necessity of a more intimate knowledge of topographical details of regions over which troops must be manœuvred. The march up the peninsula from Yorktown, the battle of Fair Oaks and Seven Pines, Jackson's collision with Hill's line of march from Mechanicsville to Gaines's Mill, and the whole seven days' campaign brought out this fact in strong colors, bloody colors, at Beaver Dam Creek.

One of the first things that engaged General Lee's attention on taking command of the army was the organization of some plan for procuring accurate maps for his own use and that of his commanders. A few days after this event, on the 3d or 4th of June, the writer was sought by Major Walter H. Stevens, Chief Engineer of the army at that time, and Major Jasper S. Whiting, his associate, and was informed that they had been sent from headquarters by General Lee to find a suitable person to take charge of a topographical organization which he was desirous of having formed as soon as possible, and proceed to the field, as he found no maps of consequence on taking command of the army; and as maps were indispensable, no means must be spared to procure them. I was asked if I would undertake the duty and on what terms. They were informed that I had an application for the appointment to a captaincy in the Engineer Corps, favorably indorsed by the President, which for several months had been conveniently pigeon-holed in the Engineer Bureau, and that if they would procure that appointment I would accept it and proceed immediately to work. It was done by order of General Lee on recommendation of those officers, and my commission was dated and received on June 6th. Two or three surveying parties furnished with the necessary instruments were immediately organized and started from Richmond as a center, to radiate thence to the picket-lines of the army, from Meadow Bridge around to James River, each party taking an allotted sector of that circumscribed space. This work had not sufficiently far advanced to be of any use in June, for no part of the region beyond our lines was accessible to survey until June 30th, when orders were given to follow in the wake of our army and extend the surveys as fast and as far as possible. The field work was mapped as fast as practicable, but as the army soon changed its location, more immediate attention was given to other localities. Therefore, this map in question was dated 1862–3: it was not available as complete until the spring of 1863. Other parties, soon after these first ones were started, were sent into Hanover and Spotsylvania counties, and as fast as possible other parties, amounting in all to about thirteen, were formed and sent into other counties of northern and north-eastern portions of Virginia, until in the course of time detailed surveys were made and at the close of the contest nearly all the work was mapped, from the western part of Fauquier and Rappahannock counties to Wilmington, North Carolina; from the strategic lines on the eastward to the Piedmont region of Virginia; and down the valley of Virginia as far as the Potomac River in Jefferson and Berkeley counties; and into south-western Virginia as far as Smythe county; and nearly all the counties south of James River east of Lynchburg unoccupied by the Federal forces. The surveys in North Carolina embraced a considerable belt on each side of the Weldon and Wilmington R. R. The exact limits of these extensive surveys can not now be recalled, for these maps have all been lost.

The general plan of operations was adopted of placing full parties in each county, and maps of each county thus successively surveyed in detail were constructed on a comparatively large scale, giving full credit to heads of field corps in the titles; and also general maps, one north and one south of James River, were prepared on a smaller scale, preserving all the details. So great was the demand for maps occasioned by frequent changes in the situation of the armies, that it became impossible by the usual method of tracings to supply them. I conceived the plan of doing this work by photography, though expert photographers pronounced it impracticable, in fact impossible. To me it was an original idea, though I believe not a new one, but not in practical use. Traced copies were prepared on common tracing-paper in very black India ink, and from these sharp negatives by sun-printing were obtained, and from these negatives copies were multiplied by exposure to the sun in frames made for the purpose. The several sections, properly toned, were pasted together in their order, and formed the general map, or such portions of it as were desired; it being the policy, as a matter of prudence against capture, to furnish no one but the commanding general and corps commanders with the entire map of a given region.

From this statement it will be seen that to General Lee is due the credit of promptly originating methodical means for procuring accurate maps to supply the want that has been, by implication mainly, so unfavorably commented on. Many maps that grace various memoirs, and personal recollections, and descriptions of campaigns and battle-fields in Virginia have their basis in the maps made as above described, though accredited to others. "I could a tale unfold" in regard to some of these stolen maps, but *cui bono? Nil proprium ducas quod mutari potest.*

General Woodruff, United States Engineer, orally, and Generals Lee and Gilmer and several other persons have from time to time, by letter, inquired of me the fate of these maps. It may be of public interest to give all the information I have concerning them, for it does not seem to be known how extensive, how complete, and how valuable these surveys were. It was gratifying to my pride to learn that the United States Engineer Bureau was desirous of obtaining our maps, and to hear one of the distinguished officers attached thereto remark that our maps were better than their own. His expressed reasons in nowise reflected on his own service, but accounted for it from the fact that no regular system could be maintained in consequence of the frequent change of commanders of the Army of the Potomac. On Sunday, April 2d, the night of the evacuation of Richmond, about 10 o'clock P. M., I placed in charge of an engineer officer and a draughtsman, upon an *archive* train bound for Raleigh, North Carolina, a box or two containing all the original maps and other archives of my office, except the field note-books, which were burned by order of my superior. This officer in charge never has reported to me the fate of this property, nor his own fate. It is supposed it was burned with the train, or pillaged, for fragments of some of the maps were reported to have been seen along that route in North Carolina. Nineteen years after the shipment of this property I received a package of worthless securities, personal property, from a son of General Gilmer in Savannah. He could give no information as to how this package came into his father's possession. I presume General Gilmer did not have them in 1867–8, when I saw him in Savannah, for he did not mention them. This package was in one of those boxes, my camp-desk. Who sent those papers to General Gilmer? and did the sender retain the maps and correspondence? There were many autograph letters from various generals acknowledging with thanks the receipt of maps, with commendations as to their completeness and accuracy. I should like to recover these letters. The *negatives* of the general maps, to divide the chances of capture, I gave to my private secretary. Some time after, he informed me that he had carried them with him in his flight as far as Macon, Georgia, and on his return, for greater security, had placed them in a lady's trunk, a fellow-passenger's. Hearing *en route* that all baggage of returning fugitives was to be examined at Augusta, Georgia (which proved to be a false rumor), he incontinently burned them *to save them*. This is the extent of my information concerning the fate of these valuable maps. On learning this sad fate of all the evidences of our three years' labor, and that my modicum of glory was thus dissipated in thin air, my feelings were akin to those of Audubon when he learned that the rats had destroyed his labor of years in the wilderness of woods; or, more congenially, perhaps, to those of General Magruder on being informed in advance of written orders that he was to make preparations for evacuating his lines before Yorktown at an early hour. Raising himself on one elbow, when he was roused from his slumbers to hear the verbal order to that purport from General Johnston, he remarked with mingled astonishment and disgust, in that peculiar manner of speech which all who knew him will recognize: "Steventhis (Stevens) *thic tranthit gloria pe-nin-thu-læ*."

Albert H. Campbell.

CHARLESTON, W. VA., May 17th, 1887.

General Robert B. Potter and the Assault at the Petersburg Crater.

IN THE CENTURY magazine for September (page 764), in an account of the Explosion of the Mine at Petersburg, it is stated that

"each of the three commanders of the white divisions presented reasons why his division should *not* lead the assault. General Burnside determined that they should 'pull straws,' and Ledlie was the (to him) unlucky victim. He, however, took it good-naturedly."

There are the best reasons for saying that this statement is incorrect, and among them is a letter written by General Robert B. Potter to one who especially enjoyed his confidence, in which he says:

"My division expected and was anxious to have the advance, because they knew the ground, had an interest in the work, were in the best condition, and known to be the best division in the corps."

That he did not have this task committed to him was well known by his friends to have been the one great disappointment of General Potter's army life, and there are those who have often heard him say that, so far from there having been reluctance on the part of any of the division commanders of the Ninth Corps to take the leading place in the charge, they were all desirous of that honor. The question was decided by General Burnside in order that in the choice there should not seem to be any favoritism, and, especially, to avoid that appearance of partiality for a very dear personal friend which would not improbably have been said to have influenced him had he chosen General Potter.

Henry C. Potter.

TOPICS OF THE TIME.

Manual Training in Common Schools.*

THE argument against common schools has been put in its strongest form by a distinguished English thinker, as follows: "Conceding for a moment that the Government is bound to educate a man's children, what kind of logic will demonstrate that it is not bound to feed and clothe them?" The argument ignores and refuses to meet the only excuse which has ever been offered for a common-school system,—the political basis. The system is not a largess to the recipient, but a natural measure of self-defense on the part of the government which educates. It is necessary, in a democratic form of government, that the voters should be so far educated as to be reasonably relieved from danger of deception by interested parties; when that is accomplished, the duty of the government ceases. To look at the function of government in the matter, as so many of those interested in public education are apt to look at it, as "the prevention of ignorance," is really but another phase of the feeling that the function of government is "the prevention of poverty."

While the purpose of the system is political, it seems legitimate to attempt to attain as much other good as possible on the way to the goal. If, as a part of the process of making the boy a reasonably good voter, it is possible also to give him the rudiments of a mechanical training, surely time and money spent in this way are very far from being wasted. It is on this ground that the appeal has been made for a certain proportion of manual training in the public schools. It is not intended that the public schools shall be diverted from their proper work into that of graduating expert plumbers, carpenters, or shoemakers: the basis of the system, as above stated, should guard one from any such error. All that is meant is that the training of the hands and eyes should have a place alongside of the training of the mind, body, and heart. There are elementary principles of execution which are common to all trades, or most of them. The boy who has mastered these is prepared, in a measure, for any trade, though he is master of none. It is only asked that boys in the public schools who desire it should have the opportunity, as a part of their ordinary work, of receiving instruction in these elementary principles. They would thus receive education which the State is under obligations to provide for all its voters, and, at the same time, a preparation through which they will be better apprentices and better workmen when they pass out of school.

The argument is offered in reply that the public schools are for all, while this is a preparation designed for a special class. In this form the argument has little weight so long as German, French, music, the higher mathematics, and most of the features of a preparation for college are a recognized part of the educational system of so many States. But the argument really has a different foundation. It implies that the proposition is a disguised attempt to develop a permanent artisan class, to fit a part of our boys for "that state of life unto which it shall please God to call" them, and to make it pretty certain that they shall stay there. Nothing could be more baseless than such an idea. It is quite sure that this feature in education would incline boys to be *good* mechanics, and not mere bunglers; and that this training, if it should become general, would tend to increase the total working force of the country, even though it did not increase the number of mechanics. But it is far from true that this training would be of benefit only to him who is to be an artisan. Even the clergyman or the editor would be the better as a man and in his profession for a practical knowledge of the proper use of those wonderful tools, the human hands. There is no man, in any profession, who would not be better able to do his usual work, at times, for just this training. It is, above most others, a training whose benefits are not restricted to a special class, but are bestowed upon all.

The argument assumes, also, the odd position that the better artisans are the most likely to remain permanently in the artisan class. There are too many examples to the contrary to make it necessary to do more than state this position. So far as the proposition for manual training touches the "special class" which has been spoken of, it aims only to clear the way of the artisan's children to any position which he may think higher and better for them. But the essence of the proposition has no such restricted aim. It aims to help eradicate that pestilent feeling of contempt for work which is the bane of this generation. Better that the rich man's son should be compelled to work with his hands for a year or two than that he should grow up to feel, and to impress upon others, that work is degrading. Better that the sons of our men of moderate means should learn that there is a science and beauty in manual labor than that they should come to believe that there are easier ways of getting a dollar than by working for it. Better that we should have manual training in our public schools than that all our public-school boys should want to begin life as clerks in brokers' offices, or in any position which is not smirched with manual labor. That feature which has made our country what it is, work and the love of it, is at stake, and the new proposition is a means of saving it.

The only other objection which has been seriously offered caters to one of the worst errors of our modern labor organizations. They aim to restrict the number of apprentices, in order to "make more work" for those already in the trade. What will they say when they see apprentices of a higher grade of intelligence and ability swarming out of our public schools? In answer, it should be said frankly and distinctly that the effect which is implied would be one of the most weighty benefits of the new system. Suppose the lawyers should form an organization for the purpose of

* See "Open Letters," in this number.

abolishing all the law-schools, restricting the number of students in each office, and so "making more work" for the present number of lawyers: would that accomplish their object? They know that the higher the standard of law in a country is, the more confidence the people feel in the lawyers, and that this is the proper way to "make more work" for all of them; and they wisely multiply law-schools and aim to increase their efficiency. Is it wiser for plumbers, for example, to fight against manual training? Or rather should they encourage it, better the grade of their apprentices and their work, and thus gain a public confidence in their capacity which is very far from existing now? Work is "made" by raising the character of the work. Mr. Carroll D. Wright has most acutely pointed out the fact that the introduction of nickel-plating into the manufacture of stoves in this country has "made work" for 30,000 additional operatives, and crowded no one out. It is in this way that thorough manual training is to help the workingman in the future, by making possible branches of work which did not exist before.

A proposition to add fully developed trade-schools to our common-school system is open to objections which do not apply to that of simple manual training. The latter would do no more than show the pupil, by a practical test which is clear to his own apprehension, whether he has an aptitude for such work, and give him an insight into the principles of symmetry and order which underlie it. If there is any valid objection to giving it a place in the State's scheme of common-school education it should be considered at once, for the support of the manual-training proposition is a growing one.

A Southern Man Ahead of his Time.

On page 435 of the present number of this magazine, the authors of the Lincoln history have referred briefly to the opposition made to disunion in South Carolina by James Louis Petigru in 1861, and on page 432 is given a photograph of his bust.

Something in the character of the independent, far-seeing man, and in the peculiarly generous appreciation of his worth displayed by his fellow-citizens, calls for further attention. Clear-eyed and just, he rarely failed to see and follow the eternal truth that underlies all prejudice, education, and passion. In his private practice, in the courts, in his personal relations to all men, in the nullification troubles in South Carolina, where nothing but his efforts and those of James Hamilton kept the State from civil war, this was always shown. But the time came, when, foremost man of the State as he was, he had no power to stem the flood of passion setting in toward disunion. Not for a moment then did he lose his keen insight nor the firm hand with which he held himself in check. He was not an abolitionist, and he had no feeling against slavery; but he had no hope or faith in revolution. He felt that it was wrong in policy and false in principle. He put no trust in the prevailing faith of the Southern people, that a State would be permitted to secede in peace. He saw that secession would put into the hands of the North a power over the South and slavery that nothing else could give,— a power to gain the aid and sympathy of the whole world, to make war on Southern soil, and to free the slave. If the South were alarmed at the possibilities of danger in a raid like that of John Brown's, what remedy, he asked, could be gained by rushing into war with the wealthy and populous North — with the civilized world? He saw in secession ambition and wounded vanity; he saw anarchy and civil war; he saw the abolitionist triumphant; he saw the South devastated; he saw division, and sorrow, and ruin; he saw crime. On the other hand, he felt that there was nothing to fear in Lincoln's election. He recognized the fact that the North was outstripping the South in numbers, and wisely counseled the South to yield her political supremacy with good grace. He discerned many reasons for Lincoln's success, but in none read danger. Time, he claimed, would right all wrongs, and avert all disaster. But his arguments were less than useless: secession came; war followed. For the rest of his life he was never again in sympathy with the purposes of his people, though he yielded to their decision, and held common cause in their sorrow. He was a solitary scholar in a world where all others were fighting men. He went his way, and his people went theirs. Whenever their paths crossed he was unfailing in courtesy and kindness; but he never concealed his regret for their action, nor his fear of the ultimate downfall of their hopes.

On the part of the people of South Carolina there was displayed a more generous tolerance of his obnoxious views than would seem possible. Even during the tumult of secession they elected him to their highest salary and most important trust — to codify the State laws. In spite of the satire and ridicule that he hurled at them, they continued to elect him until the work was done. His freedom of speech never destroyed their confidence in him, nor lessened their magnanimity; neither did he restrain it to gain their favor. The case can have few parallels in the history of any country.

The fame of such a man, renowned lawyer and great private citizen, is necessarily fleeting; it is forgotten when the generation in which he lived has passed away. That there might remain some slight token of one who was great in many ways, and, above all, great in his faith in the indissolubility of the Union, it was a fitting incident in the centennial celebration of Charleston, in 1883, that Mayor William A. Courtenay brought about by presenting to the city a bust of James Louis Petigru. It ought to stand to the city as a perpetual reminder of the magnanimity of its people and the faith in the Union which its great citizen held in an hour when apparent self-interest and patriotism and right all cried out against his firm belief. It is a token of the renewed love of his fellow-citizens for our common country; it is a sign that the past is utterly past, and that the same future lies before us all.

Our Daily Bread.

In commenting upon a paper in which this subject was presented by Professor Atwater at the meeting, last August, of the American Association for the Advancement of Science, the "New York Times" speaks as follows:

"It is much to be wished that his conclusions might be presented to the people who most need them, and in a form that they could understand and would accept. These people are manual workmen, both skilled

mechanics and common laborers. Their extravagance in food is reckless and is one important cause why, with the high rates of wages that prevail here, workmen save so little more than in countries where wages are lower and where food is dearer. . . . If the facts could be brought to the knowledge of the spendthrifts who most need them, a very great work could be done. It is one which the priests of the Roman Catholic Church have peculiar facilities for doing, and they would doubtless undertake it if they appreciated its importance."

These suggestions are excellent. But why not other clergymen as well? The people of limited means are not all Catholics, nor do Protestant ministers fail to appreciate the need of caring for the material as well as the spiritual wants of their flocks. They, too, are anxious for the great mass of humanity outside the churches, and know that such means as these are among the most efficient for getting the multitudes who ignore the Church to feel that it and its spiritual ministrations are for them. Is it not a matter for all who are intent upon bringing New Testament Christianity more and more into the affairs of daily life and using it to elevate the masses of mankind? Christianity and the Church are the great agents of the world's charity and its "higher education." In different ages these functions have necessarily been exercised by the Church in different ways. One way which the present phase of material and intellectual progress makes essential is the application of the teachings of science to the material, and hence the moral, elevation of men. Not that churches should set up cooking-schools or clergymen become experts in chemistry, but that the rightfulness of economy should be taught, its simpler principles explained, and people encouraged to think and learn about them, and helped to use them. The members of the medical profession, too, might aid greatly, as indeed they do. They see the practical needs and can, in their daily intercourse with the families they visit, suggest much that is helpful.

Of course the facts of food-economy must be got into popular shape, but this is being done. It is only in these later days that science is getting hold of them. In the series of articles now appearing in THE CENTURY it has been necessary to devote many pages to explanations of the fundamental principles of nutrition and the experiments upon which they are based, because much that is important has not yet been put into English: even the latest text-books do not contain these things. Further articles, like the one in the present number, will give practical details and their application in the directions of domestic and social economy, health, and morals. In due time simple manuals and other publications will doubtless become common, and the subject thus be placed more fully before the people.

The industrial schools are taking up the chemical, physiological, and economic phases of the subject. There is a demand that instruction in this, as in other branches of applied science, be given to the pupils of the public schools, and the first steps in this direction have already been taken in some cities.

But one great difficulty is the lack of information. More research is needed. The work of some of our boards of health and labor bureaus is beginning to tell. The agricultural experiment stations established and to be established in each State and Territory of the Union, by an Act of the last Congress, will acquire information of value. But much that is pressingly demanded requires peculiar facilities for its production, such as are found only in the laboratories and libraries of the great educational institutions, and is dependent for its best development upon the intellectual attrition and the opportunities for continuous study which such establishments alone can offer. In the European universities these facilities are provided by the Government; with us they depend upon private munificence. The investigations which Professor Atwater has told of in THE CENTURY as carried on in this country have been largely dependent upon private aid. Those in which he has been engaged at Wesleyan University would have been impossible without it.

The endowment of research is one of the most useful forms of public benefaction. Here is a way in which it may be made extremely useful. A few hundreds of dollars will make a valuable piece of investigation, a few thousands, an important research, possible. A laboratory built and equipped for a sum which many a man invests in a house at a watering-place, or a pleasure yacht, and an endowment that would yield a revenue equal to the annual cost of the house or yacht, would bring results of untold value to the world.

A gratifying illustration of the progress in this direction is being shown by one of our popular scientific journals. "Science," taking up the subject as treated in the columns of THE CENTURY, is instituting an inquiry into the subject of the wastefulness in the purchase and use of food by wage-workers and the poor. The results can hardly fail to be of great value.

America is not Russia.

WE do not see how anything could more clearly demonstrate the folly and crime of an anarchical movement in America than the papers by Mr. Kennan, on the condition of affairs in the Russian Empire, now being published in THE CENTURY.

These criticisms proceed from a country whose relations with Russia are particularly cordial. They are printed in a periodical where "The Life of Peter the Great," published as a two-years' serial, did much to increase the amicable interest of Americans in the affairs of Russia, and they are from a hand that has shown conspicuously its friendliness toward the Russian Government.

Without favoring or defending the methods of the Russian revolutionists, Mr. Kennan shows that the violence which individuals, or groups of individuals, are guilty of in Russia, is a natural result of the absence of civil liberty. The Russian Liberals (not revolutionists) demand — what? The readers of the November CENTURY have seen the moderation of their demand: they desire freedom of speech, freedom of the press, security for personal rights, and a constitutional form of government. America, above all nations of the world, means these very things. Anarchy, and the dastardly methods of the anarchist, have no slightest color of excuse to exist in a free country. And, thank Heaven! America is continually making it evident that a free country is abundantly adapted to the defense of its own freedom; that is to say, of its own existence.

OPEN LETTERS.

Industrial Training in the Public Schools.

PHILADELPHIA.

IT gives me great pleasure to state that the efforts made to introduce industrial training into the public schools of Philadelphia have been attended with the most unqualified success. The provisions thus far made for carrying it into operation are as follows:

1. *The Kindergarten.* This feature of our school system is of recent origin, and is as yet imperfectly organized. It is our purpose, however, ultimately to make the Kindergarten the foundation of all the education given in the public schools of the city.

2. *Instruction in Sewing to Girls.* All the girls above the first two years of the school course receive systematic instruction in sewing. The classes now number about twenty-five thousand girls. Our experience has been that from the age of nine years it is possible for girls to make rapid progress in the elementary processes of sewing, and, as they advance, to make practical application of these processes to the making of garments. The sewing lessons do not interfere in the slightest with the other work of the schools. They afford a pleasant rest to the children, who seem greatly to enjoy the hour devoted to this occupation. My opinion is that there is a good deal of educational value in the sewing work, over and above the practical application which will be made of it in real life.

3. *Industrial Art Training.* A school is maintained for the children attending the grammar schools, in which instruction is given in free-hand drawing, modeling in clay, wood-carving, and simple joinery work. This school is open to both boys and girls, who receive two hours' instruction per week. The training has a marked influence upon the productive faculties of the pupils, and the results prove how strong the artistic tendency is in the general average of children.

4. *The Manual Training School.* This is the chief feature of our industrial education. It is a school to which boys who have finished the grammar-school course are admitted upon examination. In addition to a good secondary education in the English language, history, mathematics, and science, and a thorough course in drawing, instruction is given in the nature and use of the fundamental tools, and in their application to the chief materials used in the industries of the world. The success of this school has exceeded our highest anticipations. The manual training has a marked influence upon the mental and moral character of the boys — producing a thoroughness and earnestness in every task which is quite unusual among boys of their age. The average age of the pupils when admitted is about fifteen years. The course of instruction occupies three years.

It will thus be seen that in Philadelphia we have made a beginning in several directions with industrial, or as I prefer to call it, manual, training. The problem remaining to be solved is such an extension and coördination of these elements as shall furnish a continuous and progressive course of manual training all along the line of the pupils' education.

It is scarcely three years since these efforts to graft industrial training on the public schools of the city was begun, but it has already won the confidence of the community, and there is a growing demand for its further extension throughout the school system. I believe that the incorporation of industrial training into the public schools of this country is only a question of time. The misunderstanding as to its purposes arises chiefly among those who have no personal knowledge of its practical operation and management. My conviction is that before a great while it will be universally accepted as the greatest advance which has been made in the public education of the United States for half a century.

Yours very truly,

James MacAlister,
Superintendent Public Schools, Philadelphia, Pa.

NEW HAVEN.

IN trying to incorporate industrial training as a part of our public-school course, we have avoided attempting anything that would interfere materially with work already established. Plain sewing has been introduced in all intermediate schools, much to the satisfaction of both parents and children. Although only one hour per week is assigned to this branch, considerable skill has been acquired, and very neat specimens of needlework are now to be seen in many schools.

An attempt to adapt the occupations of the Kindergarten to primary schools has been measurably successful. This "busy work," so called, is intended to train the hand and the eye, assist the teaching of reading, writing, and numbers, employ the activities of children in a pleasant way, and lay the foundation for drawing and higher manual work.

During the past year, Prang's models for teaching form have been introduced, with exercises in clay modeling. This furnishes the best basis for industrial drawing, which is now a part of our curriculum.

Early in the year a manual-training shop, capable of accommodating twenty-four boys at once, was opened, and ten classes, selected from the several grammar schools of the city, have received two hours' instruction each week. The boys thus instructed have, as a rule, been full of interest, and with about thirty lessons have become fairly proficient in the use of tools.

The effect of these several forms of industrial effort upon teaching generally is good. The value of dealing with things rather than with words is becoming an axiom in all our schools.

Very truly yours,

S. T. Dutton,
Superintendent Public Schools, New Haven, Conn.

AN ADVERSE VIEW.

THE public-school system of this country has developed steadily for more than two and a half centuries. It has been modified and improved from time to time, and adapted to new conditions and different localities.

Consequently we have a highly intelligent citizenship, great business activity, and a high degree of inventive skill by which machinery is made to do the work of man and to cheapen every product which his need requires.

Now these very results of our education are so much admired that they are used as an argument against the system which produced them. Mental training has resulted in great industrial progress: and now we are exhorted to abandon that training and work directly for industrial progress. Industrial education is the popular fetich; and if any one tries to advocate anything else he is suppressed by the old cry of "Great is Diana of the Ephesians."

Technical schools undoubtedly are in demand; and they are essential and highly useful. Special industrial schools are also to be encouraged, and they may be beneficial. But the public schools should not be subverted or overthrown in order to make a place for such schools.

In the first place, a distinct phase of this kind of education was begun more than fifty years ago, and it proved a dead failure. It has been my fortune to be connected with three institutions of this kind, in the States of Maine and Massachusetts, where were to be seen the decaying ruins of a system as promising to its advocates as any which is now proposed.

In the second place there is a fallacy in the claim that manual training in school is necessary in order to produce intellectual honesty; that accuracy of thought and statement can not be secured without muscular work in the production of material things; that geometry, for example, can not be learned thoroughly without cutting out blocks, nor astronomy without going up in a balloon to see the stars; — for this is what the advocates of manual training claim when their claim is reduced to its bald and concrete form. In the third place there is a materialistic tendency, in the present advocacy of manual training as an adjunct of public-school education, which is destructive of that virile quality of thought and mental power which it is the province of education to beget. Within a fortnight one of these advocates is reported to have said: "The important thing to keep before a boy's mind in school is, 'How will all this help me in getting a living?'"— as if the American people need to be stimulated in money-getting; and as if the high object of education is the almighty dollar!

Finally, when the public-school system undertakes to do everything for a pupil; to train his mind to clear and vigorous thinking; to develop all his physical powers and teach him a trade by which he may earn a livelihood; and to train his moral nature so that he may have a clear passport to heaven, then this system will fall to pieces of its own weight. For ours is not a paternal government whose design is to care for each individual, but a democracy in which each has not only to take care of himself but to help also in making regulations for all; and till the family relation is overthrown in the onward "progress" of our age, something must be left to parents; and it can best be left there in spite of the protestations of those self-constituted philanthropists who so much desire to educate every child for his "sphere in life."

A. P. Marble,
Superintendent Public Schools, Worcester, Mass.

Industrial Training in the New York Catholic Protectory.

THE New York Catholic Protectory is a remarkable instance of a reformatory in which industrial training is carried on to an extent unsurpassed by that of any similar institution in the world. The work and methods of the Protectory are but little known to the people of the State, although it is annually visited by many European educators and economists, and has been repeatedly noticed and extolled in the columns of such papers as the London "Times," "Standard," "Chronicle," "Post," and "Pall Mall Gazette." The superiority and excellence of its industrial training consist chiefly in the variety of trades taught, thus affording a scope for differing tastes and aptitude; the thorough, efficient nature of the instruction; the size and superior appointments of the shops; and the high standard attained as workmen by boys trained there. The following trades are taught: printing, electrotyping, silk-weaving, shoemaking, tailoring, chair-making, blacksmithing, carpentry; the business of machinists, wheelwrights, bakers, and practical farming and gardening. The girls, who are under the charge of the Sisters of Charity, are instructed in sewing, embroidery, kid-glove making, dress and shirt making. Last year the proceeds of the sewing and glove-making departments alone amounted to $11,031.32.

Mental and manual training are combined in the most admirable manner, the time of the children being about equally divided between the school-room and the work-shop, with ample opportunities for recreation. From October until May evening classes are formed in free-hand, mechanical, and architectural drawing, and in designing and modeling. In all the trades the precision and taste which the habit of drawing gives are clearly perceptible. The children of the Junior Department, who are kept entirely separate from the others, have their own work-shops, where, for a few hours daily, they are initiated into the elementary principles of trade instruction, as a preparation for the real shop-work of the Senior Department. Every boy in the Protectory is taught some trade in its entirety, and if, for any reason, he leaves before finishing his particular trade, he is at least thoroughly grounded in an elementary knowledge of it, and can readily find employment outside.

The various work-shops are each under the supervision of one of the Christian Brothers, who watches over the manners and morals of the boys, and maintains order and discipline; but the trade instruction is, in every case, given by skilled, trained mechanics, who are paid liberal salaries to act as instructors and foremen to the youthful workmen. The superior quality of the work done by very young children proves conclusively what may be done by judicious, intelligent training. Take, for example, the shoe-shop, which employs 260 boys and turns out over 300 pairs of shoes a day; or the printing-office, which does the entire work of two large publishing houses. The average age of the boys is twelve years. At the New Orleans Exhibition the work of the Protectory attracted universal attention, as it had done the year before at the London International Exhibition. Among the exhibits were finely woven silks, engravings, exquisite carvings and designs, beautiful specimens of printing, electrotyping, embroidery and sewing, well-made and really finished shoes,

suits of clothing, and gloves. The work in wood was well represented by tables, chairs, and excellent examples of carpentry.

The production of work for a regular market by the Protectory is also an important factor in promoting the efficiency and value of the industrial training. Thus, in filling an order for a certain amount of work to be ready at a stated time, many practical questions must be taken into consideration, a knowledge of which is of the highest value to the workman. So a boy is taught not only the execution of the work, but the time required for its performance; the cost of production; the quality and nature of materials; and many other practical matters which can only be learned by the production of work destined for actual use.

Boys trained in the shops of the Protectory are eagerly sought as workmen by the leading manufacturers, and many now fill positions as foremen and superintendents in large establishments in New York and neighboring cities.

Ida M. Van Etten.

The American Book.

THERE is one thing which, more than any other, would nationalize our literature. It is a question of a little common honesty — a matter of a little every-day sort of justice; and it would be twice blessed in the giving and in the receiving. We need a broadening of our copyright laws, a better protection for ideal and intellectual property, which is, after all, a more natural property than lands and corporeal hereditaments. It is a case where the ideal is most real; but it is also a property most liable to theft, most easily stolen, and least protected of all property.

It is gravely urged, in opposition to copyright legislation, that it would be wrong to force people to pay for what they can now have free — that to allow copyright to foreigners would be to pay an enormous tax for what we can have for the taking. Shoes and shirts are an enormous tax paid to decency and comfort. Shall we, therefore, in order to evade the tax, take the wares of the shoemaker and the tailor without compensation? It is the argument of Captain Kidd and the banditti. Proudhon said, "Property is robbery." America says, by her attitude on the copyright question, property in brains is robbery, if the brains are under a foreign scalp. A foreign author has no rights an American is bound to respect, and because of this theory, and this only, the converse is true in fact — that an American author has no rights in the hands of a foreigner.

We bear with composure the charge, and the fact, of being robbers in the fields of literature, but our blood runs cold at the thought of the torch of the mob applied to the tinder of a factory, or at the vision of a piece of gas-pipe, charged with dynamite, flung into the streets of a great city. We can not afford to suspend the truest maxims of our freedom at the call of interest or expediency. We can not allow our love of dollars to overshadow the future and forge fetters for our principles, nor let communism of brains emasculate our literature and make us a nation of literary beggars. There is something better than cheapness. The smuggler's goods are cheap. Is the smuggler, therefore, a great reformer and a public benefactor? The people must read, they must educate; but to do these things shall we steal or smuggle? James Russell Lowell says, "There is one thing better than a cheap book, and that is a book honestly come by." The argument that cheapness is a national blessing largely resolves itself into an argument that is individual and selfish. If it is of any force as against international copyright, let us carry it out to its logical sequence and abolish home copyright as well, and then sit down and forecast the result.

It is true that it is the duty of the State to legislate primarily in the interests of its own citizens. But "there is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty." American progress can not be built up on cheapness alone. We sometimes buy cheap and ask no questions, glad that our wants and our purses so nearly agree; but there is, after all, a universal sentiment of honesty that is always glad to see one's neighbor come into his own. And it would seem to be the simplest possible proposition, that if one has made anything, whether a baby-jumper, or a book that is sufficiently valued by his fellow-men to be used by them, he has an ownership in his work, and is fairly entitled to a profit therefrom. Justice is better than cheapness, honesty is more to be desired than culture, righteousness is higher than expediency.

But expediency seems to be the highest reach of international law, and, abandoning any higher principle, it is full time for America to get into line with other states and nations, and amend her copyright laws on the ground of policy.

Competition is desirable, but our copyright laws put us beyond competition, and, as we have seen, into the range of pillage. Commercial monopoly tends to robbery. Mercantile competition is a matter of public policy. But an honest merchant can not compete with the pirate and the smuggler. Piracy and smuggling under governmental protection would soon destroy all home market and home manufacture, and home honesty as well. It is a regular "Stand and deliver" to all fair trade. This is just what the United States Government is doing in literary matters. It puts the American book in competition with the book for whose production nothing is paid. It is not "Chinese cheap labor," but stolen and absolutely unpaid labor!

If the alien's book is to be forever the cheapest book, it will be the book most read. American thought and action fed on foreign diet will, in time, be but an echo of foreign types. If we are to promote a national culture, we must keep abreast of our neighbors in all that tends to the advancement of a sound national literature. The state ought to have a literature in sympathy with it, for literature is one of the strongest forces in shaping social life and national character.

It is argued against international copyright that it will increase the price of books, and that cheap reading is a large factor in cheap education. Cheap reading is, perhaps, desirable, and cheap education may be a blessing, but things may sometimes be too cheap. I think the facts would be, that new foreign books would be higher in price, by reason of copyright, and new American books would be cheaper, by reason of a wider market. There is a large class of books which would not be affected by copyright, for it would not be retroactive. Year after year the books that age can

not wither nor custom stale — the books that are "immortalities" — are dropping into the common fund by the expiration of the "limited period." Let us take these spoils of time freely and without price, under the policy of all governments, but in all justice and good conscience let us recompense the author for his work, under whatsoever skies he writes, for the statute time.

The United States, whose literature owes more to the world than that of any other nation, is, in the matter of intellectual property, behind the age. She wraps the mantle of selfishness about her and legislates for her own family only, saying to her citizens, "Thou shalt not rob thine own brother, but if there be a stranger within thy gates, thou mayest plunder him with a high hand and a free conscience." It is one against the world, and her plunder weakens her capacity for producing work that is good at home, or work that the world will even steal. A governmental policy in copyright, that would grant common rights to others, would secure for ourselves rights which we need, and rights which would largely help us to higher standards, purer taste, and added nationality in our literature.

John E. Cleland.

INDIANAPOLIS, IND.

The Piedmont Exposition, Atlanta.

COUNTY and State fairs are locally advantageous whenever they are intelligently conducted. If planned so as to attract wide attention and induce general interest, they always arouse a spirited rivalry among the contestants for awards of merit, and such competitive efforts necessarily result in material benefit to all branches of industry and all departments of husbandry that are represented. Likewise inter-State and national expositions, when successfully managed, are proportionately beneficial throughout the wider fields of their influence. They are all eye-openers to the possibilities of energy, incentives to enterprise, and powerful factors in the creation of thrift and prosperity.

In these respects it is impossible to estimate what they have done for the South within the last ten years. Probably all of the others together are not equal in the value of their effect to the Piedmont Exposition, which occurred at Atlanta, Ga., about three months ago. It is now sufficiently a thing of the past to be reviewed calmly, with some chance of determining its practical results and substantial benefits.

It was only 104 days in course of preparation, and it lasted just two weeks. The fair-grounds, consisting of 197 acres, were farm-lands in cultivation when the Exposition was organized; and yet 104 days from that time, when the gates of the great fair were formally thrown open, all the necessary buildings and other arrangements, including an excellent race-track, stood in such admirable readiness that they seemed no less than the creditable result of many months of laborious preparation.

The Exposition itself was undeniably higher in its aim, wider in its scope, greater in its magnitude, and fuller in its success than any affair of the kind which has ever been held in the South.

If asked to express in one word the best result and most invaluable benefit of the Piedmont Exposition, I should say — revelation! Revelation, deep and wide, of a common interest in our common country; revelation of local pride without the slightest disposition to insist upon the perpetuation of sectional lines between the States; revelation of a sincere desire for the profitable development of every resource of our broad land; revelation of that true patriotism which should make Massachusetts rejoice in the prosperity of Georgia's cotton-mills, and make Pennsylvania glad at Alabama's mineral wealth; revelation of the truth that we are one people, with no violently conflicting interests, no ground for jealous ambitions, and no cause for internal dissensions, but bound together by a union of purposes, a sympathy in aspirations, and an indestructible fellowship in destiny. These were the revelations of inter-State significance.

Locally the Piedmont Exposition was a revelation of marvelous excellence in all varieties of manufacturing industry; of surprising advance in every phase of mercantile enterprise; of vast improvement in stock and cattle-breeding; of admirable progress in methods of farming; and of an inexhaustible wealth in mineral and other natural resources.

It showed too that the Southern people "have pulled themselves together," and so energized their ambitions as to insure a rapid march in all ways of material development and substantial prosperity. In this spirit of revived hope they are greatly sustained by the constant realization of encouragement from all the other branches of our great family of States.

It can not fairly be claimed that the immense crowd which gathered in Atlanta during the Exposition was all attracted by the exhibition of the Piedmont resources. It must be admitted that the President and his wife were incalculably strong magnets. No doubt thousands went to Atlanta to see them who never approached the Exposition grounds. But the crowd was great enough to stand a very liberal allowance for the hero-worshiping element, and still leave a balance altogether ample to attest a deep and wide interest in the purposes and success of the Exposition itself.

The visitors numbered more than twice as many as the resident population. I mean it as no complaint against the provision which Atlanta made for her guests, but only as evidence of how the city was packed do I mention the fact that several churches and other public buildings were thrown open as sleeping-houses for strangers who were without shelter. I saw at least five hundred men, women, and children sleeping on their trunks in the Union Depot; and the cold marble steps of the Kimball House, for three flights up, were every night literally packed with men who dropped down on them in absolute exhaustion and slept.

If most of these people suffered all these discomforts merely for a glimpse of the President, it argues powerfully the Southern interest in national affairs. If, on the other hand, even a fair proportion of them were simply in attendance upon the Exposition, it proves a lively awakening of interest in the vast wealth and infinite resources of the Piedmont region. The fair was the first of its kind in the South which I ever knew to be profitable. The total cost was $199,530. The total receipts from all sources were $209,096. Thus is shown a net profit of $9566. In this calculation the permanent buildings and the grounds are put down in the

receipts at their cost, and counted as property on hand fully worth in cash the estimated value.

I think possibly the most astounding fact in connection with the affair was its freedom from serious casualties. There was but one accident of any sort reported during the two weeks; a young boy working around the machinery in one of the main buildings was caught in a wheel and had his leg broken.

When it is remembered that there are eight railroads running into Atlanta, and that for ten days extra schedules were operated over all of them, and that during that time no train ever came into or went out of the town that was not packed to its utmost capacity, the escape from accidents seems almost miraculous.

The mineral exhibit alone would have justified the total cost of the Exposition. With one display in this department there was a casket of jewels (in the rough) found in North Carolina, which an expert valued at over $30,000. But I dare not trust myself to specify even the most conspicuous exhibits. The effect of the Exposition will be felt far beyond the bounds of the region it embraced, and its results will be manifested in endless phases of energy and usefulness. It is only just to say that to Henry W. Grady is due the credit for the conception of this important enterprise, as well as the chief praise for its successful fulfillment.

Marion J. Verdery.

Hawthorne's Loyalty.

AN autograph letter of Hawthorne, dated July 20th, 1863, has recently been brought to an auction sale, but without the knowledge or consent of the person to whom it was addressed.

Its publication touched me deeply, I confess, especially as Hawthorne indicates, in the letter itself, the confidence in which it was written. He says:

"I do not write (if you will please to observe) for my letter to be read by others, for this is the first time that I have written down ideas which exist in a gaseous state in my mind; and perhaps they might define themselves rather differently on another attempt to condense them."

The publication of this letter has led to harsh and bitter comments, and to inferences entirely at variance with Hawthorne's opinions as expressed to me at different periods during the war, in our various conversations and in his letters herewith printed. There is in the letter spoken of intrinsic evidence that all its statements were not intended to be taken literally. For instance (in controverting the charge that Pierce was a traitor), Hawthorne exclaims, "A traitor! Why, he is the only loyal man in the country, North or South." Again, he says, in a jocular strain to the lady addressed, "I offer you the nook in our garret which Mary contrived as a hiding-place for Mr. Sanborn."

Remarks like these show that the letter was written in a careless manner, and ought not, all, to be taken seriously.

It should be observed that Hawthorne did not — in this letter or elsewhere — speak of the Peace Democrats as if he were one of them; and I believe there is no proof whatever that he could fairly be so classed.

Did he at any time utter a wish that the "rebels" might succeed? Did he ever rejoice in any victory of theirs? Did he praise resistance to the military draft? or discourage Union enlistments or the granting of liberal military supplies? Did he, in any case, send messages to the enemy or encourage them to persevere in rebellion? Did he express respect or esteem for the Southern people while at war with us? If he did none of these things, but, on the contrary, always approved and applauded the vigorous prosecution of the war after it had broken out, then there is no justice in calling him a Peace Democrat. While Hawthorne made no pretension to the character of a statesman, he felt deeply the importance of the national interests at stake; and some of his expressed views were wise and far-reaching. Certainly he was an ardent well-wisher for the success of the North.

Speculating in this letter upon what the rebels might do in a certain contingency, he gives it as his own opinion that "the best thing possible, as far as I can see, is to effect a separation of the Union, giving us the west bank of the Mississippi and a boundary line affording us as much Southern soil as we can hope to digest in another century."

Looking at the condition of the country to-day after the successful termination of the war and the settlement of our national difficulties, it should not be forgotten that — during the struggle — there were times when the most earnest lovers of the Union contemplated in sadness the probability of a division of the States, whose interests were then so widely different.

Letters from distinguished Republican statesmen and loyal editors are in existence which show that under the terrible financial, political, and military strain to which the North was subjected, they seriously considered the prospect of being obliged — especially in case of foreign intervention — to accede to some such settlement of the contest as the one suggested by Hawthorne in the letter in question.

Many thoughtful men now living, who were of mature age at the time of the war, will remember that they themselves, though loyal to the core, from time to time had doubts and fears as to the outcome of the struggle, and speculated as to the terms of settlement most advantageous to the North that could be obtained. Nor was it cowardly or disloyal, under the trying circumstances continually occurring, for any man — while doing his utmost for the success of our cause — to think and talk in confidence to his friends of the contingency of separation from the "diseased members," as Hawthorne called them.

In the dark days of the war (and they were frequent almost to its end) many true men echoed the opinion that it would be wise to "let our erring sisters go." But, happily, a stronger and wiser policy prevailed. With these remarks I submit the following extracts from letters of Hawthorne to myself, which show his deliberate judgment — expressed at various times — upon the subject of the War of the Rebellion:

CONCORD, May 26th, 1861.

DEAR BRIDGE: . . . The war, strange to say, has had a beneficial effect upon my spirits, which were flagging wofully before it broke out. But it was delightful to share in the heroic sentiment of the time and to feel that I had a country — a consciousness which seemed to make me young again. One thing, as regards this matter, I regret, and one thing I am glad of. The regretable thing is that I am too old to shoulder a musket myself, and the joyful thing is that Julian is too young. He drills constantly with a company of lads, and means to enlist as soon as he reaches the minimum age; but I trust

we shall be either victorious or vanquished before that time.

Meantime (though I approve the war as much as any man), I don't quite understand what we are fighting for, or what definite result can be expected. If we pummel the South ever so hard, they will love us none the better for it; and, even if we subjugate them, our next step should be to cut them adrift. If we are fighting for the annihilation of slavery, to be sure, it may be a wise object, and offers a tangible result, and the only one consistent with a future union between North and South. A continuance of the war would soon make this plain to us; and we should see the expediency of preparing our black brethren for future citizenship by allowing them to fight for their own liberties, and educating them through heroic influences. Whatever happens next, I must say that I rejoice that the old Union is smashed. We never were one people, and never really had a country since the Constitution was formed.

CONCORD, October 12th, 1861.

DEAR BRIDGE: I am glad you take such a hopeful view of our national projects, so far as regards the war; but my own opinion is that no nation ever came safe and sound through such a confounded difficulty as this of ours. For my own part I don't hope (nor indeed wish) to see the Union restored as it was. Amputation seems to me much the better plan; and all we ought to fight for is the liberty of selecting the point where our diseased members shall be left off. I would fight to the death for the Northern Slave States, and let the rest go. I am glad Mrs. Bridge has had a little rest from Washington life, and heartily wish you could have been with her.

CONCORD, February 13th, 1862.

DEAR BRIDGE: . . . Frank Pierce came here and spent a night, a week or two since, and we mingled our condolements for the state of the country. Pierce is truly patriotic, and thinks there is nothing left for us but to fight it out; but I should be sorry to take his opinion implicitly as regards our chances for the future. He is bigoted to the Union, and sees nothing but ruin without it; whereas I (if we can only put the boundry far enough South) should not much regret an ultimate separation. A few weeks will decide how this is to be; for only a powerful Union feeling shall be developed by the military successes that seem to be setting in, and we ought to turn our attention to the best mode of resolving ourselves into two nations.

It would be too great an absurdity to spend all our Northern strength for the next generation in holding on to a people who insist upon being let loose. If we do hold them, I should think Sumner's territorial plan the best way!

P. S. I ought to thank you for a shaded map of Negrodom which you sent me a little while ago. What a terrible amount of trouble and expense in washing that sheet white! And, after all, I am afraid we shall only variegate it with blood and dirt. [The map referred to was one showing the comparative destiny of the slave population of the several Southern States.]

On his return home, after a visit to me in Washington, he wrote:

CONCORD, April 15th, 1862.

DEAR BRIDGE: Yours inclosing two photographs of Professor Henry's received.

I reached home safe and sound on Thursday. It is a pity I did not wait one day longer, so as to have shared in the joyful excitement about the Pittsburg victory and the taking of Island Number Ten.

In a letter to me, dated April 19th, 1862, he wrote:

"I feel a tremendous anxiety about our affairs at Yorktown. It will not surprise me if we come to grief."

It may be pertinent to add that, just after the first battle of Bull Run, Hawthorne says, in his answer to a dinner invitation from James Russell Lowell, quoted by Lathrop in his "Study of Hawthorne":

"Speaking of dinner, last evening's news will dull the edge of many a Northern appetite; but if it puts all of us into the same grim and bloody humor that it does me, the South had better have suffered ten defeats than won this victory."

From an unbroken friendship beginning with our college days and ending only with his life, I believe that I enjoyed Hawthorne's confidence and understood his personal and political character as thoroughly as any one, and I should hold myself false to the memory of my friend if I did not give my testimony, and furnish the proofs in my possession, of his loyalty to the North, which has recently, and most unfairly, been called in question.

Horatio Bridge,
U. S. Navy.

"THE MOORINGS," ATHENS, PA.

Corrections.

ON page 77 of the November CENTURY, a picture of Gov. Israel Washburn of Maine appeared over the title of his brother E. B. Washburne. A portrait of the latter will appear in an early part of the Lincoln history.

ON page 134 of the same number, a picture of the Washington Monument in the Capitol Square, Richmond, was in a part of the edition incorrectly called the Jackson Monument.

BRIC-À-BRAC.

Recollections of Grant.

"I KNEW him well," the old man said.
"We were together in fight:
I with the Left when the charge was led—
The General of course had the Right.

I stood by his side," the old man said,
"When a bullet whizzed down the line:
Scarce forty feet from the General's head—
And but little farther from mine.

Did I blench at the storm?" the old man said,
"Ah, sir, the bravest may;
And from childhood up I 've been always afraid
Of finding myself in the way."

"Shall I write thee down, O hero," I said,
"As a friend of the fallen chief,
And blazon thy name beside that of the dead
In a glorious alto-relief?"

"Nay, his friends were many," the old man said,
"A greater distinction I want—
Just say I 'm the one who when all was done
Wrote no 'Recollections of Grant!'"

Charles Henry Webb.

THE FOREIGNER TAKING AMERICAN NOTES.

WAITER: "Yaas, sir; dey is two branches of our soldiery. What you see now is got up jes' fo' times o' peace and is styled malicious — what we call de raglers is only jes' fo' war."

Uncle Ezek's Wisdom.

A BUSYBODY is an individual who goes about stealing other people's time, and fooling away his own.

THERE is truth enough in existence for a dozen worlds like this, and there are lies enough for fifty.

PITY and water-gruel are much alike, and a man will thrive on one just about as fast as on the other.

THE man whose most ardent admirers are his own family, never amounts to anything in the world.

IF a man acts natural he is sure to act honest; his conscience never made him dishonest.

THE brain thinks, but the heart decides.

TO BE a successful prude, a woman must be at least two-thirds a coquette.

FORMS and ceremonies are just as necessary as law and gospel; without them mankind would be no better than an organized mob.

A MULE is the only creature among the domestic animals who does n't know the difference between praise and abuse.

HAPPINESS is an art, and we have to learn how to be happy, just as we have to learn how to be good.

IF we could see ahead as well as we can see behind, most of us would take the back track at once.

TO THE wicked all things are vile.

THERE are few animals that you can trust with absolute liberty, and fewer men.

UNIFORM politeness is a species of godliness; it may not make a saint of a man, but it makes a lovely sinner.

ADVERSITY links all things closer. Who ever heard of a beggar advertising for a lost dog?

Uncle Ezek.

To Wilding, my Polo-Pony.

My Wilding, I must leave thee!
Does word of parting grieve thee
As it grieves me, thy master, fond, indulgent,
Who see the softness in thine eye refulgent
And think a thousand thoughts are dreaming there
As like my thoughts as love is like love's prayer?

How passing true thou art to me
Thy whinnyings apart to me
Make clear. Thy kissing breath upon my cheek
Is warm as June-time love, that needs not speak
To set the heart that beateth true a-bloom —
To stir the sense to quaff the day's perfume.

Thou art a pretty fellow:
Thy brilliant chestnut-yellow
Shines like a changing silk; the driven snows
Have stained thy foot and striped thy Roman nose;
A-top the neck thy bristling mane doth curve,
And every muscle shown doth seem a nerve.

And every step or motion
Gives those who see a notion
Of Pegasus. Thou needest not his wings:
Thy dainty limbs were made for flights and flings;
And if thy feet do touch the earth, 't is done
As one would quickly kiss, 'twixt fear and fun.

If some one now a stranger
Drop apples in thy manger,
And fetch thee sugar in his pocket too,
Thou 'lt eat — perhaps — and yet to me be true,
Nor let the stranger learn the secret sign
That makes thee lift thy foot and bow so fine.

But when I 'm gone, who 'll ride thee,
Caress, or even chide thee?
Will other understand thy playful tricks,
Thy curvetings and antics, bucks and kicks?
Will other let thee shy on loosened rein,
And let thee have thy head o'er every plain?

And who will drive thee, pony,
O'er roughish roads and stony?
Ah, Wilding, cunning rogue, I 'll not forget
The day I paid a friend a friendly debt
And loaned thee: how thou brokest trace and rein
And, leaving him, sped home to me again!

They say that I 'll forget thee
And nevermore will pet thee,
When I have learned to love some maiden fair.
I say that she with thee my love shall share!
If I must love thee less to love her more,
I 'll love thee as I love thee now thrice o'er!

I 'll see thee in the spring-time,
For birds and me the wing-time
To take the northward flight. Together then
We 'll seek the lanes, and run and race again.
But, Wilding-pony, I must leave thee now.
Farewell! Now whinny, lift thy foot, and bow!

John Eliot Bowen.

"The Lady; or, the Tiger?"

Had I been the hero whose fate is unknown,
Do you think I 'd have wavered in doubt?
I 'd have opened the doors to both beauty and beast,
Saying, "Ladies, you 'll please fight it out!"

Belle A. Mundy.

With Pen and Ink.

With pen and ink one might indite
A sonnet, or indeed might write
A billet-doux, or, eke to raise
The wind, a note for thirty days.

Not mine the poem; they 'd send it back
Or shove it into BRIC-À-BRAC.
My flippant muse is never seen
Within the solid magazine.

And not for me the billet-doux;
Indeed, who should I write it to?
I would not thus employ my pen,
Unless to woo my wife again.

Ah me! the while I stop to think
What Shakspere did with pen and ink,
I wonder how his ink was made, —
If blue or purple was the shade;

His pen, — broad-nibbed and rather stiff,
Like this, or fine? I wonder if
He tried a "Gillott," thirty-nine,
Or used a coarser pen, like mine?

Or was it brains? No ink I know
Will really make ideas flow,
Nor can the most ingenious pen
Make wits and poets of dull men.

So this the miracle explains,
He used his pen and ink with brains.
Mine is the harder task, I think,
To write with only pen and ink.

Walter Learned.

Pepita.

Up in her balcony where
Vines through the lattices run
Spilling a scent on the air,
Setting a screen to the sun,
Fair as the morning is fair,
Sweet as a blossom is sweet,
Dwells in her rosy retreat
Pepita.

Often a glimpse of her face
When the wind rustles the vine
Parting the leaves for a space
Gladdens this window of mine, —
Pink in its leafy embrace,
Pink as the morning is pink,
Sweet as a blossom I think
Pepita.

I who dwell over the way
Watch where Pepita is hid —
Safe from the glare of the day
Like an eye under its lid:
Over and over I say, —
Name like the song of a bird,
Melody shut in a word, —
"Pepita."

Look where the little leaves stir!
Look, the green curtains are drawn!
There in a blossomy blur
Breaks a diminutive dawn; —
Dawn and the pink face of her, —
Name like a lisp of the south,
Fit for a rose's small mouth, —
Pepita!

RANCH LIFE IN THE FAR WEST.

IN THE CATTLE COUNTRY.

ILLUSTRATIONS BY FREDERIC REMINGTON.

OLD-STYLE TEXAN COWMAN.

THE great grazing lands of the West lie in what is known as the arid belt, which stretches from British America on the north to Mexico on the south, through the middle of the United States. It includes New Mexico, part of Arizona, Colorado, Wyoming, Montana, and the western portion of Texas, Kansas, Nebraska, and Dakota. It must not be understood by this that more cattle are to be found here than elsewhere, for the contrary is true, it being a fact often lost sight of that the number of cattle raised on the small, thick-lying farms of the fertile Eastern States is actually many times greater than that of those scattered over the vast, barren ranches of the far West; for stock will always be most plentiful in districts where corn and other winter food can be grown. But in this arid belt, and in this arid belt only,—save in a few similar tracts on the Pacific slope,—stock-raising is almost the sole industry, except in the mountain districts where there is mining. The whole region is one vast stretch of grazing country, with only here and there spots of farm-land, in most places there being nothing more like agriculture than is implied in the cutting of some tons of wild hay or the planting of a garden patch for home use. This is especially true of the northern portion of the region, which comprises the basin of the Upper Missouri, and with which alone I am familiar. Here there are no fences to speak of, and all the land north of the Black Hills and the Big Horn Mountains and between the Rockies and the Dakota wheat-fields might be spoken of as one gigantic, unbroken pasture, where cowboys and branding-irons take the place of fences.

The country throughout this great Upper Missouri basin has a wonderful sameness of character; and the rest of the arid belt, lying to the southward, is closely akin to it in its main features. A traveler seeing it for the first time is especially struck by its look of parched, barren desolation; he can with difficulty believe that it will support cattle at all. It is a region of light rainfall; the grass is short and comparatively scanty; there is no timber except along the beds of the streams, and in many places there are alkali deserts where nothing grows but sage-brush and cactus. Now the land stretches out into level, seemingly endless plains or into rolling prairies; again it is broken by abrupt hills and deep, winding valleys; or else it is crossed by chains of buttes, usually bare, but often clad with a dense growth of dwarfed pines or gnarled, stunted cedars. The muddy rivers run in broad, shallow beds, which after heavy rainfalls are filled to the brim by the swollen torrents, while in droughts the larger streams dwindle into sluggish trickles of clearer water, and the smaller ones dry up entirely, but in occasional deep pools.

All through the region, except on the great

Indian reservation, there has been a scanty and sparse settlement, quite peculiar in its character. In the forest the woodchopper comes first; on the fertile prairies the granger is the pioneer; but on the long stretching uplands of the far West it is the men who guard and follow the horned herds that prepare the way for the settlers who come after. The high plains of the Upper Missouri and its tributary rivers were first opened, and are still held, by the stockmen, and the whole civilization of the region has received the stamp of their marked and individual characteristics. They were from the South, not from the East, although many men from the latter region came out along the great transcontinental railway lines and joined them in their northern migration.

They were not dwellers in towns, and from the nature of their industry lived as far apart from each other as possible. In choosing new ranges, old cow-hands, who are also seasoned plainsmen, are invariably sent ahead, perhaps a year in advance, to spy out the land and pick the best places. One of these may go by himself, or more often, especially if they have to penetrate little known or entirely unknown tracts, two or three will go together, the owner or manager of the herd himself being one of them. Perhaps their herds may already be on the border of the wild and uninhabited country: in that case they may have to take but a few days' journey before finding the stretches of sheltered, long-grass land that they seek. For instance, when I wished to move my own elkhorn steer brand on to a new ranch I had to spend barely a week in traveling north among the Little Missouri Bad Lands before finding what was then untrodden ground far outside the range of any of my neighbors' cattle. But if a large outfit is going to shift its quarters it must go much farther; and both the necessity and the

AN EXPLORING OUTFIT.

AN EPISODE IN THE OPENING UP OF A CATTLE COUNTRY.

THE MIDDAY MEAL.

chance for long wanderings were especially great when the final overthrow of the northern Horse Indians opened the whole Upper Missouri basin at one sweep to the stockmen. Then the advance-guards or explorers, each on one horse and leading another with food and bedding, were often absent months at a time, threading their way through the trackless wastes of plain, plateau, and river-bottom. If possible they would choose a country that would be good for winter and summer alike; but often this could not be done, and then they would try to find a well-watered tract on which the cattle could be summered, and from which they could be driven in fall to their sheltered winter range—for the cattle in winter eat snow, and an entirely waterless region, if broken, and with good pasturage, is often the best possible winter ground, as it is sure not to have been eaten off at all during the summer, while in the bottom the grass is always cropped down soonest. Many outfits regularly shift their herds every spring and fall; but with us in the Bad Lands all we do, when cold weather sets in, is to drive our beasts off the scantily grassed river-bottom back ten miles or more among the broken buttes and plateaux of the uplands to where the brown hay, cured on the stalk, stands thick in the winding *coulées*.

These lookouts or forerunners having returned, the herds are set in motion as early in the spring as may be, so as to get on the ground in time to let the travel-worn beasts rest and gain flesh before winter sets in. Each herd is accompanied by a dozen, or a score, or a couple of score, of cowboys, according to its size, and beside it rumble and jolt the heavy four-horse wagons that hold the food and bedding of the men and the few implements they will need at the end of their journey. As long as possible they follow the trails made by the herds that have already traveled in the same direction, and when these end they strike out for themselves. In the Upper Missouri basin, the pioneer herds soon had to scatter out and each find its own way among the great dreary solitudes, creeping carefully along so that the cattle might not be overdriven and might have water at the halting-places. An outfit might thus be months on its lonely journey, slowly making its way

over melancholy, pathless plains, or down the valleys of the lonely rivers. It was tedious, harassing work, as the weary cattle had to be driven carefully and quietly during the day and strictly guarded at night, with a perpetual watch kept for Indians or white horse-thieves. Often they would skirt the edges of the streams for days at a time, seeking for a ford or a good swimming crossing, and if the water was up and the quicksand deep the danger to the riders was serious and the risk of loss among the cattle very great.

At last, after days of excitement and danger and after months of weary, monotonous toil, the chosen ground is reached and the

THE OUTLYING CAMP.

final camp pitched. The footsore animals are turned loose to shift for themselves, outlying camps of two or three men each being established to hem them in. Meanwhile the primitive ranch-house, out-buildings, and corrals are built, the unhewn cottonwood logs being chinked with moss and mud, while the roofs are of branches covered with dirt, spades and axes being the only tools needed for the work. Bunks, chairs, and tables are all home-made, and as rough as the houses they are in. The supplies of coarse, rude food are carried perhaps two or three hundred miles from the nearest town, either in the ranch-wagons or else by some regular freighting outfit, whose huge canvas-topped prairie schooners are each drawn by several yoke of oxen, or perhaps by six or eight mules. To guard against the numerous mishaps of prairie travel, two or three of these prairie schooners usually go together, the brawny teamsters, known either as "bull-whackers" or as "mule-skinners," stalking beside their slow-moving teams.

The small outlying camps are often tents, or mere dug-outs in the ground. But at the main ranch there will be a cluster of log buildings, including a separate cabin for the foreman or ranchman; often another in which to cook and eat; a long house for the men to sleep in; stables, sheds, a blacksmith's shop, etc.,—the whole group forming quite a little settlement, with the corrals, the stacks of natural hay, and the patches of fenced land for gardens or horse pastures. This little settlement may be situated right out in the treeless, nearly level open, but much more often is placed in the partly wooded bottom of a creek or river, sheltered by the usual background of somber brown hills.

When the northern plains began to be settled, such a ranch would at first be absolutely alone in the wilderness, but others of the same sort were sure soon to be established within twenty or thirty miles on one side or the other. The lives of the men in such places were strangely cut off from the outside world, and, indeed, the same is true to a

hardly less extent at the present day. Sometimes the wagons are sent for provisions, and the beef-steers are at stated times driven off for shipment. Parties of hunters and trappers call now and then. More rarely small bands of emigrants go by in search of new homes, impelled by the restless, aimless craving for change so deeply grafted in the breast of the American borderer: the white-topped wagons are loaded with domestic goods, with sallow, dispirited-looking women, and with tow-headed children; while the gaunt, moody frontiermen slouch alongside, rifle on shoulder, lank, homely, uncouth, and yet with a curious suggestion of grim strength underlying it all. Or cowboys from neighboring ranches will ride over, looking for lost horses, or seeing if their cattle have strayed off the range. But this is all. Civilization seems as remote as if we were living in an age long past. The whole existence is patriarchal in character: it is the life of men who live in the open, who tend their herds on horseback, who go armed and ready to guard their lives by their own prowess, whose wants are very simple, and who call no man master. Ranching is an occupation like those of vigorous, primitive pastoral peoples, having little in common with the humdrum, workaday business world of the nineteenth century; and the free ranchman in his manner of life shows more kinship to an Arab sheik than to a sleek city merchant or tradesman.

By degrees the country becomes what in a stock-raising region passes for well settled. In addition to the great ranches smaller ones are established, with a few hundred, or even a few score, head of cattle apiece; and now and then miserable farmers straggle in to fight a losing and desperate battle with drought, cold, and grasshoppers. The wheels of the heavy wagons, driven always over the same course from one ranch to another, or to the remote frontier towns from which they get their goods, wear ruts in the soil, and roads are soon formed, perhaps originally following the deep trails made by the vanished buffalo. These roads lead down the river-bottoms or along the crests of the divides or else strike out fairly across the prairie, and a man may sometimes travel a hundred miles along one without coming to a house or camp of any sort. If they lead to a shipping point whence the beeves are sent to market, the cattle, traveling in single file, will have worn many and deep paths on each side of the wheel-marks; and the roads between important places which are regularly used either by the United States Government, by stage-coach lines, or by freight teams become deeply worn landmarks — as, for instance, near us, the Deadwood and the old Fort Keogh trails.

Cattle-ranching can only be carried on in its present form while the population is scanty; and so in stock-raising regions, pure and simple, there are usually few towns, and these are almost always at the shipping points for cattle. But, on the other hand, wealthy cattlemen, like miners who have done well, always spend their money freely; and accordingly towns like Denver, Cheyenne, and Helena, where these two classes are the most influential in the community, are far pleasanter places of residence than cities of five times their population in the exclusively agricultural States to the eastward.

A true "cow town" is worth seeing,— such a one as Miles City, for instance, especially at the time of the annual meeting of the great Montana Stock-raisers' Association. Then the whole place is full to overflowing, the importance of the meeting and the fun of the attendant frolics, especially the horse-races, drawing from the surrounding ranch country many hundreds of men of every degree, from the rich stock-owner worth his millions to the ordinary cowboy who works for forty dollars a month. It would be impossible to imagine a more typically American assemblage, for although there are always a certain number of foreigners, usually English, Irish, or German, yet they have become completely Americanized; and on the whole it would be difficult to gather a finer body of men, in spite of their numerous shortcomings. The ranch-owners differ more from each other than do the cowboys; and the former certainly compare very favorably with similar classes of capitalists in the East. Anything more foolish than the demagogic outcry against "cattle kings" it would be difficult to imagine. Indeed, there are very few businesses so absolutely legitimate as stock-raising and so beneficial to the nation at large; and a successful stock-grower must not only be shrewd, thrifty, patient, and enterprising, but he must also possess qualities of personal bravery, hardihood, and self-reliance to a degree not demanded in the least by any mercantile occupation in a community long settled. Stockmen are in the West the pioneers of civilization, and their daring and adventurousness make the after settlement of the region possible. The whole country owes them a great debt.

The most successful ranchmen are those, usually South-westerners, who have been bred to the business and have grown up with it; but many Eastern men, including not a few college graduates, have also done excellently by devoting their whole time and energy to their work,— although Easterners who invest

their money in cattle without knowing anything of the business, or who trust all to their subordinates, are naturally enough likely to incur heavy losses. Stockmen are learning more and more to act together; and certainly the meetings of their associations are conducted with a dignity and good sense that would do credit to any parliamentary body.

during their long drives with every kind of team, through every kind of country, and in every kind of weather, who, proud of their really wonderful skill as reinsmen and conscious of their high standing in any frontier community, look down on and sneer at the plodding teamsters; trappers and wolfers, whose business is to poison wolves, with shaggy, knock-kneed

A ROW IN A CATTLE TOWN.

But the cowboys resemble one another much more and outsiders much less than is the case even with their employers, the ranchmen. A town in the cattle country, when for some cause it is thronged with men from the neighborhood round about, always presents a picturesque sight on the wooden sidewalks of the broad, dusty streets. The men who ply the various industries known only to frontier existence jostle one another as they saunter to and fro or lounge lazily in front of the straggling, cheap-looking board houses: hunters, in their buckskin shirts and fur caps, greasy and unkempt, but with resolute faces and sullen, watchful eyes, that are ever on the alert; teamsters, surly and self-contained, with slouch hats and great cowhide boots; stage-drivers, their faces seamed by hardship and exposure

ponies to carry their small bales and bundles of furs — beaver, wolf, fox, and occasionally otter; silent sheep-herders, with cast-down faces, never able to forget the absolute solitude and monotony of their dreary lives, nor to rid their minds of the thought of the woolly idiots they pass all their days in tending,— these are the men who have come to town, either on business or else to frequent the flaunting saloons and gaudy hells of all kinds in search of the coarse, vicious excitement that in the minds of many of them does duty as pleasure, the only form of pleasure they have ever had a chance to know. Indians too, wrapped in blankets and with stolid, emotionless faces, stalk silently round among the whites, or join in the gambling and horse-racing. If the town is on the borders of the

mountain country, there will also be sinewy lumbermen, rough-looking miners and packers, whose business it is to guide the long mule trains that go where wagons can not and whose work in packing needs special and peculiar skill; and mingled with and drawn from all these classes are desperadoes of every grade, from the gambler up through the horse-thief to the murderous professional bully, or, as he is locally called, "bad man"—now, however, a much less conspicuous object than formerly.

But everywhere among these plainsmen and mountain-men, and more important than any, are the cowboys,—the men who follow the calling that has brought such towns into being. Singly, or in twos or threes, they gallop their wiry little horses down the street, their lithe, supple figures erect or swaying slightly as they sit loosely in the saddle; while their stirrups are so long that their knees are hardly bent, the bridles not taut enough to keep the chains from clanking. They are smaller and less muscular than the wielders of ax and pick; but they are as hardy and self-reliant as any men who ever breathed — with bronzed, set faces, and keen eyes that look all the world straight in the face without flinching as they flash out from under the broad-brimmed hats. Peril and hardship, and years of long toil broken by weeks of brutal dissipation, draw haggard lines across their eager faces, but never dim their reckless eyes nor break their bearing of defiant self-confidence. They do not walk well, partly because they so rarely do any work out of the saddle, partly because their *chaperajos* or leather overalls hamper them when on the ground; but their appearance is striking for all that, and picturesque too, with their jingling spurs, the big revolvers stuck in their belts, and bright silk handkerchiefs knotted loosely round their necks over the open collars of the flannel shirts. When drunk on the villainous whisky of the frontier towns, they cut mad antics, riding their horses into the saloons, firing their pistols right and left, from boisterous lightheartedness rather than from any viciousness, and indulging too often in deadly shooting affrays, brought on either by the accidental contact of the moment or on account of some long-standing grudge, or perhaps because of bad blood between two ranches or localities; but except while on such sprees they are quiet, rather self-contained men, perfectly frank and simple, and on their own ground treat a stranger with the most whole-souled hospitality, doing all in their power for him and scorning to take any reward in return. Although prompt to resent an injury, they are not at all apt to be rude to outsiders, treating them with what can almost be called a grave courtesy. They are much better fellows and pleasanter companions than small farmers or agricultural laborers; nor are the mechanics and workmen of a great city to be mentioned in the same breath.

The bulk of the cowboys themselves are South-westerners; but there are also many from the Eastern and the Northern States, who if they begin young do quite as well as the Southerner. The best hands are fairly bred to the work and follow it from their youth up. Nothing can be more foolish than for an Easterner to think he can become a cowboy in a few months' time. Many a young fellow comes out hot with enthusiasm for life on the plains, only to learn that his clumsiness is greater than he could have believed possible; that the cowboy business is like any other and has to be learned by serving a painful apprenticeship; and that this apprenticeship implies the endurance of rough fare, hard living, dirt, exposure of every kind, no little toil, and month after month of the dullest monotony. For cowboy work there is need of special traits and special training, and young Easterners should be sure of themselves before trying it: the struggle for existence is very keen in the far West, and it is no place for men who lack the ruder, coarser virtues and physical qualities, no matter how intellectual or how refined and delicate their sensibilities. Such are more likely to fail there than in older communities. Probably during the past few years more than half of the young Easterners who have come West with a little money to learn the cattle business have failed signally and lost what they had in the beginning. The West, especially the far West, needs men who have been bred on the farm or in the workshop far more than it does clerks or college graduates.

Some of the cowboys are Mexicans, who generally do the actual work well enough, but are not trustworthy; moreover, they are always regarded with extreme disfavor by the Texans in an outfit, among whom the intolerant caste spirit is very strong. Southern-born whites will never work under them, and look down upon all colored or half-caste races. One spring I had with my wagon a Pueblo Indian, an excellent rider and roper, but a drunken, worthless, lazy devil; and in the summer of 1886 there were with us a Sioux half-breed, a quiet, hard-working, faithful fellow, and a mulatto, who was one of the best cow-hands in the whole round-up.

Cowboys, like most Westerners, occasionally show remarkable versatility in their tastes and pursuits. One whom I know has abandoned his regular occupation for the past nine months, during which time he has been in succession a bartender, a school-teacher,

COWBOY FUN.

and a probate judge! Another, whom I once employed for a short while, had passed through even more varied experiences, including those of a barber, a sailor, an apothecary, and a buffalo-hunter.

As a rule the cowboys are known to each other only by their first names, with, perhaps, as a prefix, the title of the brand for which they are working. Thus I remember once overhearing a casual remark to the effect that "Bar Y Harry" had married "the seven Open A girl," the latter being the daughter of a neighboring ranchman. Often they receive nicknames, as, for instance, Dutch Wannigan, Windy Jack, and Kid Williams, all of whom are on the list of my personal acquaintances.

No man traveling through or living in the country need fear molestation from the cowboys unless he himself accompanies them on their drinking-bouts, or in other ways plays the fool, for they are, with us at any rate, very good fellows, and the most determined and effective foes of real law-breakers, such as horse and cattle thieves, murderers, etc. Few of the outrages quoted in Eastern papers as their handiwork are such in reality, the average Easterner apparently considering every individual who wears a broad hat and carries a six-shooter a cowboy. These outrages are, as

IN A BOG-HOLE.

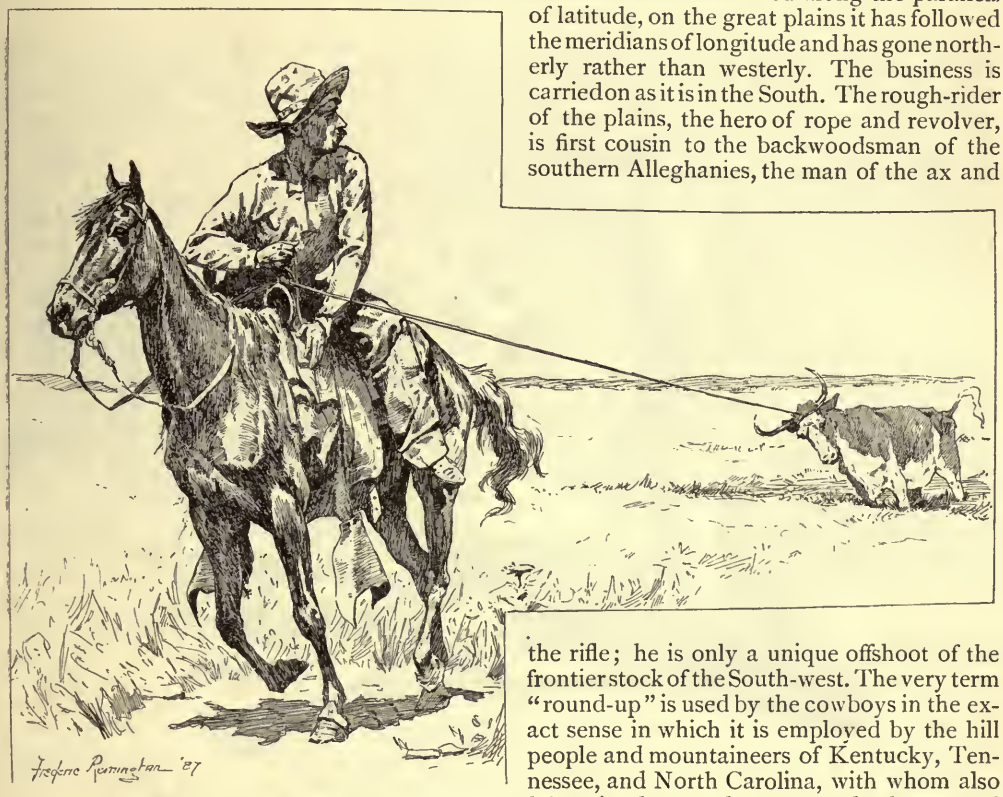
a rule, the work of the roughs and criminals who always gather on the outskirts of civilization and who infest every frontier town until the decent citizens become sufficiently numerous and determined to take the law into their own hands and drive them out. The old buffalo-hunters, who formed a distinct class, became powerful forces for evil once they had destroyed the vast herds of mighty beasts whose pursuit had been their means of livelihood. They were absolutely shiftless and improvident; they had no settled habits; they were inured to peril and hardship, but entirely unaccustomed to steady work; and so they afforded just the materials from which to make the bolder and more desperate kinds of criminals. When the game was gone they hung round the settlements for some little time, and then many of them naturally took to horse-stealing, cattle-killing, and highway robbery, although others, of course, went into honest pursuits. They were men who died off rapidly, however; for it is curious to see how many of these plainsmen, in spite of their iron nerves and thews, have their constitutions completely undermined, as much by the terrible hardships they have endured as by the fits of prolonged and bestial revelry with which they have varied them.

The "bad men," or professional fighters and man-killers, are of a different stamp, quite a number of them being, according to their light, perfectly honest. These are the men who do most of the killing in frontier communities; yet it is a noteworthy fact that the men who are killed generally deserve their fate. These men are, of course, used to brawling, and are not only sure shots, but, what is equally important, able to "draw" their weapons with marvelous quickness. They think nothing whatever of murder, and are the dread and terror of their associates; yet they are very chary of taking the life of a man of good standing, and will often weaken and back down at once if confronted fearlessly. With many of them their courage arises from confidence in their own powers and knowledge of the fear in which they are held; and men of this type often show the white feather when they get in a tight place. Others, however, will face any odds without flinching. On the other hand, I have known of these men fighting, when mortally wounded, with a cool, ferocious despair that was terrible. As elsewhere, so here, very quiet men are often those who in an emergency show themselves best able to hold their own. These desperadoes always try to "get the drop" on a foe — that is, to take him at a disadvantage before he can use his own weapon. I have known more men killed in this way, when the affair was wholly one-sided, than I have known to be shot in fair fight; and I have known fully as many who were shot by accident. It is wonderful, in the

event of a street-fight, how few bullets seem to hit the men they are aimed at.

During the last two or three years the stockmen have united to put down all these dangerous characters, often by the most summary exercise of lynch law. Notorious bullies and murderers have been taken out and hung, while the bands of horse and cattle thieves have been regularly hunted down and destroyed in pitched fights by parties of armed cowboys; and as a consequence most of our territory is now perfectly law-abiding. One such fight occurred north of me early last spring. The horse-thieves were overtaken on the banks of the Missouri; two of their number were slain, and the others were driven on the ice, which broke, and two more were drowned. A few months previously another gang, whose headquarters were near the Canadian line, were surprised in their hut; two or three were shot down by the cowboys as they tried to come out, while the rest barricaded themselves in and fought until the great log-hut was set on fire, when they broke forth in a body, and nearly all were killed at once, only one or two making their escape. A little over a year ago one committee of vigilantes in eastern Montana shot or hung nearly sixty — not, however, with the best judgment in all cases.

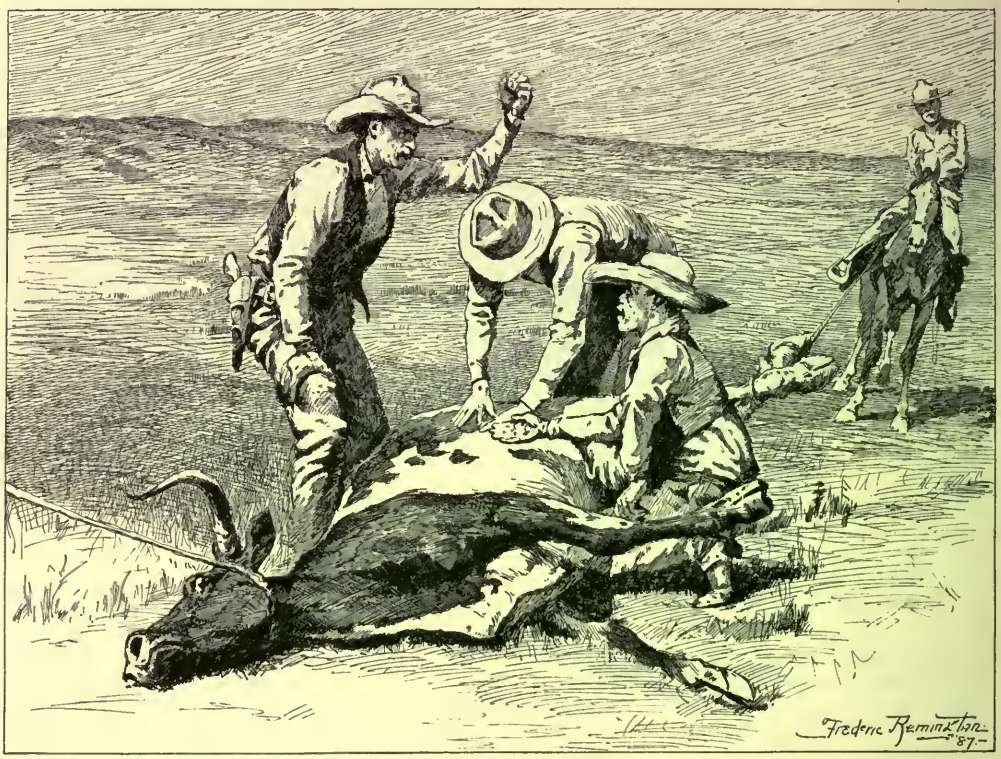
A stranger in the North-western cattle country is especially struck by the resemblance the settlers show in their pursuits and habits to the Southern people. Nebraska and Dakota, east of the Missouri, resemble Minnesota and Iowa and the States farther east, but Montana and the Dakota cow-country show more kinship with Texas; for while elsewhere in America settlement has advanced along the parallels of latitude, on the great plains it has followed the meridians of longitude and has gone northerly rather than westerly. The business is carried on as it is in the South. The rough-rider of the plains, the hero of rope and revolver, is first cousin to the backwoodsman of the southern Alleghanies, the man of the ax and the rifle; he is only a unique offshoot of the frontier stock of the South-west. The very term "round-up" is used by the cowboys in the exact sense in which it is employed by the hill people and mountaineers of Kentucky, Tennessee, and North Carolina, with whom also labor is dear and poor land cheap, and whose few cattle are consequently branded and turned loose in the woods exactly as is done with the great herds on the plains.



PULLING A COW OUT OF THE MUD.

But the ranching industry itself was copied from the Mexicans, of whose land and herds the South-western frontiermen of Texas took forcible possession; and the traveler in the North-west will see at a glance that the terms and practices of our business are largely of Spanish origin. The cruel curb-bit and heavy stock-saddle, with its high horn and cantle, prove that we have adopted Spanish-American horse-gear; and the broad hat, huge blunt spurs, and leather *chaperajos* of the rider, as well as the corral in which the stock are penned, all alike show the same ancestry. Throughout the cattle country east of the Rocky Mountains, from the Rio Grande to the Saskatch-

ewan, the same terms are in use and the same system is followed; but on the Pacific slope, in California, there are certain small differences, even in nomenclature. Thus, we of the great plains all use the double *cincha* saddle, with one girth behind the horse's fore legs and another farther back, while Californians prefer one with a single *cincha*, which seems to us much inferior for stock-work. Again, Californians use the Spanish word "lasso," which with us has been entirely dropped, no plainsman with pre-



A DISPUTE OVER A BRAND.

tensions to the title thinking of any word but "rope," either as noun or verb.

The rope, whether leather lariat or made of grass, is the one essential feature of every cowboy's equipment. Loosely coiled, it hangs from the horn or is tied to one side of the saddle in front of the thigh, and is used for every conceivable emergency, a twist being taken round the stout saddle-horn the second the noose settles over the neck or around the legs of a chased animal. In helping pull a wagon up a steep pitch, in dragging an animal by the horns out of a bog-hole, in hauling up logs for the fire, and in a hundred other ways aside from its legitimate purpose, the rope is of invaluable service, and dexterity with it is prized almost

or quite as highly as good horsemanship, and is much rarer. Once a cowboy is a good roper and rider, the only other accomplishment he values is skill with his great army revolver, it being taken for granted that he is already a thorough plainsman and has long mastered the details of cattle-work; for the best roper and rider alive is of little use unless he is hard-working, honest, keenly alive to his employer's interest, and very careful in the management of the cattle.

All cowboys can handle the rope with more or less ease and precision, but great skill in its use is only attained after long practice, and for its highest development needs that the man should have begun in earliest infancy. A really first-class roper can command his own price, and is usually fit for little but his own special work.

It is much the same with riding. The cowboy is an excellent rider in his own way, but his way differs from that of a trained school horseman or cross-country fox-hunter as much as it does from the horsemanship of an Arab or of a Sioux Indian, and, as with all these, it has its special merits and special defects — schoolman, fox-hunter, cowboy, Arab, and

Indian being all alike admirable riders in their respective styles, and each cherishing the same profound and ignorant contempt for every method but his own. The flash riders, or horse-breakers, always called "bronco busters," can perform really marvelous feats, riding with ease the most vicious and unbroken beasts, that no ordinary cowboy would dare to tackle. Although sitting seemingly so loose in the saddle, such a rider cannot be jarred out of it by the wildest plunger, it being a favorite feat to sit out the antics of a bucking horse with silver half-dollars under each knee or in the stirrups under each foot. But their method of breaking is very rough, consisting only in saddling and bridling a beast by main force and then riding him, also by main force, until he is exhausted, when he is turned over as "broken." Later on the cowboy himself may train his horse to stop or wheel instantly at a touch of the reins or bit, to start at top speed at a signal, and to stand motionless when left. An intelligent pony soon picks up a good deal of knowledge about the cow business on his own account.

All cattle are branded, usually on the hip, shoulder, and side, or on any one of them, with letters, numbers, or figures, in every combination, the outfit being known by its brand. Near me, for instance, are the Three Sevens, the Thistle, the Bellows, the OX, the VI., the Seventy-six Bar ($\frac{7}{6}$), and the Quarter Circle Diamond ($\widehat{\diamond}$) outfits. The dew-lap and the ears may also be cut, notched, or slit. All brands are registered, and are thus protected against imitators, any man tampering with them being punished as severely as possible. Unbranded animals are called *mavericks*, and when found on the round-up are either branded by the owner of the range on which they are, or else are sold for the benefit of the association. At every shipping point, as well as where the beef cattle are received, there are stock inspectors who jealously examine all the brands on the live animals or on the hides of the slaughtered ones, so as to detect any foul play, which is immediately reported to the association. It becomes second nature with a cowboy to inspect and note the brands of every bunch of animals he comes across.

Perhaps the thing that seems strangest to the traveler who for the first time crosses the bleak plains of this Upper Missouri grazing country is the small number of cattle seen. He can hardly believe he is in the great stock region, where for miles upon miles he will not see a single head, and will then come only upon a straggling herd of a few score. As a matter of fact, where there is no artificial food put up for winter use cattle always need a good deal of ground per head; and this is peculiarly the case with us in the North-west, where much of the ground is bare of vegetation and where what pasture there is is both short and sparse. It is a matter of absolute necessity, where beasts are left to shift for themselves in the open during the bitter winter weather, that they then should have grass that they have not cropped too far down; and to insure this it is necessary with us to allow on the average about twenty-five acres of ground to each animal. This means that a range of country ten miles square will keep between two and three thousand head of stock only, and if more are put on, it is at the risk of seeing a severe winter kill off half or three-quarters of the whole number. So a range may be in reality overstocked when to an Eastern and unpracticed eye it seems hardly to have on it a number worth taking into account.

Overstocking is the great danger threatening the stock-raising industry on the plains. This industry has only risen to be of more than local consequence during the past score of years, as before that time it was confined to Texas and California; but during these two decades of its existence the stockmen in different localities have again and again suffered the most ruinous losses, usually with overstocking as the ultimate cause. In the south the drought, and in the north the deep snows, and everywhere unusually bad winters, do immense damage; still, if the land is fitted for stock at all, they will, averaging one year with another, do very well so long as the feed is not cropped down too close.

But, of course, no amount of feed will make some countries worth anything for cattle that are not housed during the winter; and stockmen in choosing new ranges for their herds pay almost as much attention to the capacity of the land for yielding shelter as they do to the abundant and good quality of the grass. High up among the foot-hills of the mountains cattle will not live through the winter; and an open, rolling prairie land of heavy rainfall, and where in consequence the snow lies deep and there is no protection from the furious cold winds, is useless for winter grazing, no matter how thick and high the feed. The three essentials for a range are grass, water, and shelter: the water is only needed in summer and the shelter in winter, while it may be doubted if drought during the hot months has ever killed off more cattle than have died in consequence of exposure on shelterless ground to the icy weather, lasting from November to April.

The finest summer range may be valueless either on account of its lack of shelter or because it is in a region of heavy snowfall — portions of territory lying in the same latitude

BRONCO BUSTERS SADDLING.

and not very far apart often differing widely in this respect. This loss, of course, had nothing to do with overstocking; and the same was true of the loss that visited the few herds which spent the very hard winter of 1880 on the northern cattle plains. These were the pioneers of their kind, and the grass was all that could be desired; yet the extraordinary severity of the weather proved too much for the cattle. This was especially the case with those herds consisting of "pilgrims," as they are called—that is, of animals driven up on to the range from the south, and therefore in poor condition. One such herd of pilgrims on the Powder River suffered a loss of thirty-six hundred out of a total of four thousand, and the survivors kept alive only by browsing on the tops of cottonwoods felled for them. Even seasoned animals fared very badly. One great herd in the Yellowstone Valley lost about a fourth of its number, the loss falling mainly on the breeding cows, calves, and bulls,—always the chief sufferers, as the steers, and also the dry cows, will get through almost anything. The loss here would have been far heavier than it was had it not been for a curious trait shown by the cattle. They kept in bands of several hundred each, and during the time of the deep snows a band would make a start and travel several miles in a straight line, plowing their way through the drifts and beating out a broad track; then, when stopped by a frozen watercourse or chain of buttes, they would turn back and graze over the trail thus made, the only place where they could get at the grass.

A drenching rain, followed by a severe snap of cold, is even more destructive than deep snow, for the saturated coats of the poor beasts are turned into sheets of icy mail, and the grass-blades, frozen at the roots as well as above, change into sheaves of brittle spears as uneatable as so many icicles. Entire herds have perished in consequence of such a storm. Mere cold, however, will kill only very weak animals, which is fortunate for us, as the spirit in the thermometer during winter often sinks to fifty degrees below zero, the cold being literally arctic; yet though the cattle become thin during such a snap of weather, and sometimes have their ears, tails, and even horns frozen off, they nevertheless rarely die from the cold alone. But if there is a blizzard blowing in at such a time, the cattle need shelter, and if caught in the open, will travel for scores of miles before the storm, until they reach a break in the ground, or some stretch of dense woodland, which will shield them from the blasts. If cattle traveling in this manner come to some obstacle that they can not pass, as, for instance, a wire fence or a steep railway embankment, they will not try to make their way back against the storm, but will simply stand with their tails to it until they drop dead in their tracks; and, accordingly, in some parts of the country—but luckily far to the south of us—the railways are fringed with countless skeletons of beasts that have thus perished, while many of the long wire fences make an almost equally bad showing. In some of the very open country of Kansas and Indian Territory, many of the herds during the past two years have suffered a loss of from sixty to eighty per cent., although this was from a variety of causes, including drought as well as severe winter weather. Too much rain is quite as bad as too little, especially if it falls after the 1st of August, for then, though the growth of grass is very rank and luxuriant, it yet has little strength and does not cure well on the stalk; and it is only possible to winter cattle at large at all because of the way in which the grass turns into natural hay by this curing on the stalk.

But scantiness of food, due to overstocking, is the one really great danger to us in the north, who do not have to fear the droughts that occasionally devastate portions of the southern ranges. In a fairly good country, if the feed is plenty, the natural increase of a herd is sure shortly to repair any damage that may be done by an unusually severe winter—unless, indeed, the latter should be one such as occurs but two or three times in a century. When, however, the grass becomes cropped down, then the loss in even an ordinary year is heavy among the weaker animals, and if the winter is at all severe it becomes simply appalling. The snow covers the shorter grass much quicker, and even when there is enough, the cattle, weak and unfit to travel around, have to work hard to get it by exertion tending to enfeeble them and render them less able to cope with the exposure and cold. Again, the grass is, of course, soonest eaten off where there is shelter; and, accordingly, the broken ground to which the animals cling during winter may be grazed bare of vegetation though the open plains, to which only the hardiest will at this season stray, may have plenty; and insufficiency of food, although not such as actually to starve them, weakens them so that they succumb readily to the cold or to one of the numerous accidents to which they are liable—as slipping off an icy butte or getting cast in a frozen washout. The cows in calf are those that suffer most, and so heavy is the loss among these and so light the calf crop that it is yet an open question whether our northern ranges are as a whole fitted for breeding. When the animals get weak they will huddle into some nook or corner or empty hut and simply stay there till they die.

Overstocking may cause little or no harm for two or three years, but sooner or later there comes a winter which means ruin to the ranches that have too many cattle on them; and in our country, which is even now getting crowded, it is merely a question of time as to when a winter will come that will understock the ranges by the summary process of killing off about half of all the cattle throughout the North-west

In our northern country we have "free grass"; that is, the stockmen rarely own more than small portions of the land over which their cattle range, the bulk of it being unsurveyed and still the property of the National Government—for the latter refuses to sell the soil except in small lots, acting on the wise principle of distributing it among as many owners as possible. Here and there some ranchman has acquired title to narrow strips of territory peculiarly valuable as giving water-right; but the amount of land thus occupied is small with us,—although the reverse is the case farther south,—and there is practically no fencing to speak of. As a consequence, the land is one vast pasture, and the man who overstocks his own range damages his neighbors as much as himself. These huge northern pastures are too dry and the soil too poor to be used for agriculture until the rich, wet lands to the east and west are occupied; and at present we have little fear from grangers. Of course, in the end much of the ground will be taken up for small farms, but the farmers that so far have come in have absolutely failed to make even a living, except now and then by raising a few vegetables for the use of the stockmen; and we are inclined to welcome the incoming of an occasional settler, if he is a decent man, especially as, by the laws of the Territories in which the great grazing plains lie, he is obliged to fence in his own patch of cleared ground, and we do not have to keep our cattle out of it.

At present we are far more afraid of each other. There are always plenty of men who for the sake of the chance of gain they themselves run are willing to jeopardize the interests of their neighbors by putting on more cattle than the land will support—for the loss, of course, falls as heavily on the man who has put on the right number as on him who has put on too many; and it is against these individuals that we have to guard so far as we are able. To protect ourselves completely is impossible, but the very identity of interest that renders all of us liable to suffer for the fault of a few also renders us as a whole able to take some rough measures to guard against the wrong-doing of a portion of our number; for the fact that the cattle wander intermixed over the ranges forces all the ranchmen of a locality to combine if they wish to do their work effectively. Accordingly, the stockmen of a neighborhood, when it holds as many cattle as it safely can, usually unitedly refuse to work with any one who puts in another herd. In the cow country a man is peculiarly dependent upon his neighbors, and a small outfit is wholly unable to work without their assistance when once the cattle have mingled completely with those of other brands. A large outfit is much more master of its destiny, and can do its own work quite by itself; but even such a one can be injured in countless ways if the hostility of the neighboring ranchmen is incurred. So a certain check is put to undue crowding of the ranges; but it is only partial.

The best days of ranching are over; and though there are many ranchmen who still make money, yet during the past two or three years the majority have certainly lost. This is especially true of the numerous Easterners who went into the business without any experience and trusted themselves entirely to their Western representatives; although, on the other hand, many of those who have made most money at it are Easterners, who, however, have happened to be naturally fitted for the work and who have deliberately settled down to learning the business as they would have learned any other, devoting their whole time and energy to it. As the country grows older, stock-raising will in some places die out, and in others entirely change its character; the ranches will be broken up, will be gradually modified into stock-farms, or, if on good soil, may even fall under the sway of the husbandman.

In its present form stock-raising on the plains is doomed, and can hardly outlast the century. The great free ranches, with their barbarous, picturesque, and curiously fascinating surroundings, mark a primitive stage of existence as surely as do the great tracts of primeval forests, and like the latter must pass away before the onward march of our people; and we who have felt the charm of the life, and have exulted in its abounding vigor and its bold, restless freedom, will not only regret its passing for our own sakes only, but must also feel real sorrow that those who come after us are not to see, as we have seen, what is perhaps the pleasantest, healthiest, and most exciting phase of American existence.

Theodore Roosevelt.

SOME LETTERS OF WALTER SAVAGE LANDOR.

WAS first directed to Landor's works by hearing how much store Emerson set by them. I grew acquainted with them fifty years ago in one of those arched alcoves in the old college library in Harvard Hall, which so pleasantly secluded without wholly isolating the student. That footsteps should pass across the mouth of his Aladdin's Cave, or even enter it in search of treasure, so far from disturbing only deepened his sense of possession. These faint rumors of the world he had left served but as a pleasant reminder that he was the privileged denizen of another, beyond "the flaming bounds of place and time." There, with my book lying at ease and in the expansion of intimacy on the broad window-shelf, shifting my cell from north to south with the season, I made friendships, that have lasted me for life, with Dodsley's Old Plays, with Cotton's Montaigne, with Hakluyt's Voyages, among others that were not in my father's library. It was the merest browsing, no doubt, as Johnson called it, but how delightful it was! All the more, I fear, because it added the stolen sweetness of truancy to that of study, for I should have been buckling to my allotted task of the day. I do not regret that diversion of time to other than legitimate expenses, yet shall I not gravely warn my grandsons to beware of doing the like?

I was far from understanding all I heard in this society of my elders into which I had smuggled myself, and perhaps it was as well for me; but those who formed it condescended to me at odd moments with the tolerant complacency of greatness, and I did not go empty away. Landor was in many ways beyond me, but I loved the company he brought, making persons for me of what before had been futile names, and letting me hear the discourse of men about whom Plutarch had so often told me such delightful stories. He charmed me, sometimes perhaps he imposed on me, with the stately eloquence that moved to measure always, often to music, and never enfeebled itself by undue emphasis, or raised its tone above the level of good breeding. In those ebullient years of my adolescence it was a wholesome sedative. His sententiousness, too, had its charm, equally persuasive in the carefully draped folds of the chlamys or the succinct tunic of epigram. If Plato had written in English, I thought, it is thus that he would have written. Here was a man who knew what literature was, who had assimilated what was best in it, and himself produced or reproduced it.

Three years later, while I was trying to persuade myself that I was reading law, a friend* who knew better gave me the first series of the "Imaginary Conversations," in three volumes, to which I presently added the second series, and by degrees all Landor's other books as I could pick them up, or as they were successively published. Thus I grew intimate with him, and, as my own judgment gradually affirmed itself, was driven to some abatement of my hitherto unqualified admiration. I began to be not quite sure whether the balance of his sentences, each so admirable by itself, did not grow wearisome in continuous reading,—whether it did not hamper his freedom of movement, as when a man poises a pole upon his chin. Surely he has not the swinging stride of Dryden, which could slacken to a lounge at will, nor the impassioned rush of Burke. Here was something of that cadenced stalk which is the attribute of theatrical kings. And sometimes did not his thunders also remind us of the property-room? Though the flash failed, did the long reverberation ever forget to follow? But there is always something overpassionate in the recoil of the young man from the idols of the boy. Even now when I am more temperate, however, I cannot help feeling that his humor is horse-play; that he is often trivial and not seldom slow; that he now and again misses the true mean that can be grave without heaviness and light without levity, though he would have dilated on that virtue of our composite tongue which enabled

* Let me please myself by laying a sprig of rosemary ("that's for remembrance") on his grave. This friend was John Francis Heath of Virginia, who took his degree in 1840. He was the handsomest man I have ever seen, and in every manly exercise the most accomplished. His body was as exquisitely molded as his face was beautiful. I seem to see him now taking that famous standing-jump of his, the brown curls blowing backward, or laying his hand on his horse's neck and vaulting into the saddle. After leaving college he went to Germany and dreamed away nine years at Heidelberg. We used to call him Hamlet, he could have done so much and did so absolutely nothing. He died in the Confederate service, in 1862. He was a good swordsman (we used to fence in those days), and the rumor of his German duels and of his intimacy with Prussian princes reached us when some fellow-student came home.

it to make the distinction, and would have believed himself the first to discover it. He can not be familiar unless at the cost of his own dignity and our respect. I sometimes question whether even that quality in him which we cannot but recognize and admire, his loftiness of mind, should not sometimes rather be called uppishness, so often is the one caricatured into the other by a blusterous self-confidence and self-assertion.

He says of himself —

> Nature I loved, and, next to Nature, Art;

but I am inclined to think that it was Art he loved most. His perennial and abiding happiness was in composition, in fitting word to word, and these into periods, like a master-workman in mosaic. This, perhaps, is why he preferred writing Latin verse, because in doing that the joy of composing was a more conscious joy. Certainly we miss in him that quality of spontaneousness, that element of luck, which so delights us in some of the lesser and all the greater poets. By his own account the most audacious of men, his thought and phrase have seldom the happy audacity of what Montaigne calls the first jump. Father Thames could never have come upon *his* stage with both his banks on the same side, refreshing as that innovation might have been to an audience familiar with the humdrum habits of the river. Yet he is often content to think himself original when he has lashed himself into extravagance; and the reserve of his better style is the more remarkable that he made spoiled children of all his defects of character. It might almost seem that he sought and found an equipoise for his hasty violence of conduct in the artistic equanimity of his literary manner. I think he had little dramatic faculty. The creations of his brain do not detach themselves from it and become objective. He lived almost wholly in his own mind and in a world of his own making which his imagination peopled with casts after the antique. His "Conversations" were imaginary in a truer sense than he intended, for it is images rather than persons that converse with each other in them. Pericles and Phocion speak as we might fancy their statues to speak,— nobly indeed, but with the cold nobleness of marble. He had fire enough in himself, but his pen seems to have been a non-conductor between it and his personages. So little could he conceive the real world as something outside him, that nobody but himself was astonished when he was cast in damages at the suit of a lady to whom he had addressed verses that would have blackened Canidia. But he had done it merely as an exercise in verse; it was of that he was thinking, more than of her, and I doubt if she was so near his consciousness, or so actual to him, as the vile creatures of ancient Rome whose vices and crimes he laid at her door. Even his in every way admirable apothegms seem to be made out of the substance of his mind, and not of his experience or observation. And yet, with all his remoteness, I can think of no author who has oftener brimmed my eyes with tears of admiration or sympathy.

When we have made all deductions, he remains great and, above all, individual. There is nothing in him at second-hand. The least wise of men, he has uttered through the mask of his interlocutors (if I cannot trust myself to call them characters) more wisdom on such topics of life and thought as interested or occurred to him than is to be found outside of Shakspere; and that in an English so pure, so harmonious, and so stirringly sonorous that he might almost seem to have added new stops to the organ which Milton found sufficient for his needs. Though not a critic in the larger sense,— he was too rash for that, too much at the mercy of his own talent for epigram and seemingly conclusive statement,— no man has said better things about books than he. So well said are they, indeed, that it seems ungrateful to ask if they are always just. One would scruple to call him a great thinker, yet surely he was a man who had great thoughts, and when he was in the right mood these seam the ample heaven of his discourse like meteoric showers. He was hardly a great poet, yet he has written some of the most simply and conclusively perfect lines that our own or any other language can show. They float stately as swans on the tamer level of his ordinary verse. Some of his shorter poems are perfect as crystals. His metaphors are nobly original; they stand out in their bare grandeur like statues against a background of sky; his similes are fresh, and from nature; he plucks them as he goes, like wild-flowers, nor interrupts his talk. An intellectual likeness between him and Ben Jonson contantly suggests itself to me. Both had burly minds with much apparent coarseness of fiber, yet with singular delicacy of temperament.

In politics he was generally extravagant, yet so long ago as 1812 he was wise enough (in a letter to Southey) to call war between England and America civil war, though he would not have been himself if he had not added, "I detest the Americans as much as you do." In 1826 he proposed a plan that would have pacified Ireland and saved England sixty years of odious mistake.

Ten or twelve years ago I tried to condense my judgment of him into a pair of quatrains, written in a copy of his works given to a dear

young friend on her marriage. As they were written in a happier mood than is habitual with me now, I may be pardoned for citing them here with her permission, and through her kindness in sending me a copy:

> A villa fair, with many a devious walk
> Darkened with deathless laurels from the sun,
> Ample for troops of friends in mutual talk,
> Green Chartreuse for the reverie of one:
> Fixed here in marble, Rome and Athens gleam;
> Here is Arcadia, here Elysium too;
> Anon an English voice disturbs our dream,
> And Landor's self can Landor's spell undo.

His books, as I seem to have hinted here, are especially good for reading aloud in fitly sifted company, and I am sure that so often as the experiment is tried this company will say, with Francesca:

> Per più fiate gli occhi ci sospinse
> Quella lettura, e scolorocci il viso.

Landor was fond of saying that he should sup late, but that the hall would be well lighted, and the company, if few, of the choicest. The table, indeed, has been long spread, but will he sit down till the number of the guests is in nearer proportion to that of the covers? It is now forty years since the collected edition of his works was published, probably, as was usual in his case, a small one. Only one re-impression has yet been called for. Mr. Forster's biography of him is a long plea for a new trial. It is a strange fate for a man who has written so much to interest, to instruct, to delight, and to inspire his fellow-men. Perhaps it is useless to seek any other solution of the riddle than the old *habent sua fata libelli*. But I envy the man who has before him the reading of those books for the first time. He will have a sensation as profound as that of the peasant who wandered in to where Kaiser Rothbart sits stately with his knights in the mountain cavern biding his appointed time.

I saw Landor but once — when I went down from London, by his invitation, to spend a day with him at Bath in the late summer of 1852. His friend the late Mr. Kenyon went with me, — his friend and that of whoever deserved or needed friendship, the divinely appointed *amicus curiæ* of mankind in general. For me it was and is a memorable day, for Landor was to me an ancient, and it seemed a meeting in Elysium. I had looked forward to it, nevertheless, with a twinge of doubt, for three years before I had written a review of the new edition of his works, in which I had discriminated more than had been altogether pleasing to him. But a guest was as sacred to Landor as to an Arab, and the unaffected heartiness of his greeting at once reassured me. I have little to tell of our few hours' converse, for the stream of memory, when it has been flowing so long as mine, gathers an ooze in its bed like that of Lethe, and in this the weightier things embed themselves past recovery, while the lighter, lying nearer the surface, may be fished up again. What I can recollect, therefore, illustrates rather the manner of the man than his matter. His personal appearance has been sufficiently described by others. I will only add, that the suffused and uniform ruddiness of his face, in which the forehead, already heightened by baldness, shared, and something in the bearing of his head, reminded me vividly of the late President Quincy, as did also a certain hearty resonance of speech. You felt yourself in the presence of one who was emphatically a Man, not the image of a man; so emphatically, indeed, that even Carlyle thought the journey to Bath not too dear a prize to pay for seeing him, and found something royal in him. When I saw him he was in his seventy-eighth year, but erect and vigorous as in middle life. There was something of challenge even in the alertness of his pose, and the head was often thrown back like that of a boxer who awaits a blow. He had the air of the arena. I do not remember that his head was large, or his eyes in any way remarkable.

After the first greetings were over, I thought it might please him to know that I had made a pilgrimage to his Fiesolan villa. I spoke of the beauty of its site. I could not have been more clumsy, had I tried. "Yes," he almost screamed, "and I might have been there now, but for that in-tol-e-rrr-a-ble woman!" pausing on each syllable of the adjective as one who would leave an imprecation there, and making the *r* grate as if it were grinding its teeth at the disabilities which distance imposes on resentment. I was a little embarrassed by this sudden confidence, which I should not here betray had not Mr. Forster already laid Landor's domestic relations sufficiently bare. I am not sure whether he told me the story of his throwing his cook out of a window of this villa. I think he did, but it may have been Mr. Kenyon who told it me on the way back to London. The legend was, that after he had performed this summary act of justice, Mrs. Landor remonstrated with a "There, Walter! I always told you that one day you would do something to be sorry for in these furies of yours." Few men can be serene under an "I always told you so" — least of all men could Landor. But he saw that here was an occasion where calm is more effective than tempest, and where a soft answer is more provoking than a hard. So he replied mildly: "Well, my dear, I *am* sorry, if that will do you any good. If I had remembered that our best tulip-bed was under that window, I'd have flung the dog out of t' other."

He spoke with his wonted extravagance (he was always in extremes) of Prince Louis Napoleon: "I have seen all the great men that have appeared in Europe during the last half-century, and he is the ablest of them all. Had his uncle had but a tithe of his ability, he would never have died at St. Helena. The last time I saw the Prince before he went over to France, he said to me, 'Good-bye, Mr. Landor; I go to a dungeon or a throne.' 'Good-bye, Prince,' I answered. 'If you go to a dungeon, you may see me again; if to a throne, never!'" He told me a long story of some Merino sheep that had been sent him from Spain, and which George III. had "stolen." He seemed to imply that this was a greater crime than throwing away the American colonies, and a perfidy of which only kings could be capable. I confess that I thought the sheep as shadowy as those of Hans in Luck, for I was not long in discovering that Landor's memory had a great deal of imagination mixed with it, especially when the subject was anything that related to himself. It was not a memory, however, that was malignly treacherous to others.

I mentioned his brother Robert's "Fountain of Arethusa"; told him how much it had interested me, and how particularly I had been struck with the family likeness to himself in it. He assented; said it *was* family likeness, not imitation, and added: "Yes, when it came out many people, even some of my friends, thought it was mine, and told me so. My answer always was, 'I wish to God I *could* have written it!'" He spoke of it with unfeigned enthusiasm, though then, I believe, he was not on speaking terms with his brother. Whenever, indeed, his talk turned, as it often would, to the books or men he liked, it rose to a passionate appreciation of them. Even upon indifferent matters he commonly spoke with heat, as if he had been contradicted or hoped he might be. There was no prophesying his weather by reading the barometer of his face. Though the index might point never so steadily to *Fair*, the storm might burst at any moment. His quiet was that of the cyclone's pivot, a conspiracy of whirlwind. Of Wordsworth he spoke with a certain alienated respect, and made many abatements, not as if jealous, but somewhat in the mood of that Athenian who helped ostracize Aristides. Of what he said I recollect only something which he has since said in print, but with less point. Its felicity stamped it on my memory. "I once said to Mr. Wordsworth, 'One may mix as much poetry with prose as one likes, it will exhilarate the whole; but the moment one mixes a drop of prose with poetry, it precipitates the whole.' He never forgave me!" Then followed that ringing and reduplicated laugh of his, so like the joyous bark of a dog when he starts for a ramble with his master. Of course he did not fail to mention that exquisite sea-shell which Wordsworth had conveyed from *Gebir* to ornament his own mantel-piece.

After lunch, he led us into a room the whole available wall-space of which was hung with pictures, nearly all early Italian. As I was already a lover of Botticelli, I think I may trust the judgment I then inwardly pronounced upon them, that they were nearly all aggressively bad. They were small, so that the offense of each was trifling, but in the aggregate they were hard to bear. I waited doggedly to hear him begin his celebration of them, dumfounded between my moral obligation to be as truthful as I dishonestly could and my social duty not to give offense to my host. However, I was soon partially relieved. The picture he wished to show was the head of a man, an ancestor, he told me, whose style of hair and falling collar were of the second quarter of the seventeenth century. Turning sharply on me, he asked: "Does it remind you of anybody?" Of course this was a simple riddle; so, after a diplomatic pause of deliberation, I replied, cheerfully enough: "I think I see a likeness to you in it." There was an appreciable amount of fib in this, but I trust it may be pardoned me as under duress. "Right!" he exploded, with the condensed emphasis of a rifle. "Does it remind you of anybody else?" For an instant I thought my retribution had overtaken me, but in a flash of inspiration I asked myself, "Whom would Landor like best to resemble?" The answer was easy, and I gave it forthwith: "I think I see a likeness to Milton." "Right again!" he cried triumphantly. "It *does* look like me, and it *does* look like Milton. That is the portrait of my ancestor, Walter Noble, Speaker of one of Charles First's parliaments. I was showing this portrait one day to a friend, when he said to me, 'Landor, how can you pride yourself on your descent from this sturdy old cavalier — you who would have cut off Charles's head with the worst of 'em?' '*I* cut off his head? Never!' 'You wouldn't? I'm astonished to hear you say that. What would you have done with him?' 'What would I have done? Why, *hanged* him, like any other malefactor!'" This he trumpeted with such a blare of victory as almost made his progenitor rattle on the wall where he hung. Whether the portrait was that of an ancestor, or whether he had bought it as one suitable for his story, I can not say. If an ancestor, it could only have been Michael (not Walter) Noble, Member of Parliament (not Speaker) during the Civil War, and siding with the Commons against the King. Landor had con-

founded him with Sir Arnold Savage (a Speaker in Henry Seventh's time), whom he had adopted as an ancestor, though there was no probable, certainly no provable, community of blood between them. This makes the anecdote only the more characteristic as an illustration of the freaks of his innocently fantastic and creative memory. I could almost wish my own had the same happy faculty, when I see how little it has preserved of my conversation, so largely monologue on his part, with a man so memorable.

The letters which follow can lay no claim to importance, but they illustrate pleasantly the more playful as well as the more lovable side of his nature. They are at least more interesting, and bear more clearly the stamp of the writer's character, than many of Goethe's to the Frau von Stein. Landor has not, it is true, the literary or historical importance of Goethe, but he was one of the most remarkable men of a remarkable generation, and of rarer type, perhaps, than any of them as a conscious artist in words. The letters will add nothing to his fame and little to our knowledge of him, but they will be welcome to those who already value him, and may awaken some curiosity about him in others. They give an amiable picture of him without his armor, and in an undress, though never a careless or slovenly one. That on the death of his dog Pomero is especially worth having, and the slapdash judgments upon artists in others are very characteristic. They were written, in various years, to Miss Mary Boyle. That sister to whom he sends messages was Miss Carolina Boyle, for many years maid of honor to Queen Adelaide. As Landor seems almost never to have dated his letters, it is impossible to assign any but a conjectural order to them. The postmark of one enables us to pin it down to 1842. The annotations are Miss Boyle's.

I was going to say that more than fif— but I feel Cynthius at my ear, and shall say instead, that in honor of Miss Mary Boyle, Silvio Pellico, just released from his Prigioni, wrote some of those facile verses that sing in Italian, but are apt to have bad colds in English. Indiscreet readers may look up the date if they will. Miss Boyle bears no discoverable relation to dates. As nobody ever knew how old the Countess of Desmond was, so nobody can tell how young Miss Mary Boyle is. Known formerly as a vivacious amateur authoress, her recent historical and biographical catalogues of the art treasures at Longleat and Panshanger have a serious value. No knock could surprise the modest door of what she calls her Bonbonnière in South Audley street, for it has opened and still opens to let in as many distinguished persons, and, what is better, as many devoted friends, as any in London. However long she may live,— and may so excellent a woman live as long as she chooses!— hers can never be that most cheerless of fates, to outlive her friends, while cheerfulness, kindliness, cleverness, and contentedness, and all the other good nesses have anything to do with the making of them.

James Russell Lowell.

1.

My Dear Miss Boyle: Your letter is really a most delightful ramble. I believe I must come and be your writing-master. Certainly, if I did nothing else by drilling, I should make rank and file stand closer.

We must now be serious. I am grieved and shocked at the idea of any dog in existence, quadruped or other, tearing your handkerchief. Hampton Court — indeed any court upon earth — would loudly protest against such an outrage. I, who am too low for ambition, take out my pencil and try my hand at accounts, and find that two such handkerchiefs as ladies now carry are worth in hard cash somewhat more than the purchase of a villa (freehold, delightfully situated, furnished, etc., etc.) on the Southampton-water. If you can trust me in the making of a bargain, I will go forthwith to my neighbour and acquaintance Lord Ashtown, with the fragments of yours in my hand, and offer them to him for his, which is a very pretty and commodious one. If you consent to it, I will allow him to remove the pictures. This will not materially diminish any little advantage in the transfer: so do not stand out for them. I like to do things handsomely, particularly at another's expense. I must fit Grison's * face to mine, and reason with him amicably on running away with a treasure which he can neither make use of nor lay up.

You cannot overvalue † James. There is not on God's earth (I like this expression, vulgar or not) any better creature of his hand, any one more devoted to his highest service, the office of improving us through our passions. You are destined and gifted by the same Power for the same glorious work. I am curious to see your sister's two petitions. Her commands may assume that form, but they are commands nevertheless, and must be executed. This morning at breakfast I wrote some verses on the Chinese war. Here they are.

There may be many a reason why,
O ancient land of Kong-Fu-Tsi!
We burn to make the little feet

* Miss Boyle's large Sardinian greyhound.
† Mr. G. P. R. James, the novelist.

Of thy indwellers run more fleet.
But while (as now) before my eyes
The steams of thy sweet herb arise,
Amid bright vestures, faces fair,
Long eyes and closely braided hair,
I cannot wish thee wrongs or woes.
And when thy lovely single rose,
Which every morn I run to see,
Smiles with fresh-opened flower on me,
And when I think what hand * it was
Cradled the nursling in its vase,
By all the Gods, O, ancient land!
I wish thee, and thy laws, to stand.

Altissimo Poeta, non è vero?

Are you acquainted with the Eltons at Southampton? The girls are most delightful; the father an excellent man and good poet. I have a great regard for all the family.

II.

BATH, June 28 [1841].

DEAR MISS BOYLE: Your letter has followed me from Bath to Paris, and from Paris back again to Bath, not without a short delay in London. Had I been aware that you and your fair sister were at Hampton Court, I should certainly have paid you my respects there. I was in town only 5 days as I went and only 3 as I returned. No lady on earth will believe that any person can dislike Paris. I hate and abominate it: yet never in any place have I received so much civility and attention. There was no opera, and the gallery of the Louvre was open only for the exhibition of modern works. The French have no Landseer, no Stanfield, no Eastlake. I hope you have enjoyed the sight of their wonderful productions. This year, I am sorry to say, ill-health has prevented Landseer from displaying his wonderful powers, but Stanfield has a picture which I hear is sold for seven hundred guineas, representing the Island of Ischia in the beginning of a storm, to which neither Claude nor Gaspar nor Nicotas Poussin ever painted anything equal. Eastlake's Christ weeping over the fate of Jerusalem is worthy of Domenichino, to say the least. Between the time of Hogarth and Eastlake we never had an artist who could draw. Reynolds and Lawrence are on a level in this particular.

You perhaps will wonder what could have induced me to revisit Bath at such a season. The fact is, I abhor all popular bustle, and had I made the visits I intended to make, I should have been in the midst of contested elections, and what is worse, where some of my personal friends are opposed. This very day an election is going on here; but I neither hear, nor will go where I can hear, anything of the matter. To-morrow I will write to our friend James — as great a *conservative* as I am, even of his temper. With love to your sister (for nobody can give her less), believe me, ever sincerely, Yours,

W. S. LANDOR.

III.

DEAR MISS BOYLE: It is incredible to me that I should have permitted your letter to remain unanswered. So, at last, you can be enthusiastic about our artists. Take especial care to avoid the expression of your enthusiasm in good society. You know it is forbidden on all subjects, particularly on works of art or literature, by those we may see and serve. Stanfield, in his view of Ischia, has produced a nobler work, in my opinion, than the best of Claude or Poussin. I rejoice to hear that Boxall† has been painting your family. He is an excellent artist and a modest man. Do not think me too obstinate in persisting to call myself a conservative. My "Letters of a Conservative"‡ were written to bring the apostate Bishops back to Christianity; to make them useful as teachers; that the indignation of the people might not rise up against the only unreformed Church in Christendom. It would grieve me to see religion and education taken out of the hands of gentlemen, and turned altogether, as it is in part, into those of the uneducated and vulgar. I would rather see my own house pulled down than a cathedral. But if Bishops are to sit in the House of Lords as Barons, voting against no corruption, against no cruelty, not even the slave-trade, the people ere long will knock them on the head. Conservative I am, but no less am I an *aristocratic radical* like yourself. I would eradicate all that vitiates our constitution in church and state, making room for the gradual growth of what altered times require, but preserving the due ranks and orders of society, and even to a much greater degree than most of the violent tories are doing.

You have here my profession of political faith, explicit, and without mystery.

Remember me to your brother, and present me with your usual grace to Lady Boyle and your sister. Above all, believe me very sincerely Yours,

W. S. LANDOR.

IV.

DEAR MISS BOYLE: It is humane and generous in you to wish me a happy New Year, and judicious not to wish me many of them.

* Rose was the name of a great favorite of the writer's.

† Afterwards Sir William Boxall, and Director of the National Gallery.

‡ Published in 1836.

You ask me whether I have ever seen Burleigh.* Yes; nearly a half-century ago. Nevertheless, I have not forgotten its magnificence. No place ever struck me so forcibly. And then the grounds! Surely they were made expressly for the grand attitudinarian Grison. Being but a boy when I saw Burleigh, I admired, as most people do to the end of their lives, by prescription. I had not then learnt pictures by costly experience, and the probability is, that I admired a celebrated work by the vilest and least imaginative of painters even more than the Domenichino to which you allude. The Christ breaking the bread, by Carlo Dolce, is the most celebrated in England of that painter's works. I happen to possess the one which is the most celebrated in Italy, the one in which the pearls of the Madonna (they tell you, and tell you truly) "*paiono vere*": I gave, out of wantonness, sixty louis for it, the real value is three farthings. How many thousand of such fellows as Carlo Dolce and Sasso Ferrato are worth less than a finger's breadth of Domenichino. In regard to his frescoes you are nearly right. But it is impossible to conceive the perfection of frescoes out of Siena. Not Michelangelo, nor even Raffael himself, quite understood the coloring. Razzi, Beccafumi, and their contemporaries in Siena, did perfectly. Nearest to them is Andrea del Sarto.

But all their works, with Michelangelo's included, are incomparably less than equivalent to the Incendio del Borgo. Well, let us be contented. The cartoons make us nearly as rich as Italy herself in painting, and all the sculpture in Italy is not worth the single figure of the Ilyssus in the Elgin marbles. We are pleased to underrate our contemporaries, partly thro' ignorance, and partly thro' malignity. But I question whether the twelve of the greater Gods, by any ancient, were comparable to the twelve Apostles of Thorwaldsen.

Of course, if Phidias was the sculptor, they were; but we hear only of his Zeus and Pallas. I have no doubt that he not only designed but finished the Ilyssus and Theseus. These fragments are the *only* remains of any very great Greek sculptor. Happily they are of the very greatest — the unapproachable Zeus of sculptors.

And now let me turn to the work which you are about. James† would no more tell you to throw it into the fire, than he would tell you to throw fire into it. The one would be an arson for which there would be a thousand prosecutors, all of whom would have lost valuable property by it, and the other (the throwing fire into it), I am certain, is done already.

What I myself have been doing is hardly worth mentioning. I have given strict orders not even to have it advertised, much less puffed. Nevertheless it is not unlikely that it will be puffed — puffed away, when it reaches Burleigh. I shall give orders this moment for it to be sent to you.

Remember me to your sister, if she is awake, but do not waken her on purpose, and to your brother, and believe me, dear Miss Boyle,

Yours very sincerely,

W. S. LANDOR.

BATH, January 5.

V.

DEAR MISS BOYLE: Everybody who writes to you begins with "I am delighted, I am charmed," etc., etc. For my part, I am quite incapable of originality and must say the same thing. James† wrote to me also. It appears the Duke of Wellington asked him whether it would be possible to establish a Newspaper which should tell the truth. Alas! what a question for a wise man — for a man of experience — above all, for a politician — for a minister of state!

If the thing *is* to be done, he must do it himself. But you are very capable of furnishing one good article — take care it is quite true. The paragraph may run somewhat thus: "On Tuesday last Miss Mary Boyle, accompanied by her cousin the Hon. and Rev. Mr. Boyle, did Mr. Landor the honour of calling on him on his ground-floor No. 35 St. James Sq., Bath.

"They found him writing some nonsense verses, by which he acquired great distinction both at school, and since. We are enabled, by the favour of our fair correspondent, to give the reader a sample.

"The leaves are falling; so am I;
The few late flowers have moisture in the eye;
So have I too.
Scarcely on any bough is heard
Joyous (or e'en unjoyous) bird
The whole wood through.
Winter *may* come; he brings but nigher
His circle (yearly narrower) to the fire
Where old friends meet.
Let him! now heaven is overcast
And spring and summer both are past,
And all things sweet!"

VI.

AND so, Carissima, you want to know whether I shall be *glad* to see you, or *sorry* to see you, on the twentieth. Well then — *sorry* — to *have* seen you — glad, exultingly glad, to see you. And now I am resolved not to tell you which I love best, Melcha or Mora.‡

* Seat of the Marquis of Exeter.

† Mr. G. P. R. James.

‡ Names of two characters in a poetical drama by Miss Mary Boyle.

Melcha colpisce fortemente — Mora più ancora s'innamora.

I have broken my word to myself, all thro' you.

Tell the Maid of Honour I wd rather the Queen* gave her a thousand pounds than any one else gave her *qualsi voglia somma.*

You see I have learnt to write from you — only I can sometimes get three or four words into a line — which you can never do for the life of you. But there are several in which I find two entire ones. I do not like to spoil the context, otherwise I would order them to be glazed, and framed in gold.

The Grand-duke of Tuscany has completed his collection of hieroglyphics, so I need give you no assurance that I will not make money of those I expect.

I was at a pic-nic on Saturday. The dancing did not tire me. I can only account for it from having used my eyes only. I like the Polka amazingly, and many years shall not elapse before I take a lesson or two. I do not promise to dance at your wedding, but I will promise to dance at your eldest daughter's if I receive an invitation. *Addio*, Carina.

VII.

I HOPE you have enough of appellatives. For my part, I have no notion of giving any to young ladies, unless it be such as they, by acceptance at the altar, have fairly taken. Godfathers and godmothers are small authority for me. Many a man has admired the pitch of his courage, and the charms of his handwriting, at that pretty word *Dear*, preceding a name that always has a long and sweet quaver in it, be its constituent vowels and consonants what they may. I myself, in times past, have looked at the two together so long that it required an effort to make the pen follow the flutterings of the heart. For be it known, hearts were worn then. So, you are resolved to have a *name*, are you? I suspected as much at the very first page of yours I ever read. But how can you expect an author to call you dear, or any such thing? or even to say, what all men of sound judgment agree in, and many whose judgment is thrown a trifle off the balance — that "Mary" has the sweetest sound of any? Before I am driven into a letter, I usually think I have been in the presence of, if not still conversing with the person I write to. Otherwise I doubt whether I could overcome my disposition to idleness — in the fingers at least. When I have called you dear, pray tell me how I must go on — and whether when I have written the next word, I am to put a comma or a mark of admiration. If you leave it to me — indeed whether you do or not — I am for the ! Three generations, you tell me, were present at your triumphal entry to Marston. This is not enough for me. When you can muster four, I shall take it unkind of the hospitable rector if he does not invite me again. Should he forget it, I will sit upon the park-gate and write a squib on every soul that enters. I wonder by what right or reason they presented you with anything like *freedom*.† You who have made so many wish to lose it, ought to forfeit it forthwith. And now which of your lords is to take you to the concert? Lord Cork, Lord Dungarvon, or that lord who will be prouder than either, seeing that certain rights and privileges are conferred on him under your sign manual. I leave this place, Torquay, after the Regatta, the end of next week, and shall be then at Llanbedr Hall, Ruthin. It is rich in orange-flowers — so you need not provide any for me if you summon me to Marston. Furthermore, the waistcoat I had ordered for the Regatta ball shall be kept unopened. I will descend no farther to particulars, but assure you that you *shall* have a name, and that I am very sincerely and affectionately yours,

W. S. LANDOR.

Say some tender thing for me to your sister, and, this being duly performed, lay your face (as far as it will go) along Grison's, with my blessing.

VIII.

IN speaking of two sisters, *the* two — how dare you talk of the older and the younger? Do you not know that all the angels were created at once — *ad un fiato?*

Now you little thought that the old Torment (for "Tormen*tor*" is a weak expression) would take you at your word. He will, however, and without so much as a finger at nose-side or ear-side, by way of taking counsel with himself.

Expect your Imaginary Conversation to make its appearance in front of my last volume.

Some critic in another century may, by way of paradox, start a doubt whether it is genuine, that is, *mine;* but all the rest will cry out against his temerity. *Addio*, Madcap.

IX.

IT is only this evening that I received the Bridal of Melcha.‡ I do not like to be an Echo, but I am certain I must be one in expressing my admiration of it.

To-night is our Fancy Ball. You should be at it, crowned with myrtle and bay. If I had

* Alluding to the marriage portion of maids of honor.

† A birthday jest,—"freedom of the city."

‡ A dramatic poem by Miss Mary Boyle.

opened the volume but at the very hour of meeting my friends there, I could not have refrained from reading it through before I set out.

Indeed it is already late enough, and, I suspect, past the post-office hour, so adieu, Musa-Grazia! and call me in future anything but Dottissimo. Remember, you have a choice of Issimi. Among them all there is no one who can glorify you for more of noble and exalted attributes than

W. LANDOR.

1 St. James Square,
Monday, April 22.

Say everything you can think of, on my part, to our incomparable friend James,* and his lady.

If you distribute any kisses for me among the lesser ones, I know not through what banker to send you the amount.

Non essendo pratico,
Come sanno tutti.

X.

1842.

To meet with a failure is one thing, and to commit one is another. Now even you are liable to the former. It was vexation, it was grief to me when I found the little card of the little lady. I was ready to strike my forehead, but I feared from its vacuity it might make a loud report in the square, and I should be bundled off to Dr. Foxe's. And so your sister permitted the noblest of the animal creation (his serene Highness)† to travel without her! For shame! for shame!

I saw him the very day of my arrival in Bath. He recognized me, but was rather ashamed of acknowledging me. He stood with one foot upon the carriage-wheel remonstrating against delay. I put my face to his, and my hand on his hard loins, hard as if he had been mesmerized. I wanted to whisper a few words in his ear, but he thought it too great a liberty, and shook me off; just as if he had been one fresh from court — as he probably was. O that I were acquainted with the Satirist or John Bull! He should be down for it. And pray what have you been doing, that you sh^d inflict on yourself the voluntary penance of reading my poems? Before you get them (which will not be until we meet at Millard's Hill), I must admonish you that the *amatory* are all ideal. Some have fancied that *Ianthe* (stolen by Byron) is only Jane, with the Greek θ (th) put in. What noodles are commentators!

If ever you read the "Foreign Quarterly," you will find in the two last numbers two *Articles*, as they are called, by me on Catullus and Theocritus. A friend made me break my resolution of declining all entreaties to review, because he had an interest in this publication. *Addio.*

* Mr. G. P. R. James.
† Grison, a large Sardinian greyhound.

XI.

IF you quarrel with yourself I will quarrel with you, for I am the sworn enemy of all yours. You have been happy, and have made others so — now what would you have or do? At this moment I return from a cricket club, where indeed I did not play at cricket, but I did at quoits, and won two games in three, after a disuse of nearly half a century. Hereupon I think myself no inconsiderable personage. Nevertheless I suspect there are certain proud Boyles here and there, who fancy they have done as great things merely because they have been men of state, or men of war, with a philosopher or so, and now and then a beauty at the buttonhole. I can clearly prove the contrary, and will.

You will grant that Apollo was among the first to move in what is called a high sphere. He composed well on various subjects. In fact he did everything well but play at quoits.

There he mistook a boy's head for a feather; why! it would have almost been a mistake if it had been a girl's! Now I made the feather shake, and the turf about it, at every cast of my quoits.

Apropos of hitting and missing — at least at one of them, I will not say which — do you meditate as much mischief to the grouse this month as you did to the pheasants in Hampshire? What a clear conscience! what unbroken slumbers are yours! On second thought, I will not swear to that. But you appear to have adopted the notion,

That a brave *pheasantry*, a manor's pride,
When once destroyed can never be supplied.

Never did so vile a verse make so deep an impression.

I am worth only one pen in the world, and were it no bull, I would say it is a borrowed one. I can make nothing of it, else I would speedily show you how much better my handwriting is than yours. I must now leave off — for here are come from the hotel sundry porters for sundry shillings to be disbursed — one of them indeed has very much of a half-crown face, for he sports a speck of black hair under his nether lip. So, adieu.

XII.

Sept. 12 [1842].

Più che Dottissima! I should be very much delighted to see you as you describe yourself with one cheek crimson, and the other a livid white, and yellow eyes. Surely some extraor-

dinarily scientific painter must have arranged these colours for you.

Whatever lady presumes to wear them henceforth, I shall cry out against her audacious plagiarism. But as you, like all your sex, are fond of change, I am ready to lay any wager that when I see you, it will be the fashion for you to wear both cheeks slightly tinged with pink, and both eyes more the colour of the heavens than of the sun. This latter change may perhaps be less glorious: never mind! be moderate and submit.

What a glorious day is this for the pictures and the gardens and the waters and the Nymphs of Hampton Court! Do not let Campbell's Life of Petrarch darken it. I have not read the book and never shall read it — but I hear it is wretched. I am sorry for this. However, his fame is fairly established, by the admirable poem "Hohenlinden," and some others. Do not start if I tell you that in my poor opinion Campbell is a much better poet than Petrarch. I do not say a better; I say a *much* better. But the world ought to venerate the friend of Boccaccio — of Boccaccio, the most creative genius that the continent has produced since *the* creation: for Homer and Dante were not preëminent as creators. I love the lover of Laura, the recluse of Arquà, the defender of resuscitated Liberty, and the recoverer of ancient learning. But among all the departed men of genius Boccaccio is the one most after my own heart; a friend of freedom, a despiser of faction and of popularity, and too great to enter as a dependent or suitor the courts of princes. Literary men in general are the vilest of the human race: happy we, who enjoy the friendship of one* incomparably good and great in all his works, words, and thoughts.

Another is Southey, to whose wife, I may almost say widow, I will write to-day if I can — for I often sit, when I am thinking of her and him, with my pen in my hand and with ink in it until it dries up. I am now at Warwick, on a visit to my sister. Toward the end of next week I propose setting out for Staffordshire, to see my brother the rector of Birlingham, whom I have not seen these five years; and about the end of October I hope to be at Bath. Now, unless you tell me that you are writing in good earnest, I will never say again that I am, affectionately,

Yours,

W. L.

XIII.

TAKE care, Graziosissima! If you lead captive a single beau, I will add a couple of belles to my territories, forthwith.

"Time has not thinned my flowing locks." Now do not suspect me of fibbery, or rub your memory till it smarts again. The thing is sure enough — and the "*perché*" is — they never flowed at all, but were equally stagnant and shallow at all seasons of my life — pretty nearly. At last, however, they have acquired that fine silvery tone which great painters have attained after long practice: something of the Guido, and something of the Vandyck.

Now for news. I sent your brother a ticket (I had six at my disposal) for Lady John Somerset's ball, at Clifton. But he would not go, because he had a cold, and his nose was red. His nose must be turned into a salamander, and his cold into an iceberg, before the ladies will find another so acceptable to them. But if ever he intends to marry, he should not throw away seven years more. It is rarely that pure blood and plentiful gold roll together in the same channel. If he wishes to raise a full cup to his lips, he must stoop a little. As to you and your sister, I will give my consent to nothing below the dignity of Earl. Somehow I like the sound of that title better than marquis or duke — it sounds more English — it looks nearer Alfred. There was a duke of Shrewsbury — and he was nothing at all — but one can hardly form an idea of any title so glorious as Earl of Shrewsbury. Shakespeare was the sovereign who conferred it; but not without merit.

And so! it was to you I promised my teapot,— was it? Never mind. I have a "*cosa stupenda*" for flowers and butterflies — a Japan pattern, large enough to hold an apronful of primroses. You must come for it, and remind me — for you see how apt we young people are to forget our promises. I knew I had something to present to you; and there are flowers and butterflies on both — as there is a river as well at Macedon as at Monmouth. *Addio, Graziosissima* and *mi creda sempre divotissimo.*

XIV.

MARIUCCIA MIA.

[March, 1856.]

IT is not always that I know one of the places, out of the two, where you are — but one I do know to a certainty. Alas! I have lost my poor dear Pomero.† He died, after a long illness, apparently from a kick he received in the stomach in my absence. The whole house grieved for him. I buried him in a coffin in the garden. I would rather have lost everything else I possess in the world. Seven years we lived together in more than amity. He loved me to his heart — and what a heart

* Mr. G. P. R. James.

† The writer's pet white Pomeranian dog.

it was! Mine beats audibly while I write about him.

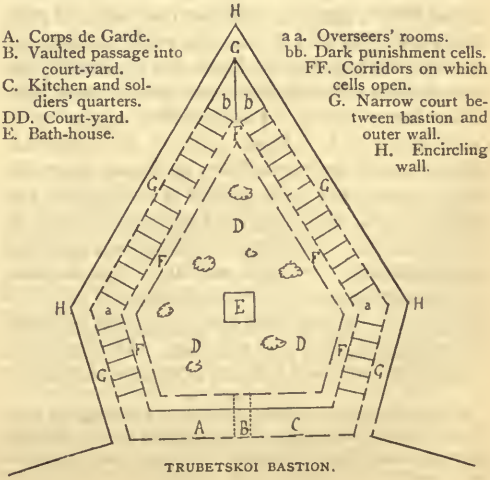
At present I am doing nothing. Last month I ordered some "Leaves for the Study" to be printed for the benefit of a day-labourer who has written some good and manly poetry, now published by subscription. If you read "Fraser's Magazine," you will see in April two imaginary conversations of mine. My scenes are on Antony and Octavius — characters of which it appears to me that Shakespeare has made sad work — and worse in Cleopatra. God bless you, my pleasant Mariuccia. Pray for me, and Pomero. Some people are so wicked as to believe we shall never meet again!

W. S. L.

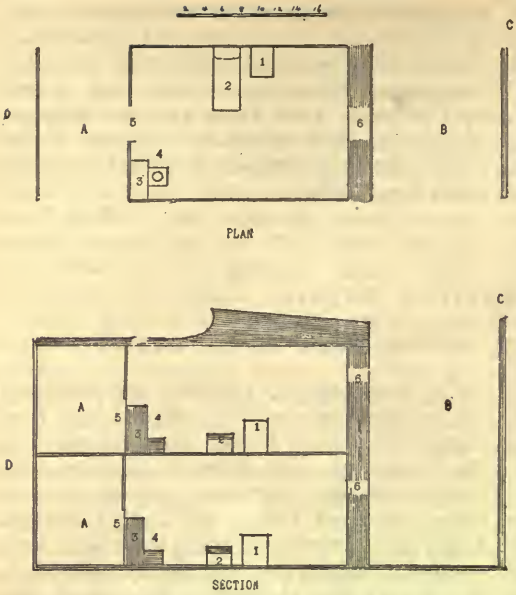
A RUSSIAN POLITICAL PRISON.

THE FORTRESS OF PETROPAVLOVSK.

THE great state prison of Russia — the prison in which all important and dangerous political offenders sooner or later find themselves — is the fortress of Petropavlovsk. Every traveler who has visited St. Petersburg must remember the slender gilded spire which rises to a height of nearly four hundred feet from the low bank of the Neva opposite the Winter Palace, and which shines afar like an uplifted lance of gold across the marshy delta of the river and the shallow waters of the Finnish Gulf. It is the spire of the fortress cathedral under which lie buried the bones of Russia's Tsars and around which lie buried almost as effectually the enemies of the Tsars' government. All that can be seen of the fortress from the river, upon which it fronts, is a long, low wall of gray stone broken sharply into salient and reëntering angles with a few cannon *en barbette*, a flag fluttering from the parapet, and over all the white belfry and burnished spire of the cathedral and the smoking chimneys of the Imperial mint. The main entrance to the fortress is a long vaulted passage leading through the wall near the end of the Troitski bridge and opening into a rather spacious grassy and well-shaded park or boulevard to which the public are admitted at all hours of the day and through which the residents of "the Petersburg side," as that part of the city is called, go to and from their homes. It is impossible, however, to obtain by merely walking along this thoroughfare any definite idea of the extent or character of Russia's great political prison. The fortress as a whole is an immense aggregation of bastions, ravelins, curtains, barracks, and storehouses which must cover at least three-quarters of a square mile and which is intersected by the boulevard above referred to, and by a canal or moat which separates the citadel or fortress proper from the "crown-work" in the rear. In what part of this vast labyrinth of walls, gates, courts, bastions, and redoubts the political prisoners are confined even they themselves do not know. They are taken to the fortress at night, between gendarmes in closely curtained carriages, and when, after being conveyed hither and thither through heavy gates between echoing walls and along vaulted passages, they are finally ordered to alight, they find themselves in a small and completely inclosed court-yard from which nothing whatever can be seen except the sky overhead. Where this court-yard is situated they can only conjecture. There is some reason to believe that the part of the fortress where the political prisoners are confined while awaiting trial is a bastion which projects on the river side in the direction of the Bourse; but even this is not certain. All that I could learn from the political exiles whose acquaintance I made in Siberia was that they had been shut up in what they believed to be the Trubetskoi bastion. Of this particular part of the fortress, however, they could give me a full description, and a plan of it, drawn by an exile who is now in Eastern Siberia, will be found below.



TRUBETSKOI BASTION.



PLAN OF CASEMATE AND SECTION OF RIGHT FACE OF BASTION FROM INNER COURT-YARD TO OUTER WALL.

A. Corridor; B. Outer court; C. Encircling wall; D. Inner court.
1. Table; 2. Bed; 3. Oven; 4. Commode; 5. Door; 6. Window.

THE TRUBETSKOI BASTION.

THE Trubetskoi bastion is a massive, pentagonal, two-story structure of stone and brick, about 300 feet in length from the flanked angle to the base and 250 feet in width on a line drawn between the two shoulder angles.* It stands in a court which is 25 or 30 feet longer and wider than the bastion itself, and which is formed by a high wall corresponding in outline with the bastion faces and separated from them all around by a space of 12 or 15 feet. The effect of this encircling wall is to completely shut the bastion in. The casemates which serve as cells for the political prisoners are in two tiers, one above the other, and are situated in the body of the structure, between the narrow outer court and a more spacious inner yard. Their doors open upon corridors which extend around the inner inclosure, and their windows look out upon the blank encircling wall which is as high as the bastion itself, and which not only limits vision in every direction, but deprives the lower tier cells to a great extent of light and air. The number of the casemates in the entire bastion is 72,—36 in each tier,—and with the exception of those in the angles, they are all alike. As they were originally intended for the accommodation of heavy cannon, they are much larger than ordinary prison cells. Their dimensions are approximately 24 feet in length from door to window, 16 feet in width between partition walls, and 12 feet in height to a slightly vaulted ceiling. The walls and ceilings are of brick, and the floors are concrete. The massive outer face of the bastion is pierced in each casemate by one arched window at a height of eight or nine feet from the floor, the tunnel-like aperture is guarded by double gratings, and the lower right-hand pane of the iron sash is hung on hinges so that it can be opened for the admission of air. Owing to the height of the window from the floor the prisoner cannot reach it without support, and can see nothing out of it except the upper part of the outer wall and a narrow strip of sky. The heavy doors of the casemates are of wood, and in the middle of each is a square port-hole which can be closed by a hinged panel. The panel swings up and down like a miniature drawbridge, and when lowered to a horizontal position forms a shelf upon which food for the prisoner can be placed by the guard. Immediately over it is a narrow horizontal slit about as large as the opening for letters in a street letter-box, covered by a pivoted strip of wood which can be raised and lowered like the blade of a jack-knife so as to open or close the aperture. This contrivance, which is known to the political prisoners as the "Judas," enables the guard to look into the cell at any time without attracting the attention of the occupant. The furniture of the casemate consists of a common Russian oven with its door in the corridor; an iron bedstead, bolted into the masonry at one end so that it cannot be moved; a shelf-like slab of iron, also bolted into the wall near the head of the bed and intended for use as a table; a stationary iron wash-basin; a wooden box, containing an excrement bucket; a small cheap image of the Madonna before which the prisoner can say his prayers, and a tin cup suspended against the wall under the window to catch the moisture which drips from the slopes of the deep embrasure. The general aspect of the casemate is somber, gloomy, and forbidding; and the first idea suggested to the mind by the massive walls, the vaulted ceiling, the iron window, the damp, lifeless air, and the profound stillness is the idea of a burial vault or crypt.

* The dimensions of the Trubetskoi bastion as here stated must not be regarded as strictly accurate, since they are based merely upon estimates and computations.—G. K.

THE FIRST NIGHT IN THE FORTRESS.

WHEN a political prisoner is brought at night to one of these casemates he is first of all stripped naked. A careful examination is made of his person to ascertain whether he

has anything concealed in his hair, mouth, ears, or nostrils, and when the guard are satisfied that he has not, they give him in the place of his own clothing a prison costume consisting of a coarse gray linen shirt, drawers of the same material, a long blue linen dressing-gown, woolen stockings, and a pair of soft felt slippers. As soon as he has put on these garments the soldiers of the guard retire, the heavy wooden door closes behind them, the key grinds in the rusty padlock, and the prisoner is left alone in the dimly lighted casemate. The stillness is that of the grave. There is not a footstep, nor a voice, nor a sound of any kind to indicate the presence of another human being in the bastion. Every fifteen minutes the bells of the fortress cathedral chime out slowly the air with which the words, "Have mercy, O Lord!" are associated in the Russian liturgy, and every hour they ring the melody of the ecclesiastical chant, "How glorious is our Lord in Zion!" The damp, heavy atmosphere, the dripping walls, the oppressive silence, and the faint muffled tones of the cathedral bells chiming mournful airs from the church liturgy, all seem to say to the lonely and dejected prisoner, "Although not dead, you are buried." Crushed by the thought that this is the end of all his hopes and aspirations and struggles for the welfare of his country, tortured by anxiety concerning the fate of those nearest and dearest to him, he rises from the narrow iron bed upon which he has thrown himself in the first paroxysm of despair and begins to pace his cell. "How long," he asks himself, "will this continue?" He reviews mentally the events which preceded and followed his arrest, recalls the questions that were asked him at the preliminary examination, and tries to form from the facts of his case a calm judgment as to the probable duration of his imprisonment. The offense with which he is charged is not, he thinks, a serious one; there are no complicating circumstances to retard the investigation; perhaps he will be tried and released in a few weeks. But as this ray of hope enters his heart he stoops to replace the loose felt slipper which has fallen from one foot, and in so doing notices for the first time what seems to be a faint path leading from one corner of the cell to another on the same diagonal which he has been pacing. Startled by a vague apprehension, he seizes the small lamp and examines it more closely. It is unquestionably a path—a shallow but perceptible groove worn into the solid concrete by human footsteps. The mournful significance of this discovery comes to him almost with the shock of a new misfortune. He then is not the first prisoner who has been buried in this lonely casemate, nor the first who has sought in physical exercise relief from mental strain. Somebody who perhaps was also accused of a political offense—somebody who perhaps was also hopeful of a speedy trial—made that significant groove. Somebody heart-sick with hope long deferred trod that path from corner to corner not merely a hundred times nor a thousand times, but hundreds of thousands of times, until the solid floor of the casemate had been worn away by his weary feet, and a long shallow depression marked the line of his monotonous march. This melancholy record of an unknown predecessor's loneliness and isolation disheartens the prisoner more than all that has happened to him since his arrest. He recalls the history of the Decembrists, and remembers that in this same fortress many of that gallant band of revolutionists spent all the years of their early manhood and finally died, committed suicide, or went insane. One of them, Lieutenant-Colonel Battenkoff, languished here in solitary confinement for almost a quarter of a century;* another, Midshipman Diboff, was held a prisoner here until death came to his relief; a third, Lieutenant Zaikin, unable to endure the mind-destroying torture of complete isolation, killed himself by dashing his head against the wall; while a fourth, preferring even a death of agony to a life clouded by mental disorder, swallowed glass broken from his cell window.† In this same fortress still another officer lay in solitary confinement until the guards re-

* The history of the attempt made by a number of army and navy officers at the accession to the throne of the Emperor Nicholas to bring about a revolution and establish a constitutional form of government is well known. Lieutenant-Colonel Battenkoff, one of the participators in this movement, was punished by solitary confinement in the fortress from December, 1825, to February, 1846, a period of more than twenty years. During this time he was never outside of the Alexei ravelin, and never saw a human being except his guards. He was permitted to have a Hebrew Bible and a lexicon, and he spent a large part of his time in making a new translation of the Old Testament into Russian. This mental occupation probably saved him from insanity, which is the fate most dreaded by political prisoners and which is the almost invariable result of long solitary confinement. With the exception of the lexicon and a few religious books, Lieutenant-Colonel Battenkoff had access to no literature, and in the whole twenty years did not see a newspaper nor hear a word of intelligence from the outside world. He was, in fact, buried alive in the strictest sense of the words. In February, 1846, he was finally released and exiled to western Siberia. Some interesting facts with regard to his life and character will be found in a letter from his friend Mr. A. Luchtef to the Irkutsk newspaper, "Sibir," for January 30, 1883, and in Maximoff's "Siberia and Penal Servitude," Vol. II., p. 166.

† "Recollections of a Decembrist," p. 185, by A. Belaieff. St. Petersburg, 1882. Much was crossed out in the manuscript of Mr. Belaieff's book by the censor, but the above statements were allowed to stand.

ported that he had ceased to answer questions, and an official examination showed that he had become a complete imbecile. He could still eat, drink, and perform the actions that years of unbroken routine had rendered habitual; but from his heavy, glazed eyes the last spark of human intelligence had vanished, and he sat motionless on his bed for days at a time in the profound stupor of intellectual death.*

Oppressed by these gloomy recollections of fortress history, the prisoner can pace his cell no longer. He imagines that he can feel with his lightly clad feet the shallow trough made by the feet of his unknown predecessor, and every step in it suggests possibilities of suffering which he dares not contemplate. Seating himself again on the narrow bed, he listens long and intently for some sound of life from the outside world — some faint, audible evidence of human activity to break up this oppressive nightmare of burial in a subterranean crypt haunted by phantasms of tortured suicides and imbeciles. The bells of the fortress cathedral chime out slowly again, "Have mercy, O Lord!" but the faint tones of the mournful supplication die away into a stillness more profound, if possible, than that which went before. Suddenly the prisoner becomes conscious of two human eyes staring at him with fixed, unwinking gaze from the middle of the casemate door. Startled, nervous, excited, it seems to him for a moment as if the phantasms of his disordered imagination were taking definite objective form — as if the ghost of some political suicide, at that dead hour of the night, were peering into the gloomy casemate where on a tragic day long past it left its emaciated mortal tenement lying on the floor with a fractured skull or a throat full of broken glass. But as he gazes in spell-bound fascination at the mysterious, expressionless eyes they suddenly vanish, and a faint click, made by the cover of the "Judas" as it falls into place over the slit where the eyes have been, shows him that the fancied apparition was only the guard looking into the cell from the corridor. A momentary feeling of relief is followed by still deeper depression, as he realizes for the first time that although absolutely alone he is the object of constant suspicion and vigilance. The eyes of a supernatural visitant would at least have been compassionate and sympathetic; but the impersonal, unrecognizable, expressionless eyes of an unknown spy appearing noiselessly now and then at the aperture of the "Judas" only render his situation the more intolerable. The very solitude seems now to be pervaded and dominated by a watchful, hostile, pitiless presence which he can neither see nor escape from.

As the prisoner's emotional excitement gradually subsides he begins to feel conscious of the damp chilliness of the casemate, and in a shiver, due partly to cold and partly to nervous reaction, he creeps into his narrow bed and draws the thin blanket up over his shoulders for the night. The last sound which he hears as he sinks into a troubled, fitful sleep is that of the cathedral chime ringing at midnight, "God save the Tsar."

ROUTINE OF LIFE IN A CASEMATE.

THE daily routine of a prisoner's life in the Trubetskoi bastion begins with the serving of hot water for tea about 8 o'clock in the morning. Nothing except the hot water is furnished at the expense of the Government; but if the prisoner has money of his own in the hands of the "smatritel," or warden, the latter will purchase for him tea, sugar, white bread, tobacco, and other simple luxuries not forbidden by prison rules. About 2 o'clock the guard appears at the port-hole in the door with the prisoner's dinner, which consists of soup with a few fragments of meat floating in it, "kasha," made of unground barley or oats boiled in enough water to saturate the grains, and a pound and a half of black rye-bread. What remains of the soup from dinner is warmed up for supper, and at a later hour in the evening hot water is brought again for tea. All food is served in block-tin or pewter dishes, and is eaten with wooden spoons. Knives and forks are regarded as dangerous implements and are not allowed to go into a prisoner's hands under any circumstances. Previous to 1879 the food provided for political prisoners in the Trubetskoi bastion was abundant and good. Thirty-five or forty out of fifty or more exiles whom I questioned on the subject in Siberia told me that during the time that they were imprisoned in the fortress — between 1873 and 1878 — complaint with regard to food could not fairly be made. It was better in

* Neither the name nor the offense of this officer is known. The fact of his existence was disclosed by certain gendarmes who served as guards in the Alexei ravelin in 1882, and who in August of that year were exiled to Siberia for permitting political prisoners to communicate with their friends. According to the story of these gendarmes, the imbecile officer, who was known only by the number of his casemate, had been thrown into the fortress many years before they first saw him for offering a grievous insult to the Emperor Alexander II. The cause for the insult was said to be the ruin by the Tsar of the officer's sister. Whether this story had a foundation in fact, or was merely a prison rumor which obtained currency as an explanation of the officer's long confinement and strict seclusion, I do not know; but the exiled gendarmes were in perfect agreement as to the facts of the unknown prisoner's life which had come under their own immediate observation, and described with many pathetic details the gradual decay of his mental powers.

quality and more plentiful in quantity than that furnished to prisoners of the same class in other prisons of the empire. About the time, however, that the Terrorists began their activity in 1879, the treatment of political prisoners everywhere underwent a change for the worse, and in the fortress that change was marked by a decrease in the quantity and a deterioration in the quality of the food. Finally, after the assassination of Alexander II., the imprisoned revolutionists were deprived of nearly all the privileges that they had previously enjoyed, were treated with greater severity and rigor than ever, and were put virtually upon the same footing with common criminals. In 1882, when a young law student of my acquaintance named Stassoff was brought to the Trubetskoi bastion, the food furnished there was so bad that at first he could not force himself to eat it, although he had already been four months in prison in another part of the empire. The guard, noticing that he left his dinner and supper untouched, said to him, "Do you intend to starve yourself to death?"

"Suppose I do," replied the prisoner; "why not?"

"We won't let you," said the guard; "we will feed you by force."

"How by force?"

"Simply enough; we will put a rubber pipe down your throat and pour milk into it."

"But," said Mr. Stassoff, "if you 'll only give me milk, I 'll take that now without any rubber pipe." The guard, a good-humored young soldier, smiled and turned away, advising the prisoner to eat what was set before him. Hunger finally compelled Mr. Stassoff to swallow the prison ration, but that the food thus forced upon him was insufficient and bad is shown by the fact that in less than three months he was prostrated by scurvy, and at the expiration of four months it was found necessary to remove him to the House of Preliminary Detention in order to save his life. He was so weak that he could not leave his bed, his face was pale and haggard, his eyes were sunken, and blood flowed from his swollen gums at every attempt to eat. He had then been eight months in solitary confinement without trial, and had been reduced from robust health to a condition so low that the fortress surgeon who was called to examine him said, "We must get you out of this grave or it will soon be too late."

The dreary monotony of life in the Trubetskoi bastion is relieved to some extent by a daily walk of ten or fifteen minutes in the small inner court-yard. Every morning or afternoon, at a certain appointed hour, a soldier enters the casemate with the clothing which the prisoner had on when he was arrested and, throwing it upon the bed, says, "Pazholuyte na progulku"—"You will please take your walk." It is one of the rules of the fortress that a prisoner shall put on his own dress every time he leaves his cell, in order that the prison garments which he has been wearing may be thoroughly searched during his temporary absence. He is required therefore to change his apparel throughout, even to underclothing and stockings, and is closely watched meanwhile to see that he does not transfer anything from one suit of clothes to the other. When he has made this complete change of dress he is taken out into the little court-yard where, between two gendarmes, he promenades slowly back and forth for ten minutes. He can see little more from his exercise ground than he could from his cell; but in summer and in fair weather even a walled court-yard is a pleasant change from the gloom, dampness, and death-like stillness of a bomb-proof casemate. It is at least open to the universe overhead, and as the prisoner walks back and forth in it the sun shines warmly and brightly in his face; the green foliage of a few shrubs and stunted trees gratifies the craving of his eyes for color; he can hear occasionally the whistle of a passing steamer on the unseen Neva, or the faint music of a band in the neighboring zoölogical garden; and now and then, when the wind is fair, it brings to his nostrils the cool, moist fragrance of the woods. If this walk could be prolonged for two or three hours, it would have a most beneficial influence upon the prisoner's health and spirits; but as there are sometimes sixty or seventy political offenders in the bastion, and as the Government does not intend that they shall ever see one another, much less have an opportunity to exchange signals, only one of them is allowed to walk in the court-yard at a time. This limits the daily outing of each to about ten minutes. While the prisoner is taking his walk, the cell which he has left and the prison dress which he has temporarily laid aside are both carefully searched, in order to make sure that he has not accidentally come into possession of an old rusty nail; that he is not saving up bits of cigarette paper with a view to surreptitious correspondence; that he is not hoarding matches with the hope of getting enough together to poison himself—that, in short, he is not hiding anything which can be used either as a means of making his life more endurable or as an instrument for putting it to an end. When the prisoner returns to his cell at the end of his walk he puts on again the coarse linen prison garb which has just been searched, and the citizen's dress which he has worn for ten minutes in the court-

yard is taken away by the gendarmes to be searched in its turn. This ends the day's "recreation."

It is the concurrent testimony of fifty or more exiles whom I met in Siberia, that the worst privations of life in the Trubetskoi bastion are the loneliness, the stillness, and the lack of occupation. Physical hardships, such as bad food, foul air, dampness and cold, can be endured; but the mental and moral torture of complete isolation, perfect stillness, and the absence of all employment for hands and brain soon becomes literally insupportable.

HOW PRISONERS ARE WATCHED AND GUARDED.

THE system of discipline enforced in the fortress is of the strictest possible character. In 1881 there were constantly on guard in each of the several corridors of the Trubetskoi bastion two sworn "nadziratels," or overseers, five soldiers armed with rifles and revolvers, and four gendarmes. Their duties were to carry food and water to the prisoners in their cells, to keep up fires in the ovens in winter, to remove the excrement buckets when necessary, to see that no noise was made in any part of the bastion, and to watch the prisoners constantly night and day through the "Judas" slits in the doors of the casemates. They all wore soft felt slippers, so that they could steal along the corridors and peep into the cells without making the slightest noise; they were forbidden to talk to one another or to the prisoners in a tone above a whisper, or to speak to the latter at all, except in case of absolute necessity; and they had orders to report instantly any unusual or suspicious action or behavior on the part of the occupant of any cell on their corridor. Finally, the three classes of guards — overseers, soldiers, and gendarmes — were required to watch not only the prisoners, but one another; so that if a soldier, for example, came to feel affection and sympathy for a prisoner, and wished to help or shield him, he would be restrained from doing so by the consciousness that he himself was watched by the gendarmes, and that the least relaxation of severity or manifestation of sympathy on his part would be noticed and reported. There is always danger in a Russian prison that the political prisoners, who are generally men of education and character, will establish friendly relations with their guards — especially with the soldiers — and will secure the aid of the latter in carrying on secret correspondence with their friends, both inside and outside the prison walls. This has happened again and again in all parts of the empire, and more than once in the fortress itself. In order to prevent it the Government has not only made it the duty of the soldiers and the gendarmes to watch one another, but has adopted the plan of changing them so frequently that a prisoner has not time even to lay the foundation of an acquaintance with one of them before another takes his place. In 1881 the soldiers on duty in the corridors of the Trubetskoi bastion were changed every hour; and as the prison authorities could draw soldiers from an army of fifty or sixty thousand men massed in and about St. Petersburg, they could put a different battalion on guard duty every day for six months. The gendarmes were also shifted frequently; and the overseers, who were twenty-four in number, changed stations every day, going from one story or corridor of the bastion to another at irregular and uncertain intervals, so that a prisoner sometimes did not see the same overseer twice in a fortnight, and could never count on the presence of a particular one in his corridor at a particular time. Once a month the prisoners are taken separately to a little bath-house in the middle of the court-yard, where they bathe under guard of two gendarmes, and as often as may be necessary the prison barber visits them in their cells for the purpose of cutting their finger-nails, toe-nails, and hair. Edged tools are not allowed to go into their hands for an instant, and a female prisoner who obtains permission to sew in her casemate must call the guard every time she wishes to use scissors, and give him the material to be cut.

INTERVIEWS WITH RELATIVES.

THE loneliness and monotony of life in the Trubetskoi bastion are relieved, in the cases of many of the prisoners, by occasional interviews with relatives. Once a month the father, mother, sister, brother, wife, or child of a political prisoner may obtain from the Minister of the Interior or the Chief of Gendarmes permission to visit the fortress in a closed carriage under guard and talk with the prisoner for ten minutes. In the room where the interview takes place there are two net-work partitions or gratings of iron wire, five or six feet apart, with a square aperture in each like a bank teller's window, at about the height of a man's head from the floor. The visitor stands on the outside of one of these gratings, and the prisoner on the outside of the other, with their faces at the square port-holes, while at a small table in the inclosure between them sits an officer whose duty it is to listen to the conversation. Both visitor and prisoner are warned in advance that their talk must be limited to strictly personal and domestic matters; that it must be perfectly intelligible to the listening

officer; and that it must contain neither names of persons nor references to public affairs. In order to guard against a possible interchange of secret signals, a gendarme stationed directly behind the prisoner watches every motion and expression of the visitor, while another, stationed behind the visitor, watches every motion and expression of the prisoner. At the slightest indication of an attempt on the part of either to convey forbidden intelligence to the other, an end is put to the interview and the privilege is not again granted. Many prisoners regarded the so-called privilege as a mere mockery, and refused to see their relatives altogether. Doctor Melnikoff, a bright, cultivated young surgeon whom I found living in exile in a village of eastern Siberia near the frontier of Mongolia, said to me in a conversation on this subject: "Interviews with my wife were a source of pain and distress to me rather than of pleasure. I could not say anything to her that I wanted to say; I could not take her in my arms; I could not even touch her hand; and it seemed like a desecration of love to speak of it in the presence of hired eavesdroppers, jailers, and spies to whom it might afterward be nothing more than a subject for coarse jest and laughter. All I could do, therefore, was to ask and answer a few formal questions; look with aching heart at my wife's pale, convulsed face streaming with tears; and then bid her good-bye and go back to my casemate. For days afterward her agonized face haunted me and I was more miserable than ever. I finally refused to see her."

PRIVILEGES AND DIVERSIONS.—AN ARTIFICIAL HICCOUGH.

THE only privilege of a prisoner's life in the Trubetskoi bastion which is really prized is the use of books and writing materials. There is in the bastion a very good library of about a thousand volumes, made up chiefly of books which have been sent to or purchased by the prisoners in the course of the last twenty years, but which the owners were not permitted to take away with them at the expiration of their terms of imprisonment. From this library many — perhaps most — of the politicals awaiting trial are allowed to draw books. Writing materials, in the shape of a pen and ink and a small copy-book made of half a dozen sheets of coarse paper stitched together, are also loaned to them for a few hours at a time upon condition that they shall be returned without injury or mutilation. These privileges, however, are not granted at all times nor to all of the prisoners. Nikolai Charushin, one of the early propagandists, who spent two years and a half in the Trubetskoi bastion, was not allowed for the first five months to see a single printed line. Solomon Chudnofski, a well-known publicist and a member of the western Siberian branch of the Imperial Geographical Society, was put into a straitjacket in the same bastion in the spring of 1878 for insisting upon his legal right to have pen and paper for the purpose of writing a letter of complaint to the Procureur. Many other prisoners were deprived of these and all other privileges for months at a time, without the assignment of any reason whatever by the prison authorities. There would seem to be sometimes a deliberate intention on the part of the Government to break down the resolution and disorder the mental faculties of obstinate political offenders by depriving them of all means of mental employment. Doctor Melnikoff, for example, the young surgeon of whom I have spoken, was not allowed for a long time to have either books or writing materials, and finding that the loneliness and lack of occupation were becoming insupportable, he saved a part of his daily ration of black rye-bread, and after moistening it enough to render it plastic he began to mold it into small figures. This diversion was a perfectly harmless one, even from the point of view of the strictest disciplinarian, and if it had been permitted it would have enabled the young surgeon to while away many long, weary hours, and might have made for him all the difference between mental health and insanity. No sooner, however, did the gendarmes on duty in the corridor notice what he was doing than they took away both the figures and the bread and warned him that if he attempted anything of the kind again he would be punished.

The death-like stillness of the casemate where Doctor Melnikoff was confined became in time as intolerable as the absence of employment. His feet, clad in soft felt slippers, made not the slightest noise when he walked; he dared not knock or drum with his fingers; and it was so long since he had heard the sound of his own voice that he sometimes doubted whether he still had a voice. He finally went into the remotest part of the casemate, crouched down in a corner, with his back to the door, and began to talk softly aloud to himself. The next time the guard peeped through the "Judas" and discovered what the prisoner was doing he opened the door and said to him that talking aloud even to one's self was "neilza,"—"impossible,"—and that if he repeated the offense he would be put into a dark cell. Baffled again, the young surgeon was for a long time silent, but he finally conceived the idea of making a noise, and at the same time reassuring himself as to the

unimpaired efficiency of his vocal cords, by counterfeiting a hiccough. This stratagem succeeded. The guard of course insisted that the prisoner should stop it; but the prisoner declared that hiccough is a spasmodic affection of the diaphragm and glottis which cannot be controlled by the will, and that if the guard wanted it stopped the best thing he could do was to get him some medicine for it from the fortress surgeon. The soldier, acting on this suggestion, went to consult the "feldsher" or assistant medical officer of the bastion, while the prisoner, with a sense of perfect security, hiccoughed so vociferously and joyously that he could be heard out in the corridor. All efforts of the prison authorities to cure Doctor Melnikoff's hiccough proved unavailing. It was a chronic infirmity, and when it assumed an acute and paroxysmal form, as it did every day or two throughout the remainder of his term of imprisonment, it set all remedies at defiance. I said to the young surgeon when he related to me in Siberia this incident of his prison life, that I presumed the distressing malady disappeared with his liberation from the fortress. "Oh, no," interposed his wife laughingly. "Whenever he feels lonesome or '*ennuied*' he hiccoughs to himself artificially for a quarter of an hour at a time; but he does it now unconsciously, so that it really is a disease."

PRISONERS' METHODS OF INTERCOMMUNICATION.

THE principal object of the rigorous system of prison discipline enforced in the Trubetskoi bastion is the prevention of communication between the prisoners. As the politicals in this part of the fortress are all persons who have not yet been tried, the Government regards it as extremely important that they shall not have an opportunity to secretly consult one another and agree upon a scheme of defense; that they shall not be allowed to give one another points and suggestions after preliminary examination; and that those who have been a long time in prison shall not be able to learn from those just arrested what has happened in the outside world since their removal from it. The Government intends, in short, to isolate every political offender, if possible, so completely that he will suppose himself to be the only human being shut up in that part of the fortress and will not think, therefore, of knocking on the wall or trying in any other way to attract sympathetic attention. If the prisoners were permitted to talk aloud, either to the guards or to themselves, such isolation as this would be impracticable. They would occasionally hear one another's voices and would thus be apprised of their nearness to one another; and then if they were allowed to make the least noise they would contrive a method of transmitting intelligence by means of that noise from cell to cell. Even footsteps on a hard floor, if the feet were not muffled in soft felt slippers, might be so timed and spaced as to indicate numbers and letters in the cipher-square. In view of these considerations the Government believes it to be absolutely necessary to watch the prisoners constantly and to maintain throughout the bastion the stillness of a sepulcher. The results of this strict system of surveillance and repression are not, however, as satisfactory in practice as they presumably are in theory. The political prisoners communicate with one another in three or four different ways in spite of all the measures of prevention and precaution that official ingenuity can devise. In the first place they communicate by means of the knock alphabet. The prison authorities made an attempt in 1876 to put a stop to surreptitious telegraphy by masking the walls of all the casemates with screens of wire net-work covered with soft thick felt. This scheme however created a new evil without remedying the old one. The space between the screens and the wall served the prisoners as a convenient hiding-place for scraps of cigarette paper, old nails, pins, bits of string, ends of burnt matches, and other useful articles of that sort which they had previously had great difficulty in concealing from the gendarmes. The screens, moreover, did not prevent the knocking. The prisoners soon discovered that the little shelf-like iron table bolted into the wall of each casemate near the head of the bed would convey sound as well as the wall itself, and that if an instructed listener put his ear to one of these tables he could hear distinctly the faintest tap made upon the corresponding table in the cell above or below. This discovery rendered communication between the cells of the upper and the lower tier comparatively safe and easy. All that the prisoner had to do was to seat himself on the bed, bury his head in his arms on the table as if he were tired or despondent, and tap softly with the ball of one finger on the iron slab under cover of his shoulder. The attitude was a perfectly natural one and excited no mistrust in the mind of the guard, and by a slight change of position the ear could be laid against the table when it became necessary to listen. Gentle tapping upon a nonresonant substance like iron did not make noise enough to be heard across the casemate, and yet every stroke set up a slight vibration in the table which was communicated through the wall to the corresponding table in the cell

above or below, where it became audible as a faint, soft throb. This method of knocking was much safer than the one in ordinary use, because when the prison authorities set a trap for the knockers, as they frequently did, by secretly removing three or four prisoners from alternate cells and putting gendarmes in their places, no harm ever came of it. The knocking of course continued, but as the official eavesdroppers never thought of putting their ears to the tables, they were unable to detect the slightest sound.

CIPHER-MEDICATED BREAD PILLS.

ONLY two successful methods of preventing intercommunication by means of the knock alphabet were ever devised by the fortress authorities. One of them necessitated the disuse of all the cells immediately adjoining those occupied by political offenders, and the other required the stationing of a gendarme and a soldier in every casemate. Even these measures, however, did not entirely stop intercommunication unless the prisoners were deprived at the same time of their daily walk and of the privilege of drawing books from the library. If all the cells around a prisoner were left empty and he found that he could not get a response to his knocks, he saved bits of cigarette paper, pierced holes in them with a sharp splinter or dotted them with the burnt end of a match in such a manner that the groups of holes or dots when counted would indicate numbers answering to certain letters in the cipher-square, and then inclosing the papers in a small ball of moistened bread, he laid them aside until he should be taken out for his daily walk. As soon as he heard the gendarmes coming for him he concealed the cipher-medicated bread pill in his mouth, and when after the usual change of dress he was conducted into the court-yard, he contrived to drop it unnoticed in a place where he thought it would be discovered by the next prisoner who came there to walk. The little brownish ball of rye-bread was so nearly of the color of the ground that it was not likely to attract the attention of the guard, and yet it was almost certain to be noticed by men who were looking with intense passionate eagerness for secret tidings from a brother, wife, or dearest friend who, if alive, was somewhere in that gloomy bastion. Occasionally, when a prisoner was unable to procure cigarette paper, he unraveled a little yarn from his stocking or drew out a thread from his cotton sheet, and having tied knots in it in such a way that the groups of knots would make numbers in the cipher-square, he dropped that in the court-yard. The first prisoner who discovered the bread pill or the tangled thread generally managed to secure it either by pretending to tie his shoe or by some other similar ruse; and having obtained possession of it, he concealed it in his mouth, carried it back to his cell, and at the first opportunity read the cipher message which it contained or embodied. Such communications were necessarily brief, but they were sometimes full of significance and pathos. In November, 1880, there was in the fortress a well-known revolutionist named Goldenberg, whose mental faculties had become partially disordered as the result of solitary confinement. In a fit of morbid depression he reasoned himself into the belief that the revolutionary movement was hopeless; that a continuance of the struggle could lead to nothing but further misery and disaster; and that the best way to stop it and to prevent the sacrifice of more lives was to make a full and frank confession to the Chief of Gendarmes of all that he knew, and thus enable the Government to crush the revolutionary organization by a single decisive blow. The reasoning was that of an unbalanced brain, but Goldenberg acted upon it and gave to the Government all the information in his possession with regard to the plans and *personnel* of the organization to which he belonged. This betrayal almost destroyed the revolutionary party by leading to the immediate arrest of a large number of its ablest and bravest representatives. After taking this fatal step Goldenberg was tormented by the thought that his comrades in prison would misunderstand his motives and perhaps attribute his action to the basest treachery or cowardice. He was still in solitary confinement in the fortress and had no opportunity to explain or defend his course, but the secret communications in cipher which he began to drop in the court-yard showed his comrades that he had some explanation to make. A prominent revolutionist who was then in the Trubetskoi bastion, but who is now in eastern Siberia, said to me, "Hardly a day passed that some of us did not find in the court-yard a bread pill or a leaf or a scrap of cigarette paper bearing in cipher the words, 'I can explain — Goldenberg'; or 'Don't condemn me — Goldenberg'; or 'Hear before you judge — Goldenberg.' It was pathetic to see how the poor fellow longed to unbosom himself to some of us, and how he was tortured by the thought that we might regard him as a traitor or a coward." Goldenberg died mysteriously in the fortress before the end of that same year, and is believed to have committed suicide. The Government used his confession against Zheliaboff in the trial of the regicides in 1881, but refused to give any information

with regard to the time or circumstances of his death.*

Another method of intercommunication, which was resorted to when knocking became for any reason impracticable, was that by means of library books. When a volume was returned by a prisoner after perusal, every page of it was scrutinized by a gendarme before it was replaced in the library, in order to guard against the possibility of communication by means of writing on the margins or fly-leaves. Notwithstanding this precaution, the prisoners managed to mark the books in such a way that the marks were not perceptible to the examining gendarme, but could be found by other prisoners into whose hands the volumes might subsequently come. This they accomplished by making shallow indentations with a splinter or a pin over selected letters of the print. The indentations were so faint that they were not noticeable when the leaf of the book made a right angle with the line of vision, but they clearly appeared when the page was held up to the light at an acute angle, with the eye of the reader near the lower margin. An indentation over the second letter from the beginning of a line indicated the figure 2, and another over the third letter from the end of the same line the figure 3, and the number 23 stood in the cipher square for the letter "h." In this way a message might be spelled out in cipher even in the presence of a gendarme, and there was hardly one chance in a hundred that the faint indentations would be discovered by an official examiner who had to look over three or four hundred pages in a few moments, and who often performed his duty in a formal and perfunctory manner.

A WINGED MESSENGER.

It would be thought that human ingenuity could go no further in the contrivance of schemes to relieve the monotony of solitary confinement by a secret interchange of ideas and emotions with other prisoners, but in the fortress there were occasionally practiced methods of intercommunication even more extraordinary than any of these.

"One afternoon in the summer of 1881," said Doctor Melnikoff to me in the course of a conversation about his fortress life, "I was lying on the bed in my casemate, wondering how I should get through the rest of the day, when there flew into the cell through the open port-hole in the door a large blue-bottle fly. In the stillness and loneliness of one of those casemates any trifle is enough to attract a man's attention, and the occasional visit of a fly is an important event in one's life. I listened with pleasure to the buzz of his wings, and followed him with my eyes as he flew back and forth across the cell until I suddenly noticed that there was something unnatural in the appearance of his body. He seemed to have something attached to him. I arose from the bed in order to get nearer to him, and soon satisfied myself that there was a bit of paper fastened to his body. How to catch him and secure that paper without attracting the attention of the guard in the corridor I hardly knew, as he was flying most of the time in the upper part of the cell beyond my reach. For ten or fifteen minutes I watched him without being able to think of any way to capture him; but at last he came down nearer to the floor, and as he passed me I succeeded in catching him in the hollow of my hands without injuring him. Attached to his body by a fine human hair I found a small folded scrap of thin cigarette paper, upon which a man's name had been written with the burnt end of a match. It was not the name of any one whom I knew; but as it was evident that some strictly guarded prisoner hoped by this means to let his friends in the bastion know either that he had been arrested or that he was still alive, I fastened the paper again to the fly as well as I could and put him out into the corridor through the port-hole, saying 'S'Bogom'" ["With God," or "Go with God"—a Russian expression commonly used in bidding a friend good-bye].

"Did you ever hear anything more of the fly," I inquired, "or find out who the prisoner was?"

"Never," he replied. "The fly disappeared in the corridor, but whether the paper ever reached anybody who was acquainted with the prisoner, or not, I don't know—probably not, for the chances were a thousand to one against it."

If these pages should ever be seen by the political prisoner who wrote his name on that scrap of cigarette paper, and who, if alive, is now in Siberia, he will know that his little winged messenger did not wholly fail, but carried his name to another prisoner, who, although a stranger, thought of him often with sympathy and pity and remembers him still, even in Siberian exile.

George Kennan.

*Official Stenographic Report of the Trial of the Regicides, p. 7. St. Petersburg, 1881.

A SONG OF THE MOCKING-BIRD.

(BEFORE SUNRISE.)

'MID foliage green and gold,
And bloom-sprays manifold,
I feel
The fragrance of eternal freshness steal
Forth from the rising day,
And far away,
Like the murmur of a stream,
Or a lute-chord in a dream,
On the horizon stirs
The rich and rapturous anthem of the Future's choristers.
How it flows
And grows!
On its notes
What triumph floats!
Before it earth is gladdened and the sea is like a rose.

The dawn
Is coming on —
Sweeter,
Fleeter,
In rhythms and rhymes and ripples flow the rays.
The high,
Blue, boundless, splendid sky
Flares like a rimpled blaze
Of sympathy divine.
A rare
Bouquet upon the air,
As if of mellow wine
Out of old flagons bursting,
Sets the whole world wildly thirsting.
The ships leap
On the fragrant, breezy deep,
And the broad fields are billowy with grains.
The great mills roar;
Earth's veins of wealth outpour,
And tireless engines pierce the hills and crash across the plains.

Hurled
Around the world,
The lightning-bolts of man's best words to man
Burn chains in two,
Turn old things new;
And, flung back from the trumpets in the van,
To the dull, listless ear
Of the straggler in the rear
Come precious notes blown on the dewy rim
Of the morning cool and dim.

Hist!
Ere the strain is whist,
A voice, out of the dawn's vague, rosy mist:
Pure as God's highest fire
The worker's golden hire,
And the home he makes with it,
And the peace he takes with it
To wife and children, are reward as fair
As soul can compass or as love can bear!

O brothers all! come near
And hear
A bird's
Melodious dreaming set to words,
And flung
The spring's new leaves and tender buds among,
For very joy of life, and hope, and love,
In a world made broad enough
For all God's creatures to be merry in,
With joyous clash and din,
And yet too small
For any greed at all!
Lo! deep and sure
Is cut this truth in heaven's book of gold:
Out of one mother in the garden old
Were born the rich and poor.

O ditcher in the mire!
O stoker by the fire,
And driver on the engine flying far,
And brakeman on the car!
O molder, strong and grim!
O 'longshoreman, and open-hearted tar,
And pilot, tough and true!
O miner in the coal-shaft damp and dim!
O factory girl with eyes serenely blue,
And cheerful matron washing clothes for hire!
O all who work and suffer and aspire!
Give ear!
Look up, and hear
And make thine own
This song, out of the future blown
So keen and clear:—
O pure of heart and faithful, hand in hand,
The strong, the weak, the great and small shall stand
Upright and free in Freedom's favored land,
And know
That howso blow
The winds of chance and change,
Onward and upward every step shall go,
And farther and freer every soul shall range!

How good
This universal bond of brotherhood,
And all this wide,
Strong, equal-flowing tide
Of human love and human charity
Foaming and heat-flushed as the rosy flood
of some deep tropic sea!

No?
Not so?—
As I swing
And sing,
I hear a myriad voices answer mine,
From the oak woods and the pine,
From the seas and from the lakes,
From the brakes,
From the cities and the shops,
From the mines and mountain-tops,
From field and fold,
Out of hot Southern marsh and Northern prairie cold,
All murmuring: "We are poor;
How long shall we endure
This burden that we bear
And the iron chains we wear?"

O brothers, though you grope
For the lowest rung of hope;
O sisters, though you weep
In darkness doubly deep,
And cry
From out foul pits of nameless misery,
Seeing on lofty places
Vague splendors and grand dreams
Flashing from fervent eyes and godlike faces,
Whereon the favor of Heaven divinely beams,
Envy not,
Nor curse your lot;
For lo! the best of all
God's gifts on you shall fall,
And your hearts shall over-brim
With ecstatic praise to Him!

Yea,
Deny it as you may,
The dawn
Is coming on,
And the heights must feel the glow
Before the valleys low;
But the great midday
Will strike
The peaks and vales alike,
And they
Who in life's hollows stay
Shall feel the heat divine,
When the strong noon sun shall shine
At the zenith, clear and high,
Of a just and liberal sky!

In some manger cold,
In some hovel mean and lone
That the beasts would scorn to hold,
Laughs the babe that shall be king;
Whilst on a blazing throne
Sits an abject, hopeless thing,
Silent and shivering!

O Poor!
God's promises are sure;
High
As the starry sky
Is your children's destiny;
And broad,
And giant-waved and tempest-bearing, like the sea,
Is the flood
That shall soon come roaring, leaping,
Over earth, and sweeping
The horses, chariots, hosts and homes, banners and citadel
Of earth's tyrants into hell!
O king! O lord! O usurer!
O rich man's heart that no heart's cry can stir!
What gold may bar the path
Of the storm-flood and the whirlwind of God's wrath?
What ships with iron mail,
What steel-girt fortress, what hired armies strong,
Intrenched in wrong,
With bristling guns and bayonets, shall avail
Against the crushing missiles of God's vengeance sent
Out of the raging, rent, and flaming firmament?
It is sweet! sweet! sweet!
(I hear a million voices in unison repeat)
This vengeance that is coming on the world,
When the lofty shall lie low,
And the blood of kings shall flow
In rivers round the thrones in fragments hurled!

Peace!
Cease!
Such thoughts as these
Set all their harshness hissing through my song
And do my voice irreparable wrong!
Blown clear,
As glass through fire,
Let breath of love grow sweeter year by year;
Blown farther, higher,
The bugle-call of Hope still guide us on,
Until at last
The night be past,
And, rushing to the zenith from the dawn,
We see the sun pour light of life on all,
And hear a voice out of near heaven fall,
Saying to those who in the caves and lonely hollows dwell:
"Come forth; I am thy God, and all is well!"

Maurice Thompson.

PICTORIAL ART ON THE STAGE.

IN the age of Elizabeth, during the great epoch of dramatic achievement, no attempt was made at scenic illusion. The stage was almost bare; properties and costumes were few and simple; painted scenery was unknown; rushes strewed the floor; tapestry-covered screens marked the entrances and exits; locality was indicated by a placard bearing the name Rome, Venice, Illyria, as the case might be; a canopied seat, a bed, a table, with tankards and flagons, were all that was required to represent a throne-room, a chamber, or a tavern; the fixed wall at the back of the stage, a maid-of-all-work accessory, serving any and all occasions, stood for *Juliet's* balcony, the ramparts of Angers, or *Brabantio's* house. The court gallants, the rough sailors, and the townsfolk who crowded the Cockpit and the Globe did not need the aid of scene-painter and costumer to make the creations of their dramatists real and living.

If the plays of Webster and Marlowe, Shakspere and Jonson, were given without painted scenery or historic costumes, are scenery and costumes not mere adjuncts, dividing the interest, distracting the attention, of the spectator? Why, then, do we in this age of wide reading, archæological studies, and foreign travel require them?

To answer these questions we must pass to a consideration of the conditions of the audience.

In the sixteenth century daily life had a splendid setting: religious and civic ceremonies, public sports, war even, were pageants. The citizen was himself an integral part of these splendors; he walked in the procession, knelt in the cathedral, wore a glittering costume to the wars.

In the memories of these men were the bloody birth of the new faith and the bloodier death of the old; in their middle age they were blown to the four quarters of the seas, trading with Hawkins, fighting with Drake, roaming the flower forests of South America, hearing eye-witness tales of the golden civilizations of Mexico and Peru, — scattered to the world's end, until the Armada loomed upon the horizon and called them together again. Drunk and dazzled between these enchantresses of the East and the West, Italy and the southern seas, such

were the imaginations to which Shakspere appealed.

The world was young for the second time, and to these men a few words of description were as fire to tow.

If these were their powers of imagination, their possibilities for expression in scene-setting were very different: the splendors could not be realistically represented upon small stages and with imperfect machinery. Costume could not be impressive, because upon the very

BACCHUS POURING A LIBATION BEFORE THE PLAY.

stage itself sat, as spectators, the ruffling gallants of the time, the noblest and richest among the auditors, clad in the costliest fashions that have ever been worn. Chaffing the pit, criticising aloud the action of the piece, they divided with the players the attention of the audience, and by their blaze of color made dramatic concentration impossible. The play in those days was costumed contemporaneously, and the poor actor could not vie with these birds of paradise — he would have been a ridiculous anticlimax. In the past, simplicity was natural to the stage; beauty, pageantry were parts of daily life — the theater needed but to suggest them. To these men their drama was not an exotic or an antiquity so much as ours is. It was a natural growth of the soil, a product of the artistic needs of the age, reflecting its manners, ethics, and ideals. This is far from being the case with us. In seeing any play of the past we have to put ourselves in a certain mental attitude, shift our ordinary point of view, acclimatize ourselves to the foreign atmosphere. Therefore, historic costumes and settings are indispensable to create the illusion for which the actor strives: the direct appeal to the eye puts the audience unconsciously in sympathy with the spirit of a remote era. Let us take an example: In Delavigne's "Louis XI." we change from our age of freedom to that of an absolute king, an age of jealousy and insecurity. Our minds are brought into immediate recognition of this by the castle, the drawbridge, the thick walls, and the heavily armed attendants, without obliging us to go through any mental process in order to realize these changed conditions. Man has in every age a craving for beauty of architecture, color, and grouping. To-day, "no longer able to be an actor, he desires to be a spectator" of the picturesque, for in our time pageantry has been shifted from daily life to the stage. The man of the sixteenth century, having it in his city, his dress, and his home, did not need it at the theater. We have reversed these conditions. With our civilization of mechanics and the exact sciences, life has grown dun and civil-suited: the Puritans themselves would wonder at the plainness of our daily attire. Processions have all but disappeared; court ceremonial has been simplified; color abandoned even by the peasant and the soldier, and at present the armies of Europe are being uniformed in dull blues and grays, and only gala days see the people of Spain and Italy in their old-time brilliancy.

Let us not then drive picturesqueness from its last stronghold, the theater. *There* much can be done for us with slight means: behind the footlights everything is relative, and relatively the largest frames are small, be they even the prosceniums of San Carlo and La Scala; in them much may be represented by little, a few seem many, an hundred be an army. To the man of the Renaissance, who had perhaps during the day seen a thousand knights ride by against the splendid background of a mediæval city, the twelve horsemen of "La Juive" at the Paris Grand Opera would not be impressive; to us they help the spectacle greatly. Those who object to elaborate settings, holding that high thought is incompatible with the sensuous gratification of the eye, have a too flexible standard. They do not logically define their position. Their theories, pushed to their legitimate sequence, would give the stage its Elizabethan simplicity, or indeed find their most direct expression in Coquelin's monologues recited in evening-dress in a drawing-room.

A fine setting can not belittle good poetry — it may be too gorgeous, it can not be too good; and the fact that elaborate costumes and scenery may carry a poor piece does not prove that

they may hurt a good one; just as the occasional success of great personal beauty in an indifferent actress is no argument against the possession of a handsome person by an actress of genius.

Most important of all is the fact that it is the quality of *novelty* which makes fine stage-settings distracting to many persons. Once thoroughly accustomed to good and correct scenery and costume, we shall cease to be unduly occupied by them: when Garrick and Talma made a few innovations, it is probable that even such simple alterations as discarding the bag-wig disturbed old play-goers. To-day we are willing enough that the painted Arden shall be leafy and beautiful; *Rosalind* is not less so: we are familiar with the loveliness of a forest. *Theodora's* palace is rich and striking, and we say that it is scenic and distracts us from Bernhardt's acting: we are unaccustomed to Byzantine architecture. *Tony Lumpkin*, *Lady Teazle* must be well costumed; the eighteenth century is about us still in our old country homes. *Cæsar* must be toged; the veriest primer thus shows him to us. In Shakspere's time *Brutus* conspired, slew, and died in ruff and feathered hat and Spanish rapier.

THE THEATER OF THE ELIZABETHAN STROLLERS — THE INN YARD.

We live in an eclectic age and can not dress our players contemporaneously as did the Ve-

IN A MIRACLE PLAY.

netians; we would not accept a *Hamlet* in high hat and ulster. Since, therefore, we must costume our actors, let us learn to apply the laws of beauty in form and color guided by æsthetics rather than by archæology: the latter, pure and simple, we do not want; it would hamper us, but decent fitness always helps. Anything *outré* is bad; unfamiliar archæological ugliness should, of course, be let alone, but unfamiliar archæological beauty by usage soon becomes familiar.*

The possibilities of scenic expression have made great strides within a few years. During the seventeenth and eighteenth centuries but little attempt at realistic setting, historical accuracy, or local color was made upon the French or English stage. In the last quarter of the last century Voltaire had warmly advocated studies in that direction, and in the first quarter of ours Walter Scott began to write his tales, and the love of the picturesque as embodied in the quaint and the remote grew apace. In France a hard struggle ensued between the old conventional and the new romantic schools, during which the red waistcoat of Théophile Gautier was the oriflamme of the innovator, and the young Victor Hugo faced a tempest of howls and hisses, to triumph utterly at last. For the first time approximately correct costumes, local color, and realistic scenery were presented with the drama. Hugo's plays were examples of minute setting; each scene was preceded by an elaborate description of the requisite scenery, costumes, and properties. Finally even that abode of conventionality, the opera, was affected, so irresistible was the new movement.

Meyerbeer, with Scribe as librettist, began to mount his pompous "machines." The cathedral scene of the "Prophet," the ship in "L'Africaine," where the whole stage swings around as *Nelusko* puts the vessel about, had a European reputation. Progress continued, but until very recently, while form and line were good, color was still violent and inharmonious; and at the opera the maids of honor filed along in sequence of chromes, vermilions, magentas, like the dearly remembered but gaudy Noah family of the arks of our childhood. Towards 1873, Offenbach, as manager of the Théâtre de la Gaîté, gave his "Orphée aux Enfers" enlarged to the proportions of a five-act spectacle. With this relatively trivial work, delicate color made one of its first successes. In Paris, Grévin, the designer superintending the costumes, put gods and goddesses, mermen and mermaidens, mortals, satyrs, Pegasus, and all into the lightest and most delicate colors, using only a few dark or dull tones for contrast. Almost banishing the usual gold and silver, he obtained the most brilliant effect of color that had been seen up to that time upon the French stage. "Orphée" was successful, and Paris cried out that tinsel must go—"plus de clinquant!" Good color was now expected at the theater, and in England Mr. Irving added the dignity, sobriety, and nobility of color which befitted the more serious drama. South Kensington and the new art movement of course aided. In France, M. Sardou and others followed. Careful stage-setting was now in full progress on both sides of the Channel, and American audiences could judge of its results during the western tours of the Lyceum Company.

THE AUDIENCE OF A MIRACLE PLAY IN AN ABBEY.

Let us pass to the consideration of the appli-

* The Greek drama has been purposely left unconsidered in this question. Human, universal, eternal as are the great plays, should we see them acted and set as they were in the days of Pericles, they would seem to us local, strange, and remote. The Greek scene was of masonry, a fixture, part of the theater itself, and usually represented the façade of a palace; to its three doors were respectively assigned the entrances of the principal actor, the strangers or guests, and the common people of the play. The players wore huge conventional masks, set wigs, high-soled buskins, and were stuffed and padded under their formal draperies. Everything about the Greek drama, from the plot of the play to the costume of the actor, had a character of immutability and fixity quite opposed to our ideal of the most subtle, emotional, and evanescent of all the arts.

The Greek play is therefore so foreign to our life, so seldom represented on our stage, that it is not necessary to consider it in reference to modern needs; its conditions differ as utterly from our dramatic requirements as the antique theater, hewn out of the hillside, open to the sky, lighted by the southern sunshine, differs from our play-houses.

cation of pictorial law to the theater. The pictorial part in the production of a play may be continued in the painting of the scenery, the construction of the costumes and the properties, and the combination of all into stage pictures.

A BATTLE.

Theatrical settings are to a considerable extent governed by the same laws which control the execution of easel pictures,—harmony of color, agreeable distribution of the masses, groups, and lighting, as in a composition upon canvas; recognition of the pictorial principle that simple central objects will bear an elaborate background, and that an intricate foreground needs simplicity behind it. In a few words, the relief which is given to the principal rôles, by their inherent importance and the superiority of the actors filling them, may be greatly enhanced by purely pictorial means of color and lighting.

Let us, for the sake of illustration, suppose a case from "Julius Cæsar," as given by Mr. Barrett at the Star Theater winter before last. The leading actors were in the foreground in white togas, while behind, at the back of the

stage, were the plebeians, represented by the pupils of the Lyceum School, dressed, as they really were at the rehearsal, some in brilliant red, many in white, or bright yellow, each pupil trying sincerely though mistakenly to add to the general effect by being as conspicuous as possible. Against this rainbow the principal actors showed but poorly. With the ready consent of Mr. Barrett, Mr. Millet, who had volunteered his assistance in the arrangement of the costumes, ordered thirty or forty dresses of neutral colors,— light and dark ochers, dull reds, olives, and mauves. Once upon the scene, these yielded not only a delightful harmony of colors among themselves, but a fine relief to the white figures of the senators. Thus by good judgment the desired effects were focused and made to tell. *Antony* in black, upon the tribune, had for a complement the hurry and confusion of the mob; in the senate-house the foreground of senators struggling with *Cæsar* gave the detail; the neutral costumes of the Lyceum massed upon the benches furnished the simple background. For, observe that a massing or multiplication of parts either upon canvas, bas-relief, or scene yields simplicity, when the same spaced or scattered would confuse. These are a few instances of pictorial laws applied to grouping. Special cases have to be met as they come up at rehearsals. Other instances are more directly personal: for example, rouging and making-up are largely dependent upon the size of the house. It is again a question of the painter's canvas and its distance from the spectator. Rouge, if too violent, by a natural law of color causes the planes of the cheeks to recede from the planes of the other and whiter portions of the face, thus producing a look of age and of gauntness. The sparing use of rouge is good. The Greeks, those most logical of artists, touched the cheeks of their canephoræ with it for the Panathenaic procession, but in their use of color, whether upon the faces of their girls or upon the triglyphs and metopes of their temples, they estimated at its full value the glazing and harmonizing power of sunlight.

When considering costumes and scenery, emphasis must be placed upon the fact that good effects in many cases do not or should not cost more than poor ones. A single illustration will be better than much explanation. In the fine rendering of the "Valkyr" by the German Opera Company last winter, the furs, characteristic helmets, lances, and big shields of the warrior-maidens — costly things — were constructed with taste and skill, but the fine effect that should have been produced by this care and cost was spoiled by so simple a matter as the cloaks of the Valkyrs. Such dyes were used as had, we fondly hoped, perished off the face of the earth, or been imprisoned in the glass jars of druggists' windows. Paris green, magenta, chrome,— what names can be found for such crudities! The same expenditure with a feeling for color would have made all perfect: many in the audience would have been hurt by false notes in the music, many were by the bad color, the laws of which exist somewhere, though infinitely subtle and not yet formulated. *Pure* color should be used with the greatest care, and in the smallest quantities. White is the noblest of all, and for brilliant effects incomparable; while for general use and masses we must rely on the secondaries and tertiaries. It was the good fortune of the art epochs — antiquity, the Middle Ages, the Orient of the past — that their imperfect chemistry did not know how to create pure color; tones which were perforce free from sharpness, employed for centuries, educated the eyes of men, and in spite of Western dyes the modern Japanese continues to be a colorist, though not in his full measure.

As to material, woolens, crêpes, and cheese-cloth, good in color, well cut and draped, are better than satin and velvet ill applied. The costliness of the latter should insure them good treatment, but often does not.

Fine costume is the result of a lavish expenditure, but it is the expenditure of thought and training; money plays only a secondary part. Some artists are almost sure to be well costumed, the public hardly realizing what care and study have been given to apparently unimportant detail. For exquisite scales of color we have had Mr. Irving's *Benedick* dress and Mr. Norman Forbes's *Claudio* costume in the first act of "Much Ado," Miss Terry's gowns as *Beatrice*, Madame Modjeska's beautifully draped *Juliet* costume in the garden scene with the *Nurse*,— indeed, the names of these artists suggest a whole series of pictures.

The meticulous care of Mr. Irving's personal make-ups has been criticised. Signor Salvini, on the other hand, makes but few changes; we always see the same high, bald forehead, full, drooping mustache, and handsome face. He is a great genius, but his performance is not greater because of his slight make-up; if so, it would be greater still in modern dress. Mr. Irving studies the pictures and prints of the time until he walks on to the stage the very man Charles Stuart and no other, so that the audience almost look for the Vandyke frame out of which he has stepped. As *Louis XI.* sits in his chair of state, his sharp knees almost meet his chin in the pose so familiar to us; the chair is cunningly contrived for this very effect, and helps to give the bent

and drawn look. Is this trickery? Not at all; it is good art, excellent art. The inner passions and struggles which the actor is to express surely carve the outer shell which he is also to present. The handsome soldier who rushes on to the stage, armor clattering, one tasse torn half away, hair flying, bears in his outward presence the courtliness and bravery that history yields to Charles I. in spite of his weakness and treachery; the crouching ugliness of the French king is wicked ugliness, and the man *Louis* in the throne-room above infers the iron cage in the dungeon below. So to the audience the make-up is a part of the man, and the pictorial becomes the psychological.

IN THE WINGS — WAITING TO GO ON THE STAGE.

Data are abundant. Viollet-le-Duc has given us the Middle Ages, even to the patterns of its dresses. Armor, so splendid in its scenic effect, stands reconstructed, even to its minutest buckle, upon the eighty military figures of the Paris Museum of Artillery. There may be found the clattering Burgundians of Louis XI., King Harry's men of Harfleur and Agincourt, the Crusaders of Tasso, the Gauls of the Arch of Orange,— they who feared nothing save that the sky might fall,— the Athenian "Knights" of Aristophanes, Cæsar's legionaries and gladiators, the "Miles Gloriosus" of Plautus, the Northmen of the Nibelungen cycle, the men of all the ancient dramas,— for then every man was a soldier, even the fur-clad pre-historic human animal whom circumstances of time and space prevent us from following in any drama save that of beast slaying and eating, or being beast slain and devoured. Excellent costume books abound, the

THE MURDER OF JULIUS CÆSAR — FROM BEHIND THE SCENES.

results of a harvest gleaned from the pictures and sculptures of Italy and the North, and in part already presented in some theaters.

The buckramed and gilded Byzantines have come from the solemn mosaics of St. Vitalius to the light and glitter of the Porte St. Martin; Bernhardt's "Daughter of Roland" has stepped down from her canopied niche in Chartres's porch; Carpaccio's many-colored youths of the Company of the Calza have left the walls of Venice; the pages of the Brera walk the boards; the forester lads of the Flemish tapestries are seen in the doublet and long hose of Modjeska's *Rosalind;* while the glorious donzella of Veronese, pearled, ruffed, and brocaded, bears herself as radiantly in Miss Terry's *Portia* as even upon the canvas of the great old master. Archæology *per se* we do not want, any more than we want it in our pictures, but where relative faithfulness adds beauty and picturesqueness — and it generally does — we most emphatically do wish it. Rigid adherence to archæology may produce constraint, stiffness, and ugliness; reckless depart-

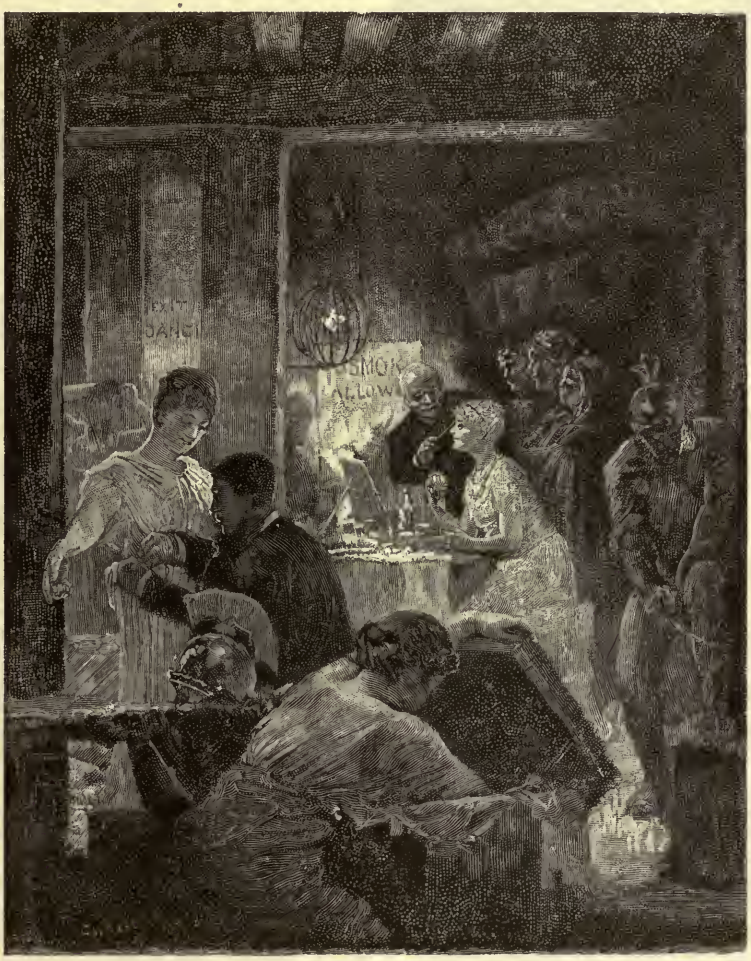
ure from it may be ridiculous. The plays of the eighteenth century stand near to us; in the old homes of New England, New Jersey, and the South are heirlooms that familiarize us with the accessories of the times of Garrick and Cibber. Family portraits teach us to demand good costume upon our *Peter Teazles* and *Anthony Absolutes*. Great-grandmother's quilted petticoat, which, dragged from some garret, had been curiously handled by us, seems right and proper upon *Miss Hardcastle* or *Dorinda;* but when the piece goes farther back, what a terra incognita we find; for the Middle Ages or antiquity, what amalgamations are accepted and applauded! How well New York knows the Paris-green tights and tin-pot helmets of "Trovatore"! In the dress of these mediæval Spanish freebooters we follow the assurance of Solomon Lucas to Mr. Snodgrass that a Grecian helmet is, and always has been, the real and only head-gear for a troubadour. Perhaps some opera librettos are too preposterous to deserve serious consideration, but Shakspere is almost as ill treated. A few years ago we saw *Desdemona* arrive at Cyprus in a New York hat of the latest fashion, so big and white, one wondered that anything so like a sail had outlived the "wrack and sufferance" met by the ships. When a famous foreign artist played to us in "Macbeth" it was surprising to see in the banquet scene two red-velvet and gilt arm-chairs for the grim Scotchmen of the time of the Norman conquest. In the same play, when one of the ghostly descendants of *Banquo* wore his too succinct white gown over a pair of modern trousers, the audience laughed aloud. There was about it a suggestion of nocturnal conflagration and of royalty properly anxious to save the crown even in the minimum of clothing. Our ancestors differed from us in their requirements. We should not to-day, as did the sixteenth-century playwright, furnish our Carthaginian senators with watches; nor give Abraham a gun wherewith to shoot Isaac, as in the old ivory, nor like the Dutch artist send the Jews up to Jerusalem on skates. Such were the delightful anachronisms of the naïve old times. To-day we are a little more learned; and though we eschew the strait-jacket of absolute archæology, we may nevertheless be tolerably correct, for the average theater-goer travels far more than he did fifty years ago, sees the relics of the past, and is not averse to meeting them again upon the stage.

To the untraveled, the theater, especially in a country which, like ours, has few historic monuments, is a pictorial educator. A French savant has proposed that archæological correctness in appointments shall just keep pace with the knowledge of the audience; that the already familiar shall be given with fair accuracy, and that the unfamiliar shall be but slightly sketched. Thus, ancient Romans, being well known, shall wear their togas correctly; but if so unusual a thing as a Persian interior occur, baggy trousers, black beards, and a pipe or two will sufficiently suggest what is needed without distracting the audience by archæological detail. His theory was certainly carried out in an American play at one of the French theaters, where the scene represented the cabin of a steamboat on its way from Chicago to New York, and where the manners and customs of the natives were as unusual as the route of the boat. In all seriousness, it seems impossible to justify such a theory; the knowledge of an audience is never homogeneous. The Englishman whose helmeted ancestors hang in portrait upon his walls will know one thing, the Yankee who contemplates his grandfather in continentals above the chimney-piece will know another, the street urchin in the gallery will know neither.

Though it may not at first be appreciated, the most careful setting is not too good for the teaching of any audience. Of course, in the search after scenic correctness, there is a golden mean, and that mean is such correctness as is consistent with beauty and unity. On the other hand, at one of the extremes is the captious criticism which condemned the cedar walk of "Much Ado about Nothing" with the tremendous indictment that "cedars did not exist in Messina for fifty years after the action of the piece"; at the other extreme is the disappointed yet credulous surprise of Du Maurier's old lady in "Punch" who, seeing the sandwich-man placarded with "Irving as *Hamlet*," says, "Dear me! I had no idea he was at all such a looking person as that!"

As certain costumes serve to set off and emphasize other and more prominent ones, so scenery backs and completes all: its primary function is to be a background and a frame. Therefore, whatever else it is, it should never be obtrusive; and keeping this in mind, we have but to make a wise selection — good scenic artists are at hand and photography has levied tribute upon the world. Have you "Romeo" or "Othello"? Views of Verona and Venice are frequent. "La Haine" or "Theodora"? Siena, Ravenna, and Constantinople are available to give such strength and character as no painter could invent. Have you a modern society play? Apply exactly the same laws that you would to a historical one — namely, those of color, line, and, above all, sobriety. The overloading which is vulgar in our homes is vulgar upon the stage: a cohort of little jars bespangling everything, a butterfly assortment of ribbon-bows, a long array of plump chairs

and sofas, upholstered with bright tufted satins, are bad in our parlors, and upon the stage distract the eye from what should be prominent. Where both furniture and scenery are overloaded and brilliant in color, the costume of the performer is nowhere; there is no subordination to effect; all is on one level plane of gorgeousness, like the company of soldiers, raised by Artemus Ward, to be exclusively composed of brigadier-generals. On the contrary, unity as well as character is given by good choice of scene. All who have visited them, and who have any art feeling, know what an impression is made by the gloom and stained-glass splendor of a Gothic cathedral, the frowning mass of a northern castle, the glitter of an Italian hill-town in the sun. Each is the outcome of a time, a part of it, an epitome of it — indeed, seeming almost an organic growth. What a poor substitute would be some evolution from inner consciousness, some jumble of approximation made up from imperfect memory and more imperfect knowledge! In a tragedy where the action is supposed to pass in Britain of the eleventh century, we have seen a flat representing the interior of a royal palace, apparently the epoch placed the piece *in nubibus* — anything would do. This scene contained some Romanesque arches, pseudo-Corinthian columns, Gothic colonnettes, a kind of frieze of Assyrian honeysuckle, a sort of huge cenotaph with Egyptian cornice, and what might have been Etruscan polygonal masonry. The architecture defied gravitation, fragments of arches hanging like Mohammed's coffin in mid-air. Surely such antics in scene-painting are "but a gallimaufry of gambols."



MAKING-UP.

This is, of course, an extreme case, and matters in our theaters are improving in this respect. Unfortunately, there is at present a tendency to estimate the value of a setting by

THUNDER AND LIGHTNING.

the amount of money it costs. This is a vulgar error; in theatrical as in other matters the most lavish expenditure of money cannot supply the lack of knowledge and training. It is of very little importance whether the velvet of *Romeo's* doublet costs five or fifty dollars a yard; it is of paramount importance that it should be correct in cut and good in color.*

Scene and setting go hand in hand in obedience to pictorial law. In an easel picture the main motive is the focal point; the other parts of the canvas will either be left comparatively simple, or made interesting by objects or color of a thoroughly secondary importance. In a play, the principle being invariable but the conditions somewhat changed, one portion sets off another, the pictorially dramatic coming to the front where the dialogue is least dramatic, the purely intellectual element representing the concentrated and the pictorially dramatic the diffused quality of interest. The balancing of such points is too nice to be ever successfully settled, and Mr. Irving, as a protagonist of artistic setting, has, of course, been much criticised. Such of his arrangements as were seen in America appear singularly unattackable, and a happy medium between too much and too little; he does not smother his pieces with people, or overload them with pageantry. His "Hamlet" was quietly set: his most gorgeous scenes were given to the comedies, and he seemed to seek rather perfection than profusion, tonality than startling contrasts. An instance of his application of the purely pictorial to the weaker portion of a play is found in the first act of "Louis XI." As we read it, this first act seems dull; it is a preface to the play, quite lacking in dramatic interest; its scenic arrangement made it a charming prologue. Plessis les Tours drew its crenelated line across the sky; then entered the little procession, the red-cowled children and garlanded girls; the clattering change of guard followed. *Nemours*, with his mailed knights, clanked across the stage; challenge and pass-word given, out filed the Scotch archers, down rattled the drawbridge, all disappeared within, and the audience without any conscious effort had pushed back the dial-hand of time four centuries, and was in feudal Touraine.

Another of his artistic effects is the church-scene in "Much Ado," where not only the realistic treatment of the setting, but also the separate entrance of each actor, the salutation of the altar, the reverent hush before the ceremony, form such a contrast to the exciting scenes which follow. So, too, in clever emotional antithesis — the heavy organ tones of the crypt-scene have not ceased to vibrate, when, like a sun-burst after storm-clouds, the rush of violins ushers in the lighted hall in which the charming comedy has its end. Indeed, it is perhaps the most of all in this wondrous fairy-land of Shakspere's comedies, of "As You Like It" and "Twelfth Night," of "Tempest" and "Winter's Tale," these paradises of rewarded virtue and villainy reformed, that mind, heart, eye, and ear are alike gratified, and the true symphony of all the arts becomes possible.

M. Sardou is a born stage-setter, but with a leaning to "great machines," numbers of figurants, and magnificence. "La Haine," the earliest of his elaborate essays, was really spectacular: in the first act one saw the fortress-

* The more we have seen of the American stage since the visit of the Lyceum Company, the more we feel it necessary to insist upon sobriety, sobriety, and again sobriety. It was because Mr. Irving's settings were so harmonious, so artistic,—above all, so carefully and faithfully thought and reasoned out,—that they were so good. Vaunted expense in a mounting is nothing; it all may have been misapplied. There has been so much gilt and tinsel in some of our plays — bright colored processions do not necessarily make a fine spectacle. And it should be remembered, too, that bad scenery spoils good costume; and that in England and France painters are convinced that a scene should not be a hard and crude piece of work, but should have atmosphere and grayness, precisely as in the case of landscape or architecture in an easel picture. Witness the fine scenery brought by Miss Anderson to America for "Romeo and Juliet," notably the lovely garden-scene, backed by the view of Verona. Some excellent landscape painting has been shown at some of our smaller theaters here, and some of Mr. Daly's revivals have been beautifully costumed.

like streets of mediæval Siena,— real, long-horned white oxen from Tuscany drew the block-wheeled carts across the stage; people strolled about until, the alarm-bell ringing, chains quickly barricaded the way; men caught up their children and ran for their houses; realism did what it could to make the audience feel that it was itself a part of the Middle Ages. Again, in another scene before the cathedral, the young men of adverse parties suddenly, in true Italian fashion, drew sword and attacked; all at once in the center of the stage the great church-doors swung open; upon the platform, in all the splendor of high canonicals, appeared the angry archbishop with his train — bishops, priests, choir-boys, and censer-bearers — advancing straight between the weapons; before the cross the combatants knelt; from the great book, opened upon the shoulders of two kneeling acolytes, the prelate rebuked the people, who, stacking their swords at the doors, in mediæval manner, entered the cathedral to the music of the organ and the bells. "La Patrie," at the Porte St. Martin, has been, perhaps, the most carefully and successfully set of any of his pieces.

If, then, the necessary data are and have been so abundant, whose fault is it that they have not been used? Not the managers' surely; they are always willing to give the public what it wants if they can only find out what that is. Not the dramatic critics'; they would gladly appreciate fine and well-ordered settings. Mr. Booth made a gallant initiative many years ago with "Julius Cæsar." Mr. Wallack and Mr. Daly have done well with old English comedy; much good scenery was painted, but in the main things were bad. The fact is that until the Centennial lent its art impulse to the great mass of the people which had not traveled abroad, there existed in this country no general public appreciation of fine setting. Three or four years ago Mr. Frank D. Millet, the painter, came forward as an innovator in antique costume. We had close at hand, as models, casts and photographs of the women of the Parthenon in the most beautiful draperies ever worn, perfectly fulfilling the æsthetic conditions of clothing, at once concealing and revealing the human body. As a realization of this, the modern American stage had adopted a formless low-necked gown, made of material neither heavy nor light, worn over various bunching articles of underwear, and festooned to suit the taste of the wearer. Mr. Millet thought that it was not enough to cut a piece of cloth after the pattern of some learned archæologist,— the cloth once upon the figure must *look* like an antique dress. He had carefully studied the authorities upon costume and those best authorities, the sculptures of the museums of Athens, Italy, and London, and bringing to his work at once art feeling and a principle of strong common sense, he gave the stage in the person of Miss Anderson's *Galatea* a careful reproduction of the loveliest costume ever worn — that of the Athenian lady of the great epoch. He treated color with as much respect and taste as form and line, and somewhat later, the Harvard Greek play offering him an opportunity, he applied his costumes to groups and masses. An article by him upon the play appeared in the pages of THE CENTURY.* Mr. Barrett, Mr. Wallack, and Mr. Daly, in Shaksperian and other old English revivals, have given care and thought to the progress of stage-setting, and the public look to them as leaders in that direction.

To sum up: in this paper an attempt has been made to prove that in our sober time pageantry has been shifted from our outdoor life to the stage, and that illusion there is necessary; that a dignified and beautiful setting may be produced by the application of pictorial laws to the stage, and that the same laws are applicable to all the arts governing both the theater and the picture; that in our eclectic time we may demand accuracy heretofore unnecessary and impossible; — in short, to prove that the pictorial may help its sister, the dramatic art.

It is not necessary that the painter should turn stage-manager, nor vice versâ, only that

THE TRAP.

*See "Costumes in the Greek Play at Harvard," in this magazine for November, 1881.

the laws of form and color at the theater should be recognized as potent for good, their misconception as potent for obstruction and ridicule.

Last of all, we do not forget that while the accessory art transforms the audience into a receptive and well-attuned instrument, the actor's is the spirit that informs and breathes upon the strings.

AT "THE LITERARY."

Folks in town, I reckon, thinks
They git all the fun they air
Runnin' loose 'round! — but, 'y jinks!
We got fun, and fun to spare,
Right out here amongst the ash
And oak timber ever'where!
Some folks else kin cut a dash
'Sides town-people, don't fergit! —
'Specially in winter-time,
When they 's snow, and roads is fit.
In them circumstances I 'm
Resignated to my lot —
Which puts me in mind o' what
'S called "The Literary."

Us folks in the country sees
Lots o' fun! — Take spellin'-school;
Er ole hoe-down jamborees;
Er revivals; er ef you 'll
Tackle taffy-pullin's you
Kin git fun, and quite a few! —
Same with huskin's. But all these
Kind o' frolics they hain't new
By a hundred year' er two,
Cipher on it as you please!
But I 'll tell you what I jest
Think walks over all the rest —
Anyway it suits *me* best, —
That 's "The Literary."

"I WAS 'P'INTED TO BE WHAT THEY CALL 'CRITIC.'"

First they started it — "'y gee!"
Thinks-says-I, "This settlement
'S gittin' too high-toned fer me!"
But when *all* begin to jine,
And I heerd *Izory* went,
I jest kind o' drapped in line
Like you 've seen some sandy, thin,
Scrawny shoat put fer the crick
Down some pig-trail through the thick
Spice-bresh, where the whole drove 's been
'Bout six weeks 'fore he gits in!
"Can't tell nothin'," I-says-ee,
"'Bout it tel you go and see
Their blame 'Literary!'"

Very first night I was there
I was 'p'inted to be what
They call "Critic" — so 's a fair
And square jedgment could be got
On the pieces 'at was read,
And on the debate, — "Which air

Most destructive element,
Fire er worter?" Then they hed
Compositions on "Content,"
"Death," and "Botany"; and Tomps,
He read one on "Dreenin' swamps"
I p'nounced the boss, and said,—
"So fer 'at 's the best thing read
In 'The Literary!'"

"TOMPS, HE READ ONE ON 'DREENIN' SWAMPS.'"

Then they sung some — tel I called
Order, and got back ag'in
In the critic's cheer, and hauled
All o' the p'formers in.
Mandy Brizendine read one
I fergit; and Doc's was "Thought";
And Sarepty's, hern was "None
Air denied 'at knocks"; and Daut —
Fayette Strawnses little niece —
She got up and spoke a piece:
Then Izory she read hern —

"AND DOC'S WAS 'THOUGHT.'"

"Best thing in the whole concern,"
I-says-ee; "now le' 's adjourn
This-here 'Literary!'"

They was some contendin'— yit
We broke up in harmony.
Road outside as white as grit,
And as slick as slick could be!—
I 'd fetched 'Zory in my sleigh,
And I had a heap to say,
Drivin' back — in fact, I driv
'Way around the old north way,
Where the Daubenspeckses live.
'Zory allus — 'fore that night —
Never 'peared to feel jest right
In my company.— You see,
On'y thing on earth saved me
Was that "Literary!"

James Whitcomb Riley.

"I HAD A HEAP TO SAY, DRIVIN' SACK."

MARGUERITE.

XIV.

WHO SHE WAS.

FOR a moment somewhat more than her profile shone upon Claude's bewildered gaze.

"I shall see her eye to eye at last!" shouted his heart within; but the next moment she turned away and with two companions who came across the same threshold moved up the street and at the nearest corner vanished. Her companions were the American lady and the artist. Claude wheeled and hurried to pass around the square in the opposite direction, and as he reached the middle of its third side saw the artist hand them into the street-car, lift his hat, and return towards the studio. The two men met at the foot of the stairs. The Spaniard's countenance betrayed a restrained elation.

"You goin' see a picture, now," he said, in a modestly triumphant tone. "Come in," he added, as Claude would have passed the studio door.

They went in together. The Spaniard talked; Claude scarcely spoke. I cannot repeat the conversation literally, but the facts are these: A few evenings before, the artist had been one of the guests at a musical party given by a lady whose name he did not mention. He happened — he modestly believed it accidental — to be seated beside the hostess, when a young lady — "jung Creole la-thy," he called her — who was spending a few days with her played the violin. The Spaniard's delicate propriety left her, also, nameless, but he explained that, as he understood, she was from

the Teche. She played charmingly — "for an amateur," he qualified; but what had struck him more than the music was her beauty, her figure, her picturesque grace. And when he confessed his delight in these, his hostess, seemingly on the inspiration of the moment, said:

"Paint her picture! Paint her just so! I 'll give you the order! Not a mere portrait — a picture!" And he had agreed, and the "jung" lady had consented. The two had but just now left the studio. To-morrow a servant would bring violin, music-rack, etc.; the ladies would follow, and then —

"You hear music, anyhow," said the artist. That was his gentle way of intimating that Claude was not invited to be a looker-on.

On the next day Claude, in his nook above, with the studio below shut from view by the curtain of his inner window, heard the ladies come. He knows they are these two; for one voice, the elder, blooms out at once in a gay abundance of words, and the other speaks in soft low tones that before they reach his ear run indistinguishably together.

Soon there comes the sound of tuning the violin, while the older voice is still heard praising one thing and another and asking careless questions.

"I suppose that cotton cloth covers something that is to have a public unveiling some day, does n't it?"

Claude cannot hear the answer; the painter drops his voice even below its usual quiet tone. But Claude knows what he must be saying; that the cloth covers merely a portrait he is finishing, of a young man who has sat for it to please a wifeless, and but for him childless, and fondly devoted father. And now he can tell by the masculine step, and the lady's one or two lively words, that the artist has drawn away the covering from his (Claude's) own portrait. But the lady's young companion goes on tuning her instrument — "tink, tink, tink"; and now the bow is drawn.

"Why, how singular!" exclaims the elder lady. "Why, my dear, come here and see! Somebody has got your eyes! Why, he 's got your whole state of mind, a reduplication of it! And — I declare, he looks almost as good as you do! If — I ——"

The voice stops short. There is a moment's silence in which the unseen hearer doubts not the artist is making signs that yonder window and curtain are all that hide the picture's original, and the voice says, again:

"I wish you 'd paint my picture," and the violin sounds once more its experimental notes.

But there are other things, which Claude can neither hear nor see nor guess. He can not see that the elder lady is already wondering at and guardedly watching an agitation betrayed by the younger in a tremor of the hand that fumbles with her music-sheets and music-stand, in the foot that trembles on the floor, in the reddened cheek, and in the bitten lip. He may guess that the painter sits at his easel with kindling eye; but he can not guess that just as the elder lady is about to say:

"My dear, if you don't feel" — the tremor vanishes, the lips gently set, and only the color remains. But he hears the first soft moan of the tense string under the bow, and a second, and another; and then as he rests his elbows upon the table before him and covers his face in his trembling hands it seems to him as if his own lost heart had entered into that vibrant medium, and is pouring thence to heaven and her ear its prayer of love.

Paint, artist, paint! Let your brushes fly! None can promise you she shall ever look quite like this again. Catch the lines, — the waving masses and dark coils of that loose-bound hair; the poise of head and neck; the eloquent sway of the form; the folds of garments that no longer hide, but are illumined by, the plenitude of an inner life and grace; the elastic feet; the ethereal energy and discipline of arms and shoulders; the supple wrists; the very fingers quivering on the strings; the rapt face, and the love-inspired eyes!

Claude, Claude! when every bird in forest and field knows the call of its mate, can you not guess the meaning of those strings? Must she open those sealed lips and call your very name — she who would rather die than call it?

He does not understand! Yet, without understanding, he answers. He rises from his seat; he moves to the window; he will not tiptoe or peep; he will be bold and bad! Brazenly he lifts the curtain and looks down; and one, one only, — not the artist and not the patroness of art, but that one who would not lift her eyes to that window for all the world's wealth, — knows he is standing there, listening and looking down. He counts himself all unseen, yet presently shame drops the curtain. He turns away, yet stands hearkening. The music is about to end. The last note trembles on the air. There is silence. Then some one moves from a chair, and then the single cry of admiration and delight from the player's companion is the player's name —

"Marguerite Beausoleil!"

Hours afterward there sat Claude in the seat where he had sunk down when he heard that name. The artist's visitors had made a long stay, but at length they were gone. And now Claude, too, rose to go out. His steps

were heard below, and presently the painter's voice called persuadingly up:

"St. Pierre! St. Pierre! Come, see."

They stood side by side before the new work. Claude gazed in silence. At length he said, still gazing:

"I 'll buy it when 't is finish'."

But the artist explained again that it was being painted for Marguerite's friend.

"For what she want it?" demanded Claude. The Spaniard smiled and intimated that the lady probably thought he could paint. "But at any rate," he went on to say, "she seemed to have a hearty affection for the girl herself, whom," he said, "she had described as being as good as she looked." Claude turned and went slowly out.

When at sunset he stood under the honey-locust tree on the levee where he was wont to find his father waiting for him, he found himself alone. But within speaking distance he saw St. Pierre's skiff just being drawn ashore by a ragged negro, who presently turned and came to him, half-lifting the wretched hat that slouched about his dark brows, and smiling.

"Sim like yo' done fo'got me," he said. "Don't yo' 'member how I use' live at Belle Alliance? Yes, seh. I 's de one what show Bonaventure de road to Gran' Point'. Yes, seh. But I done lef' dah since Mistoo Wallis sole de place. Yes, seh. An' when I meet up wid yo' papa yo' nevva see a nigger so glad like I was. No, seh. An' likewise yo' papa. Yes, seh. An' he ass me is I want to wuck fo' him, an' I see he needin' he'p, an' so I tu'n in an' he'p him. Oh, yes, seh! dass mo' 'n a week, now, since I been wuckin' fo' yo' papa."

They got into the skiff and pushed off, the negro alone at the oars.

"Pow'ful strong current on udder side," he said, pulling quietly up-stream to offset the loss of way he must make presently in crossing the rapid flood. "Mistoo Claude, I see a gen'leman dis day noon what I ain't see' befo' since 'bout six year' an' mo'. I disremember his name, but ——"

"Tarbox?" asked Claude with sudden interest.

"Yes, seh. Dass it! Tah-baux. Sim like any man ought to 'member that name. Him an' yo' papa done gone down de canal. Yes, seh; in a pirogue. He come in a big hurry an' say how dey got a big crevasse up de river on dat side, an' he want make yo' papa see one man what livin' on Lac Cataouaché. Yes, seh. An' yo' papa say yo' fine yo' supper in de pot. An' Mistoo Tah-baux he say he want yo' teck one hoss an' ride up till de crevasse an' yo' fine one frien' of yose yondah, one ingineer; an' he say — Mistoo Tah-baux — how he 'low to meet up wid yo' at yo' papa' house to-morrow daylight. Yes, seh; Mistoo Tah-baux; yes, seh."

XV.

CAN THEY CLOSE THE BREAK?

THE towering cypresses of the far southern swamps have a great width of base, from which they narrow so rapidly in the first seven or eight feet of their height, and thence upward taper so gradually, that it is almost or quite impossible for an ax-man standing at their roots to chop through the great flare that he finds abreast of him and bring the trees down. But when the swamps are deep in water the swamper may paddle up to these trees whose narrowed waists are now within the swing of his ax, and standing up in his canoe, by a marvel of balancing skill, cut and cut until at length his watchful up-glancing eye sees the forest giant bow his head. Then a shove, a few backward sweeps of the paddle, and the canoe glides aside, and the great trunk falls, smiting the smooth surface of the water with a roar that, miles away, reaches the ear like the thunder of artillery. The tree falls; but if the woodsman has not known how to judge and choose wisely when the inner wood is laid bare under the first big chip that flies, there are many chances that the fallen tree will instantly sink to the bottom of the water and can not be rafted out. One must know his craft even in Louisiana swamps. "Knowledge is power."

When Zoséphine and Mr. Tarbox finished out that Sunday twilight walk, they talked, after leaving the stile behind, only on business. He told her of having lately been with a certain expert in the swamps of Barataria, where he had seen some noble cypress forests tantalizingly near to navigation and market, but practically a great way off, because the levees of the great sugar-estates on the Mississippi River shut out all deep overflows. Hence these forests could be bought for, seemingly, a mere tithe of their value. Now, he proposed to buy such a stretch of them along the edge of the shaking prairie north of Lake Cataouaché as would show on his part, he said, "caution, but not temerity."

He invited her to participate. "And why?" For the simple reason that the expert, and engineer, had dropped the remark that in his opinion a certain levee could not possibly hold out against the high water of more than two or three more years, and that when it should break it would spread from three to nine feet of water over hundreds of square miles of swamp forests, *prairies tremblantes*, and rice and sugar fields, and many leagues of railway.

Zoséphine had consented; and though Mr. Tarbox had soon after gone upon his commercial travels, he had effected the purchase by correspondence, little thinking that the first news he should hear on returning to New Orleans would be that the remotely anticipated "break" had just occurred.

And now, could and would the breach be closed, or must all Barataria soon be turned into, and remain for months, a navigable yellow sea? This, Claude knew, was what he must hasten to the crevasse to discover, and return as promptly to report upon, let his heart-strings draw as they might towards the studio in Carondelet street and the Christian Women's Exchange.

XVI.

THE OUTLAW AND THE FLOOD.

WHAT suffering it costs to be a coward! Some days before the crevasse occurred, he whom we know as the pot-hunter stood again on the platform of that same little railway station whence we once saw him vanish at sight of Bonaventure Deschamps. He had never ventured there since, until now. But there was a new station-agent.

His Indian squaw was dead. A rattlesnake had given her its fatal sting, and the outcast, dreading all men and the coroner not the least, had, silently and alone, buried her on the prairie.

The train rolled up to the station again as before. Claude's friend, the surveyor, stepped off with a cigar in his mouth, to enjoy in the train's momentary stay the delightful air that came across the open prairie. The pot-hunter, who had got rid of his game, ventured near his former patron. It might be the engineer could give him work whereby to earn a day's ready money. He was not disappointed. The engineer told him to come in a day or two, by the waterways the pot-hunter knew so well, across the swamps and prairies to Bayou Terrebonne and the little court-house town of Houma. And then he added:

"I heard this morning that somebody had been buying the swamp land all around you out on Lake Cataouaché. Is it so?"

The Acadian looked vacant and shook his head.

"Yes," said the other, "a Madame Beausoleil, or somebod— What 's the matter?"

"All aboard!" cried the train conductor.

"The fellow turned pale," said the surveyor as he resumed his seat in the smoking-car and the landscape began again to whirl by.

The pot-hunter stood for a moment, and then slowly, as if he stole away from some sleeping enemy, left the place. Alarm went with him like an attendant ghost. A thousand times that day, in the dark swamp, on the wide prairie, or under his rush-thatch on the lake-side, he tortured himself with one question: Why had she — Zoséphine — reached away out from Carancro to buy the uncultivable and primeval wilderness round about his lonely hiding-place? Hour after hour the inexplicable problem seemed to draw near and nearer to him, a widening, tightening, dreamlike terror, that, as it came, silently pointed its finger of death at him. He was glad enough to leave his cabin next day in his small, swift pirogue — shot-gun, ax, and rifle his only companions — for Terrebonne.

It chanced to be noon of the day following when he glided up the sunny Terrebonne towards the parish seat. The shores of the stream have many beauties, but the Acadian's eyes were alert to anything but them. The deep-green, waxen-leaved casino hedges; the hedges of Cherokee rose, and sometimes of rose and casino mingled; the fields of corn and sugar-cane; the quaint, railed floating bridges lying across the lazy bayou; the orange groves of aged, giant trees, their dark-green boughs grown all to a tangle with well-nigh the density of a hedge, and their venerable trunks hairy with green-gray lichens; the orange-trees again in the door-yards, with neat pirogues set upon racks under their deep shade; the indescribable floods of sunlight and caverns of shadow; the clear brown depths beneath his own canoe; or at the bottom the dark, waving, green-brown tresses of water-weeds — these were naught to him.

But the human presence was much; and once, when just ahead of him he espied a young sun-bonneted woman crouching in the pouring sunshine beyond the sod of the bayou's bank, itself but a few inches above the level of the stream, on a little pier of one plank pushed out among the flags and reeds, pounding her washing with a wooden paddle, he stopped the dip of his canoe-paddle and gazed, with growing trepidation and slackening speed. At the outer end of the plank the habitual dip of the bucket had driven aside the water-lilies, and made a round glassy space that reflected all but perfectly to him her busy young downcast visage.

"How like —" Just then she lifted her head. He started as though his boat had struck a snag. How like — how terribly like to that young Zoséphine whose ill-concealed scorn he had so often felt in days — in years — long gone, at Carancro! This was not and could not be the same — lacked half the necessary years; and yet in the joy of his relief he answered her bow with a question: Whose was yonder house?

She replied, in the same Acadian French in which she was questioned, that there dwelt or had dwelt, and about two weeks ago had died, "Monsieur Robichaux." The pot-hunter's paddle dipped again, his canoe shot on, and two hours later he walked with dust-covered feet into Houma.

The principal tavern there stands on that corner of the court-house square to which the swamper would naturally come first. Here he was to find the engineer. But as with slow, diffident step he set one foot upon the corner of the threshold, there passed quickly by him and out towards the court-house two persons — one a man of a county court-room look and with a handful of documents, and the other a woman whom he knew at a glance. Her skirts swept his ankles as he shrank in sudden and abject terror against the wall, yet she did not see him.

He turned and retreated the way he had come, nothing doubting that only by the virtue of a voodoo charm which he carried in his pocket he had escaped, for the time being, a plot laid for his capture. For the small, neatly robed form that you may still see disappearing within the court-house door, beside the limping figure of the probate clerk, is Zoséphine Beausoleil. She will finish the last pressing matter of the Robichaux succession now, in an hour or so, and be off on the little branch railway, whose terminus is here, for New Orleans.

When the pot-hunter approached Lake Cataouaché again he made on foot, under cover of rushes and leaves taller than he, a wide circuit and reconnoissance of his hut. While still a long way off he saw, lighted by the sunset rays, what he quickly recognized as a canoe drawn half out of the water almost at his door. He warily drew nearer. Presently he stopped and stood slowly and softly shifting his footing about on the oozy soil at a little point of shore only some fifty yards away from his cabin. His eyes, peering from the ambush, descried a man standing by the pirogue and searching with his gaze the wide distances that would soon be hidden in the abrupt fall of the southern night.

The pot-hunter knew him. Not by name, but by face. The day the outlaw saw Bonaventure at the little railway station, this man was with him. The name the pot-hunter did not know was St. Pierre.

The ambushed man shrank a step backward into his hiding-place. His rifle was in his hand and he noiselessly cocked it. He had not resolved to shoot; but a rifle is of no use until it is cocked. While he so stood another man came into view and to the first one's side. This one, too, he knew, despite the soft hat that had taken the place of the silk one; for this was Tarbox. The Acadian was confirmed in his conviction that the surveyor's invitation for him to come to Houma was part of a plot to entrap him.

While he still looked the two men got into the canoe and St. Pierre paddled swiftly away. The pot-hunter let down the hammer of his gun, shrank away again, turned and hurried through the tangle, regained his canoe, and paddled off. The men's departure from the cabin was, in his belief, a ruse. But he knew how by circuits and short cuts to follow after them unseen, and this he did until he became convinced that they were fairly in the Company Canal and gliding up its dark colonnade in the direction whence they had evidently come. Then he returned to his cabin and with rifle cocked and with slow, stealthy step entered it, and in headlong haste began to prepare to leave it for a long hiding-out.

He knew every spot of land and water for leagues around, as a bear or a fox would know the region about his den. He had in mind now a bit of dry ground scarce fifty feet long or wide, deeply hidden in the swamp to the north of this lake. How it had ever happened that this dry spot, lifted two or three feet above the low level around it, had been made, whether by some dumb force of nature or by the hand of men yet more untamable than he, had never crossed his thought. It was beyond measure of more value to him to know, by what he had seen growing on it season after season, that for many a long year no waters had overflowed it. In the lake, close to his hut, lay moored his small centerboard lugger, and into this he presently threw his few appliances and supplies, spread sail, and skimmed away, with his pirogue towing after.

His loaded rifle lay within instant reach. By choice he would not have harmed any living creature that men call it wrong to injure; but to save himself, not only from death, but from any risk of death, rightful or wrongful, he would, not through courage, but in the desperation of frantic cowardice, have killed a hundred men, one by one.

By this time it was night; and when first the lugger and, after it was hidden away, the pirogue, had carried him up a slender bayou as near as they could to the point he wished to reach, he had still to drag the loaded pirogue no small distance through the dark, often wet, and almost impenetrable woods. He had taken little rest and less sleep in his late journeyings, and when at length he cast himself down before his fire of dead fagots on the raised spot he had chosen, he slept heavily. He felt safe from man's world, at least for the night.

Only one thing gave him concern as he lay down. It was the fact that when, with the old woods-habit strong on him, he had approached his selected camping-ground, with such wariness of movement as the dragging pirogue would allow, he had got quite in sight of it before a number of deer on it bounded away. He felt an unpleasant wonder to know what their unwilling boldness might signify.

He did not awake to replenish his fire until there were only a few live embers shining dimly at his feet. He rose to a sitting posture; and in that same moment there came a confusion of sound — a trampling through bushes — that froze his blood and robbed his open throat of power to cry. The next instant he knew it was but those same deer. But the first intelligent thought brought a new fear. These most timid of creatures had made but a few leaps and stopped. He knew what that meant! As he leaped to his feet the deer started again and he heard, to his horror,— where the ground had been dry and caked when he lay down,— the plash of their feet in water.

Trembling, he drew his boots on, made and lighted a torch, and in a moment was dragging his canoe after him in the direction of the lugger. Presently his steps, too, were plashing. He stooped, waved the torch low across the water's surface, and followed the gleam with his scrutiny. But he did so not for any doubt that he would see, as he did, the yellow flood of the Mississippi. He believed, as he believed his existence, that his pursuers had let the river in upon the swamp, ruin whom they might, to drive him from cover.

Presently he stepped into the canoe, cast his torch into the water, took his paddle, and glided unerringly through a darkness and a wild tangle of undergrowth, large and small, where you or I could not have gone ten yards without being lost. He emerged successfully from the forest into the open prairie, and, under a sky whose stars told him it would soon be day, glided on down the little bayou lane, between walls of lofty rushes, up which he had come in the evening, and presently found the lugger as he had left her, with her light mast down, hidden among the brake canes that masked a little cove.

The waters were already in the prairie. As he boarded the little vessel at the stern, a raccoon waddled in noiseless haste over the bow, and splashed into the wet covert of reeds beyond. If only to keep from sharing his quarters with all the refuge-hunting vermin of the noisome wilderness, the one human must move on. He turned the lugger's prow towards the lake, and spread her sails to the faint, cool breeze. But when day broke the sail was gone.

Far and wide lay the pale green leagues of reeds and bulrushes, with only here and there a low willow or two beside some unseen lagoon, or a sinuous band of darker green where round rushes and myrtle bushes followed the shore of some hidden bayou. The waters of the lake were gleaming and crinkling in tints of lilac and silver stolen from the air, and away to the right, and yet farther to the left, stood the dark phalanxes of cypress woods.

Thus had a thousand mornings risen on the scene in the sight of the outlaw. Numberless birds fluttered from place to place, snatching their prey, caroling, feeding their young, chattering, croaking, warbling, and swinging on the bending rush. But if you looked again, strange signs of nature's mute anguish began to show. On every log or bit of smaller drift that rain-swollen bayous had ever brought from the forest and thrown upon their banks some wild tenant of the jungle, hare or weasel, cat, otter, or raccoon, had taken refuge, sometimes alone, but oftener sharing it, in common misery and silent truce, with deadly foes. For under all that expanse of green beauty, the water, always abundant, was no longer here and there, but everywhere.

See yonder reed but a few yards away. What singular dark enlargement of stem is that near its top, that curious spiral growth? — Growth! It is a great serpent that has climbed and twined himself there, and is holding on for the life he loves as we love ours. And see! On a reed near by him, another; and a little farther off, another; and another — and another! Where were our eyes until now? The surface of the vast brake, as far as one can see such small things, is dotted with like horrid burdens. And somewhere in this wild desolation, in this green prospect of a million deaths waiting in silence alike for harmful and harmless creatures, one man is hiding from all mankind.

XVII.

WELL HIDDEN.

Of all the teeming multitudes of the human world, the pot-hunter knows not one soul who is on his side; not one whom he dare let see his face or come between him and a hiding-place. The water is rising fast. He dare not guess how high it will come; but rise as it may, linger at its height as it may, he will not be driven out. In his belief a hundred men are ready, at every possible point where his foot could overstep the line of this vast inundation, to seize him and drag him to the gallows. Ah, the gallows! Not being dead — not God's anger — not eternal burnings; but simply facing death! The gallows! The tree above his head — the rope around

his neck — the signal about to be spoken — the one wild moment after it! These keep him here.

He has taken down sail and mast. The rushes are twelve feet high. They hide him well. With oars, mast, and the like he has contrived something by which he can look out over their tops. He has powder and shot, coffee, salt, and rice; he will not be driven out! At night he spreads his sail and seeks the open waters of the lake, where he can sleep, by littles, without being overrun by serpents; but when day breaks there is no visible sign of his presence. Yet he is where he can see his cabin. It is now deep in the water and the flood is still rising. He is quite sure no one has entered it since he left it. But — the strain of perpetual watching!

When at dawn of the fifth day he again looked for cover in the prairie the water was too high to allow him concealment, and he sought the screen of some willows that fringed the edge of the swamp forest, anchoring in a few rods' width of open water between them and the woods. He did not fear to make, on the small hearth of mud and ashes he had improvised in his lugger, the meager fire needed to prepare his food. Its slender smoke quickly mingled with the hazy vapors and shadows of the swamp. As he cast his eye abroad he found nowhere any sign of human approach. Here and there the tops of the round rushes still stood three feet above the water, but their slender needles were scarcely noticeable. Far and near, over prairie as over lake, lay the unbroken yellow flood. There was no flutter of wings, no whistle of feathered mate to mate, no call of nestlings from the ruined nests. Except the hawk and vulture, the birds were gone. Untold thousands of dumb creatures had clung to life for a time, but now were devoured by birds of prey and by alligators, or were drowned. Thousands still lived on. Behind him in the swamp the wood-birds remained, the gray squirrel still barked and leaped from tree to tree, the raccoon came down to fish, the plundering owl still hid himself through the bright hours, and the chilled snake curled close in the warm folds of the hanging moss. Nine feet of water below. In earlier days, to the northward through the forest many old timbers rejected in railway construction or repair, with dead logs and limbs, had been drifted together by heavy rains and had gathered a covering of soil; canebrake, luxurious willow-bushes, and tough grasses had sprung up on them and bound them with their roots. These floating islands the flood, now covering the dense underbrush of the swamp, lifted on its free surface, and in its slow creep southward bore through the pillared arcades of the cypress wood and out over the submerged prairies. Many a cowering deer, in those last few days, that had made some one of these green fragments of the drowned land a haven of despair, the human castaway left unharmed.

Of all sentient creatures in that deluge he was suffering most. He was gaunt and haggard with watching. The thought of pursuit bursting suddenly around him now fastened permanently upon his imagination. He feared to sleep. From the direction of the open water surprise seemed impossible; but from the forest! what instant might it not ring with the whoop of discovery, the many-voiced halting challenge, and the glint of loaded Winchester? And another fear had come. Many a man not a coward, and as used to the sight of serpents as this man, has never been able to be other than a coward concerning them. The pot-hunter held them in terror. It was from fear of them that he had lighted his torch the night of his bivouac in the swamp. Only a knowledge of their ordinary haunts and habits and the art of avoiding them had made the swamp and prairie life bearable. Now all was changed. They were driven from their dens. In the forest one dared not stretch forth the hand to lay it upon any tangible thing until a searching glance had failed to find the glittering eye and forked tongue that meant "Beware!" In the flooded prairie the willow-trees were loaded with the knotted folds of the moccasin, the rattlesnake, and I know not how many other sorts of deadly or only loathsome serpents. Some little creatures at the bottom of the water, feeding on the soft white part of the round rush near its root, every now and then cut a stem free from its base and let it spring to the surface and float away. Often a snake had wrapped himself about the end above the water, and when this refuge gave way and drifted abroad he would cling for a time, until some less forlorn hope came in sight, and then swim for it. Thus scarce a minute of the day passed, it seemed, but one, two, or three of these creatures, making for their fellow-castaway's boat, were turned away by nervous waving of arms. The nights had proved that they could not climb the lugger's side, and when he was in her the canoe was laid athwart her gunwales; but at night he had to drop the bit of old iron that served for an anchor, and the very first night a large moccasin — not of the dusky kind described in books, but of that yet deadlier, black sort, an ell in length, which the swampers call the Congo — came up the anchor-rope. The castaway killed it with an oar; but after that who would have slept?

About sunset of the fifth day, though it was

bright and beautiful, the hunter's cunning detected the first subtle signs of a coming storm. He looked about him to see what provision was needed to meet and weather its onset. On the swamp side the loftiest cypresses, should the wind bring any of them down, would not more than cast the spray of their fall as far as his anchorage. The mass of willows on the prairie side was nearer, but its trees stood low — already here and there the branches touched the water; the hurricane might tear away some boughs, but could do no more. He shortened the anchor-rope and tried the hold of the anchor on the bottom to make sure the lugger might not swing into the willows, for in every fork of every bough was a huge dark mass of serpents plaited and piled one upon another and ready at any moment to glide apart towards any new shelter that might be reached.

While eye and hand were thus engaged the hunter's ear was attentive to sounds that he had been hearing for more than an hour. These were the puff of 'scape-pipes and plash of a paddle-wheel, evidently from a small steamer in the Company Canal. She was coming down it; that is, from the direction of the river and the city.

Whither was she bound? To some one of the hundred or more plantations and plantation homes that the far-reaching crevasse had desolated? Likely enough. In such event she would not come into view, although for some time now he had seen faint shreds of smoke in the sky over a distant line of woods. But it filled him with inward tremors to know that if she chose to leave the usual haunts of navigation on her left, and steam out over the submerged prairies and lake, and into the very shadow of these cypresses, she could do it without fear of a snag or a shallow. He watched anxiously as the faint smoke reached a certain point. If the next thin curl should rise farther on, it would mean safety. But when it came it seemed to be in the same place as the last; and another the same, and yet another the same; she was making almost a straight line for the spot where he stood. Only a small low point of forest broke the line, and presently, far away, she slowly came out from behind it.

(To be concluded in the next number.)

George W. Cable.

THE GOVERNOR'S PREROGATIVE.

THE Governor was at home. He sat in his library, in a most amiable mood. His eye took a languid pleasure wandering over the familiar surroundings. After the bare and slightly dingy furnishing of the executive office at the capitol, he was glad to look again on the ceiling, with its mahogany bars, the stamped gold and leather behind the glass of the book-cases, and the warm hues of the curtains and the velvet carpet.

"It is pleasant to be home," said the Governor, dropping his newspaper to look out of the window. The paper certainly was not as entertaining as the distant view of the lake, a blue mist breaking into tumbling lines of foam on a sandy beach; or the nearer view of his own lawn, and the groom, in livery, leading a wee Shetland pony, with his little daughter for rider, around the drive, while the wind blew the child's yellow curls against her rosy cheeks and carried her small laughter and shouts to her father's ears.

Thus he happened to be looking when an old German woman entered the yard and stopped under the shadow of the *porte-cochère*. She was evidently quite an old woman, with wrinkles and white hair; but her face had a ruddy tint burnt into the brown on her cheeks, and her sturdy shape was erect and vigorous of movement. She wore a black stuff gown made in the simplest fashion and carried a bundle. With considerable amusement the observer saw her undo this bundle and take out a comb and a white kerchief, preparatory to making a sort of toilet. First, she brushed away the dust which lay thick on her gown; then she smoothed her hair; and, finally, tied the white kerchief about her neck. Having done all this with the utmost gravity, she walked to the basement door.

"Oh, woman, woman," mused the Governor, "how you cling to your little vanities! She is hardly fine enough for a friend of cook's; perhaps she comes to see the laundress. But why did n't she dress at home?" Smiling to himself, he returned to his paper, only to be interrupted shortly by the butler's announcement of a woman to see him.

"She is an old woman, sir," said Hopkins, who had rather a kind heart and knew the Governor's like weakness.

"Show her in, Hopkins," was the reply. "Ten to one," thought the Governor, "it's

my old woman. So the toilet was for me. I wonder what she wants of me. Thank Heaven, the offices are all full, anyhow!"

The Governor guessed correctly; it was the old woman whom he had seen. She entered timidly in the rear of Hopkins. Safely opposite the Governor, she dropped a courtesy.

"Spricht Excellenz Deutsch?" she asked.

"Ein wenig," said the Governor, apparently with the unworthy motive of impressing Hopkins; for the instant that personage had closed the door, departing, he added, "Speak English, if you can; and won't you take a chair, madam?"

"Oh, no, gnädiger Herr — Excellenz; no, I vill petter stan'. Excellenz, I haf von son, er ist mein einsiges — mine only schild. Dis morgen I vas tell he do *dis* — see, Excellenz." She courtesied again, holding out a carefully folded newspaper to the Governor at arms-length. Even in youth she could never have been a pretty woman, and years of toil had made her shape angular and clumsy and tanned and wrinkled the large features framed by the white hair; but her clear blue eyes were as simple and honest as a child's, and they looked up at the Governor so anxiously that, glancing down the page, he felt a sensation of pity.

"Fritz Jansen," he exclaimed; "are you *his* mother?" and to himself he added, "This is worse than the office-seekers!"

The old woman courtesied timidly. She was quick-sighted enough to see that, somehow, he was unfavorably impressed.

Just then there came two taps at the door. The Governor frowned; he recognized his wife's knock. It is not, therefore, to be inferred that his domestic life was unhappy; on the contrary, he was in love with his wife, who returned his affection; but he felt a presentiment that her presence would make infinitely more disagreeable the decision to which he was sure he must come; yet, at the same time, he was conscious of an irritating longing to shift the responsibility of consolation on to some woman's shoulders — besides, his wife spoke German. A third tap sounded on the door-panel; it meant, "Are you engaged?"

"Perhaps I vould go vays," said the old woman. "I kin vait oudsides, yet — if Excellenz is pizzy?"

"Oh, no," said the Governor. "Come in, Annie." The lady who entered was young and pretty, and her charming eyes had not yet lost their look of amiable interest. She seemed to have just returned from a walk, for her fair skin had the wind's roses and her blonde hair was roughened the least in the world. There was enough silver braid on her perfectly fitting blue cloth dress to compel the old woman's admiration and awe.

"My wife," said the Governor briefly. "Will you interpret a little for me, Annie? This is Fritz Jansen's mother."

The old woman dropped her courtesy, the patient sadness of her face brightening a little.

"Ya, gnädige Frau," said she, "I koom to beg der barton von mine son. He is in brison to pe hang'."

"You know," said the Governor, "that he has been found guilty of murdering his betrothed, Lena — "

"No, Excellenz — Greta," interrupted the old woman eagerly. "She vas heist Gretchen; der baper speak wrong von dat, an' berhaps, it vould be mit oder t'ings wrong also!"

"His betrothed, Greta, then," amended the Governor, "under very — hem — very aggravated circumstances. He has had a long and perfectly impartial trial, and has been condemned on overwhelming evidence. I — I really do not see," said the Governor, trying to bring the scene to an abrupt conclusion, "how it will be possible for me to pardon him. Tell her that in German, Annie."

"Oh, poor thing!" said the Governor's wife.

The old woman had listened with an expression of pathetic attention. Plainly she did not comprehend the Governor's words, but in some way she gathered from his manner that her petition was rejected. She clasped her large rough hands unconsciously as she turned to the lady, whose kind face looked to her then like that of a guardian angel.

"The gracious lady speaks German, is it not true?" she said in her native tongue. "Ah, gracious lady, it is cruel lies; my Fritz is not a wicked man. Oh, no; who should know of him better than his mother? I will tell it in as few words as I can, if the gracious lady will but listen. My Fritz is the only one of seven the good Lord has let me keep. The father was a carpenter, and he carried me to Munich, and there he fell off a scaffold and hurt his back, and lived ten years but never walked again; and the cholera came, and four of my children did die, and there was only Fritz and Otto, because the others did die when they were babies. And the next year, in the street a wagon did run over my Otto, and he was sick for three months and died. How could I have lived those days but for my Fritz? He was but a boy of ten, but he cared for the father and Otto while I was gone to work and scrub for the American ladies. He would cook and make the room neat like a girl, and in the evenings he would study the book to learn. Always he would help me and do little things to please me; and when he was sixteen and the father died, he said: 'Now I will save money, and we will go to America.' And he would work at everything

and give me always the money; and nights he would always work also, and at Christmas he comes to me with a fine black gown, saying: 'Thou, too, shalt have a fine gown for the church; this is with the evenings' work, mamma.' Ah, gracious lady, none can tell how good and kind is my Fritz; never idle one moment and never cross, but always singing, and merry, and kind to every one, and not able to go by the starving dog even, but must share his own soup and black bread. And so it was with Greta, too, gracious lady. There was in the house with us a poor woman that made flowers, and she did have a little girl. She was five years younger than was my Fritz,— eleven only was she,— and one day she comes weeping to my room to say her mother is fainted; but it was not fainted, she was dead. The people in the house, they say, 'Now since the little Gretchen has no one to care for her she must go to the waisenhaus; but my Fritz says, 'Mamma, Otto is dead, and all my little sisters; there is but thee and me: let us take the little Greta for my sister and thy daughter, and she shall have half my bread and soup. We shall not go any less soon to America, and in America will be bread for us all.' And that was how Greta came to us. Then my brother writes to me from America, saying, 'Come,' and we came, and at first we were all with my brother, and Fritz worked for him; but, after a while, Fritz and I, who also worked hard, saved a little money and we say we will buy a farm. So Greta, who was like my daughter and was fifteen now — Greta say, 'I will go and work at service in the city to make money, so then we can buy the farm.' And Fritz, he works here with me to buy the farm, and so it go on. Greta, she comes to see me, and always she brings the money. She will not have enough dresses to be bright and gay like a young maiden, if I do not sometimes go to the city myself to buy for her. But I know that an old woman like me would not know what would please a young maiden; so I did always pick out a young lady at the shop that was selling and looked kind, and I told her what money to spend I had, and how it was for Greta, that was like my daughter, and would give all her money to me to buy the farm. And when Greta would come to see us in the new dress, then would my Fritz smile and kiss me. At last we did have almost enough money, and then did come the bad crops, and my brother he loses all the crop that he means to sell to pay the money that he must pay on his own farm, and I feel bad for him and talk with Fritz and Greta, and they say he must not lose his farm when we have money; so we lend to him money and Greta tells us how Fritz, who was like his father a carpenter, could earn much money in the city. By this time they were betrothed and to be married when we have the farm. So Fritz — it was six months ago — went to the city. He writes to me and Greta writes to me, and twice he comes to see me, but two months ago I got a letter saying he must go to a city far away and I will not hear for a long time; and for two, three, weeks when I do not hear I do not think so much, but then I begin to wonder and I have my brother write to Greta, but I get no answer and then — then — will the gracious lady have patience with me that I am so long? — then it was yesterday that my brother was in the little town that is near us and a man showed him the paper, how my Fritz two months ago had killed my Greta and had been before the judge and was now in prison to die." The old woman's hands trembled, and her voice, for the first time. The Governor's wife said something in an undertone to her husband; he nodded and went quietly out of the room, returning with a glass of wine. But the old woman, courtesying in her old-fashioned way, shook her head. "No, Excellenz, I cannot trink; if Excellenz und die gracious laty forgif', I vill tell more — in German."

"Certainly, if it is easier for you," said the lady; while the Governor, with a resigned air, sank into a chair. The old woman continued:

"So my brother cannot show me the paper, when he will come home, but sits in the corner still, with his head down, and my brother's wife cries and will not tell me why, and they do not let the children laugh, and in the morning, when they have talked together, my brother brings me the paper and I see the name. And he tells me how the man says that the Governor is the only one can have my Fritz let out of the prison. So we did go to the town, to the railroad, but the cars have changed the time to go and we did not know; so we are too late and Hermann would have me wait for the cars to-night, but I could not wait when my Fritz was in prison, and my Greta was dead, so I did walk —"

"From where?" asked the lady gently.

"It is from Egmont, gracious lady."

"But it is fifteen miles!"

"Yes, gracious lady."

"Walter, do you hear?" said the lady reproachfully; "she has walked from Egmont!"

"Yes, my dear," answered the Governor mildly; "it is a long walk. She had better sit down."

Then his wife rapidly repeated the old woman's story to him. "Now tell him the rest in English," she said to the old woman.

The latter turned to the Governor and dropped her invariable courtesy before she spoke. "My brother told me dat I vould

pring de baper vat say how mine Fritz is not vicked mans. I did go, dis mornin', to der peoples dat know mine Fritz, Herr Excellenz." She took a paper out of the bag which hung from her waist, in plain sight so that she might always be secure of its presence, and presented it with the courtesy.

Some German had evidently drawn up the humble certificate to Fritz Jansen's honesty, good-nature, industry, and peaceableness. "I kin not for long stay," said the old woman, wistfully eying the Governor's face, "so I go to dem I knows. It is sign py Johann Mueller, dat Fritz did vork py — und Kurtz Claussen, dat have de farm ve puy, und Ernst Bürger, der saloon-keeper dat know Fritz well — in dee olt country also," said she with simple pride. In Germany one may be a liquor-seller and lose nothing in the social scale; indeed, it is a calling of respectability quite above Frau Jansen's former station.

The Governor looked most uncomfortable. He gave his wife a glance of appeal. "My dear, I don't see what I can do," he said desperately, rubbing at the wrinkles in his forehead. "There is no doubt about it, the fellow killed the girl out of jealousy, in the most brutal way, and then tried to throw suspicion on an innocent man. The evidence is quite conclusive; the girl lived long enough to identify her assailant. Besides, he is known to the police as a brutal, dissipated fellow; he nearly beat a man to death before. He has been sentenced justly, and I have no right to interfere. Such crimes as his are getting too common."

"Look at his mother," said the lady gently. She was still standing, her strained gaze bent on the Governor's face, her gaunt brown hands plucking at the strings of her bag.

"I am as sorry as you are for his mother," said the Governor, looking the other way; "but I have no right to let my pity blind me to my duty. If every jealous brute can kill the woman he is jealous of, and escape scot-free, what security have you women got?"

"I don't believe he killed her at all," said the lady. "Such a good boy as he was could n't do such a cruel thing as that. I 've read it all, Walter. It 's sickening, it 's atrocious; and that 's why I am convinced Fritz Jansen never did it."

"She says he did."

"Then she was mistaken. I don't think much of *her*."

The Governor put his hand over his mustache to hide an involuntary smile. "Well, you see *I* am sorry for her. Apart from the murder, he had not treated her well. He had not even been faithful to her. My dear, there are the police-court records. He has been up before the courts for drunkenness and assault half a dozen times. His mother says he was a carpenter, but he was n't anything so respectable. His principal business seems to have been a billiard-marker, which he combined with much shadier ways of getting money."

"Walter, I can't believe he was so bad, when he was such a good, unselfish boy. Don't you think it was touching the way he helped his mother when he was a child? I don't see how he could have changed so suddenly."

"My dear," said the Governor gravely, "he may have been a good boy, I don't know; unhappily, there is n't the least doubt that he was not a good man. You must remember his mother only tells the best of him now; besides, mothers are the last persons to know when their sons go to the bad; probably his uncle could tell a very different sort of story. Madam,"— turning to the old woman,— "what did you do with your money?"

She looked dazed and her eyes wandered to the lady, who repeated the question in German.

"I gif' all to Fritz, Excellenz," she answered, "und he have it in der pank to keep."

"Humph!" said the Governor.

"It may be all right," pleaded his wife.

"Did you ever hear — well, anything bad of your son since he went to the city?" the Governor went on.

"Bad? of mein Fritz?" said the old woman; "nefer vun vort."

"Can you read English? Have you read the paper?"

"No, Excellenz. I kin no English read, but der man he did tell to mein bruder vat it vas been. Yes."

"You see, Annie," said the Governor, "he might be a thorough-paced scamp, and his mother never know. I have no doubt he has used all the money she fancies is in the bank. He intended this crime; wrote to her he was going away; meant to run away, for that matter. Don't you notice that the murder was committed just after he wrote? I am afraid he is a bad-hearted fellow. I don't see how I can do anything for him. Such fellows as he are too dangerous to be let loose. Decent people have their rights too; they ought to be protected, even if the rogues must suffer. Your good heart —"

"I have n't any better heart than you," interrupted the Governor's wife with spirit; "only I don't sit down on it, as you do!"

—"Blinds you," pursued the Governor, "to the grim facts of the case. Not only would a pardon be an abuse of the pardoning power, which the people have vested in me, confiding in my honesty and justice; not only would it be a virtual encouragement of a peculiarly brutal class of murders; but, my darling wife, it would be cruelty in disguise to this poor old

mother herself. If the boy dies now, true, his mother will mourn him and miss him all her life; think him an innocent victim, and me a cruel murderer. Very well, so be it. She will still have her memories of his youth to console her, and her very conviction of the injustice of his fate will be a comfort to her; while on the other hand, if I release him, he will dissipate all her illusions, neglect her, ill-treat her, very likely spend every cent of her hard earnings, and at last convince even that trusting soul what a brute he is. It is the truest kindness to her to refuse."

"But I am sure he is n't a brute!"

"Unhappily, I am sure he *is*."

"Then," said the lady quickly, "you might commute his sentence to imprisonment for life; in the penitentiary he could n't ill-treat his mother, or spend her money, and if he happens to be innocent, you would have a chance to find it out!"

The Governor shook his head. "You want to open the whole question of capital punishment, I think. But, my dear, whatever your view or mine of the advisability of hanging, the laws make hanging the punishment for murder, and I am sworn to see that the laws are executed. And, frankly, I must say that if ever the extreme penalty of the law was deserved, it was in this case. Jansen's lawyer made all his fight on technicalities. He has appealed to me, and I have gone over the ground with him. It was a brutal, unprovoked, deliberate murder — just that. Were I to pardon Jansen, I should n't do it because there was a shadow of excuse for him, but because I pitied his mother. Now, I have n't the right to gratify my own feelings at the expense of the State. I am convinced that Jansen's immediate trial and his speedy execution will do more than anything else could to stop the wholesale murder that has been going on for the last six months in this State. But suppose I commute Jansen's sentence and, because of my leniency, a single murder — not to say five, or ten, or a dozen, as is probable — is committed; do you think I can hold myself guiltless of that bloodshed? No, Annie; I can't do it. It hurts me as much as it does you to have to refuse this poor creature; but the law must take its course. Tell her so, please, as kindly as you can."

His wife knew him well enough to perceive that further pleading would be useless. She went up to the old woman and took one of the big brown hands in hers. Her voice faltered as she tried to put into German her husband's conviction that he had no right to interfere; before she was through, her cheeks were wet with tears.

The listener's face lost its ruddy brown color: whether she grasped the meaning of the words is doubtful, but she knew that she had failed.

"Kann Excellenz nichts fur mich?" she stammered, her dim eyes still fixed with the same wistful intensity on the Governor's troubled face, her hands clasped again.

He shook his head.

"Wer, den, Excellenz? who? I vill go to him py de cars."

He shook his head again. "Good Heavens, Annie," he cried, "I can't stand this! Can't you help me out?"

"Alas," his wife said, in German, very gently, "I am so sorry — so sorry for you, but there is no one — no hope."

"No — hope," the mother repeated brokenly; "und my Fritz —" Taking a step forward, she tried to look more closely into the lady's face, but her strength failed her; she staggered, and must have fallen had she not caught at the corner of the table to steady herself.

Instantly the lady held the rejected glass of wine to her lips while the Governor pushed a chair towards her. Mechanically she took a swallow of the wine; but she would not sit.

"No, Excellenz; pardon," she said weakly, "but it vas so long vays und I haf veep so mooch for Greta. Now I vill go. I did already dersturp der pisiness too long, und I must see mein Fritz."

"I will give you a note to the jailer," said the Governor, suiting his action to his words; "and —"

He did not finish the sentence; but when he had written the note, he put a bank-bill into another envelope, on which he wrote a few German words.

The old woman stood a moment, collecting her strength, her face looking old and worn. She made none of the efforts to alter his decision which the Governor had dreaded. When he handed her the note, she took it with a low courtesy, saying, "Excellenz haf been ver goot to me. I bin sorry for troubles him," and placed the paper carefully in her bag. Then she turned to the Governor's wife, kissed her hand, courtesying again and murmuring some low words of gratitude, and passed, erect as ever, though with a feebler step, out of the room.

"Oh, poor soul!" said the Governor's wife. "Walter, send somebody to the train with her, — poor, simple, meek, broken-hearted creature!"

The Governor's face was almost as haggard as that of his petitioner. "If she had only reproached me, I could have borne it better," he muttered. "Now I sha'n't be able to get the look of her eyes out of my head!" He ques-

tioned Hopkins (who was the "some one" sent to the train) minutely about her. Hopkins said that she seemed like a woman dazed, but was quite docile and grateful and went off on the right train, safely committed to the conductor's care. He spoke warmly of her downstairs; he had a shrewd surmise as to the nature of her errand, and his pity was not lessened by the deep deference of her manner towards himself. The general opinion downstairs, shaped by Hopkins, was that the Governor ought to be ashamed of himself.

Indeed, the Governor found little comfort anywhere, unless it might be in his own conscience. His wife refused to be convinced by the abundant evidence of Fritz Jansen's guilt, which he was at the pains to lay before her. Even his children picked up some garbled version of the story from the maids, and his little girl, nestling her golden head on his heart, stabbed it with the question: "Does it hurt much to be hanged, papa? Wally says it does."

"Wally is a naughty boy to talk to you about hangings," said the Governor.

"It was n't Wally; it was just Sarah, when she and Ellen were making the beds. She said there was a poor man to be hanged, and you would n't prevent it; but you will, papa, won't you?"

"You may be sure, my dear," said the much-tried Governor, "that I sha'n't let any man be hanged who does n't deserve it."

"But, papa," pleaded the child, "don't let him *anyhow*. Wally says it hurts *awful;* he choked himself to see."

The Governor gave a sort of groan and put the child down; it was a relief to hear the door-bell ring, and have a chance to get away. "I wish that miserable Jansen were hanged and it was all over," he thought; "this is terrible!" He knew that the execution was to follow soon after the conviction; but he would not look at the papers to see the exact date. He could not keep his imagination away from the figure of the old German woman so meekly accepting her fate and going on that dismal journey to her son. Had she staid near him ever since, he wondered. On his part, he had written to the various prison officials and to the sheriff, bespeaking their kind offices to smooth the prisoner's last days. He had sent money to the jailer for Jansen's mother, "afterward." It seemed to him that he had done all in his power, and now he was only anxious to forget. For a month after the interview he was away from home most of the time,—just a month, to a day. He had come back, and was sitting in his library with his wife, when he happened to notice a paper on the table. His wife's eye followed his.

"It has the notice of Jansen's execution in it," said she; "he was hanged yesterday."

The Governor dropped the hand which he had extended. "I don't care to see it," said he. There was a wood fire burning in the open fire-place, and he turned his face towards the blaze. For the next few minutes there was silence. Hopkins's voice broke it. He spoke in his usual quiet tones, but he had a curious look of suppressed agitation on his impassive face.

"It is the old woman who was here the last time you was home, sir," said Hopkins. The Governor turned pale.

"I will see her, Walter," said the Governor's wife, gently; "it will be better."

"No," said the Governor, straightening himself in the chair with a distinct sensation of wanting to run out of the room. "You are very kind, Annie; but I will see her myself. Show her in, Hopkins."

She came in — behind her a young man with the aspect of a "naturalized American." The Governor had not the hardihood to lift his eyes to her face. He was dimly aware that she was courtesying in the familiar fashion; but his words stuck in his throat when he tried to speak.

"Excellenz," said the old woman, "I haf pring mein Fritz." She dragged the young man forward.

"Your Fritz!" cried the Governor and his wife together. "Ya, Excellenz; ya, gnädige Frau," said the old woman, with a beaming face. "Ya, ven I vas go py der prison und see der pad, vicked mans it vas not mein Fritz; it vas Fritz Jansen, but not mein schild, und it vas Lena und not mein Greta he vas kill, already, ya. Der baper vas tell kein lies. Mein Fritz vas in Canada, und I go by mein Greta und it vas tree days he come, mein Fritz, und I prings pack der money und tanks for him. He can goot English speak to Excellenz. Und, Excellenz, vill Excellenz gif to him different name to dat vicked mans dat is hang? He vish not be heist name of mans dat is hang!"

She paused and courtesied. The young man blushed and bowed. There was a strong likeness between him and his mother. He had the same round honest face and wide blue eyes. His profuse blonde hair was carefully parted on one side of his head, just above his ear. His clothes retained all the freshness of the shop creases, and his linen was spotless. Greta's hand might be traced in his blue cravat as well as in his mother's decent new bonnet and shawl. He was evidently abashed by his surroundings, but answered the Governor's questions frankly and to the point. He had written his mother, but the letters were delayed. Had either his mother or his uncle been able to read English, they would have

noticed circumstances about the story of the other Fritz Jansen's crime which would have made them suspect the truth. Greta had made everything plain to his mother and taken her home. He, himself, had returned three days before, and his mother was eager to have him go at once to the Governor and return the money given her, and also — this she had greatly at heart — beg the Governor to change his name. During the colloquy the old woman kept turning her head from one speaker to the other, smiling radiantly and courtesying whenever either the Governor or his wife looked in her direction.

"I 'm fery grateful," Jansen concluded, "to your Excellency and your" — he hesitated, seeming uncertain what was the proper title for a Governor's wife, and compromised on — "your lady, for all the kindness you 've showed my mother; and I vould like, too, as you should know I ain't that kind of a fellow like Fritz Jansen, but a honest man, like my mother said."

"Ya," said the old woman; "die gracious lady believe, but Excellenz vas not know."

"I am quite sure everything your mother said of you was true," said the Governor, in his most affable manner, "and I shall be glad to see about the legislature changing your name; but you must n't think of returning the money."

"Let it be our wedding gift to Miss Greta," said the Governor's wife, with her charming smile. So, indeed, it was settled; and a certain gorgeous coral and gold brooch which figured at Greta's wedding some weeks later was bought with that exact sum. Frau Jansen was far too conscientious to add or subtract one penny. The simple people went away happy, after Hopkins had served them with wine and cake. The latter mighty personage received their confidences and heartfelt gratitude with stately suavity; indeed, Hopkins felt himself rather instrumental in Fritz Jansen's turning out to be a good fellow instead of a murderer, and an approving conscience swelled his imposing bosom. Meanwhile, the Governor and his wife were looking at each other. The Governor felt immensely relieved. Neither could he help rejoicing to himself that he had not weakly yielded. Principle had triumphed. Moreover, the triumph had that particular spice which comes from a victory over one's wife. He was quite too magnanimous to say: "Now, my dear, you see I know better than you about my own business. How embarrassing it would be had I followed your advice and pardoned that scoundrel!" But he stole a glance at his wife to see how she was taking things, expecting perhaps some hint of contrition on her face.

Instead she said, "Walter, dear, did n't I tell you so?"

"Tell me so!" gasped the Governor. "Of course you did n't tell me so! You wanted me to par — "

"But did n't I tell you over and over, and insist, that that pathetic old thing's son *could n't* be a cold-blooded murderer!"

The Governor stared a minute in dumb amazement before he got breath to laugh.

"Bless your feminine mind, Annie, and did n't *I* insist that Fritz Jansen *was?* Who was right?"

"Both of us, of course," said she.

A DAY IN WINTER.

HOW could one live through a day like this,
Sweet! were one not with his books or in love?
I am both; I am happy; with that dear bliss
Of lovers who have no faith to prove,
Of readers who have no task for heeding,
But read from the sheer, sweet love of reading.

The sun is dead, and the clouds hang low,
And the winds are weeping a dirge. What though?
My life is full: in my heart I know
'T is only distance keepeth the kiss
On thy lips from mine,
On my lips from thine;
No task to learn, no faith to prove —
Oh, how could one live through a day like this,
Sweet! were one not with his books or in love?

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

X.

THE AFFAIR AT TIMBER CREEK CAMP-MEETING.

WHEN Tom Grayson found himself suddenly stranded on the farmstead in Hubbard Township he went to work to learn again the arts half forgotten during his three-years' absence in Moscow. It was necessary to put his soft hands to the plow, and to burn his fair face in the hot sun of the hay-field. With characteristic heedlessness of results he set out, on the very first day after his return, to mow alongside the stalwart hired man Bob McCord, the father of Mely. Bob lived in a little cabin not far from the Grayson place, and since Tom left the farm he had done most of the work for Mrs. Grayson. He was commonly known as "Big Bob," because he had a half-brother of sinister birth who was older than himself, but a small man, and who for distinction was "Little Bob." Big Bob fulfilled his name in every dimension. His chest was deep, his arms were gigantic in their muscularity, and no man had ever seen his legs show signs of exhaustion. His immense muscles were softened in outline by a certain moderate rotundity; his well-distributed adipose was only one of many indications of his extraordinary physical thriftiness. In more than one stand-up fight he had demonstrated his right to the title of champion of the county. Yet he was a boyishly good-natured man, with no desire to hurt anybody, and he never fought from choice. But every rising fisticuffer within half a hundred miles round had heard of Bob's strength, and the more ambitious of these had felt bound to "dare" him. It was not consonant with the honor of such a man as Bob to "take a dare"; so against first one and then another aspiring hero he had fought, until at length there was none that ventured any more to "give a dare" to the victor of so many battles. His physical perfections were not limited to mere bull strength: no man had a keener eye or a steadier hand; none could send a rifle-ball to its mark with a more unerring aim. Had he lived in the days of the Saxon invasion of England, McCord would have stood high on the list of those renowned for exploits of strength and daring, the very darling hero of the minstrel. Our own Indian wars of the seventeenth and eighteenth centuries brought renown to just such men as he, semi-barbarian path-makers for the advance of civilization. He had lagged a generation late. In the peaceful time, when strength of muscle was secondary to mental power, and when a sure aim was no longer important for the defense of one's life, nor the chief means for winning one's meat, the powerful Bob McCord saw degenerate men, whom he could have held at arms-length, prevail over him in the struggle for existence. For though he was capable of hard work, he could never endure steady application; his nature was under mortgage to adventurous ancestors, the ancient Indian-fighters and scouts of the Appalachian country, and those more remote forefathers, the untamed emigrants who had been almost expelled from the Scottish border in the time of the Stuarts, to help resettle the devastated north of Ireland, to say nothing of the yet wilder Irish women with whom they had mated. Nothing less than the sound of the cup scraping on the bottom of the family meal-box would impel Bob to work. Every wind that came from the sea of grass to the westward brought him the whir of the wings of prairie-hens; dreams of bear-hunting filled his mind whenever he looked into the recesses of the woods. At every sight of the rising moon his hunter's soul imagined the innumerable deer which at that hour rise from their coverts to graze on the prairies. Every stream tantalized him with the thought of darting perch, and great prowling cat-fish hidden beneath its surface, and challenging him to catch them if he could. If, as we are taught to believe, the manliness of the English aristocracy and the American apery of it is only kept alive by outdoor sports, how much their superior in surplus manhood must such a man as Bob McCord be! In his estimation no days were counted a part of human life except those passed in circumventing and taking the wild creatures of the woods or the

prairie, and those others spent in the rude fun of musters, barbecues, elections, corn-shuckings, wood-choppings, and like assemblages, where draughts from a generous big-bellied bottle, with a twisted neck, alternated with athletic feats, practical jokes, and tales as rude as the most unblushing of those told by pious pilgrims to Canterbury in the old religious time.

It was alongside this son of Anak that Tom set himself to do a full day's work at the start. The severity of labor accorded well with his pungent feeling of penitence. Big Bob regarded him as he might any other infant, not unkindly; he even had a notion that the Widow Grayson and her children were in some sense under his care, and he did not wish any harm to come to the boy, but a practical joke was too good a thing to be missed. For two hours and a half, on that morning of Tom's appearance in the field with a scythe, Bob did not once stop to take the usual rests. Tom felt inevitable exhaustion coming on, though he cut a much narrower swath than his companion. McCord's herculean right knee was bare, having that morning forced itself through his much-bepatched trousers of butternut-dyed cotton cloth. While swinging his wider-sweeping scythe at a desperate rate, he kept telling Tom stories of adventure and the well-worn joe-millers of the log-cabin firesides, never seeming to notice the poor fellow's breathless endeavors to keep up or his ever-narrowing swath. Only when at length he turned and looked at Tom's face and perceived that the persistency of his will might carry him too far, he said, as with his scythe he picked some good bunches of grass from the edge of an elder-patch and cast a wistful glance at the jug standing in a cool fence corner:

"Looky h-yer, Tom, you 're a-gittin' kind-uh white-like about the gills, un 'f you try to keep up weth me, yer hide 'll be a-hangin' on the fence afore night."

"I know that," said Tom, who found himself so thoroughly beaten that there was no use in denying it.

"Well, hang yer scythe on that air red-haw over there un take a leetle rest, un then try a pitch-fork awhile. I 'lowed I 'd see what sort uv stuff you 've got, seein's you wuz so almighty gritty. A bigger man 'n you could n' hold agin me"; and Bob let the amusement he felt at Tom's discomfiture escape in a long hearty chuckle, rising at length into a loud laugh, as he reversed his scythe and fell to whetting it, making the neighboring woods ring with the tune he beat on the resonant metal,— a kind of accompaniment to the briskness of his spirit.

And now Barbara appeared bringing the snack that was commonly served to the mowers in the forenoon. Bob hung up his scythe, and, having taken some whisky, joined the exhausted Tom under the shady boughs of a black walnut. Barbara uncovered her basket, which contained an apple-pie to be divided between the two and a bottle of sweet milk. Tom had stretched himself in sheer exhaustion on a swath of hay.

"You foolish boy," said Barbara. "You 've gone at your work too brash. You ought to be ashamed of yourself. Here, take some of this pie; and don't you work so hard the rest of the day."

"Tom," said Bob, speaking with his mouth full of pie, "'f I had the eddication you 've got, you would n't ketch me in this yere hot sun. I 'd take a school. What 's eddication good fer, anyhow, ef 't ain't to git a feller out uh the hot sun?"

But for the present Tom resolved to stick faithfully to his toil. As the days wore on, and he became accustomed to the strain, he found the work a sedative; he was usually too tired to think much of his disappointment. Only the face of Rachel Albaugh haunted his visions in lonely hours, and at times a rush of indignant feeling towards George Lockwood disturbed his quiet.

In the early days of August there came a time of comparative leisure. The summer harvests were over, and the fields of tall corn had been "laid by" after the last plowing. Then Illinois had a breathing spell; and shutting up its house, and hitching up its horse, and taking all the children, it went to visit its "relations," staying a week at a place. Farmers frequented the town, to meet old friends and get the better of them in swapping horses; and in this time of relaxation came the season of Baptist Associations and Methodist Camp-meetings and two-days' Basket Meetings — jolly religious picnics, where you could attend to your salvation and eat "roas'in' ears" with old friends in the thronged recesses of the forests, among a people who were perhaps as gregarious as any the world has ever produced. Children looked forward to this gypsying with eagerness, and adults gave themselves over to it with the abandon of children. What night-scenes there were! Within the oval of tents at a camp-meeting two great platforms were raised on posts six or eight feet high and covered with earth; on these were built great blazing bonfires, illuminating all the space inclosed by the tents and occupied by the enthusiastic assembly, which, as one great chorus, made the wide forest vocal with a tide of joyous or pathetic song. But there were two poles to the magnetism of a camp-meeting.

In the region of outer blackness, quite beyond the reach of any illumination from the platform bonfires, there were also assemblies of those who were attracted by the excitement, but to whom the religious influences were a centrifugal force. Here jollity and all conceivable deviltry rejoiced also in companionship.

The Great Union Camp-Meeting was held in the first half of August on the Timber Creek camp-ground, only a mile and a half from the Grayson place. The mother and Barbara went every evening and came back with accounts of the attendance, of the old friends encountered, and of the sermons of favorite preachers. They told how "powerfully" the elder had preached, and how the eloquent young preacher, who was junior on the next circuit, had carried all before him in a pathetic exhortation. But Tom showed no desire to attend. He was slowly sinking into a depression quite unusual with him. He had been accustomed to the excitement of the town, and the prospect of a life of dull routine on a farm ate into his spirit like a biting rust. Barbara amused him with stories of the camp-meeting; she told him of the eccentric German exhorter whose broken English she mimicked, and of the woman she had heard relate in a morning "speaking-meeting" that, when convinced of the sin of wearing jewelry, she had immediately taken off her ear-rings and given them to her sister. These things lightened his spirit but for a moment; he would relapse soon into the same state of mental lassitude, or more acute melancholy. Barbara endeavored to cheer him with projects; he could take a school the next winter, and with the money earned pay his board somewhere in town and take up the study of law again. But all of Barbara's projects were moderate and took full account of difficulties. Tom had little heart for a process that demanded plodding and patient waiting; nor did any of Barbara's suggestions hold out any prospect of his recovering his ground with Rachel, which was the thing he most desired.

One evening, as he finished a supper which he had eaten with little relish and in silence, he pushed back his chair and sat moodily looking into the black cave of the kitchen fire-place, where the embers were smoldering under the ashes. Then when his mother had left the kitchen, and Barbara was clearing away the plates, he said:

"The more I think of it, the worse I feel about George Lockwood. The tricky villain got me into that scrape and then told all about it where he knew it would do me the most harm. I 'd just like to shoot him."

"You 'd better shoot him and get yourself hanged!" said Barbara with impatience. "*That* would mend matters, would n't it?"

"'T would n't matter much to me," said Tom. "This country life does n't suit me; I 'd just as well be out of it, and they do say hanging is an easy way of dying." This last was spoken with a grim smile.

"I suppose you don't think of *us*," said Barbara.

"I 'm more trouble than good to you and mother."

"And now if you would only commit a crime"— Barbara was looking at him with a concentrated gaze — "that would put an end to all mother's sorrows; she would die in slow torture, and I would be left alone in the world to be pointed at by people, who would say in a whisper: 'That 's the sister of the fellow that was hanged.'" And Barbara caught her breath with a little gasp as she turned away.

"Oh, don't talk that way, Barb! Of course I don't mean to do anything of the sort. It 's a kind of relief to talk sometimes, and I do feel bitter enough."

Barbara turned sharply on him again and said: "That 's just the way to get to be a murderer — keep stirring up your spite. After a while the time 'll come when you can't control yourself, may be, and then you 'll do something that you only meant to think about."

Tom shuddered a little and, feeling uncomfortable under Barbara's gaze, got up and started away. But Barbara followed him and caught hold of his arm, and pulled him around till she could look in his face, and said, with more feeling than she liked to show:

"Look here, Tom! Give me your word and honor that you 'll put all such thoughts out of your mind."

"Of course I will, Sis, if you think there 's any danger."

"And come and go over to the camp-meeting to-night with mother and me. It 'll do you good to see somebody besides the cows."

"All right," said Tom, shaking himself to get rid of his evil spirit, and remembering, as he went out to harness old Blaze-face to the wagon, that he would stand a chance of catching a glimpse of Rachel in the light of the torches.

The preaching was vigorous and stirring, and the exhorter, who came after the preacher, told many pathetic stories, which deeply moved a people always eager to be excited. The weird scene no doubt contributed by its spectacular effect to increase the emotion. The bonfires on the platforms illuminated the circle of white tents, which stood out against

the wall of deep blackness in the forest behind; the rays of light mounted a hundred feet and more through the thick branches of lofty beech and maple trees, and was reflected from the under side of leaves quivering in the breeze. The boughs and foliage, illuminated from below, had an unreal and unworldly aspect. No imagery of the preacher could make the threatened outer darkness of the lost so weird to the imagination as this scene, in which the company of simple-minded people found themselves in the presence of savage Nature, and in a sphere of light bounded on every hand by a blackness as of darkness primeval.

Tom paid little attention to the eloquence of the preacher or to the tearful words of him who came after. At first he was interested and even excited by the scene: he watched the flickering of the great shadows of the tree trunks as the platform fires rose and fell; but presently he set himself to searching under the large straw bonnets of that time for a face. He knew well that the sight of that face could not make him happy, but he seemed driven by some evil impulse to seek for it. If Rachel was there he did not find her. When the exhorter had closed his artless string of disconnected anecdotes with an equally artless appeal, and a hymn was announced, Tom whispered to Barbara that he would go and see if the horse was all right, and would meet her at the door of the Mount Zion tent when meeting should "let out." Then as the congregation rose, he went out by a passage between two of the tents into the woods. The "exercises" lasted a full hour longer, and it was half-past 10 before the presiding elder gave the benediction. Barbara and her mother went to the door of the Mount Zion tent, where they stood watching the moving people and waiting for Tom. Mely McCord, who was to ride home with them, was talking in her fluent way to Barbara when an excited man rushed into the space within the tents, and, finding himself obstructed by the groups of people in the aisles, ran hurriedly across the boards that served for backless benches until he reached the great rude pulpit. He addressed a word to the white-haired presiding elder, who was standing on the steps of the stand, engaged in shaking hands with old friends from all parts of his district. Then the new-comer seized the tin horn that hung against a tree, and which was used to call the people to meeting. With this in his hand he mounted the rude board rostrum and blew a long, harsh blast. Part of the people out of curiosity had stopped talking when he made his appearance, and when the strident tin horn ceased, there was a momentary murmur and then the stillness of death, except for confused cries of excitement, in the remote outer regions, which now became audible. Then the man on the platform said in a breathless voice:

"A man has been killed in the woods outside of the camp-ground. The murderer has fled. The sheriff is wanted!"

"Here he is!" cried some voices, and the sheriff stood up on a bench and waved his hand to the messenger, who came down and communicated in a few words what he knew of the murder. The sheriff then hurriedly departed.

"Sit down there, mother," gasped Barbara. "Mely, you stay by mother."

Then Barbara's slight form pushed through the crowd, until her progress was arrested by a dense knot of eager inquirers that encompassed the man who had brought the news. It was quite impossible to get within twenty feet of him, or to hear anything he was saying; but bits of intelligence percolated through the layers of humanity that enveloped him. Barbara could only wait and listen. At last a man a little nearer the radiating center said in reply to the query of one who stood next to her:

"It 's George Lockwood, that clerks for Wooden & Snyder down 't Moscow, that 's killed, but I can't find out who 't wuz done it."

Barbara's heart stood still within her for a moment. Then dreading to hear more, she pushed out of the ever-increasing crowd and reached her mother.

"Come, mother; we must get home quick."

"What 's the matter, Barb'ry? who 's killed?" asked Mely McCord.

"I don't know anything, only we *must* get home. Quick, mother!" She was impelled by instinct to save her mother as long as possible from the shock she felt impending. But it was of no use.

"What 's the matter, Sam; can you make out?" cried a man near her to one just emerging from the crowd about the messenger.

"W'y, they say as Tom Grayson 's shot an' killed a feller from Moscow, an' Tom 's made off, an' can't be found. They 's talk of lynchin' him."

Mrs. Grayson's lips moved; she tried to speak, but in vain; the sudden blow had blanched her face and paralyzed her speech. It was pitiable to see her ineffectual effort to regain control of herself. At length she sank down on a shuck-bottom chair by the door of the tent.

"Yer 's some smellin'-salts," said a woman standing by, and she thrust forward her leathery hand holding an uncorked bottle of ammonia.

"He did n't do it," murmured Mrs. Grayson, when she had revived a little. "Our

Tommy would n't do sech a thing. Go up there,"—and she pointed to the pulpit,—"you go up there, Barb'ry, an' tell the folks 't our Tommy never done it."

"Come, mother; let 's go home," said Barbara faintly, for all the energy had gone now.

"I 'll go with you," said Mely.

But Mrs. Grayson did not wish to go; she was intent on staying in order to tell the folks that Tommy "never, never done sech a thing."

She yielded at length to the gentle compulsion of Barbara and Mely and the neighbors who gathered about, and got into the wagon. Mely, who knew every inch of the road, took the reins, and drove slowly towards the Grayson house, picking a way among the stumps, roots, and holes of the new road.

XI.

FRIENDS IN THE NIGHT.

THE ride seemed to Barbara almost interminable. If she could have left her half-distracted mother she would have got out of the wagon and run through the fields, in hope of finding Tom and knowing from him the whole truth, and making up her mind what was to be done. When at length the wagon reached the gate in front of the Grayson house, Bob McCord was in waiting. He had heard that a bear had been seen on Broad Run, and had left the camp-meeting early, intent on a departure before daylight in pursuit of that "varmint." He had known nothing of the shooting, but he told Barbara that, when he came near the Grayson house, he had seen Tom run across the road and into the house,—and that Tom came out again almost at once, and reached the gate in time to meet the sheriff and give himself up. The sheriff had dismounted one of the men with him, and putting Tom in the saddle they had gone towards Moscow on a gallop. Bob was n't near enough to hear what Tom had said when the sheriff took him; but knowing that something must be wrong, he had waited for the return of the wagon.

It was some relief to the tension of Barbara's feelings to know that Tom was now in the hands of the lawful authorities and well on his way to Moscow, where he would be out of the reach of the angry crowd that was surging to and fro around the camp-meeting.

But there followed the long night of uncertainty. The mother sat moaning in her chair, only rousing herself enough now and then to assure some newly arrived neighbor that "poor Tom never done it." Barbara confided only to Mely McCord the very faint hope she entertained that Tom was not guilty. She could n't believe that he would break his solemn promise, made that very evening. But in her secret heart she could not get over the fact that George Lockwood was lying in the woods stark and dead, and no one was so likely to have killed him as her impetuous brother.

About 1 o'clock, the dreadful monotony of the night was dreadfully broken by the arrival of the deputy-sheriff. He spoke in an unsympathetic, official voice, but in a manner externally respectful. He must search Tom's room; and so, taking a candle, he went to the room alone, and soon came back bringing an old-fashioned single-barrel, flint-lock pistol, of the kind in use in the early part of the century. It had belonged to Tom's father, and the officer had found it in one of the drawers in the room. Barbara sat down and shut her eyes as the deputy passed through the sitting-room with the weapon, but Mrs. Grayson called the officer to her.

"I say, Mister—I don't know your name. Let me speak to you."

"Yes, ma'am," said the man. "My name 's Markham"; and he came and stood near her.

"Air you the son of Lijy Markham?" Mrs. Grayson always identified people by recalling their filiation, and she could not resist this genealogical tendency in her mind even in the hour of sorest trial.

"Yes," said the officer.

"Well, now, what I want to say is that Tommy did n't kill that man. I 'm his mother, an' I had ought to know, an' I tell yeh so. You had n't ought to 'a' took 'im up fer what he did n't do."

Markham was puzzled to know what to reply, but he answered presently:

"Well, the court 'll find out about it, you know, Mrs. Grayson." The man's official stiffness was a little softened by the tones of her heart-broken voice.

Barbara never could tell how she got through the hours from half-past 10 to 3 o'clock. Neighbors were coming and going—some from a desire to be helpful, others from curiosity, but Mely remained with them. Bob McCord was too faithful to leave the Graysons when he might be needed, but it was impossible for him to remain awake from mere sympathy. When Markham was gone, he lay down on the end of the porch farthest from the door, and slept the sleep of the man of the Bronze Age. His fidelity was like that of a great dog—he gave himself no anxiety, but he was ready when wanted.

At 3 o'clock Barbara said to Mely: "I can't stand it a minute longer; I can't wait for daybreak. Wake up your father and ask him to hitch up Blaze. I 'm going to see Tom as quick as I can get there. I ought to have started before."

"I 'm a-goin' too," said Mrs. Grayson.

"No, mother; you stay. It 's too much for you."

"Me, Barb'ry?" The mother's lip quivered, and she spoke in a tremulous voice, like that of a pleading child. "Me stay 't home an' my Tommy — my boy — in jail! No, Barb'ry; you won't make me stay 't home. I 'm goin' t' Moscow, ef it kills me. I must. I 'm his mother, Barb'ry. He 's the on'y boy 't 's left. All the rest is dead an' gone. An' him in jail!"

"Pap! pap! you wake up!" Mely was calling to her father lying there asleep, and Barbara came and stood in the door, fain to hasten Bob McCord's slow resurrection from the deeps of unconsciousness and at the same time to escape from the sight of her mother's despair.

As Bob got up and comprehended the urgent request that the horse be harnessed immediately, Barbara's attention was drawn to a man coming swiftly down the road in the moonlight. The figure was familiar. Barbara felt sure she recognized the new-comer; and when, instead of stopping to fumble for the gate-bolt, he rested his hands on the fence alongside and sprang over, she knew that it was Hiram Mason, whom she had not seen since the evening, nearly two weeks before, when they had peeled apples together. It would be hard to say whether pleasure or pain predominated in her mind when she recognized him.

By the time Mason got over the fence Bob McCord had gone to the stable, and Mely had reëntered the house. Barbara went forward and met Hiram on the steps to the porch.

"Poor, dear Barbara!" were his words as he took her hand. At other times her pride had been nettled by his pity, but her desolate soul had not fortitude enough left to refuse the comfort in his tender words.

"I came the very moment I heard," he said. "I was staying away down at Albaugh's, and Ike was the only one of them on the camp-ground. He was so excited, and so anxious to see and hear, that he did n't get home till 2 o'clock. And only think, I was sleeping quietly and you in such trouble!"

"You must n't come in," said Barbara. "We 're a disgraced family, and you must n't come in here any more."

"What notions!" answered Hiram. "I 'm here to stay. Let me ask your mother." He took hold of her arms and put her aside very gently and pushed on into the house, where Mely was pinning on Mrs. Grayson's wide cape preparatory to her ride to Moscow.

"Mrs. Grayson —" said he.

"W'y, ef 't ain't the master!" she interrupted in a trembling voice. "Mr. Mason, Tommy never killed that man, an' he had n't ought to 'a' been took up."

"Mrs. Grayson, won't you let me stay with you a few days, now you 're in trouble, and help you through?"

The old lady looked at him for a moment before she was able to reply.

"It ain't fer a schoolmaster an' a preacher's son to come here, now folks 'll be a-sayin' 't we 're — 't we 're — murderers." This last word, uttered with tremulous hesitation, broke down her self-control, and Mrs. Grayson fell to weeping again.

"I 'm going to stay by you awhile, and we 'll see what can be done," said Mason. "They 've taken your boy, and you 'll let me fill his place a little while, won't you, now?"

"God bless you, my son!" was all the weeping woman could say; and Barbara, who had followed Hiram into the room and stood behind him while he talked to her mother, turned her face to the dark window and wept heartily for the first time in this sorrowful night.

"You 'd jest orter 'a' heerd the master a-talkin' to Mrs. Grayson," said Mely McCord afterward. "He stood there lookin' at her with his head turned kind-uh cornerin'-like, un his words was so soft-like un pitiful; — lawsey! ef he did n' make me feel jes like 's ef my heart wuz a-comin' right up into my mouth."

Bob McCord led old Blaze up in front of the gate, and all in the house went down to the road.

"Mr. McCord," said Mason, "I want to drive that wagon."

"I don't b'lieve you kin do this fust piece uv road with nothin' but moonshine," said Bob.

"Oh, yes! I 've been over it a good many times." Only Barbara knew how often Hiram had traversed it.

When the schoolmaster had helped Mrs. Grayson and Barbara into the wagon, and while Mely was assisting them to adjust themselves, he went to the horse's head, where McCord was standing, and said in a low voice:

"They told me there was a rush to lynch him last night; and Ike Albaugh says that Jake Hogan, who worked for them this last harvest-time, told him at the camp-ground that the Broad Run boys were going to make another of their visits to Moscow to-night if the coroner's inquest was against Tom. Now, Tom *may* be innocent; and he ought to have a fair show, anyhow."

"I 'd better see to *that!*" said Bob. "I 'low I 'll jest drop in amongst 'em over onto the run, kind-uh accidental-like, afore dinner-time to-day, an' throw 'em off, one way er 'nother, ez the case may be."

Mrs. Grayson was seated in a chair placed in the springless wagon for her comfort, while Hiram and Barbara sat on a board laid across from one side to the other of the wagon. They departed out of sight slowly, Mason guiding the horse carefully over the rough ground in the obscurity of a moonlight not yet beginning to give way to the break of day.

XII.

A TRIP TO BROAD RUN.

As the wagon disappeared, Bob called to his daughter, who had been left in charge.

"Mely! Mely! You jes stir up the kitchen-fire there, honey, un bile me a cup of coffee, agin I go home un fetch my gun wi' the dogs, un come back." (Bob knew there was no coffee at home.) "I 'm a-goin' over onto Broad Run arter bears."

"Aw, now, pap, you 're al'ays off fer a hunt at the wrong time. Don' choo go away now, un the folks in sech a world uh trouble. Un besides, mammy hain't got anough to eat in the house to do tell you come back." All this Mely said in a minor key of protest, which she had learned from her mother, who was ever objecting in a good-natured, pathetic, impotent way to her husband's thriftless propensities.

"I know what I 'm up to, Mely. They 's reasons, un the schoolmaster knows 'em. You keep your tongue still in yer head, honey. On'y be shore to remember, 'f anybody axes about me, 't I 'm arter bears. Jes say 't bears uz been seed over onto Broad Run, un 't pap could n't noways keep still, he wuz so sot on goin' over 'n' sayin' howdy to 'em. That 'll soun' like me, un folks 'll never mistrust."

"But mammy hain't akchelly got anough fer the children to eat," responded Mely.

"Well, I 'low to fetch some bear meat home, un you kin borry some meal from Mrs. Grayson's bar'el tell I git back. 'F they knowed what kind uh varmints I wuz arter over there, they would n't begrudge me nuthin', Sis. Come, now, hump yer stumps; fer I 'll be back in a leetle less 'n no time."

And Bob went off in the darkness. In about a dozen minutes he returned with his powder-horn slung about his shoulders over his hunting-shirt and carrying his rifle. He was closely followed by Pup, Joe, and Seizer, his three dogs, whose nervous agitation, as they nosed the ground in every direction, contrasted well with the massive stride of their master. Having swallowed such a breakfast as Mely could get him out of Mrs. Grayson's stores, and put a pone of cold corn-bread into the bosom of his hunting-shirt, McCord was off for the Broad Run region at the very first horizon streak of daybreak. Though game was but a secondary object in this expedition, he could not but feel an exhilaration which was never wanting when he set out in the early morning with his gun on his shoulder and in the congenial companionship of his dogs. Hercules or Samson could hardly have rejoiced in a greater assurance of physical superiority to all antagonists. The most marked trait in Bob's mental outfit was the hunter's cunning, a craft that took delight in tricks on man and beast. The fact that he was akin to some of the families on Broad Run enhanced the pleasure he felt in his present scheme to get the better of them. He would "l'arn the Broad Run boys a thing uh two that 'd open their eyes." His great plump form shook with merriment at the thought. Plovers rose beating the air and whistling in the morning light as he passed, and the dogs flushed more than one flock of young prairie-chickens, which went whirring away just skimming the heads of the grass in low level flight, but Bob's ammunition was not to be spent on small game this morning. By 7 o'clock the increasing heat of the sun made the wide, half-parched plain quiver unsteadily to the vision. The sear August prairie had hardened itself against the heat — the grass and the ox-eyes held their heads up without sign of withering or misgiving: these stiff prairie plants never wilt — they die in their boots. But the foliage of the forest which Bob skirted by this time appeared to droop in very expectation of the long oppressive hours of breathless heat yet to come. In this still air even the uneasy rocking poplar-leaves were almost stationary on their edgewise stems.

Steady walking for more than three hours had brought Bob to the outskirts of the Broad Run region, and had sobered the dogs; these now sought fondly every little bit of shade, and lolled their tongues continuously. The first person that Bob McCord encountered after entering the grateful region was one Britton — "ole man Britton," his neighbors called him. This old settler led a rather secluded life. Neither he nor his wife ever left home to attend meetings or to share in any social assembly. They had no relatives among the people of the country, and there was a suspicion of mystery about them that piqued curiosity. Some years before, a traveler, in passing through the country, gave out that he recognized Britton, by his name and features, as one whom he had known in Virginia, where he said Britton had been an overseer and had run away with his employer's wife. The neighbors had never accepted the traveler's story in this way; though they were ready to believe that the woman might have run away with Britton. When Bob came in sight of him,

the saturnine old man was standing looking over the brink of a cliff into a narrow valley through which coursed the waters of Broad Run, steadying himself meanwhile by a sapling. Bob, following his first impulse, deposited his gun, beckoned his close-following little dog back, and crept stealthily towards Britton, keeping a tree between him and Britton when he could. Arrived in reach he made a spring, and laying firm hold of his victim by grasping him under the arms, he held him for a moment over the edge of the precipice. Then he brought him back and set him safely down as one might a child, and said innocently:

"W'y, Mr. Britton, I do declare, 'f I had n't 'a' cotcht you, you 'd 'a' fell off!"

The shriveled old man drew back to a safe distance from the brink and tried to force his insipid face into a smile, but he was pale from the deadly fright. Big Bob rubbed his legs and gave way to a spasm of boisterous boyish laughter.

"Seed any bear signs 'round about, Mr. Britton?" he said, when his laugh had died into a broad grin.

"No."

"What wuz you lookin' over the cliff fer?"

"Zeke Tucker. He 's workin' fer me, an' he 's been gone all the mornin' arter my claybank hoss. I 'm afeard sumpin 's happened."

"'F I find him I 'll set the dogs onto him an' hurry him up a leetle," said Bob, laughing again and going on, intent now on encountering Zeke, alone, for purposes of his own.

Then, when he had gone a little way, he stopped and looked back at the retreating old man, and grinned as he noted the doleful way in which his over-large trousers bagged behind.

"Mr. Britton," he called, "which way 'd Zeke go?"

"Up the crick; the hoss is up thar sumers."

Having secured this information, Bob went on, descending the cliff to the valley through which Broad Run rattled its shallow waters — a valley so broken and rugged as to render it almost unfit for cultivation. This glen was settled, as such regions are wont to be, by a race of "poor whiteys," or rather by a mixture of people belonging to two stocks originally different. The one race was descended from the lowest of the nomads, vagrants, and other poverty-stricken outcasts that had been spirited away from England by means legal and illegal, to be sold for a long term into bondage in the American colonies; the other, from the roughest wing of the great Scotch-Irish immigration of the last century — the hereditary borderers who early fought their way into the valleys and passes of the Alleghanies. Equally thriftless in their habits, and equally without any traditions of their origin, members of these two tribes mingled easily. The people in whom the Scotch-Irish blood preponderates are more given to violence, but their humor, their courage, and their occasional bursts of energy indicate that they have a chance of emerging from barbarism; while the poor whiteys of English descent are most of them beyond the reach of evolution, foreordained to extinction by natural selection, whenever the pressure of over-population shall force them into the competition for existence.

With that instinctive unthriftiness which is the perpetual characteristic of the poor whitey in all his generations, the Broad Run people had chosen the least inviting lands within a hundred miles for their settlement, as though afraid that by acquiring valuable homes they might lose their aptitude for migration; or afraid, perhaps, that fertile prairies might tempt them to profitable toil. The convenience of a brook by their doors, and a wood that was uncommonly "handy," had probably determined their choice. Then, too, the circumjacent cliffs gave them a sense of being shut in from prairie winds, and put some limit to the wanderings of their half-starved "critters." For the rest, their demands upon the land were always very modest — a few bushels of "taters," for roasting in the ashes; a small field of maize, for roasting-ears, hominy, and corn-dodgers; and such pumpkins and beans as could be grown intermingled with the hills of corn, were about all that one of these primitive families required, beyond what could be got with a gun or a fishing-line. The only real luxuries affected were onions and melons —"inyuns un watermillions," in Broad Run phrase. Their few pigs and cows ran at large, and lived as they could. Oxen they rarely owned, but whenever a man was in the least prosperous he was sure to possess a single inferior saddle-horse, though he often had no saddle. A horse was kept at the service of neighbors; for, like other savages, the Broad Run people were hospitable and generous to members of their own tribe, and the only economy they understood was that of borrowing and lending, by which a number of families were able to make use of the same necessary articles. This happy device, for example, enabled one circulating flat-iron to serve an entire neighborhood.

The Broad Run people entertained a contempt for the law that may have been derived from ancestors transported for petty felonies. It seemed to them something made in the interest of attorneys and men of property. A person mean enough to "take the law onto" his neighbor was accounted too "triflin'" to be

respectable; good whole-souled men settled their troubles with nature's weapons,—fists, teeth, and finger-nails,—and very rarely, when the offense was heinous and capital, with bullets or buckshot. Men who were habitually disgraceful in any way— as, for example, those who could not get drunk without beating their wives — were punished, without the delay of trial, by the infliction of penalties more ancient than statutes, such as ducking, riding on a rail, or sudden banishment. Hanging by lynch law was reserved for the two great crimes of horse-stealing and murder.

They put the killing of George Lockwood into the category of grudge-murder, since he was shot at night "without giving him a show for his life." But the shooting did not immediately concern Broad Run, and Broad Run folks would not have felt themselves responsible for seeing justice done, if it had not been for concurring circumstances. Lynch law is an outbreak of the reformatory spirit among people of low or recent civilization. Like other movements for reform, it is often carried by its own momentum into unforeseen excesses. It had happened recently that two brothers, thieves of the worst class, who had infested the country and had long managed to escape from the law, had been sent to prison for four years. They were believed to be guilty of an offense much blacker than the robbery for which they were sentenced; but the murder of a strange peddler had escaped notice until the body had been discovered two years after the crime, and the crime could not then be brought home by legal evidence. Their attorney, a lawyer notorious for chicanery, had, by appeal, got a new trial on account of some technical error in the proceedings of the lower court. The county had already been taxed many thousands of dollars to defray the expense of convicting them, and the people were exasperated by the prospect of a new expense with the possible escape of the criminals. Public expenses, it is true, sat lightly on Broad Run; the taxes levied on its barren patches and squalid cabins were not considerable, but Broad Run made much of the taxes it did pay, and it caught the popular indignation, and was indignant in its own prompt and executive fashion. The very night before the new trial was to begin, the doors of the jail were forced, and the two prisoners were shot to death by a mob. On the jail door was left a notice, warning the attorney of the criminals to depart from the county within thirty hours, on pain of suffering a like fate. Though Broad Run got most of the credit for this prompt vindication of justice, the leaving of this legible notice upon the door was taken as evidence of the complicity of some whose education was better than that of the settlers at the Run. This execution had taken place but three months before the shooting of George Lockwood, and the mob was like a were-wolf. Perhaps I ought rather to liken it to those professional reformers who, having abolished slavery, or waved their hats while others abolished it, proceed to inquire for the next case on the docket, and undertake forthwith to do away with capital punishment or the marriage relation. Having found its local self-complacency much increased by success in discovering a method cheaper and more expeditious than those of the courts, Broad Run was readily inclined to apply its system of criminal jurisprudence to a new case.

But this local reformatory tendency, like many large movements of the sort, was very capable of lending itself to the promotion of personal aims and the satisfaction of private grudges. One of Tom Grayson's rash boyish exploits, soon after he took up his abode with his uncle in town, had been to avenge himself for an affront put upon him the year before by Jake Hogan of Broad Run. Jake, while working as a hired man for Butt, the next neighbor to the Graysons, had taken the side of his employer in the long-standing quarrel between the Butts and the Graysons about pigs in the corn-field and geese in the meadow, "breachy" horses and line fences. Jake had gone so far one day as to throw Tom, then a half-grown boy, into the "branch." A boy's memory of such events is good, and when Jake rode into Moscow, a year later, in company with his sweetheart to see the circus, Tom repaid the old grudge by taking the stirrups from Jake's saddle and dropping them into the public well; so that the consequential Jake had the mortification of escorting a giggling Broad Run girl to her home with his lank legs and his big boots dangling, unsupported, against the flanks of his horse. Hogan would have beaten Tom, if he had not received an intimation that this would perhaps involve the necessity of his settling the matter a second time with big Bob McCord. But he laid up his grudge, and from that time he had taken pleasure in testifying to his settled conviction that Tom "would n' never come t' no good eend." He always lent emphasis to this sinister prediction by jerking his head back, with the self-confident air of a man who knows what he knows. From the moment of the shooting of Lockwood, when Jake found that Tom was on the direct road to the gallows, he began to twit all his cronies.

"Hain't I al'ays said so? Go to thunder! D' yeh think Jake Hogan don' know a feller as the rope 's already got a loop onto?" And

he would jerk his chin back, and stiffen his neck, as he defiantly waited for a reply.

Not content with exulting in successful prophecy, Jake got a notion from the first that it devolved on him now to see that this young scapegrace should not fail of merited punishment. His neighbors at the Run, having boasted much of the value of what they called "Broad Run law," were willing to add a leaf to their laurels as reformers of the county; and he counted also on finding recruits among the loafers on the outskirts of the camp-meeting, if the coroner's jury should return a verdict adverse to Tom.

Bob McCord was able to conjecture something of this state of affairs from the slender information the schoolmaster had given him. During all his morning's walk to Broad Run, Bob's thoughts had chiefly revolved about plans for circumventing Hogan. His first crude scheme was to join the reformers in their little excursion, and then mislead or betray them; but his friendly relations with the Graysons were too well known to Jake for this to be possible. It was not until the old man Britton had mentioned Zeke Tucker that there occurred to Bob's inventive mind a proper agent for his purpose. Wishing to have his coming known, he steered his course near to the rickety cabin of Eleazar Brown, or, as he was commonly called, "Ole Lazar Brown."

"G'-mornin', S'manthy," Bob called to Lazar Brown's daughter, at the same time giving his head a little forward jerk,— the very vanishing point of a bow,— but without stopping his march. S'manthy had buried two husbands, and had borne eight white-headed children, but she had never been called by any other name than S'manthy. Just now she was "batting" clothes on a block in front of the house, turning a wet garment over with her left hand from time to time, and giving it the most vindictive blows with a bat held in her right.

"Y' ain't heern nothin' 'v no bears a-cap'rin' 'round h-yer lately, eh?" Bob asked, relaxing his gait a little.

"They say as they 's a b'ar been seed furder upt the run, un I 'low you mout fine some thar ur tharabouts," replied the woman, intermitting her batting a moment and pushing back her faded pink sun-bonnet. "But wha' choo doin' away f'om home, I 'd thes like to know, when they 's so much a-goin' on in your diggin's? They say you 've had a murder 'n' all that."

"I don't talk, S'manthy. I 'm a-lookin' fer bears. They 's times when you 'd orter hole onto yer tongue with both uh yore han's."

Bob quickened his stride again and was soon out of sight among the scrubby trees of the rugged valley.

"I say, daddy!" called S'manthy, when Bob had had time to get out of hearing; "looky h-yer, daddy!"

Old Lazar Brown, in answer to this call, came and stood in the door, taking his cob-pipe from his mouth with his shaky hand and regarding his daughter.

"Big Bob McCord 's thes gone along upt the run a-huntin' fer b'ars," said S'manthy. "Un they say as the feller that killed t' other feller las' night 's the son uh the woman 't 'e works fer. Bob 's the beatinest hunter! Ef Gaberl wuz to toot his horn, Bob 'd ax him to hole on long anough fer him to git thes one more b'ar, I 'll bet."

Lazar Brown had shaking-palsy in his arms, and, being good for nothing else, could devote his entire time to his congenial pursuits as gossip and wonder monger of the neighborhood. Having listened attentively to S'manthy, he shook his head incredulously.

"Yeh don' think ez he 's arter b'ars, do yeh, S'manthy? Bob 's got some trick er 'nother 'n 'is head. W'y, thes you look, he mus' uh le't home afore daybreak. Now, Bob 'd natterly go to the carner's eenques' to-day, whar they 'll be a-haulin' that young feller up that shot t' other feller las' night. Big Bob 's got some ornery trick 'n 'is head." Here Lazar Brown stopped to replace his pipe in his mouth. He was obliged to use both hands, but after two or three attempts he succeeded. "Looky h-yer, S'manthy, you thes keep one eye out fer Bob; I 'low he 'll go down the run to-wurds ev'nin'. He 'll be orful dry by that time, fer he 's one of the *driest* fellers. Thes you tell him 't I 've got a full jug, un ax him in, un we 'll kind-uh twis' it out uh 'im. I 'low I 'll go 'n find Jake."

Lazar returned to the house, knocked the ashes out of his pipe and refilled it. Then with some difficulty he succeeded in taking a live coal from the ashes: holding it in the leathery palm of his shaking left hand, he got it deposited at last on the corn-cob bowl of his pipe. As soon as this operation of firing-up was completed, he set out in a trotty little walk, glad to have news that would make the neighbors hearken to him.

Meantime Bob McCord, having passed out of sight of S'manthy in his progress up the creek, had faced about and come back through the bushes to a point overlooking Lazar Brown's cabin, where, in a dense patch of papaws, he stood in concealment. This movement greatly perplexed the old dog Pup, who stood twitching his nose nervously, unable to discover what was the game that had attracted his master's eye. When at length

Bob saw Lazar start off down the run, he smote his knee with his hand and gave vent to half-smothered laughter.

"Tuck like the measles!" he soliloquized. "Un it 'll spread too. See 'f it don't! Come, Pup—bears! bears! ole boy!"*

The dogs took the hint and ceased their nosing about the roots of trees for squirrels, and in beds of leaves and bunches of grass for hares. They began to make large circles through the trees about Bob, who moved forward as the center of a sort of planetary system, the short-legged dog keeping near the center, while Pup ranged as far away as he could without losing sight of his master,—the remote Uranus of the hunt. Joe, having "tairrier" blood in him, ran with his nozzle down; but long-legged Pup, with a touch of greyhound in his build, carried his head high and depended on his eyes. The fact that Tom Grayson's life was at stake afforded no reason, in Bob's view, for giving over the pursuit of bears. Nor did he hunt in serious earnest merely because there was neither bread nor meat at home. A cat will catch mice for the mere fun of it, and with Bob the chase was ever the chief interest of life. But Bob did not forget his other errand: while the dogs were seeking for bears, he was eagerly scanning the bushes in every direction for Zeke Tucker. Half a mile above Lazar Brown's he encountered Zeke, carrying a blind-bridle on his arm, and still looking in vain for Britton's stray horse.

"Hello, Zeke! the very feller I wuz lookin' fer. Don't ax me no questions about what I 'm a-doin' over h-yer, an' I won't tell you no lies. Let 's set down a minute on that air hackberry log."

The writer of a local guide-book to the city of Genoa recounts, among the evidences of piety exhibited by his fellow-citizens, the hospital built by them for those "*al quale non è conceduto di bearsi nel sorriso di un padre.*" Zeke was one of those to whom, in the circumlocution of the Genoese writer, had not been granted the benediction of a father's smile. Such unfortunates were never wanting in a community like Broad Run, but no one had ever thought of building an asylum for them, though there were many ready to make them suffer the odium of sins not their own. From that unexpected streak of delicacy which is sometimes found in a rough man of large mold, Bob McCord had always refrained from allusion to the irregularity of Zeke's paternity, and had frequently awed into silence those who found pleasure in jibing him. This had awakened in Zeke a grateful adhesion to Bob, and in the young man's isolation among his neighbors and his attachment to himself Bob saw a chance to secure an ally.

"Zeke," said McCord, when once they were seated on the hackberry log, "you 'n' me 's al'ays been frien's, hain't we?"

"Toobshore, Bob! they hain't no man a-livin' I 'd do a turn fer quicker."

"Well, now, you tell me this: Is Jake Hogan a-goin' to town weth the boys to-night?"

"I had n't no ways orter tell, but I 'low 't 'e is."

"You a-goin' along?"

"I dunno. 'F you don't want me to, I don't reckon ez I shall."

"Yes, but I 'd ruther you 'd go. I don't want that air fool boy hung 'thout a fair stan'-up trial, 'n' I may 's well tell you 't I don't mean he shall be nuther, not 'f I have to lick Jake Hogan tell his ornery good-fer-nothin' hide won't hold shucks. But don't choo tell him a word 't I say."

"Trust *me*." Zeke was pleased to find himself in important confidential relations with a man so much "looked up to" as Bob McCord. "Jake 's been the *hardest* on me 'v all the folks, un they 's been times when I 'lowed to pull up, un cl'ar out fer the Injun country, to git shed uv 'im. I wish to thunder you *would* lick him 'thin 'n inch 'viz life. He 's a darn-sight wuss 'n git-out."

"Looky h-yer, Zeke; I 'll tell you how you kin git even with Jake. You jest go 'long weth the boys to-night, wherever they go. I 'm goin' to fix it so 's they won't do nuthin' to-night. You 're livin' 't ole man Britton's now, ainch yeh?"

"Yes."

"Well, you git off fer half a day f'om Britton's, un go to the eenques' this arternoon, un fine out all you kin. Arter supper, you go over to the groc'ry; un jest as soon 's you fine out whech way the wind sets, you 've got to let me know. 'T won't do fer me to be seed a-talkin' to you, ur fer me to loaf aroun' Britton's. But ef Jake makes up his mine to go to Moscow, you light a candle to-night un put it in the lof' where you sleep, so 't 'll shine out uv a crack on the south side uv the chimbley, in the furder eend uv the house."

"But his mine 's already made up," said Zeke.

* Why it was that Bob said "bears," and did not say "b'ars," as some of his class did, I do not know. Broad as his dialect was, it was perceptibly less aberrant than that of Lazar Brown's family, for example. It is impossible to trace the causes for local and family variations of speech; nor is a word always pronounced in the same way in a dialect,—it varies in sound sometimes, when more or less stress is put upon it. The varieties are here set down as they existed, except that print can never give those shades of pronunciation and inflection that constitute so large a part of the peculiarities of speech, local, personal, and temporary.

MR. BRITTON AND BIG BOB.

"They 's time to change afore night. Ef he 's goin' to Perrysburg —"

"Perrysburg? They ain't no talk uv Perrysburg," said Zeke.

"They may be," answered Bob. "Un ef Perrysburg 's the place, you put the candle at the leetle winder on the north side uv the chimbley. Un when I shoot, you put out the candle, un then I 'll know it 's you, un you 'll know 't I understan'. You see, 't won't do fer me to stop any nearder 'n the hill, un I 'll wait there till I see your candle. Then you go weth Jake." Here Bob got up and strained his long-sighted eyes at some object in the bushes on the other side of the brook. "Is yon hoss yourn, on t' other side of the branch?"

"I don't see no hoss," said Zeke.

"Well, you watch out a minute un you 'll ketch sight uv 'im. He 's gone in there to git shed of the flies."

"That 's our clay-bank, I believe," said Zeke, getting up and carefully scanning the now half-visible horse.

"Mine! you hain't seen nor heern tell of me, un you b'long to Jake's crowd weth all your might."

With these words Bob set out again for his bear-hunt, while the bare-foot Zeke waded through the stream, which was knee-deep, and set himself to beguile Britton's clay-bank horse into standing still and forfeiting his liberty.

(To be continued.)

Edward Eggleston.

LIVING IN PARIS.

IT is in Paris as it is everywhere else — men may spend what they please. There lived in the garret of a house where I was a tenant a man, wife, and two children, who literally spent nothing. They were from the mountains on the Swiss frontier of France. They there owned land which yielded four hundred dollars a year. They had determined to make their annual income six hundred dollars, and to amass twenty-five hundred dollars for each of their children on marriage. The hall-porter gave them the garret closet free. The tenants gave them scraps of bread and broken victuals. They drank only water. The wife did the washing in the yard; neither soap nor irons were used. The husband was employed all night at the goods-station of a railway, and he there got odd jobs during the day; the wife did chores. The children went to a free school. A great many of the hall-porters spend nothing. They have their lodging free; the wife is employed as a char-woman in the house or neighborhood; the husband is often a tailor. They get broken victuals and second-hand clothes and shoes from tenants, and sometimes a bottle of wine.

A TYPE OF THE SHARPER.

There are eighty thousand houses in Paris, and nearly every one of them has a hall-porter; some of them have two. There are petty needle and thread shops, or shops for notions, which anybody can manage. The husband is a clerk in some office. If the shop yields income enough to pay its rent, both husband and wife are content.

The absence of servants is very remarkable. I have lived in houses where I was the only person who kept a servant, and she was merely a char-woman.

This work is much easier than in America. No fuel is used in the kitchen but charcoal, which is burned in a sort of shelf with four holes, one of which is for the soup-pot, another for the stew-pan or gridiron; the others are rarely used. I have, while hunting lodgings, visited thousands of kitchens. I have seen only these two holes which bore marks

of use. Eighty pounds of charcoal (all wood is sold by weight), costing one dollar and sixty cents for the very best quality of Yonne make, medium thickness, last a month or six weeks. It makes no dust, leaves few ashes, and is easily lighted. Recently a sort of artificial "lightwood" has come into great favor. It is sold in coarse paper boxes, holding from forty to forty-eight pieces, which cost one cent a box; for four cents a month the fires are lighted instantly and without paper. A match and this lightwood are all that is required.

The butcher calls twice a day, first to get orders, lastly with the orders filled. The baker comes every morning, bringing what bread you want. The grocer calls twice on an appointed day (always the same), once to get, next to fill orders. The vintner calls on an appointed day, if you please, bringing a week's or a fortnight's or a month's supply, just as you wish. Your laundress comes once in ten days if she live in the country: Saturday to return the clean, Monday to get the soiled linen, if she live in town. A note to your coal-dealer brings fuel. Every morning costermongers call at the door, one with fish, another with oysters, another still with vegetables; you may order from them what you desire; but don't order anything anywhere in Paris; find what you want and there buy. If you order, you are sure to be cheated in quality, in quantity, or in price; commonly in all three. To make costermongers bring what you want, say: "You have no strawberries?" or, "You have no tomatoes?" When you get a tolerably good costermonger, especially a fishmonger, stick to him. There is at least one good pastry-cook in every respectable neighborhood. Visit, buy from each of them, and select the best. The pastry-cook is very useful. He supplies delicious meat and fish pies and such dessert (I use the word in the American sense) as an ordinary cook could not be expected to make; for instance, Charlotte Russe, St. Honoré, Frangipane, and the like. Never buy cake of any sort at a baker's. All bakers make several sorts of bread, but scarcely a baker in Paris makes bad bread; some of them make bread as good as cake. If you want to see bread in perfection, the *beau idéal* of bread, go to Versailles and buy it, especially their *pain marquise* for Sunday's sale. Do not buy fuel of any sort from the petty coal-dealers found in every street, unless you have no place to store a large quantity; then you must buy of your neighbor.

IN A CHURCH CORNER.

Lodgings in Paris are of several classes. The lowest is *cabinet*, which is a cupboard with room enough for a cot, if the cot be not long, if the cot be not wide, if the cot be not high, and if the cot can enter. There is never a fire-place, rarely a window, unless the cabinet be next to the roof, where there may be a skylight. A cabinet is to be had for from twelve to twenty-four dollars a year. It is tenanted by servants, sometimes husband and wife, but commonly by unmarried servants, by shop-boys in their first wrestle with fortune, and by other persons who are employed all day, eat at public dining-rooms, and ask of home only shelter from rain and a place to lie down.

Next is *chambre*, which is a room with a fire-place and commonly with a window, or at least an apology for a window. It is let for from twenty-four to fifty dollars a year, but the latter price is very rare and could be gotten

only in the busiest parts of Paris. Then comes *chambre et cabinet* — a bedchamber with a smaller room for orts and ends: the chamber has a window; the smaller room has a window generally, but no fire-place. They are to be had for from thirty to sixty dollars.

Above these is *logement*, which always has a kitchen and two chambers, with fire-places and windows. All well-to-do married working people live in logements, which are very comfortable in the newer houses of Paris; but perhaps the balance is even between the older and the newer houses.

SOUP IN THE MORNING.

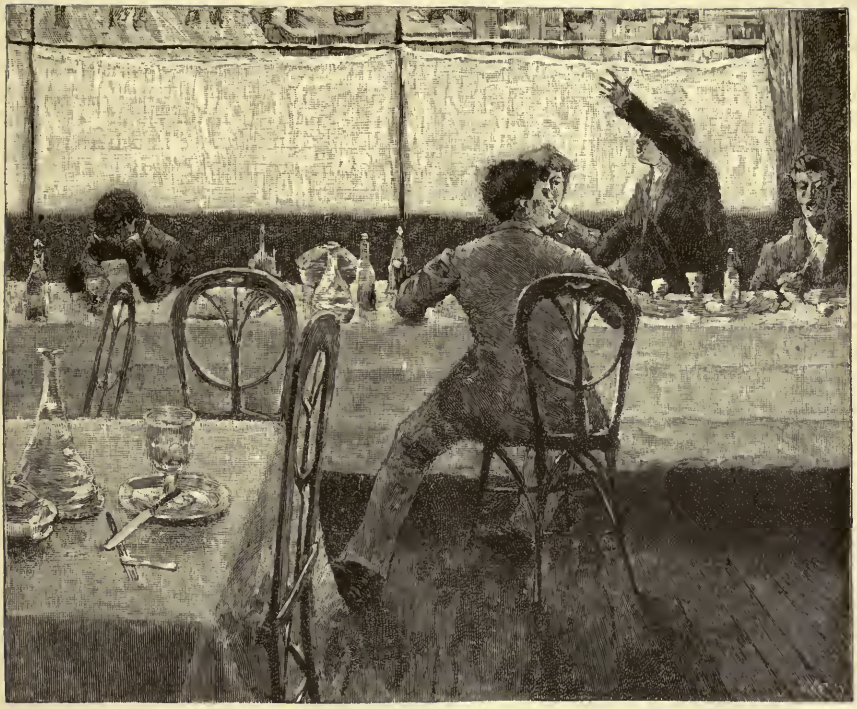
Higher in the social scale is *petit appartement*. Here glimmerings of gentility begin to appear.

A petit appartement must contain a sitting-room and a dining-room, though no larger than a pocket handkerchief. It is amusing to see the importance the French attach to a sitting-room.

Some petits appartements are very cozy. They have sitting-room, dining-room, kitchen, and bedchamber. Next comes *appartement*, which contains a sitting-room, dining-room, kitchen, antechamber, one, sometimes two, bedchambers, and other conveniences. There is a mirror on the marble mantel-piece of the sitting-room and the bedchamber, a porcelain stove in the dining-room, a cellar, and a servant's chamber in the garret. In new houses there is water in the kitchen, and gas everywhere. Rent for appartements varies from one hundred and sixty to three hundred dollars.

Then you have *grand appartement*, which has commonly two sitting-rooms and several bedchambers, besides the rooms to be found in an appartement. Above grand appartement is *hôtel*, which is a private mansion; while a *grand hôtel* is a public-house or a tavern. There are as many sorts of refectories in Paris as of lodgings.

At all of the convents and barracks broken meats are distributed during winter. There are "economical kitchen ranges," where soup with its meat and vegetables is sold for one cent a ration; and there are innumerable places where free tickets for even these cheap rations are to be had. A ticket for bread is commonly given with the soup-ticket. At all of the markets, and especially at the Great Markets, there are itinerant coffee-sellers and soup-sellers. Frenchmen and soup are convertible terms. Whenever a Frenchman is ill, or exhausted, or hungry, or about to take a long journey, he orders soup. The first thing he orders when he gets up in the morning is soup. The last thing he takes at night before donning his night-cap (all Frenchmen wear night-caps) is soup. So, of course, soup-houses are found everywhere. Our wood-cut represents a scene in the neighborhood of the Great Markets, where from 3 A. M. to sunset hundreds of similar scenes are to be found. An old woman has a small table on which white earthenware bowls, made so thick that they might fall on the ground without breaking, and so thick that the buyer feels he has a large ration for his money, are laid; by her side are two large tin cans, both with chafing-iron in the bottom to keep the contents hot. One can holds soup, the other hot water to wash bowls after use. In old times — that is, before the ground around the Innocents' Fountain was sodded and made a public garden — all this space was covered with soup-cooks, each under a wide, red umbrella, with soup-pot simmering on a portable kitchen. Each customer was given election — a bowl of soup or pot-luck. Armed with an iron fork whose



A STUDENTS' RESTAURANT.

handle was three feet long, he had the right to try his pot-luck; if he speared a bit of meat, it was added to his soup-bowl. These picturesque kitchens have been improved out of existence. Pot-luck has been lost.

The poorest young artist or student scarcely ever enters a *gargote*. He prefers eating bread and cheese or bread and sausage at home to mingling with coarse throngs. If he has a little money, he goes to some *crèmerie*. No soup is to be had here; but coffee or chocolate, an omelette, a chop or beef-steak, and a salad are to be gotten for five cents each; bread, for two cents. Some of these crèmeries are quite clean, and the cooking is good and plain, such as one sees in peasants' houses.

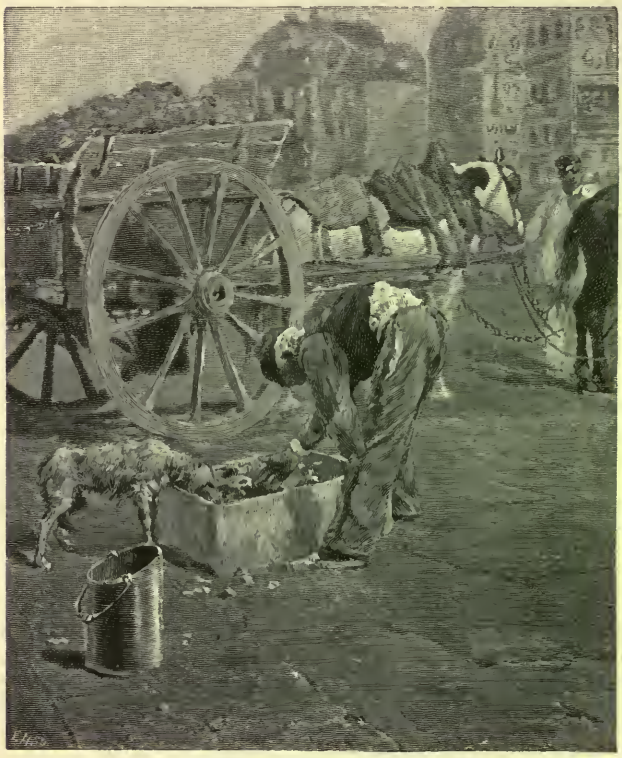
A little higher in grade above the crèmerie is the *bouillon;* for in the business parts of Paris (where such eating-houses alone are to be found) it is frequented from 9 A. M. to 2 P. M. by business men and the better-paid clerks and shopmen. Later in the day it is frequented by the poor who are too proud, or whose position (as Government clerks and the like) forbids them, to go to the lower classes of eating-houses. You can get nothing in a bouillon but beef soup, boiled beef (the beef of the soup), cheese, currant jelly, bread, and wine. The prices are three cents for soup, five cents for beef (which has been boiled to shreds, and is as tasteless as so much twine), and two cents for bread. Few of the customers order anything else, except a vial of wine, which costs four cents; cheese and currant jelly are three cents a ration. *Bouillons Duval* were originally such places as these. Duval was a butcher near the Great Markets. He every day had left odds and ends of meat, mere waste. He, like all butchers in working people's quarters, used this waste to make beef soup, which he sold to his neighbors. Being a first-rate judge of meat on the hoof (a very rare talent; the butchers in Paris who have this talent are widely known and have more business than they can attend to), he got the Hôtel du Louvre and two or three of the great clubs for customers. They wanted only the best cuts. He did not know what to do with the lower qualities of meat. In thinking over the best way to end this embarrassment, he determined to establish bouillons, where not only soup but roast meats should be sold, and so low as to tempt even customers of restaurants. They at once became popular, and poured so much money into his pocket that he turned them into restaurants, where he sold not only inferior but the highest qualities of meat.

Nearly all vintners supply food. The majority of them ought to be classed with gargotes, but many of them have two rooms, one

for working people, the other for a higher class of customers. The cooking, meats, and vegetables are very coarse, but large rations are given. This is their recommendation.

The price is six cents a ration for everything but bread, which is three cents. Some vintners have a reputation for dishes which brings them in a great deal of custom. There is a vintner in Rue du Temple whose delicious tripe draws people from every part of Paris. There are several near the Great Markets famous for snails.

Above the vintners are the fixed-price restaurants — that is, public dining-rooms where, for a given sum of money, you have for breakfast as much bread as you can eat on the spot, one ration of meat, one ration of vegetables, a dessert, and a vial of wine, or a second ration of meat or of vegetables instead of wine; for dinner, soup, two rations of meat, a ration of vegetables, a dessert, and a vial of wine, which may be exchanged as above mentioned. The cheapest of these restaurants are in the Latin Quarter. They are students' restaurants. All students' restaurants are crowded — not on account of excellence, but of cheapness. When a man has only sous in his pocket, he does not stop to frame a bill of fare; he runs for low prices. He has not reached the hour when he may listen to his palate and humor all its whims. Prices at restaurants are of all rates, but fourteen, sixteen, or eighteen sous, with two sous to the waiter, will still get in the Latin Quarter a full dinner. As for quality — "Don't you think, Mr. Surface, we had better leave honor out of the argument?" Beggars must not be choosers. All cheap and especially all students' restaurants are most democratic places. Nobody hesitates to chat with his neighbor. After you have eaten three or four meals, the waiter looks on you as his property; and even before this initiation, if you order a bottle of wine (vials are the largest liquid measure known to the general customer), the waiter is sure to bring his own glass with bottle and to toss off a bumper to your health. The victualer always sidles up to you, unless you seem to be unusually poor or hold unsatisfactory theories of credit, under which circumstances the instinct of self-preservation keeps him at a safe distance from you. What would become of his daughters' dowries and sons' marriage settlements if, while he crammed you with bread and soup, you crammed him with airy promises to pay? His eyes have two other duties to discharge. He gives as much bread as the customer can carry off under his epidermis; but some fellows (there are black sheep in all flocks!) translate epidermis *overcoat*, failing to distinguish between meal eaten and meal saved. These cheap restaurants are disappearing even in the Latin Quarter. Rents, taxes, and everything else are rising, and to give a meal of any sort for less than a franc is becoming a miracle which it is daily harder to work. On the other hand, it is easier to make money in Paris than it ever was. But this is a knack which some men never find out. When the price is twenty-five cents for breakfast and fifty cents for dinner, a half bottle of wine is given. There are public dining-rooms where, for forty cents, a breakfast, and, for from seventy cents to one dollar, a dinner may be had, but where the bill of fare is apparently more limited than in restaurants. Here you are given a book and asked to select what you want; but ninety-five of every hundred dishes set down in the book are not to be had. In public dining-rooms you have a bill of fare (such as is given



MORNING SCAVENGER.

in hotels), which you may eat your way through. The secret of the low prices of the cheaper restaurants is this: they make arrangements with butchers, poulterers, and fishmongers to take from them, a little while before they close for the day, all meat, poultry, and fish left over, and which would be unsalable by next morning. They get these objects below cost, and at once cook them enough to prevent spoiling. They go to the Great Markets just before the markets close. The peasants, sooner than carry their market stuff home again, will sell it for a mere song. Fruit and vegetables which could not have been bought during the morning for less than six cents apiece may be had, then, three for one cent.

Lastly come restaurants where one pays not only for what he takes, but for everything he uses — even for the knives, forks, and spoons. There are all sorts of these restaurants, cheap and dear; the cheapest are, however, dearer than the highest fixed-price restaurant.

I must not omit to mention cafés, although they are becoming mere billiard saloons. Clubs have hurt them. Then the introduction of bars gave them another blow. A still more serious blow was the establishment of musical cafés. Cafés are a cheap club. Artists, literary men, and business men living in the same neighborhood meet at cafés after dinner. Cafés are neutral ground, where there is no etiquette of visits, where everybody is equally at home, where one may order what he pleases, may come when he chooses, and leave the instant he feels tired; where the room is handsome, brilliantly lighted, comfortably warm, always animated. If these habitual frequenters be numerous enough to warrant it, a room is set apart solely for their use: it is really a club-room. The musical cafés require customers to take some refreshment (all refreshments served in them are dear and bad), but at most of them tickets, costing ten cents, are sold at the counter, which relieve visitors from the importunities of waiters. Neighbors who are known to be frequent visitors are commonly told that they are welcome without payment of admittance fee; even in these musical cafés there are corners reserved for neighbors who come with their wives and children to spend the evening.

Were I poor and wished to master French quickly and thoroughly, to see a great deal of French life, to understand the current of unwritten French thought, and to spend as little money as possible, I should, were I a man, become a boarder in a third-rate boys' school; were I a woman, in a third-rate girls'

A GUARDIAN OF THE PUBLIC GARDENS.

school in the suburbs of Paris or, which would every way be better, in some small provincial town. Here I should attend all the lessons, especially all the French and English lessons, given. I should select the most intelligent tutor, and win him, or her, by taking private lessons (they would not cost more than two dollars a month) and by making timely presents; he or she would on holy-day show you sights missed by general travelers. He would explain them to you, and call attention to particulars which else had escaped notice. You would visit the churches of Paris and mark the difference between them.

Or he or she would go with you to public gardens and analyze the people met. There are no more majestic figures in Paris (beadles of the great churches excepted) than the constables of the public gardens. Strangers take them for marshals of France. The cross of the Legion is on their breast; immense epaulettes hang on their shoulders; their clothes are brilliant military uniforms; their hat is that worn by the infantry. So strangers' eyes may well gaze on them for glories of France. They are old non-commissioned officers, whose declining days are made more comfortable by having the pay of constable added to pension. Their duties are light. They are expected to wage war on turbulent boys, to give chase to dogs that invade the garden, to guard flowers from hands that can not distinguish between *meum* and *tuum*. Their campaign never begins

GOING TO COMMUNION.

until long after sunrise and always ends with twilight. Their longest forced march is from chair to chair. Their existence is a Frenchman's *beau idéal* of life — plenty to eat and drink, nothing to do, sauntering in a public promenade till legs whisper "seat," and clothed from head to foot in gaudy clothes.

He or she would warn you against the adventurers with whom public resorts in Paris swarm. Once familiar with their physiognomy you would detect them everywhere, and find this knowledge useful even on your return to the United States. Faces such as our wood-cut portrays are to be seen hourly in Paris. When this knave gets up in the morning he does not know where he will breakfast, still less where he will dine; and should his landlord be harsh, or have lost patience, he does not know where he will sleep. His only hope is that, if he eat very moderately and content himself with soup and bread, the mistress of the crèmerie will still give him credit, or that he may meet some acquaintance who will treat him to meat or drink. He is utterly without scruple. If he does not steal, it is solely from cowardice — fear of being caught.

Now the tutor already mentioned would take you to one of the most charming sights of Paris — the "first communion" of all the

boys and girls of a large parish. What putting on the *toga virilis* was to a Roman youth, what buying the first fan is to a Spanish girl, what "coming out" is to our sisters, what presentation at court is to our English high-born cousins,— so is the "first communion" to French boys and girls. It taken, they are men and women. Is iron fortune theirs? After "first communion" they must set to work; life's race has begun. It is the great family festival. All persons do not figure as bride or groom, but all persons (at least it was the rule before war was declared on religion) take the "first communion." Girls are robed as brides, but trinkets are forbidden. The utmost purity of appearance is sought, to give all spectators "the outward and visible sign of the inward and spiritual grace." Each girl wears a white veil, and her hair, no matter how luxuriant, or blue black, or Venetian auburn, is held a close prisoner in a white cap, though the head have right to duchess diadem; the dress is muslin and as white as the veil; the waist girdled by a broad white ribbon ending in a large bow-knot behind. Boys wear white trousers, waistcoat, cravat, gloves, and an armlet of broad white ribbon tied in a large bow-knot, while from both ends hangs long gold or silver fringe; black coat; hair as well dressed as the nearest barber's skill can go; hat left at home. In one hand is held a missal, and a white rosary ending in a cross; in the other, a long white wax taper with a red velvet gold-trimmed holder round it.* Girls and boys wear these clothes at confirmation and at "renewal," which takes place a year afterward, though the armlet is discarded from the boy's arm at "renewal." Where poverty is unable to provide this livery of heaven, wealth supplies not only the dress but the substantial meal which adds memories to the day, for round the board all kindred are assembled — often for the first, oftener for the last, time. The day ended, boy's armlet and girl's white reticule are put in a paper box and are laid in a secure corner of a chest of drawers, to be joined in time by the bride's garter or her orange wreath as souvenirs of life's great days. The church to which grandma and kinswomen are wending their way in our illustration is St. Médard, the parish church of Mouffetard Quarter — the parish church of the famous Gobelins tapestry manufactory and of the Garden of Plants. It has twice been inundated with blood in our day — in June, 1848, in May, 1871.

J. D. Osborne.

* Until 1882, girls too bore lighted tapers. The transept viewed from behind the high altar was a striking scene. Tapers' flames seemed like St. Elmo's lights hovering over the boys and girls, and might easily be taken for the Spirit falling from heaven on purity, blessing it and fitting it for the good fight in life's battle to be begun to-morrow. In 1881, a girl in St. Sulpice Church set her veil on fire, and there came nigh being a catastrophe fatal to as many as that at Lima, Peru, a few years since. Calamity was averted by a priest, who in putting out the fire was seriously burned. Since then no tapers have been intrusted to girls.

EMMA LAZARUS.

WHEN on thy bed of pain thou layest low
Daily we saw thy body fade away,
Nor could the love wherewith we loved thee stay
For one dear hour the flesh borne down by woe;
But as the mortal sank, with what white glow
Flamed thy eternal spirit, night and day,—
Untouched, unwasted, though the crumbling clay
Lay wrecked and ruined! Ah, is it not so,
Dear poet-comrade, who from sight hast gone,—
Is it not so that spirit hath a life
Death may not conquer? But, O dauntless one!
Still must we sorrow. Heavy is the strife
And thou not with us,— thou of the old race
That with Jehovah parleyed, face to face.

R. W. G.

AWAITING THE ENEMY. FROM A WAR-TIME PHOTOGRAPH.

THE GRAND STRATEGY OF THE WAR OF THE REBELLION.

BY GENERAL W. T. SHERMAN.

TWENTY-TWO years have passed since the termination of the civil war in America; a new generation of men has the destiny of our country in their possession, and we who probably lag superfluous on the stage watch with jealous interest the drift of public opinion and of public events. These are mainly guided by self-interest, by prejudice, by the teachings of books, magazines, and newspapers.

We veterans believe that in 1861–5 we fought a holy war, with absolute right on our side, with pure patriotism, with reasonable skill, and that we achieved a result which enabled the United States of America to resume her glorious career in the interest of all mankind, after an interruption of four years by as needless a war as ever afflicted a people.

The causes which led up to that war have been well described by Mr. Greeley, Dr. Draper, Mr. Blaine, and General Logan — the opposite side by Mr. Davis, Governor Foote, General Johnston, and the recent biographers of General Lee. In addition to these, innumerable volumes have been published, and nearly all the leading magazines of our country have added most interesting narratives of events, conspicuously so THE CENTURY. The editors of this magazine, armed with a personal letter from General Grant, applied long ago to have me assist them in their laudable purpose. I declined, but the pendulum of time seems to have swung too far in the wrong direction: one is likely to receive the impression that the civil war was only a scramble for power by mobs, and not a war of high principle, guided by men of great intelligence according to the best light they possessed. Discovering that one branch of the history of that war, "Grand Strategy," has been overlooked or slighted by writers, I have undertaken to discuss it, not with any hope to do full justice to the subject, but to attract the attention of younger and stronger men to follow up and elaborate it to the end.

War is the conflict of arms between peoples for some real or fancied object. It has existed from the beginning. The Bible is full of it. Homer immortalized the siege and destruction of Troy. Grecian, Roman, and European history is chiefly made up of wars and the deeds of soldiers; out of their experience arose certain rules, certain principles, which made the "art of war" as practiced by Alexander, by Cæsar, by Gustavus Adolphus, and by Frederick the Great.

These principles are as true as the multiplication table, the law of gravitation, of virtual velocities, or of any other invariable rule of natural philosophy. The "art of war" has grown to be the "science of war," and probably reached its summit in the wars of Europe from 1789 to 1815. Its fundamental principles are as clearly defined as are those of the laws of England by Blackstone. Jomini may be assumed as the father of the modern science of war, and he has been supplemented by "great masters" such as Napoleon, Marmont, Wellington, Napier, Hamley, Soady, Chesney, and others, all of whom agree in the fundamental principles; but to me the treatise of France J. Soady,

Lieutenant-Colonel, R. A., published in London, 1870, seems easiest of reference and best suited to my purpose, because he admits the elements of local prejudice and the temperament of the people to enter into the problem of war.

Lieutenant-Colonel Soady divides the "lessons of war as taught by the great masters" into the following heads:

1. Statesmanship in its relationship to war. 2. Strategy, or the art of properly directing masses upon the theater of war, either for offense or invasion. 3. Grand tactics. 4. Logistics, or the art of moving armies. 5. Engineering — the attack and defense of fortifications. 6. Minor tactics.

He further subdivides these "heads," and illustrates by historic examples the following branches: "Aim and principles," "Lines of communication," "Zone of operations," "Offensive and defensive warfare," Fortresses, Battle, Modern improvement in arms, Steamboats and Railroads, the Telegraph; and indeed more nearly approaches the science of war as it exists to-day than any author of whom I have knowledge. Any non-professional reader who will cast his eyes over the 555 pages of Lieutenant-Colonel Soady's volume, as well as those of "The Operations of War," by Colonel (now General) Hamley, will discover that war as well as peace has a large field in the affairs of this world, demanding as much if not more study than most of the sciences in which the human mind is interested.

Every man who does to his neighbor as he wishes his neighbor should do unto him finds on examining the law of the day that he has been a law-abiding citizen; so a soldier or general who goes straight to his object with courage and intelligence will find that he has been a scientific soldier according to the doctrines laid down by the great masters. Many of us in our civil war did not think of Jomini, Napoleon, Wellington, Hamley, or Soady; yet, as we won the battle, we are willing to give these great authors the benefit of our indorsement.

Now in the United States of America, in the year of our Lord 1861, some ambitious men of the Southern States, for their own reasons, good or bad, resolved to break up the union of States which had prospered beyond precedent, which by political means they had governed, but on which they were about to lose their hold. By using the pretext of slavery which existed at the South they aroused their people to a very frenzy, seceded (or their States seceded) from the Union, and established a Southern Confederacy, the capital of which was first at Montgomery, Alabama, afterwards at Richmond, Virginia, with Jefferson Davis as their president. By a conspiracy as clearly established as any fact in history, they seized all the property of the United States within the seceded States, except a few feebly garrisoned forts along the seaboard, and proclaimed themselves a new nation, with slavery the corner-stone. Old England, the first modern nation to abolish slavery and to enforce the noble resolve that no man could put his foot on English soil without "*eo instante*" becoming a free man, looked on with complacency, and encouraged this enormous crime of rebellion.

The people of the Northern free States, accustomed to the usual criminations of our system of elections, supposed this to be a mere incident of the presidential election of the previous November; went along in their daily vocations in the full belief that this episode would pass away as others had done; and treated the idea of civil war in this land of freedom as a pure absurdity.

In due time, March 4, 1861, the new President, Abraham Lincoln, was installed as the President of the United States. He found the seven cotton-States in a condition which they called "out of the Union," claiming absolute independence, and seeking to take into their confederacy every State which tolerated slavery. In the end they succeeded, except with Delaware, Maryland, Kentucky, and Missouri, so that in the spring of 1861, April 12th, when the Southern Confederacy began actual war by bombarding Fort Sumter, in Charleston Harbor, it awakened a response which even they could not misunderstand.

The people of the United States loved their Government and their history; they realized perfectly the advantages they possessed over the inhabitants of other lands, but had no army or navy adequate to meet so grave a crisis. The boom of the cannon in Charleston Harbor was carried by electricity to every city, town, and village of the land, and the citizens realized for the first time that civil war was upon them; they were told to form themselves into companies and regiments, and to go with all expedition to Washington, the national capital, to defend the civil authorities and the archives of government. This done, the cry went up, "On to Richmond!" and the battle of Bull Run resulted. The South was better prepared than the North, and victory went to the former, according to the established rules of war. Had Johnston or Beauregard pushed their success and occupied Washington, it would not have changed the final result, because twenty millions of freemen would never have submitted tamely to the domination of the slave-holder faction. Johnston himself records that his army was as much

confused and disordered as ours, both being green and badly organized and disciplined.

Then began the real preparation. Soady quotes from Napoleon: "When a nation is without establishments and a military system, it is difficult to organize an army." We found this perfectly true; yet the people of the United States, on the call of their President, organized voluntarily three hundred regiments of a thousand men each, which were distributed to the places of immediate danger. Soady says further: "Although wars of opinion, national wars and civil wars are sometimes confounded, they differ enough to require separate notice. . . . In a military sense these wars are fearful, since the invading force not only is met by the armies of the enemy, but is exposed to the attacks of an exasperated people."

The very nature of the case required the North to invade the South, to recover possession of the forts, arsenals, dock-yards, mints, post-routes, and public property which had been wrongfully appropriated by the public enemy. We had not only to meet and conquer the armies and the exasperated people of the South, but the obstacles of nature — woods, marshes, rivers, mountains — and the climate of a region nearly as large as all Europe.

Omitting the States of Maryland, Kentucky, and Missouri (3,024,745), which supplied each belligerent a fair quota, the Northern States had a population of 19,089,944 to 9,103,332 in the Confederate States. In the autumn of 1861, these faced each other in angry controversy, the North resolved to maintain the Union, and the South to establish a separate government, necessarily hostile to it. Each side maintained throughout the same form of government, with a president elected by the people as their chief magistrate and commander-in-chief of the army and navy, with a cabinet of his choice to assist in the administration of government, a congress to enact the laws and provide the ways and means, and a supreme court to sit in judgment on those laws. Both parties, following common precedents, raised their armies by the same methods — first by volunteering, and then by a draft of citizens between the ages of eighteen and forty-five years, induced by bounties or enforced by severe penalties. At first the Southern youth were clamorous to be led against the detested Yankees and Abolitionists, each claiming to be equal to five of the shop-keepers and mud-sills of the North; but they soon became convinced that man to man was all they wanted.

According to Captain Frederick Phisterer, in his valuable "Statistical Record of the Armies"* (1883), the "calls" on the North for men were, in the four years of war, 2,763,670, which resulted in an aggregate of 2,772,408;† but as these calls were for three months, one year, two years, three years, and "during the war," the actual soldiers are counted two, three, and four times.

On p. 62 occurs a table, which every officer who has had to fight with men present for duty, instead of on paper, well understands, in which is given, "Present":

July 1, 1861	183,588
January 1, 1862	527,204
March 31, 1862	533,984
January 1, 1863	698,802
January 1, 1864	611,250
January 1, 1865	620,924
March 31, 1865	657,747
May 1, 1865	797,807

and on the latter date 202,709 absent — aggregating 1,000,516 on the muster-rolls at the end of the war. I have no doubt this is as correct as possible.

The "absent" were not present with the armies at the front, but were generally in rear of the base of supplies; and even of the "present" we had to estimate at least one-third as detached, guarding our long lines of supplies, sick in hospital, company cooks, teamsters, escorts to trains, and absent from the ranks by reason of the many causes incident to war.

Assuming one soldier to sixteen of the population, — at times more, at times less, — the Southern armies must have had an average of 569,000 men. I cannot find even an approximate table of their numbers; but we know they had in their ranks every man they could get, subject to the same causes of absenteeism as the Union armies.

Before I enter upon the real subject of this paper, let me attempt to portray the two great leaders of these mighty hosts, Abraham Lincoln and Jefferson Davis, both of whom, in addition to their civil functions, often exercised their unquestioned right to command their respective armies. They, in fact, commissioned all general officers, assigned them to posts, gave military orders, defined the "objects" of campaigns, and often the exact "lines of operation."

* Captain Phisterer in this record gives the date and place of 2261 distinct battles and engagements, and for 149 of them he gives the estimated losses. I do not know the source of his information, but I do know that it is very difficult to ascertain the exact facts even as to the Union forces, much more the Confederate. His tables are more complete and easier of reference than those supplied by the adjutant-general, and are offered in this paper only as approximate, to illustrate the argument and demonstrate the magnitude of these "operations of war." — W. T. S.

† A recent officially revised statement increases this number to 2,778,304. — EDITOR.

Lincoln was by nature and choice a man of peace. Born in Kentucky, but taken by his parents in early youth to Indiana and Illinois, he grew up to manhood the type of the class of people who inhabit our North-west. He in time became a lawyer in Springfield, the capital of Illinois, had a fair practice, and always took a lively interest in all public questions — in other words, "politics." He became skilled in debate, and during the discussions which arose from the repeal of the Missouri Compromise and the extension of slavery over the vast territories acquired by the Mexican war of 1846–8, he was compelled to meet in debate one of the ablest men of his day, Stephen A. Douglas, whom he fairly excelled, whereby he acquired national fame; was, according to the usage of our country, nominated as the Republican candidate for President, and was duly and fairly elected in November, 1860. At that time he was somewhat a stranger to the country, especially to the South, who regarded him as an Abolitionist, then the vilest of mortals in their estimation. But no sooner was he legally inducted into his office, March 4, 1861, than he began to display those qualities of head and heart which will make him take rank with the most renowned men of earth.

He never professed any knowledge of the laws and science of war, yet in his joyous moments he would relate his *large experience* as a soldier in the Black Hawk war of 1832, and as an officer in the Mormon war at Nauvoo, in 1846. Nevertheless, during the progress of the civil war he evinced a quick comprehension of the principles of the "art," though never using military phraseology. Thus his letter of April 19, 1862, to General McClellan, then besieging Yorktown, exhibits a precise knowledge of the strength and purpose of each of the many armies in the field, and of the importance of "concentric action." In his letter of June 5, 1863, to General Hooker, he wrote:

> In one word, I would not take any risk of being entangled upon the river [Rappahannock], like an ox jumped half-way over a fence, and liable to be torn by dogs front and rear, without a fair chance to gore one way, or to kick the other.

Again, June 10, 1863, writing to General Hooker:

> If left to me, I would not go south of the Rappahannock upon Lee's moving north of it. If you had Richmond invested to-day, you would not be able to take it in twenty days. Meanwhile your communications, and with them your army, would be ruined. I think Lee's army and not Richmond is your objective point. If he comes toward the Upper Potomac, follow him on his flank and on the inside track, shortening your lines while he lengthens his. If he stop, *fret him* and *fret him*.

This is pure science, though the language is not technical.

It is related by General Grant in his memoirs that when he was explaining how he proposed to use the several scattered armies so as to accomplish the best results, referring to the forces in western Virginia, and saying that he had ordered Sigel to move up the Valley of Virginia from Winchester, make junction with Crook and Averell from Kanawha, and go towards Saltville or Lynchburg — Mr. Lincoln said, "Oh, yes! I see that. As we say out West, if a man can't skin, he must hold a leg while somebody else does."

In his personal interview with General Grant about March 8, 1864, Mr. Lincoln recounted truly and manfully that

> he had never professed to be a military man, or to know how campaigns should be conducted, and never wanted to interfere in them; but the procrastination of commanders, and the pressure from the people at the North and Congress, *which was always with him*, forced him to issuing his series of military orders, one, two, three, etc. He did not know but all were wrong, and did know that some were. All he wanted or ever had wanted was some one who would take the responsibility and *act*, and call on him for all the assistance needed, pledging himself to use all the power of the Government in rendering such assistance.

At last he had found that man.

Jefferson Davis also was born in Kentucky. He removed in youth to the State of Mississippi, whence he was appointed a cadet to the United States Military Academy at West Point, September 1, 1824. He was graduated No. 23 in a class of 33 members in June, 1828; served on the North-west frontier, now Wisconsin and Iowa, as a lieutenant of the First Infantry, till March 4, 1833, when he was appointed to the First Dragoons as a first lieutenant; with that regiment he served on the frontier of Arkansas, now Fort Gibson in the Indian Territory, till he resigned, in 1835. He was in civil life in his State of Mississippi till the breaking out of the Mexican war, in 1846, when, as colonel of a Mississippi regiment, he took a conspicuous part under General Zachary Taylor at Monterey and at Buena Vista, where he was badly wounded.

With the disbandment of his regiment he resumed his civil and political career; was a senator in the National Congress, 1847–53; Secretary of War under President Pierce, 1853–57; and again a senator, from 1857 to 1861, when he became the President of the Southern Confederacy, and Commander-in-chief of its armies and navy.

He was by nature and education a soldier, giving orders to his armies, laying down plans of campaign, lines of operation, and descending into details which it might have been wiser to have left to subordinates.

No one has ever questioned the personal integrity of Mr. Davis, but we his antagonists have ever held him as impersonating a bad

cause from ambitious motives, often exhibiting malice, arrogance, and pride.

Such, in my judgment, were the two great antagonist forces, and such their leaders in our civil war.

Recurring now to the autumn of 1861, these two forces stood facing each other with one of the most difficult problems of the science of war before them. The line of separation was substantially the Potomac, the Ohio, and a line through southern Missouri and the Indian Territory to New Mexico, fully two thousand miles long; but this naturally divided itself into three parts — the east or Potomac (McClellan), the center or Ohio (Buell), and the west or Missouri (Halleck). Confronting them was the Army of Northern Virginia (Johnston — Lee), that of the Cumberland (Albert Sidney Johnston), and that of the trans-Mississippi (McCulloch — Price). All these were educated and experienced soldiers. The North necessarily took the offensive, and the South the defensive. After much preliminary skirmishing the first significant movement was that of General Thomas, January 20, 1862, who moved forward, attacked, defeated, and killed General Zollicoffer, at Mill Springs, Kentucky; the next was that of General Grant from Cairo, Illinois, up the Tennessee River in conjunction with the gunboat fleet under Commodore Foote, which captured Fort Henry, and afterwards (February 14th–16th) Fort Donelson, in which the Union losses are reported, 2886, and the Confederate, 15,067,* most of these prisoners of war. The prompt capture of these two fortified positions with their garrisons compelled the Confederate general, Johnston, to abandon his fortified flanks at Bowling Green, Kentucky, and Columbus, on the Mississippi River, and to fall back two hundred miles to a new line along the Memphis and Charleston railroad. The Union armies followed up this movement, the one (Grant) to Shiloh, abreast of Corinth, the other (Pope) directly down the Mississippi River, the real "objective" of this grand campaign. There was still another army, under General S. R. Curtis, an educated and professional soldier, moving southward, west of the Mississippi River, which encountered its enemy at Pea Ridge, Arkansas, on the 6th–8th of March, defeated him, inflicting a loss of 5200* men to his of 1384. These three armies, under the command of General Halleck at St. Louis, were operating from a secure base, with abundant supplies on "concentric lines," with a well-defined and important "objective," the recovery of the Mississippi River, the chief navigable river of the continent, which had been forcibly taken possession of by the enemy, its banks fortified with heavy guns, and with several fleets of armed gun-boats to patrol and defend it.

The Army of the Ohio, General Buell, moved forward to Nashville and the Tennessee River.

Here the Confederate general, Albert Sidney Johnston, displayed great skill and generalship by using his railroads, collecting all his scattered forces at Corinth, Mississippi, completely reorganizing them and hurling them with terrific energy on Grant at Shiloh, timing his attack so as to overwhelm this army before the arrival of the Army of the Ohio, approaching from the direction of Nashville. On the first day, April 6, 1862, he was partially successful, but met a foe of equal skill and determination, and there lost his life, necessitating a change of commanders in the very crisis of battle. He was succeeded by Beauregard, who continued the attack; but the Union forces under Grant held the key-points of the position till night, when arrived the division of Lew Wallace, which had been detached, and three divisions of the Army of the Ohio. The next morning the Union armies assumed the "offensive," drove the Confederates back to Corinth, and won the victory. The losses are recorded 13,573 to the Union, and 10,699 to the Confederates. This was a highly critical battle, more important in its moral than its physical results. It gave the Union army great confidence in itself, and in its ability not only to defeat the Confederate armies, man to man, but to overcome the "obstacles of nature" and the machinations of an "exasperated people."

While these movements were in progress down the Mississippi, Commodore Farragut, with his sea-going fleet, a flotilla of mortar-boats under Commodore Porter, and a land force under General Butler, was preparing to reach the same "objective" from the mouth of the river. On the 20th of April, Farragut began by breaking the chain of obstacles at Forts Jackson and Saint Philip, both works planned by scientific engineers and built by competent workmen; both were well garrisoned and supplied, with heavy artillery and abundance of ammunition. Then he steamed by these forts, fighting right and left in his "wooden ships with hearts of steel," instantly attacked the Confederate fleet above, utterly annihilated it, went on up to the city of New Orleans and captured it — all inside of ten days. No bolder or more successful act of war was ever done than this, which was fully equal to Nelson's attack on the French fleet at Aboukir, and infinitely more important in its conse-

* The Official Records, while not conclusive, would seem to place this loss at a much smaller figure.— EDITOR.

quences. Had not events elsewhere delayed the movement from the North, the Mississippi would have been ours in the summer of 1862, whereas its recovery was only postponed till 1863.

Almost coincident with the battle of Shiloh, General Pope, operating down the Mississippi in coöperation with the gun-boat fleet of Commodore Foote, attacked the fortified Island No. 10, and on the 8th of April captured it, with all its stores and most of its garrison. The gun-boat fleet, pushing on down the river, encountered Fort Pillow on the 14th of April, again on the 10th of May, and June 4th captured it; and under command of Commodore Davis pushed on to Memphis, where, June 6th, it absolutely destroyed the Confederate fleet of gun-boats, thus leaving no obstacle, except Vicksburg, to the free navigation of the river.

General Halleck, after the battle of Shiloh, ordered General Pope's army by water from Island No. 10 to Shiloh, and proceeded there himself to command the several armies in person. He organized these, viz., of the Ohio, Tennessee and Mississippi, into the usual right and left wings, center, and reserve, and moved, about the end of April, with great deliberation on the Confederate army intrenched at Corinth, Mississippi, a strategic place of value, being the point of intersection of two important railroads. After some immaterial skirmishing the Confederate general, Beauregard, abandoned the place, fell back to Tupelo, fifty miles south on the Mobile and Ohio railroad, and the Union forces occupied Corinth, May 30, 1862. General Halleck then had in hand one of the strongest and best armies ever assembled on this continent, and could easily have pursued Beauregard, scattered his army, marched across to Vicksburg, then unfortified, occupied it, and thus brought to a brilliant conclusion the campaign he had so well begun; he could have made the Mississippi open to commerce, created a complete isolation of the trans-Mississippi department of the Confederates, and thereby set free, for other uses, three-fourths of his army of one hundred thousand men. But the reverses to McClellan in the worthless peninsula of James River, and the appeal of the good Union people of East Tennessee, caused our President and commander-in-chief to break up that army and call General Halleck to Washington, send Buell's army towards Chattanooga, and leave General Grant with the Army of the Tennessee to defend a line of one hundred and fifty miles (Tuscumbia to Memphis), placing him on the defensive with a bold, skillful, and enterprising enemy at his front. The Confederate armies of Price and Van Dorn were brought from across the Mississippi to face Grant from Holly Springs. Bragg, who succeeded Beauregard at Tupelo, moved his army, reënforced by recruits, detachments, and exchanged prisoners, rapidly by rail to Chattanooga to meet Buell, who had marched across from Corinth. Feeling himself equal if not superior to Buell, Bragg, August 21, 1862, began that really bold and skillful campaign which forced Buell back to his base of supplies at Louisville, on the Ohio River. Here, in his turn, Buell received reënforcements and resumed the offensive, encountering Bragg at Perryville, Kentucky, on the 8th of October, 1862, inflicting a loss to the enemy of 7000, to his own of 4348, which induced Bragg to fall back to Murfreesboro', Tennessee.

Meantime Price and Van Dorn began to be aggressive against General Grant's long, thin line of defense; but Grant met them with consummate skill, at every point, as at Iuka, September 19th–20th, and at Corinth, October 3d–4th, the casualties of which are reported 2359 Union and 14,221* Confederate — a fiercely contested battle at which Rosecrans commanded, and which was conclusive of events in that quarter to the end of the war.

Grant then, November, 1862, resumed the original offensive against Vicksburg,— known to be strongly fortified, occupied by a competent garrison, and covered by the armies of Price and Van Dorn, under the command of Lieutenant-General Pemberton, whose headquarters were at Holly Springs, Mississippi. Leaving small detachments to guard the key-points to his rear, Grant moved with all his force straight against Pemberton, who first formed his defensive line behind the Tallahatchie, and, this being too long for his strength, fell behind the Yalabusha at Grenada. Grant moved his scattered forces concentrically on Oxford, Mississippi, which he occupied on the 2d of December, and then resolved to send Sherman back to Memphis with one of his four brigades to organize, out of new troops arrived there and other troops belonging to Curtis at Helena, Arkansas, an expeditionary force to move by the river direct against Vicksburg, whilst he held the main force under Pemberton so occupied that he could not detach any of his men to that fortress. After Sherman had started, Pemberton detached Van Dorn with a strong cavalry command to pass around the flanks of Grant's army, to capture his depot of supplies at Holly Springs, and to go on northward, destroying his line of communication. Van Dorn, an educated soldier, did his work well, and compelled Grant to halt and finally to take up a new base of supplies at Memphis. Meantime Sherman went

* Later compilations make this 4707.— EDITOR.

on to Vicksburg, but, instead of meeting a small garrison, found Vicksburg not only strong by nature and art, but fully reënforced by Pemberton. He failed because the condition of facts had changed. He was superseded by McClernand, and he in time by General Grant, who came in person to direct operations against Vicksburg from the river. Then followed that long period of searching for the possession of some dry land whence Vicksburg could be reached, first above the place, finally below. The passage at night by the gun-boat fleet, led by Admiral Porter in person, accompanied by some transports, was as bold and successful an "operation of war" as was the passage of Forts Jackson and Saint Philip by Farragut the previous year. Then the march of Grant's army by roads which would have been pronounced impracticable by any European engineer, his attack on Grand Gulf, and subsequent landing at Bruinsburg; the movement and battle at Port Gibson; the rapid march to Jackson whereby he interposed his army between those of Pemberton in Vicksburg and of Johnston outside; the battle of Champion's Hill, whereby he drove Pemberton to his trenches and then invested him till his surrender in July — these operations illustrated the highest principles of war, one of whose maxims is to divide your enemy and beat each moiety in detail. I do believe that when this campaign is understood by military critics it will rank with the best of the young Napoleon in Italy, in 1796. The fall of Vicksburg resulted in the fall of Port Hudson below, after which, in the language of Mr. Lincoln, the Mississippi "went unvexed to the sea." In my judgment, the recovery of the Mississippi River was conclusive of the civil war. Whatever power holds that river can govern this continent. Its possession in 1863 set free the armies which were in at the death of the Southern Confederacy, in 1865.

Recurring now to the great central line of operations: I left Bragg on the defensive at Murfreesboro', Tennessee, and Buell at Perryville, Kentucky. The authorities at Washington became dissatisfied with Buell, and replaced him by Rosecrans, who had deservedly won great fame by his defense of Corinth. Soady records, as a standard rule of war, that an army assuming the offensive must maintain the offensive. So Rosecrans moved forward to Nashville, where he picked up Thomas's corps, which had been left there by Buell in his retrograde movement, and then to Murfreesboro' on Stone's River, where, December 31, 1862 – January 2, 1863, ensued one of the bloodiest battles of the war, resulting in a Union loss of 11,578, and a Confederate loss of 25,500 (Phisterer).* The Union forces held the ground and Bragg gradually fell back to Chattanooga — by nature a strategic place of the first importance, made so because here the main spurs of the Alleghanies are broken by the Tennessee River. To possess this place was Rosecrans's "objective." His army was adequate; his corps, divisions, and brigades were well commanded; yet the great distance from his base of supplies, on the Ohio River, made the logistics very difficult. In September, 1863, he moved forward, crossed the Tennessee River at Bridgeport, sent one corps direct to Chattanooga, and with the other three crossed the Sand Mountain and Raccoon range, debouching into the Valley of the Chickamauga, in rear of Chattanooga. Bragg, detecting this "turning" movement, fell back to Lafayette, in the same valley of the Chickamauga, where he was reënforced by Longstreet's corps from Virginia, and at the critical moment attacked vehemently on the 19th and 20th of September, 1863, breaking the right flank of Rosecrans's army; but when he reached the Fourteenth Corps, General George H. Thomas, he could not move the "Rock of Chickamauga." Rosecrans gained Chattanooga, the object of his campaign, but he was therein besieged by Bragg; his losses were 15,851, to Bragg's 17,804. Calls for reënforcements to that army came: the Eleventh and Twelfth corps under Hooker were sent by rail from Washington, and the Fifteenth Corps, Sherman, from Vicksburg. General Grant also, having finished his task on the Mississippi, was summoned to Louisville by the Secretary of War, Mr. Stanton, and after a consultation was ordered to Chattanooga to supersede Rosecrans. All these combinations were concluded by November, and Bragg had made the fatal mistake, laid down in all the books, of detaching Longstreet's corps to Knoxville, 110 miles away, to capture Burnside's army. He was over-confident in the strength of his position on Lookout Mountain and Missionary Ridge, whence he could look down upon his supposed victims, who he believed would by starvation be compelled to surrender. But a master-mind had arrived, who soon solved the question of supplies and then addressed himself to the question of battle. Grant promptly detected Bragg's mistake in detaching Longstreet, and resolved to attack and drive him away the very moment the reënforcements hastening to him could be available. On the 23d of November, 1863, having all his troops in position, he began the attack, beginning on both flanks, and at the right moment hurling his center against Bragg's "unassailable" position on Missionary Ridge, he drove him in defeat and disorder to and through

* Later compilation: Union, 13,249; Confederate, 10,266.— EDITOR.

Ringgold Gap, twenty-six miles; and then only paused because of the necessity to send relief to General Burnside at Knoxville. This was fully accomplished, so that by the end of November the enemy was beaten at all points, and the temporary check at Chickamauga was fully redeemed. The losses in the Union army were 5615, to the Confederate loss of 8684. All the movements were made strictly according to the lessons of war as taught by the great masters, and they will stand the test of the most rigid critic.

I now turn with some degree of hesitation to the great Army of the Potomac, operating directly in front of Washington, and which European and Eastern critics, whose sight apparently could not penetrate beyond the Alleghanies, watched with painful solicitude.

That army was from the beginning to the end of the war the controlling military force of the Union cause; and never was an army more true and loyal to its government, more obedient to its generals, more patient in adversity, more magnanimous in victory than was the Army of the Potomac. After the episode of Bull Run in July, 1861, General McClellan was called from the West by universal acclaim to command it; and on the retirement of General Scott, by reason of age, November 1st, General McClellan was appointed by President Lincoln to command all the armies of the United States. He proceeded with commendable skill and energy to the work of organization, equipment, and transportation; but the season for active operations had passed, and his army remained on the banks of the Potomac at the beginning of 1862. The Confederate army, under General Joseph E. Johnston, was at Centreville, twenty-six miles south, with outposts in sight of the National Capitol, and had established batteries on the river below threatening the water-line of supply from the direction of the Chesapeake. General McClellan's "Own Story," now a part of history, shows that he was conscious of the impatience of the whole country at his seeming quiescence; and I am not surprised that Mr. Lincoln should have assumed his unquestioned power to issue his General Order No. 1, of January 27th, ordering a simultaneous advance of all the armies on the 22d of February, 1862. The Army of the Potomac advanced directly from their camps to the front at Fairfax and Centreville, to find that the Confederates had gone behind the Rappahannock.

At Fairfax Court House, on the 11th of March, General McClellan received President Lincoln's war order, No. 3, relieving him of the command of the armies of the United States; restricting his authority to the single Army of the Potomac; and in common with all other department commanders requiring him to report promptly and frequently to the Secretary of War, Mr. Stanton. Meantime had been fully discussed the plan of campaign, the bases of supply, lines of operation, fortresses, etc., partly by conference, and partly by a correspondence given at length in McClellan's "Own Story," culminating in the two letters of February 3, 1862, on p. 229. The result was the movement against Richmond by way of Fort Monroe, resulting in innumerable delays at Yorktown, Williamsburg, etc., till the 31st of May, when was fought the first considerable battle of "Fair Oaks," or "Seven Pines," near Richmond, at which General Johnston was wounded, and General Lee succeeded him in command of the Confederate Army of Northern Virginia. Soon followed the battle of Gaines's Mill, and McClellan's "retreat," fighting for seven days (June 25th–July 1st) to reach Harrison's Landing on the James River, twenty-five miles below Richmond, as a new "base" from which to renew his offensive against Richmond, when his army had become rested and reënforced from the North. During his stay at Harrison's Landing, July 2d–August 17th, the temper of his correspondence, official and private, was indicative of a spirit not consistent with the duty of the commanding general of a great army.

After reading McClellan's "Own Story," and the principal histories of that period, coupled with conversations with many of his principal subordinates, I am convinced that McClellan's fatal mistake was in the choice of his "line of operations" in the spring of 1862. I believe that had he moved straight against his antagonist behind the Rappahannock with his then magnificent army, and had he fought steadily and persistently, as Grant did two years later, he would have picked up his detachments, including McDowell's corps, would have reached Richmond with an overwhelming force, would have captured the city, possibly the Confederate army,—at least would have dispersed it,—thus ending the war.

I do not entertain the idea that Mr. Lincoln, Mr. Stanton, Mr. Chase, and General Halleck could have conspired for his defeat, lest McClellan should become a rival presidential candidate, or for any motive whatsoever. He had ample power and adequate force, but failed in his "objective," which should have been the Confederate Army of Northern Virginia, instead of the city of Richmond. Of course, the withdrawal of Blenker's division and McDowell's corps at the crisis of his attack on Richmond were large factors in his failure, but these were direct consequences of his own plan of campaign, which involved the defense of Washington as well as the capture of Rich-

mond. General McClellan was unquestionably a man of pure character, of great intelligence, learned in the science of war, and with all the experience possible in our country with its limited military establishment. He was graduated at West Point, No. 2 in the class of 1846; went directly to the war in Mexico, whence he returned with an exalted reputation for soldiership under fire; was selected by the War Department for many scientific purposes, among them to proceed to Sebastopol in 1856, to observe the operations of the armies there engaged; and soon after the outbreak of our Rebellion was chosen with universal assent to command the principal army of the Union. No man knew better than he that the problem of war demanded an aggressive soldier. He failed because he chose a wrong "objective" and a wrong "line of operation"— a common mistake in strategy.

Meantime General Halleck, July 16, 1862, had been summoned from Corinth, Mississippi, to Washington, to command the armies of the United States, and thus the Army of the Potomac had four commanding generals,—the President, the Secretary of War, General Halleck, and General McClellan,—each giving orders, planning campaigns, ordering detachments hither and thither, seemingly without concert, and based on the latest information by "spies and informers." Nothing but Divine Providence could have saved this nation from humiliation at that crisis of our history. General John Pope, whose work at Island No. 10 and at Corinth had been personally seen by General Halleck, was brought east by him and given command of the scattered forces left behind by McClellan to protect Washington against Stonewall Jackson and the Confederate hosts who believed that Washington was synonymous with the Union cause, and that if Washington could be captured "the game was up." General Pope skillfully collected and disposed his forces, and fought them manfully. The Army of the Potomac, by Halleck's orders, was withdrawn from Harrison's Landing and sent as rapidly as possible to the assistance of General Pope, who was threatened by Stonewall Jackson, followed by Lee's whole army. The battle of Groveton, or the second Bull Run, has been the subject of the most critical investigation, and I do not propose to mingle in that controversy; but I believe Pope fought valiantly and well, that he checked Lee in his full career for Washington, and brought his "forlorn-hope" to the defenses of Washington in as good condition as could have been done by any of his critics.

At all events the Army of the Potomac was back in front of Washington about the end of August, 1862, confronting its old enemy commanded by Lee, which believed itself invincible. On the 2d of September Major-General McClellan was ordered by the President to "have command of the fortifications of Washington, and of all the troops for the defense of the capital."* Pope's Army of Virginia was merged into that of the Potomac, then commanded by McClellan.

Lee then began his invasive campaign into Maryland, crossing the Potomac by its upper fords east of Harper's Ferry, having detached Stonewall Jackson to capture Harper's Ferry and its garrison, which he did promptly on the 15th of September, at a loss to the Union of 11,783 men, to the Confederates of 500, and thereafter joined Lee at Antietam in time to render material assistance in that battle.

As soon as McClellan became convinced that Lee designed to cross the Potomac, he followed by roads leading north of that river, his left near it and his right extending to Frederick City, which he reached September 12th. The Confederates had been there the day before, and had fallen back along the old National Road by Turner's and Crampton's Gaps of South Mountain (Blue Ridge), where a battle was fought on the 14th, in which the Union loss was 2325 to the Confederate 4343. Lee called in all his detachments and prepared for battle at Sharpsburg, covering a ford of the Potomac River with Antietam Creek to his front, assuming the defensive. McClellan closed down on him and prepared to defeat him with a considerable river to his rear. This battle also has been one which has been discussed with crimination and recrimination in which I do not propose to engage, limiting myself to quotations from Soady:

> It is an approved maxim in war never to do what the enemy wishes you to do, for this reason alone — that he desires it. A field of battle, therefore, which he has previously studied and reconnoitered should be avoided, and double care should be taken where he has had time to fortify or intrench. One consequence deducible from this principle is never to attack a position in front which you can gain by turning (Napoleon) [p. 75].
>
> General McClellan at the battle of Antietam, beside that [*sic*] of making his attacks so disconnectedly that they afforded no help to each other, . . . kept 15,000 men in strict reserve to the very end of the battle — a force which properly employed might have been used to obtain some decisive advantage. For any practical effect . . . Porter's corps might as well have been at Washington. There is no example of any great tactician thus making useless his superiority of force of his own choice, except the single one of Napoleon refusing to employ his guard to decide the desperate struggle at Borodino; and although the great emperor had the strongest possible reason for thus reserving his best troops in the enormous distance from his depots which he arrived at, and the consequent impossibility of replacing them, yet he has been more condemned than admired for this striking deviation from his usual practice, which rendered his victory so

* "McClellan's Own Story," p. 536.

indecisive and ultimately so useless. But McClellan was in the very reverse of such a position, and could have had no similar reason; for his reënforcements were near, and those of his opponent exhausted. The only excuse that can be made for his timidity as to the use of his reserve must be in the ignorance he labored under as to the great numerical inferiority of Lee [p. 234].

The battle of Antietam was fought September 17, 1862, soon after which McClellan was superseded by Burnside, who followed Lee up to the old lines of the Rappahannock, crossed at Fredericksburg, and on December 13th fought that desperate battle, losing 12,353 to Lee's loss of 4576; soon after which he was replaced by Hooker, who crossed the Rapidan and May 1–4, 1863, fought Lee at Chancellorsville, losing 16,030 to Lee's 12,281, when he fell back again north of the Rappahannock. Then Lee in his turn assumed the offensive and made his campaign into Pennsylvania, resulting in the famous battle of Gettysburg, fought almost coincident with the capture of Vicksburg, viz., July 1–3, 1863, in which Lee was the assailant, losing 23,186 men to 34,621 on the part of Meade,* who fought purely on the defensive. General Meade is entitled to extraordinary honor for his conduct of that battle, because he was ordered to command that army whilst actually on the march, with no time to reconnoiter, study the ground, or become acquainted with his corps and division commanders,— that too in the presence of a victorious army of unknown strength, commanded by a general of known ability and great repute.

The defeat of the Confederate army at Gettysburg and the capture of Vicksburg should have ended the civil war July 4, 1863, — but no! the leaders demanded the "last ditch," and their followers seemed willing. The Army of Northern Virginia fell back behind the Rappahannock, and the Army of the Potomac followed and occupied their old ground about Warrenton.

On the 4th day of March, 1864, General U. S. Grant was summoned to Washington from Nashville to receive his commission of lieutenant-general, the highest rank then known in the United States, and the same that was conferred on Washington in 1798. He reached Washington on the 7th, had an interview for the first time with Mr. Lincoln, and on the 9th received his commission at the hands of the President, who made a short address, to which Grant made a suitable reply. He was informed that it was desirable that he should come east to command all the armies of the United States, and give his personal supervision to the Army of the Potomac. On the 10th he visited General Meade at Brandy Station, and saw many of his leading officers, but returned to Washington the next day and went on to Nashville, to which place he had summoned Sherman, then absent on his Meridian expedition. On the 18th of March he turned over to Sherman the command of the western armies and started back for Washington, Sherman accompanying him as far as Cincinnati. Amidst constant interruptions of a business and social nature, these two commanders reached the satisfactory conclusion that as soon as the season would permit, all the armies of the Union would assume the "bold offensive" by "concentric lines" on the common enemy, and would finish up the job in a single campaign if possible. The main "objectives" were Lee's army behind the Rapidan in Virginia, and Johnston's army at Dalton, Georgia.

On reaching Washington, General Grant studied with great care all the minutiæ of the organization, strength, qualities, and resources of each of the many armies into which the Union forces had resolved themselves by reason of preceding events, and in due time with wonderful precision laid out the work which each one should undertake. His written instructions to me at Nashville were embraced in his two letters of April 4, and April 19, 1864, both in his own handwriting, which I still possess, and which, in my judgment, are as complete as any of those of the Duke of Wellington contained in the twelve volumes of his published letters and correspondence.

With the month of May came the season for *action*, and by the 4th all his armies were in motion. The army of Butler at Fort Monroe was his left, Meade's army the center, and Sherman at Chattanooga his right. Butler was to move against Richmond on the south of James River, Meade straight against Lee, intrenched behind the Rapidan, and Sherman to attack Joe Johnston and push him to and beyond Atlanta. This was as far as human foresight could penetrate. Though Meade commanded the Army of the Potomac, General Grant substantially controlled it, and on the 4th of May, 1864, he crossed the Rapidan, and at noon next day attacked Lee. He knew that a certain amount of fighting, "killing," had to be done to accomplish his end, and also to pay the penalty of former failures. In the "wilderness" there was no room for grand strategy, or even minor tactics; but the fighting was desperate, the losses to the Union army being, according to Phisterer, 37,737,† to the Confederate loss of 11,400 — the difference due to Lee's intrenchments and the blind nature of the country in which the battle was fought. On the night of May 7th both par-

ties paused, appalled by the fearful slaughter; but General Grant commanded "Forward by the left flank." That was, in my judgment, the supreme moment of his life: undismayed, with a full comprehension of the importance of the work in which he was engaged, feeling as keen a sympathy for his dead and wounded as any one, and without stopping to count his numbers, he gave his orders calmly, specifically, and absolutely—"Forward to Spotsylvania." But his watchful and skillful antagonist detected his purpose, having the inner or shorter line, threw his army across Grant's path, and promptly fortified it. These field intrenchments are peculiar to America, though I am convinced they were employed by the Romans in Gaul in the days of Cæsar. A regiment, brigade, division, or corps, halting for the night or for battle, faced the enemy; moved forward to ground with a good outlook to the front; stacked arms; gathered logs, stumps, fence-rails, and anything which would stop a bullet; piled these to their front, and, digging a ditch behind, threw the dirt forward, and made a parapet which covered their persons as perfectly as a granite wall.

When Grant reached Spotsylvania, on the 8th of May, he found his antagonist in his front thus intrenched. He was delayed there till the 20th, during which time there was incessant fighting, because he was compelled to attack his enemy behind these improvised intrenchments. His losses according to Phisterer were 24,461,* to the Confederate loss of 9000. Nevertheless, his renewed order, "Forward by the left flank," compelled Lee to retreat to the defenses of Richmond.

Grant's memoirs enable us to follow him day by day across the various rivers which lay between him and Richmond, and in the bloody assaults at Cold Harbor, where his losses are reported 14,931 † to 1700 by his opponent. Yet ever onward by the left flank, he crossed James River, and penned Lee and his Army of Northern Virginia within the intrenchments of Richmond and Petersburg for ten long months on the pure defensive, to remain almost passive observers of local events, whilst Grant's other armies were absolutely annihilating the Southern Confederacy.

Whilst Grant was fighting desperately from the Rapidan to the James, there were two other armies within the same "zone of operations,"—that of the "James" under General Butler, who was expected to march up on the south and invest Petersburg and even Richmond; and that of Sigel at Winchester, who was expected to march up the Valley of Virginia, pick up his detachments from the Kanawha (Crook and Averell), and threaten Lynchburg, a place of vital importance to Lee in Richmond. Butler failed to accomplish what was expected of him; and Sigel failed at the very start, and was replaced by Hunter, who marched up the Valley, made junction with Crook and Averell at Staunton, and pushed on with commendable vigor to Lynchburg, which he invested on the 16th of June.

Lee, who by this time had been driven into Richmond with a force large enough to hold his lines of intrenchment and a surplus for expeditions, detached General Jubal A. Early with the equivalent of a corps to drive Hunter away from Lynchburg. Hunter, far from his base, with inadequate supplies of food and ammunition, retreated by the Kanawha to the Ohio River, his nearest base, thereby exposing the Valley of Virginia, whereupon Early, an educated soldier, promptly resolved to take advantage of the occasion, marched rapidly down this valley northward to Winchester, crossed the Potomac to Hagerstown, and thence boldly marched on Washington, defended at that time only by armed clerks and militia. General Grant, fully alive to the danger, dispatched to Washington by water, from his army investing Petersburg, two divisions of the Sixth Corps and the Nineteenth Corps, just arriving from New Orleans. These troops arrived at the very nick of time,—met Early's army in the suburbs of Washington, and drove it back to the Valley of Virginia, whence it had come.

This most skillful movement of Early demonstrated to General Grant the importance of the Valley of Virginia, not only as a base of supplies for Lee's army in Richmond, but as the most direct, shortest, and easiest route for a "diversion" into the Union territory north of the Potomac. He therefore cast around for a suitable commander for this field of operations, and settled upon Major-General Philip H. Sheridan, whom he had brought from the West to command the cavalry corps of the Army of the Potomac.

Sheridan promptly repaired to his new sphere of operations, quickly ascertained its strength and resources, and resolved to attack Early in the position which he had chosen in and about Winchester, Va. He delivered his attack across broken ground on the 19th of September, beat his antagonist in fair, open battle, sending him "whirling up the Valley," inflicting a loss of 5500 men to his of 4873, and followed him up to Cedar Creek and Fisher's Hill. There Early recomposed his army and fell upon the Union army on the 19th of October, gaining a temporary advantage during General Sheridan's absence; but on his opportune return his army resumed the

* Later compilation, 18,399.— EDITOR.
† Later compilation, 12,737.— EDITOR.

offensive, defeated Early, captured nearly all his artillery, and drove him completely out of his field of operations, eliminating that army from the subsequent problem of the war. Sheridan's losses were 5995 to Early's 4200; but these losses are no just measure of the results of that victory, which made it impossible to use the Valley of Virginia as a Confederate base of supplies and as an easy route for raids within the Union lines. General Sheridan then committed its protection to detachments and with his main force rejoined General Grant, who still held Lee's army inside his intrenchments at Richmond and Petersburg.

I now turn with a feeling of extreme delicacy to the conduct of that other campaign from Chattanooga to Atlanta, Savannah, and Raleigh, which with liberal discretion was committed to me by General Grant in his minute instructions of April 4, and April 10, 1864. To all military students these letters must be familiar, because they have been published again and again, and there never was and never can be raised a question of rivalry or claim between us as to the relative merits of the manner in which we played our respective parts. We were as brothers — I the older man in years, but he the higher in rank. We both believed in our heart of hearts that the success of the Union cause was not only necessary to the then generation of Americans, but to all future generations. We both professed to be gentlemen and professional soldiers, educated in the science of war by our generous Government for the very occasion which had arisen. Neither of us by nature was a combative man; but with honest hearts and a clear purpose to do what man could we embarked on that campaign which I believe, in its strategy, in its logistics, in its grand and minor tactics, has added new luster to the old science of war. Both of us had at our front generals to whom in early life we had been taught to look up,— educated and experienced soldiers like ourselves, not likely to make any mistakes, and each of whom had as strong an army as could be collected from the mass of their nine millions of Southern people,—of the same blood as ourselves, brave, confident, and well equipped; in addition to which they had the most decided advantage of operating in their own difficult country of mountain, forest, ravine, and river, affording admirable opportunities for defense, besides the other equally important advantage that we had to invade the country of our unqualified enemy and expose our long lines of supply to the guerrillas of an "exasperated people." Again, as we advanced we had to leave guards to bridges, stations, and intermediate depots, diminishing the fighting force, whilst our enemy gained strength by picking up his detachments as he fell back, and with railroads to bring supplies and reënforcements from his rear. In Europe war is confined to actual belligerents wearing uniforms, publicly proclaiming their character. Not so with us. Men professing to be peaceful farmers and physicians — yea, preachers of the Gospel — were apprehended in doing acts of a most damaging nature; and I recall to memory a case when our pickets brought to me three preachers with double-barreled guns who said they were hunting for birds as food for their tables. On drawing the charges, each gun contained twelve buckshot, which would have killed a man at sixty yards. I instance these facts to offset the common assertion that we of the North won the war by brute force, and not by courage and skill.

On the historic 4th day of May, 1864, the Confederate army at my front lay at Dalton, Georgia, composed, according to the best authority, of about 45,000 men, commanded by General Joseph E. Johnston, who was the equal in all the elements of generalship with General Lee, and who was under instructions from the war powers in Richmond to assume the offensive northward as far as Nashville. But he soon discovered that he would have to conduct a defensive campaign. Coincident with the movement of the Army of the Potomac, as announced by telegraph, I put my armies in motion from our base at Chattanooga. These were the armies of the Ohio, 13,559 men; of the Cumberland, 60,773; of the Tennessee, 24,465 — grand total, 98,797 men and 254 guns.

I had no purpose to attack Johnston's position at Dalton in front, but marched from Chattanooga to feign at his front and to make a lodgment in Resaca, eighteen miles to his rear, on "his line of communication and supply." The movement was partially, not wholly, successful; but it compelled Johnston to let go Dalton and fight us at Resaca, where, May 13th–16th, our loss was 2747 and his 2800. I fought offensively and he defensively, aided by earth parapets. He then fell back to Calhoun, Adairsville, and Cassville, where he halted for the battle of the campaign; but, for reasons given in his memoirs, he continued his retreat behind the next spur of mountains to Allatoona.

Pausing for a few days to repair the railroad without attempting Allatoona, of which I had personal knowledge acquired in 1844, I resolved to push on towards Atlanta by way of Dallas; this Johnston quickly detected, and forced me to fight him at New Hope Church, four miles north of Dallas, resulting in losses of 3000 to the Confederates to 2400 to us.

The country was almost in a state of nature — few or no roads, nothing that a European could understand, but where the bullet killed its victim as surely as at Sevastopol. Johnston had meantime picked up his detachments, and had received reënforcements from his rear which raised his aggregate strength to 62,000 men, and warranted him in claiming that he was purposely drawing us far from our base, and that when the right moment should come he would turn on us and destroy us. We were equally confident and not the least alarmed. He then fell back to his position at Marietta, with Brush Mountain on his right, Kenesaw his center, and Lost Mountain his left. His line of ten miles was too long for his numbers, and he soon let go his flanks and concentrated on Kenesaw. We closed down in battle array, repaired the railroad up to our very camps, and then prepared for the contest. Not a day, not an hour or minute was there a cessation of fire. Our skirmishers were in absolute contact, the lines of battle and batteries but little in rear of the skirmishers; and thus matters continued until June 27th, when I ordered a general assault, with the full coöperation of my great lieutenants, Thomas, McPherson, and Schofield, as good and true men as ever lived or died for their country's cause; but we failed, losing 3000 men, to the Confederate loss of 630. Still, the result was that within three days Johnston abandoned the strongest possible position and was in full retreat for the Chattahoochee River. We were on his heels; skirmished with his rear at Smyrna Church on the 4th day of July, and saw him fairly across the Chattahoochee on the 10th, covered and protected by the best line of field intrenchments I have ever seen, prepared long in advance. No officer or soldier who ever served under me will question the generalship of Joseph E. Johnston. His retreats were timely, in good order, and he left nothing behind. We had advanced into the enemy's country 120 miles, with a single track railroad, which had to bring clothing, food, ammunition, everything requisite for 100,000 men and 23,000 animals. The city of Atlanta, the gate city opening the interior of the important State of Georgia, was in sight; its protecting army was shaken but not defeated, and onward we had to go,— illustrating the principle that an army "once on the offensive must maintain the offensive."

We feigned to the right, but crossed the Chattahoochee by the left, and soon confronted our enemy behind his first line of intrenchments at Peach Tree Creek, prepared in advance for this very occasion. At this critical moment the Confederate Government rendered us most valuable service. Being dissatisfied with the Fabian policy of General Johnston, it relieved him, and General Hood was substituted to command the Confederate army. Hood was known to us to be a "fighter," a graduate of West Point of the class of 1853, No. 44, of which class two of my army commanders, McPherson and Schofield, were No. 1 and No. 7. The character of a leader is a large factor in the game of war, and I confess I was pleased at this change, of which I had early notice. I knew that I had an army superior in numbers and *morale* to that of my antagonist; but being so far from my base, and operating in a country absolutely devoid of food and forage, I was dependent for supplies on a poorly constructed, single-track railroad back to Louisville, five hundred miles. I was willing to meet our enemy in the open country, but not behind well-constructed parapets.

Promptly, as expected, the enemy sallied from his Peach Tree line on the 18th of July, about midday, striking the Twentieth Corps (Hooker), which had just crossed Peach Tree Creek by improvised bridges. The troops became commingled and fought hand to hand desperately for about four hours, when the Confederates were driven back within their lines, leaving behind their dead and wounded. These amounted to 4796 men, to our loss of 1710. We followed up, and Hood fell back to the main lines of the city of Atlanta. We closed in, when again, Hood holding these lines by about one-half his force, with the other half made a wide circuit by night, under cover of the woods, and on the 22d of July enveloped our left flank "in air," a movement that led to the hardest battle of the campaign. He encountered the Army of the Tennessee,— skilled veterans who were always ready to fight, were not alarmed by flank or rear attacks, and met their assailants with heroic valor. The battle raged from noon to night, when the Confederates, baffled and defeated, fell back within the intrenchments of Atlanta. Their losses are reported 8499 to ours of 3641; but among these was McPherson, the commander of the Army of the Tennessee. Whilst this battle was in progress, Schofield at the center, and Thomas on the right, made efforts to break through the intrenchments at their fronts, but found them too strong to assault.

The Army of the Tennessee was then shifted, under its new commander (Howard), from the extreme left to the extreme right, to reach, if possible, the railroad by which Hood drew his supplies, when he again, on the 28th of July, repeated his tactics of the 22d, sustaining an overwhelming defeat, losing 4632 men to our 700. These three sallies convinced him that his predecessor, General Johnston, had not erred in standing on the defensive. There-

after the Confederate army in Atlanta clung to his parapets. I never intended to assault these, but gradually worked to the right to reach and destroy his line of supplies, because soldiers, like other mortals, must have food. Our extension to the right brought on numerous conflicts, but nothing worthy of note, till about the end of August I resolved to leave one corps to protect our communications to the rear, and move with the other five to a point (Jonesboro') on the railroad twenty-six miles below Atlanta, *not* fortified. This movement was perfectly strategic, was successful, and resulted in our occupation of Atlanta, on the 3d of September, 1864. The result had a large effect on the whole country at the time, for solid and political reasons. I claim no special merit to myself, save that I believe I followed the teachings of the best masters of the "science of war" of which I had knowledge; and better still, I had pleased Mr. Lincoln, who wanted "success" very much. But I had not accomplished all, for Hood's army, the chief "objective," had escaped.

Then began the real trouble. We were in possession of Atlanta, and Hood remained at Lovejoy's Station, thirty miles south-east, on the Savannah railroad, with an army of about 40,000 veterans inured to war, and with a fair amount of wagons to carry his supplies, independent of the railroads. On the 21st of September he shifted his position to Palmetto Station, twenty-five miles south-west of Atlanta, on the Montgomery and Selma railroad, where he began his systematic preparations for his aggressive campaign against our communications to compel us to abandon our conquests. Here he was visited by Mr. Davis, who promised all possible coöperation and assistance in the proposed campaign; and here also Mr. Davis made his famous speech, which was duly reported to me in Atlanta, assuring his army that they would make my retreat more disastrous than was that of Napoleon from Moscow. Forewarned, I took immediate measures to thwart his plans. One division was sent back to Rome, another to Chattanooga; the guards along our railroad were reënforced and warned of the coming blow. General Thomas was sent back to the headquarters of his department at Nashville, Schofield to his at Knoxville, and I remained in Atlanta to await Hood's "initiative." This followed soon. Hood, sending his cavalry ahead, crossed the Chattahoochee River at Campbelltown with his main army on the 1st of October, and moved to Dallas, detaching a strong force against the railroad above Marietta which destroyed it for fifteen miles, and then sent French's division to capture Allatoona. I followed Hood, reaching Kenesaw Mountain in time to see in the distance the attack on Allatoona, which was handsomely repulsed by Corse. Hood then moved westward, avoiding Rome, and by a circuit reached Resaca, which he summoned to surrender, but did not wait to attack. He continued thence the destruction of the railroad for about twenty miles to the tunnel, including Dalton, whose garrison he captured. I followed up to Resaca, then turned west to intercept his retreat down the Valley of Chattooga; but by rapid marching he escaped to Gadsden, on the Coosa, I halting at Gaylesville, whence to observe his further movements. Hood, after a short pause, crossed the mountains to Decatur, on the Tennessee River, which, being defended by a good division of troops, he avoided, and finally halted opposite Florence, Alabama, on the Tennessee River. Divining the object of his movement against our communications, which had been thus far rapid and skillful, I detached by rail General Schofield and two of my six corps to Nashville, all the reënforcement that Thomas deemed necessary to enable him to defend Tennessee, and began my systematic preparations for resuming the offensive against Georgia. Repairing the broken railroads, we collected in Atlanta the necessary food and transportation for 60,000 men, sent to the rear all impediments, called in all detachments, and ordered them to march for Atlanta, where by the 14th of November were assembled 4 infantry corps, 1 cavalry division, and 65 field guns, aggregating 60,598 men. Hood remained at Florence, preparing to invade Tennessee and Kentucky, or to follow me. We were prepared for either alternative.

According to the great Napoleon, the fundamental maxim for successful war is to "converge a superior force on the critical point at the critical time." In 1864 the main "objectives" were Lee's and Johnston's armies, and the critical point was thought to be Richmond or Atlanta, whichever should be longest held. Had General Grant overwhelmed or scattered Lee's army and occupied Richmond he would have come to Atlanta; but as I happened to occupy Atlanta first, and had driven Hood off to a divergent line of operations far to the west, it was good strategy to leave him to a subordinate force, and with my main army to join Grant at Richmond. The most practicable route to Richmond was near a thousand miles in distance, too long for a single march; hence the necessity to reach the sea-coast for a new base. Savannah was the nearest point, distant three hundred miles, and this we accomplished from November 12th to December 21, 1864. According to the Duke of Wellington, an army moves upon its belly, not upon its legs; and no army dependent on wagons

can operate more than a hundred miles from its base, because the teams going and returning consume the contents of their wagons, leaving little or nothing for the maintenance of the men and animals at the front, who are fully employed in fighting; hence the necessity to "forage liberally on the country," a measure which fed our men and animals chiefly on the very supplies which had been gathered near the railroads by the enemy for the maintenance of his own armies. "The march to the sea" in strategy was only a shift of base for ulterior and highly important purposes.

Meantime Hood, whom I had left at and near Florence, Alabama, three hundred and seventeen miles to my rear, having completely reorganized and re-supplied his army, advanced against Thomas at Nashville, who had also made every preparation. Hood first encountered Schofield at Franklin, November 30, 1864, attacked him boldly behind his intrenchments, and sustained a positive "check," losing 6252 of his best men, including Generals Cleburne and Adams, who were killed on the very parapets, to Schofield's loss of 2326. Nevertheless he pushed on to Nashville, which he invested. Thomas, one of the grand characters of our civil war, nothing dismayed by danger in front or rear, made all his preparations with cool and calm deliberation; and on the 15th of December sallied from his intrenchments, attacked Hood in his chosen and intrenched positions, and on the next day, December 16th, actually annihilated his army, eliminating it thenceforward from the problem of the war. Hood's losses were 15,000 men to Thomas's 305.

Therefore at the end of the year 1864 the war at the west was concluded, leaving nothing to be considered in the grand game of war but Lee's army, held by Grant in Richmond, and the Confederate detachments at Mobile and along the sea-board north of Savannah. Of course Charleston, ever arrogant, felt secure; but it was regarded by us as a "dead cock in the pit," and fell of itself when its inland communications were cut. Wilmington was captured by a detachment from the Army of the Potomac, aided by Admiral Porter's fleet and by Schofield, who had been brought by Grant from Nashville to Washington and sent down the Atlantic coast to prepare for Sherman's coming to Goldsboro', North Carolina,—all "converging" on Richmond.

Preparatory to the next move, General Howard was sent from Savannah to secure Pocotaligo, in South Carolina, as a point of departure for the north, and General Slocum to Sister's Ferry, on the Savannah River, to secure a safe lodgment on the north bank for the same purpose. In due time—in February, 1865—these detachments, operating by concentric lines, met on the South Carolina road at Midway and Blackville, swept northward through Orangeburg and Columbia to Winnsboro', where the direction was changed to Fayetteville and Goldsboro', a distance of 420 miles through a difficult and hostile country, making junction with Schofield at a safe base with two good railroads back to the sea-coast, of which we held absolute dominion. The resistance of Hampton, Butler, Beauregard, and even Joe Johnston was regarded as trivial. Our "objective" was Lee's army at Richmond. When I reached Goldsboro', made junction with Schofield, and moved forward to Raleigh, I was willing to encounter the entire Confederate army; but the Confederate armies—Lee's in Richmond and Johnston's in my front—held interior lines, and could choose the initiative.

Few military critics who have treated of the civil war in America have ever comprehended the importance of the movement of my army northward from Savannah to Goldsboro', or of the transfer of Schofield from Nashville to coöperate with me in North Carolina. This march was like the thrust of a sword towards the heart of the human body; each mile of advance swept aside all opposition, consumed the very food on which Lee's army depended for life, and demonstrated a power in the National Government which was irresistible.

Therefore in March, 1865, but one more move was left to Lee on the chess-board of war—to abandon Richmond; make junction with Johnston in North Carolina; fall on me and destroy me if possible, a fate I did not apprehend; then turn on Grant, sure to be in close pursuit, and defeat him. But no! Lee clung to his intrenchments for political reasons, and waited for the inevitable. At last, on the 1st day of April, General Sheridan, by his vehement and most successful attack on the Confederate lines at the "Five Forks" near Dinwiddie Court House, compelled Lee to begin his last race for life. He then attempted to reach Danville, to make junction with Johnston, but Grant in his rapid pursuit constantly interposed, and finally headed him off at Appomattox, and compelled the surrender of the Army of Northern Virginia, which for four long years had baffled the skill and courage of the Army of the Potomac and the power of our National Government. This substantially ended the war, leaving only the formal proceedings of accepting the surrender of Johnston's army in North Carolina and of the subordinate armies at the South-west.

All these movements were on a grand scale, strictly in conformity with the lessons of the great masters, and illustrate every branch of

the science of war as defined by Soady,—strategy, logistics, grand and minor tactics, and engineering.

In thus summarizing these controlling events, extending through four years of time and embracing a continent, I have endeavored to confine myself to the chief campaigns and battles which illustrate military principles. The first year of the war was necessarily one of preparation, but in the last three I contend that every principle of the science of war was illustrated and demonstrated by examples in our war. "Divergent" operations were generally useless or failures; "convergent" operations, with good "bases," though far apart, when persevered in resulted in success and victory. All I aim to establish is that the civil war brought forth, on both sides, out of the mass of the American people, the knowledge, talents, and qualities which were necessary to the occasion; that success resulted from the same qualities, the same knowledge and adherence to the rules of war, which have achieved military success in other ages and in other lands; and that military knowledge acquired beforehand was most valuable, though not conclusive. The same knowledge might have been and was acquired in actual war, though often at a terrible expense in human life and misery.

There is an old familiar maxim, "In peace prepare for war," so that I would deem it the part of wisdom for our Government to accumulate in our arsenals a large supply of the best cannon, small arms, ammunition, and military equipments, ready for instant use; to encourage military education, and to foster a national militia.

I will quote here an expression of a personal friend who was a good soldier of the civil war, now a senator in Congress, contained in an address which he recently delivered to the graduating class of a college in Michigan:

> Of course knowledge is power, we all know that: but mere knowledge is not power, it is simply possibility. *Action* is power, and its highest manifestation is action with knowledge.

How true this is, is felt by every soldier who has been in battle. 'T is not the man who knows most, but the one who *does* best, that wins. Grant, and Meade, and Sheridan at the close of the war could have been taught many lessons by our learned professors, but none of these could have guided the forces to victory as Grant did at Chattanooga, defended his position as Meade did at Gettysburg, or hurled his masses as Sheridan did at Winchester. Action guided by knowledge is what is demanded of the modern general. He must know as much of the school of the soldier as any man in the ranks; he must know what men can do, and what they cannot do; he must foresee and forereach to provide in advance the food, clothing, ammunition, and supplies of every nature and kind necessary for the maintenance of his command; and, moreover, he must gain the confidence and affections of all the men committed to his charge. Above all, he must *act* according to the best knowledge and information he can obtain, preferably coupled with experience acquired long in advance. If we demand of the engineer of a locomotive, composed of bits of iron, both knowledge and experience, how much more should we demand these qualities of the commander of an army, composed of living men, of flesh and blood, with immortal souls! There may be such men as born generals, but I have never encountered them, and doubt the wisdom of trusting to their turning up in an emergency.

The aggressive demands a great moral force, the defensive less. A man who has not experienced the feeling cannot comprehend the sensation of hurling masses of men against an intrenched enemy, almost sure to result in the death of thousands, and, worse still, the mangling of more, followed by the lamentations of families at the loss of fathers, brothers, and sons. We in America, with a free press behind us, which sympathized with their neighbors and rarely comprehended the necessities of battle, felt this moral force far more than would any European general with his well-organized corps and battalions which he could move with little more feeling than he would the ivory figures on a chess-board.

In 1872 I visited Europe in the frigate *Wabash*, and was landed at Gibraltar, held by England with a full war garrison, composed of all arms of service, commanded by Sir Fenwick Williams of Kars, a general of great renown, whose officers were thoroughly educated and of marked intelligence. They naturally questioned me as to the conduct of our civil war; they could comprehend how we might, out of our intelligent citizens, create battalions of infantry, but were incredulous when I explained that we had been equally successful with artillery, engineers, ordnance and staff, the scientific branches of the military service; and when I further claimed that most of our campaigns had been conducted according to the highest military principles, as taught by their General Hamley in the staff school at Aldershot, I could read in their faces signs of more than doubt. The same or similar experiences occurred afterwards at Malta, and in the clubs of London.

In Russia I found the army officers specially well informed about American affairs. At Vladi Kavkas, a city at the north base of the

Caucasian range of mountains, Mr. Curtin and I, with our party, were entertained by a brigadier-general and the officers of his command, who welcomed us in a speech referring to Grant and Sheridan, Farragut and Porter, with as much precision as could have been expected at Denver. In Italy also there prevailed a similar public feeling, and there I encountered several who had been to America, and had shared in some of our campaigns.

In Germany the army officers seemed so well satisfied with themselves, by reason of their then recent victories over the French, that they gave little heed to our affairs on this side of the Atlantic. In all their garrisoned towns they were drilling morning, noon, and night, at the squad drill, at the company drill, and in the school of the battalion; and if industry and attention to details are ruling elements in the science of war, then will the German battalions maintain the cohesion and strength they displayed in the war of 1870–71. With such battalions as units, there can be no scarcity of skilled officers and generals.

In like manner the French had not yet recovered from their defeats at Woerth, Metz, Gravelotte, Sédan, and Paris. With them the separation of the officer from the soldier was much more marked than in any other of the military establishments I witnessed in Europe, and one of their most renowned generals attributed to this cause their defeat and national humiliation; specifying that when their armies were hastily assembled on the Rhine, the soldiers did not personally know their captains and company officers, and these in turn could not distinguish their own commanders. I infer, however, from recent accounts, that General Boulanger, who attended our centennial celebration at Yorktown in 1881, has corrected much of this, and has infused into the French army somewhat of his own youthful ardor and spirit, so that if a new war should arise in Europe we may expect different results.

Nevertheless, for service in our wooded country, where battles must be fought chiefly by skirmishers and "thin lines," I prefer our own people. They possess more individuality, more self-reliance, learn more quickly the necessity for organization and discipline, and will follow where they have skilled leaders in whom they have confidence. Any one of the corps of the Army of the Potomac, or of the West, would not have hesitated to meet after 1863, in open ground, an equal number of the best drilled German troops. This, of course, may seem an idle boast; it is only meant to convey my opinion that the American people need not fear a just comparison in warlike qualities with those of any other nation. We are more likely to err in the other direction, in over-confidence, by compelling inferior numbers and undisciplined men to encounter superior troops, exposing them to certain defeat — a "cruel and inhuman" act on the part of any government. Strength in war results from organization, cohesion, and discipline, which require time and experience; but war is an expensive luxury, too costly to maintain even to secure these important results: therefore the greater necessity for fostering a national militia, and supporting military schools like that at West Point, which has proven its inestimable value to the nation as General Washington predicted, and as every war in America during this century has demonstrated.

W. T. Sherman.

NEW YORK, May 1, 1887.

VALUES.

I MAKE apprisal of the maiden moon
For what she is to me:
Not a great globe of cheerless stone
That hangs in awful space alone,
And ever so to be;
But just the rarest orb,
The very fairest orb,
The star most lovely-wise
In all the dear night-skies!

So thou to me, O jestful girl of June!
I have no will to hear
Cold calculations of thy worth
Summed up in beauty, brain, and birth:
Such coldly strike mine ear.
Thou art the rarest one,
The very fairest one,
The soul most lovely-wise
That ever looked through eyes!

Richard E. Burton.

ABRAHAM LINCOLN: A HISTORY.*

PREMIER OR PRESIDENT?

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE REBEL GAME.

THE rebel conspirators were not unmindful of the great advantages they had hitherto derived from their complaints, their intrigues, their assumptions, their arrogant demands. No sooner was the provisional government organized at Montgomery than they appointed a new embassy of three commissioners to proceed to Washington and make the fourth effort to assist, protect, and if possible to establish the rebellion through a negotiation. They not only desired to avert a war, but, reasoning from the past, had a well-grounded faith that they would secure a peaceful acquiescence in their schemes. The commissioners were instructed to solicit a reception in their official character, and if that were refused, to accept an unofficial interview; to insist on the *de facto* and *de jure* independence of the Confederate States; but nevertheless to accede to a proposition to refer the subject of their mission to the United States Senate, or to withhold an answer until the Congress of the United States should assemble and pronounce a decision in the premises, provided the existing peaceful status were rigidly maintained.†

This modest programme was made necessary by the half-fledged condition of the rebellion: its personal jealousies were not yet hushed; its notions of State rights were not yet swallowed up in an imperious military dictatorship; above all, its military preparation consisted mainly of a self-sacrificing enthusiasm. Notwithstanding the two months' drill and battery-building at Charleston, Davis did not agree with Governor Pickens that the moment had come to storm Sumter. "Fort Sumter should be in our possession at the earliest moment possible," wrote the rebel war secretary, but "thorough preparation must be made before an attack is attempted. . . . A failure would demoralize our people and injuriously affect us in the opinion of the world as reckless and precipitate."‡ Therefore they made Beauregard a brigadier-general and sent him to command in the harbor of Charleston. Beauregard's professional inspection justified this prudence.

> If Sumter was properly garrisoned and armed [wrote he (March 6th)], it would be a perfect Gibraltar to anything but constant shelling night and day from the four points of the compass. As it is, the weakness of the garrison constitutes our greatest advantage, and we must for the present turn our attention to preventing it from being reënforced. This idea I am gradually and cautiously infusing into the minds of all here; but should we have to open our batteries upon it, I hope to be able to do so with all the advantages the condition of things here will permit. All that I ask is time for completing my batteries and preparing and organizing properly my command.§

The first of the three commissioners, Martin J. Crawford, arrived in Washington the day before Lincoln's inauguration. He would have nothing more to do with Buchanan, he wrote.

> His fears for his personal safety, the apprehensions for the security of his property, together with the cares of state and his advanced age, render him wholly disqualified for his present position. He is as incapable now of purpose as a child.‖

With the arrival of the second commissioner, John Forsyth, they prepared to begin operations upon the new Administration. It was comparatively easy to call into caucus the active or disguised secessionists who yet remained in the city. Wigfall, Mason, Hunter, and Breckinridge were still in the Senate; Virginia and the other border States had a number of sympathizing Congressmen in the House; Bell, Crittenden, and Douglas, though loyal, had no love for Lincoln, and could be approached with professions of peace; Seward, in order to gain information, had kept himself during the whole winter in relation with all parties, and had openly proclaimed that his policy was one of peace and conciliation.¶

The prospect of beginning negotiations seemed flattering; nevertheless, their first caucus over the inaugural agreed that "it was Lincoln's purpose at once to attempt the col-

lection of the revenue, to reënforce and hold Forts Sumter and Pickens, and to retake the other places."* A day or two later, on comparing the fragmentary gossip they had raked together, in which the difficulties of reënforcing Sumter were dimly reflected, with a general conversation alleged to have been held by one of their informants with Seward, they framed and reported to Montgomery a theory of probable success.

Seward, they thought, was to be the ruling power of the new Administration. Seward and Cameron were publicly committed to a peace policy. They would establish an understanding with the Secretary of State.

> This gentleman [they wrote] is urgent for delay. The tenor of his language is to this effect: I have built up the Republican party; I have brought it to triumph; but its advent to power is accompanied by great difficulties and perils. I must save the party and save the Government in its hands. To do this, war must be averted; the negro question must be dropped; the "irrepressible" conflict ignored; and a Union party to embrace the border slave-States inaugurated. I have already whipped Mason and Hunter in their own State. I must crush out Davis, Toombs, and their colleagues in sedition in their respective States. Saving the border States to the Union by moderation and justice, the people of the cotton-States, unwillingly led into secession, will rebel against their leaders and reconstruction will follow.

The commissioners therefore deemed it their duty to support Mr. Seward's policy. "Until we reach the point of pacific negotiations, it is unimportant what may be his subsequent hopes and plans. It is well that he should indulge in dreams which we know are not to be realized." They of course make no mention of the arguments, agencies, and influences which we may infer they employed in their deceitful intent to foster these dreams; unless, indeed, they were instrumental in provoking the Senate debate of March 6th and 7th, in which Clingman attacked the inaugural as an announcement of war, while Douglas defended it as a manifesto of peace, "for the purpose," as Mr. Forsyth wrote that Douglas told him, "of fixing that construction on it and of tomahawking it afterwards if it [the Administration] departed from it."†

Acting upon this assumed anxiety of Seward for delay and for peace, the commissioners now agreed upon what they elaborately described in a long dispatch to Montgomery as a most ingenious plan. They would force the Administration to accept or reject their mission, and thereby confront the immediate issue of peace or war, unless Seward would consent to maintain the present military status. Having reached this conclusion, they laboriously drew up a memorandum which they purposed to ask Seward to sign, and sent it to the State Department by an "agent," but Mr. Seward was at home ill, and could not be seen.

Their long dispatches home, and their mysterious allusions to conversations, to agents, and intermediaries, convey the impression that they were "in relation" with the Secretary of State; but whether they were duped by others, or whether they were themselves duping the Montgomery cabinet, indisputable indications in these documents contradict their assertions. At last, however, their vigilance was rewarded with what they considered an item of important news, and they hurried off several telegrams to Montgomery: "Things look better here than was believed."‡ "The impression prevails in Administration circles that Fort Sumter will be evacuated within ten days."‡ This was on Saturday night, March 9th, and so far from being exclusive or advance information, it was substantially printed in next morning's newspapers.§ After four days' consideration by the Lincoln government, and extended discussion in a Cabinet meeting, the loss of Sumter seemed unavoidable; and the rumor was purposely given out to prepare the public mind, if the need should finally come for the great sacrifice.

The Jefferson Davis cabinet at Montgomery clutched at the report with avidity. Under this hope they were no longer satisfied with the "existing peaceful status" specified in their instructions of February 27th, and repeated in the prepared memorandum of the commissioners. "Can't bind our hands a day without evacuation of Sumter and Pickens," replied Toombs imperatively by telegraph on Monday, March 11th.‖ Until Sumter should be evacuated it was idle to talk of peaceful negotiation, he added in his written dispatch to the commissioners, while they were further instructed to "pertinaciously demand" the withdrawal of the troops and vessels from Pickens and Pensacola.¶

Thus spurred into activity, the commissioners now deemed it incumbent on them to make an effort. The whole tenor of their previous dispatches was calculated to convey the impression that they were twisting the Secretary of State at pleasure between their diplomatic thumb and finger. On Monday, March 11th, they sent him their first message — not the demand of Toombs that day received by tel-

egraph, not even the mild suggestion of their original instructions to maintain the status and appeal to Congress, but a meek inquiry whether they would be allowed to make a sort of back-door visit to the State Department. To describe it in their own words: "We availed ourselves of the kind consent of Senator Hunter of Virginia to see Mr. Seward, and learn if he would consent to an informal interview with us."* Mr. Seward of course received Senator Hunter politely, for he still professed to be a loyal senator representing a loyal State, and gave him the stereotyped diplomatic reply, that "he would be obliged to consult the President." The next morning Seward sent Hunter a note of irreproachable courtesy but of freezing conclusiveness. "It will not be in my power," he wrote, "to receive the gentlemen of whom we conversed yesterday. You will please explain to them that this decision proceeds solely on public grounds and not from any want of personal respect." †

This was a cold bath to the commissioners, and the theories of their own finesse, and of the torturing perplexities into which Seward had been thrown, became untenable.

> To-day at 11 o'clock [so runs their own report] Mr. Hunter brought us the promised reply, a copy of which is appended to this dispatch. It is polite; but it was considered by us at once as decisive of our course. We deemed it not compatible with the dignity of our Government to make a second effort, and took for granted that having failed in obtaining an unofficial interview with the Secretary of State, we should equally fail with the President. Our only remaining course was plain, and we followed it at once in the preparation of a formal note to the State Department informing the United States Government of our official presence here, the objects of our mission, and asking an early day to be appointed for an official interview.

They then repeat the gossip of the day — what Mr. Lincoln was said to have told a gentleman from Louisiana, that "there would be no war and that he was determined to keep the peace"; also what Crittenden told Crawford, "that General Scott was also for peace and would sustain Mr. Seward's policy." Finally, showing in what complete ignorance they were of events happening about them, they ask with bewildered curiosity, "Can it be that while they refuse to negotiate with us to keep the Republican party in heart, they mean to abandon both forts on military grounds and thus avoid the occasion of a collision, or do they mean to refer the questions raised by our note to the Senate? Time only can determine, and we await the result. We are still of the opinion that Fort Sumter will be evacuated. The opinion gains ground here that Lieutenant Slemmer and garrison will also be withdrawn from Fort Pickens."*

Toombs was ready to sue or bluster as occasion demanded.

> You have shown to the Government of the United States [he wrote back to the commissioners] with commendable promptness and becoming dignity that you were not supplicants for its grace and favor, and willing to loiter in the antechambers of officials to patiently await their answer to your petition; but that you are the envoys of a powerful confederacy of sovereignties, instructed to present and demand their rights.

Nevertheless, instead of recalling these neglected envoys, he instructs them to "communicate freely and often," and to employ a secretary to assist them, "at such monthly compensation as you may deem reasonable." ‡

The hint to remain was hardly necessary. The commissioners apparently had no idea of abandoning their intrigues, unpromising as they were.

Their secretary, John T. Pickett, now besieged the State Department for an answer to the commissioners' formal note. Seward replied (March 15th) in a lengthy and courteous but dignified memorandum that he did not perceive in the "Confederate States" a rightful and accomplished revolution or an independent nation; that he could not act on the assumption or in any way admit that they constituted a foreign power with which diplomatic relations ought to be established; that he had no authority, nor was he at liberty, to recognize the commissioners as diplomatic agents, or hold correspondence or other communication with them. §

This paper, if delivered, would have terminated the labors and functions of the commissioners. But they were in no hurry to return empty-handed to Montgomery, and still fondly nursed the theory so elaborately described in their long dispatches. One of them repeated it with emphasis in a private letter to a member of the Montgomery cabinet:

> We are feeling our way here cautiously. We are playing a game in which time is our best advocate, and if our Government could afford the time I feel confident of winning. There is a terrific fight in the Cabinet. Our policy is to encourage the peace element in the fight, and at least blow up the Cabinet on the question. ‖

This dispatch is a frank confession that the rebel embassy was so far a complete failure,

and that its future opportunity lay solely in the barren regions of hotel gossip and newspaper rumors. The commissioners would have merited no further historical mention had they not unexpectedly secured a most important ally — John A. Campbell, an Associate Justice of the Supreme Court of the United States, appointed from Alabama, and therefore in the confidence and, as it soon turned out, in the secret interest of the South and the rebellion. Justice Campbell now made himself the voluntary intermediary between the commissioners and the Secretary of State. Owing to his station and his professions, Seward gave him undue intimacy and confidence, enabling Campbell, under guise of promoting peace, to give aid and comfort to the enemies of the United States, in violation of his oath and duty. The details of the intrigue rest entirely upon rebel statements, and mainly upon those of Campbell himself, who gave both a confidential and a semi-official version to Jefferson Davis; the latter Davis transmitted in a special message to the Confederate Congress to "fire the Southern heart." Campbell having thus made his share of the transaction official, and having for a quarter of a century stood before the public accusing Seward and the Lincoln administration of "equivocating conduct" and "systematic duplicity," history must adjudge the question as well as it may with the help of his own testimony.

It has already been stated that Seward's official refusal to receive the commissioners was being prepared at the State Department. The Assistant Secretary had promised to send it to the commissioners' hotel. The commissioners thus relate the beginning of Campbell's intrigue:

> The interview between Colonel Pickett and the Assistant Secretary of State occurred on Friday morning the 14th* inst. Immediately thereafter, and within a brief space of time after Colonel Pickett's statement to us, the Hon. John A. Campbell, of the Supreme Court of the United States, sought an interview with Mr. Crawford of thiscommission, and after stating what he knew to be the wish and desire of Mr. Seward to preserve the peace between the two Governments, asked if there could be no further delay for an answer to our note to the Government, stating at the same time that he had no doubt if it were pressed that a most positive though polite rejection would be the result.†

Commissioner Crawford's official reply to this overture is best described by Toombs's formula that he should "pertinaciously demand" the evacuation of Sumter and maintenance of the "status" elsewhere; the alternative and confidential reply we can only conjecture. But it may well be presumed that Campbell fully revealed to Crawford his sympathy with the rebellion and his purpose to aid it, and that he was in return thoroughly instructed in the game, which was "to encourage the peace element in the fight, and at least blow up the Cabinet on the question."

Thus instructed and prepared, Justice Campbell on the same day (March 14th or 15th) made a voluntary call on Mr. Seward, and in the general conversation which he induced evidently played his part of the game of peace and reconciliation with consummate ability. He probably painted the "dreams which we know are not to be realized" in such rosy colors as to call forth from Seward the hopeful observation "that a civil war might be prevented by the success of my [Campbell's] mediation."‡ The impression upon Seward that Campbell was laboring honestly for the preservation of the Union was also strengthened by his having brought Justice Nelson with him, to whom the slightest suspicion of disloyalty has never attached. It seems clear that these professions of patriotic zeal threw Mr. Seward off his guard as to Campbell's motives, and that he accepted his intervention as a Union peacemaker, not as a rebel emissary.

Seward replied confidentially, "that it was impossible to receive the commissioners in any diplomatic capacity or character, or even to see them personally." Campbell adds that he said "it was not desirable to deny them or to answer them."§ As part of a general policy of delay and avoidance of conflict he may have said and meant it: as an immediate and urgent diplomatic step he certainly did not mean it, because his Assistant Secretary had already promised to send the answer to the commissioners' hotel, when for mere temporary delay dozens of expedients might have been used. Continuing his conversation and unguardedly enlarging his confidence, Seward, in answer to Campbell's direct inquiry, ventured the opinion that Sumter would be evacuated and collision avoided at Charleston. The idea was not new; the rumor had been openly and half-officially printed in the newspapers nearly a whole week; the commissioners had telegraphed it to Montgomery. Campbell, however, caught eagerly at the suggestion, and proposed to write the peaceful news to Jefferson Davis; and Seward, with a momentary excess of enthusiasm, authorized him (so Campbell relates) to write: "Before this letter

* The almanac shows that Friday was the 15th. There is, therefore, an error either in the day of the week or day of the month.

reaches you Sumter will be evacuated, or the orders will have issued for that purpose — and no change is contemplated at present in respect to Pickens."* Campbell rushed off in a fever of delight to tell the commissioners, and magnified the confidence to the proportions of a pledge. The incident began to grow more rapidly than the story of the three black crows. The commissioners, on their part, hurried a telegram to Montgomery:

> By pressing we can get an answer to our official note to-morrow. If we do, we believe it will be adverse to recognition and peace. We are sure that within five days Sumter will be evacuated. We are sure that no steps will be taken to change the military status. With a few days' delay a favorable answer may be had. Our personal interests command us to press. Duty to our country commands us to wait. What shall we do ?†

To all of which Toombs answered laconically, "Wait a reasonable time and then ask for instructions."

It is needless to point out the absurd variance of this announcement with Seward's alleged statement, which was simply an opinion that orders would be issued to evacuate Sumter within five days. He undoubtedly believed every word of this at the moment. Seward was then, as he declared to Lincoln in writing, in favor of evacuation;‡ and Scott's written draft of an order to that effect, under date of the 11th, was in the President's hands. The President had as yet announced no decision. On the 15th, for the first time, the Cabinet voted — five to evacuate, two to attempt to supply. Seward still had every reason to suppose that the necessity, the Cabinet majority, General Scott's influence, and Lincoln's desire to avoid war would, acting together, verify his prediction. Presuming that he was talking to a friend and not an enemy, to a judge and not an advocate, to a Unionist and not a rebel, he undoubtedly and properly thought his words were received as a prediction, and not as a pledge.

The five days elapsed, but Lincoln sent no order to Anderson, and announced no decision to the Cabinet. He was still patiently seeking, and had not found his way out of the dilemma. He had not yet beheld "the salvation of the Lord." He was neither optimist nor pessimist. He wished to decide, not upon impulse or even necessity, but upon judgment and advantage. He was neither stubbornly headstrong nor cravenly submissive. If, like the farmer in his favorite illustration, he could not plow through the log, perhaps he might plow around it. He was meditating on the visit of Fox to Sumter, of Lamon and Hurlbut to Charleston; he was deliberating about a diversion upon the Virginia convention; above all, he was waiting to hear from his order to reënforce Pickens, dispatched on the 12th of March. His Cabinet ministers did not yet understand him. Seward on the one hand, and Blair on the other, unused to men of his fiber, began to fear this was vacillation, indecision, executive incompetence. The atmosphere of Washington had hitherto largely produced two classes of men — those who bluster and domineer, those who protest and yield. Lincoln belonged to neither class; and his persistent non-committal, his silent hopefulness, his patient and well-considered inaction, baffled their prophecy. Such tenacity of purpose, combined with such reticence of declaration, was an anomaly in recent Federal administration.

The hopes of the rebels, so unexpectedly inflated, began once more to collapse. Governor Pickens sent inquiries to the commissioners. Toombs telegraphed them, "We can't hear from you."§ Campbell was summoned and dispatched post-haste to the State Department. He had interviews on March 21st and 22d. But in reality Seward was no wiser than he had been in the previous interviews, and could only repeat his beliefs and his predictions, and declare, in his philosophic vein, that "governments could not move with bank accuracy."‖

For a third time the conspirators grew impatient, and again Campbell, on Saturday, March 30th, and Monday, April 1st, went to the State Department as the messenger of rebellion.¶ By this time Seward had real information. A second Cabinet vote had been taken, on March 29th, in which the majority was reversed. The President had ordered the preparation of the Sumter expedition; and Seward himself, though still advising the abandonment of Sumter, was personally preparing an expedition to reënforce Fort Pickens.

Seward at this point must have realized how injudicious he had been to give Campbell any confidence whatever, since to preserve secrecy for his own project he must abruptly break off the intimacy. Perhaps he had by this time divined that he was dealing with a public enemy. At all events, whatever may have been his reasons, he took occasion to correct any misunderstanding which might previously have sprung up by giving Campbell a written mem-

¶ Campbell to Seward. "Rebellion Record."

orandum (April 1st), as follows: "The President may desire to supply Sumter, but will not do so without giving notice to Governor Pickens"; adding verbally (Campbell says) that he still did not believe the attempt would be made, and that there was no design to reënforce Sumter. Campbell acknowledges that he took notice of this very important correction and definition. "There was a departure here from the pledges of the previous month," he writes; "but with the verbal explanation I did not consider it a matter then to complain of."*

The commissioners and their game here drop into the background, and Mr. Justice Campbell takes up the rôle of leading conspirator. History will ask, Of what had this high minister of the law any right to complain? Two days afterward we find him making a confidential report to the insurrectionary chief at Montgomery, as follows:

I do not doubt that Sumter will be evacuated shortly, without any effort to supply it; but in respect to Pickens I do not think there is any settled plan, and it will not be abandoned spontaneously, and under any generous policy, though perhaps they may be quite willing to let it be beleaguered and reduced to extremities. I can only infer as to this. All that I have is a promise that the status will not be attempted to be changed prejudicially to the Confederate States without notice to me. It is known that I make these assurances on *my own responsibility*. I have no right to mention any name or to pledge any person. I am the only responsible person to you, I consenting to accept such assurances as are made to me and to say, "I have confidence that this will or will not be done." I have no expectation that there will be bad faith in the dealings with me.

Now I do not see that I can do more. I have felt them in a variety of forms as to the practicability of some armistice or truce that should be durable and would relieve the anxiety of the country. But at present there can be no compact, treaty, recognition of any kind. There will be no objection to giving the commissioners their answer; but if the answer is not called for it will not be sent, and it is intimated that it would be more agreeable to withhold it. So far as I can judge, the present desire is to let things remain as they are, without action of any kind. There is a strong indisposition for the call of Congress, and it will not be done except under necessity. The radicals of the Senate went off in anger, and Trumbull's coercion resolution was offered after a contumelious interview with the President. My own notion is that the inactive policy is as favorable to you as any that this Administration could adopt for you, and that I would not interrupt it.

Here the learned judge might have stopped, and perhaps would have left posterity to question his method rather than his motives. But inexorable History demanded her tribute of truth: under her master-spell he went on, and in the concluding paragraph of the letter his own hand recorded a confession little to have been expected from an officer whose duty it was to expound and to administer the law of treason as written in the Constitution of the United States and the acts of Congress.

The great want [he continued] of the Confederate States is peace. I shall remain here some ten or fifteen days. My own future course is in some manner depending upon circumstances and the opinions of friends. At present I have access to the Administration I could not have except under my present relations to the Government, and I do not know who could have the same freedom. I have therefore deferred any settlement on the subject until the chance of being of service at this critical period has terminated. This letter is strictly confidential and private. †

There is no need of comment on this "aid and comfort" to the enemies of his Government by a member of the highest court of the United States. It only remains to note the acknowledgment and estimate of it by Jefferson Davis, replying from Montgomery under date of April 6th:

Accept my thanks for your kind and valuable services to the cause of the Confederacy and of peace between those who, though separated, have many reasons to feel towards each other more than the friendships common among nations. Our policy is, as you say, peace. . . . In any event I will gratefully remember your zealous labor in a sacred cause, and hope your fellow-citizens may at some time give you acceptable recognition of your service, and appreciate the heroism with which you have encountered a hazard from which most men would have shrunk. ‡

While this direct correspondence between Davis and Campbell was being carried on, the commissioners, to whom Mr. A. B. Roman had been sent as a reënforcement, were, partly as a matter of form, partly for ulterior purposes, kept in Washington by the Montgomery cabinet to "loiter in the ante-chambers of officials." The occupation seems to have grown irksome to them; for, nowise deceived or even encouraged by Campbell's pretended "pledges," they asked, under date of March 26th, "whether we shall dally longer with a Government hesitating and doubting as to its own course, or shall we demand our answer at once?"§ On April 2d, Toombs gave them Jefferson Davis's views at length. He thought the policy of Mr. Seward would prevail. He cared nothing for Seward's motives or calculations. So long as the United States neither declare war nor establish peace, "it affords the Confederate States the advantages of both conditions, and enables them to make all the necessary arrangements for the public defense, and the solidifying of their Government, more safely, cheaply, and expeditiously than they could were the attitude of the United States more definite and decided."‖ The commis-

sioners were therefore to make no demand for their answer, but maintain their present position. In view of this confident boast of the chief of the rebellion of "the advantages of both conditions," his subsequent accusation of bad faith on the part of the Lincoln administration is culminating proof of the insincerity and tortuous methods of the rebel game.

VIRGINIA.

CIVIL war, though possible, did not at the moment seem imminent or necessary: Lincoln had declared in his inaugural that he would not begin it; Jefferson Davis had written in his instructions to the commissioners that he did not desire it. This threw the immediate contest back upon the secondary question — the control and adhesion of the border slave-States; and of these Virginia was the chief subject of solicitude. The condition of Virginia had become anomalous; it was little understood by the North, and still less by her own citizens. She retained all the ideal sentiment growing out of her early devotion to and sacrifices for the Union; but it was warped by her coarser and stronger material interest in slavery. She still deemed she was the mother of presidents; whereas she had degenerated into being, like other border States, the mother of slave-breeders and of an annual crop of black-skinned human chattels to be sold to the cotton, rice, and sugar planters of her neighboring commonwealths. She thought herself the leader of the South; whereas she was only a dependent of the Gulf States. She yet believed herself the teacher of original statesmanship; whereas she had become the unreasoning follower of Calhoun's disciples — the Ruffins, the Rhetts, and the Yanceys of the ultra South.

The political demoralization of Virginia was completed by the John Brown raid. From that time she dragged her anchors of state; her faith in both constitution and liberty was gone. The true lesson of that affair was indeed the very reverse. The overwhelming popular sentiment of the North denounced the outrage; the national arms defended Virginia and suppressed the invasion; the State vindicated her local authority by hanging the captured offenders. Thus public opinion, Federal power, and State right united in a precedent amounting of itself to an absolute guaranty, but which might have been easily crystallized into statute or even constitutional law. Sagacious statesmanship would have plucked this flower of safety. On the contrary, her blind partisanship spurned the opportunity, distrusted government, and sought refuge in force. Her then governor confesses that from that period

> we began to prepare for the worst. We looked carefully to the State armory; and whilst we had the selection of the State quota of arms we were particular to take field ordnance instead of altered muskets; and when we left the gubernatorial chair, there were in the State armory at Richmond 85,000 stand of infantry arms and 130 field-pieces of artillery, besides $30,000 worth of new revolving arms purchased from Colt. Our decided opinion was that a preparation of the Southern States in full panoply of arms, and prompt action, would have prevented civil war.*

* Wise, "Seven Decades."

MARTIN J. CRAWFORD, CONFEDERATE COMMISSIONER.
(FROM A PHOTOGRAPH BY BRADY.)

Many strong external signs indicated the persistent adherence of Virginia to the Union. Her legislature refused the proposition of South Carolina for a conference of the Southern States, made in the winter of 1859–60. In the presidential election her citizens voted overwhelmingly for Bell and Everett and their platform of "The Union, the Constitution, and the enforcement of the laws." Notwithstanding these manifestations of allegiance, public sentiment took on a tone and a determination which, paradoxical as it may seem, was rebellion in guise of loyalty. It is perhaps best illustrated by the declaration of ex-Governor Wise that he meant to fight in the Union,* not out of it. To the nation at large the phrase had a pretty and patriotic sound; but when explained to be a determination to fight the Federal Government "in the Union," it becomes as rank treason as secession itself.

However counterfeit logic or mental reservations concealed it, the underlying feeling was to fight, no matter whom, and little matter how, for the protection of slavery and slave property. In this spirit Virginia continued her military preparations. To this end half a million dollars were voted in the winter of 1859–60, and a million more in that of 1860–61. Commissioners were appointed to purchase arms; companies were raised, officers appointed, regiments organized, camps of instruction formed. It was one of these that Floyd sent Hardee to inspect and drill in November, 1860. Before the end of January, this appeal to military strength by Virginia was duly paraded in the United States Senate as a menace, to extort a compromise and constitutional guarantees for slavery. Nor did the threat seem an empty one. The State professed to have an actual army of 62 troops of cavalry, numbering 2547 men; 14 companies of artillery, numbering 820 men; and 149 companies of infantry, numbering 7180 men. All these were uniformed and armed; while 6000 men additional were formed into companies, ready to have arms put into their hands.†

Governor Letcher, the successor of Wise, had begun his administration with the announced belief that disunion was "not only a possible but a highly probable event."‡ The defeat of his favorite, Douglas, and the success of Lincoln, served therefore as a pretended justification of his fears, if not an actual stimulant of his hopes. The presidential election was scarcely over when he called an extra session of the legislature, to "take into consideration the condition of public affairs" consequent on the excitement produced by "the election of sectional candidates for President and Vice-President."‖ That body met January 7, 1861; the doctrine of non-coercion, South Carolina secession, and the Fort Sumter affair had become every-day topics, and the South generally was in a seething ferment. On Federal affairs Governor Letcher's message was a medley of heterogeneous and contradictory arguments and recommendations. He declared a disruption of the Union inevitable. He desired a national convention. He thought that four republics might be formed. He scolded South Carolina for her precipitate action. He joined a correct and a false quotation of Lincoln's sentiments. He opposed a State convention. He recommended sending commissioners to other slave-States. He proposed terms to the North, and thought they

* "As to parting from the Union in my affections, I shall never do that. As to leaving its flag, whenever I leave this confederacy, this north star confederacy, which makes the needle tremble northward, sir, I shall carry the old flag of the Union out with me; and if ever I have to fight,— so help me, God! — I will fight with the star-spangled banner still in one hand and my musket in the other. I will never take any Southern cross or any palmetto for my flag. I will never admit that a Yankee can drive me from the Union and take from me our capital. I will take from him forts; I will take from him flags; I will take from him our capital; I will take from him, if I can, my whole country, and save the whole. Will that satisfy the gentleman as to fighting in the Union?" [Speech of H. A. Wise in the Virginia Convention, April 10, 1861. "Richmond Enquirer."]

† Report Adj.-General of Virginia, Feb. 27, 1861.

‡ Inaugural message, Jan. 7, 1860.

‖ Governor Letcher, proclamation, Nov. 15, 1860.

would be "freely, cheerfully, and promptly assented to." He said, "Let the New England States and western New York be sloughed off." He wanted railroads to Kansas and direct trade to Europe. And finally he summed up: "Events crowd upon each other with astonishing rapidity. The scenes of to-day are dissolved by the developments of to-morrow. The opinions now entertained may be totally revolutionized by unforeseen and unanticipated occurrences that an hour or a day may bring forth." The simple truth was, that in Governor Letcher's hands the "Old Dominion" was adrift towards rebellion without rudder or compass.

His quarrel with South Carolina turned upon an important point. The irascible Palmetto State was offended that Virginia had a year before rejected her proposal for a Southern conference. In retaliation she now intimated that she would help to destroy Virginia's slave-market. "The introduction of slaves from other States," said her governor, "which may not become members of the Southern Confederacy, and particularly the border States, should be prohibited by legislative enactment, and by this means they will be brought to see that their safety depends upon a withdrawal from their enemies, and a union with their friends and natural allies." * Mississippi made a similar threat. "As it is more than probable," said her executive, "that many of the citizens of the border States may seek a market for their slaves in the cotton-States, I recommend the passage of an act prohibiting the introduction of slaves into this State unless their owners come with them and become citizens, and prohibiting the introduction of slaves for sale by all persons whomsoever." Governor Letcher grew very indignant over these declarations. "These references to the border States," said he, "are pregnant with meaning, and no one can be at a loss to understand what that meaning is. While disavowing any unkind feeling towards South Carolina and Mississippi, I must still say that I will resist the coercion of Virginia into the adoption of a line of policy whenever the attempt is made by Northern or Southern States." †

Incensed against the North and distrustful of the South, the governor pushed forward his military preparations. Especially did he cast a longing eye at Fort Monroe. "As far back as January 8th" (1861), says he, "I consulted with a gentleman whose position enabled him to know the strength of that fortress, and whose experience in military matters enabled him to form an opinion as to the number of men that would be required to capture it. He represented it to be one of the strongest fortifications in the world, and expressed his doubts whether it could be taken unless assailed by water as well as by land, and simultaneously." ‡ Since Governor Letcher had neither a fleet nor a properly equipped army, he did not follow up this design. The discussion of the project, however, illustrates the condition of his allegiance to the flag of his country and the constitution he was then under oath to uphold.

Like the governor, the legislature at once put itself in an attitude of quasi-rebellion by resolving, on the second day of the session, that it would resist any attempt of the Federal Government to coerce a seceding State. It soon passed an act to assemble a convention; and by a large appropriation for defense, already mentioned, by issuing treasury notes,

JOHN LETCHER, GOVERNOR OF VIRGINIA.
(FROM A PHOTOGRAPH BY A. A. TURNER.)

by amending the militia laws, and by authorizing counties to borrow money to purchase arms, and especially by its debates, further fostered and stimulated the prevailing secession undertow during the whole of its extra session, from January 7th to April 4th.

The election for a convention was held February 4th, and provoked a stirring contest. Its result was apparently for union; the Union members claimed a majority of three to one. This was, however, evidently an exaggerated estimate. The precise result could not be well defined. Politics had become a Babel. Discussion was a mere confusion of tongues.

* Governor Gist, message.
† Governor Letcher, message, Jan. 7, 1861.
‡ Governor Letcher, message, Dec. 2, 1861.

Party organization was swallowed up in intrigue; and conspiracy, not constitutional majorities, became the basis and impulse of legislation.

The Virginia convention met February 13th, and its proceedings reflect a maze of loose declamation and purposeless resolves. It had no fixed mind, and could, therefore, form no permanent conclusion. The prevailing idea of the majority seemed to be expressed in a single phrase of one of its members, that "he would neither be driven by the North nor dragged by the cotton-States." It was virtually a mere committee of observation, waiting the turn of political winds and tides. It gave, however, two encouraging though negative signs of promise; the first, that it had undoubtedly been chosen by a majority of voters really attached to the Union and desiring to remain in it; the second, that during a session of well-nigh a month it had not as yet passed an ordinance of secession, which had so far been a quick result in other State conventions.

As said at the beginning of this chapter, the course of the border States, and especially of Virginia, was on all hands the subject of chief solicitude. Her coöperation was absolutely essential to the secession government at Montgomery. This point, though not proclaimed was understood by Jefferson Davis, and to powerful intrigues from that quarter many otherwise unaccountable movements may doubtless be ascribed. Neither was her adherence to the Union undervalued by Lincoln. Seward was deeply impressed both with the necessity and the possibility of saving her from secession "as a brand from the burning." He relied (too confidently, as the event proved) on the significance of the late popular vote. He sent an agent to Richmond, who brought him hopeful news. He had already proposed to strengthen the hands of the Virginia Unionists by advising Lincoln to nominate George W. Summers to fill the existing vacancy on the bench of the United States Supreme Court.* Under his prompting, no doubt, Lincoln now perhaps thought it possible to bring his personal influence to bear on the Virginia convention. He authorized Seward to invite Summers, or some equally influential and determined Union leader, to come to Washington. It is not likely that he had any great faith in such an effort; for the refusal or neglect of Scott, Gilmer, and Hunt to accept a cabinet appointment, offered each of them with more or less distinctness, had proved that Southern Unionism of this type was mere lip-service and not a living principle. It so turned

JOHN MINOR BOTTS.
(FROM A PHOTOGRAPH BY BRADY.)

out in this instance. Summers, pleading important business in the convention, excused himself from coming. It would appear, however, that he and others selected one John B. Baldwin as a proper representative, who came to Washington and had an interview with the President on the morning of April 4, 1861. There is a direct conflict of evidence as to what occurred at this interview. The witnesses are Mr. Baldwin himself and Mr. John Minor Botts, both of whom gave their testimony under oath before the Reconstruction Committee of Congress in 1866, after the close of the war.

Mr. Botts testifies that on the 7th of April he called upon the President, who related to him, in confidence, that a week or ten days previously he had written to Summers to come to Washington, and he, instead of obeying the summons, had, after that long delay, sent Baldwin. On Baldwin's arrival (on the 5th of April, as Botts relates the story) Lincoln took him into a private room in the Executive Mansion, and said to him in substance:

> Mr. Baldwin, why did you not come here sooner? I have been waiting and expecting some of you gentlemen of that convention to come to me for more than a week past. I had a most important proposition to make to you. But I am afraid you have come too late. However, I will make the proposition now. We have in Fort Sumter, with Major Anderson, about eighty men. Their provisions are nearly exhausted. I have not only written to Governor Pickens, but I have sent a special messenger† to him to say that I will not permit these

* Seward to Lincoln, March 9, 1861. Unpublished MS.

† This messenger was not sent until the evening of April 6th.

people to starve; that I shall send them provisions. If he fires on that vessel, he will fire upon an unarmed vessel loaded with bread. But I shall at the same time send a fleet along with her, with instructions not to enter the harbor of Charleston unless that vessel is fired into; and if she is, then the fleet is to enter the harbor and protect her. Now, Mr. Baldwin, that fleet is now lying in the harbor of New York, and will be ready to sail this afternoon at 5 o'clock; and although I fear it is almost too late, yet I will submit the proposition which I intended when I sent for Mr. Summers. Your convention in Richmond has been sitting now nearly two months, and all that they have done has been to shake the rod over my head. You have recently taken a vote in the Virginia convention on the right of secession, which was rejected by ninety to forty-five, a majority of two-thirds, showing the strength of the Union party in that convention. If you will go back to Richmond, and get that Union majority to adjourn and go home without passing the ordinance of secession, so anxious am I for the preservation of the peace of this country, and to save Virginia and the other border States from going out, that I will take the responsibility of evacuating Fort Sumter, and take the chance of negotiating with the cotton-States.

Mr. Botts here asked how Baldwin received that proposition.

Sir [replied Lincoln, with a gesture of impatience], he would not listen to it for a moment; he hardly treated me with civility. He asked me what I meant by an adjournment; did I mean an adjournment *sine die?* Why, of course, Mr. Baldwin, said I. I mean an adjournment *sine die*. I do not mean to assume such a responsibility as that of surrendering that fort to the people of Charleston upon your adjournment, and then for you to return in a week or ten days and pass your ordinance of secession.

Mr. Botts then relates that he asked permission of the President to go himself and submit that proposition to the Union members of the convention, but that Lincoln replied it was too late, the fleet had sailed. Further, that Baldwin returned to Richmond without even disclosing the President's offer; and that he eventually became an active secessionist, and held a commission in the rebel army.*

On the material point Baldwin's testimony is directly to the contrary. . He states that Seward's messenger reached Richmond April 3d; that at the request of Summers he immediately returned with him to Washington and called on the President on the morning of April 4th; that Lincoln took him into a private room and said, in substance: "I am afraid you have come too late; I wish you could have been here three or four days ago. Why do you not adjourn the Virginia convention?" "Adjourn it how?" asked Baldwin. "Do you mean *sine die?*" "Yes," said Lincoln; "*sine die*. Why do you not adjourn it? It is a standing menace to me which embarrasses me very much."

Baldwin then relates how he made a grandiloquent speech to the President about the balance of power, the safeguards of the Constitution, and the self-respect of the convention; that the Union members had a clear majority of nearly three to one; they were controlling it for conservative results, and desired to have their hands upheld by a conciliatory policy; that if he had the control of the President's thumb and finger for five minutes he could settle the whole question. He would issue a proclamation, call a national convention, and withdraw the forces from Sumter and Pickens. But Mr. Baldwin declares and reiterates that he received from Mr. Lincoln "no pledge, no undertaking, no offer, no promise of any sort." "I am as clear in my recollections," he says, "as it is possible to be under the circumstances, that he made no such suggestion as I understood it, and said nothing from which I could infer it." †‡

A careful analysis and comparison with established data show many discrepancies and errors in the testimony of both these witnesses. Making due allowances for the ordinary defects of memory, and especially for the strong personal and political bias and prejudice under which they both received their impressions, the substantial truth probably lies midway between their extreme contradictory statements. The actual occurrence may therefore be summed up about as follows:

Mr. Seward had an abiding faith in the Unionism and latent loyalty of Virginia and the border States. He wished by conciliation to re-awaken and build it up; and thereby not merely retain these States, but make them the instruments, and this feeling the agency, to undermine rebellion and finally reclaim the cotton-States. Lincoln did not fully share this optimism; nevertheless he desired to avoid actual conflict, and was willing to make any experimental concession which would not involve the actual loss or abandonment of military or political advantage. The acts of the previous Administration had placed Fort Sumter in a peril from which, so the military authorities declared, he could not extricate it. His Cabinet advised its evacuation. Public opinion would justify him in sacrificing the fort to save the garrison. He had ordered Fort Pickens reënforced; he was daily awaiting news of the execution of his announced policy to "hold, occupy, and possess" the Government posts. Pickens once triumphantly secured, the

loss of Sumter could be borne. But might not the loss of Sumter be compensated? Might he not utilize that severe necessity, and make it the lever to procure the adjournment of the Virginia convention, which, to use his own figure, was daily shaking the rod over his head? This we may assume was his reasoning and purpose when about March 20th, either directly or through Seward, he invited Summers, the acknowledged leader of the Union members of the convention, to Washington.

Summers, however, hesitated, delayed, and finally refused to come. His plea of business was evidently a pretext, not a valid excuse. Meanwhile things had changed. The anxiously-looked-for news of the reënforcement of Fort Pickens did not arrive. The Cabinet once more voted, and changed its advice. The President ordered the preparation of the Sumter expedition. A second expedition to Fort Pickens had been begun. Another perplexing complication, to be hereafter mentioned, had occurred. At this juncture Baldwin made his appearance, but clearly he had come too late. By this time (April 4, 1861) his presence was an embarrassment, and not a relief. Fully to inform him of the situation was hazardous, impossible; to send him back without explanation was impolite and would give alarm at Richmond. Lincoln therefore opened conversation with him, manifesting sufficient personal trust to explain what he intended to have told Summers. This called forth Baldwin's dogmatic and dictatorial rejoinder, from which Lincoln discovered two things: first, that Baldwin was only an embryo secessionist; and, second, that the Virginia convention was little else than a warming-pan for the rebellion. Hence the abrupt termination of the interview, and the unexplained silence at Richmond.

PREMIER OR PRESIDENT?

At noon on the 29th of March the Cabinet assembled and once more took up the all-absorbing question of Sumter. All the elements of the problem were now before them — Anderson's condition and the prospects of relief as newly reported by Fox; the state of public opinion in Charleston as described by Hurlbut; the Attorney-General's presentation of the legal aspects of an attempt at collecting the customs on shipboard; the Secretary of the Treasury's statement of the condition and resources of the revenue service; the report of the Secretary of the Navy as to what ships of war he could supply to blockade the port of Charleston; and, finally, the unexpected attitude of General Scott in advising the evacuation of Fort Pickens. All these features called out so much and such varied discussion, that at length the Attorney-General, taking up a pen, rapidly wrote on a slip of paper a short summing-up of his own conclusions. This he read aloud to the President, who thereupon asked the other members of the Cabinet to do the same.* They all complied, and we have therefore the exact record of the matured opinions of the Cabinet members then present. The importance of the occasion renders these memoranda of enduring interest. Placed in their order they read as follows:

By Mr. Seward:

First. The dispatch of an expedition to supply or reënforce Sumter would provoke an attack, and so involve a war at that point.

The fact of preparation for such an expedition would inevitably transpire and would therefore precipitate the war — and probably defeat the object. I do not think it wise to provoke a civil war beginning at Charleston and in rescue of an untenable position.

Therefore I advise against the expedition in every view.

Second. I would call in Captain M. C. Meigs forthwith. Aided by his counsel I would at once and at every cost prepare for a war at Pensacola and Texas, to be taken, however, only as a consequence of maintaining the possessions and authority of the United States.

Third. I would instruct Major Anderson to retire from Sumter forthwith. †

By Mr. Chase:

If war is to be the consequence of an attempt to provision Fort Sumter, war will just as certainly result from the attempt to maintain possession of Fort Pickens.

I am clearly in favor of maintaining Fort Pickens, and just as clearly in favor of provisioning Fort Sumter.

If that attempt be resisted by military force Fort Sumter should, in my judgment, be reënforced.

If war is to be the result, I perceive no reason why it may not be best begun in consequence of military resistance to the efforts of the Administration to sustain troops of the Union stationed, under the authority of the Government, in a fort of the Union, in the ordinary course of service. ‡

By Mr. Welles:

I concur in the proposition to send an armed force off Charleston, with supplies of provisions and reënforcements for the garrison at Fort Sumter, and of communicating at the proper time the intentions of the Government to provision the fort, peaceably if unmolested. There is little probability that this will be permitted, if the opposing forces can prevent it. An attempt to force in provisions without reënforcing the garrison at the same time might not be advisable; but armed resistance to a peaceable attempt to send provisions to one of our own forts will justify the Government in using all the power at its command to reënforce the garrison and furnish the necessary supplies.

Fort Pickens and other places retained should be strengthened by additional troops, and, if possible, made impregnable.

The naval force in the Gulf and on the Southern coast should be increased. Accounts are published that vessels having on board marketable products for the

* Bates, diary. Unpublished MS.
† Seward, memorandum. Unpublished MS.
‡ Chase, memorandum. Unpublished MS.

crews of the squadron at Pensacola are seized — the inhabitants we know are prohibited from furnishing the ships with provisions or water; and the time has arrived when it is the duty of the Government to assert and maintain its authority.*

By Mr. Smith:

Viewing the question whether Fort Sumter shall be evacuated as a political one, I remark that the effect of its evacuation upon the public mind will depend upon the concurrent and subsequent action of the Government. If it shall be understood that by its evacuation we intend to acknowledge our inability to enforce the laws, and our intention to allow treason and rebellion to run its course, the measure will be extremely disastrous and the Administration will become very unpopular. If, however, the country can be made to understand that the fort is abandoned from necessity, and at the same time Fort Pickens and other forts in our possession shall be defended, and the power of the Government vindicated, the measure will be popular and the country will sustain the Administration.

Believing that Fort Sumter cannot be defended, I regard its evacuation as a necessity, and I advise that Major Anderson's command shall be unconditionally withdrawn.

At the same time I would adopt the most vigorous measures for the defense of the other forts, and if we have the power I would blockade the Southern ports, and enforce the collection of the revenue with all the power of the Government. †

By Mr. Blair:

First. As regards General Scott, I have no confidence in his judgment on the questions of the day. His political views control his judgment, and his course as remarked on by the President shows that, whilst no one will question his patriotism, the results are the same as if he was in fact traitorous.

Second. It is acknowledged to be possible to relieve Fort Sumter. It ought to be relieved without reference to Pickens or any other possession. South Carolina is the head and front of this rebellion, and when that State is safely delivered from the authority of the United States it will strike a blow against our authority from which it will take years of bloody strife to recover.

Third. For my own part, I am unwilling to share in the responsibility of such a policy. ‡

By Mr. Bates:

It is my decided opinion that Fort Pickens and Key West ought to be reënforced and supplied, so as to look down opposition at all hazards — and this whether Fort Sumter be or be not evacuated.

It is also my opinion that there ought to be a naval force kept upon the Southern coast sufficient to command it, and if need be actually close any port that practically ought to be closed, whatever other station is left unoccupied.

It is also my opinion that there ought to be immediately established a line of light, fast-running vessels, to pass as rapidly as possible between New York or Norfolk at the North and Key West or other point in the Gulf at the South.

As to Fort Sumter — I think the time is come either to evacuate or relieve it. §

The majority opinion of the Cabinet on the 15th of March had been against the expediency of an attempt to provision Fort Sumter; but now, after a lapse of two weeks, the feeling was changed in favor of the proposed measure. Irrespective of this fresh advice, however, the President's own opinion was already made up. On the day previous he had instructed Captain Fox to prepare him a short order for the ships, men, and supplies he would need for his expedition, ‖ and that officer complied with characteristic and promising brevity:

Steamers *Pocahontas* at Norfolk, *Pawnee* at Washington, *Harriet Lane* at New York, to be under sailing orders for sea, with stores, etc., for one month. Three hundred men to be kept ready for departure from on board the receiving ships at New York. Two hundred men to be ready to leave Governor's Island in New York. Supplies for twelve months for one hundred men to be put in portable shape, ready for instant shipping. A large steamer and three tugs conditionally engaged. ¶

The Cabinet meeting over, the President wrote at the bottom of this preliminary requisition the following order to the Secretary of War.: "Sir: I desire that an expedition, to move by sea, be got ready to sail as early as the 6th of April next, the whole according to memorandum attached, and that you coöperate with the Secretary of the Navy for that object." ** This order and its duplicate to the Secretary of the Navy †† duly signed and transmitted to the two departments, Captain Fox hurried away to New York to superintend the further details of preparation in person.

It will be observed that the President's order is simply to prepare the expedition; "which expedition," in his own language, was "intended to be ultimately used or not, according to circumstances." ‡‡ But he was by this time convinced that the necessity would arise. Nothing had yet been heard from the order to reënforce Fort Pickens sent two weeks previously; on the contrary, there were rumors through the Southern newspapers that the *Brooklyn*, containing the troops, had left her anchorage off Pensacola and gone to Key West. As a matter of fact, she had first transferred her troops to the *Sabine;* but this was not and could not be known, and the necessary inference was that the *Brooklyn* had carried them away with her. The direction to land them would therefore unavoidably fail, and both Sumter and Pickens be thus left

within the grasp of the secessionists. Such was the contingency which had decided the President to prepare the Sumter expedition.*

The logic of daily events had by this time also wrought a change in the mind of Seward. In his written opinion of March 15th he had declared, "I would not provoke war in any way now"; but on the 29th, apparently alarmed, like the rest, at the advice of General Scott to make further concession to the rebels, he wrote, "I would at once, and at every cost, prepare for a war at Pensacola and Texas." That very afternoon, as he had suggested in this same paper, he brought Captain M. C. Meigs, the engineer officer in charge of the work on the new wings of the Capitol building, to the President. One reason for selecting him, in addition to his special training and acknowledged merit, was that he had in January personally accompanied the reënforcements then sent to Key West and Tortugas. On the way to and from the President's, Seward explained to Meigs that he wished the President to see some military man who would not talk politics; that they had Scott and Totten, but no one would think of putting either of those old men on horseback. They were in a difficulty. Scott had advised giving up both Sumter and Pickens. For his part, his policy had been to give up Sumter; but he wished to hold Pickens, making the fight there and in Texas, throwing the burden of the war, which all men of sense saw must come, upon those who, by revolting, had provoked it.†

The President talked freely with Captain Meigs, and after some inquiries about Sumter asked him whether Fort Pickens could be held. Meigs replied, "Certainly, if the navy would do its duty." The President then asked him whether he could go down there again and take general command of those three great fortresses, Taylor, Jefferson, and Pickens, and keep them safe. Meigs answered that he was only a captain, and could not command the majors who were there. Here Seward broke in with: "I understand how that is; Captain Meigs must be promoted." "But there is no vacancy," answered the modest captain. Mr. Seward, however, made light of all difficulties, and told the President if he wanted this thing done to put it in Meigs's charge. When Pitt wished to conquer Canada, he said, he sent for a young man whom he had noticed in the society of London, and told him to take Quebec,—to ask for the necessary means and do it,—and it was done. Would the President do this now? Lincoln replied he would consider it, and let him know in a day or two.

Two days afterward (Sunday, March 31st) Meigs was about starting for church when Colonel Keyes, General Scott's military secretary, called and took him to Mr. Seward, who requested them to go forthwith and in consultation with General Scott to put upon paper an estimate and project for relieving and holding Fort Pickens, and to bring it to the President before 4 o'clock that afternoon. The two officers went directly to the engineer's bureau to inspect the necessary charts of Pensacola Harbor and drawings of the fortifications, and over these they matured their plans. The rapid lapse of the few hours allowed compelled them to report back to the President before seeing General Scott. Lincoln heard them read their paper, and then directed them to submit it to the general. "Tell him," said he, "that I wish this thing done, and not to let it fail unless he can show that I have refused him something he asked for as necessary."† The officers obeyed, and on the way encountered Mr. Seward, who went with them. "General Scott," said he, on entering the old soldier's presence, "you have formally reported to the President your advice to evacuate Fort Pickens; notwithstanding this, I now come to bring you his order, as Commander-in-chief of the Army and Navy, to reënforce and hold it to the last extremity." The old general had his political crotchets, but he was at heart a soldier and a disciplinarian. "Sir," replied he, drawing himself up to his full height, "the great Frederick used to say, 'When the king commands, all things are possible.' It shall be done." Meigs and Keyes submitted their plan, which he approved in the main, adding a few details they had in their haste overlooked; the project was further discussed and definitely adopted.

Fort Pickens stands on the western extremity of Santa Rosa Island, and serves, in connection with its twin fort, McRae, on the mainland opposite, to guard the entrance to Pensacola Harbor. But in this case the two forts intended to render mutual assistance were held by opposing forces, bent not upon protecting but upon destroying each other, and restrained only by the existence of the "Sumter and Pickens truce," described in a previous chapter. So far as a mere cannonade might go, Pickens was perhaps as strong as McRae; but Lieutenant Slemmer in Pickens had only a handful of Union men, forty-six soldiers and thirty ordinary seamen all told, while some thousands of rebels were either encamped or within reach of the secession General Bragg, himself a trained and skillful soldier. The chief danger was that Bragg might organize a large

* Lincoln, Message to Congress, July 4, 1861.
† Meigs, diary. Unpublished MS.

body of men, and by means of boats, crossing the bay at night or in a fog, carry Fort Pickens by a sudden assault long before the reënforcements in the Union fleet could be landed, as they were by the terms of the truce authorized to do in such an emergency. The substance of Meigs's plan was, that while a transport vessel bearing troops and stores landed them at Fort Pickens, outside the harbor, a ship-of-war, arriving simultaneously, should boldly steam past the hostile batteries of Fort McRae, enter the harbor, and take up such a position within as to be able to prevent any crossing or landing by the rebels. The ship destined to run the batteries would necessarily encounter considerable peril, not only from the guns of McRae, but also from those of Fort Barrancas and supposed batteries at the navy yard — all, like McRae, on the mainland, and forming part of the harbor defenses.

For such coöperation Meigs needed a young, talented, and daring naval officer, and accordingly he made choice of Lieutenant David D. Porter, a companion and intimate friend, who, as he believed, combined the requisite qualities.

One important characteristic of this Pickens expedition was to be its secrecy. Seward in his argument on Sumter had much insisted that preparation for reënforcement would unavoidably come to the knowledge of the rebels, and enable them to find means to oppose it. This argument applied with even greater force to Fort Pickens; the rebels controlled both the post and the telegraph throughout the South, and it was thought that upon the first notice of hostile design Bragg would assault and overwhelm the fort. Besides, the orders transmitted through regular channels two weeks before had apparently failed. But now that the ships to supply Sumter were being got ready, it was doubtless thought that under this guise the Pickens relief could be prepared without suspicion. On Monday, April 1, 1861, Captain Meigs, Colonel Keyes, and Lieutenant Porter were busy, under the occasional advice of Seward and General Scott, in perfecting the details of their plans and in drawing up the formal orders required. These were in due time signed by the President himself, it being part of the plan that no one but the officers named, not even the Secretaries of War or Navy, should have knowledge of them.* This was an error which only the anomalous condition and extreme peril of the Government would have drawn Lincoln into, and it was never repeated. He doubtless supposed they were entirely consistent with the Sumter plans, especially as General Scott's written request for his signature accompanied the papers — the general being perfectly cognizant of both expeditions.

HEADQUARTERS OF THE ARMY,
WASHINGTON, April 1, 1861.

DEAR SIR: The immediate departure of a war steamer, with instructions to enter Pensacola Harbor and use all measures in his power to prevent any attack from the mainland upon Fort Pickens, is of prime importance. If the President, as Commander-in-chief, will issue the order of which I inclose a draft, an important step towards the security of Fort Pickens will be taken. I am, sir, very respectfully, your most obedient servant, WINFIELD SCOTT.

HON. W. H. SEWARD, Secretary of State, etc. †

But although useful to secrecy, this course was bound to produce confusion and bad discipline; and such was its immediate result. That afternoon the commandant of the Brooklyn Navy Yard received two telegrams, in very similar language, directing him to "fit out the *Powhatan* to go to sea at the earliest possible moment." One was signed by the Secretary of the Navy, the other by the President; the former intending the ship to go to Sumter, the latter to Pickens, and neither being aware of the other's action. Neither had reason to anticipate any such conflict of orders: the *Powhatan* was not included in Fox's original requisition, and Meigs did not even know that the Sumter expedition was being prepared.

On the same afternoon several additional orders, made out under Seward's supervision, were brought to Lincoln. Supposing they all related to this enterprise, he signed them without reading; but it soon turned out that two of them related to a matter altogether different. These orders changed the duty of several naval officers: Captain Pendergrast was to be sent to Vera Cruz on account of "important complications in our foreign relations"; and Captain Stringham was to go to Pensacola.

When these last-mentioned orders reached the hands of the Secretary of the Navy, to whom they were addressed and immediately transmitted, that official was not only greatly mystified but very seriously troubled in mind. He hastened to the President, whom he found alone in the executive office, writing. "What have I done wrong?" Lincoln inquired playfully, as he raised his head, and with his ever-accurate intuition read trouble in the countenance of his Secretary. Mr. Welles presented the anomalous papers and asked what they meant; he had heard of no "foreign complications," and he preferred Stringham in his present duty.

The President [says Mr. Welles] expressed as much surprise as I felt, that he had signed and sent me such a document. He said Mr. Seward, with two or three young men, had been there through the day on a matter which Mr. Seward had much at heart; that he had yielded to the project of Mr. Seward, but

* Meigs, in "National Intelligencer," Sept. 16, 1865.

† Unpublished MS.

as it involved considerable detail, and he had his hands full, and more too, he had left Mr. Seward to prepare the necessary papers. These papers he had signed, some of them without reading, trusting entirely to Mr. Seward, for he could not undertake to read all papers presented to him; and if he could not trust the Secretary of State, whom could he rely upon in a public matter that concerned us all? He seemed disinclined to disclose or dwell on the project, but assured me he never would have signed that paper had he been aware of its contents, much of which had no connection with Mr. Seward's scheme. . . . The President reiterated they were not his instructions, and wished me distinctly to understand they were not, though his name was appended to them — said the paper was an improper one — that he wished me to give it no more consideration than I thought proper — treat it as canceled — as if it had never been written.*

Mr. Welles acted upon this verbal assurance, and was highly gratified that the President thus corrected what he felt to be an encroachment upon the duties and powers of the Navy Department. Nevertheless it is apparent that he had his doubts whether Lincoln had fully and unreservedly given him his confidence in this affair. In these surmises he was correct; a circumstance had occurred between the President and Seward which the former could not communicate, and so far as is known never did communicate to any person but his private secretary, and of which the President's private papers have also preserved the interesting record. In order rightly to understand it, a brief glance at contemporary affairs is needful.

It will hardly be possible for the readers of history in our day to comprehend the state of public sentiment in the United States during the month of March, 1861. The desire for peace; the hope of compromise; the persistent disbelief in the extreme purposes of the South; and, strongest of all, a certain national lethargy, utterly impossible to account for,— all marked a positive decadence in patriotic feelings. The phenomenon is attested not only in the records of many public men willing to abandon constitutional landmarks and to sacrifice elementary rights of mankind, but also shown in the words and example of military officers like Scott and Anderson in their consenting to shut their eyes to the truths and principles of their own profession,— that it is the right of the Government to repel menaces as well as blows, and that building batteries is as effective and aggressive war as firing cannon-balls.

This perversion of public opinion in fact extended back to the meeting of Congress in December. Under the spell of such a political nightmare the revolution had been half accomplished. The Union flag had been fired upon, the Federal laws defied, the secession government organized and inaugurated. The work of the conspirators was done, but the popular movement had not yet fully ratified it. Ours is preëminently a country of mass meetings and conventions, of high-sounding resolves and speeches of flaming rhetoric. Perhaps their constant recurrence makes us less critical than we ought to be in scanning their real or fictitious value. Because a certain number of delegates assembled at Montgomery and framed a paper government, it did not necessarily follow that the people of the cotton-States stood behind them. In this case it was even so; but the military thrall by which revolution swept away conservatism was not understood by the North. The difficult problem was presented to the Lincoln administration, not alone whether it should endeavor to knock down the revolutionary edifice half built, but also whether such an effort might not excite the whole Southern people to rise *en masse* to complete it. The disease of rebellion existing in an advanced stage, could the cure be best effected with sedatives or irritants?

From our point of view the answer is easy; but it was not of so ready solution in March, 1861. Lincoln in his hesitation to provision Sumter at all hazards was not executing his own inclinations, but merely submitting to what for the time seemed the military and, more than all, the political necessities of the hour. The Buchanan administration had first refused and then postponed succor to the fort. Congress had neglected to provide measures and means for coercion. The conservative sentiment of the country protested loudly against everything but concession. His own Cabinet was divided in council. The times were "out of joint." Public opinion was awry. Treason was applauded and patriotism rebuked. Laws were held to be offenses, and officials branded as malefactors. In Lincoln's own forcible simile, sinners were "calling the righteous to repentance."

It must be remembered too, that during the month of March, 1861, Lincoln did not yet know the men who composed his Cabinet. Neither, on the other hand, did they know him. He recognized them as governors, senators, and statesmen, while they yet looked upon him as a simple frontier lawyer at most, and a rival to whom chance had transferred the honor they felt to be due to themselves. The recognition and establishment of intellectual rank is difficult and slow. Perhaps the first real question of the Lincoln cabinet was, "Who is the greatest man?" It is pretty safe to assert that no one — not even he himself — believed it was Abraham Lincoln. Bearing this in mind, we shall be better able to understand and explain acts done and acts omitted during that memorable month.

* Welles, in "Galaxy," November, 1870.

In this state of affairs the policy of the new Administration was necessarily passive, expectant, cautious, and tentative. Other causes contributed to their embarrassments. The change from a long Democratic to a Republican régime involved a sweeping change of functionaries and subordinates. The impending revolution made both sides suspicious and vindictive; the new appointees could not, as in ordinary times, lean upon the experience and routine knowledge of the old. Passion swayed the minds of men. There was little calm reasoning or prudent counsel. The new party was not yet homogeneous. A certain friction mutually irritated Republicans of Whig, of Democratic, or of Free-soil antecedents against each other. Douglas was artfully leading a Senate debate to foster and strengthen the anti-war feeling of the North. The Cabinet had not become a working unit. Each Cabinet minister was beset by a horde of applicants, by over-officious friends, by pressing and most contradictory advice.

Seward naturally took a leading part in the new Cabinet. This was largely warranted by his prominence as a party manager; his experience in the New York governorship and in the United States Senate; the quieting and mediating attitude he had maintained during the winter; the influence he was supposed to wield over the less violent Southerners; the information he had gained from the Buchanan cabinet; his intimacy with General Scott; his acknowledged ability and talent; his optimism, which always breathed hope and imparted confidence. During the whole of March he had been busy with various measures of tentative administration. He had advised appointments, written diplomatic notes and circulars, carried on a running negotiation with the rebel commissioners, sought to establish relations with the Virginia convention, sent Lander to Texas to kindle a "back fire" against secession, elaborated his policy of evacuating Sumter, proposed a change of party name and organization, and set on foot the secret expedition to Fort Pickens. All this activity, however, did not appear to satisfy his desires and ambition. His philosophic vision took a yet wider range. He was eager to enlarge the field of his diplomacy beyond the boundaries of the republic. Regarding mere partisanship as a secondary motive, he was ready to grapple with international politics. He would heal a provincial quarrel in the zeal and fervor of a continental crusade. He would smother a domestic insurrection in the blaze and glory of a war which must logically be a war of conquest. He would supplant the slavery question by the Monroe Doctrine. And who shall say that these imperial dreams did not contemplate the possibility of changing a threatened dismemberment of the Union into the triumphant annexation of Canada, Mexico, and the West Indies?

On this same first day of April, while Meigs and Porter were busy with plans and orders about Fort Pickens, Seward submitted to Lincoln the following extraordinary state paper, unlike anything to be found in the political history of the United States:

SOME THOUGHTS FOR THE PRESIDENT'S CONSIDERATION, April 1, 1861.

First. We are at the end of a month's administration, and yet without a policy, either domestic or foreign.

Second. This, however, is not culpable, and it has even been unavoidable. The presence of the Senate, with the need to meet applications for patronage, have prevented attention to other and more grave matters.

Third. But further delay to adopt and prosecute our policies for both domestic and foreign affairs would not only bring scandal on the Administration, but danger upon the country.

Fourth. To do this we must dismiss the applicants for office. But how? I suggest that we make the local appointments forthwith, leaving foreign or general ones for ulterior and occasional action.

Fifth. The policy at home. I am aware that my views are singular, and perhaps not sufficiently explained. My system is built upon this *idea* as a ruling one, namely, that we must

CHANGE THE QUESTION BEFORE THE PUBLIC FROM ONE UPON SLAVERY, OR ABOUT SLAVERY, for a question upon UNION OR DISUNION.

In other words, from what would be regarded as a party question, to one of *Patriotism or Union.*

The occupation or evacuation of Fort Sumter, although not in fact a slavery or a party question, is so *regarded.* Witness the temper manifested by the Republicans in the free States, and even by Union men in the South.

I would therefore terminate it as a safe means for changing the issue. I deem it fortunate that the last Administration created the necessity.

For the rest I would simultaneously defend and reenforce all the forts in the Gulf, and have the navy recalled from foreign stations to be prepared for a blockade. Put the island of Key West under martial law.

This will raise distinctly the question of *Union* or *Disunion.* I would maintain every fort and possession in the South.

FOR FOREIGN NATIONS.

I would demand explanations from Spain and France, categorically, at once.

I would seek explanations from Great Britain and Russia, and send agents into Canada, Mexico, and Central America, to rouse a vigorous continental spirit of independence on this continent against European intervention.

And, if satisfactory explanations are not received from Spain and France,

Would convene Congress and declare war against them.

But whatever policy we adopt, there must be an energetic prosecution of it.

For this purpose it must be somebody's business to pursue and direct it incessantly.

Either the President must do it himself, and be all the while active in it, or

Devolve it on some member of his Cabinet. Once adopted, debates on it must end, and all agree and abide.

It is not in my especial province.

But I neither seek to evade nor assume responsibility.*

The conscientious historian must ask the reader to pause and re-read this most remarkable and pregnant document. It is a little difficult to imagine what must have been the feelings of a President, and particularly of a frank, loyal, and generous nature like that of Lincoln, to receive from his principal councilor and anticipated mainstay of his Administration such a series of proposals. That he should delegate his presidential functions and authority; that he should turn his back upon the party which elected him; that he should ignore the political battle which had been fought and the victory for moral government which had been won; that he should by an arbitrary act plunge the nation into foreign war; that he should ask his rival to rule in his stead — all this might be romantic statesmanship, but to the cool, logical mind of the President it must have brought thoughts excited by no other event of his most eventful life. What was to be said in answer? The tender of a grave issue like this presupposed grave purposes and determinations. Should he by a fitting rebuke break up his scarcely formed Cabinet and alienate the most powerful leader after himself, who might perhaps carry with him the organized support of all the Northern States which had voted for this rival at Chicago?

The President sent his reply the same day. He armed himself with his irresistible logic, his faultless tact, his limitless patience, his kindest but most imperturbable firmness. Only the "hand of iron in the glove of velvet" could have written the following answer:

EXECUTIVE MANSION, April 1, 1861.

HON. W. H. SEWARD.

MY DEAR SIR: Since parting with you I have been considering your paper dated this day, and entitled "Some thoughts for the President's consideration." The first proposition in it is, "*First*, We are at the end of a month's administration, and yet without a policy, either domestic or foreign."

At the beginning of that month, in the inaugural, I said, "The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts." This had your distinct approval at the time; and, taken in connection with the order I immediately gave General Scott, directing him to employ every means in his power to strengthen and hold the forts, comprises the exact domestic policy you now urge, with the single exception that it does not propose to abandon Fort Sumter.

Again, I do not perceive how the reënforcement of Fort Sumter would be done on a slavery or party issue, while that of Fort Pickens would be on a more national and patriotic one.

The news received yesterday in regard to St. Domingo certainly brings a new item within the range of our foreign policy; but up to that time we have been preparing circulars and instructions to ministers and the like, all in perfect harmony, without even a suggestion that we had no foreign policy.

Upon your closing proposition, that "whatever policy we adopt, there must be an energetic prosecution of it,

"For this purpose it must be somebody's business to pursue and direct it incessantly,

"Either the President must do it himself, and be all the while active in it, or

"Devolve it on some member of his Cabinet. Once adopted, debates on it must end, and all agree and abide," I remark that if this must be done, I must do it. When a general line of policy is adopted, I apprehend there is no danger of its being changed without good reason or continuing to be a subject of unnecessary debate; still, upon points arising in its progress I wish, and suppose I am entitled to have, the advice of all the Cabinet.

Your Ob't Serv't,

A. LINCOLN. †

In this reply not a word is omitted which was necessary, and not a hint or allusion is contained that could be dispensed with. The answer was conclusive and ended the argument. So far as is known, the affair never reached the knowledge of any other member of the Cabinet, or even the most intimate of the President's friends; nor was it probably ever again alluded to by either Lincoln or Seward. Doubtless it needed only the President's note to show the Secretary of State how serious a fault he had committed, for all his tireless industry and undivided influence continued to be given for four long years to his chief, not only without reserve, but with a sincere and devoted personal attachment. Lincoln, on his part, easily dismissed the incident from his thought with that grand and characteristic charity which sought only to cherish the virtues of men — which readily recognized the strength and acknowledged the services of his Secretary, to whom he unselfishly gave, to his own last days, his generous and unwavering trust.

[*BEGUN IN THE DECEMBER NUMBER.*]

THE DUSANTES.*

A SEQUEL TO "THE CASTING AWAY OF MRS. LECKS AND MRS. ALESHINE."

BY FRANK R. STOCKTON,

Author of "Rudder Grange," "The Lady, or the Tiger?" etc.

III.

MR. ENDERTON'S letter astonished and angered me, but in spite of my indignation I could not but feel amused at the crafty way in which he had put a stop to the probable perpetual peregrinations of the ginger-jar. I handed the letter to Mr. Dusante, and when he had read it his face flushed, and I could see that he was very angry, although he kept his temper under excellent control.

"Sir," he said presently, "this shall not be allowed. That jar, with its contents, is my property until Mrs. Lecks has consented to receive it. It is of my own option that I return it at all, and I have decided to return it to Mrs. Lecks. Any one interfering with my intentions steps entirely beyond the line of just and warrantable procedure. Sir, I shall not go westward to-morrow morning, but, with my family, will accompany you to Chicago, where I shall require Mr. Enderton to return to me my property, which I shall then dispose of as I see fit. You must excuse me, sir, if anything I have said regarding this gentleman with whom you are connected has wounded your sensibilities."

"Oh, don't think of that!" I exclaimed. "Pitch into Enderton as much as you please, and you may be sure that I shall not object. When I took the daughter to wive, I did not marry the father. But, of course, for my wife's sake I hope this matter will not be made the subject of public comment."

"You need have no fear of that," said Mr. Dusante; "and you will allow me to remark that Mr. Enderton's wife must have been a most charming lady."

"Why do you think so?" I asked.

"I judge so," he answered, with a bow, "from my acquaintance with Mrs. Craig."

I now went immediately to Ruth, who, I found, knew nothing of what had occurred, except that her father had gone on to Chicago in advance of our party, and had had time only to bid her a hasty good-bye. I made no remarks on this haste which would not allow Mr. Enderton to take leave of us, but which gave him time to write a letter of some length; and as Ruth knew nothing of this letter, I determined not to mention it to her. Her father's sudden departure surprised her but little, for she told me that he always liked to get to places before the rest of the party with whom he might be journeying. "Even when we go to church," she said, "he always walks ahead of the rest of us. I don't understand why he likes to do so, but this is one of his habits."

When I informed Mrs. Lecks and Mrs. Aleshine of what had happened, they fairly blazed.

"I don't know what Mr. Dusante calls it," exclaimed Mrs. Lecks, "but I know what I call it!"

"Yes, indeed!" cried Mrs. Aleshine, her round eyes sparkling with excitement; "if that is n't ex-honesty, then he ain't no ex-missionary! I pity the heathen he converted!"

"I 'll convert him," said Mrs. Lecks, "if ever I lay eyes on him! Walkin' away with a package with my name on it! He might as well take my gold spectacles or my tortoise-shell comb! I suppose there 's no such thing as ketchin' up with him, but I 'll telegraph after him; an' I 'll let him know that if he dares to open a package of mine, I 'll put the law on him!"

"That 's so," said Mrs. Aleshine. "You kin send telegraphs all along the line to one station an' another for conductors to give to him in the cars, an' directed to Mr. Enderton, a tall man with gray-mixed hair an' a stolen bundle. That 's the way they did in our place when Abram Marly's wife fell into the cistern, an' he 'd jus' took the cars to the city, an' they telegraphed to him at five different stations to know where he 'd left the ladder."

"Which ain't a bad idea," said Mrs. Lecks, "though his name will be enough on it without no description; an' I 'll do that this minute, an' find out about the stations from the clerk."

"You must be very careful," I said, "about

* Copyright, 1887, by Frank R. Stockton. All rights reserved.

anything of that kind, for the telegrams will be read at the stations, and Mr. Enderton might be brought into trouble in a way which we all should regret; but a dispatch may be worded so that he, and no one else, would understand it."

"Very well," said Mrs. Lecks, "an' let 's get at it; but I must say that he don't deserve bein' saved no trouble, for I 'm as sure as that I 'm a livin' woman that he never saved nobody else no trouble sence the first minute he was born."

The following dispatch was concocted and sent on to Bridger, to be delivered to Mr. Enderton on the train:

The package you know of has been stolen. You will recognize the thief. If he leaves it at Chicago hotel, let him go. If he opens it, clap him in jail.

MRS. LECKS.

"I think that will make him keep his fingers off it," said Mrs. Lecks; "an' if Mr. Dusante chooses to send somethin' of the same kind to some other station, it won't do no harm. An' if that Enderton gets so skeered that he keeps out of sight an' hearin' of all of us, it 'll be the best thing that 's happened yet. An' I want you to understan', Mr. Craig, that nothin' 's goin' to be said or done to make your wife feel bad; an' there 's no need of her hearin' about what 's been done or what 's goin' to be done. But I 'll say for her, that though, of course, Mr. Enderton is her father and she looks up to him as such, she 's a mighty deal livelier and gayer-hearted when he 's away than when he 's with her. An' as for the rest of us, there 's no use sayin' anythin' about our resignedness to the loss of his company."

"I should say so," said Mrs. Aleshine; "for if there ever was a man who thought of himself ninety-nine times before he thought of anybody else once, an' then as like as not to forgit that once, he 's the man. An' it 's not, by no means, that I 'm down on missionaries, for it 's many a box I 've made up for 'em, an' never begrudged neither money nor trouble, an' will do it ag'in many times, I hope. But he ought n't to be called one, havin' given it up,—unless they give him up, which there 's no knowin' which it was,—for if there 's anythin' which shows the good in a man, it 's his bein' willin' to give up the comforts of a Christian land an' go an' convert heathens; though bein' willin' to give up the heathens an' go for the comforts shows him quite different, besides, as like as not, chargin' double an' only half convertin'."

Mr. Dusante was fully determined to go on with us until he had recovered possession of the ginger-jar. His courteous feelings towards Mrs. Craig and myself prevented his saying much about Mr. Enderton, but I had good reason to believe that his opinions in regard to my father-in-law were not very different from those of Mrs. Lecks and Mrs. Aleshine. Ever since Mr. Enderton had shown his petulant selfishness, when obliged to give up his room at the railroad station for the use of the women of his party, Mr. Dusante had looked upon him coldly, and the two had had but little to say to each other.

We were all very glad that our pleasant party was not to be broken up; and although there was no resignation at the absence of the ginger-jar, we started on our journey the next day in a pleasanter mood for the absence of Mr. Enderton. Before we left, Mr. Dusante sent a telegram to Kearney Junction, to be delivered to Mr. Enderton when he arrived there. What this message was I do not know, but I imagine its tone was decided.

Our journey to Chicago was a pleasant one. We had now all become very well acquainted with each other, and there was no discordant element in the combined party. Some of us were a little apprehensive of trouble, or annoyance at least, awaiting us in Chicago, but we did not speak of it; and while Ruth knew nothing of her father's misbehavior, it might have been supposed that the rest had forgotten it.

At Chicago we went at once to Brandiger's Hotel, and there we found, instead of Mr. Enderton, a letter from him to Ruth. It read as follows:

MY DEAR DAUGHTER: I have determined not to wait here, as originally intended, but to go on by myself. I am sorry not to meet you here, but it will not be long before we are together again, and you know I do not like to travel with a party. Its various members always incommode me in one way or another. I had proposed to go to Philadelphia and wait for you there, but have since concluded to stop at Meadowville, a village in the interior of Pennsylvania, where, as they have informed me, the two women, Mrs. Lecks and Mrs. Aleshine, reside. I wish to see the party all together before I take final leave of them, and I suppose the two women will not consent to go any farther than the country town in which they live. Inclosed is a note to your husband relating to business matters. I hope that he will take the best of care of you during the rest of the journey, and thus very much oblige

YOUR AFFECTIONATE FATHER.

This was my note:

MR. CRAIG. SIR: I should have supposed that you would have been able to prevent the insolent messages which have been telegraphed to me from some members of your party, but it is my lot to be disappointed in those in whom I trust. I shall make no answer to these messages, but will say to you that I am not to be browbeaten in my intention to divide among its rightful claimants the money now in my possession. It is not that I care for the comparatively paltry sum that will fall to myself and my daughter, but it is the principle of the matter for which I am contending. It was due to me that the amount should have been returned

to me, and to no other, for me to make the proper division. I therefore rest upon my principles and my rights; and, desiring to avoid needless altercations, shall proceed to Meadowville, where, when the rest of my party arrive, I shall justly apportion the money. I suppose the man Dusante will not be foolish enough to protract his useless journey farther than Chicago. It is your duty to make him see the impropriety of so doing.

Yours, etc.
D. J. ENDERTON.

Ruth's letter was shown to all the party, and mine in private to Mr. Dusante and Mrs. Lecks and Mrs. Aleshine. When the first moments of astonishment were over, Mrs. Lecks exclaimed:

"Well, after all, I don't know that I 'm so very sorry that the old sneak has done this, for now we 're rid of him for the rest of the trip; an' I 'm pretty certain, from the way he writes, that he has n't dipped into that jar yet. We 've skeered him from doin' that."

"But the impidence of him!" said Mrs. Aleshine. "Think of his goin' to the very town where we live an' gittin' there fust! He 'll be settin' on that tavern porch with every loafer in the place about him, an' tellin' 'em the whole story of what happened to us from beginning to end, till by the time we git there it 'll be all over the place an' as stale as last week's bread."

"'The man Dusante,'" quietly remarked that individual, "will not abandon the purpose of his journey. He left his island to place in the hands of Mrs. Lecks, on behalf of her party, the ginger-jar with the money inclosed. He will therefore go on with you to Meadowville, and will there make formal demand, and, if necessary, legal requisition, for the possession of that jar and that money; after which he will proceed to carry out his original intentions."

We all expressed our pleasure at having him, with his ladies, as companions for the remainder of our journey, and Mrs. Lecks immediately offered them the hospitalities of her house for as long a time as they might wish to stay with her.

"The weather there," she said, "is often splendid till past Thanksgivin' Day, an' nobody could be welcomer than you."

"I 'd have asked you myself," said Mrs. Aleshine, "if Mrs. Lecks had n't done it,— which of course she would, bein' alive,— but I 'm goin' to have Mr. Craig an' his wife, an' as our houses is near, we 'll see each other all the time. An' if Mr. Enderton chooses to stay awhile at the tavern, he can come over to see his daughter whenever he likes. I 'll go as fur as that, though no further can I go. I 'm not the one to turn anybody from my door, be he heathen, or jus' as bad, or wuss. But tea once, or perhaps twice, is all that I can find it in my heart to offer that man after what he 's done."

As the Dusantes and Ruth expressed a desire to see something of Chicago, where they had never been before, we remained in this city for two days, feeling that as Mr. Enderton would await our coming, there was no necessity for haste.

Early in the afternoon of the second day I went into the parlor of the hotel, where I expected to find our party prepared for a sight-seeing excursion; but I found the room tenanted only by Mrs. Aleshine, who was sitting in her bonnet and wraps, ready to start forth. I had said but a few words to her when Mrs. Lecks entered, bonnetless and shawlless, and with her knitting in her hand. She took a seat in a large easy-chair, put on her spectacles, and proceeded to knit.

"Mrs. Lecks!" exclaimed her friend in surprise, "don't you intend goin' out this afternoon?"

"No," said Mrs. Lecks. "I 've seen all I want to see, an' I 'm goin' to stay in the house an' keep quiet."

"Is n't Mr. Dusante goin' out this afternoon?" asked Mrs. Aleshine.

Mrs. Lecks laid her knitting in her lap; then she took off her spectacles, folded them, and placed them beside the ball of yarn; and, turning her chair around, she faced her friend. "Barb'ry Aleshine," said she, speaking very deliberately, "has any such a thing got into your mind as that I 'm settin' my cap at Mr. Dusante?"

"I don't say you have, an' I don't say you have n't," answered Mrs. Aleshine, her fat hands folded on her knees, and her round face shining from under her new bonnet with an expression of hearty good-will, "but this I will say,— an' I don't care who hears it,— that if you was to set your cap at Mr. Dusante there need n't nobody say anythin' agin it, so long as you are content. He is n't what I 'd choose for you, if I had the choosin', for I 'd git one with an American name an' no islands. But that 's neither here nor there, for you 're a grown woman an' can do your own choosin'. An' whether there 's any choosin' to be done is your own business too, for it 's full eleven years sence you 've been done with widder fixin's; an' if Mr. Lecks was to rise up out of his grave this minute, he could n't put his hand on his heart an' say that you had n't done your full duty by him, both before an' after he was laid away. An' so, if you did want to do choosin', an' made up your mind to set your cap at Mr. Dusante, there 's no word to be said. Both of you is ripe-aged and qualified to know your own minds, an' both of you is well off enough, to all intents and purposes,

to settle down together, if so inclined. An' as to his sister, I don't expect she will be on his hands for long. An' if you can put up with an adopted mother-in-law, that 's your business, not mine; though I allus did say, Mrs. Lecks, that if you 'd been 'Piscopalian, you 'd been Low Church."

"Is that all?" said Mrs. Lecks.

"Yes," replied the other; "it 's all I have to say jus' now, though more might come to me if I gave my mind to it."

"Well, then," said Mrs. Lecks, "I 've somethin' to say on this p'int, and I 'm very glad Mr. Craig is here to hear it. If I had a feelin' in the direction of Mr. Dusante that he was a man, though not exactly what I might wish, havin' somethin' of foreign manners with ties in the Sandwich Islands, which I should n't have had so if I 'd had the orderin' of it, who was still a Christian gentleman,— as showed by his acts, not his words,— a lovin' brother; an' a kind an' attentive son by his own adoption; and who would make me a good husband for the rest of our two lives; then I 'd go and I 'd set my cap at him — not bold nor flauntin', nor unbecomin' to a woman of my age, but just so much settin' of it at him, that if he had any feelin's in my direction, and thought, although it was rather late in life for him to make a change, that if he was goin' to do it he 'd rather make that change with a woman who had age enough, and experience enough in downs as well as ups, and in married life as well as single, to make him feel that as he got her so he 'd always find her; then I say all he 'd have to do would be to come to me an' say what he thought, an' I 'd say what I thought, an' the thing would be settled, an' nobody in this world need have one word to say, except to wish us joy, an' then go along and attend to their own business.

"But now I say to you, Barb'ry Aleshine, an' just the same to you, Mr. Craig, that I have n't got no such feelin's in the direction of Mr. Dusante, an' I don't intend to set my cap at him, an' if he wore such a thing and set it at me, I 'd say to him, kind though firm, that he could put it straight again as far as I was concerned; an' that if he chose to set it at any other woman, if the nearest an' dearest friend I have on earth, I 'd do what I could to make their married lives as happy as they could be under the circumstances; and no matter what happened, I would n't say one word, though I might think what I pleased. An' now you have it, all straight and plain: if I wanted to set caps, I 'd set 'em; and if I did n't want to set 'em, I would n't. I don't want to, and I don't."

And, putting on her spectacles, she resumed her knitting.

Mrs. Aleshine turned upon her friend a beaming face.

"Mrs. Lecks," she said, "your words has lifted a load from off my mind. It would n't ha' broke me down, an' you would n't never have knowed I carried it, but it 's gone, an' I 'm mighty glad of it. An' as for me an' my cap,— an' when you spoke of nearest and dearest friends, you could n't meant nobody but me,— you need n't be afraid. No matter what I was, nor what he was, nor what I thought of him, nor what he thought of me, I could n't never say to my son when he comes to his mother's arms, all the way from Japan: 'George, here 's a Frenchman who I give to you for a father!'"

Here I burst out laughing, but Mrs. Lecks gravely remarked: "Now I hope this business of cap-settin' is settled an' done with."

"Which it is," said Mrs. Aleshine, as she rose to meet the rest of our party as they entered the room.

For several days I could not look upon the dignified and almost courtly Mr. Dusante without laughing internally and wondering what he would think if he knew how, without the slightest provocation on his side, a matrimonial connection with him had been discussed by these good women, and how the matter had been finally settled. I think he would have considered this the most surprising incident in the whole series of his adventures.

On our journey from Chicago to the little country town in the interior of Pennsylvania we made a few stops at points of interest for the sake of Ruth and the Dusante ladies, Mrs. Lecks and Mrs. Aleshine generously consenting to these delays, although I knew they felt impatient to reach their homes. They were now on most social terms with Mrs. Dusante, and the three chatted together like old friends.

"I asked her if we might call her Emily," said Mrs. Aleshine in confidence to me, "an' she said, 'yes,' an' we 're goin' to do it. I 've all along wanted to, because it seemed to come nat'ral, considerin' we knowed 'em as Emily an' Lucille before we set eyes on 'em. But as long as I had that load on my mind about Mrs. Lecks an' Mr. Dusante, I could n't 'Emily' his adopted mother. My feelin's would n't ha' stood it. But now it 's all right; an' though Emily is n't the woman I expected her to be, Lucille is the very picter of what I thought she was. An' as for Emily, I never knowed a nicer-mannered lady, an' more willin' to learn from people that 's had experience, than she is."

We arrived at Meadowville early in the afternoon, and when our party alighted from the train we were surprised not to see Mr. Ender-

ton on the platform of the little station. Instead of him, there stood three persons whose appearance amazed and delighted us. They were the red-bearded coxswain and the two sailor men, all in neat new clothes and with their hands raised in maritime salute.

There was a cry of joy. Mrs. Aleshine dropped her bag and umbrella, and rushed towards them with outstretched hands. In a moment Mrs. Lecks, Ruth, and myself joined the group, and greeted warmly our nautical companions of the island.

The Dusante party, when they were made acquainted with the mariners, were almost as much delighted as we were, and Mr. Dusante expressed in cordial words his pleasure in meeting the other members of the party to whom his island had given refuge.

"I am so glad to see you," said Mrs. Aleshine, "that I don't know my bonnet from my shoes! But how, in the name of all that 's wonderful, did you git here?"

"'T ain't much of a story," said the coxswain, "an' this is just the whole of it. When you left us at 'Frisco we felt pretty downsome, an' the more that way because we could n't find no vessel that we cared to ship on; an' then there come to town the agent of the house that owned our brig, and we was paid off for our last v'yage. Then, when we had fitted ourselves out with new togs, we began to think different about this shippin' on board a merchant vessel, an' gittin' cussed at, an' livin' on hard-tack an' salt prog, an' jus' as like as not the ship springin' a leak, an' all hands pumpin' night an' day, an' goin' to Davy Jones after all. An' after talkin' this all over, we was struck hard on the weather bow with a feelin' that it was a blamed sight better — beggin' your pardon, ma'am — to dig garden-beds in nice soft dirt, an' plant peas, an' ketch fish, an' all that kind of shore-work, an' eatin' them good things you used to cook for us, Mrs. Aleshine, and dancin' hornpipes fur ye, an' tamin' birds when our watch was off. Was n't that so, Jim an' Bill?"

"Aye, aye, sir!" said the black-bearded sailor men.

"Then says I, 'Now look here, mates, don't let 's go an' lark away all this money, but take it an' make a land trip to where Mrs. Aleshine lives,' which port I had the name of on a piece of paper which you give me, ma'am."

And here Mrs. Aleshine nodded vigorously, not being willing to interrupt this entrancing story.

"'An' if she 's got another garden, an' wants it dug in, an' things planted, an' fish caught, an' any other kind of shore-work done, why we 're the men for her; an' we 'll sign the papers for as long a v'yage as she likes, an' stick by her in fair weather or foul, bein' good for day work an' night work, an' allus ready to fall in when she passes the word.' Ain't that so, Jim and Bill?"

"Aye, aye, sir!" returned the sailor men with sonorous earnestness.

"Up'n my word!" cried Mrs. Aleshine, tears of joy running down her cheeks, "them papers shall be signed if I have to work night an' day to find somethin' for you to do. I 've got a man takin' keer of my place now; but many a time have I said to myself that, if I had anybody I could trust to do the work right, I 'd buy them two fields of Squire Ramsey's an' go into the onion business. An' now you sailor men has come like three sea angels, an' if it suits you we 'll go into the onion business on sheers."

"That suits us tip-top, ma'am," said the coxswain; "an' we 'll plant inyans for ye on the shears, on the stocks, or in the dry dock. It don't make no dif'rence to us where you have 'em; jes pass the word."

"Well, well," said Mrs. Lecks, "I don't know how that 's goin' to work, but we won't talk about it now. An' so you came straight on to this place?"

"That did we, ma'am," said the coxswain. "An' when we got here we found the parson, but none of you folks. That took us aback a little at fust, but he said he did n't live here, an' you was comin' pretty soon. An' so we took lodgin's at the tavern, an' for three days we 've been down here to meet every train, expectin' you might be on it."

Our baggage had been put on the platform, the train had moved on, and we had stood engrossed in the coxswain's narrative, but now I thought it necessary to make a move. There was but one small vehicle to hire at the station. This would hold but two persons, and in it I placed Mrs. Dusante and Ruth, the first being not accustomed to walking, and the latter very anxious to meet her father. I ordered the man to drive them to the inn, which was about a mile from the station, where we would stay until Mrs. Lecks and Mrs. Aleshine should get their houses properly aired and ready for our reception.

"Mrs. Craig will be glad to get to the tavern and see her father," said Mrs. Aleshine. "I expect he forgot all about it 's bein' time for the train to come."

"Bless you, ma'am!" exclaimed the coxswain, "is she gone to the tavern? The parson 's not there!"

"Where is he, then?" asked Mrs. Aleshine.

"He 's at your house, ma'am," replied the coxswain.

"An' what in the name of common sense is he doin' at my house?" exclaimed Mrs.

Aleshine, her eyes sparkling with amazement and indignation.

"Well, ma'am, for one thing," said the coxswain, "he 's had the front door painted."

"What!" cried Mrs. Lecks and Mrs. Aleshine in one breath.

"Yes," continued the coxswain; "the parson said he hated to see men hangin' around doin' nothin'. An' then he looked about, an' said the paint was all wore off the front door, an' we might as well go to work an' paint that, an' he sent Jim to a shop to git the paint an' brushes —"

"An' have 'em charged to me?" cried Mrs. Aleshine.

"Yes, ma'am," continued the coxswain. "An' Jim an' Bill holy-stoned all the old paint off the door an' I painted it, havin' done lots of that sort of thing on shipboard; an' I think it 's a pretty good job, ma'am — red at top and bottom an' white in the middle, like a steamer's smoke-stack."

Mrs. Lecks and Mrs. Aleshine looked at each other. "An' he told you to do that?" said Mrs. Lecks.

"Yes, ma'am," answered the coxswain. "The parson said he never liked to be nowhere without doin' what good he could. An' there was some other paintin' he talked of havin' done, but we ain't got at it yit. I s'posed he was actin' under your orders, an' I hope I have n't done no wrong, ma'am."

"You 're not a bit to blame," said Mrs. Aleshine; "but I 'll look into this thing. No fear about that! An' how did he come to go to my house? An' how did he get in, I 'd like to know?"

"All I know about that," said the coxswain, "is what the gal that 's livin' there told me, which she did along of askin' us if we was comin' to live there too, an' if she should rig up beds for us somewhere in the top-loft, but we told her no, not havin' no orders, an' payin' our own way at the tavern. She said, said she, that the parson come there an' 'lowed he was a friend of Mrs. Aleshine's an' travelin' with her, an' that if she was at home she would n't let him stay at no tavern; an' that knowin' her wishes he 'd come right there, an' 'spected to be took care of till she come. She said she felt oncertain about it, but she tuck him in till she could think it over, an' then we come an' certified that he was the parson who 'd been along with Mrs. Aleshine an' the rest of us. Arter that she thought it was all right, an', beggin' your pardon if we was wrong, so did Jim an' Bill an' me, ma'am."

"Now," exclaimed Mrs. Aleshine, "if that is n't exactly like Elizabeth Grootenheimer! To think of Elizabeth Grootenheimer thinkin'! The Grootenheimers always was the dumbest family in the township, an' Elizabeth Grootenheimer is the dumbest of 'em all! I did say to myself when I went away: 'Now Elizabeth Grootenheimer is so stone dumb that she 'll jus' stay here an' do the little I tell her to do, an' has n't sense enough to git into no mischief.' An' now, look at her!"

She waved her hand in the direction of the invisible Elizabeth Grootenheimer.

Mrs. Lecks had said very little during this startling communication, but her face had assumed a stern and determined expression. Now she spoke.

"I guess we 've heard about enough, an' we 'd better be steppin' along an' see what else Mr. Enderton an' Elizabeth Grootenheimer is doin'."

The homes of Mrs. Lecks and Mrs. Aleshine were not far from each other and were situated about midway between the station and the village inn, and in the direction of these our party now started. Mrs. Aleshine, contrary to her custom, took the lead, and walked away with strides of unusual length. Mrs. Lecks was close behind her, followed by the two Dusantes and myself, while the three mariners, who insisted upon carrying all the hand-baggage, brought up the rear. We stepped quickly, for we were all very much interested in what might happen next; and very soon we reached Mrs. Aleshine's house. It was a good-sized and pleasant-looking dwelling, painted white, with green shutters and with a long covered porch at the front. Between the road and the house was a neat yard with grass and flower-beds, and from the gate of the picket-fence in front of the yard a brick-paved path led up to the house.

Our approach had been perceived, for on the porch, in front of the gayly painted door, stood Mr. Enderton, erect and with a bland and benignant smile upon his face. One hand was stretched out as if in welcome, and with the other he gracefully held the ginger-jar, now divested of its wrappings.

At this sight Mrs. Lecks and Mrs. Aleshine made a simultaneous dash at the gate, but it was locked. The two women stamped their feet in fury.

"Put down that jar!" shouted Mrs. Lecks.

"Elizabeth Grootenheimer! Elizabeth Grootenheimer!" screamed Mrs. Aleshine. "Come here and open this gate."

"Break it down!" said Mrs. Lecks, turning to the sailors.

"Don't you do it!" exclaimed Mrs. Aleshine, throwing herself in front of it. "Don't you break my gate! Elizabeth Grootenheimer!"

"My friends," said Mr. Enderton in clear, distinct tones, "be calm. I have the key of that gate in my pocket. I locked it because

I feared that on your first arrival you would hurry up to the house in a promiscuous way, and give heed to irrelevant matters. I wished to address you in a body and in a position where your attention would not be diverted from me. I hold here, my friends, the receptacle containing the money which under a misapprehension was paid for our board while on a desert island. This money I have taken care of and have carefully guarded for the benefit of us all. Unfortunately objections have arisen to this guardianship, which were forwarded to me by telegraph, but I have not heeded them. If you cannot see for yourselves the propriety of my assumption of this trust, I will not now undertake to enlighten you. But I hope there is no necessity for this, for, having had time to give the matter your fullest attention, I doubt not that you entirely agree with me. I will merely add, for I see you are impatient, that the sum which will fall to the share of each of us is comparatively insignificant, and in itself not worth striving for; but what I have done has been for the sake of principle. For the sake of principle I have insisted that this money should be received by its rightful owners; for the sake of principle I assumed the custody of it; and for the sake of principle I shall now empty the contents of this jar — which by me has not been examined or touched — upon the floor of this porch, and I shall then proceed to divide said contents into five suitable portions — the three mariners, as I understand, having paid no board. The gate can then be opened, and each one can come forward and take the portion which belongs to him or to her. The portion of my daughter, whom I saw pass here in a carriage, going, doubtless, to the inn, will be taken charge of by myself."

"You man!" shrieked Mrs. Lecks, shaking her fist over the fence, "if you as much as lift that paper of fish-hooks from out the top of that ginger-jar, I 'll —"

Here she was interrupted by the loud, clear voice of Mr. Dusante, who called out: "Sir, I require you to put down that jar, which is my property."

"I 'll let you know," said Mrs. Lecks, "that other people have principles!"

But what more she said was drowned by the voice of Mrs. Aleshine, who screamed for Elizabeth Grootenheimer, and who was now so much excited that she was actually trying to break open her own gate.

I called out to Mr. Enderton not to make trouble by disturbing the contents of the jar; and even Miss Lucille, who was intensely amused at the scene, could be heard joining her voice to the general clamor.

But the threats and demands of our united party had no effect upon Mr. Enderton. He stood up, serene and bland, fully appreciating the advantage of having the key of the gate's padlock in his pocket and the ginger-jar in his hand.

"I will now proceed," said he. But at that moment his attention was attracted by the three mariners, who had clambered over the pointed pales of the fence and who now appeared on the porch, Bill to the right hand of Mr. Enderton, Jim to the left, and the red-bearded coxswain at his back. They all seemed to speak at once, though what they said we could not hear, nothing but a few hoarse mutterings coming down to us.

But in consequence of what Bill said, Mr. Enderton handed him the key of the gate; and in consequence of what Jim said, Mr. Enderton delivered to him the ginger-jar; and in consequence of what the coxswain said, he and Mr. Enderton walked off the porch; and the two proceeded to a distant corner of the yard, where they stood, out of the way, as it were, while the gate was opened. Bill bungled a little, but the padlock was soon removed, and we all hurried through the gate and up to the porch, where Jim still stood, the ginger-jar held reverently in his hands.

The coxswain now left Mr. Enderton, and that gentleman proceeded to the open gate, through which he passed into the road, and then turned, and in a loud and severe tone addressed Mrs. Aleshine:

"I leave your inhospitable house and go to join my daughter at the inn, where I request you to send my valise and umbrella as soon as possible."

Mrs. Aleshine's indignation at this invasion of her home and this trampling on her right to open her own gate had entirely driven away her accustomed geniality, and in angry tones she cried:

"Jus' you stop at that paint-shop when you git to the village, an' pay for the paint you had charged to me; an' when you 've done that you can send for your things."

"Come, now, Barb'ry," said Mrs. Lecks, "don't let your feelin's run away with you. You ought to be thankful that he 's let you off so easy, an' that he 's gone."

"I 'm all that," said Mrs. Aleshine; "an' on second thoughts, every whip-stitch of his bag and baggage shall be trundled after him as soon as I kin git it away."

We all now stood upon the porch, and Mrs. Aleshine, in calmer tones, but with her face still flushed from her recent excitement, turned to us and said: "Now, is n't this a pretty comin' home? My front gate fastened in my very face; my front door painted red and white; the inside of the house, as like as not,

turned upside down by that man jus' as much as the outside; an' where in the world, I 'd like to know, is Elizabeth Grootenheimer?"

"Now, don't you be too hard on her," said Mrs. Lecks, "after havin' been away from her so long. I have n't a doubt she 's feedin' the pigs; an' you know very well she never would leave them as long as she felt they needed her. You need n't mind if your house is upset, for none of us is comin' in, havin' only intended to see you to your door, which I must say is a pretty blazin' one."

"And now, Mrs. Lecks," said Mr. Dusante, taking, as he spoke, the ginger-jar from the hand of Jim, "I think this is a suitable opportunity for me to accomplish the object for which my present journey was undertaken, and to return to you the contents of this jar."

"Which," said Mrs. Lecks, in a very decided tone, "I don't take now no more 'n I did before."

Mr. Dusante looked surprised and troubled. After all the dangers and adventures through which that ginger-jar had gone, I believe that he expected that Mrs. Lecks would at last relent and consent to accept it from him.

"Now, look here," said Mrs. Aleshine; "don't let us have any more fuss about the ginger-jar or anything else. Let 's put off talkin' about that till we 're all settled an' fixed. It won't do for you to take the jar to the tavern with you, Mr. Dusante, for like as not Mr. Enderton will git hold of it ag'in, an' I know Mrs. Lecks won't let it come into her house; so, if you like, you may jus' leave it here for the present, an' you may make up your minds nobody 'll touch it while I 'm about. An' about I intend to be!"

This arrangement was gladly agreed upon, and the jar being delivered to Mrs. Aleshine, we took our leave of her.

Mrs. Lecks found no difficulty in entering her gate, where she was duly welcomed by a man and his wife she had left in charge, while the Dusantes and myself walked on to the inn, or "Hotel," as its sign imported, about which the greater part of the little town clustered. The three mariners remained behind to await further orders from Mrs. Aleshine.

By the afternoon of the next day the abodes of those two most energetic and capable housewives, Mrs. Lecks and Mrs. Aleshine, were fully prepared for the reception of their visitors, and the Dusante family were ensconced beneath the roof of the one, while my wife and I were most warmly welcomed at the gayly adorned door of the other.

Mr. Enderton remained at the inn, where he found very comfortable quarters, an arrangement satisfactory to all parties.

In Mrs. Aleshine's dwelling, where, from the very first, Lucille took her position as a most constant visitor, being equally welcomed by Ruth and the mistress of the house, all was satisfaction and high good-humor. The ceaseless activity and cheerful spirits of our hostess seemed to animate us all. At Mrs. Lecks's home the case was different. There, I could plainly see, there was a certain uneasiness amounting almost to stiffness between Mrs. Lecks and Mr. Dusante. The latter had not accomplished the purpose for which he had made this long journey; and although if things had turned out as he wished, he would have been very glad to be the guest of Mrs. Lecks, still, under the present circumstances, the situation did not suit him. Mrs. Lecks, too, possessed an unsettled mind. She did not know when Mr. Dusante would again endeavor to force back upon her the board-money in the ginger-jar, and in this state of uneasy expectancy she was not at her best.

"He 's not satisfied," said she to me, on the morning after the Dusantes had come to her; "he wants to do somethin', or else to go away. I wish that ginger-jar had dropped into the bottom of the sea while he was bringin' it, or else had smashed itself into a thousand bits while we was slidin' down the mountain, and the money had melted itself into the snow. S'posin' at the end of the week he was to come to me and offer to pay me board for himself and his family, sayin' that was no more than I 'd done to him! Of course the two cases are not a bit alike; for we went to his house strangers, without leave or license, while he comes to mine as a friend, bein' fully invited an' pressed. But I don't suppose I could make him see it in that light, an' it worries me."

I was convinced that something ought to be done to end this unpleasant state of affairs, and I took my wife and Miss Lucille into council on the subject. After we had deliberated a little while an idea came to Ruth.

"In my opinion," said she, "the best thing we can do with that board-money is to give it to those three sailors. They are poor and will be glad to get it; Mr. Dusante and Mrs. Lecks ought to be fully satisfied, for the one does n't keep it, and the other does n't take it back, and I 'm sure that this plan will please all the rest of us."

This plan was unanimously agreed to by the council, and I was appointed to go immediately and lay it before the parties interested.

Mr. Dusante gave his ready consent to the proposition. "It is not what I intended to do," said he, "but it amounts to almost the same thing. The money is in fact restored to its owners, and they agree to make a certain disposition of it. I am satisfied."

Mrs. Lecks hesitated a little. "All right,"

said she, in a few moments. "He takes the money and gives it to who he chooses. I 've nothin' to say against it."

Of course no opposition to the plan was to be expected from anybody else, except Mr. Enderton. But when I mentioned it to him I found, to my surprise, that he was not unwilling to agree to it. Half closing the book he had been reading, he said: "What I have done was on behalf of principle. I did not believe, and do not believe, that upon an entirely deserted island money should be paid for board. I paid it under protest, and I do not withdraw that protest. According to all the laws of justice and hospitality the man who owned that island should not retain that money, and Mrs. Lecks had no right to insist upon such retention. But if it is proposed to give the total sum to three mariners, who paid no board and to whom the gift is an absolute charity, I am content. To be sure, they interfered with me at a moment when I was about to make a suitable settlement of the matter, but I have no doubt they were told to do so; and I must admit that while they carried out their orders with a certain firmness characteristic of persons accustomed to unreasoning obedience, they treated me with entire respect. If equal respect had been shown to me at the beginning of these disputes, it would have been much better for all concerned."

And, opening his book, he recommenced his reading.

That afternoon, all of us, except Mr. Enderton, assembled on Mrs. Aleshine's porch to witness the presentation of the board-money. The three sailors, who had been informed of the nature of the proceedings, stood in line on the second step of the porch, clad in their best toggery, and with their new tarpaulin hats in their hands. Mrs. Aleshine went into the house and soon reappeared, carrying the ginger-jar, which she presented to Mr. Dusante. That gentleman took it, and stood holding it for a moment as if he were about to speak; but even if he had intended to say anything he had no further opportunity, for Mrs. Lecks now stepped forward and addressed him:

"Mr. Dusante," said she, "from what I have seen of you myself an' heard tell of you from others, I believe you are a man who tries to do his duty, as he sees it, with a single heart an' no turnin' from one side to the other. You made up your mind that you 'd travel over the whole world, if it had to be done, with that ginger-jar an' the board-money inside of it, till you 'd found the people who 'd been livin' in your house; an' then that you 'd give back that jar, jus' as you 'd found it, to the person who 'd took upon herself the overseein' of the reg'lar payin' of the money, an' the puttin' of it therein. With that purpose in your mind you carried that jar over the ocean; you wandered with it up an' down California; an' holdin' it tight fast in your arms, you slid down the slipperiest mountain that was ever made yet, I believe, an' if it had been your only infant child, you could n't have held it firmer, nor regarded it more careful. Through ups an' downs, an' thicks an' smooths, you carried that jar or followed it, an' for the sake of doin' what you 'd set your mind on you came all the way to this place; to which, if it had n't been for that one idea, it is n't likely you 'd ever dreamed of comin'. Now, Mr. Dusante, we 've all agreed on what we think is the right thing to do, an' you agreed with us, but I can see by your face that you 're disapp'inted. The thing you set out to do you have n't done; an' I 'm not goin' to have it to say to myself that you was the only one of all of us that was n't satisfied, an' that I was the stumblin'-block that stood in your way. So I 'll back down from sayin' that I 'd never touch that jar again, an' you can put it into my hands, as you set out to do."

Mr. Dusante made no answer, but stepped forward, and taking Mrs. Lecks's large brown and work-worn hand, he respectfully touched it with his lips. It is not probable that Mrs. Lecks's hand had ever before been kissed. It is not probable that she had ever seen any one kiss the hand of another. But the hard sense and keen insight of that independent country-woman made her instantly aware of what was meant by that old-fashioned act of courteous homage. Her tall form grew more erect; she slightly bowed her head; and received the salute with a quiet dignity which would have become a duchess.

This little scene touched us all, and Mrs. Aleshine afterwards informed me that for a moment she had n't a dry eye in her head.

Mr. Dusante now handed the ginger-jar to Mrs. Lecks, who immediately stepped towards Ruth and Lucille.

"You two young ones," she said, "can jus' take this jar, an' your hands can be the first to lift off that paper of fish-hooks an' take out the money, which you will then divide among our good friends, these sailor men."

Ruth and Lucille immediately sat down on the floor of the porch and the one emptied the board-money into the lap of the other, where it was speedily divided into three equal portions, one of which was placed in the hands of each mariner.

The men stood motionless, each holding his money in his open right hand, and then the red-bearded coxswain spoke.

"It ain't for me, nor for Bill, nor for Jim nuther, to say a word agin what you all think

is right and square. We 've stood by ye an' obeyed orders since we first shipped on that island, an' we intend to do so straight along, don't we, Jim an' Bill?"

"Aye, aye, sir!" said Jim and Bill, in hearty hoarse response.

"There 's some of ye, 'specially Mrs. Aleshine, though meanin' no disrespec' to anybody else, that we 'd foller to the cross-trees of the top-gallant mast of the tallest ship that ever floated in the middle of the ragin'est typhoon that ever blowed. Would n't we, Jim an' Bill?"

"Aye, aye, sir!" sang out Jim and Bill.

"But though we stand ready to obey orders," said the coxswain, "we made up our minds, when we heard what was goin' to be done, that we 'd listen keerful fer one thing, an' we have listened keerful an' we have n't heard that one thing, an' that thing was what we should do with this money. An', not havin' heard it, an' so bein' under no orders as to the spendin' of it, we take the money, an' thank you kindly, one an' all. Don't we, Jim and Bill?"

"Aye, aye, sir!" said Jim and Bill.

And into the pocket of each mariner clinked the money.

Mr. Dusante now took up the ginger-jar and approached Mrs. Lecks. "I hope, madam," he said, "that as the subject of our little differences has now been removed from this jar, you will consent to accept it from me as a memento of the somewhat remarkable experiences through which it has accompanied us."

"Take it, sir?" said she. "To be sure I will. An' very glad am I to get it. As long as I live it shall stand on the mantel-piece in my parlor; an' when I die, it shall be left to my heirs, to be taken care of as long as it holds together."

Every reason for dissatisfaction having now been banished from our little company, we all settled down for a season of enjoyment. Even Mr. Enderton, who had found on the top shelf of a closet in his room a lot of old leather-bound books, appeared to be in a state of perfect content. To the Dusantes a residence in this absolutely rural portion of our Middle States in the autumnal season was an entirely novel experience. The crisp and invigorating air, the mists and glowing hues of the Indian summer time, the softness of the sunshine, and even those masses of limbs and twigs which had already dropped their leaves and spread themselves in a delicate network against the clear blue sky, were all full of a novel beauty for these people who had lived so long in tropical lands and among perennial foliage, and had never known the delights of an American country life out of season. Having enjoyed Mrs. Lecks's hospitality for a suitable period, they proposed to that sensible woman that she should receive them as boarders until the winter should set in; and to this practical proposition she gave a ready assent, hoping that the really cold weather would long defer its coming.

Ruth and I established ourselves on the same terms with Mrs. Aleshine. A prolonged holiday from the labors of my business had been the object of my attempted journey to Japan, and I could think of no place where it would better please my young wife and myself to rest for a time than here among these good friends.

A continual source of amusement to us were the acts and doings of Mrs. Aleshine and her three sailor men. These bold mariners had enlisted, soul and body, into the service of the thrifty housewife; and as it was impossible to do anything in connection with the growing of the onions until the desired fields should be acquired and the spring should open, many and diverse were the labors at which the coxswain and those two able-bodied seamen, Bill and Jim, set themselves or were set by Mrs. Aleshine.

The brilliantly painted front-door, which at first had excited the good woman's ire, gradually came to command her admiration; and when her sailor men had done everything else that they could in the barns, the fields, or at the wood-pile, she gave them privilege to paint various portions of her property, leaving designs and colors to their own taste and fancy. Whether they milked the cows, cut the wood, or painted the sides of the house, they always worked like good fellows, and in nautical costume. They holy-stoned the front deck, as they called the floor of the porch, until it seemed sacrilegious to set foot upon it; and when the house and the pale-fence had been suitably painted, they allowed their fancies lofty flights in the decoration of the smaller out-buildings and various objects in the grounds. One of the men had a pocket-chart of the colors adopted by the different steamship companies all over the world, and now smoke-houses, corn-cribs, chicken-houses, and so on, down to pumps and hitching-posts, were painted in great bands of blue-and-red and white-and-black, arranged in alternating orders, until an observer might have supposed that a commercial navy had been sunk beneath Mrs. Aleshine's house-grounds, leaving nothing but its smoke-stacks visible.

The greatest work of decoration, however, was reserved by the red-bearded coxswain for himself, designed by his own brain, and executed by his own hands. This was the tattooing of the barn. Around this building, the sides

of which were already of a color sufficiently resembling a well-tanned human skin, the coxswain painted, in blue spots resembling tattooing, an immense cable passing several times about the structure, a sea-serpent almost as long as the cable, eight anchors, two ships under full sail, with a variety of cannons and flags which filled up all the remaining spaces. This great work was a long time in execution, and before it was half finished its fame had spread over the surrounding country.

The decoration of her premises was greatly enjoyed by Mrs. Aleshine. "It gives 'em somethin' to do," said she, "till the onion-season comes on; it makes 'em happy; an' the leaves an' flowers bein' pretty nigh gone, I like to see the place blossomin' out as if it was a cold-weather garden."

In the evenings, in the large kitchen, the sailor men danced their hornpipes, and around the great fire-place they spun long yarns of haps and mishaps on distant seas. Mrs. Aleshine always, and the rest of us often, sat by the fire and enjoyed these nautical recreations.

"Havin' myself done housekeepin' in the torrid zone," she once said, "a lot of the things they tell come home to me quite nat'ral. An' I 'd do anythin' in the world to make 'em content to live on dry land like common Christians, instid of cavoortin' about on the pitchin' ocean, runnin' into each other, an' springin' leaks with no likelihood of findin' a furnished island at every p'int where their ship happened to go down."

On one subject only did any trouble now come into the mind of Mrs. Aleshine, and she once had a little talk with me in regard to it.

"I 've been afeared from the very beginnin'," she said, "an' after a while I more 'n half believed it, that Elizabeth Grootenheimer was settin' her cap at the coxswain, so I jus' went to him an' I spoke to him plain. 'This sort o' thing won't do at all,' says I; 'an' although I have n't a doubt you see it for yourself, I thought it my dooty to speak my mind about it. There 's plenty of young women in this township that would make you sailor men fust-rate wives, an' glad enough I 'd be to see you all married an' settled an' gone to farmin' right here amongst us, but Elizabeth Grootenheimer won't do. Settin' aside everything else, if there was to be any children, they might be little coxswains, but they 'd be Grootenheimers too; stone-dumb Grootenheimers; an' I tell you plain that this county can't stand no more Grootenheimers!' To which he says, says he, 'I want you to understan', ma'am, that if ever me or Jim or Bill makes up our mind to set sail for any sort of a weddin' port, we won't weigh anchor till we 've got our clearance papers from you.' By which he meant that he 'd ask my advice about courtin'. An' now my mind 's easy, an' I can look ahead with comfort to onion-time."

I found it necessary to go to Philadelphia for a day or two to attend to some business matters; and the evening before I started, the coxswain came to me and asked a favor for himself and his mates.

"It may n't have passed out of your mind, sir," said he, "that when me an' Jim an' Bill took that money that you all give us, which was n't zackly like prize-money, because the rest of the crew, to put it that way, did n't get any, we listened keerful to see if anythin' was said as to what we was to do with the money; an' nothin' bein' said, we took it, an' we was n't long makin' up our minds as to what we was goin' to do with it. What we wanted to do was to put up some sort of signal what could n't git blowed away, or, more like, a kind of reg'lar moniment as would make them that looked at it remember the rough squalls an' the jolly larks we 've gone through with together, an' it was when we was talkin' about Mrs. Lecks bein' give the ginger-jar to put on her mantel-piece an' keep forever, that me an' Jim an' Bill we said, says we, that Mrs. Aleshine should have a ginger-jar too, havin' as much right to one as her mate, an' that that would be the signal-flag or the moniment that we 'd put up. Now, sir, as you 're goin' to town, we ask you to take this money, which is the whole lot that was give' us, an' have a ginger-jar built, jus' the size an' shape an' gen'ral trim of that other one, but of no pottery-stuff, fur you kin buy 'em jus' like that, an' that ain't what we want. We want her built of good oak, stout an' strong, with live-oak knees inside to keep her stiff an' save her from bein' stove in, in case of a collision. We want her bottom coppered up above the water-line with real silver, an' we want a turtle-back deck with a round hatchway, with a tight-fittin' hatch, jus' like common jars. We want her sides caulked with oakum, an' well scraped an' painted, so that with water inside of her or outside of her she won't leak. An' on the bottom of her, so they kin be seen if she keels over, we wants the names of me, an' Jim, an' Bill, which we 've wrote on this piece of paper. An' on her sides, below the water-line, on the silver copperin', we wants the names of all the rest of you, an' the latitood an' longitood of that island, an' anythin' out of the logs that might 'a' been kep' by any of you, as might help to be remembered the things what happened. An' then, if there 's any room left on the copperin' an' any money lef' to pay for 'em, you might have cut on as many anchors, an' hearts, an' bits of cable, an' such like suitable things as would fill up. An' that jar

we 're goin' to give to Mrs. Aleshine to put on her mantel-piece, to stay there as long as she lives, or anybody that belongs to her. An', by George, sir!" he added behind his hand, although there was nobody to hear, "if ever them two jars run into each other, it won't be Mrs. Aleshine's that 'll go down!"

I undertook this commission, and in due course of time there came to the village the most astonishing ginger-jar that was ever built, and which satisfied the three mariners in every particular. When it was presented to Mrs. Aleshine, her admiration of this work of art, her delight in its ownership, and her gratitude to the donors were alike boundless.

"However could I have had the idee," said she privately to me, "that any one of them noble sailor men could have brought himself down to marry Elizabeth Grootenheimer!"

It was not long after this happy event that another great joy came to Mrs. Aleshine. Her son returned from Japan. He had heard of the loss of the steamer in which his mother and Mrs. Lecks had set sail, and was in great trouble of mind until he received a letter from his mother which brought him speedily home. He had no intention of settling in Meadowville, but it had been a long time since he had seen his mother.

He was a fine young man, handsome and well educated, and we were all delighted with him; and in a very short time he and Lucille Dusante, being the only young bachelor and maiden of the company, became so intimate and super-friendly that it was easy to see that to Mrs. Aleshine might come the unexpected rapture of eventually being the mother of Lucille.

We staid much later at Meadowville than we had expected. Even after the little hills and vales had been well covered with snow, sleighing and coasting parties, led by the lively new-comer, offered attractions, especially to Lucille, which bound us to the cheery homes of Mrs. Lecks and Mrs. Aleshine. But, after a time, the Dusantes considered it prudent to go to Florida for the rest of the winter; Mr. Enderton had long since read all the books on his closet-shelf and departed for New York; and Ruth and I determined that we, too, must move eastward.

But, before our little company separated, Mrs. Aleshine's son and Lucille Dusante had settled it between them that when the spring-time came they would set sail for a wedding port. This match was a highly satisfactory one to all concerned, for Mr. Dusante could scarcely have found a young brother-in-law who would make his sister so happy, and who was, at the same time, so well fitted by disposition and previous occupation to assist in his increasing business cares.

In the spring the Dusante family came North again and Lucille and her lover were married; and then all of us, except Mr. Enderton, who had obtained a most congenial position as assistant librarian in a public institution seldom visited, gathered at Meadowville to spend a week or two together before Ruth and I repaired to the New England town which was to be our home; and the Dusante family, the young husband included, set out on a tour, partly of business and partly of pleasure, through Canada and the far Northwest.

It was arranged that, whenever it should be possible, Lucille and Mrs. Dusante should spend their summers at Meadowville; and as this would also give her much of the society of her son, the heart of Mrs. Aleshine could ask no more.

This visit to Meadowville was in the onion-season; and one morning Ruth and I sat upon a fence and watched the three sailor men busily at work. The soil looked so fine and smooth that one might almost have supposed that it had been holy-stoned; and the three nautical farmers, in their tight-waisted, loose-bottomed trousers, their tarpaulin hats, and their wide-collared shirts, were seated on the ground at different points, engrossed in the absorbing task of setting out young onions as onions had never been set out before. All the careful attention to patient minutiæ which nautical handiwork had taught them was now displayed in their new vocation. In a portion of the field which had been first planted the onions had sprouted, and we could see evidences of astonishing designs. Here were anchors in onions; hearts in onions; brigs, barks, and schooners in onions; and more things pertaining to ships, the heart's affections, and the raging main outlined in onions than Ruth and I could give names to.

"It seems to me," said I, "that there must have been some sort of enchantment in that little island in the Pacific, for in one way or another it has made us all very happy."

"That is true," answered Ruth; "and, do you know, I believe the cause of a great part of that happiness was the board-money in the ginger-jar!"

Frank R. Stockton.

THE END.

IT is incorrect to suppose that astrology has no votaries at the present time. Zadkiel's Almanac, which has been published for nearly forty consecutive years, sells more than one hundred and twenty thousand copies per annum, and it is not a publication which ignorant persons could understand,— nor does it appear to make any appeals to that class. The "Saturday Review" for July 4, 1863, says: "Without doubt there are a million of people who have some sort of confidence in Zadkiel; certainly there is ample encouragement to them in the countenance afforded Zadkiel by the great and wise and learned of the land." This writer also states that "society believes in astrology." It is quite possible that this is exaggerated, for "society" affects the study of all strange or new things. If its interest in any passing novelty or new aspect of something old should be allowed any value as indicating what it "believed," it might be held to accept almost anything.

I should not, however, think it a prudent economy of time or space to treat astrology here merely to delay its final disappearance. It is because the exhibition of its principles and methods will afford us an almost indispensable aid in the studies to which this series of articles is devoted, and account for and explain certain conditions of current thought, that it is worthy of investigation.

Goethe begins his autobiography with these words:

> On the 29th of August, 1749, at midday, as the clock struck 12, I came into the world at Frankfort-on-the-Main. My horoscope was propitious: the Sun stood in the sign of the Virgin, and had culminated for the day; Jupiter and Venus looked on him with a friendly eye and Mercury not adversely, while Saturn and Mars kept themselves indifferent; the Moon alone, just full, exerted the power of her reflection all the more as she had then reached her planetary hour. She opposed herself, therefore, to my birth, which could not be accomplished until this hour was passed. These good aspects, which the astrologers managed subsequently to reckon very auspicious for me, may have been the causes of my preservation; for, through the unskillfulness of the midwife, I came into the world as dead, and only after various efforts was I enabled to see the light.

This mighty intellect, representing, according to Madame de Staël, in himself alone the whole of German literature, whose knowledge and insight, sensibility and imagination, were so extraordinary as to elevate him for all time to the highest rank, appears to have been somewhat under the influence of that belief in astrology which, from the earliest ages, had dominated the human mind, and from which, at the date of his birth, even the most enlightened, with comparatively few exceptions, had not been emancipated. For there was scarcely an extraordinary character in antiquity who did not believe in astrology. Hippocrates and Galen,— the first names in medicine,— Pythagoras, Democritus, and Thales gave it credit. Hippocrates said in substance that a physician who was ignorant of astrology deserved to be called a fool rather than a physician; and Galen, that no man should "trust himself to that physician, or rather pretender, who is not skilled in astrology." In China, Persia, Egypt, Greece, and Rome it was universally accepted, while Chaldea may be called the center of its power.

There are many references to it in the Bible, such as "The stars in their courses fought against Sisera," and "Canst thou bind the sweet influences of Pleiades, or loose the bands of Orion?" The Magi, who came from the East following the star of Christ, were astrologers. It seems probable from some passages that Daniel, who accepted the office of chief of the Magi, studied the heavens and astrological books. Only when the astrologers contradicted the direct revelation of God's word were they specially condemned. On such occasions the prophets denounced them: though seeming to admit that there might be an influence from the stars, they declared that they could not prevail against the will of God — as when Jeremiah says, "Be not dismayed at the signs of heaven, for the heathen are dismayed at them"; or the similar injunction given by Isaiah, "Let now the astrologers, the stargazers, the monthly prognosticators, stand up, and save thee."

The ancient poets — Æschylus, Vergil, Horace, Homer, and many others — rose to the loftiest strains when praising astrology. In more modern times the chief physicians on the continent of Europe were astrologers, some of them very famous. One was Cardan of Milan, who was not only a physician but an algebraist. The "Text-book of Astrology" gives a list of eminent men in England who believed in astrology,— Roger Bacon; Duns Scotus; Baron Napier, the inventor of logarithms; Tycho Brahe; Francis Bacon; Kepler; Flamsteed, the first Astronomer Royal; Sir Elias

Ashmole, the founder of the Ashmolean Museum. Chaucer was also a believer, and wrote a treatise on the astrolabe. John Dryden, skilled in the theory, computed the nativities of his children, and foretold certain severe accidents to his son Charles.

Astrology has exerted great influence upon language and literature. Many of the words most frequently used are derived from astrology or kindred subjects — *augur*, *augury*, *auspices*, the common word *talisman*, and especially *influence*. In literature appeals to the heavens are common, as well as references to the stars as sources of prosperity.

Trench says we seem to affirm that we believe that

> the planet under which a man may happen to be born will affect his temperament, will make him for life of a disposition grave or gay, lively or severe. . . . For we speak of a person as "jovial," or "saturnine," or "mercurial"— jovial as being born under the planet Jupiter or Jove, which was the joyfullest star and of the happiest augury of all; a gloomy, severe person is said to be "saturnine" as born under the planet Saturn, who was considered to make those that owned his influence, and were born when he was in the ascendant, grave and stern as himself; another we call "mercurial," that is, light-hearted, as those born under the planet Mercury were accounted to be. The same faith in the influence of the stars survives, so far at least as words go, in "disaster," "disastrous," "ill-starred," "ascendant," "ascendancy," and, indeed, in the word "influence" itself.*
>
> Or, again, do we keep in mind, or are we even aware, that whenever the word "influence" occurs in our English poetry, down to a comparatively modern date, there is always more or less remote allusion to the skyey, planetary influences supposed to be exercised by the heavenly luminaries upon men? How many a passage starts into new life and beauty and fullness of allusion, when this is present with us. Even Milton's
>
> Store of ladies, whose bright eyes
> Rain *influence*,
>
> as spectators of the tournament, gain something when we regard them — and using this language, he intended we should — as the luminaries of this lower sphere, shedding by their propitious presence strength and valor into the hearts of their knights.†

If we turn to Shakspere, we find the belief molding some of his most beautiful expressions:

> Comets, importing change of times and states,
> Brandish your crystal tresses in the sky.

When *Romeo* and *Juliet* are married the prayer is:

> So smile the heavens upon this holy act,
> That after hours with sorrow chide us not.

In one of the most frequently quoted passages of Shakspere the astrological reference is generally omitted:

> In my stars I am above thee: . . . some are born great, some achieve greatness, and some have greatness thrust upon them.

* Trench, "On the Study of Words."
† Trench, "English Past and Present."

From Byron astrologers quote a fine passage, using it as though he were a believer:

> Ye stars! which are the poetry of heaven,
> If in your bright leaves we would read the fate
> Of men and empires — 't is to be forgiven
> That, in our aspirations to be great,
> Our destinies o'erleap their mortal state,
> And claim a kindred with you; for ye are
> A beauty and a mystery, and create
> In us such love and reverence from afar,
> That fortune, fame, power, life, have named themselves a star.

Dante, writing of Mars, says:

> With him shalt thou see
> That immortal who was at his birth impressed
> So strongly with this star, that of his deeds
> The nations shall take note.

And speaks in another place thus:

> Where the planets roll
> To pour their wished influence on the world.

Longfellow, in a passage which has touched many a parent's heart, says:

> O child! O new-born denizen
> Of life's great city! on thy head
> The glory of the morn is shed,
> Like a celestial benison!
> . . . . . .
> By what astrology of fear or hope
> Dare I to cast thy horoscope!

What is astrology? According to Zadkiel's "Grammar of Astrology" the science consists of four branches or distinct parts, which are essentially different from each other. These are: *Nativities*, *Mundane Astrology*, *Atmospheric Astrology*, and *Horary Astrology*.

Nativities comprise "the art of foreseeing, from the figurings of the heavens at the moment of birth, the future fate and character of individuals."

Mundane Astrology is "the art of foreseeing, by the positions of the heavenly bodies at certain periods, the circumstances of nations, such as wars, pestilences, inundations, earthquakes, etc."

Atmospheric Astrology, Zadkiel defines as "the art of foreseeing, by the positions of the planets at the periods of the sun and moon being in mutual aspect, and some other circumstances, the quality of the weather at any required time or place."

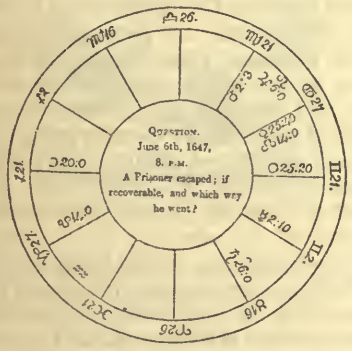
Horary Astrology is "the art of foreseeing, by the positions of the heavens at any period when an individual may be anxious about the matter, the result of any business or circumstance whatever."

Concerning Atmospheric Astrology, which is merely a system of meteorology based on the theory that the changes of the weather are produced by the influence of the planets, I shall say nothing. Mundane Astrology is in

some respects more complex than either Nativities or Horary Astrology.

The nature of the influence of the heavens upon human destiny has been differently taught by different astrologers, some claiming that the heavens merely exhibit the signs of events, so that when these are properly interpreted the future can be foretold, and others holding that they are the causes of the events. Most, however, seem to believe that they are both.

The calculations of astrology are made by means of the sun, moon, and planets, the signs of the Zodiac, and the various aspects and relations of the planets. To work the problems, a "figure of the heavens" is drawn. This is merely a map to represent the heavens at any particular moment, such as when a child is born, a question asked, etc. It is made by drawing three circles and then drawing lines to represent the horizon, and others at right angles with them to represent the meridian. Thus will be shown the natural divisions formed by the rising and setting of the sun, and by his passing the meridian at noon and midnight. Each of these quarters or quadrants is to be divided again into three equal parts, forming the twelve houses. The following figure, from Lilly's "Introduction to Astrology," exhibits the method:



In calculating a *nativity* the horoscope must be cast for the instant the child is born, and the figure show exactly the state of the heavens at that instant as viewed from the place of birth: the signs of the Zodiac and the planets, with their latitudes, declinations, etc., have to be determined, and the figure when completed must exhibit all these. This is difficult, and cannot be done without a knowledge of astronomical tables.

Suppose, then, the figure completed; what is the method of judging? Here we enter the most interesting part of the subject. From the time of Ptolemy down to the present, a system of significations has existed. These significations, which have been more or less changed and modified by the various astrologers who have arisen since his time, are assigned to the signs of the Zodiac, and also to the planets and to their relations to each other and to the Zodiac. Aries, one of the four cardinal signs, influences Britain, Germany, Denmark, Lesser Poland, Burgundy, Palestine, Syria, and Judea. Astrologers go so far as to specify towns: Naples, Capua, Florence, Verona, Padua, Brunswick, Marseilles, Cracow, and Utrecht. Gemini relates to the north-east coast of Africa, Lower Egypt, Flanders, Lombardy, Sardinia, Brabant, and Belgium. It is of particular interest to us because it rules the west of England and the United States. London, Marseilles, and other cities also come under its sway, and, the "Science of the Stars" modestly says, "perhaps Melbourne."

Astrologers hold that the signs of the Zodiac affect not only nations, but individuals — that Aries, for example, produces a spare and strong body, of stature rather above the average, face long, eyebrows bushy, neck long, etc.; while Taurus gives a middle stature, thick, well-set body, broad forehead, full face and prominent eyes, neck and lips thick, nose and mouth wide. Aries governs the head and face of man; and the diseases it produces (when evil planets are located in it) are small-pox, measles, ringworm, apoplexy, palsy, etc. Gemini governs the arms and shoulders. Its diseases are brain-fever, croup, fractures of the head, arms, etc.

Certain planets are called *malefics*. These are Mars, Saturn, and Uranus. Venus and Jupiter are specified as *benefics*. A planet is spoken of as being *afflicted* whenever the malefics are in certain relations to it, and as being free from affliction when the benefics are in these relations. Of the sun they say that if it is afflicted at birth the tendency is to the destruction of life. In order to have great prosperity, both the sun and the moon must be free from affliction; and if both are afflicted, the person will have a life-long struggle. If the sun is in good aspect with Mars, the child born will be very fortunate in war, surgery, chemistry, etc.; if it is in the zenith and free from affliction, he will have a great public career. If it is rising at the birth, it makes him bold, courageous, and proud. But if it is afflicted by Saturn, he is liable to consumption or paralysis; if by Mars, he will be cruel and blood-thirsty, unless Jupiter happens to assist the sun. If the moon is properly related it has a good, but if otherwise an exceedingly bad, effect. Its diseases are rheumatism, consumption, palsy, lunacy, scrofula, small-pox, and dropsy.

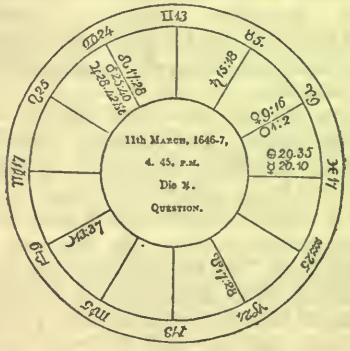
There are certain "eminent" fixed stars, to which great significance is attached. Some of

these are Aldebaran, Hercules, and Regulus. Alfred J. Pearce predicts that when "the martial star Aldebaran (α Tauri), of the first magnitude, shall arrive at 17 degrees, 54 minutes, Gemini, 700 years hence, there will probably happen a fearful conflagration in if not the total destruction of London." This is safer than anything which Professor E. Stone Wiggins has as yet attempted, since the author of the "Science of the Stars" will not be upon the scene at that time to rejoice at the fulfillment of his prophecy or mourn over the destruction of London.

When the figure is completed, and the positions and aspects of the planets are duly marked, the preparation is made to form a judgment.

The exact way of judicature in astrology is, first, by being perfect in the nature of the planets and signs; secondly, by knowing the strength, fortitude, or debility of the significators and well-poise of them (that is, the various rules, directions, aspects, etc., and several mixtures in your judgment); thirdly, by applying the influence of the figure of heaven erected and the planets' aspects to one another at the time of the question or nativity.*

To make the proper calculation is a work requiring experience.



The above is the famous figure which William Lilly drew to decide whether Presbytery should stand in England. Zadkiel adduces this figure with the judgment pronounced upon it as a decisive proof of the science, and of its ability to decide the most important questions, both public and private.

To demonstrate the truth of astrology its votaries appeal to the history of England for the past six hundred years. Aries is the principal sign influencing England. Saturn is a malefic planet, and they assign various coincidences of misfortune to England during the times "Saturn" was in "Aries," of which I give a few. In 1290, the desperate war with the Scots was waged by Edward I. and the English army defeated at Roslin, near Edinburgh; in 1378, the rebellion by Wat Tyler; in 1555, Queen Mary's time, 277 persons burned at the stake; in 1643, civil war between Charles I. and Parliament. The whole list is remarkable.

On the other hand, in 896 Jupiter was in Aries, and King Alfred beat the Danes; in 1215 King John signed the Magna Charta; in 1856 peace was signed between the allies, and the Crimean war ended; in 1868 the tide of prosperity set in.

An important incident is related to the United States. Gemini rules the United States and also the west of England. The rebellion of the American colonies coincided with the transit of Uranus through the sign Gemini; and on the very next occasion, as the "Science of the Stars" points out, when the same planet passed through the same sign, 1859 to 1866, the American civil war waged four years. During the same time the west of England suffered fearfully from the cotton famine, nearly a million people being in a state of semi-starvation.

Of the eclipses in their relation to Mundane Astrology the following illustrations may serve: On April 10, 1865, there occurred a partial eclipse of the moon at Washington; Jupiter was in the ascendant in Sagittarius, and about that time General Lee surrendered to General Grant. They make the point also upon the death of President Garfield, that in the midheavens of his horoscope the comet B appeared, and that this same comet was seen in the second decanate of Gemini on the 22d of May, and on the 2d of July, 1881, Garfield was shot.

Another class of coincidences is striking. It is claimed by astrology that mental disease is likely to occur when Mars and Saturn — to which modern research has added Uranus — are at birth in conjunction, quadrature, or opposition with Mercury and the moon, but Mercury more particularly. The "Science of the Stars," from which we take some of these coincidences, though it has quoted them from another work, says: "It is by no means asserted that insanity always or even often occurs with such opposition; what is asserted is, that it rarely occurs without it." This proposition should be scrutinized, for it contains a serious if not fatal weakness.

There are nine great princes notoriously insane or deficient in intellect, upon whose birth Mercury or the moon, or both, will be found to have been afflicted by Mars, Saturn, or Uranus. These are: Paul of Russia, George III. of England, Gustavus IV. of Sweden, Ferdinand II. of Austria, Maria of Portugal, Charlotte, Empress of Mexico, Charles II. of

* Lilly, "Introduction to Astrology," p. 29.

Spain, Murad V. of Turkey, and Constantine of Russia. Six persons of genius, born under the same configuration, Gérard de Nerval; Alfred Rethel, the painter of "Der Tod als Freund"; Agnes Bury, the actress; Julien; Paul Morphy, the chess-player; and Pugin, became insane. Four distinguished men who lost their faculties in old age are also given — Swift, Southey, Moore, and Faraday. The histories of the Bourbon family, as derived from documents now in the British Museum, agree with the state of the heavens at the time of their births, according to the theories of astrology; their misfortunes, insanity, violent deaths, etc., are too well known to need recapitulation. Many coincidences between the aspect of the heavens at her birth and the events of her career are found in the life of Queen Victoria.

Lilly predicted, it is claimed, in 1651 the Great Plague which occurred in London in 1665. The following is a fac-simile of the hieroglyphic of the Great Plague:

Fac-Simile of the Hieroglyphic of the GREAT PLAGUE in 1665, published by W. LILLY, in the Year 1651.

This hieroglyphic, as explained by Zadkiel,

signifies a great mortality, in which the vast number of deaths should so far exceed the supply of coffins that the dead should be buried in their shrouds, or merely stitched up in sheets, as therein rudely represented.

Lilly also predicted, in the same year, by means of an astrological hieroglyphic, the Great Fire in London, which took place September 3, 1666.

Zadkiel says that the hieroglyphic forecasting the Great Fire may be understood

by the horoscope being introduced therein, and the twins are intended to represent the sign Gemini, which in astrology is known to rule London, and the twins are, therefore, intended to denote that city. Their falling headlong into the fire signifies the extensive injury to be done to London by that element fifteen years afterwards.

The astrologers made a great deal out of these hieroglyphics, Zadkiel affirming that if there had been only these, whereas there were several others equally pointing out future events published with them, they would ever remain undeniable monuments of the author's skill and of the substantial truth of the science of astrology.

Fac-Simile of the Astrological Hieroglyphic of the GREAT FIRE in LONDON, September 3d, 1666, published by W. LILLY, in the Year 1651.

Americans cannot but be struck by a recent extraordinary coincidence. In Zadkiel's Almanac for 1886 occurs the following prediction:

Shocks of earthquake in the 77th degree of west longitude may be looked for. Great thunder-storms and waves of intense heat will pass over the States. There will be great excitement in America.

What are the facts? The terrific shocks of earthquake which visited Charleston, S. C., Washington, Richmond, Augusta, Raleigh, etc., on the night of August 31st, many lives being lost, took place in longitude 76 to 78 degrees west. Waves of intense heat passed over the States in July and August, the thermometer in the middle of the latter month in St. Louis rising to 104 in the shade. Coincidences more or less can be multiplied indefinitely, and it was by observing them that the system of astrology was constructed.

ITS PROBLEMS MERE PUZZLES.

Having traced the influence of astrology upon literature and given an explanation of the principles of the science, and an impartial outline of the supposed evidences of its truth which its professors advance, it is now necessary to subject those evidences to examination. Fortunately the cases adduced are of great historical interest, and a discussion which otherwise might be tedious is closely connected with the progress of civilization and of modern as well as ancient nations.

The ancients knew nothing of the two great planets Uranus and Neptune. Yet the "Text-book of Astrology" asserts that "the influence of Uranus is found to be very powerful in nativities, when he is angular or in as-

pect to the luminaries." Shortly after this planet was discovered, an astrologer called on an astronomer to secure his calculations of the periodical motions of Uranus, stating that it was very probable "that the want of a knowledge and use of its motions was the cause that, in judicial astrology, the predictions so often failed." The planet Neptune was discovered in 1846. The "Text-book of Astrology" affirms that "sufficient time has not elapsed to enable astrologers to determine the exact nature of Neptune's influence in nativities"; yet, the writer appropriately says, "until more experience has been gained as to his influence in nativities, it may be accepted that his general character is fortunate, and that persons born under his sway are healthy, good-natured, and romantic." When Mr. Proctor remarked, a number of years ago, "astrologers tell us now that Uranus is a very potent planet, yet the old astrologers seem to have gotten on very well without him," all that the standard authorities of the "Science" could reply was that "Democritus maintained that more planets would be discovered in succeeding ages." This is no answer to the proposition that the ancients seemed to succeed in total ignorance of the "very powerful" influence of Uranus, and the possible mighty influence of Neptune.

There are three fatal defects in the proofs they offer: (*a*) The number of instances investigated is too small to establish a law of cause and effect. (*b*) In the more remarkable predictions, reasoning upon existing conditions and tendencies, a shrewd guess or a mere coincidence can account for the fulfillment. (*c*) In the most striking cases there was ample time for the culmination of the operation of causes.

When William Lilly was examined by the British Parliament on his prophecies concerning the plague and the fire, he was thus addressed by Sir Robert Brooke:

> Mr. Lilly, this Committee thought fit to summon you to appear before them this day, to know if you can say anything as to the cause of the late fire, or whether there might be any design therein. You are called the rather hither, because, in a book of yours long since printed, you hinted some such thing by one of your hieroglyphicks.

Unto which Mr. Lilly replied:

> May it please your Honors: After the beheading of the late King, considering that in the three subsequent years the Parliament acted nothing which concerned the settlement of the nation's peace; and seeing the generality of the people dissatisfied, the citizens of London discontented, the soldiery prone to mutiny; I was desirous, according to the best knowledge God had given me, to make enquiry by the art I studied, what might, from that time, happen unto Parliament and the nation in general. At last, having satisfied myself as well as I could, and perfected myself as well as I could, and perfected my judgment therein, I thought it most convenient to signify my intentions and conceptions thereof in forms, shapes, types, hieroglyphicks, etc., without any commentary, that so my judgment might be concealed from the vulgar, and made manifest only unto the wise; I herein imitating the examples of many wise philosophers who had done the like. Having found, Sir, that the city of London would be sadly afflicted with a great plague, and not long after with an exorbitant fire, I framed these two hieroglyphicks, as represented in the book, which, in effect, have proved very true.
>
> "Did you foresee the year?" said one. "I did not," said I, "nor was desirous; of that I made no scrutiny." I proceeded: Now, Sir, whether there was any design of burning the City, or any employed to that purpose, I must deal ingenuously with you; that, since the fire, I have taken such pains in the search thereof, but cannot or could not give myself any the least satisfaction therein I conclude that it was the finger of God only; but what instruments he used thereunto, I am ignorant.

Those were troublous times; plagues were common in Europe, fires were of frequent occurrence, and modern methods of extinguishing them had not been invented.

Lilly did not pretend to have foreseen the year, or to reflect any light upon the instruments; yet he was constantly ascertaining "who stole fish" and what had become of lost dogs, and affirms that he never failed in questions of that sort. His hieroglyphics could have been applied to a variety of events. It would have been easy to interpret that which he afterwards declared foretold the Great Plague as signifying murders and the hasty concealment of bodies, or the burial of soldiers after a battle. The hieroglyphic typifying the fire could have been applied to any other of a hundred things, as falling into a fire might be made to illustrate most catastrophes.

The coincidences in English history, it is to be noted, consist of certain events drawn from a period of six hundred years, which events occurred during the progression of Saturn through Aries. Saturn remains long in that sign, and his returns are separated by a considerable time. In the confused history of England during those six centuries there were hundreds of battles and great events were numerous, and yet but thirteen of these having an evil character are produced. English history furnishes scores of disasters which occurred when Saturn was *not* in Aries. In like manner, Jupiter is in Aries every twelve years or thereabouts, and yet but seven prosperous events are produced from 1196 — nearly seven hundred years! Those mentioned are great occurrences, but during the seven centuries more than a hundred occurred when Jupiter was *not* in Aries.

It will be observed that the American Revolution did concur with the transit of Uranus through the sign Gemini, and also that the next time that planet passed through Gemini,

from 1859 to 1866, the great American civil war raged four years. But the period from 1784 to 1859 was just long enough for the causes growing out of slavery and different views of State sovereignty to culminate in a rebellion. Had the malefic planet's orbit been smaller there would not have been time enough. This is all that appears. The astrologer declares that during the same time the west of England suffered fearfully from the cotton famine. This is not wonderful, as the cotton came from the South and its ports were blockaded. Had there been no cotton-mills in the west of England, or had the war begun sooner or later, they would not have suffered at that particular time.

The death of President Garfield, considered in connection with the appearance of comet B in his horoscope and also in the year of his death, is merely a proof that between the appearances of that comet sufficient time elapsed for the infant Garfield to grow to manhood and become President and for such modification of political parties as then existed.

As to the statements concerning mental diseases, in order to give them any value thousands of cases should be adduced, and it should be proved that the majority of those who were insane were born under such aspects of the heavens, and that comparatively few born under other signs lost their reason. A score or five hundred coincidences of this kind are not sufficient to lay the foundation for a law.

The prediction of Zadkiel that earthquakes would occur in the 77th degree of west longitude, followed immediately by the earthquakes in this country, appears at first sight very remarkable. Yet to read all the predictions of Zadkiel's Almanac for 1886 and compare them with subsequent events is sufficient to dissipate any belief that there was a foreseeing of those events. The Almanac for 1886 predicted for England that an effort would be made to abolish hereditary peerages; that the revenue would not be satisfactory; that theaters would suffer; that the school-board would be in bad odor, and that certain of its members would find their chances of reëlection very perilous; that some public buildings would be destroyed in Paris by fire; that German affairs would become entangled; that socialistic proceedings would cause trouble (a thing that has been true for several years, and no more true during 1886 and 1887 than it had been). An astounding prediction was made that there would be "some trouble in the Western States and a good deal of sickness, and that the President would find his office a burdensome one." The financial condition of Mexico was to be bad. In Australia there would be trouble connected with railroads, and serious accidents were only too probable. There would be a great outbreak of epidemic diseases, and naval forces would be increased. In Ottawa the Canadian government would find it difficult to maintain peace at home and abroad; and in Paris the Communists would resort to violence and the streets would be stained with blood. In all these there is scarcely another definite prediction of importance, or a fulfillment transcending the results of ordinary sagacity in conjecturing future events.

Much was made of the prediction of Zadkiel in his Almanac for 1853 of the fate of Louis Napoleon. That prediction was in the following words:

> But let him not dream of lasting honors, power, or prosperity. He shall found no dynasty, he shall wear no durable crown, but in the midst of deeds of blood and slaughter, with affrighted Europe trembling beneath the weight of his daring martial hosts, he descends beneath the heavy hand of fate, and falls to rise no more.

Some of this language is extravagant, but as a whole it may be considered a correct description of the career and doom of Louis Napoleon. Yet Zadkiel was not alone in this prediction; for students of French history, and every one acquainted with the events of the preceding thirty years, anticipated the speedy downfall of the Empire. The observations of writers, statesmen, and philosophers concurred in the opinion that the career of Louis Napoleon would be terminated by revolution or foreign war. The world was not surprised at his overthrow, for all perceived that he lacked the genius of his great uncle, and that he had lost the power to fire the heart of his country; while the condition of France financially and morally for years was not such as to promise success in any serious conflict with any one of the great Powers. At the time of his fall, "affrighted Europe" did not tremble beneath the weight of his daring martial hosts.

From time immemorial the different characters and histories of twins have been alleged against astrology. Cicero quotes the stoic Diogenes, who, when contending against the Chaldean astrologers, says:

> For instance, two twins may resemble each other in appearance, and yet their lives and fortunes be entirely dissimilar.

The characters and careers of Jacob and Esau have been alleged against them by Mr. Proctor and others. They answer very ingeniously that a difference of five minutes in the time of the birth of twins may imply such a difference in the position of the planets

as to indicate a great dissimilarity in their careers.*

If they were willing to adhere to this proposition they would be more consistent; but they advance in proof of the truth of astrology, in all their books, many instances of twins having similar careers when it was impossible for them to procure infallible data as to the precise moment of birth, and when they knew there must have been some difference.

This subject has of late been made interesting by the manner in which the astrologers of England have made use of Francis Galton's monograph on the "History of Twins." Mr. Galton sent out circulars to persons who were either twins themselves or near relatives of twins. He received "about eighty returns of close similarity, many of which entered into instructive details." From these replies he draws various conclusions, such as that "extreme similarity and extreme dissimilarity between twins of the same sex are nearly as common as moderate resemblance." He says that when twins are a boy and a girl they are never closely alike. In the thirty-five cases of great similarity, there were seven in which both twins suffered from some special ailment or some exceptional peculiarity. They were liable to sickness at the same time in nine out of thirty-five cases. Eleven pairs out of this number were remarkably similar in the association of ideas, making the same remarks on the same occasion. In sixteen cases their dispositions were very similar. He says that only a few retain their close resemblance through life, either physically or in disposition. Again, he says that it is a fact that "extreme dissimilarity, such as existed between Jacob and Esau, is a no less marked peculiarity in twins of the same sex than extreme similarity."

Since his views were published I have observed various twins and have seen some instances of astonishing similarity, but in other children, not twins, more instances which could readily be accounted for by the law of heredity and the influence of similar surroundings and nurture. A number of instances could be given of distinguished men, now living or but recently deceased, where the physical and mental resemblances between them and their twin brothers were no greater than ordinarily exist between brothers. Is it not important in a general examination to collect with equal care instances of as great similarities between children who have the same parents but who are not twins? Harmonies of disposition, similarity of personal appearance, and devotion to each other through life have been seen between brothers and sisters, more frequently between sisters, and occasionally between two brothers.

Driven to concede these things, the astrologers in modern times have been compelled to say:

> We do not deny the existence of many difficulties and anomalies, and fully admit that astral science is incompetent to explain the divergences in the human constitution and character without a free use of the doctrine of heredity. Our contention is that the two theories complete each other, the latter accounting for the element of stability, the former for the element of variability.†

An illustration of the wild manner in which a person competent to edit Zadkiel's Almanac may reason can be found in the "Text-book of Astrology," p. 164:

> Astrologers find that unless Mars afflicts either the ascendant or luminaries at birth (or in the fatal train of directions) there is no liability to take the small-pox.

How this can be ascertained without an acquaintance with the nativities of an immense number of persons and their histories in relation to small-pox is not set forth. The investigation is so difficult that they could not possibly show that every person who ever took small-pox was born when Mars was in a certain relation to the birth. They are not kind enough to inform us whether the vaccination of persons born under these circumstances would or would not "take." They may carry it a little farther yet and dispose of the liability to hydrophobia, cholera, yellow fever, etc., in a similar way!

Here is another case from the same source. An individual was born when the sun and moon were evilly configurated with Saturn and had no assistance from Jupiter. In harmony with theories of astrology, he did not prosper in Great Britain, but afterwards went to Australia, where he became one of the wealthiest and most highly respected citizens of Melbourne. How is this explained? It is sufficiently easy:

> At his birth the planets Mercury, Venus, and Jupiter were located in the fourth house (the northern angle). By crossing the equator, and pitching his tent in a southern latitude (38°), *he inverted his horoscope* and thereby brought the *benefics* nearly to zenith.

* They state this as follows: It is well known to *accoucheurs* that the intervals between the births of twins vary greatly; in some cases three or four minutes, in other cases hours and even days. Every four minutes' interval brings another degree of right ascension on the meridian, consequently a difference of half an hour in the times of birth would make a great difference in the part of the sign of the Zodiac ascending (as one degree in arc represents one hour of life in directions) and would alter the periods of occurrence of the subsequent events. The whole sign of Aries only takes (in the latitude of London) about fifty-two minutes in ascending; hence it is evident that a difference of half an hour might give Aries at the birth of one child and Taurus at the birth of the second.

† Wilson, "Dictionary of Astrology."

When any person declines to believe in astrology, he is disposed of without difficulty. For example, Luther condemned astrology. The "Text-book" says, perhaps this was owing to the very evil horoscope assigned to him by the great Cardan, and observes that Melancthon believed in it, and that "*phrenologists* [!] will understand that Melancthon's judgment on a scientific subject is entitled to far greater weight than Luther's."

DIVINATION.

Astrologers maintain that if the coincidences had not been sufficient in number and character to prove an intimate connection between the stars and the fate of men, it would have been impossible to maintain faith in their system through so many ages. This claim is shown to be worthless by an examination of divination in general. In all countries and times divination has been practiced, and to this day maintains itself in Asia and in various parts of the continent of Europe.

Divination was practiced in almost innumerable ways, such as by observing the flight of birds, called Augury; the living human body, such as Palmistry; dead bodies, such as Aruspicy, the inspection of animals slain in sacrifice; Anthropomancy, the examination of a dead human being; by fire, Pyromancy, of which there were six varieties; by natural phenomena, thunder and lightning, air and winds and water; by mirrors and glasses; by letters and figures; and by direct appeals to chance. Besides these salt, laurel, dough and meal, verses, dreams, and consulting the dead were used.

All these and many other methods were practiced and held in the highest reverence by many poets, philosophers, and warriors of Greece and Rome and other ancient nations. And coincidences followed the predictions of the diviners as remarkable as any that astrologers boast, and by these faith was maintained. When they failed they quibbled and equivocated, after the manner of the astrologers.

Cicero's treatise "On Divination," though written so long ago, exhausts the subject. That famous work is frequently misquoted so as to place the authority of Cicero in favor of divination. It consists of an introduction, in which Cicero declares that —

> It is an old opinion derived as far back as from the heroic times, and confirmed by the unanimous agreement of the Roman people, and indeed of all nations, that there is a species of divination in existence among men which the Greeks call μαντική; that is to say, a presentiment and foreknowledge of future events. A truly splendid and serviceable gift if it only exists in reality.

In testing this opinion he represents a discussion between his brother Quintus and himself. Quintus affirms that all nations have believed in divination. He asserts that when the statue of Plato, which stood on the top of the temple of Jupiter, was struck by lightning, and the head of the statue could not be found, the soothsayers said that it had been thrown down into the Tiber, and it was found in that very place; and that King Deiotarus never did anything without taking the auspices. An instance which he emphasizes is told of Tiberius Gracchus, an augur of the highest reputation, who, when two snakes were caught in his house, convoked the soothsayers. The answer which they gave him was that "if he let the male escape, his wife would die in a short time; but if he let the female escape, he would himself die: accordingly he let the female escape and died in a few days." One of the most striking passages concerns the oracle at Delphi:

> Would that oracle at Delphi have been so celebrated and illustrious, and so loaded with such splendid gifts from nations and kings, if all ages had not had experience of the truth of its predictions?

Some theologians, who should know better, to this day quote this passage for their own purpose, and attribute it to Cicero.

When Cicero replies he opens with metaphysical considerations, maintaining that if things come by chance they cannot be divined, and if by fate they cannot be changed. He then considers the inspection of the entrails of victims and says:

> Could you persuade any man in his senses that those events which are said to be signified by the entrails are known by the augurs in consequence of a long series of observations? How long, I wonder? For what period of time have such observations been continued? What conference must the augurs hold among themselves to determine which part of the victim's entrails represents the enemy, and which the people; what sort of cleft in the liver denoted danger, and what sort presaged advantage?

On the subject of the ox without the heart he asks:

> How is it that you think it impossible that an animal can live without a heart, and yet do not think it impossible that its heart could vanish so suddenly, no one knows whither? For myself I know not how much vigor is necessary to carry on vital function, and suspect that if afflicted with any disease, the heart of a victim may be found so withered, and wasted, and small as to be quite unlike a heart.

He then tells him that in trying to prove the truth of the auguries he is overturning the whole system of physics; and concludes his argument in these words:

> After having thus destroyed divination by the inspection of entrails, all the rest of the science of the soothsayers is at an end.

Of the head which was discovered he says:

> Oh! But a head was found in the Tiber. As if I affirmed that those soothsayers had no skill! What I deny is their *divination*.

He quotes the old saying of Cato, familiar enough to everybody, that

> he wondered that when one soothsayer met another he could help laughing. For of all the events predicted by them, how very few happened! And when one of them does take place, where is the proof that it does not take place by mere accident?

Cicero had little respect for the oracle of Delphi. He thus attacks it:

> I now come to you,
> Apollo, monarch of the sacred center
> Of the great world, full of thy inspiration,
> The Pythian priestesses proclaim thy prophecies.
>
> For Chrysippus has filled an entire volume with your oracles, many of which, as I said before, I consider utterly false, and many others only true by accident, as often happens in any common conversation. Others, again, are so obscure and involved that their very interpreters have need of other interpreters; and the decisions of one lot have to be referred to other lots. Another portion of them are so ambiguous that they require to be analyzed by the logic of dialecticians. Thus, when Fortune uttered the following oracle respecting Crœsus, the richest king of Asia,
>
> > When Crœsus has the Halys crossed,
> > A mighty kingdom will be lost,
>
> that monarch expected he should ruin the power of his enemies; but the empire that he ruined was his own. Whichever result had ensued, the oracle would have been true.

The use I make of divination is to show that in its diversified forms it was sustained by means similar to those employed by astrologers, and exerted the same kind of influence over the minds of men. Its supports were the occasional occurrence of striking coincidences which the superstition of the people accepted, while they were prevented from carefully examining the whole subject, both by fear of the consequences of unbelief to themselves personally, and by their habit of mind, which was in all respects the reverse of scientific. Also, many of the most powerful intellects were paralyzed by the opinion that if divination were given up belief in the gods must be renounced, and from that they shrank.

Many astrologers and diviners were undoubtedly wise men, acquainted with the laws of physics so far as they had been discovered, and with the progress of war and current events. They were as able to form rational conjectures of the future as any of their contemporaries. Some of them were masters of magic, very skillful in sleight-of-hand, and were also capable of practicing ventriloquism. When they exercised this knowledge and these powers they credited it to astrology or to the method of divination which they employed. As Lilly naïvely says, they saw by "*discretion* as well as art." The knowledge which they possessed in common with all persons of equal attainments, and the peculiar skill gained by long practice in observing the probable course of events, together with coincidences with casual but no causal connection, account for the apparent fulfillment of astrological and similar predictions.

To those who deny this *there exists the same reason for believing in the various forms of divination as in astrology.*

COINCIDENCES.

Suspicion may arise that this theory places a burden upon the possibilities of fortuitous coincidence which it is not able to support. It is therefore necessary to show that coincidences are far more frequent and astonishing than is generally supposed.

Coincidences in names are of such frequent occurrence as to be familiar; but some of them are surprising. Daniel Webster married Catherine Le Roy. A few months since in Boston a suit was noticed, the parties to which were Daniel Webster and Catherine Le Roy. The First Unitarian Church of the city of Baltimore was attended for more than forty years by a gentleman recently deceased. From that pulpit he heard discourses by Doctors Furness, Bellows, Sparks, Burnap, and Greenwood. Two were settled pastors; the others, eminent men who appeared on various occasions. In Guilford, Conn., till within a few years, the Second Congregational Church had had but three pastors in its entire history — Root, Wood, and Chipman. This society resulted from a disturbance in the First Church, and when Mr. Root was about to be installed, one of the members of the First Church, with equal bitterness and wit suggested a text, "And I saw the wicked taking root." Not many years since the city of New York had attention drawn to the names of four great criminals whose names contradicted their characters — Charles Peace, who had personated a clergyman, was hung for murder in England; Angel was the name of a defaulting cashier; John Hope, of one of the robbers of the Manhattan Bank; and the Rev. John Love was deposed for crime. On the day that the Hon. John P. Hale died, the schooner *John P. Hale* ran ashore on a reef called Norman's Woe. When James Buchanan was President of the United States, a ship-of-war was named after his niece, the accomplished Miss Harriet Lane. The officer in command was Henry Wainwright. An accident happened to that

vessel about the same time that Henry Wainright of England murdered a Miss Harriet Lane. The papers that announced the accident to the ship gave in another column the details of the murder.

The superstitions concerning dates occasionally exhibit remarkable coincidences. Thirty-three sovereigns have ascended the English throne since the time of William the Conqueror, every month except May witnessing the coronation of one or more; that month, not one. In the lives of men extraordinary coincidences often occur on particular days of the week.

Friday, commonly counted unlucky, in the early history of the United States seems to be a day of good fortune. The "Norfolk Beacon," many years ago, gave the following list of fortunate events in early American history which occurred on Friday:

On Friday, August 3, 1492, Christopher Columbus sailed on his great voyage. On Friday, October 12, 1492, he first discovered land. On Friday, January 4, 1493, he sailed on his return to Spain, which, if he had not reached in safety, the happy result would never have been known which led to the settlement of this vast continent. On Friday, March 15, 1493, he arrived at Palos in safety. On Friday, November 22, 1493, he arrived at Hispaniola, on his second voyage to America. On Friday, June 13, 1494, he, though unknown to himself, discovered the continent of America. On Friday, March 5, 1496, Henry VIII. of England gave to John Cabot his commission, which led to the discovery of North America. This is the first American state paper in England. On Friday, September 7, 1565, Melandez founded St. Augustine, the oldest town in the United States. On Friday, November 10, 1620, the *Mayflower* made the harbor of Provincetown; and on the same day was signed that august compact, the forerunner of our present glorious Constitution. On Friday, December 22, 1620, the Pilgrims made their final landing at Plymouth Rock. On Friday, February 22, 1732, George Washington, the father of American freedom, was born. On Friday, June 16, Bunker Hill was seized and fortified. On Friday, October 7, 1777, the surrender of Saratoga was made, which had such power and influence in inducing France to declare for our cause. On Friday, September 22, 1780, the treason of Arnold was laid bare, which saved us from destruction. On Friday, October 19, 1781, the surrender of Yorktown, the crowning glory of the American arms, occurred. On Friday, June 7, 1776, the motion in Congress was made by John Adams, seconded by Richard Henry Lee, that the United Colonies were, and of right ought to be, free and independent. Thus, by numerous examples, we see that, however it may be with foreign nations, Americans never need dread to begin on Friday any undertaking, however momentous it may be.

Impressive coincidences have occurred in the words of parts performed by actors in their last appearance on the stage previous to death or attacks of fatal illness. The same is true of clergymen whose texts for their last sermons, and frequently the very words which they uttered before being stricken with paralysis or apoplexy, have been singularly appropriate. An appalling instance occurred in a certain church near New York. Nearly fifty years ago, its pastor stood in the pulpit reading the stanza,

> Well, the delightful day will come
> When my dear Lord shall take me home,
> And I shall see his face.

At this point he was smitten with paralysis and soon ceased to breathe. Thirty-three years afterward, another pastor standing in the same pulpit, reading the same stanza, was also smitten and removed to die.

In marriages, both in the beginning and progress of the attachment, opportunities that are called casual, or coincidences in times, places, and circumstances of meeting, have to all appearance in many, if not in most cases, influenced the fate of the "high contracting parties" more powerfully than anything which they had intentionally arranged. Indeed, many persons when doubting the wisdom of a proposed marriage, encourage themselves in the belief that it was "meant to be," or that it was "providential," by recalling such circumstances.

How often resemblances of persons in no way related confuse the question of identity. Detectives frequently unravel difficult problems by their skill and sagacity, but owe their success in many cases to chance coincidences. Such happenings are of assistance to lawyers, and by them desperate cases are saved. Every lawyer of large practice has a list of anecdotes of this sort with which he delights young "limbs of the law."

In an unsigned article appearing in the "Cornhill Magazine" in 1872, which is now known to have been written by Richard A. Proctor, from the fact that he has incorporated it nearly all verbatim, without quotation, in his last work, is given a case which "relates to a matter of considerable interest apart from the coincidence." I condense the account.

Dr. Thomas Young was endeavoring to interpret the inscription of the famous Rosetta Stone. Sir George Francis Grey placed in Dr. Young's hands some of the most valuable fruits of his researches among Egyptian relics, including fine specimens of writing on papyrus, which he had purchased from an Arab at Thebes in 1820. Before this reached Young, a man named Casati had arrived in Paris bringing with him from Egypt a parcel of Egyptian manuscripts, among which Champollion observed one which bore in its preamble some resemblance to the text of the Rosetta Stone. Dr. Young procured a copy and attempted to translate it; then Sir George gave him the new papyri. He discovered that this document was a translation of the enchorial manuscript of Casati, and says: "The most extraordinary chance had brought unto me the possession of a document which was not very likely ever to have existed, still less to have been preserved uninjured, through a period of nearly two thousand years; but that this very extraordinary translation should have been brought safely to Europe, to England, and to me, at the very moment when it was most of all desirable to me to possess it, as the illustration of an original which I was then studying, but

without any other reasonable hope of comprehending it — this combination would, in other times, have been considered as affording ample evidence of my having become an Egyptian sorcerer."

Mr. Proctor regards this as most extraordinary.

Such coincidences are not very uncommon. About fifteen years ago seven old friends, who had casually met, were dining together at one of the hotels in the city of New York. The subject of spiritualism was introduced; the extraordinary "manifestations" given by Charles Foster were discussed, and one of the party said, "I don't believe in spiritualism, but the blood-red writing which Foster shows upon his arm, in which the name of a deceased friend of the visitor appears, confounds me." Having investigated the subject, I ventured to say that was not difficult to explain; when another member of the party said, "Oh, yes, it has been exposed in the United States courts." This remark excited great attention. He then stated that Colchester, a medium, was famous for producing the same phenomenon, and that the internal revenue officers had notified him to take out a license as a juggler. He put in a defense that he was not a juggler, but a spiritual medium; and that those things were done, not by his own personal procurement, but by supernatural beings. Prior to this time, Colchester had made an arrangement with a famous prestidigitator to travel with him in Europe and give exhibitions in which Colchester was to perform this feat. During their intimacy he explained to the professional wizard how it was done. Afterward Colchester became too intimate with alcoholic spirits and the tour abroad was abandoned. The revenue officers had become aware of this, and the wizard was summoned as a witness for the Government. He not only explained how it was done, but did it in the presence of the court and jury.

Now comes the strangest part of the story. Three years afterward, while I was calling at a large furniture store in a city which I was not in the habit of visiting more than once in two or three years, a gentleman entered on business and the proprietor excused himself for a few minutes. On his return he said, "That was rather singular business on which I was called away. The gentleman you saw is the famous wizard ——. He wishes to rent some furniture for use in his performances here." I recognized the name of the man, whom I especially wished to see, to ascertain whether Colchester's methods and those of Foster were similar, and whether the results of my investigation were confirmed. At my request he was recalled and performed the feat — first with such rapidity of action as to invest it with all the mystery which perplexed most and appalled some of Foster's visitors; afterward more slowly, explaining the successive steps.

Such things occur with more or less frequency to every student, investigator, or professional man.

The science of medicine affords many examples. Ancient remedies, deemed of the utmost importance, are now utterly discarded; but they were long supported by coincidences. Men took them and recovered, the inference being that they were cured by them. Now a wider generalization and a more accurate induction establish either that they were inert, or that the patient recovered in spite of them. Great modifications have taken place in the most enlightened medical opinion in regard to the use of water in different diseases, and the relative value of bleeding and the occasions in which it is indicated. The growth of the idea that one or two remedies are sufficient for every disease is one, and the list of thousands of specifics for ten times that number of symptoms is another, illustration of deception by coincidence. In 1813 Sir Benjamin Brodie published a work on the diseases of the spine and joints, lauding the advantages of calomel, setons, blisters, and bleeding, with long confinement to a recumbent position. In 1834, in a new edition, he confirmed what he had enforced twenty-one years before. In 1850 he thus recants:

A more enlarged experience has satisfied me that, in the very great majority of instances, this painful and loathsome treatment is not only not useful, but absolutely injurious. For many years I have ceased to torment my patients thus afflicted in any manner.

In the realm of pure chance it is impossible to fix the limits of coincidence. Mr. Proctor's recent work, "Chance and Luck," quotes from Steinmetz this fact:

In 1813 a Mr. Ogden wagered one thousand guineas to one that *seven* could not be thrown with a pair of dice *ten* successive times. The wager was accepted (though it was egregiously unfair); and, strange to say, his opponent threw *seven* nine times running. At this point Mr. Ogden offered four hundred and seventy guineas to be off the bet. But his opponent declined, though the price offered was far beyond the real value of his chance. He cast yet once more and threw nine, so that Mr. Ogden won his guinea.

Commenting on this, Mr. Proctor says:

Now here we have an instance of a most remarkable series of throws, the like of which has never been recorded before or since. Before they had been made it might have been asserted that the throwing of nine successive sevens with a pair of dice was a circumstance which chance would never bring about; for experience was as much against such an event as it would seem to be against the turning up of a certain number ten successive times at roulette. Yet experience now shows that the thing is possible, and if we are to limit the action of chance we must assert that the throwing of seven ten times in succession is an event which will never happen.

I will present one more, which I think will justify the assertion that no coincidence more wonderful has ever occurred. The article was found by me in an Italian paper while Louis Napoleon was in prison at Wilhelmshöhe. If it has ever appeared in English it has escaped my notice.

THE LETTER M AND THE NAPOLEONS.

Marbœuf was the first to recognize the genius of Napoleon at the École Militaire, Marengo was the greatest battle gained by Bonaparte, and Melas opened to him the way into Italy. Mortier was one of his first generals, Moreau betrayed him, and Murat was the first martyr in his cause. Marie Louise partook of his highest destinies, Moscow was the abyss in which he was engulfed. Metternich conquered him on the field of diplomacy. Six marshals (Massena, Mortier, Marmont, Macdonald, Murat, Moncey) and twenty-six of his generals of divisions had names beginning with the letter M. Murat, Duke of Bassano, was the counselor in whom he placed the greatest confidence; his first great battle was that of Montenotte, his last that of Mont-Saint-Jean. He gained the battles of Moscow, Montmirail, and Montereau. Then came the assault of Montmartre. Milan was the first enemies' capital and Moscow the last in which he entered. He lost Egypt through the blunders of Menou, and employed Miollis to make Pius VII. prisoner. Malet conspired against him; afterwards Marmont. His ministers were Maret, Montalivet, and Mollien. His first chamberlain was Montesquieu, his last sojourn Malmaison. He gave himself up to Captain Maitland. He had for his companion at St. Helena Montholon, and for his valet Marchand.

If we examine the history of his nephew Napoleon III. we find that the same letter has no less influence, and we are assured that the captive of Wilhelmshöhe attaches still more importance to its mysterious influence than did his uncle. The Empress, his wife, is a Countess Montijo; his greatest friend was Morny; the taking of Malakoff and of the Mamelouvert the principal exploits of the Crimean war,—exploits due chiefly to the French. His plan in the Italian campaign was to give the first battle at Marengo, but this was not fought until after the engagement of Montebello at Magenta. McMahon received for the important services rendered by him in the battle the title of Duke of Magenta, as Pélissier received for a similar service that of Duke of Malakoff. Napoleon III. now made his entry into Milan and repulsed the Austrians at Melegnano.

After 1866 the letter M seems to have become for him a presage of misfortune. We pass over Mexico and Maximilian, and take the present war, in which he had founded a vain hope on three M's — Marshal McMahon, Montauban, and the Mitrailleuse. Mayence was to have been the base of operations for the French army, but, repulsed on the Moselle, his fate was decided upon the Meuse at Sedan. Finally we have to mention the fall of Metz. All these disasters are due to another M, the enemy of Napoleon — and this is a capital M — Moltke.

These incidents must be sufficient to show that, excluding wise forecasts and self-procured fulfillments, we do not place too great a burden upon coincidences when we attempt by them to account for the specious evidences of astrology and divination.

The following principles concerning coincidences will be found reliable as working laws:

First. As a general proposition, the law of coincidences is that when two phenomena always coincide they are either connected as "cause and effect" or are the "effect of a common cause." But if they do not always coincide, neither of these is proved. They may then be the effects of separate causes working in their respective planes.

The first question is, Do the phenomena always coincide? The importance of a wide generalization is often lost sight of, and erroneous conclusions are asserted with all the confidence of demonstration. A physician who lives near the sea says that during the past five years he has noted the hour and minute of death of ninety-three patients, and that every one has "gone out with the tide" save four, who died suddenly by accident. Yet about thirty-two years ago, a writer in the English "Quarterly Review" claimed to have ascertained the hour of death in 2880 instances of all ages. His observations show that the maximum hour of death is from 5 to 6 o'clock A. M., when it is 40 per cent. above the average; the next during the hour before midnight, when it is 25 per cent. in excess. Between 9 and 10 o'clock in the morning it is 17½ per cent. above, but from 10 A. M. to 3 P. M. it is 16½ per cent. below the average. From 3 to 7 in the afternoon the deaths rise to 5½ per cent. above the average, and then fall from that hour to 11 P. M., averaging 6½ per cent. below mean. It is probable that both these observations are worthless in view of the small number of instances covered. It is clear that they do not concur; yet, taken separately, each would seem conclusive.

Second. Astronomical predictions are based upon a series of unvarying coincidences, in most cases in harmony with laws whose operations can be tested at any time. If these phenomena were irregular and unclassifiable such predictions would be wholly uncertain; but because they usually coincide, — and when they do not, interfering causes can be traced,—eclipses can be foretold for thousands of years in advance, and discoveries such as those of Uranus and Neptune can be made.

Third. Chemistry and cognate sciences also work with fixed phenomena, so that when the most diverse elements are combined and effects observed, formulæ can be deduced by which at all times the same effects can be produced.

Fourth. Many of the most wonderful inventions have been made by seeming accident; for example, photography. But reflection upon the accident reveals the cause; the cause and the effect are seen to be *scientific* coinci-

dences, and the art with its principles and practice is the result.

Fifth. The performances of jugglers are in harmony with the established methods of nature. The charm of their exploits is in the successful concealment of the causes, rapidity of motion, distraction of attention, and shrewdly contrived illusions of the senses.

Sixth. It is essential to remember that the so-called "laws of chance" reflect no light on the order of sequence. It may be rendered probable by those laws that a certain event will not occur on the average more than *once* in a *million* of times; but this gives no assistance in determining the order in which any two occurrences will take place. Thus, if it be shown that an event will occur once in a million of times, in the first million it may be the last in the series, and in the second it may be the first; and that will bring them side by side. Many years ago there was a famous lawsuit in New England. A wealthy woman died leaving large sums for benevolent purposes, and to her niece — already very rich — almost a million of dollars. The niece made strenuous efforts to break the will. A codicil was produced, the signature of which was found to be exactly like another signature of the testatrix. It was hinted, if not explicitly charged, by the counsel for the will that it was a forgery. Professor Peirce of Harvard University was brought in as a witness. He testified that not more than once in many millions of times would two signatures of the same person be written precisely alike. From this it was designed to raise the presumption that where there is an exact coincidence it must have been done by tracing. The court sustained the will on other grounds, and declined to decide that question. But the force of a presumption of this kind is much weakened, if not destroyed, by the fact that all to which Professor Peirce testified might be true, yet the two similar signatures might occur in the same month. Mr. Proctor states it thus:

> The balance is restored just as chance directs. It may be in the next thousand trials, it may not be before many thousands of trials. We are utterly unable to guess when or how it will be brought about.

The business of life insurance can be carried on with certainty, provided the system be constructed upon averages deduced from a sufficiently large number of lives; but the employment of a smaller number would make it ruinous. It is clear that "expectation of life," so called, cannot give the slightest hint as to the probable duration of the life of any man insured under a perfectly reliable system.

Seventh. When a phenomenon is seen with which human beings are not directly connected as actual or possible agents, and which appears to be unlike the course of nature, it should be studied scientifically to ascertain its cause. By such investigations every thing now attributed to natural forces has been wrested from the domain of superstition. The work began almost contemporaneously with the historic period. Its results are now the inheritance of the school-boy. He understands the causes of many things which were formerly attributed, even in classic Greece and Rome, to supernatural interferences.

Eighth. When phenomena are presented by human beings for which no natural cause is assigned and none appears, the first philosophical inquiry is, Is this deception or jugglery? Here the question of moral presumption comes into view. Has this person a motive to deceive? Is his character such as to raise doubts whether he be honest? The peculiar influence of that phase of human nature which loves to startle, to be regarded as extraordinary, either in action, knowledge, or susceptibility, and the strange opinions and morbid conditions which give fascination to the exercise of the ability to deceive, must not be ignored. When pay is received for such performances, the presumption of dishonesty is strong. The possible paralleling of the phenomena by confessed jugglers is also an important consideration.

Assuming, however, that no presumption of jugglery or deceit can be found, the next question is, Do the phenomena go beyond what is known of the possibility of chance coincidences? Not until it is shown that legerdemain cannot produce the effects; that the most painstaking investigation can find no explanation and no antecedent in the order of nature; and, further, that the phenomena transcend the possible bounds of coincidences, is there the least presumption that the cause is supernatural. Yet comparatively few of the investigators of occult phenomena have taken pains to comprehend the facts and principles of natural science or the tricks of jugglers, — some of whom have been masters of science, — or to comprehend the vast possibilities of coincidence.

It should not be supposed that common sense and learning, without special experience, qualify persons to investigate these things. Yet physicians who would sneer with just contempt at a non-professional person who should attempt to give an opinion on a difficult question in medical science, and lawyers who would despise a layman presuming to appear as a judge of abstruse legal questions, and ministers who have given no attention to methods of deception or to the "night side of nature," will join with merchants, teachers, and farmers to pronounce upon subjects much

further removed from their spheres than the pursuits of those whom they call "laymen" are from their own; and, because they cannot see how these things can be done or explained, will give support by testimonials and affirmations of mystery to every new, or renewal of an ancient, superstition. Thus astrology and divination were maintained, and so vast structures of deception at the present day are upheld.

J. M. Buckley.

THE EUROPEAN CRAZE FOR DECORATIONS.

MANY American travelers in Europe will have noticed in the principal thoroughfares of the largest capitals a number of small but elegant shops, the keepers of which earn their living, and in many instances accumulate considerable fortunes, by the vanity, not of women, but of the stronger sex. They are decoration merchants — the jewelers of men.

There are cheap and costly orders, modern and antique orders, and probably even a greater variety than there is in jewelry for ladies. The "man of society" in Europe requires orders just as his wife requires diamonds — not that it is the fashion to wear the glittering crosses and stars in their full blaze at every picnic or *soirée*, but at all such social occasions the Continental gentleman will, according to etiquette, wear in the shape of a *boutonnière* or colored button on his coat something to indicate his possession of such crosses. The more multicolored the button or rosette, the more crosses the wearer has, and the more respected and envied he will be in a certain set. Every American traveler on the Continent has probably noticed these *boutons* on at least one man out of ten, not counting the working-classes. These distinguished people are usually the object of some slight attention on the part of the railway conductor, hotel proprietor, or custom-house official. I know several Americans who, while in Europe, imitated this European custom by wearing rosettes in the American colors in their buttonholes, and thus enjoyed the slight advantages of a "*décoré*,"— at least with those whose knowledge of the orders of chivalry is somewhat limited.

Very few — probably not more than three — decorative institutions have retained their original organization and privileges through centuries down to the present time. Curiously enough the most ancient of these institutions, the order of the Holy Sepulcher, is still existing, although in a deteriorated state. Founded with the object of defending the holy grave at Jerusalem, it exercised its holy function for many centuries under the auspices of the Patriarch of Jerusalem. But it dwindled down to a mere name when the object of its existence, the defense of the Holy Sepulcher, became unnecessary. To-day the Patriarch of Jerusalem still retains the right to confer the insignia of the order, a red enameled cross curiously shaped. Some years ago, when the "crown of thorns" and the alleged pieces of the "true cross" were exhibited at the Chapel of Notre-Dame in Paris, the knights of the order were permitted to exercise their ancient privilege of guarding the holy relics.

Probably the next most ancient order was that of the mysterious Knights of the Round Table, said to have been founded by King Arthur in 516, though it is doubtful if it ever existed in reality. The most powerful impulse for the foundation of knightly orders was the defense of Christianity against the Saracens in the Holy Land, and, later on, against the Moors in Spain. The holy cross was the ensign adopted by all, and their names and attire simply varied according to their nationality and their patron saint. To-day, the object and organization of those noble institutions is preserved by only one order — that of the Knights of St. John (or Knights of Malta). They are recognized as a sovereign body, and have their ambassadors at various courts, and in their ranks are representatives of many leading Catholic, sovereign, and aristocratic families of Austria, Germany, Italy, and Great Britain. They have retained their ancient picturesque dress and their time-honored ceremonies.

All the other orders conformed themselves to modern views and requirements, and little more remains of them than the outside insignia, the cross, conferred by the sovereign upon persons distinguished for virtue, merit, or fidelity. Among them may be counted the order of Christ (a meager offspring of the once powerful order of the Knights Templar), the Spanish orders of Alcantara, of Calatrava, and the still more ancient of St. Jacob of the Sword. Aside from these historical orders many other decorations have been founded during the past two centuries, with the object of promot-

ing all possible virtues and as a recompense for all possible merits and achievements. They are not orders in the ancient meaning of the word. Their knights have to abide by no special laws, have to render no special service—in fact, are united as a body only once a year, at a religious ceremony and a banquet. Excepting some orders, like the Marie Thérèse of Austria, whose knights receive handsome annual pensions, the only value in belonging to an order is limited to-day to the visible distinction. None but persons of great achievements in science, art, literature, or on the battle-field will, for instance, be admitted into the Prussian order of Merit or the Bavarian order of Maximilian. The number of their knights is very limited, and the knights themselves choose the persons to be proposed to the sovereign as worthy to fill vacancies.

Only a few Americans and Englishmen are possessors of decorations; which, of course, does not imply that they are devoid of either merit or vanity. The English government is at all events not guilty of any wholesale distribution of decorations, and although England possesses a number of orders, they are in most instances conferred only upon persons of high rank or of real merit, military or diplomatic, and very rarely for scientific or literary achievements.

The highest English order—and indeed ranking in the same line with the Golden Fleece of Austria or the Black Eagle of Prussia—is the well-known Garter, only conferred upon princes and persons of the highest nobility. Lord Palmerston once said, "What I like about the Garter is, that it does not require any particular merit to get it."*

I have seen the Prince of Wales attired in the full paraphernalia of a K. G. (the usual abbreviation for Knight of the Garter), consisting of black costume and knee-breeches of the time of George III., the famous garter, a blue velvet ribbon lined with leather, under the left knee. The well-known inscription on it, *Honi soit qui mal y pense*, is set in diamonds. The decoration belonging to the garter consists of an oblong gold medal worn on a blue ribbon around the neck, and showing St. George with the dragon, surrounded by the same inscription as on the garter; and, in addition, a brilliant star on the left breast, and a blue ribbon from the right shoulder to the left hip with another image of St. George suspended.

Among other English decorations the order of the Bath, mostly for civil services, and the Victoria Cross, for military valor, are the most distinguished; indeed, the letters G. C. B., K. C. B., C. B. (standing for "Grand Cross Bath," "Knight Commander Bath," and "Companion Bath" respectively), form a valuable addition to the long list of initials which is apt to form a sort of peacock's tail to the names of distinguished Englishmen. It is a sort of ribbon worn in the buttonhole of their signature. There are about half a dozen other decorations conferred in Great Britain, among them the order of the Thistle for the Scotch, and the Shamrock (or St. Patrick) for the Irish nobility. Foreigners rarely receive English distinctions of this sort.

There can be no doubt that many decorations in several large empires are conferred upon soldiers or statesmen for real merit only, especially when a council of well-known men is appointed to decide upon or recommend the investiture with this or that respected order. The Russian order of St. George, the Austrian order of Marie Thérèse, and the Prussian order of the Iron Cross, all three military distinctions, are conferred in this manner. Neither the Garter, nor the Austrian Golden Fleece, nor the Italian order of St. Annunciata can be compared with the little black iron cross, for the former are the ordinary attributes of every royal prince and every sovereign. Many of the latter receive these decorations on the day of their birth. Spanish royal babies wear the big yellow or blue ribbons on the day of their presentation to the court and state dignitaries, when but a few days old. The Iron Cross or the Cross of St. George, however, must be won on the battle-field.

Other decorations are given for universally acknowledged political or scientific achievements—in fact, for real merit in every branch of life, like the Belgian order of Leopold, and the Austrian order of St. Stephen and Leopold. Perhaps a dozen others are of equally high rank and respectability, like the Prussian Red Eagle, the Prussian order of the Crown, and others. The rulers of the central European empires and their responsible state ministers do not permit any abuse of them. It is mostly on account of the undisputed respectability of two or three different decorations in every state that speculation and abuse have found their way into the institution, and that an endless number of new decorations have been established of late. Each of the larger governments of Europe disposes of from ten to twelve different decorations, one or two for ladies of rank; while each of the minor states, down to the petty Republic of San Marino, may confer one, two, or more

*According to recent researches, the well-known story of the origin of the Garter is devoid of foundation. It was indeed King Edward III. who established the order after having used his own garter as a sign of rally at the battle of Crécy. The famous device is simply an allusion to his pretensions to the throne of France.

orders. There are but three governments in Europe which so far have been preserved from this institution — Switzerland, the principality of Liechtenstein, a patch of land fifty square miles in extent and inhabited by about 7000 people, and the nominally independent republic of Andorra.

The great scenes, however, of the decoration farce are the western and southern states of Europe, especially Turkey and Spain. In Latin countries this old European institution forms one of the secrets of the power and influence still exercised by kings and princes.

The governments of Europe dispose of about two hundred and fifty different decorations, most of them subdivided into four or five different grades — Grand Cross, Grand Officer, Commander, Officer, and Knight. Consequently, not less than about one thousand different crosses are at the disposal of the European governments, to recompense merit, reward favors, and foster the vanity of European society.

The subdivision of decorations into different degrees has its origin in the ancient knightly orders, as, for instance, the Knights of Malta, who were commanded by officers, commanders, grand officers, and grand commanders, somewhat similar to our armies. It was thought expedient to keep up these different degrees in the more modern institution of decorations, and to confer grand crosses only upon generals in command, state ministers, high court dignitaries, and ambassadors; the second degree, that of Grand Officer, is usually given to distinguished generals, princes, chiefs of departments, provincial governors; the degree of Commander is conferred upon staff officers, consul-generals, and dignitaries of similar rank; while the fourth and fifth degrees, those of Officer and Knight, are given to persons of minor rank or celebrity, however great their merits or achievements. The different degrees of decorations have also their different insignia. Thus the decoration of a Knight is usually the silver cross of the order, to be worn on a small ribbon suspended in the left buttonhole; the decoration of an Officer is worn in a similar way, but the cross is made of gold; the Commander wears a larger cross, on a broader ribbon around his neck; the distinction of a Grand Officer consists in the cross of the order placed on a silver or gold star, generally worn on the right side of the breast; while the Grand Cross or Grand Commander wears the same star on the left side of the breast. In addition, he wears the cross of the order suspended on a large, broad ribbon from the right shoulder to the left hip. On state occasions, grand crosses of several orders are also worn suspended on heavy gold chains around the neck. Sovereigns usually wear the stars of their own orders, of which they are the Grand Masters, while their royal consorts are Grand Masters of the female orders. The Emperor William is generally seen wearing the iron cross and the star of the most distinguished order of the Black Eagle. Emperor Francis Joseph invariably wears the decoration of the order of the Golden Fleece, it being one of the regulations of the order that every knight belonging to it must wear it at all times, in state or private. A similar regulation compels the knights of the Russian order of St. George to wear the cross at all times, and they would incur penalties if seen without it.

The ordinary decoration, including the ribbon, is about four inches long by three inches wide. To be able to wear all their decorations, Prince Bismarck or Count Moltke, for instance, would require a breast thirty feet in breadth. A man of merit in Europe should, however, not only be of large proportions, but also of superior strength; for the average weight of one gold grand cross is about half a pound. The aforesaid dignitaries would therefore have to carry about forty pounds, in addition to their heavy gold-embroidered uniform. Civilians are permitted to wear diminutive reductions of their orders, suspended on narrow gold chains; the stars of a Grand Officer or a Grand Cross, however, are worn in their original size.

It would be difficult to say who is the most decorated man of Europe. Each of the three emperors and the royal sovereigns of Europe average fifty grand crosses, with their respective appendages. Aside from the sovereigns and princes, I should think the most decorated man must be either Count Andrassy, the former Chancellor of Austria, or the station-master of ——, a well-known watering-place. The latter receives an average of three minor crosses annually, depending mainly on the number of sovereigns and princes visiting the place; station-masters, physicians, police commissioners, and others are in many instances remunerated for their services with crosses very much as the gate-keeper of the Castle of Chillon receives a shilling from every visiting Englishman.

Prince Gortschakoff was one of the most decorated men of his time, and I once saw at his house a large *étagère* full of the most varied crosses and stars, an exhibition similar to those at the Palais Royal. "I never wore them together," he told me, "and I suppose the first and last time will be at my funeral." (It is customary in Europe to carry all the decorations of a deceased dignitary on pillows behind the hearse.)

It is not usual for statesmen to receive foreign decorations set in diamonds or precious stones, unless there is a special object in it. About thirty years ago, for instance, the Shah of Persia began the new era of European civilization in his provinces by establishing glittering decorations. Now persons receiving a foreign decoration are not permitted to wear it, unless by special authorization of their sovereign. The newly established Oriental decorations were consequently of no value so long as the European governments withheld this authorization. In order to put the ruling men in a better disposition, the Oriental rulers tried a characteristic way of doing business by conferring upon them the grand crosses of the new decoration set in diamonds of great value. It was, however, of not much avail with many of the recipients.

Aside from the decorations at the disposal of sovereigns and governments in power, there are a number of others not officially recognized, but tolerated. Thus some benevolent societies, Italian cities, and formerly reigning families retain the right to confer titles and crosses. For instance, the royal house of Lusignan, which many centuries ago reigned over Jerusalem and Cyprus, disposes of an order; and, strangely enough, the crosses of these little princes are usually the handsomest and of the most elaborate design.

The innumerable number of crosses in existence, and the rage to obtain as large a collection of them as possible, of course causes many abuses of this ancient institution. Indeed, it is well known that quite a number of decorations can be bought for cash by persons of a certain outside respectability. Even as high a decoration as the *Légion d'honneur* has somewhat degenerated under the present republic, as has been shown by recent events. There is a proverb in France to the effect that nobody can escape death and the "Legion of Honor."

About ten or fifteen years ago the five-armed Cross of the Legion was a much-coveted decoration. The scarlet ribbon belonging to it was considered a sign of the wearer's authority or at least respectability, and the vast hordes of decoration-hunters therefore looked for another outlandish order having the same ribbon as the Legion. Several such were discovered, and the authorities of the respective states, finding their orders so much in demand, established secretly quite a tariff for the sale of the different degrees of the orders, and for years these crosses remained a source of considerable revenue to somebody.

The French authorities, noticing with surprise the sudden increase of red-lined boutonnières among the inhabitants of Paris, and discovering the real cause of this buttonhole inundation, compelled all persons possessing foreign decorations with ribbons similar to that belonging to the Legion of Honor to attach to the ribbon a diminutive cross of the same decoration, to distinguish it from the French cross. But this did not terminate the "*guerre aux boutonnières*," for instantly the decoration-hunters directed their attention to such easily obtainable foreign decorations whose ribbons contained, among other colors, at least a faint streak of red. The most welcome of these decorations was the Tunisian order of Merit, conferred with equal liberality on all respectable and deserving persons who pay hard cash for it. Its ribbons are green, with red borders. By making these borders very broad and leaving the faintest streak of green in the center, the boutonnière was made to resemble closely the Legion ribbon.

Aside from these minor decorations there are quite a number of other formerly much respected orders of knighthood accessible to the dollar, and a regular underhand traffic with them seems to have been established,—as certain European governments annually require enormous funds secretly to influence elections and the opposition press. This traffic, according to late revelations, appears to be in practice in certain powerful empires of Europe. Thus, until quite recently, a high decoration was sold to many otherwise respectable persons who paid considerable sums for it, amounting to twenty or thirty thousand dollars. The knights of this order were entitled to hereditary knighthood in their families, the commanders to a baronetcy. The ruler of the empire in question, recognizing the social danger connected with this system of ennobling, put a stop to it.

Enormous amounts of money are annually paid for these glittering stars and crosses, and quite frequently advertisements of the following style are to be found in European papers, especially in those of famous resorts or watering places:

> Any honorable person may obtain an officially recognized decoration, the ribbon of which can be worn in the buttonhole. Charges, moderate. Apply to Mr. ——, —— Street, London.

African and Asiatic monarchs, so much given to Oriental splendor and display, were not slow in recognizing the beauty of these glistening gold and silver stars. Turkey, Persia, Egypt, Tunis, Siam, Japan, China, etc., have their decorations, and the usual form of a cross being somewhat out of place with them, the form of a star is universally adopted in the Orient.

European republicanism does not appear to be incompatible with personal distinctions of

this sort, for not only did the French republic preserve the Legion of Honor, but two more decorations were recently established in that country — one for literary and artistic pursuits, to be conferred by the Secretary of Public Instruction; and another for agricultural merit, whose supreme chief is the Secretary of Agriculture. Several of the American republics have established similar decorations, as Honduras, Nicaragua, and Venezuela.

Aside from the decorations mentioned in the official "Almanac de Gotha," that old-established *vade mecum* of royalty and nobility in Europe, each government gives a number of other crosses and medals for civil and military merit, for art and science. Writers, poets, singers, and actors of reputation, and of either sex, are usually favored with a number of them; and many instances could be quoted where salaries have been paid in medals instead of hard cash. Extraordinary occasions, as the visit of a foreign monarch, the opening of a new theater, and jubilees of festival performances, are the occasions for such showers of medals, although some states confer them parsimoniously. I remember an amusing incident of this kind at the opening of a large new theater in Germany. The director of the theater was known to be an exceedingly vain man, whose gaping buttonhole was wide open, like a young sparrow's beak longing for food. He was expected to receive a little cross or medal on this occasion. After the first act of the festive opening performance, a chamberlain of the king entered the box of the director, and ceremoniously informed the latter that the king wished to confer upon him a mark of his esteem and a recognition of his services, and that he was sent to present to him the royal thanks. With this he handed to the director an elegant, small, leather case, and left. We congratulated him warmly, for at last his long-looked-for ribbon was in his hands! Was it the Crown? was it the Red Eagle? At last the case was opened with trembling hands, and the contents were found to be — a silver snuff-box! I shall never forget the manager's face at this solemn moment. Disgusted and disappointed, he left the theater and was not to be seen for several days. In the papers, however, it was jokingly reported that he had received the "Royal Snuff-box for Art and Science."

From the contents of this paper it will be gleaned that, aside from the knightly institutions of England, Germany, Austria, and some other countries, the system of decorations has deteriorated in no small degree, and in many instances is little more than a farce, unworthy the giver as well as the receiver. A few years ago, an envoy of a certain kingdom in a European capital used to pay his bills in decorations. Thus, his shoemaker, tailor, and butcher became knights, his landlord commander, of a certain order. Fortunately, "society" in Europe is well acquainted with the value of this or that distinction, and the sale of certain crosses has become a harmless sport.

Ernst von Hesse-Wartegg.

TOPICS OF THE TIME.

The Real Nature of Politics.

Stranger. And that common science which is over them all, and guards the laws, and all things that are in the State, and truly weaves them all into one, if we would describe under a name characteristic of this common nature, most truly we may call Politics. . . . This, then, according to our view, is the perfection of the web of political action. There is a direct intertecture of the brave and temperate natures, when the kingly science has drawn the two sorts of lives into communion. . . ; and, having completed the noblest and best of all webs of which a common life admits, and enveloping therein all other inhabitants of cities, binds them in one fabric, and governs and presides over them, omitting no element of a city's happiness.

Young Socrates. You have completed, Stranger, a very perfect image of the Statesman. — PLATO, *Politicus* (Jowett's translation).

Jailer. "What is your trade, Mr. Tweed?" *Tweed.* "Well, you may put me down as a Statesman."

THE degradation which has come upon the words "politics" and "politician," in their American use, their degeneration from the high estate to which the precedents of two thousand years have entitled them, mark a degeneration in political methods which deserves the attention of every lover of his country. "Politics" has become simply the work of managing a party for its own advantage, or that of its leaders; and the term "politician" is applied only to the campaign director, the local committee-man, the appointment-broker — in short, to the men who manage parties and distribute the public offices. If we wish a great public question — such as the labor question, the tariff question, the currency question, and others of the class — to be treated with ordinary common sense, we must "take it out of politics"; while if any party perpetrates a particularly mean act for mere partisan advantage, we are told that it was done for "political purposes." So evident has been the tendency that an effort has been made to differentiate terms, and, while leaving "politician" in its degradation, to use "statesman" as a designation for a real master of the art of government. But so sure are the laws which have been working in the case, that the only result has been a corresponding degradation in the new term also, and the only differentiation is this: the "politician" is still one who is "in politics" for the sake of what he can make there; while the "statesman" is now a *bouffe* politician — a politician with an element of conscious humbug about him.

All this is not due to loose thinking by Americans: this people is rather characterized by acute thinking in such matters, and the degradation of the word politician is but the outward sign and symbol of the degradation in political methods, which the people recognize as if by instinct, and which they mark by their use of the old words. It is the spoils system, combined with the lack for some years of any clearly defined issues in our public affairs, that has degraded our politics and politicians in fact as well as in name. While the chief work of Government officers is held to consist in getting and distributing offices, while matters of real public importance are neglected and not even discussed, it is inevitable that politics should be considered an inferior business, and its real nature and importance temporarily lost to view. There are, however, many signs among us now both of increased interest in politics and of a better understanding of what it really is; and with the progress of this improvement we may expect that the term will recover something of its old and honorable meaning. The recent courageous and remarkable surplus-and-tariff annual message of President Cleveland has greatly helped to lift current political discussion to a higher plane.

We purpose at this time to inquire a little more particularly what the old meaning of the term "politics" is. It has been said that politics is the government of nations; but the precise sense of so important and comprehensive a term cannot be fixed by a single phrase. To make the definition perfect, it would be necessary to state what are the true functions of government — a work of great difficulty, which we have no intention of undertaking at the present time. Again, it may be said that nations, or at least civilized nations, are governed by law; but politics, in every sense of the word, is clearly distinguished from law. It may be thought that the true function of politics, as distinguished from law, is to make new laws and amendments to old ones, so as to adapt the legal system to the wants of a changing and advancing society. And this is true; but even this does not reach the heart of the matter. The work of framing and enacting new laws would not be so difficult a task as it is, and would not excite the intellects and feelings of men as it does, if this was a complete account of it. The making of new laws, or changes in existing laws, is undoubtedly the ultimate outcome of politics; but the real nature of the work becomes apparent only when we consider why it is that new laws are needed and why it is often so difficult to get them enacted.

There are in the human soul many conflicting motives which display themselves in society no less than in individual character. Each of us has his own interests and his own views of what is desirable and right, and none of us is so absolutely right as never to do wrong to others. We are all likely not only to be mistaken in our opinions, but also to push the advancement of our interests beyond the line of strict justice to our neighbor; and hence the need of an overruling authority to maintain justice and keep all legitimate interests in harmony. Now, so far as the acts of individuals are concerned, the police and the courts are generally sufficient to maintain justice; but interests that are common to large numbers of men lead inevitably to great combinations seeking to control the law itself in their own interest, or to carry out some Government policy in which they believe. Thus the real work of politics, or statesmanship, consists in adjusting these conflicting social interests, which are too powerful for the ordinary law to control, so as to secure equal justice to all, and thus to enable all members of society to work together in harmony and for the common good. That this is the real nature of political work the political history of the world abundantly shows. The domestic history of every nation, and especially of every free nation, is full of the conflicts of interests and classes; while international politics in all ages has been little else than the endeavor to adjust the disputes which nations have had with each other.

Such being the real nature of politics in the higher and true sense of the word, it is not difficult to apply its lesson to our own affairs. American politics does not consist in winning elections and distributing offices, though these things are necessary as means to the end. It consists in harmonizing the various conflicting interests in American society; the interests of labor and of capital, of the farmers and of the railroads, of the manufacturer and of the importer, of the East and the West and the South — in short, of all classes and regions and individuals. To this end we must not only find out what laws are needed, but persuade the people to have them made; and when they are made we must have them impartially administered. This shows how important and how difficult and how dignified real politics is.

Honesty at Elections.

An editorial in the July number of The Century referred to recent addresses before the Commonwealth Club, by Mr. W. M. Ivins and Mr. J. B. Bishop, and advocated the adoption of the English system of managing elections, from the belief that its methods were far more democratic, far better calculated to obtain an expression of the general popular will and feeling, than our present unregulated system of nomination. A consideration fully as important, perhaps more important, is the probable influence of the success of Mr. Bishop's proposal (also made in a book on "Machine Politics" written by Mr. Ivins) of the best remedies for the universal evil of bribery at elections.

That the bribery of voters is an evil, and a general evil, of American elections will be the inevitable conclusion of any one who has had occasion to go below the surface of politics. And there is no truth in the common notion that the evil is peculiar to city elections, or even more common in them; the differences are only of methods. The large assessments of city elections are of course really corruption funds; but the multitude of election districts and of party employees makes it possible to bring most of the purchasable class of city voters into the actual or nominal service of one or other of the parties, and thus to cloak bribery under the form of wages. In agricultural districts bribery is not so completely disguised. The political evils of the former case are fully treated by Mr. Ivins and need not be repeated here; the purpose of this article is to show that the remedy may be successful in eliminating bribery from the elections outside of the cities.

Mommsen fastens on the appearance of organizations for traffic in votes as the first unmistakable sign of the fatal degeneration of the Roman popular body; and he traces from this the successive steps which followed

until Augustus sat in the place of the consuls, and the Republic had fallen. An American looks at the appearance of parallel evils in our own history as calls to a reformation, not as indications of the downfall of our republic. And yet the most optimistic of Americans may well see danger signals in many a sharply contested rural election. The ordinary party machinery is changed at once into something closely approximating an organization for traffic in votes; men who have taken little or no interest in more languid contests now begin to appear and reappear at the polling-places, each bringing with him, at each return, a voter of that large class of indifferent men who need the spur of personal and persistent solicitation, or a bribe, to undertake what they consider a burdensome task — for the sole benefit of the candidate for whom they are asked to vote. The appearance of bribery is always exaggerated, partly through braggadocio, partly through the desire of the "worker" to exalt himself before the party-managers and the people — there is never any fear of punishment. But there is bribery enough to be a danger, though the disgusted spectator may attempt to find comfort by persuading himself that after all, in the long run, each party will buy about the same number of votes, and the honest vote will decide the election.

Such comfort is of the very barrenest. It pays no regard to the most serious evil of all, the constantly increasing degeneration of our political ideals, with all the consequences which in practice have their root here. The degeneration of ideals shows itself in the fact that bribery is no longer confined to the originally purchasable class, the hirelings who vote for the side which bids highest; the virus has already spread farther. Political managers know that it is now not at all uncommon for well-to-do voters of good repute in the community to refuse to vote for their own party unless they are paid for the trouble of doing so; while lump sums to secure the presence of entire families at the polls have taken their place among the fixed expenses of party organizations. The venal vote may be overslaughed again and again by the honest vote; but an exclusive reliance on this remedy must result only in the decrease of the honest vote itself. And yet, what other remedy is open to us? The anti-bribery laws are notoriously the most difficult of all laws to be enforced, under present conditions. We have left the voter so utterly unguarded at the polls that the attractiveness of an offense so easy of commission quite outweighs any terrors to be found in an almost impossible detection.

How is the voter to be guarded further? In answering the question, we may as well get rid of the notion that there is honor among thieves, or among other rogues: on the contrary, the surest way to destroy the rogues' trade is to drive the rogues into a compulsory reliance upon honor, trust, and confidence. The first step of a prosecuting attorney, in attacking a criminal conspiracy, is to spread abroad the rumor that this, that, or the other confederate is about to "squeal"; he knows that it will be but a few days before one or more of the rogues will hurry to his office to anticipate the traitors by turning State's evidence. Bribery at elections is possible still, mainly because our laws release the briber from any necessity for reposing special trust and confidence in the voter whom he bribes: the briber is allowed to accompany the voter all the way to the polling-window, and to see that the vote paid for is deposited. Let communication between briber and voter be cut off for even a brief period just before the deposit of the ballot, and it is easy to see that the foundation of the trade of bribery at elections is greatly weakened.

Indirectly, then, honesty at elections outside of the cities ought to be very greatly promoted by the provisions, common to the English and Australian plans, that the voter, just before entering the polling-place to deposit his ballot, shall pass through another room and there have a few minutes of absolute seclusion. That seclusion, it is true, is primarily intended to give the voter an opportunity to prepare his ballot; but it just as certainly applies with peculiar force to a large part of our elections, in that it cuts the connection between the voter and any possible briber, and compels the latter, if he will pay money, to get in return only the bare word of the venal voter. Such an influence cannot but show itself in a steady decrease of the purchasable class, but the effects could not well stop there. Neither party dares now to enforce the statutory punishments for bribery at elections, for the offense is too common to all parties. But, as the offense itself lessens and becomes a less important weapon in the party armory, a party which feels itself to have been injured at any election by bribery will for the first time have an interest in seeing that the laws against bribery are enforced. This one provision, then, of the separation of the voter from other persons, not only makes bribery more difficult, but increases the probability of its punishment, while our present system makes the offense easy and its punishment difficult.

It is the unanimous testimony of those who have studied the working of the English and Australian laws that the complete exclusion of the voter from espionage or supervision while he is preparing and depositing his ballot has of itself put a stop to bribery.

There is, therefore, no shadow of reason why any reader, in any part of the country, should look upon the proposals of Mr. Bishop and Mr. Ivins as foreign to his interests, or as relating exclusively to New York or any other large city. The Ballot Act, on the general lines of the English statute, is essential as a foundation for the laws against bribery at elections, and it is therefore of interest everywhere. The effort is to be made, in several of our legislatures, at their sessions this winter, to pass such a ballot act, making the expense of printing and distributing the ballots a charge upon the State, providing for double rooms, or rooms with compartments, at polling-places, and securing to the voter a period of separation from all other persons while in the act of voting.

A bill providing for both these reforms was passed by one branch of the Michigan legislature last year, and we trust will be revived and made a law this year. It was based, in its main provision, upon the principles of the English law, and was the most carefully considered application of those principles to the needs of our American system which has yet been made. A similar application has been made in a bill which has been prepared for the New York legislature, and which ought to be made a law at this session. It places the expense of printing and distributing the ballots upon the State,

provides for secret ballot-rooms, with compartments in the proportion of one to every fifty voters, into which a voter can retire and, free from all observation, prepare his ballots, which he folds and deposits in the boxes. No "boss" or briber can follow him to see how he votes. As the State has entire charge of the ballots, there can be no peddlers of tickets about the polls. As the State pays the expense of printing and distributing, there will be no excuse for raising funds; and there being no funds, there will be no money with which to employ workers.

A law has already been adopted in Wisconsin, putting the work of distributing the ballots into the hands of the State, and providing for two polling-rooms, one in which sworn State officials shall distribute the ballots, and another, connected by a hall-way or passage, to which the voter shall pass and deposit his ballot without observation. But the printing of the ballots is left with the political parties, as heretofore. A bill providing for the State printing and charge of ballots was prepared, but not introduced, in the Connecticut legislature last year.

There is no State of the Union where honest and intelligent men have not reason to work for the adoption of a reform ballot act, not only as a positive good in itself, but as an essential prerequisite to the real and earnest enforcement of the laws prescribing punishments for bribery at elections.

"No Successful Substitute for Justice."

It is somewhat surprising that the agitation in favor of abolishing, by means of just laws, the disgrace of American literary piracy should have been until lately carried on almost exclusively by those supposed to be directly interested: namely, writers and publishers.

Only lately have there been signs that the clergy — the guardians of both private and public morals — take any vital interest in the subject, or that the people at large are aroused to the national dishonor. But the stolen books with which the country is deluged are read by the country. How many among our citizens are alive to the shameful fact that American pirates and the American public have for generations been living upon stolen literature? Congress has been blamed for its indifference — but who among us can escape reproach; who among us has done his whole duty in attempting to right this gigantic wrong; to wipe out this unendurable national disgrace?

Mr. Lowell, in presiding over the very successful Author's Readings in New York last November, added to the number of his admirable sayings in favor of international copyright. He repeated two most fortunate phrases of his own on this subject — phrases used by him in his notable address to a committee of Congress: "There is one thing better than a cheap book, and that is a book honestly come by"; "Our authors are the only workers among us who are forced to compete with men who receive no wages at all."

In the course of his Chickering Hall address, in which the above watch-words were again given out, Mr. Lowell said: "To steal a book I have bought is theft; to steal a book I have made — what is that?" In referring to the effect of the absence of international copyright upon the country at large, he put the question, "Whether it be prudent in a nation to allow its literature, or a great part of its literature, to be made for it by another nation — in other words, to allow the shaping of its thought, and therefore of its character, to be done by that other"? But the deepest word of all was this: "I prefer that the argument should rest, not upon interest and expediency, but upon honesty and justice. No successful substitute for justice has ever been discovered — nothing with the lasting quality of justice."

These are golden words, the key-note of a great national reform; or, to take another figure, shafts of light heralding the dawn of a new era of justice, a new era in the literature of the English-speaking race.

OPEN LETTERS.

About Mr. Irving.

A GREAT deal of space has been devoted in The Century, early and late, to the discussion of Mr. Irving's characteristics as an actor and as a manager. I should like, however, to tell briefly what it is that I like about this extraordinarily individual actor. I delight in going to see Mr. Irving; I delight more and more in going. I discover, in fact, that I give myself up more and more completely to the enjoyment of what I do find in him,— after having ceased to look for what I did not find.

Although so much has been said about Mr. Irving's pictorial qualities, I do not think that his pictorial genius is even yet duly appreciated. It is true that at times he does appear to think too much of this side of the dramatic art. But even if the virtue be overdone, for how much pleasure and satisfaction must we thank the virtue! Now, I do not refer merely to the general setting of the stage, the costumes and grouping, his own costume and get-up — all generously done and with an exquisite pictorial sense; — I mean something more subtile, more rare, and to me more remarkable than these. Mr. Irving is always making a picture of his own person, of his own figure and face: he is always in the right relation to the picture, which includes the whole stage; and the picture that he himself makes, by himself, is almost always fine. I follow him about with my eyes, fearing to miss each new, effective design. If it were pigments alone that he used, one would say that Mr. Irving had a strong feeling for landscape and was at the same time one of the most admirable figure-painters of our day. He is a master of color and of intense, picturesque expression.

I like Mr. Irving's humor. I like it immensely. It fascinates, it genuinely amuses me. It is a very individual and grotesque sort of humor. I never saw anything like it before and never expect to again. The more Mr. Irving gives me of his humor, the better I am pleased. "Jingle" races on so merrily, with such

a quick and saucy wit, that it is all over in the crack of a whip. I like the humor of Mr. Irving's *Mephistopheles*. The conception of the part is open to criticism. That uncertain-stepping, much-illuminated harlequin-devil seldom really scares me; but I often greatly admire his picturesqueness and sometimes his unearthly dignity, as when he warns his creature Faust, "I am a spirit!"— the finest piece of acting in the play; and I am entertained by his impish, satanic waggishness. It is, moreover, the humor of Irving's *Louis XI.* that adds force and humanity to the part.

In fact, I would almost wish Mr. Irving to play only a certain sort of comedy, did I not remember with what expressiveness he can interpret, in his own peculiar way, ideas of tragic intensity. Salvini is my ideal of tragedy — of perfection in detail and of sublimity in feeling. Two actors more unlike than Salvini and Irving cannot be named. But along with my most ineffaceable tragic impressions are certain memories of Irving — in "The Bells," in "Hamlet." But, no; it was not Irving, it was *Shylock* himself that I saw one night in Venice,— hunted, foiled, perplexed, dismayed; his sinister face and form sublimed for the moment by the shadow of all the woe and wrong wrought upon that race, which, in the language of Emma Lazarus, has "served through history as the type of suffering."

I like, it seems, many things about Mr. Irving aside from his managerial rôle; but I like him because he has brought before English and American audiences the world-tragedy of "Faust." He has led, as no one else has led, the English-speaking people, "the masses," to the study of Goethe's immortal poem. He has, in his own way, put a version of this work effectively upon the stage. It is right that the version and the way should be gravely reviewed, and that exceptions should be taken to them; but the obligation to Mr. Irving for what he has actually accomplished in this play, and in his whole interesting career as actor and manager in the Old World and the New, must never be lost sight of. It is for the serious, intellectual aims and accomplishments of his career that I like Mr. Irving; and, let me add, I like him too for letting us in America see, and see again, so individual and delightful an actress as Miss Ellen Terry,— one who so gracefully complements the sterner and more graphic qualities of the leading English-speaking actor-manager of our time.

G.

Miss Terry as Gretchen.

FROM Mr. Irving's production of "Faust" I brought away the deepest impression of the art value of Miss Terry's impersonation of the heroine. By her emotional genius she seemed to heighten the spiritual significance of the play. In the scene where the jewels are found, her simplicity divested the gewgaw motive of worldly taint; and at the crowning point of the action, kneeling before the Mater Dolorosa, she reached a height of human despair and devotional fervor which for its rarity on the stage and its spiritual elevation might well be noted as the greatest achievement of this remarkable actress. Coming after such a supreme revelation of human feeling, the closing scene of madness and death has in some degree the elements of an anticlimax, while the tableau at the end relieves by enforcing the sentiment of forgiveness and rest.

B.

"Lynching."

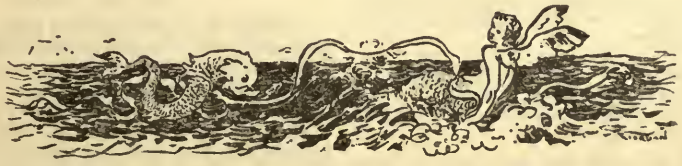
IN an open letter on the above subject published in the November number of this magazine, the writer says:

> The number of reported murders in the United States in 1882 was 1266. There were only 93 persons executed and 118 lynched,— in all, 211. Consequently. . . 1055 criminals escaped.

Judge James A. Creighton of Springfield, Ill., objects to this statement on the ground that all degrees of homicide are here classed as murders, and that the writer has made no mention of the very large number of the 1055 criminals who have been sentenced to imprisonment for terms ranging from one to ninety-nine years, or for life, according to the degree of guilt.

He also objects to calling the 118 who were lynched "escaped criminals," saying that lynching is not resorted to by men who have lost patience because criminals have escaped punishment under the law, but by men excited by aggravated cases of crime not murder, in which the law would in all probability have taken its course.

Henry A. Davis of Pittsburg, Pennsylvania, writes in relation to the same article as follows: "In no single State of the Union is a murderer punishable capitally unless the murder was willful, deliberate, and premeditated,— that is, unless the act was done with the fixed design and premeditated intent to take life, or was done in the attempt to commit some atrocious felony. So it will be seen that Dr. Deems's statistics, showing only the number of homicides, capital and otherwise, on the one hand, and the number of executions on the other hand, can have no value in showing what proportion of murderers were legally punished. A murder to be punishable capitally must not only be a willful, deliberate, and premeditated killing, but every element of such offense must be shown beyond a reasonable doubt."



BRIC-À-BRAC.

Beneath the Hood.

BENEATH the hood her eyes were bright,—
I shyly watched her where she stood,—
Her tresses looked like scraps of night
Beneath the hood.

Such smiles would stir a hermit's blood,
Such lips — like flowers warm with light -
Would quickly melt the iciest mood.

I stole behind her — 't was n't right,—
I call it neither wise nor good,—
I put propriety to flight
Beneath the hood!

William H. Hayne.

Content vs. Discontent.

ONE, satisfied with what must be her lot,—
'T was not a corner lot,— serenely meant
Never to wander from her humble cot,
Made beautiful by wise and sweet content.

And one, dissatisfied with all he had,
Roved from his place into the world's mad whirl.
What did he find? Well, it was not so bad,—
The fellow found that cottage and that girl.

A. W. R.

Uncle Esek's Wisdom.

I HAVE heard of men who knew more than they could tell, but I never have met one. If a man has a genuine idea, he can make himself understood.

LITERATURE is the diet of the common mind, but genius feeds on the unwritten things.

YOU may travel a good ways on whisky, and travel fast while you are going, but you can't get back when you want to.

WHEN you have learned to listen, you have already acquired the rudiments of a good education.

FAITH won't enable a man to lift a ton all at once, but it will, ten pounds at a time.

GENIUS invents, talent applies.

I NEVER have seen an idea too big for a sentence, but I have read thousands of sentences too big for an idea.

VANITY and jealousy are the two weakest passions in the human heart, and, strange to tell, they are the most common.

A THOROUGHLY neat woman is a joy unspeakable, but does n't she make it busy for the dust and for the people in her neighborhood!

MY young disciple, don't hunt for new things, but study to improve upon the old ones; every flat stone, and most of the bowlders, have been turned over already by the novelty-hunters.

WE find plenty of people who don't average well; they know too much for one man, and not quite enough for two.

Uncle Esek.

Young Lochinvar.

(AN AFTER-STUDY.)

THEY were married and settled, and if they repented
By times, that wild ride when the horse carried double,
They never confessed it; Papa had relented,
Being old, and averse to a family trouble.
And "the poor craven bridegroom" kept wisely afar
From the home of Fair Ellen and Young Lochinvar.

But Fair Ellen was moody: she 'd answer him shortly,
In a way which perplexed him, and which, at the least,
He considered uncalled for; and, as he grew portly,
She sneered at his fancy for frolic and feast.
"Ye 're aften forgettin'," she 'd say, "that ye are
No longer a callant, my Lord Lochinvar."

Yet she always went with him to wake or to wedding,
Though he kindly excused her, or tried to, poor man!
For the watch that she kept, as the dance he was treading,
Made him feel that he somehow was under her ban.
And the maidens would whisper, "I 'd gladly go far
To escape from a dance wi' that puir Lochinvar!"

He was nearly worn out with her moods and her tenses;
So he collared his courage, and told her, one day,
He 'd enlist, if she did n't soon come to her senses,
And endeavor to fall in the front of the fray.
"I can stand this no longer; 't were better, by far,
You had minded your father," said poor Lochinvar.

"If you 'd only just tell me what 's fashin' you, Ellen,"
He mournfully added, "and no be so blate,
Though what I 've put up wi' surpasses all tellin',
It may be that yet we could set it all straight;
And if we cannot, then I 'm aff to the war;
'T would be peace, just by contrast," said poor Lochinvar.

"Then tell you I will!" cried Fair Ellen. "I 've borne it
As lang as I can, and a great deal too lang!
As for jealousy, it 's a low thing, and I scorn it —
But some impudent scribbler 's put into a sang
That you said 'there were maidens more lovely by far'
Who would gladly have wed you, my Lord Lochinvar!"

Margaret Vandegrift.

An Example of the Superlative.

J. R. P. writes from Frankfort of a hand-bill he saw not long ago on the walls of a house in Breathell County in the mountains of eastern Kentucky. He sends it as a good example apropos of Emerson's remarks on the weakness of the superlative.

"FUN! FUN!
CARRY THE NEWS TO MARY!
WE ARE COMING.

"Happy Bill Buckles and the great original Australian troupe will give one of the Grandest Entertainments that has ever been Witnessed on this Continent at South Fork of Quicksand Creek.

"Happy Bill is the only French violin player in the world, the violin being one of the Grandest Musical instruments that has ever been on Exhibition in North America or any other Country. Happy Bill is the Gentleman who invented this superb instrument, which was made exclusively for him to please the public," etc., etc.

A MONTANA TYPE.

THE HOME RANCH.

BY THEODORE ROOSEVELT.

ILLUSTRATIONS BY FREDERIC REMINGTON.

MY home ranch lies on both sides of the Little Missouri, the nearest ranchman above me being about twelve, and the nearest below me about ten, miles distant. The general course of the stream here is northerly, but, while flowing through my ranch, it takes a great westerly reach of some three miles, walled in, as always, between chains of steep, high bluffs half a mile or more apart. The stream twists down through the valley in long sweeps, leaving oval wooded bottoms, first on one side and then on the other; and in an open glade among the thick-growing timber stands the long, low house of hewn logs.

Just in front of the ranch veranda is a line of old cottonwoods that shade it during the fierce heats of summer, rendering it always cool and pleasant. But a few feet beyond these trees comes the cut-off bank of the river, through whose broad, sandy bed the shallow stream winds as if lost, except when a freshet fills it from brim to brim with foaming yellow water. The bluffs that wall in the river-valley curve back in semicircles, rising from its alluvial bottom generally as abrupt cliffs, but often as steep, grassy slopes that lead up to great level plateaus; and the line is broken every mile or two by the entrance of a coulée, or dry creek, whose head branches may be twenty miles back. Above us, where the river comes round the bend, the valley is very narrow, and the high buttes bounding it rise, sheer and barren, into scalped hill-peaks and naked knife-blade ridges.

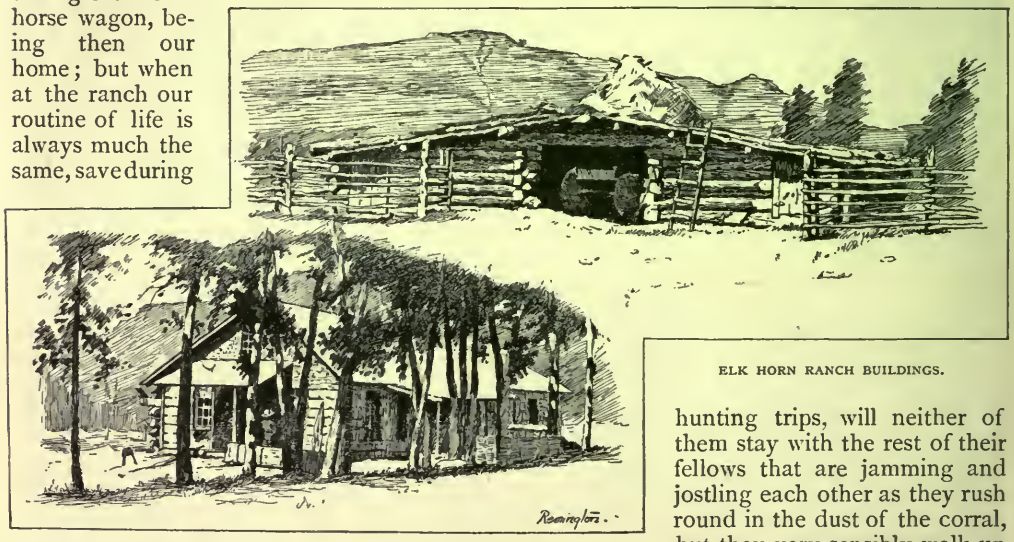
The other buildings stand in the same open glade with the ranch house, the dense growth of cottonwoods and matted, thorny underbrush making a wall all about, through which we have chopped our wagon roads and trodden out our own bridle-paths. The cattle have now trampled down this brush a little, but deer still lie in it, only a couple of hundred yards from the house; and from the door sometimes in the evening one can see them peer out into the open, or make their way down, timidly and cautiously, to drink at the river. The stable, sheds, and other outbuildings, with the hayricks and the pens for such cattle as we bring in during winter, are near the house; the patch of fenced garden land is on the edge of the woods; and near the middle of the glade stands the high, circular horse-corral, with a snubbing-post in the center, and a wing built out from one side of the gate entrance, so that the saddle band can be driven in without trouble. As it is very hard to work cattle where there is much brush, the larger cow-corral is some four miles off on an open bottom.

A ranchman's life is certainly a very pleasant one, albeit generally varied with plenty of hardship and anxiety. Although occasionally he passes days of severe toil,—for example, if he goes on the round-up he works as hard as any of his men,—yet he no longer

Copyright, 1888, by THE CENTURY CO. All rights reserved.

has to undergo the monotonous drudgery attendant upon the tasks of the cowboy or of the apprentice in the business. His fare is simple; but, if he chooses, it is good enough. Many ranches are provided with nothing at all but salt pork, canned goods, and bread; indeed, it is a curious fact that in traveling through this cow country it is often impossible to get any milk or butter; but this is only because the owners or managers are too lazy to take enough trouble to insure their own comfort. We ourselves always keep up two or three cows, choosing such as are naturally tame, and so we invariably have plenty of milk and, when there is time for churning, a good deal of butter. We also keep hens, which, in spite of the damaging inroads of hawks, bob-cats, and foxes, supply us with eggs, and in time of need, when our rifles have failed to keep us in game, with stewed, roast, or fried chicken also. From our garden we get potatoes, and unless drought, frost, or grasshoppers interfere (which they do about every second year), other vegetables as well. For fresh meat we depend chiefly upon our prowess as hunters.

During much of the time we are away on the different round-ups, that "wheeled house," the great four-horse wagon, being then our home; but when at the ranch our routine of life is always much the same, save during the excessively bitter weather of midwinter, when there is little to do except to hunt, if the days are fine enough. We breakfast early — before dawn when the nights have grown long, and rarely later than sunrise, even in midsummer. Perhaps before this meal, certainly the instant it is over, the man whose duty it is rides off to hunt up and drive in the saddle band. Each of us has his own string of horses, eight or ten in number, and the whole band usually split up into two or three companies. In addition to the scattered groups of the saddle band, our six or eight mares, with their colts, keep by themselves, and are rarely bothered by us, as no cowboy ever rides anything but horses, because mares give great trouble where all the animals have to be herded together. Once every two or three days somebody rides round and finds out where each of these smaller bands is, but the man who goes out in the morning merely gathers one bunch. He drives these into the corral, the other men (who have been lolling idly about the house or stable, fixing their saddles or doing any odd job) coming out with their ropes as soon as they hear the patter of the unshod hoofs and the shouts of the cowboy driver. Going into the corral, and standing near the center, each of us picks out some one of his own string from among the animals that are trotting and running in a compact mass round the circle; and after one or more trials, according to his skill, ropes it and leads it out. When all have caught their horses the rest are again turned loose, together with those that have been kept up overnight. Some horses soon get tame and do not need to be roped; my pet cutting pony, little Muley, and good old Manitou, my companion in so many hunting trips, will neither of them stay with the rest of their fellows that are jamming and jostling each other as they rush round in the dust of the corral, but they very sensibly walk up and stand quietly with the men in the middle, by the snubbing-post. Both are great pets, Manitou in particular; the wise old fellow being very fond of bread and sometimes coming up of his own accord to the ranch house and even putting his head into the door to beg for it.



ELK HORN RANCH BUILDINGS.

Once saddled, the men ride off on their different tasks; for almost everything is done in the saddle, except that in winter we cut our firewood and quarry our coal,— both on the

ranch,—and in summer attend to the garden and put up what wild hay we need.

If any horses have strayed, one or two of the men will be sent off to look for them; for hunting lost horses is one of the commonest and most irksome of our duties. Every outfit always has certain of its horses at large; and if they remain out long enough they become as wild and wary as deer and have to be regularly surrounded and run down. On one occasion, when three of mine had been running loose for a couple of months, we had to follow at full speed for at least fifteen miles before exhausting them enough to enable us to get some control over them and head them towards a corral. Twice I have had horses absent nearly a year before they were recovered. One of them, after being on the ranch nine months, went off one night and traveled about two hundred miles in a straight line back to its old haunts, swimming the Yellowstone on the way. Two others were at one time away nearly eighteen months, during which time we saw them twice, and on one occasion a couple of the men fairly ran their horses down in following them. We began to think they were lost for good, as they were all the time going farther down towards the Sioux country, but we finally recovered them.

If the men do not go horse-hunting they may ride off over the range; for there is generally some work to be done among the cattle, such as driving in and branding calves that have been overlooked by the round-up, or getting some animal out of a bog-hole. During the early spring months, before the round-up begins, the chief work is in hauling out mired cows and steers; and if we did not keep a sharp lookout, the losses at this season would be very serious. As long as everything is frozen solid there is, of course, no danger from miring; but when the thaw comes, along towards the beginning of March, a period of new danger to the cattle sets in. When the ice breaks up, the streams are left with an edging of deep bog, while the quicksand is at its worst. As the frost goes out of the soil, the ground round every little alkali-spring changes into a trembling quagmire, and deep holes of slimy, tenacious mud form in the bottom of all the gullies. The cattle, which have had to live on snow for three or four months, are very eager for water, and are weak and in poor condition. They rush heedlessly into any pool and stand there, drinking gallons of the icy water and sinking steadily into the mud. When they try to get out they are already too deep down, and are too weak to make a pro-

ROPING IN A HORSE-CORRAL.

longed struggle. After one or two fits of desperate floundering, they resign themselves to their fate with dumb apathy and are lost, unless some one of us riding about discovers and hauls them out. They may be thus lost in wonderfully small mud-holes; often they will be found dead in a gulch but two or three feet across, or in the quicksand of a creek so narrow that it could almost be jumped. An alkali-hole, where the water oozes out through the thick clay, is the worst of all, owing to the ropy tenacity with which the horrible substance sticks and clings to any unfortunate beast that gets into it.

A DEEP FORD.

In the spring these mud-holes cause very serious losses among the cattle, and are at all times fruitful sources of danger; indeed, during an ordinary year more cattle die from getting mired than from any other cause. In addition to this they also often prove very annoying to the rider himself, as getting his steed mired or caught in a quicksand is one of the commonest of the accidents that beset a horseman in the far West. This usually happens in fording a river, if the latter is at all high, or else in crossing one of the numerous creeks; although I once saw a horse and rider suddenly engulfed while leisurely walking over what appeared to be dry land. They had come to an alkali mud-hole, an old buffalo-wallow, which had filled up and was covered with a sun-baked crust, that let them through as if they had stepped on a trap-door. There being several of us along, we got down our ropes and dragged both unfortunates out in short order.

When the river is up it is a very common thing for a horseman to have great difficulty in crossing, for the swift, brown water runs over a bed of deep quicksand that is ever shifting. An inexperienced horse, or a mule, —for a mule is useless in mud or quicksand,— becomes mad with fright in such a crossing, and, after speedily exhausting its strength in wild struggles, will throw itself on its side and drown unless the rider gets it out. An old horse used to such work will, on the contrary, take matters quietly and often push along through really dangerous quicksand. Old Manitou never loses his head for an instant; but, now resting a few seconds, now feeling his way cautiously forward, and now making two or three desperate plunges, will go on wherever a horse possibly can. It is really dangerous crossing some of the creeks, as the bottom may give way where it seems hardest; and if one is alone he may work hours in vain before getting his horse out, even after taking off both saddle and bridle, the only hope being to head it so that every plunge takes it an inch or two in the right direction.

Nor are mud-holes the only danger the

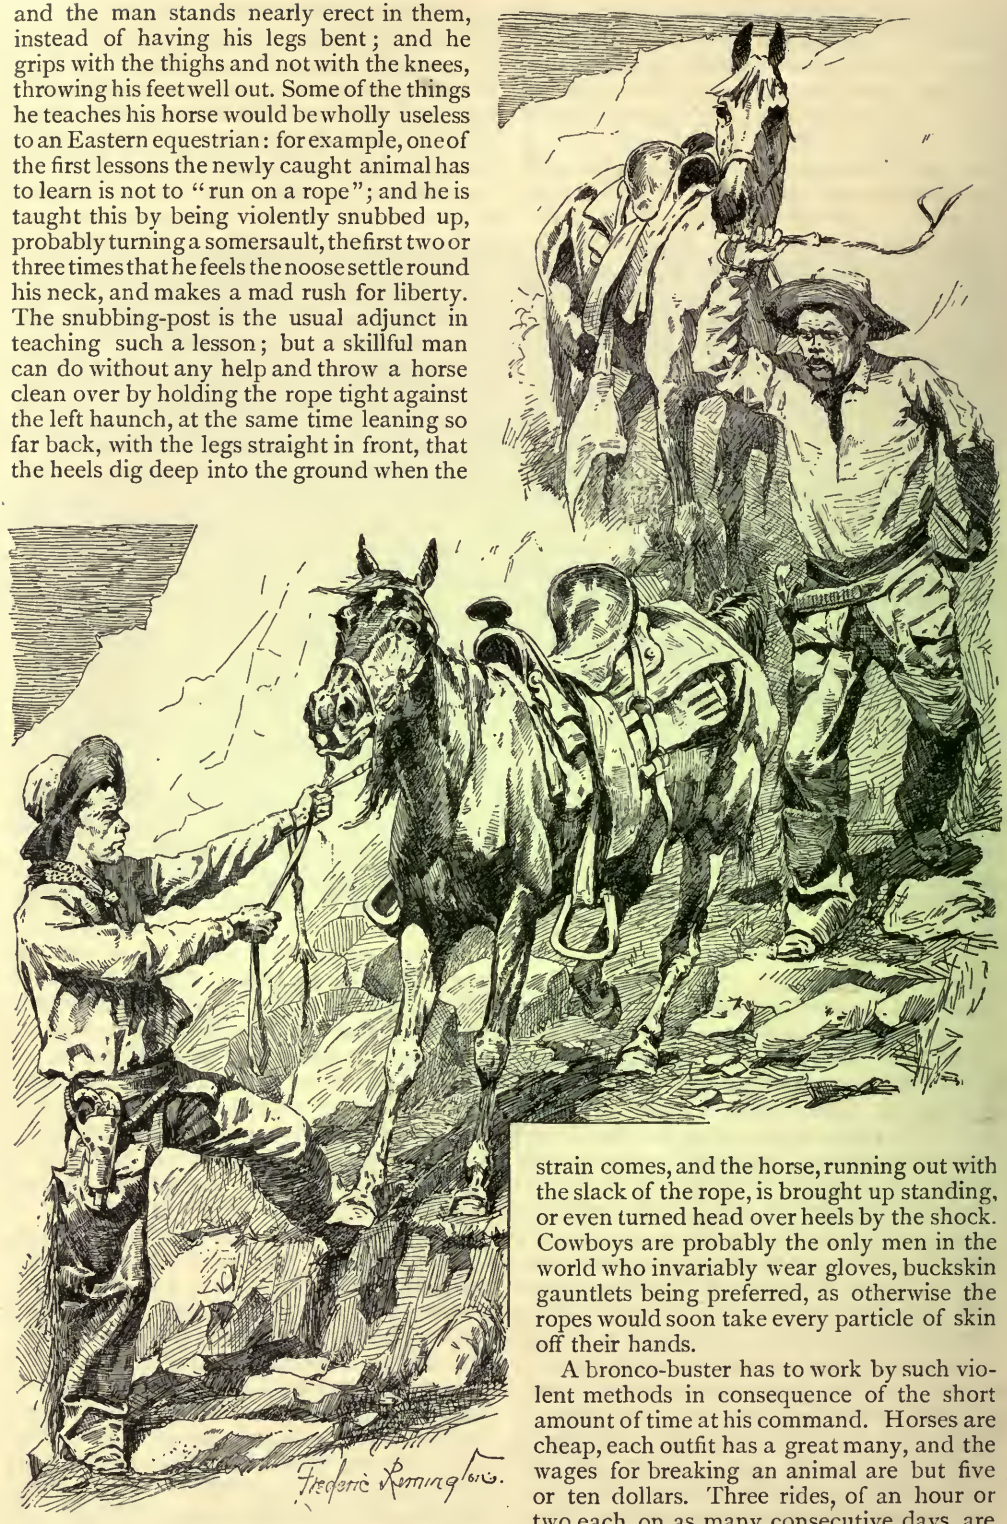
horseman has to fear; for in much of the Bad Lands the buttes are so steep and broken that it needs genuine mountaineering skill to get through them, and no horse but a Western one, bred to the business, could accomplish the feat. In many parts of our country it is impossible for a horseman who does not know the land to cross it, and it is difficult enough even for an experienced hand. For a stretch of nearly ten miles along the Little Missouri above my range, and where it passes through it, there are but three or four places where it is possible for a horseman to get out to the eastern prairie through the exceedingly broken country lying back from the river. In places this very rough ground comes down to the water; elsewhere it lies back near the heads of the creeks. In such very bad ground the whole country seems to be one tangled chaos of cañon-like valleys, winding gullies, and washouts, with abrupt, unbroken sides, isolated peaks of sandstone, marl, or "gumbo" clay, which rain turns into slippery glue, and hill chains whose ridges always end in sheer cliffs. After a man has made his way with infinite toil for half a mile, a point will be reached around which it is an absolute impossibility to go, and the adventurer has nothing to do but painfully retrace his steps and try again in a new direction, as likely as not with the same result. In such a place the rider dismounts and leads his horse, the latter climbing with cat-like agility up seemingly inaccessible heights, scrambling across the steep, sloping shoulders of the bluffs, sliding down the faces of the clay cliffs with all four legs rigid, or dropping from ledge to ledge like a goat, and accepting with unruffled composure an occasional roll from top to bottom. But, in spite of the climbing abilities of the ponies, it is difficult, and at times — for our steeds, at any rate — dangerous work to go through such places, and we only do it when it cannot be avoided. Once I was overtaken by darkness while trying to get through a great tract of very rough land, and, after once or twice nearly breaking my neck, in despair had to give up all attempts to get out, and until daybreak simply staid where I was, in a kind of ledge or pocket on the side of the cliff, luckily sheltered from the wind. It was midsummer and the nights were short, but this particular one seemed quite long enough; and though I was on the move by dawn, it was three hours later before I led the horse, as hungry, numb, and stiff as myself, out on the prairie again.

Occasionally, it is imperatively necessary to cross some of the worst parts of the Bad Lands with a wagon, and such a trip is exhausting and laborious beyond belief. Often the wagon will have to be taken to pieces every few hundred yards in order to get it over a ravine, lower it into a valley, or drag it up a cliff. One outfit, that a year ago tried to take a short cut through some of the Bad Lands of the Powder River, made just four miles in three days, and then had to come back to their starting-point after all. But with only saddle-horses we feel that it must be a very extraordinary country indeed if, in case of necessity, we cannot go through it.

The long forenoon's work, with its attendant mishaps to man and beast, being over, the men who have been out among the horses and cattle come riding in, to be joined by their fellows — if any there be — who have been hunting, or haying, or chopping wood. The midday dinner is variable as to time, for it comes when the men have returned from their work; but, whatever be the hour, it is the most substantial meal of the day, and we feel that we have little fault to find with a table on whose clean cloth are spread platters of smoked elk meat, loaves of good bread, jugs and bowls of milk, saddles of venison or broiled antelope steaks, perhaps roast and fried prairie chickens, with eggs, butter, wild plums, and tea or coffee.

The afternoon's tasks are usually much the same as the morning's, but this time is often spent in doing the odds and ends; as, for instance, it may be devoted to breaking-in a new horse. Large outfits generally hire a bronco-buster to do this; but we ourselves almost always break our own horses, two or three of my men being very good riders, although none of them can claim to be anything out of the common. A first-class flash rider or bronco-buster receives high wages and deserves them, for he follows a most dangerous trade, at which no man can hope to grow old; his work being infinitely harder than that of an Eastern horse-breaker or rough-rider, because he has to do it in such a limited time. A good rider is a good rider all the world over; but an Eastern or English horse-breaker and Western bronco-buster have so little in common with each other as regards style or surroundings, and are so totally out of place in doing each other's work, that it is almost impossible to get either to admit that the other has any merits at all as a horseman, for neither could sit in the saddle of the other or could without great difficulty perform his task. The ordinary Eastern seat, which approaches more or less the seat of a cross-country rider or fox-hunter, is nearly as different from the cowboy's seat as from that of a man who rides bareback. The stirrups on a stock saddle are much farther back than they are on an ordinary English one (a difference far more important than the high horn and cantle of the former),

and the man stands nearly erect in them, instead of having his legs bent; and he grips with the thighs and not with the knees, throwing his feet well out. Some of the things he teaches his horse would be wholly useless to an Eastern equestrian: for example, one of the first lessons the newly caught animal has to learn is not to "run on a rope"; and he is taught this by being violently snubbed up, probably turning a somersault, the first two or three times that he feels the noose settle round his neck, and makes a mad rush for liberty. The snubbing-post is the usual adjunct in teaching such a lesson; but a skillful man can do without any help and throw a horse clean over by holding the rope tight against the left haunch, at the same time leaning so far back, with the legs straight in front, that the heels dig deep into the ground when the strain comes, and the horse, running out with the slack of the rope, is brought up standing, or even turned head over heels by the shock. Cowboys are probably the only men in the world who invariably wear gloves, buckskin gauntlets being preferred, as otherwise the ropes would soon take every particle of skin off their hands.



A HARD TRAIL.

A bronco-buster has to work by such violent methods in consequence of the short amount of time at his command. Horses are cheap, each outfit has a great many, and the wages for breaking an animal are but five or ten dollars. Three rides, of an hour or two each, on as many consecutive days, are the outside number a bronco-buster deems

necessary before turning an animal over as "broken." The average bronco-buster, however, handles horses so very rudely that we prefer, aside from motives of economy, to break our own; and this is always possible, if we take enough time. The best and most quiet horses on the ranch are far from being those broken by the best riders; on the contrary, they are those that have been handled most gently, although firmly, and that have had the greatest number of days devoted to their education.

IN WITH THE HORSE HERD.

Some horses, of course, are almost incurably vicious, and must be conquered by main force. One pleasing brute on my ranch will at times rush at a man open-mouthed like a wolf, and this is a regular trick of the range-stallions. In a great many — indeed, in most — localities there are wild horses to be found, which, although invariably of domestic descent, being either themselves runaways from some ranch or Indian outfit, or else claiming such for their sires and dams, yet are quite as wild as the antelope on whose domain they have intruded. Ranchmen run in these wild horses whenever possible, and they are but little more difficult to break than the so-called "tame" animals. But the wild stallions are, whenever possible, shot; both because of their propensity for driving off the ranch mares, and because their incurable viciousness makes them always unsafe companions for other horses still more than for men. A wild stallion fears no beast except the grizzly, and will not always flinch from an encounter with it; yet it is a curious fact that a jack will almost always kill one in a fair fight. The particulars of a fight of this sort were related to me by a cattle man who was engaged in bringing out blooded stock from the East. Among the animals under his charge were two great stallions, one gray and one black, and a fine jackass, not much over half the size of either of the former. The animals were kept in separate pens, but one

day both horses got into the same inclosure, next to the jack-pen, and began to fight as only enraged stallions can, striking like boxers with their fore feet, and biting with their teeth. The gray was getting the best of it; but while clinched with his antagonist in one tussle they rolled against the jack-pen, breaking it in. No sooner was the jack at liberty than, with ears laid back and mouth wide open, he made straight for the two horses, who had for the moment separated. The gray turned to meet him, rearing on his hind legs and striking at him with his fore feet; but the jack slipped in, and in a minute grasped his antagonist by the throat with his wide-open jaws, and then held on like a bull-dog, all four feet planted stiffly in the soil. The stallion made tremendous efforts to shake him off: he would try to whirl round and kick him, but for that the jack was too short; then he would rise up, lifting the jack off the ground, and strike at him with his fore feet; but all that he gained by this was to skin his foe's front legs without making him loose his hold. Twice they fell, and twice the stallion rose, by main strength dragging the jack with him; but all in vain. Meanwhile the black horse attacked both the combatants with perfect impartiality, striking and kicking them with his hoofs, while his teeth, as they slipped off the tough hides, met with a snap like that of a bear-trap. Undoubtedly the jack would have killed at least one of the horses had not the men come up, and with no small difficulty separated the maddened brutes.

If not breaking horses, mending saddles, or doing something else of the sort, the cowboys will often while away their leisure moments by practicing with the rope. A man cannot practice too much with this if he wishes to attain even moderate proficiency; and as a matter of fact he soon gets to wish to practice the whole time. A cowboy is always roping something, and it especially delights him to try his skill at game. A friend of mine, a young ranchman in the Judith basin, about three years ago roped a buffalo, and by the exercise of the greatest skill, both on his own part and on his steed's, actually succeeded, by alternate bullying and coaxing, in getting the huge brute almost into camp. I have occasionally known men on fast horses to rope deer, and even antelope, when circumstances all joined to favor them; and last summer one of the cowboys on a ranch about thirty miles off ran into and roped a wounded elk. A forty-foot lariat is the one commonly used, for the ordinary range at which a man can use it is only about twenty-five feet. Few men can throw forty feet; and to do this, taking into account the coil, needs a sixty-foot rope.

When the day's work is over we take supper, and bed-time comes soon afterward, for the men who live on ranches sleep well and soundly. As a rule, the nights are cool and bracing, even in midsummer; except when we occasionally have a spell of burning weather, with a steady, hot wind that blows in our faces like a furnace blast, sending the thermometer far up above a hundred and making us gasp for breath, even at night, in the dry-baked heat of the air. But it is only rarely that we get a few days of this sort; generally, no matter how unbearable the heat of the day has been, we can at least sleep pleasantly at night.

A ranchman's work is, of course, free from much of the sameness attendant upon that of a mere cowboy. One day he will ride out with his men among the cattle, or after strayed horses; the next he may hunt, so as to keep the ranch in meat; then he can make the tour of his outlying camps; or, again, may join one of the round-ups for a week or two, perhaps keeping with it the entire time it is working. On occasions he will have a good deal of spare time on his hands, which, if he chooses, he can spend in reading or writing. If he cares for books, there will be many a worn volume in the primitive little sitting-room, with its log walls and huge fireplace; but after a hard day's work a man will not read much, but will rock to and fro in the flickering firelight, talking sleepily over his success in the day's chase and the difficulty he has had with the cattle; or else may simply lie stretched at full length on the elk-hides and wolf-skins in front of the hearthstone, listening in drowsy silence to the roar and crackle of the blazing logs and to the moaning of the wind outside.

In the sharp fall weather the riding is delicious all day long; but even in the late spring, and all through the summer, we try, if we can, to do our work before the heat of the day, and if going on a long ride, whether to hunt or for other purposes, leave the ranch house by dawn.

The early rides in the spring mornings have a charm all their own, for they are taken when, for the one and only time during the year, the same brown landscape of these high plains turns to a vivid green, as the new grass sprouts and the trees and bushes thrust forth the young leaves; and at dawn, with the dew glittering everywhere, all things show at their best and freshest. The flowers are out and a man may gallop for miles at a stretch with his horse's hoofs sinking at every stride into the carpet of prairie roses, whose short stalks lift the beautiful blossoms but a few inches from the ground. Even in the waste places the cactuses are blooming; and one kind in particu-

lar, a dwarfish, globular plant, with its mass of splendid crimson flowers, glows against the sides of the gray buttes like a splash of flame.

The ravines, winding about and splitting into a labyrinth of coulées, with chains of rounded hills to separate them, have groves of trees in their bottoms, over the sides of the water-courses. In these are found the black-tail deer, and his cousin, the whitetail, too, with his flaunting flag; but in the spring-time, when we are after antelope only, we must go out farther to the flat prairie land on the divide. Here, in places, the level, grassy plains are strewn with mounds and hillocks of red or gray scoria, that stand singly or clustered into little groups, their tops crested, or their sides covered, by queer, detached masses of volcanic rock, wrought into strange shapes by the dead forces whose blind, hidden strength long ago called them into being. The road our wagons take, when the water is too high for us to come down the river bottom, stretches far ahead — two dark, straight, parallel furrows

A BUCKING BRONCO.

which merge into one in the distance. Quaint little horned frogs crawl sluggishly along in the wheel tracks, and the sickle-billed curlews run over the ground or soar above and around the horsemen, uttering their mournful, never-ceasing clamor. The grass-land stretches out in the sunlight like a sea, every wind bending the blades into a ripple, and flecking the prairie with shifting patches of a different green from that around, exactly as the touch of a light squall or wind-gust will fleck the smooth surface of the ocean. Our Western plains differ widely in detail from those of Asia; yet they always call to mind

> . . . . The Scythian
> On the wide steppe.

In the spring mornings the rider on the plains will hear bird songs unknown in the East. The Missouri sky-lark sings while soaring above the great plateaus so high in the air that it is impossible to see the bird; and this habit of singing while soaring it shares with some sparrow-like birds that are often found in company with it. The white-shouldered lark-bunting, in its livery of black, has rich, full notes, and as it sings on the wing it reminds one of the bobolink; and the sweet-voiced lark-finch also utters its song in the air. These birds, and most of the sparrows of the plains, are characteristic of this region.

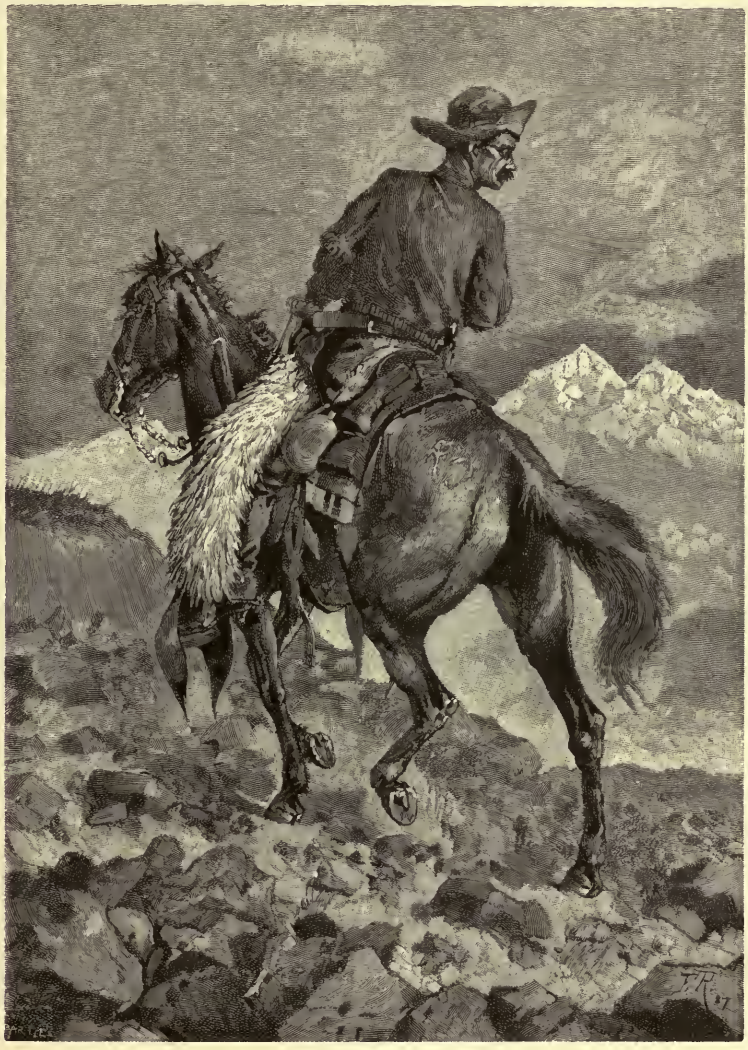
But many of our birds, especially those found in the wooded river bottoms, answer to those of the East; only almost each one has some marked point of difference from its Eastern representative. The bluebird out West is very much of a blue bird indeed, for it has no "earth tinge" on its breast at all; while the indigo-bird, on the contrary, has gained the ruddy markings that the other has lost. The flicker has the shafts of its wing and tail quills colored orange instead of yellow. The towhee has lost all title to its name, for its only cry is a mew like that of a cat-bird; while, most wonderful of all, the meadow-lark has found a rich, strong voice, and is one of the sweetest and most incessant singers we have.

Throughout June the thickets and groves about the ranch house are loud with bird music from before dawn till long after sunrise. The thrashers have sung all the night through from among the thorn-bushes if there has been a moon, or even if there has been bright starlight; and before the first glimmer of gray the bell-like, silvery songs of the shy wood-land thrushes chime in; while meadow-lark, robin, bluebird, and song sparrow, together with many rarer singers, like the grosbeak, join in swelling the chorus. There are some would-be singers whose intention is better than their execution. Blackbirds of several kinds are plenty round the house and stables, walking about with a knowing air, like so many dwarf crows; and now and then a flock of yellow-heads will mix for a few days with their purple or rusty-colored brethren. The males of these yellow-headed grakles are really handsome, their orange and yellow heads contrasting finely with the black of the rest of their plumage; but their voices are discordant to a degree. When a flock has done feeding it will often light in straggling order among the trees in front of the veranda, and then the males will begin to sing, or rather to utter the most extraordinary collection of broken sounds — creakings, gurglings, hisses, twitters, and every now and then a liquid note or two. It is like an accentuated representation of the noise made by a flock of common blackbirds. At nightfall the poor-wills begin to utter their boding call from the wooded ravines back in the hills; not "whip-poor-will," as in the East, but with two syllables only. They often come round the ranch house. Late one evening I had been sitting motionless on the veranda, looking out across the water and watching the green and brown of the hill-tops change to purple and umber and then fade off into shadowy gray as the somber darkness deepened. Suddenly a poor-will lit on the floor beside me and stayed some little time; now and then uttering its mournful cries, then ceasing for a few moments as it flitted round after insects, and again returning to the same place to begin anew. The little owls, too, call to each other with tremulous, quavering voices throughout the livelong night, as they sit in the creaking trees that overhang the roof. Now and then we hear the wilder voices of the wilderness, from animals that in the hours of darkness do not fear the neighborhood of man: the coyotes wail like dismal ventriloquists, or the silence may be broken by the strident challenge of a lynx, or by the snorting and stamping of a deer that has come to the edge of the open.

In the hot noontide hours of midsummer the broad ranch veranda, always in the shade, is almost the only spot where a man can be comfortable; but here he can sit for hours at a time, leaning back in his rocking-chair as he reads or smokes, or with half-closed, dreamy eyes gazes across the shallow, nearly dry river-bed to the wooded bottoms opposite, and to the plateaus lying back of them. Against the sheer white faces of the cliffs, that come down without a break, the dark green tree-tops stand out in bold relief. In the hot, lifeless air all objects that are not near by seem to sway and waver. There are few sounds to break the stillness. From the upper branches of the cottonwood trees overhead, whose shimmer-

ing, tremulous leaves are hardly ever quiet, but if the wind stirs at all, rustle and quaver and sigh all day long, comes every now and then the soft, melancholy cooing of the mourning dove, whose voice always seems far away and expresses more than any other sound in nature the sadness of gentle, hopeless, never-ending grief. The other birds are still; and very few animals move about. Now and then the black shadow of a wheeling vulture falls on the sun-scorched ground. The cattle, that have strung down in long files from the hills, lie quietly on the sand-bars, except that some of the bulls keep traveling up and down, bellowing and routing or giving vent to long, surly grumblings as they paw the sand and toss it up with their horns. At times the horses, too, will come down to drink, and to splash and roll in the water.

The prairie-dogs alone are not daunted by the heat, but sit at the mouths of their burrows with their usual pert curiosity. They are both-



CRUISING FOR STOCK.

ersome little fellows, and most prolific, increasing in spite of the perpetual war made on them by every carnivorous bird and beast. One of their worst foes is the black-footed ferret, a handsome, rather rare animal, somewhat like a mink, with a yellow-brown body and dark feet and mask. It is a most bloodthirsty little brute, feeding on all small animals and ground birds. It will readily master a jack-rabbit, will kill very young fawns if it finds them in the

mother's absence, and work extraordinary havoc in a dog town, as it can follow the wretched little beasts down into the burrows. In one instance, I knew of a black-footed ferret making a succession of inroads on a ranchman's poultry, killing and carrying off most of them before it was trapped. Coyotes, foxes, swifts, badgers, and skunks also like to lurk about the dog towns. Of the skunks, by the way, we had last year altogether too much; there was a perfect plague of them all along the river, and they took to trying to get into the huts, with the stupid pertinacity of the species. At every ranch house dozens were killed, we ourselves bagging thirty-three, all slain near the house, and one, to our unspeakable sorrow, in it.

In making a journey over ground we know, during the hot weather we often prefer to ride by moonlight. The moon shines very brightly through the dry, clear night air, turning the gray buttes into glimmering silver; and the horses travel far more readily and easily than under the glaring noonday sun. The road between my upper and lower ranch houses is about forty miles long, sometimes following the river-bed, and then again branching off inland, crossing the great plateaus and winding through the ravines of the broken country. It is a five-hours' fair ride; and so, in a hot spell, we like to take it during the cool of the night, starting at sunset. After nightfall the face of the country seems to alter marvelously, and the cool moonlight only intensifies the change. The river gleams like running quicksilver, and the moonbeams play over the grassy stretches of the plateaus and glance off the wind-rippled blades as they would from water. The Bad Lands seem to be stranger and wilder than ever, the silvery rays turning the country into a kind of grim fairy-land. The grotesque, fantastic outlines of the higher cliffs stand out with startling clearness, while the lower buttes have become formless, misshapen masses, and the deep gorges are in black shadow; in the darkness there will be no sound but the rhythmic echo of the hoof-beats of the horses, and the steady, metallic clank of the steel bridle-chains.

But the fall is the time for riding; for in the keen, frosty air neither man nor beast will tire, though out from the dawn until the shadows have again waxed long and the daylight has begun to wane, warning all to push straight for home without drawing rein. Then deer-saddles and elk-haunches hang from the trees near the house; and one can have good sport right on the sand of the river-bed, for we always keep shot-gun or rifle at hand, to be ready for any prairie chickens, or for such of the passing water-fowl as light in the river near us. Occasionally we take a shot at a flock of waders, among which the pretty avocets are the most striking in looks and manners. Prairie fowl are quite plenty all round us, and occasionally small flocks come fairly down into the yard, or perch among the trees near by. At evening they fly down to the river to drink, and as they sit on the sand-bars offer fine marks for the rifles. So do the geese and ducks when they occasionally light on the same places or paddle leisurely down stream in the middle of the river; but to make much of a bag of these we have to use the heavy No. 10, choke-bore shot-gun, while the little 16-bore fowling-piece is much the handiest for prairie fowl. A good many different kinds of water-fowl pass, ranging in size from a teal duck to a Canada goose, and all of them at times help to eke out our bill of fare. Last fall a white-fronted goose lit on the river in front of the ranch house, and three of us, armed with miscellaneous weapons, went out after him; we disabled him, and then after much bad shooting, and more violent running through thick sand and thick underbrush, finally overtook and most foully butchered him. The snow geese and common wild geese are what we usually kill, however.

Sometimes strings of sandbill cranes fly along the river, their guttural clangor being heard very far off. They usually light on a plateau, where sometimes they form rings and go through a series of queer antics, dancing and posturing to each other. They are exceedingly wide-awake birds, and more shy and wary than antelope, so that they are rarely shot; yet once I succeeded in stalking up to a group in the early morning, and firing into them rather at random, my bullet killed a full-grown female. Its breast, when roasted, proved to be very good eating.

Sometimes we vary our diet with fish — wall-eyed pike, ugly, slimy catfish, and other uncouth finny things, looking very fit denizens of the mud-choked water; but they are good eating withal, in spite of their uncanny appearance. We usually catch them with set lines, left out overnight in the deeper pools.

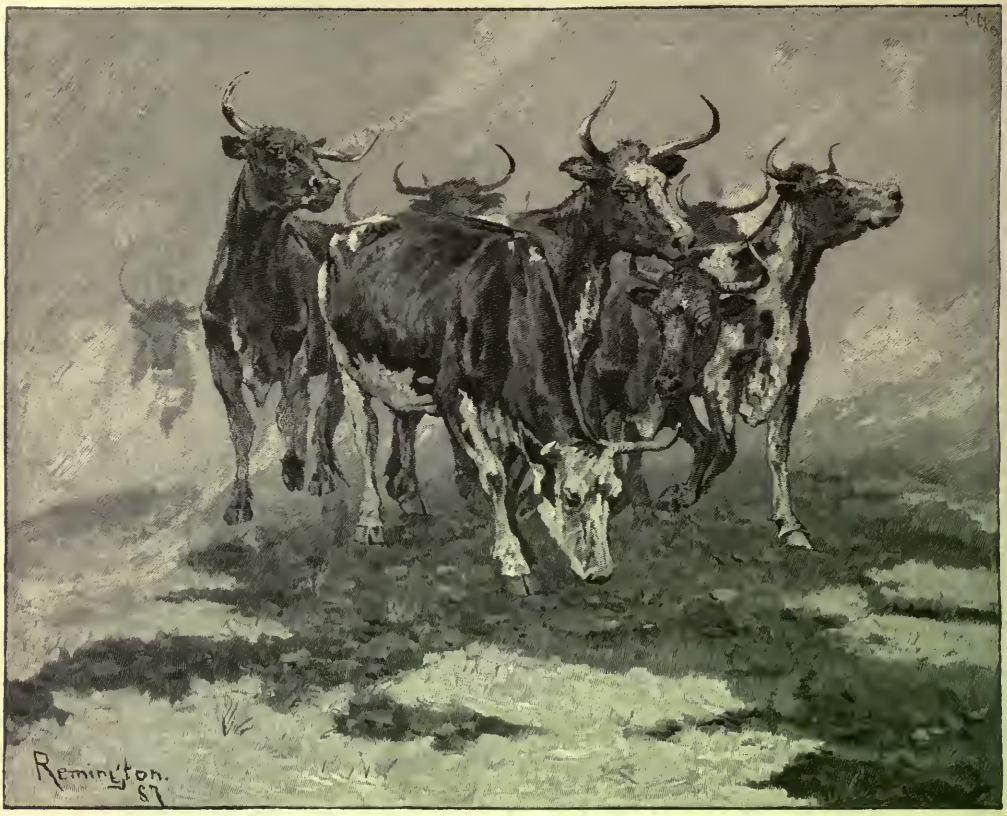
The cattle are fattest and in best condition during the fall, and it is then that the bulk of the beef steers are gathered and shipped — four-year-olds as a rule, though some threes and some fives go along with them. Cattle are a nuisance while hunting on foot, as they either take fright and run off when they see the hunter, scaring all game within sight, or else, what is worse, follow him, blustering and bullying and pretending that they are on the point of charging, but rarely actually doing so. Still, they are occasionally really dangerous,

LINE RIDING IN WINTER.

and it is never entirely safe for a man to be on foot when there is a chance of meeting the droves of long-horned steers. But they will always bluster rather than fight, whether with men or beasts, or with one another. The bulls and some of the steers are forever traveling and challenging each other, never ceasing their hoarse rumbling and moaning and their long-drawn, savage bellowing, tearing up the banks with their horns and sending little spurts of dust above their shoulders with their fore hoofs; yet they do not seem especially fond of real fighting, although, of course, they do occasionally have most desperate and obstinate set-tos with one another. A large bear will make short work of a bull: a few months ago one of the former killed a very big bull near a ranch house a score of miles or so distant, and during one night tore up and devoured a large part of his victim. The ranchman poisoned the carcass and killed the bear.

In the winter there is much less work than at any other season, but what there is involves great hardship and exposure. Many of the men are discharged after the summer is over, and during much of the cold weather there is little to do except hunt now and then, and in very bitter days lounge about the house. But some of the men are out in the line camps, and the ranchman has occasionally to make the round of these; and besides that, one or more of the cowboys who are at home ought to be out every day when the cattle have become weak, so as to pick up and drive in any beast that will otherwise evidently fail to get through the season — a cow that has had an unusually early calf being particularly apt to need attention. The horses shift for themselves and need no help. Often, in winter, the Indians cut down the cottonwood trees and feed the tops to their ponies; but this is not done to keep them from starving, but only to keep them from wandering off in search of grass. Besides, the ponies are very fond of the bark of the young cottonwood shoots, and it is healthy for them.

The men in the line camps lead a hard life, for they have to be out in every kind of



CATTLE DRIFTING BEFORE THE STORM.

weather, and should be especially active and watchful during the storms. The camps are established along some line which it is proposed to make the boundary of the cattle's drift in a given direction. For example, we care very little whether our cattle wander to the Yellowstone; but we strongly object to their drifting east and south-east towards the granger country and the Sioux reservation, especially as when they drift that way they come out on flat, bare plains where there is danger of perishing. Accordingly, the cowmen along the Little Missouri have united in establishing a row of camps to the east of the river, along the line where the broken ground meets the prairie. The camps are usually for two men each, and some fifteen or twenty miles apart; then, in the morning, its two men start out in opposite ways, each riding till he meets his neighbor of the next camp nearest on that side, when he returns. The camp itself is sometimes merely a tent pitched in a sheltered coulée, but ought to be either made of logs or else a dug-out in the ground. A small corral and horse-shed is near by, with enough hay for the ponies, of which each rider has two or three. In riding over the beat each man drives any cattle that have come near it back into the Bad Lands, and if he sees by the hoof-marks that a few have strayed out over the line very recently, he will follow and fetch them home. They must be shoved well back into the Bad Lands before a great storm strikes them; for if they once begin to drift in masses before an icy gale it is impossible for a small number of men to hold them, and the only thing is to let them go, and then to organize an expedition to follow them as soon as possible. Line riding is very cold work, and dangerous too, when the men have to be out in a blinding snowstorm, or in a savage blizzard that takes the spirit in the thermometer far down below zero. In the worst storms it is impossible for any man to be out.

But other kinds of work besides line riding necessitate exposure to bitter weather. Once, while spending a few days over on Beaver Creek hunting up a lost horse, I happened to meet a cowboy who was out on the same errand, and made friends with him. We started home together across the open prairies, but were caught in a very heavy snow-storm almost immediately after leaving the ranch where we

had spent the night. We were soon completely turned round, the great soft flakes — for, luckily, it was not cold — almost blinding us, and we had to travel entirely by compass. After feeling our way along for eight or nine hours, we finally got down into the broken country near Sentinel Butte and came across an empty hut, a welcome sight to men as cold, hungry, and tired as we were. In this hut we passed the night very comfortably, picketing our horses in a sheltered nook near by, with plenty of hay from an old stack. To while away the long evening, I read Hamlet aloud, from a little pocket Shakspere. The cowboy, a Texan,— one of the best riders I have seen, and also a very intelligent as well as a thoroughly good fellow in every way,— was greatly interested in it and commented most shrewdly on the parts he liked, especially Polonius's advice to Laertes, which he translated into more homely language with great relish, and ended with the just criticism that "old Shakspere saveyed human natur' some"— savey being a verb presumably adapted into the limited plains' vocabulary from the French.

Even for those who do not have to look up stray horses, and who are not forced to ride the line day in and day out, there is apt to be some hardship and danger in being abroad during the bitter weather; yet a ride in midwinter is certainly fascinating. The great white country wrapped in the powdery snowdrift seems like another land; and the familiar landmarks are so changed that a man must be careful lest he lose his way, for the discomfort of a night in the open during such weather is very great indeed. When the sun is out the glare from the endless white stretches dazzles the eyes; and if the gray snow-clouds hang low and only let a pale, wan light struggle through, the lonely wastes become fairly appalling in their desolation. For hour after hour a man may go on and see no sign of life except, perhaps, a big white owl sweeping noiselessly by, so that in the dark it looks like a snow-wreath; the cold gradually chilling the rider to the bones, as he draws his fur cap tight over his ears and muffles his face in the huge collar of his wolf-skin coat, and making the shaggy little steed drop head and tail as it picks its way over the frozen soil. There are few moments more pleasant than the home-coming, when, in the gathering darkness, after crossing the last chain of ice-covered buttes, or after coming round the last turn in the wind-swept valley, we see, through the leafless trees, or across the frozen river, the red gleam of the firelight as it shines through the ranch windows and flickers over the trunks of the cottonwoods outside, warming a man's blood by the mere hint of the warmth awaiting him within.

Theodore Roosevelt.

LIFTED VEILS.

O THAT you were alive again, and here!
The veils that fell between us long ago,
Are lifted. Once a few alone could know
Your deepest soul. Now time has shown how near
You stood to us, even when we shrank in fear
Lest a keen shaft of satire from your bow
Should make you seem sometimes half friend, half foe,
To those whose vision was than yours less clear;
But now your heart with all its hidden springs
Lies written in your books and in your life.
Ah, we could talk together now, and naught
Could intervene to clog the spirit's wings,
To chill the feelings or confuse the thought,
Or cloud the speech with argument or strife.

C. P. Cranch.

THE WHITE TSAR'S PEOPLE.

PART I.

I.

THE White Tsar's people cry,
"Thou God of the heat and the cold,
Of storm and of lightning,
Of darkness and dawn's red brightening;
Hold, Lord God, hold —
Hold Thy hand lest we curse Thee and die!"

II.

The White Tsar's people pray,
"Thou God of the south and the north,
We are crushed, we are bleeding,
'T is Christ, 't is Thy Son, interceding:
Forth, Lord, come forth!
Bid the slayer no longer slay!"

III.

The White Tsar's people call
Aloud to the skies of lead:
"We are slaves, not freemen;
Ourselves, our children, our women,—
Dead, we are dead,
Though we breathe, we are dead men all.

IV.

"Blame not if we misprize thee,
Who canst, but will not, draw near.
'T is Thou who hast made us,—
Not Thou, dread God, to upbraid us.
Hear, Lord God, hear!
Lest we whom Thou madest despise Thee."

PART II.

I.

Then answered the most high God,
Lord of the heat and the cold,
Of storm and of lightning,
Of darkness and dawn's red brightening:
"Bold, yea, too bold,
Whom I wrought from the air and the clod!

II.

"Hast thou forgotten from me
Are those ears so quick to hear
The passion and anguish
Of your sisters, your children, who languish
Near? Ah, not near,—
Far off by the uttermost sea!

III.

"Who gave ye your hearts to bleed
And brains to plan and to plan?
Why call ye on heaven,—
'T is the earth that to you is given!
Plead, ye may plead,
But for man I work through man.

IV.

"Who gave ye a voice to utter
Your tale to the wind and the sea?
One word well spoken,
And the iron gates are broken.
From me, yea, from me,
The word that ye will not mutter.

V.

"I love not murder but ruth.
Begone from my sight, ye who take
The knife of the coward,—
Even ye who by heaven were dowered!
Wake ye, oh wake,
And strike with the sword of Truth!

VI.

"Fear ye lest I misprize ye —
I who fashioned not brutes, but men.
After the lightning
And darkness — the dawn's red brightening!
Men — be ye men!
Lest I who made ye despise ye!"

R. W. Gilder.

HERCULES: A HERO.

ON a bright and mild early November afternoon, a young man who had alighted from a train at the Welshtown station was walking up and down and whistling on the otherwise empty platform. He was a tall, fresh-colored, brown-mustached young fellow, dressed in a well-made business suit; he had set down a hand-bag of alligator-leather and a neatly incased gun. Presently, finding that whistling had its boundaries as a resource, he consulted a large gold watch. Frank Mallard had indeed everything handsome about him; you may imagine what a completely and admirably equipped person he appeared to the countryman for whom he was waiting. You are not, however, to suppose that this individual's admiration was other than the unenvious tribute of one who felt himself at root an equal. He now came in sight, driving a pensive old sorrel horse; the once white top of his rickety wagon much besplashed with mud. He checked his not impetuous animal at a little distance from the platform, and slowly inquired, moving his whip dreamily, and fixing upon Frank the healthy stare of his light-blue eyes:

"We-ell; so ye *did* git down, Mr. Mallard?"

"Hello, Jerry!" cried Frank in his hearty way, picking up the bag and gun. "You 're a punctual man, you are!" These voices rang out pleasantly in the slumberous stillness. "How 's the pups?" asked the younger man ungrammatically, as Jerry leaned out to greet him with a violent sawing shake of the hand.

"We-ell," said Jerry thoughtfully, "the puppies is werry thin — *wer*-ry thin. I don't disguise it from you, Mr. Mallard." He grasped his conscience, which he found inclined to slide away from the fact, with some sternness.

Frank laughed; he had hardly heard Jerry's answer. He felt joyous; the scent of moist leaves, the broad and peaceful though now lessening autumn light possessed him, though he could not have expressed the feeling. He should indeed have been happy. He was twenty-four years old, good-looking, in perfect health, swimming in the easy business success which to one's wonder sometimes seems the native element of otherwise stupid men, and he had a holiday which took him out of range of a sarcastic father conscious of his son's limitations. This holiday he was about to spend in shooting over his two handsome young setters, presumably now highly accomplished, Jerry having had them in his care for some time. Dog-training was not, however, Jeremiah Hand's profession; he had a small farm, which he lazily cultivated. His wants were few, his inertia great, and wringing subsistence from the soil was a harshness not to be charged upon him; the soil would have given much more than he took. He loved gunning, dogs, companionship, tobacco, and the narration around the fire of rambling, pointless fictions. Frank had heard of him and his sagacity in matters canine from a person who kept the grounds of the athletic club to which he (Frank) belonged,—an intimate whom he called "Cholley." Jerry had been summoned to the city expressly that he might take Flash and Fan to his own home for tuition. Frank was proud of his ownership of these pretty creatures, who derived their descent, as he never tired of explaining, from that famous old prize-winner, Mr. Ramford's Flame. Their master had not till now partaken of his trainer's hospitality. The red winding road, full of "thank-you-ma'ams," along which they were passing, was new to him. The woods were not yet bare ruined choirs: here stood a maple, which still kept something of its brightness; here a rich brown and there a blood-red oak; now again, Corot-like, black branched, yellow-gray, a ghostly willow; and now a slender birch, its little light-golden leaves, dancing and twinkling along the silver stem, all a-tiptoe to fly away, as though the tree bore butterflies.

"The old woman, she said you would n't come," said Jerry, "but I told her, ye-es; ye-es. Lord, women folks hain't got no notion what sport is to a man. Now, my Sarer,—you hain't seen my Sarer,—she says to me, 'Why, father, what d'ye find in 't?' And I jest says, 'Sarer,' says I, 'you're a nice girl, a nice girl; but when all 's said and done, you 're *merely* a woman!'—Wot 's your gun, Mr. Mal-lard?"

Jerry made a spondee of Frank's name, which seemed to taste well to his tongue. Further peculiarities of his speech were, that when deliberating he would break a monosyl-

lable in two softly, which gave a fine effect of fair-minded consideration; but the letter *r* was to him ever uncompromising as a chestnut-burr.

"My gun?—a Parker. She 's a beauty!" said Frank, affectionately.

"Britch-loader, hey?" said Jerry, a slight shade of doubt clouding his open features. He thrust his sandy chin-beard out argumentatively. "We-ell, there 's advantages to the old-fashioned guns, sir. Yes, sir. There 's a man lives over here"—he gave his whip a generously comprehensive flourish—"has got a gun. I jest wisht you could see the working of that gun! It 's a' old-fashioned gun, Mr. Mallard; muzzle-loader; but, Man!" Jerry often apostrophized abstract humanity. He paused now in silent contemplation of the absent gun's virtues.

Frank laughed with good-natured derision. "Who 's your friend?" he asked.

"Herc'less, Herc'less Jimpson, is the name of that man, sir," said Jerry; "and he kin *shoot!* He 's a kind of re-lated to me, too, afar off."

"*What 's* his name?" said Frank.

"Herc'less. Cureyus, ain't it? I been told the orig'nal Herc'less was a Heer-O. That 's what he was; but I do' know the partic'lars. Name sounds forren, don't it? I must keep it in mind t' ask Sarer."

Frank's classical knowledge extended to Hercules, who had given a name to the athletic association formerly mentioned; and he found Jerry's dimness on the subject delightful. "She 'll know, will she?" he inquired, grinning.

"We-ell, she knows the most of things, sir," said Jerry, modestly. He said "sir" simply as an embellishment to conversation. "Her mother is a remarkable woman; but she 's gone beyond her, 'way beyond her. He-er we are!"

They had come to a short lane, from the opening of which was visible an unpainted and shackly dwelling; and now out ran Jerry's own shabby, slapping-gaited old setter Sam, and following him the aristocratic Flash and Fan, as lively as they were lean.

"Sarer" was not absolutely untraceable as Jerry's daughter; her long features had a hint of his. Her abundant hair was of a light red-bronze color, her complexion fair and pure, her eyes a warm, lucent brown. Mrs. Hand was a sallow, smiling, dark-eyed person with defective teeth; the kind of country-woman whose appearance carries the suggestion of a garden with marigolds and zinnias, and a low house with a best parlor smelling damp. Her horizon, originally wider than Jerry's, had narrowed with years; the last traces of the "smartness" predicated of her when a girl were to be found in an occasional touch of asperity towards her inactive husband, and in her insistence that Sarah should have "advantages." The girl had accordingly been sent to sojourn with her mother's relations in a distant village, where for a while she attended school. She was able to give her father some information on the subject of the "Heer-O" after whom their kinsman had been called, which kinsman's name she continued, in spite of her advantages, to pronounce according to tradition, "Herc'less." While she was instructing Jerry, somewhat vaguely, it must be owned, he looked at Frank meaningly, as though he would say, "You and I understand it 's nonsense, Mr. Mal-lard; but Lord! I 'm proud to have her know it." Frank, however, was not observing him. He uttered softly to himself, as Sarah went out of the room, the sentence which he had lately applied to his gun, "She 's a beauty!"

For her part, Sarah noticed that evening that the head their guest bent over a cracked cup of inexplicably bluish tea shone sleekly in the lamp-light with the hue of a brown oak-leaf. What a manly, easy way he had! With what mellow chest tones he spoke! What a neat large hand, wearing a wonderful ring with a dark carved stone!

Frank found, next morning, the action of his dogs quite promising; Jerry was wonderstruck by the performance of Frank's gun; and a number of quails departed this pleasant life with unanticipated suddenness. At perhaps twelve o'clock, Jerry's old game-bag and the pockets of his guest's corduroy coat having been fed fat by the ancient grudge man bears his brute fellow-creatures, they left the woods and came to a small old farm-house standing lonely among fields, the faint blue of its rising smoke adding a picturesque touch to the autumnal russet of far-blended foliage. This was the home of Herc'less, who came to meet them from the rudely built barn. He was of middle height, with a slouching walk and slight stoop; he wore a coat of that varied olive which is obviously the long result of time. His demeanor was passive while he and Frank were put through the cumbrous form of country introduction, and so continued during a meal of his own preparing, of which he lifelessly invited them to partake; Frank falling to with the appetite that glorifies plain fare. Herc'less even received the result of a trial of skill and shot-guns, in which he and his superannuated muzzle-loader were worsted, rather as a decree of fate, to be accepted with resignation, than with the heat of annoyance and flurry of ingenious explanation to be expected of mankind under the circumstances.

Frank looked at him with curiosity; what cold-blooded creature was this? The face he scrutinized had a sightless side, the expression of which was utterly depressed; but Herc'less suddenly turned his head, and met Frank with his single mild, honest, blue-gray eye; it was like the sudden letting of light into a room. "That gun of yourn," he said with more cordiality than he had yet shown, "is a dum good gun; that 's what it is!"

As Frank and Jerry tramped homeward in the mist of evening, after some hours less successfully spent than their agreeably destructive forenoon, the young man's thought returned to this face of the defeated Herc'less, with its neutral-brown hair that turned up at the ends, and spiritless flow of untrimmed beard.

"Live man, your friend is, Jerry!" he said with not ill-natured irony, as he snapped one of the forked seeds called "two-legged angels" from his shooting-coat.

"Herc'less," said Jerry, chewing a raw turnip, "has had his sorrers, and grievious to bear. And he hain't never cheered up. Never. That is to say, fully and completely. But," he added, half interrogatively, "he kin make a wer-ry good rabbit stew."

"I 'll swear to that," cried Frank heartily. "But what happened to him, Jerry?"

"We-ell, ye see, Herc'less," said Jerry, pausing for recollection after stating the subject of his tale, as though he had read its title,—"he was a volunteer in '61. A Zoo-av. There was a man down here had a notion of raising one of them flapping-legged reg'ments. He was wer-ry loyal, Herc'less. Not that I liked the yunerform of them Zoo-avs." He frowned slightly. "It was a little too, as you might say, galliant and gay."

The idea of Herc'less ever having had a gay and gallant appearance sent Frank into a fit of loud laughter, during which Jerry stared at him, evidently meditating. "He 's got a bullet into him!" he said suddenly, with a flash of pride in his kinsman.

"That so?" gasped Frank, still stabbed with mirth.

"We-ell," resumed Jerry, "he was sparking before the war, and they was a-going to be married. She wa' n't pretty," he admitted impartially, "but a wer-ry nice disposition. They was both great Meth'dists. Man, they was pious! Well, she says Go, and he went."

"Went where?" said Frank, getting over a fence.

"To the seat of war, sir," answered Jerry ornamentally. "She jest cried her eyes out."

"Why, you said she sent him," said Frank stupidly.

"The women folks," explained Jerry, with the deep look of an astronomer stating starry phenomena, "was *unusually* queer about '61. Well, jest at the time Herc'less was in the hospital with his left eye and his bullet,— you re-marked his left eye, of course,— Mirandy she up and died."

"Oh! Is that all?" asked Frank. "That was a long time ago."

"That 's all," said Jerry with a shade of surprise. The events of a bare life take perhaps larger proportion in the open than among tall crowded city buildings. "I guess Herc'less thought 't 'd about do. He hain't never, as I say, fully cheered up."

Frank here refreshed himself with a mouthful of spicy turnip, and while ruminating on it decided that the course of Herc'less was weak and unlike a man. Frank had a rather clumsily drawn ideal picture which he called "A Man." He was made a by-word among his associates by certain informal lectures on current topics invariably beginning, "A man, you know, he don't," or, "he does," as the occasion might demand.

"But he 's a-coming around now grajuly — grajuly; 'n' he could n't have took a better way, sir, than what he *has* took, if I *do* say it. What d' ye think —" Jerry broke off suddenly. "Lord, Mr. Mal-lard," he said in an agitated whisper, "if Van Brunt hain't let his bull git outer that field ag'in! That 's a dangerous bull, sir! Man! Hear him ro-ar?" A sound by no means inviting came upon the wind. Frank walked on gingerly in the dusk, looking around him like a boy who has heard ghost stories. He had a fair amount of physical courage, yet felt no stern joy in the prospect of encountering this highly recommended animal. Jerry followed him with his mouth drawn down demurely, "'sh!"-ing occasionally with loud force, and laboring to suppress his chuckles. He had no fear of the bull, but, hearing him "ro-ar," had indulged the impulse to embody his idea of a joke at the expense of a man with so unnaturally perfect a gun. Hence Frank lost the opportunity of learning by what course the bereaved Herc'less was likely to be "completely cheered up."

"I s'pose you been tellin' all you know, as usual," remarked Jerry's helpmate severely the same night.

"All I know?" repeated Jerry, aghast. He had suffered from low domestic temperature all the evening.

"Hain't you told him about Sarer?" asked his wife, fixing him with her glittering eye.

"I was jest getting to it," owned Jerry feebly.

"Well, you better not get to it, I *think*. I never see," she remarked with seeming irrelevance, "anybody without a particle of discreetion! Everybody 's got to know everything

all about the fam'ly, right off. I should n't think you 'd *like* to!"

Jerry quailed, attributing the bad taste of his conduct to his general inferiority as compared with this "remarkable woman." His mind had a liberality not always found in men of more liberal education; he could conceive the legitimate existence of feelings he by no means understood. He dutifully kept silence on the prohibited subject. But who knows whether it was really a fine sense of the sacredness of "fam'ly" matters, or a desire that her daughter should enjoy to the full certain further "advantages," that edged the protesting tongue of Mrs. Hand?

Frank saw Herc'less but once more during his stay; the latter was shy, and inclined to avoid Jerry's hearth while a guest sat thereby. He had on the occasion of their second meeting the same uninterested demeanor; walking, talking, even laughing,— though he rarely laughed,— all as if he were tired. It seemed impossible that this cold-looking, dull-colored life had had any part in the hot glow of the war; yet it was a gray crumbling ash, not a stone. This man had hoped, had exulted, had burned with courage, with fervid religion, with love; it was all over now, one would have said; the fire quite out. Yet sometimes a little bloom of orange light creeps along the side of a whitened ember that is blown upon; and had Frank chanced to note Herc'less turning his face towards the pleasant sound of Sarah's voice, he might have perceived a somewhat similar effect.

But while this voice was speaking, the young man was noting little except the brilliant red lips whence it came. Decidedly Jerry's daughter had sufficient rounded and warm-tinted beauty to impart to the ugliest lines of stiff calico some "grace and glimmer of romance"; and to such beauty one is not slow in surrendering unconditionally, if he have a love for rosy cheeks and an admiration for coral lips, unhampered by the possession of any intellectual ideal of his "not impossible she."

This dull young fellow was ill at ease in the society of the dainty maidens constituting the set into which his father pushed him. He was not disliked by these young ladies, whose complexities so bewildered him; they simply felt that he was not of their world, and he often, in red and hot humiliation, felt it too. But to Sarah Hand honest Frank was a Prince Charming,— here his narratives of boat-races and regatta-dinners and sparring-matches were fresh and fascinating; here he warmed himself— he stretched out his spiritual soles to the congenial fire of admiration, and was straightway singed. Sarah had no ambition; she had inherited Jerry's sweet, easy, drifting nature; but had she "gone beyond" her mother in "management" as well as in "book-learning," she could not have builded better than she now did unconsciously, on the foundation-stone of Frank's boyish egotism.

He made another though necessarily a brief visit to Welshtown in November; and some ten days before Christmas ran down again, to get, he said, "a last crack at the birds before the law was up." But if this was what he wished, he was unfortunate; for on the evening of his arrival a heavy snow-storm began, continuing several days: to clinch the necessity of his remaining indoors, Frank had taken a severe cold. Yet under these afflictions he was singularly patient, and bore like a martyr the moldy anecdotes brought from the crypt of Jerry's memory. He had a number of delicious interviews with Sarah: it was the longest of these talks that was interrupted by the entrance of Jerry, stamping, shaking, and presently steaming plenteously, one afternoon when he had gone, from a superstitious compunction, to look up Herc'less. Jerry, who rarely dreamed, had had the night before an uncanny vision concerning his kinsman, which he had elaborately described in the morning, so that the family had breakfasted full of horrors. He had found Herc'less suffering from rheumatism, and as usual without society more inspiriting than that of Peter Slade, the taciturn, loutish fellow who helped him on the small farm. There was a pathos about this uncomplaining Herc'less that melted Jerry's heart in one spot, and somehow correspondingly hardened it in another. Why, Frank's cold was being most considerately treated: at the very moment when Jerry burst in upon that cozy kitchen chat, a little saucepan of "stewed Quaker," prepared by Sarah at the suggestion of the thoughtful Mrs. Hand, was bubbling on the stove; and close to this same stove— and consequently not very far from each other— these two young people were sitting, the flickering candle-light, for it was now near supper-time, sufficing to show in their faces the peculiar expression which indicates that its wearers are on an enchanted island together, and must cross, startled, to you at your hail, for you cannot go to them. Jerry's eyebrows came together in a frown.

He was far from any conception of the situation based upon, or even including, the idea of a social inequality between his daughter and Frank Mallard. He had, moreover, a thoroughly trustful liking for the hearty-mannered young man. It was the manifest unfairness of things that afflicted him. "Now where, I want to know," his thought ran, "does Herc'less's rights come in?" This consideration wrought him up to a resolve; it seemed para-

mount even to his duty towards those exceedingly delicate scruples on the part of his superior wife which he had heretofore respected.

At supper Jerry dwelt much upon the wretched condition of the lonely Herc'less, looking hard at Sarah as he spoke. A wild-rose color grew in the girl's cheeks. Mrs. Hand eyed him movelessly, in a dreadful stony condemnation.

"Lord! if I was him," said Jerry with apparent innocence, "how I *would* look for'd to spring! Man!"

"Yes, he won't have no more rheumatiz when it gits warm," said his wife with great presence of mind. "Mr. Mallard, *do* have some fat meat." But this forlorn hope of drawing off Frank's attention failed. He rejected the singularly oleaginous delicacy offered, and stared heavily at Jerry.

"Ye-es," said Jerry genially. "Ye-es; but 'tain't altergether that — not altergether — is it, Sarer? There 'll be some one to ca-er for him then, as I may say," he continued with great meaning.

But having developed this point, he delivered a fresh cargo of nourishment with his knife and relapsed into a masterly inactivity, influenced, not by the discouraging front of his wife, but by a single quick, appealing glance from Sarah's light-brown eyes,— a glance that had sought him like a frightened bird.

He stubbornly outsat, that evening, his wife and daughter, who would remain upon the scene, the former determined, as long as they could. Frank was moody, and shied nervously from one of the disinterred anecdotes. Jerry fell to his last resource, the slow and hard-breathing perusal of a book — Sarah's, of course. Her few books were principally works of fiction, representing love as a pleasant adjunct to strictly orthodox religion. Jerry generally stigmatized them as "tomfoolishness." But this night he sat holding one firmly, with his great horny thumbs uppermost; his respiration gradually became louder; his head dropped by degrees; his lips opened.

"I think," said his wife sarcastically, as he straightened himself with a Jack-in-the-box movement, "if I was beat out I 'd go to bed, and not set gappin' like a catfish and snorin' like a — don'-know-what."

"We-ell," said Jerry deliberately, "perraps you 'n' Sarer *better* go." It became evident to Mrs. Hand that he was in one of the very infrequent moods which she characterized by a reference to a homely animal of singular will-power. He arose, filled and lit his pipe, drew his wooden chair nearer to the stove, and leaned back with his head on one side, extending his length of limb that the grateful heat might comfort his feet, clad in huge blue woolen socks. "As for me, I wan't even asleep," he said in an injured tone rare with him, "let alone snore."

His wife withdrew her forces. The door once shut, Frank, who had sat, with his chair tilted back, abstractedly smoking a cigar, now looked hard at Jerry. Jerry glanced up calmly at him.

"I hain't never told you," he said slowly, "not supposing 't 'd inter*rest* you, that Herc'less and Sarer was a-going to git married next spring." Frank said nothing.

"I s'pose you 're surprised. We-ell, I will say," continued Jerry fairly, "that when he first began coming around with a' apparient view to mattermony, *I* was supprised. And Mrs. H—— *she* was supprised; and she did n't favor it largely. But when she see Sarer's mind was *sot*" (Frank's teeth clinched on his cigar), "she says, wait till spring; so they 've waited. She says, says Mrs. H——, 't was all Sarer's soft-heartedness; and I hain't denyin' it, Sarer *has* got a soft heart. Durn a young woman that hain't! But she was sot; and I wan't sorry. It 's a good thing for him, sir; and as I see it, it 's a good thing for her."

"Why?" said Frank explosively.

"We-ell," said Jerry sagaciously, "you hain't seen much of Herc'less; I 've re-marked that he staid away while you was he-er. He hain't no hand to make acquaintances. But I know Herc'less wer-ry well. He 's a square man, sir; a square man." He nodded with a pleasant sense of his grasp of character.

"Is that a reason," cried Frank irritably, "to hand over a pretty girl like Sarah to a man fifteen years older — fifteen years!" — his voice broke like an angry boy's; his face was a bright pink,—"and all broke down as *he* is?"

Jerry pondered upon Frank with his big light-blue eyes. "All that ails Herc'less, sir," he declared, slapping his knee, "is that he hain't completely cheered up yet." He always clung to this expression in a kind of surprise at his own acuteness in having invented anything so comprehensive. "And he 's wer-ry well fixed; *wer*-ry well; wot 's he had to spend *fur?* He kin afford, sir, to take unto himself a wife; and Man!" He paused to let his not rapid imagination present an agreeable fireside picture.

Frank rose, with a savage, inarticulate sound of protest, flung down the remains of the cigar he had bitten in two, and stalking to the other side of the room began to examine his breech-loader, which he had brought downstairs that afternoon. He glowered at it for some minutes before it seemed borne in upon him what

he was looking at; then he carried it up once or twice as a gun-lover will. Perhaps it was pointed at the offending image of Herc'less.

"I guess I 'll go to bed. Good-night," he said sulkily, putting the gun over his shoulder.

"Sleep sound and hearty," said Jerry amiably. When Frank had gone, he shook his head for some minutes. "Man!" he said to himself, "he 's wer-ry hasty." He looked at the door with a forlorn smile. He did not feel disposed to hasten to awaiting retribution.

Half an hour's cool thought had, however, brought Mrs. Hand to the conclusion that her husband's mutiny was rather well-timed. She construed Frank's gloom as a favorable sign. Jerry was therefore permitted to sleep without the expected reading of the domestic riot act. The sleepless eyes under this rustic roof were younger eyes; now fully opened to a delicious, perplexing, pathetic state of affairs. To the girl, who had simply drifted on a sunny sea, her own feeling at the reminder to herself and disclosure to Frank of her true position — which had without art on her part been allowed to remain in the background — was a revelation. Doubt, shame, sudden angry pride, irrational joy, a tender remorse towards the man whom her pity had permitted to claim her,— all these sang no lullabies in Sarah's soul.

And Frank? His tossing thoughts were not occupied with Herc'less at all. For this figure, which he found abject, his young contempt was profound. The prominent fact brought out by his instinctive and involuntary resentment of Jerry's words was that he, Frank Mallard, was in love. (The good old-fashioned, indestructible phrase! What an idea of entering a new medium it conveys!)

But alas! a shadow fell athwart this bright fact, quenching the sparkle of the small foolish memories and hopes that danced through Frank's brain like glorified motes in a sunbeam. It was the shadow that had stretched across all his otherwise easy life since the death of the mother who had petted and spoiled him,— the cold, tall shadow of his father.

It fell between the son and the girl whom he loved,— loved as in him lay. It never occurred to Frank to doubt that he could marry Sarah Hand if he chose; her promise to Herc'less he regarded no more than a bond of straw. But afterward? The question came to his bedside and stood looking at him and through him with his father's eyes. So potent was the influence of the stronger soul that the young man almost saw that well-known face beside him — the thin, frosty-whiskered face, the sharp glance through the clear spectacles. Frank feared his father's anger all the more that it was certain to be an icy kind of anger, with an edge of ridicule. He was morbidly sensitive to sarcasm; his slow wits quickened to meet with understanding the jest or the slur, yet were unable by prompt retort to relieve the frenzy into which they goaded him. Ah, he knew quite well the gist of what his father would say of this matter, though he could not foresee exactly what superfine torturing twist that malevolent, incalculable cleverness of his would give the words!

A misalliance? — it would be none. Frank felt this truth; though he, of course, based his self-complacent reasoning on the natural desert of Sarah's beauty,— considering that "the proudest place would fit her face,"— and not on his own unfitness for any finer mate. But his father would consider it a misalliance, and would act accordingly — his father, whose money and influence had helped him in business to that modest height where, to do him justice, he now stood gallantly. Suppose this force all at once opposed — these props all at once withdrawn? There was a weak spot at the core of Frank's confidence — superficially so great as to be almost laughable — in his own unassisted business faculty.

In any critical moment his manliness was unreliable, as his associates in amusement well knew. He was not, they said, a "stayer." He had once been known, though in perfect physical condition, to "weaken" in a boat-race from sheer doubt of his own powers, causing his crew to be defeated by inferior men. Perhaps some of the coarsest of his rough-and-ready comrades connected his lack of "sand" with a certain clean good-boyishness which made them smile. The same mediocrity that kept him from doing active right often kept him too from doing positive wrong; he was just common clay for a potter's hand, and fate had provided the potter.

Now, as before, Frank weakened.

He passed under Jerry's roof another day, rendered sufficiently miserable by the pale but now self-possessed Sarah's complete avoidance of him, to impress upon him the need for immediate action of some sort. Retreat seemed best, as the least decisive and irretrievable step. He had some reason for starting nervously at the footfall of Mrs. Hand as she went about her work; she kept him in the corner of her eye; something was expected of him.

Late in the afternoon, Jerry brought him up from the station a city letter, which set forth certain matters requiring his personal attention. He had made up his mind to return the next day; yet, on learning that he must do so, found himself ill-used. He crumpled the letter up in his hand, scowling.

"I find I've got to go back to-morrow, Jerry," he declared suddenly in a high key.

"W'y," said Jerry, "you hain't had a durn shot! It 's a-cle-arin' like a bell."

"I've got to go," said Frank, with a sullen change of tone.

"We-ell, Mr. Mal-lard — business is business," said Jerry sympathetically, as though himself overwhelmed with affairs. "But, Man!"

The next morning was, as he had prophesied, beautifully clear; an intensely still winter day, the pines making moveless bluish shadows on the snow. Perhaps the thought that he had had no sport intensified Frank's irritation; sport certainly had a high seat among his interests.

Mrs. Hand bade him good-by very coolly; she felt instinctively her failure: the due punishment of Jerry's insubordination was doled out to him daily for months. As for Sarah, Frank indeed saw her alone for a minute; but she was engaged in feeding chickens, and he felt severely injured by the small proportion of attention which she allotted to him. As he got into Jerry's low, rough board sleigh, his heart was swelling with strong self-pity. I am afraid he had kicked away the too affectionate Fan, who ran off howling and was comforted by Sarah. Flash was of a less fawning disposition, and the happier dog.

"Man, I wisht you could stay; and failin' that, I wisht you could say when we 'd see ye ag'in," said Jerry cordially as the old sorrel sped along at a very respectable pace. "I 'd like," he said in a lower, meditative tone, "to see ye to the weddin': Man, we 'll have great times to the weddin'. But now I consider, you hain't no heart in that; you was a-sayin' that our Sarer was too young and too pretty for Herc'less."

This was the last straw. "Oh, hang it, Jerry, let me alone! *Can't* you let me alone?" said Frank volcanically; but the imprecation he actually used was much more forcible.

Jerry rubbed his nose with his forefinger. His perceptions were not keen; but the fiery handwriting on the wall was doubtless visible, though not intelligible, to the most obtuse individual at the feast of Belshazzar. As fiery was the writing of the moment on the young man's face. Jeremiah Hand was no subtle interpreter: the idea of Frank's true state of mind was as far from occurring to him as if he had been an emperor, ready to dower his daughter with a dukedom. His magnanimity leaped the gulf of all other possible constructions straight to a conclusion that seemed to him very natural: Frank loved Sarah, and would himself have been her suitor; but on learning of her engagement to Herc'less he had decided to sacrifice his feelings to his sense of honor, in the latter's behalf. Jerry would have been capable of doing that himself; and he warmed towards the poor fellow at his side, who now sat dull-eyed and sullen, inwardly sore at his own foolish outburst.

"I 'll send for the pups by and by; they 're better here than in a stable in the city," said Frank hurriedly as the train came in. Jerry nodded, and made his farewell hand-grasp a painfully full expression of sympathy. The locomotive moved off, hoarsely wheezing; he looked after it with an awed feeling of the stern justice of the event.

"It would n't be hardly fair to Herc'less, would it now?" he said to himself with his head on one side; "not after all the sorrers he 's had — and only jest beginning to git cheered up!"

Herc'less, since his quiet wooing of Sarah, had never been demonstrative; had spoken little of their future; had not frequented her society with the customary regularity of an accepted suitor. These peculiarities seemed to increase upon him rather than to diminish as the spring approached; but an evident uneasiness took the place of his former impassive behavior. The girl noticed this, and shrank within herself; she was conscious of an increasing hardness towards him, the rapid growth of which was quite beyond her control.

One day in April, Jerry had a long, low-toned conversation with Herc'less. He was puzzled and disturbed. Some unconsidered word of his had been followed by an astonishing outbreak from his daughter. "And I says, 'Don't it seem jest like a dream? There 's where he set and smoked his cig-gay-ret.' And with that she up and bursted into tears. Now, Herc'less, I leave it out to you if the po-sition of things hain't altered some?"

"I felt this a-coming," said Herc'less. "He 's a dum scoundrel, if his gun *kin* beat mine." But he said this with more melancholy than anger. It was as if he felt it all, Frank's condemned scoundrelism included, to be foreordained.

"Now I say 'No' to that, Herc'less Jimpson!" said Jerry warmly. "So far forth as I kin see, Mr. Mal-lard is a square man; a square man, sir!" He went on to describe the last scenes of Frank's stay, unconsciously coloring the story somewhat with his own interpretation.

Herc'less listened sadly. "Well," he commented with a queer smile, "I guess I 'm a square man too."

It was late the next afternoon, and Sarah, who had gone to the nearest village on an errand, was returning along a wood-path,

when she heard footsteps behind her. A glance showed her that Herc'less was following her. She was as frightened at the approach of her affianced lover as if he had been some evil-eyed stranger, and dropped the bunch of white and purple lilacs her village friend had given her.

"Sarer," he said as he came up, "I want to have a talk with you." He stooped, and picked up the flowers.

"This ain't the time," she said with a touch of her mother's sharpness; "I 've got to be getting home now."

"I 'll go your way," he said gently and reproachfully, and began to walk by her side. "Sarer," he began confidentially, "I 've been thinking things over."

It flashed across her that the things he had been thinking over were matters to be arranged for their simple housekeeping. The cold look that swept over her face, like a cloud over a hill, hurt Herc'less so that when he spoke next the tremor of his voice was noticeable.

"I 'm a good deal older 'n you, Sarer," he said; "a good deal."

She thought this was the tone of advice, and resented it. Could it be that he was about to speak to her of Frank?

"'N' I been *through* so much more," he went on. "I rec'lect so much that you hain't got no part in. I have spells when it all comes over me. Of a starry night, f'r instance, I 'll look up and I 'll feel old-like. And these laylocks — the smell of 'em carries me away back to other times. I s'pose it ain't no more to you than any other sweet smell."

He paused. Her relief as he passed from dangerous ground had been succeeded by a chill. Why did he bring these memories to her? It was like a rush of damp air from a tomb, the grotesqueness of this broken bridegroom, with his "spells" when the ghosts of dead happiness and dead sorrow alike talked with him! Could she endure an indefinite prolongation of this? But he had not yet reached his climax.

"Sarer," he said in a deep, hushed voice that hardly seemed his own, "I 'd like to show you something." He plunged far down into a breast-pocket of his old coat, and brought up something wrapped in pink paper. He unfolded it very reverently with his hairy-backed hands. "That 's Mirandy!" he said as he held it before her. The thin, mild face of the photograph, with the little dab of faded carmine disfiguring its cheeks, was to him sacred — the face of the Blessed Damozel who leaned and looked in his retrospective moments "from the gold bar of heaven."

Sarah recoiled from him — from them. Would not this figure stand by her, a kind of ghostly bridesmaid, during the ceremony against which her warm youth now cried out loudly? She was on the point of exclaiming passionately, "It can't be — it can't ever be!" But he was before her.

"I ain't never spoke to you like this before, Sarer," he said solemnly. "It 's because I want you should see what I see myself, now we 've got right down to it. It can't ever be!" She started at the echo of her own thought. "There 's *this* between us!"

Having said this, he folded up the picture carefully in its absurdly incongruous rose-colored wrapping, and laid it softly away in his pocket again.

"O Herc'less," she stammered, with the tears running down her face, "you 're so alone!"

"No, Sarer," he said kindly, "I ain't. And anyway, I 'm too broke down a man for you. Not but what I 'd 'a' done my dooty by ye. But that ain't all you want. I could make a guess, now, at the kind of a man you want." He looked at her markedly; she was sobbing hard now. He drew her head against his shoulder as if she had been a child; she did not resist; all her repugnance was gone.

"Don't ye cry, Sarer," he said soothingly. "You only jest make me feel bad."

It was all over. He had "done his dooty" by her. All that he had said was in a sense true. She could never know that he had persuaded himself so to bring an infrequent mood into the foreground as to dwarf in her sight the mild love for her which had long been his daily companion. She could never know that this meek flower of his later life was as dear to his impoverished soul as the last blue gentian to the fading year.

Summer dragged by, and still the little country household had but one new sign of Frank's existence,— a few scrawled lines in an envelope containing money. Frank himself had had time for recovery, and was, he thought, quite healed; though he yet delayed the severing of the last unromantic tie that bound him to the Hand family. His first sensation was one of amusement rather than of jealousy, when on a certain November afternoon an unlooked-for visitor appeared at his office. It was Herc'less.

He was clad in a new collection of garments which he had bought at a large ready-made clothing "emporium" that morning. The salesman had improved his peculiar opportunities. The coat was of a mulberry color, and much too small for him; the trousers, cut with a floating generosity of pattern, were of a material which the same salesman had assured him was "a fine genuine Scotch mixture": it

had somewhat the effect of Scotch cake, appearing sprinkled with small sugar-plums of several hues. Herc'less wore also a bright-blue cravat, flamboyantly tied. The feeling which had prompted him to assume this extraordinary attire was as admirable as that of a certain brave military leader who used to don his best uniform on the eve of a battle, honoring the awful hour with due pomp. But the result was a most lamentable comedy; and Herc'less's speech this day was like his garb — it was very tragical mirth.

"It appears, Mr. Mallard, that you intend to make Jerry a free gift of them dogs," he began facetiously.

"Why, no, Herc'less," said Frank, laughing with great heartiness, though hardly at the thin joke. "I 've been expecting to send for 'em. I 'll send next week."

A quickly quenched alarm gleamed in Herc'less's eye. "Send, hey? Why n't ye go down? Lord, there 's shootin' this season!" He detailed some remarkable statistics. "Jerry 'd be mighty glad to see ye; in fact, they *all* would." He said this in a hesitating and wistful way.

"Well, I 'll see," said Frank. Herc'less's appearance so absorbed him that he had no room for sentiment yet. "How 's luck with you, Herc'less? You 're looking so *remarkably* well!" He turned aside hastily to arrange some papers on his desk.

"Never was better in my life!" said Herc'less, slapping his knee loudly. He proceeded more slowly, looking at the smitten trousers-leg as though he regretted having treated it disrespectfully. "I been a-bringing my plans, as I may say, to a head."

And now the unreasonable Frank actually felt a pang. He knew long ago that it had taken place; of course it had. But he could not help turning a dark look on Herc'less. "You have!" he said shortly.

"The fact is,"— Herc'less dashed off gallantly again,— "I 've sold that little farm of mine. I 'm a-going West!" He leaned back, smiling agreeably. Frank stared.

"I 'm a-going," said Herc'less, "to Californi-er. To Californi-er."

"How 's that?" asked Frank.

"Well, ye see," said Herc'less, seeming a little abashed by the abrupt question, and sinking his obstreperously cheerful voice to as elaborately serious a tone, "I hain't been well; that is, I 'm very well *now* — never better. But I 've had a kin' of a cough; and ye know, I 've got a bullet"— here he entered with the expansiveness of the untutored into his physical peculiarities. "Now they say Californi-er,"— he uttered the word unctuously — "will make a new man of ye." He apparently expected the air of the Pacific slope to extract his bullet.

"Yes, I know," said Frank dryly. "The prospect seems to have braced you up already." The papers on his desk began to require a great deal of attention. "Sarah 's going with you, of course?"

"Lord, no!" said Herc'less with intense surprise. "I forgot — you hain't heard that it 's all over between me 'n' Sarer?"

"All over!" repeated Frank.

"Yes siree, I 'm a free man," said the joyous Herc'less. He looked into the crown of his shop-worn hat, a recent purchase. There was a small diamond-shaped bit of blue glass in it, probably designed to affect the wearer's brain in a wholesome manner.

"Ye see," he continued, "it struck us both, come to git right down to it, as in a manner unsootable. I 'm considerable older than Sarer; and there 's a lot of fine young fellers hangin' round —"

Frank flushed. Was it true? He had never seen any of these suspended suitors.

"And Sarer might take her pick," said Herc'less, taught by a touch of pride for her sake to lie fluently. "But," he resumed, startled by the thought that he might defeat his own purpose, "there 's nothin' serious up yit. Not as yit. No. Well, I thought 't was sorter unsootable. And moreover, when you 're goin' to Californi-er, to git made a new man of, you don't want no impedderments. Now, the best of wives is an impedderment."

There was a short silence; the office clock ticked. "Not but wot I 'd marry," said Herc'less thoughtfully, "if I was a settled business man like you, f'r instance." He raised his head and looked steadily at Frank with his honest one eye.

"I 'd go down after them dogs myself, if I was you," he said, "seein' the season 's so good. I jest come in to speak to you about 'em, being in town." He rose.

"Thank you, Herc'less, thank you," said Frank hastily. He held out his hand. His conscience was reminding him that in his past struggle he had never once considered this man, who, he now vaguely felt, was generous.

"I take it kind of you," he said warmly, alluding, a third person would have supposed, to Herc'less's unexpected call.

"Oh, no," said Herc'less shyly, dropping Frank's hand and edging towards the door.

"Think you 'll go down?" he asked with a sudden glance, and the same wistfulness he had shown in first urging this visit upon Frank.

"I guess I will," said Frank. He really at

the instant intended it; he felt one delicious thrill as he spoke.

"Well, it 'd pay — it 'd pay!" said Herc'less, beginning to squeak down the stairs.

Frank, after closing his door, walked to the mantel and leaned against it. He groped, as it were, to find that sweet thrill again in his breast. It was gone; everything was dull. His father's influence, not that of Herc'less, lingered in the very chair where Herc'less had sat. He now knew that he should never fulfill the implied expectation of the man who had just left him. He ran impulsively out into the hallway, and called over the rail, "Herc'less! Herc'less!" intending to say to him something — he knew not what — that should free him from the sense of having acted falsely. But Herc'less had vanished.

Frank wavered for a minute between the stair-way and his door. Then he turned and took up his life again, which he has never found a burden. He feels that the "might have been" is a thing too flimsy to weigh long upon "a Man."

Helen Gray Cone.

THE LOST BIRD ON SHIPBOARD.

(When off the coast of Africa a beautiful bird fell on deck in the night-watch. It was kept in my jacket till able to use its wings.)

LONE rover of the pathless deep,
And blank abyss of gloom;
A hundred weary leagues and more
From native tree, or Moorish shore
And thy forsaken home;

Thy tiring wing a silent throb,
In vast and upper void,
Under the watch-fire of the star,
Where sentinels of worlds afar
In camps of space abide;

And like a crimsoned autumn leaf
Torn from its parent tree,
So, drifting from the higher air,
Thy wings of color, rich and rare,
Droop o'er the purple sea.

By snowy sail and lofty spar,
And woof of salty rope,
Thy failing strength upon the deep
A haven finds for peace and sleep,
A refuge and a hope.

Thy cradle-nest is far away,
O weary bird! Why here?
The music of thy natal song,
Not written on the waves that throng
The channels of the sphere,

Not mine to know, or thine to tell.
Enough! thou hast a rest;
So in my jacket safely stay,
From midnight watch to break of day,
And nestle in my breast.

For in thy mute, exhausted life
Unspoken truth for me,
A note unheard but written plain,
In human soul to voice again
The angel dumb in thee,—

Of care divine — that never sleeps
In watching o'er its own,
For souls of men, where'er they stray,
Have in the darkness of their way
A resting-place and home.

In trouble, doubt, and haunting fear
Of sorrow's starless sea,
O brother! lost in storm or gloom,
God keeps amid the wrecks of doom
An ark that waits for thee.

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

XIII.

A BEAR HUNT.

BOB McCORD had that quick, sympathetic appreciation of brute impulses which is the mark of a great hunter. Given a bear or a deer in a certain place, at a certain hour of the day, and Bob would conjecture, without much chance of missing, in which direction he would go and what he would be about. In a two-hours' beating-up the ravine he found no traces of bears. He then faced almost about and bent his course to where the illimitable western prairie set into the woods in a kind of bay. Why he thought that on a hot day like this a bear might be taking a sunning in the open grass I cannot tell; he probably suspected Bruin of an excursion to the cornfields for "roas'in' ears." At any rate his conjecture was correct. Pup, beating forward in great leaps, with his head above the grass, caught sight of a female bear making her way to a point of timber farther down the run known as Horseshoe Neck. When the bear saw the dogs she quickened her leisurely pace into a lumbering gallop. Pup's long legs were soon stretched to their utmost in eager leaps which soon brought him in front of her; Joe, when he came up, annoyed her at the side; and stout little Seizer, watching the chance whenever she was making an angry lunge at Pup, would bravely nip her heels and so make her turn about. Before she could get her head fairly turned the fiste would turn tail and run for his life. Bob tried to get within range before the bear should disappear in the forest, but as soon as she saw herself near the timber she charged straight for it, refusing to strike at Pup, and wholly disregarding the barking of bob-tail Joe, or the proximity to her heels of Seizer. She quickly disappeared from sight in the underbrush, and the embarrassed dogs came near losing her. A few moments too late to get a shot, McCord came running to the woods at the point of her entrance. He examined the brush and listened a moment.

"She 's gone up stream," he said, "bound to make her hole at Coon's Den, 'f I don't git there fust."

He returned to the prairie and ran breathlessly along the edge of the woods for the better part of a mile; then he dashed into the timber, and pushing through the brush until he reached a cliff, he clambered down and stood with his back to the head of a ravine tributary to the valley in which Broad Run flowed. He was breathless, and his flimsy lower garments had been almost torn off him by the violence of his exertion and the resistance of underbrush and rocks; in fact, raiment never seemed just in place on him; the vigorous form burst through it now on this side and now on that. Hearing the dogs still below him, he knew that he had come in time to intercept the progress of the bear towards the heap of rocky débris at the head of the ravine. Once in these fastnesses, no skill of hunter or perseverance of dogs would have been sufficient to get her out.

The bear was soon in sight, and Bob saw that the nearly exhausted dogs were taking greater risks than ever. Little Seizer was particularly venturesome, and was so much overcome with heat and fatigue, and so breathless with barking, that it was hard for him to get out of the way of the bear's retorts. "She 'll smash that leetle ijiot the very nex' time, shore," muttered Bob with alarm; and though he knew the range to be a long one, he took aim and fired. Unluckily the infuriated Seizer gave the bear's heel a particularly savage bite, and at the very instant of Bob's pulling the trigger she turned on the little dog, and thus caused the ball to lodge in her right shoulder just as she was striking out with her left paw. She barely reached the dog, and failed to crush him with the full weight of her arm, but with her claws she lacerated his side and sent him howling out of the fray. Now, wounded and enraged, she recognized in the hunter her chief enemy; and, neglecting the dogs, she rushed up the ravine towards McCord. Bob poured a large charge of powder into his gun, and, taking a bullet from his pouch, he felt in his pocket for the patching.

A moment he looked blankly at the oncoming bear and muttered "Gosh!" between his set teeth. There was not a patch in his pocket. He had put some pieces of patching there in the darkness of the morning before leaving home, without remembering that his pocket was bottomless. He stood between a wounded bear and her cubs, and there was no time for deliberation. He might evade the attack if he could succeed in getting up the cliff where he had come down, but in that case she would reach her hole and he would lose the battle. He promptly tore a piece from the ragged leg of his trousers, and, wrapping his ball in it, rammed it home. Then he took a cap from a hole in the stock of his gun and got it fixed just in time to shoot when the bear was within a dozen feet of him. Uncultivated man that he was, he had the same refined pleasure in the death-throes of his victim that gentlemen and ladies of the highest breeding find in seeing a frightened and exhausted fox torn to pieces by hounds with bloody lips.

Bob's first care was to look after Seizer, who was badly wounded but whose bones were whole. The afternoon had passed its middle when he shot the bear, and by the time he had cared for the dog and dressed the animal the sun was low on the horizon, and McCord was troubled lest he should have delayed too long the execution of his stratagem for the confusion of Jake Hogan.

Another man might have been considerably embarrassed to dispose of the bear. But Bob proceeded to skin it and then to divest it of every part that was of little value. Then he hoisted the carcass to his shoulder and tossed the bear-skin on top. Taking up his rifle, and balancing his burden carefully before starting, he went swaying to and fro down the ravine, choosing with care the securest places among the rocks to set his feet in. It was thus that Samson went off with the great gates of Gaza. McCord was a primitive, Pelasgic sort of man, accustomed to overmatch the ferocities of Nature with a superior strength and cunning. Lacking the refinement and complexity of the typical modern, this antique human is more simple and statuesque; even the craft of such a man has little involution. There was a joy in his bloody victory over the most formidable beast in his reach that was virile and unalloyed by ruth or scruple — a joy like that which vibrates in the verses of Homer.

It was a good mile to Lazar Brown's, where Bob hoped to find a horse to take his bear home. When at length he stopped to lay his burden on a salient corner of old Lazar's rail fence, twilight had begun to bless the overheated earth.

"Got a b'ar, did n' choo, Bob?" said Old Lazar, who was lying in wait for Bob.

"To be shore, Uncle Lazar. Whadje expeck?"

"Come in, Bob, wonch yeh? I got a fresh jug full uv the critter yisterday, un I 'low you 're purty consid'able dry agin this time. You purty much al'ays air dry, Bob."

"Well, Uncle Lazar, I *am* tol'able dry un *no* mistake. I hain't had nuthin' to drink to-day 'ceppin' jes branch water, un water 's a mighty weak kind uv a drink fer a pore stomick like mine. 'N' I 'm hungry too. Don' choo 'low S'manthy could rake up a cole dodger some'ers about?"

"Oh, stay tell she gits you some supper."

"No, Uncle Lazar; I could n' stop a minute noways. They hain't got nary thing t' eat 't our house. Len' me your mare to git this 'ere varmint home?"

"I could n', Bob. I 'm thes uz willin' to 'commodate ez anybody kin be, but I 've promised the mare to one uv the boys to-night — to — to go a-sparkin' weth."

"Oh, sparkin' kin wait. What 's a feller want to go sparkin' a Friday night fer? Tell him to wait tell Sunday, so 's the gal 'll have a clean dress on."

"But I 've gi'n my word, Bob."

"Your word hain't no 'count, un you don't fool me, Uncle Lazar," said Bob, with a broad grin. "Your mare 's a-goin' to town to-night, un ef she sh'd git a bullet-hole into her who 'd pay the funeral ixpenses?"

This consideration went for a good deal with Lazar.

"I say, Bob," he said, coming closer and speaking low, "*is* they goin' to be shootin' to-night?"

"*Uv* course they is, un plenty uv it. Don' choo know 't the sheriff 's gi'n bonds, un 'f 'e lets a prisoner go he 's got to pay the damages? Un them town fellers is sot agin lynchin'." Seeing S'manthy in the cabin door straining her attention to the utmost, Bob spoke loud enough to reach her ears. "Lookey h-yer, Uncle Lazar," he went on; "d' you reckon 't that feller that 's a-goin' to git your mare shot to-night 'll gin you a whole quarter uv bear-meat fer the use *an'* the damages ef she 's shot?"

This last hint had the desired effect.

"'T ain't no use a-talkin', Daddy," S'manthy called out; "I hain't a-go'n' to let a' ole frien' like Bob McCord pack that-ar great big b'ar all the way over to Timber Crick on his shoulders ez long 's my name 's S'manthy. Un I hain't a-go'n' to have the mar' shot. So thar 's 'n eend auv it." S'manthy's common "uv"

or "uh" for "of" became "auv" when she wished to be particularly emphatic and full-mouthed in a declaration.

"Good fer *you*, S'manthy," said Bob. "You sh'll have the best leg this critter 's got. Take yer ch'ice."

A rusty ax was brought out, and Bob stopped a moment to examine its serrated edge. "I say, Uncle Lazar, ez this a' ax *ur* a saw? From the aidge uv it, I sh'd call it a saw." Then with a laugh he proceeded to cut off a liberal quarter of the bear, while S'manthy's ten-year-old tow-headed boy was sent to "ketch up the mar'," which was nibbling grass on the farther side of a patch of broad-leaved cotton-weeds. When the quarter of bear-meat had been hung up at the north end of the cabin, Lazar got out his jug and Bob began to satisfy the longings of his colossal thirst, while S'manthy set out on the pine table which stood in the middle of the floor some "Kaintucky corn-dodger," as she called it; and despite Bob's protest against staying till she could cook some supper, she put a bit of fat salt pork in the skillet to fry. Meantime the old man plied Bob with more whisky, both before and after eating. When he thought it time for this to have taken effect, he began to try to satisfy his own curiosity.

"D' joo hyer about the carner's eenquest, Bob?" he said cautiously, feeling his way towards his point.

"No, I did n't. You see I hain't seed nobody but the bear, un he wuz the ign'rantest critter. Could n't tell me nuthin'." And Bob laughed at his own wit, as was his custom. "How 'd it go?" Bob had wanted to ask this question, but he wished to let Uncle Lazar begin.

"Well, I hyern f'om Raphe Jackson, thes now, that the jury said 's Lockwood come to 'is final eend ut the han's uv Tom Grayson, ur sumpin like that; un they said 't wuz reg'lar bloody murder in the fust degree. My! ef that was n't a mad crowd! They made a rush fer Grayson, but the depitty shurriff 'd got 'im away. Ef they 'd 'a' cotcht him they would n't 'a' made two bites uv him."

"You don't say!" Bob was a little stunned. He had not thought of Tom's being at the inquest. He felt that perhaps in coming away he had made a mistake that had come near to being a fatal one.

"They wuz thes a-howlin', Raphe said, un they had n't lef' the place when he come away. They wuz made madder by the way the young scoundrel stood up un declared 't he did n' know nuthin' about the murder, arter 't wuz proved on him, plain 's the nose on a man's face, an' the dead man a-layin' right thar afore 'is eyes."

Bob was in a brown study, and nothing was said on either side for nearly a minute. It made Bob uncomfortable to reflect that he had come near losing the game at the outset.

"I 'low 't 'll go hard weth the young feller to-night."

This roused McCord from the reverie produced from his surprise.

"I reckoned the boys 'u'd be a-goin' to Moscow to-night," he said; and added, "Let 'em go!" And then he laughed as though he knew something.

"Say, Bob," said Uncle Lazar, whose curiosity was piqued beyond endurance, "what 's in the wind? What wuz it fotcht you all the way over h-yer un the eenquest a-goin' on so closte to your house?"

"Had n' got no meat," said Bob, with a wink.

"They 's sumpin more 'n *that*. You 've got sumpin ur nuther on Jake, I 'll bet."

"I 'ke speck you know a whole lot, Uncle Lazar," said Bob. "I sh'd think you 'd jest right up un guess now."

"Well, I can't."

"Well, I 'm not a-goin' to let 't out, Uncle Lazar, 'thout this 'ere whisky uh yourn 's a leetle *too* powerful fer me."

Bob did not fear the whisky: it was rare that whisky could get the better of such a frame as his; and, moreover, he was inured to it. He only threw out this hint to persuade his host to be more liberal in dispensing it.

But it appeared that Lazar's liberality with his whisky was probably exhausted; and Bob rose to go, affecting to be unsteady on his legs.

"Set down, Bob; set down, while I see about the mar'."

"Well, I 'low I will, Uncle Lazar. That air whisky uh yourn has settled into my feet a leetle."

Lazar went out to see if the boy had brought the horse, making a signal to his daughter to try her skill at coaxing Bob to tell. Meantime Bob ogled S'manthy, who, like Delilah, was debating how she could win this Samson's secret. Presently he said, in a half-tipsy tone:

"S'manthy, you 'n' me wuz al'ays good frien's, wuz n't we?"

"To be shore, Bob."

"I used to think you wuz *some* at a hoe-down; you wuz the best lookin' un the liveliest dancer uv all. How you *did* kick the floor!"

S'manthy smiled in her faded away. "Bob, that 's all saf'-sodder, un you know it. Say, Bob, ef you 're sech a frien' why on yerth don' choo tell a-body what fotcht you over h-yer to-day?"

"Aw, well, I 'd tell, on'y I 'm afeared you 'd let out."

"Not me. 'T a'n't like me to blab."

"Well, I don' mine tellin' *you*, S'manthy, 'f yeh won't tell the ole man tell mornin'."

"Oh! I 'd never tell *him*. He 'd go potterin' all over Broad Run Holler weth it, fust thing."

"'S the bes' joke," said Bob, rubbing his knees exultingly; "but I 'm afeared you 'll tell," he added, rousing himself.

"'Pon my word 'n' honor, I won't. Nobody 'll ever git 't out uh me." And S'manthy emphasized this assurance by a boastful nodding of the head forward and to one side.

"Well, 'f you think you kin keep the sekert overnight — Don' choo tell no livin' critter tell mornin'."

"I hain't no hand to tell sekerts, an' you 'd orter know that, Bob."

"Well, you jes let Jake 'n' his crowd go to Moscow to-night," said Bob, chuckling in a semi-tipsy, soliloquizing tone. "I come over to make shore they *wuz* a-goin', un I wuz to let the sher'f know ef they had got wind uv anything. I saw Markham, the deppitty, about 1 o'clock this mornin', un he tole me he 'd look arter the eenques un I mus' keep a look-out over h-yer. Jake 'll have a rousin' time, un no mistake."

"Shootin'?" queried S'manthy with eagerness.

"Naw! I wuz on'y a-lettin' on about shootin' to fool Uncle Lazar. Hain't got no needcessity to shoot. Better 'n that! Gosh!"

"Goin' to take the young feller away?"

"I 'low they did n't never take him back to Moscow arter the eenques."

"Tuh law! You don't say? Whar 've they tuck 'im to?"

"I sha'n't tell," said Bob. "I sha'n't tell even *you*, S'manthy."

"Perrysburg?"

"You al'ays wuz some at guessin'. But I sha'n't say nary nuther word, on'y he 's whar Jake won't find him ef he goes to Moscow. They went some'ers, un that 's anough. Perrysburg jail 's ruther stronger 'n ourn, I 'll say *that*. 'T wuz all fixed, 'fore I lef' home, to run him off afore the verdick wuz in, un not to keep to the big road nuther, so 's Jake would n' git wind uv 'em. Don't you whisper Perrysburg to a livin' soul. You jes let Jake go down to Moscow! I 'm comin' over 'n the mornin' to fetch your mare home un git my little Seizer that 's got to stay h-yer to-night, un then I 'll fine out how they come out." And Bob chuckled as he left the house, only turning back to say:

"You keep mum, S'manthy, ur you 'll spile it all. 'F you do tell, I won't *never* forgive yeh."

Bob now went to the brookside and cut up and stripped three or four leatherwood bushes, and tied the tough, fibrous bark into one rope. With this he girded the bear to the horse's back, meantime resisting all of Old Lazar's inquiries about the reason for his coming. At length he walked off in the darkness, unsteadily leaning against the horse on which the bear-meat was tied; and was soon out of sight.

"Bob won't tell me," said the old man plaintively, as he came into the house.

"He won't, won't he?" demanded S'manthy, with exultation in her voice. "You don' know how. Takes me to git at a sekert."

"Did he tell *you*, S'manthy?" Uncle Lazar looked a little crest-fallen.

"In *course* he did. Think I could n' make him tell? W'y, I kin thes twis' Big Bob 'roun' my little finger."

"Well, what on yerth did he come over yer fer, S'manthy?"

"I promised not to tell you."

"To be shore you did. But you 're a-goin' to."

"Yes; but you 'll let it out, un then what 'll Bob say to me?"

"What 'll Jake say to you fer lettin' yer hoss go off, when one uv his boys had the promise? Un what 'll the folks say when they find out you knowed, un let 'em be fooled by Big Bob? You 've got to tell, S'manthy, ur else have all the Holler down on yeh. Besides, you could n' keep that sekert tell bed-time, noways, un you know you could n'. 'T ain't in you to keep it, un you might thes' ez well out weth it now ez arter awhile."

"Aw, well, Daddy, Bob did n' say much, on'y ut Jake would n' fine the feller that done the shootin' when he got to Moscow."

"Tuh law!" exclaimed the old man, waiting with open eyes for more.

"He wuz tuck off, afore the eenques wuz over, to Perrysburg, un Bob come over to see 't Jake did n' git no wind uv it. That 's all they is *to* it. Un you need n' go un tell it, h-yer un yan, nuther."

S'manthy knew well that this caution was of no avail. But by tacking the provision to the information, she washed her hands of responsibility, and convinced herself that she had not betrayed a secret. It was an offering that she felt bound to make to her own complacency.

Uncle Lazar, for his part, made no bones. He only tarried long enough to set his pipe to smoking.

Bob McCord had stopped in the darkness under the shade of a box elder, a little beyond the forks of the road. He presently had the satisfaction of seeing the old man trotting

away through the cornfield towards a little grocery, which was located where the big road crossed Broad Run Hollow, and which was the common center of resort and intelligence for the neighborhood.

XIV.

IN PRISON.

Hiram Mason managed with difficulty to drive the first two miles of forest road—over roots and stumps, through ruts and mud-holes, and with no light but that of a waning moon. When he reached Timber Creek bridge he got down and led the horse on its unsteady floor. Then came, like a dark spot in the moonlight, the log school-house, which reminded him that he was running away from his day's work. He stopped at the new log-house of John Buchanan, a Scotch farmer who had been one of his predecessors, and called him up to beg him to take his place. Buchanan, whose knowledge was of the rudimentary kind, had ceased to teach because the increased demands of the patrons of the school had left him behind; it was a sort of consolation to his thwarted ambition to resume the beech-scepter if only for a day.

When Buchanan's house had been left behind, the road passed into an outskirt of small poplars and then finally shook off the woods and lay straight away over the dead level of the great prairie. By the time the wagon reached this point the dawn was beginning to reveal the landscape, though as yet the world consisted only of masses of shadow interspersed with patches of a somber gray. But the smooth road was sufficiently discernible for Hiram to put the horse into a trot, which afforded no little relief to the impatient Barbara. Up to this time they had traveled in silence, except for the groans and sighs of Mrs. Grayson. But at length Barbara took the lead.

"I can't believe that Tom did that shooting," she said to Mason. "He promised me after supper last night that he would put all hard feelings against George Lockwood out of his mind. Tom is n't the kind of a fellow to play the hypocrite. Oh, I do hope he is innocent!"

"So do I," said Mason.

"To be sure, he is," said Mrs. Grayson, with a touch of protest in her voice.

Barbara had detected a note of effort in Hiram's reply, that indicated a prevailing doubt of Tom's innocence, and she did not speak again during the whole ride. When they entered the village, Mason drove first to the sheriff's house, and went in, leaving Barbara and her mother in the wagon. Sheriff Plunkett had not yet had his breakfast. He was a well-built man, of obliging manners, but with a look of superfluous discreetness in his face. Mason explained in few words that the mother and sister of Tom Grayson, who had not seen him since the shooting of Lockwood, were at the door in a wagon and wished to be admitted to the jail. The sheriff regarded Mason awhile in silence; it was his habit to examine the possible results of the simplest action before embarking in it. He presently went up-stairs and came down bringing with him the jail keys. Mason drove the wagon to the jail, tied the horse to a tree, and suggested to Mrs. Grayson and Barbara that it would be better for him to go in first. He had a vague fear that there might be something in Tom's situation to shock the feelings of his mother and sister. The sheriff had walked briskly along the wagon track in the middle of the street to avoid the dew-laden grass on either side of the road. When he came to the door of the jail he said in an undertone as he shoved the great iron key into the door:

"Tom 's in the dungeon."

"Why did you put him in the dungeon?" asked Mason.

"We always put prisoners accused of murder in there."

"You might put an innocent man in that place," said Mason.

"Well, there ain't much doubt about Tom's being guilty; and anyways the jail 's so weak that we have to put anybody accused of murder in the dungeon, where there ain't any outside windows."

By the time he had finished this speech, Plunkett had admitted Mason and himself to the jail and locked the outside door behind them. The prison was divided into two apartments by a hall-way through the middle. The room to the left, as one entered, was called the dungeon: it was without any light except the little that came through at second-hand from the dusky hall by means of a small grating in the door; the hall itself had a simple grated window at the end farthest from the outside door.

When the sheriff had with difficulty opened the door of the dungeon, he could not see anything inside.

"Tom, come out," he called.

Mason was barely acquainted with Tom, but he was shocked to see the fine-looking fellow in handcuffs as he came to the door, blinking his eyes at the light, and showing a face which wounded pride and anxiety had already begun to make haggard.

"Mr. Mason, I did n't expect to see you," said Tom. "Did you hear anything from mother and Barbara?"

"TELL ME TRULY, TOM, DID YOU DO IT?"

"They 're outside," said Mason. "I thought I 'd just take your place at home for a few days."

The sheriff had gone along the hall to open the door leading into the room on the side opposite the dungeon. Tom regarded Mason a moment in silence, and presently said with emotion:

"How can I make anybody believe the truth? They 'll say that a man who 'd kill another would lie about it. I believe I should n't care so much about the danger of being hung, if I could only make a few people know that I did n't kill George Lockwood. I can't make you believe it, but I 'm not guilty." As he said this, Tom dropped his eyes from Mason's face, and an expression of discouragement overspread his own.

"You certainly don't seem like a guilty man," said Hiram.

"The worst of it is," said Tom, as they followed the sheriff into the eastern room of the jail, "I can't think, to save my life, who 't was that could have done the shooting. I don't know of any enemy that Lockwood had, unless you might have called me one. I hated him and talked like a fool about shooting, but I never seriously thought of such a thing."

The eastern room of the wretched little jail was about fifteen feet wide and twenty feet long. In it were confined from time to time ordinary prisoners, and occasionally lunatics, without separation on account of character or sex. Fortunately Tom had the jail now to himself.

The sheriff, who in those days was also the jailer, locked Mason and Tom in the eastern room while he opened the outside door and admitted Mrs. Grayson and Barbara to the hall. Then he locked the front door behind them and proceeded to unlock the door of the eastern room. Barbara ran in eagerly and threw her arms about Tom.

"Tell me truly, Tom," she whispered in his ear, "did you do it? Tell me the solemn truth, between you and me."

"Before God Almighty, Barb," he answered, "I did n't shoot George Lockwood, and I did n't even see him on the camp-ground. I was n't in that part of the woods, and I had n't any pistol."

"Tom, I believe you," said Barbara, sobbing on his shoulder. Wondering that her brother did not return her embrace, she looked down and saw his handcuffs, and felt, as she had not before, the horror of his situation.

Mrs. Grayson now gently pushed Barbara aside and approached Tom.

"I did n't do it, mother," said Tom; "I did n't do it."

"Of course you did n't, Tommy; I never thought you did — I just knew you *could n't* do it." And she put her trembling arms about him.

Hiram had gone into the corridor from motives of delicacy.

"Could n't you move him into the east room?" he said to the sheriff. "It 's too bad to have to lie in that dungeon, without air, and in August too. And is it necessary to keep his handcuffs on?"

"Well, you see, it 's the regular thing to put a man into the dungeon that 's up for murder, and to put handcuffs on. The jail 's rather weak, you know; and if he should escape — I 'd be blamed."

Mason went into the dark room and examined the dirty, uncomfortable cot, and felt of the damp walls. Then he returned to the east room just as Tom was explaining his flight from the camp-ground.

"I saw a rush," he said, "and I went with the rest. A man was telling in the dark that George Lockwood had been shot, and that they were looking for a fellow named Grayson and were going to hang him to the first tree. I ran across the fields to our house, and by the time I got there I saw that I 'd made a mistake. I ought to have come straight to Moscow. I went into the house and came out to go to Moscow and give myself up, but I met the sheriff at the gate."

"The first thing is the inquest," said Mason. "Have you thought about a lawyer?"

"There 's no use of a lawyer for that," said Tom. "My fool talk about killing Lockwood is circumstantial evidence against me, and I 'll certainly be held for trial — unless the real murderer should turn up. And I don't know who that can be. I 've puzzled over it all night."

"You studied with Mr. Blackman, I believe," said Mason. "Could n't you get him to defend you?"

"I don't know that I want *him*. He 's already prejudiced against me. He would n't believe that I was innocent, and so he could n't do any good."

"But you 've got to have somebody," said Barbara.

"I 've been over the whole list," said Tom, "and I 'd rather have Abra'm than anybody else."

"Abra'm 'll do it," said Mrs. Grayson; "I kin git him to do it. He 's a little beholden to me fer what I done fer him when he was little. But he 's purty new to the law-business, Tommy."

"Abra'm Lincoln 's rather new, but he 's got a long head for managing a case, and he 's honest and friendly to us. The circuit court begins over at Perrysburg to-morrow, and he 'll like as not stop at the tavern here for dinner to-day. You might see him, mother."

"Tom! Tom!" The voice was a child's, and it came from the outside of the window-grating. A child's fingers were clutched upon the stones beyond the grating; and before Tom could answer, the brown head of Janet Grayson was lifted to the level of the high, square little window, and her blue eyes were peering into the obscurity of the prison.

"Tom, are you there? Did they give you any breakfast?" she faltered, startled and ready to cry at finding herself calling into a place so obscure and apparently so void.

"O Janet! is that you?" said Tom, putting his face to the grating. "You blessed little soul, you! But you must n't come to this dreadful place." And Tom tried to wipe his eyes with his sleeve.

"Yes, but I am sorry for you, Cousin Tom," she said, dropping to the ground again and turning her head on one side deprecatingly; "and I was afraid they would n't give you enough to eat. Here 's three biscuits." She pulled them out of her pocket with difficulty and pushed them through the grating.

"Thank you, thank you," said Tom. "You are a dear, loving little darling. But see here,

JANET AT THE WINDOW.

Janet, you 'd better not come here any more; and don't call me cousin. It 's too bad you should have to be ashamed of your cousin."

"But I *will* call you cousin, an' I don' care what they say. Are *you* in there too, Barbara? You did n't kill anybody, did you?"

"No; neither did Tom," said Barbara, leaning down to the window.

"Janet," said Tom, "d' you tell Uncle Tom and Aunt Charlotte that I did n't shoot anybody. They won't believe you, but it 's a fact."

Janet had heard the news at the breakfast-table. Sheriff Plunkett, wishing to conciliate so influential a person as Thomas Grayson the elder, had sent him word very early of the unfortunate predicament in which Tom found himself, and had offered to comply with any wishes Mr. Grayson might express concerning his nephew, so far as the rigor of the law allowed. To steady-going people like the Graysons the arrest of Tom on such a charge was a severe blow; and his execution would compromise for all time their hitherto unsullied respectability in their little world. They drank their breakfast coffee and ate their warm biscuit and butter and fried ham and eggs with rueful faces. The comments they made on Tom's career were embittered by their own share of the penalty. Janet had listened till she had made out that Tom was in jail for killing somebody. Then, after hearing some rather severe remarks from her parents about Tom, she burst into tears, rose up and stamped her feet in passion, and stormed in her impotent, infantile way at her father and mother and the people who had locked up

Tom in jail. When the first gust of her indignation had found vent, she fled into the garden to cool off, as was her wont. After awhile she came back and foraged in the kitchen, where she pounced upon three biscuits which had been left on a plate by the fire to keep them warm. With these she had made off through the back gate of the garden, thence down the alley and across the public square to the jail.

Meantime a lively discussion was carried on in the house.

"We 've got to do something for Tom, I suppose," said Mrs. Grayson, after the discussion of his blameworthiness was exhausted. "He 's your nephew, and we can't get around that. Goodness knows he 's given us trouble enough, and expense enough, already." It was a favorite illusion with the Graysons that they had spent money on Tom, though he had earned all he had received.

"Yes," said Grayson reluctantly; "it 'll be expected of us, Charlotte, to stand by him. He 's got no father, you know. And I suppose George Lockwood was aggravating enough."

"The Lord knows I 'm sorry for Tom; he was always good to Janet." This reminded Mrs. Grayson of her daughter, and she went to the open door of the dining-room and called, "Janet! O Janet! It 's curious how she stands by Tom. She 's off in the sulks, and won't answer a word I say. I suppose you 'll have to go his bail," she said with apprehension.

"No, it 's not bailable. They don't bail prisoners charged with capital offenses."

"That 's a good thing, anyhow. I hate to have you go security."

"I suppose Martha 'll be able to pay the lawyers," said Thomas Grayson. "She won't expect us to do any more for Tom. It 's bad enough to have to stand the disgrace of it."

"Janet! Janet! O Janet!" called Mrs. Grayson anxiously. "I declare, I 'm uneasy about that child; it 's nearly half an hour since she went out. I wish you 'd go and have a look for her."

But at that moment Janet rushed in breathless through the kitchen.

"O Pa! I 've been over to the jail to see Tom."

"You 've been to the jail!" said Grayson, recoiling in his heart from such an experience for Janet.

"Yes, an' they 've put Barbara and Aunt Martha in there too, along with Tom." She was bursting with indignation.

"Thomas," said Mrs. Grayson, as she gathered up the hitherto neglected breakfast plates, "Martha and Barbara have come from home this morning."

"I suppose so," said Grayson, looking out of the window.

"Now it 's not going to do for us to let them go without coming here to breakfast," said the wife. "People will say we 're hard-hearted; and when they once get to talking there 's no knowing what they *won't* say. They might blame us about Tom, though the Lord knows we did *our* best for him."

"Will you go and ask Martha and Barbara to come over?" said Grayson, with a sneaking desire to escape the disagreeable duty.

"I can't bear to," said his wife. "I hate to go to the jail and see Tom there. Besides, if they 're coming I must make some coffee."

Grayson stood still and looked out of the window.

"Will they let them come if you ask 'em?" inquired Janet.

"Let who come?" said her father abstractedly.

"Aunt Martha and Barbara and Tom."

"Of course they 'll not keep your Aunt Martha nor Barbara. They have n't killed anybody."

"Neither has Tom. He told me to tell you he had n't."

"I suppose they all talk that way. 'T ain't like Tom to lie about anything though. He generally faces it out, rain, hail, or shine. I wish to goodness he could prove that he did n't kill George. Where are you going, Janet?"

"To fetch Aunt Martha and Barbara. I wish they 'd let Tom come too."

Grayson spent as much time as possible in getting his hat, and looking it over before putting it on. Then, when he could think of no other pretext for delay, he started as slowly as possible, in order to give Janet time to fetch his relatives away from the jail before he should encounter them. Janet found her aunt coming out of the prison in order to allow the sheriff to go to breakfast.

"Aunt Martha," cried Janet. "Ma wants you an' Barbara to come to breakfast. She sent me to tell you."

"I don't like to go there," said Barbara to her mother in an undertone.

But Mason, who was behind, perceiving Barbara's hesitation, came up and whispered: "You 'd better go, Barbara. Tom will need all the help he can get from your uncle's position. And I 'll take the horse and put him into your uncle's stable."

XV.

ABRAHAM LINCOLN.

THE village of Moscow was founded by adventurous pioneers while yet Napoleon's Russian expedition was fresh in all men's

minds, and took from that memory its Russian name, which, like most other transplanted names of the sort, was universally mispronounced. The village had been planted in what is called an "island," that is, a grove surrounded by prairie on every side. The early settlers in Illinois were afraid to plant themselves far from wood. As it stands to-day, the pretty town is arranged about a large public square, neatly fenced, and with long hitching rails on all four sides of it. The inside of the square is trimly kept, and is amply shaded by noble old forest-trees — almost the last survivors of the grove that formed the "island." Moscow contains a court-house that is pretentious and costly, if not quite elegant, besides other public buildings. On the streets facing this park-like square nearly all the trade of the thriving country-town is carried on. But in the time of Tom Grayson's imprisonment the public square was yet a rough piece of woods, with roots and stumps still obtruding where underbrush and trees had been cut out. There was no fence, and there were no hitching-rails. The court-house of that day was a newish frame building, which had the public-grounds all to itself except for the jail, on one corner of the square. Facing the square, on the side farthest from the jail, stood the village tavern. One half of it was of hewn logs, which marked it as dating back to the broad-ax period of the town's growth; the other half had been added after the saw-mill age began, and was yet innocent of paint, as were the court-house and several other of the principal buildings in the town. In front of the tavern was a native beech-tree, left behind in the general destruction. Under it were some rude benches which afforded a cool and favorite resort to the leisurely villagers. One of the boughs of this tree served its day and generation doubly, for besides contributing to the shadiness of the street-corner, it supported a pendant square sign, which creaked most dolefully whenever there was wind enough to set it swinging in its rusty iron sockets. The name of the hotel was one common to villages of small attainments and great hopes; the sign bore for legend in red letters: "City Hotel, R. Biggs."

To the City Hotel there came, on this first day after Tom's arrest, one of those solitary horsemen who gave life to nearly every landscape and mystery to nearly every novel of that generation. This horseman, after the fashion of the age, carried his luggage in a pair of saddle-bags, which kept time to his horse's trot by rapping against the flaps of his saddle.

"Howdy, Cap'n Biggs," said the traveler to the landlord, who was leaning solidly against the door-jamb and showing no sign of animation, except by slowly and intermittently working his jaws in the manner of a ruminating cow.

"Howdy, Abe," was the answer. "Where yeh boun' fer?"

"Perrysburg," said the new arrival, alighting and stretching the kinks out of his long, lank limbs, the horse meanwhile putting his head half-way to the ground and moving farther into the cool shade. Then the horseman proceeded to disengage his saddle-bags from the stirrup-straps, now on one side of the horse and then on the other.

"Have yer hoss fed some corn?" In asking this question Captain Biggs with some difficulty succeeded in detaching himself from the door-post, bringing his weight perpendicularly upon his legs; this accomplished he sluggishly descended the three door-steps to the ground and took hold of the bridle.

"What 's this I hear about Tom Grayson, Cap'n?" said the new-comer, as he tried to pull and wriggle his trousers-legs down to their normal place.

"Oh, he 's gone 'n' shot Lockwood, like the blasted fool he is. He wuz blowin' about it afore he lef' town las' month, but nobody reckoned it wuz anything *but* blow. Some trouble about k-yards an' a purty gal — John Albaugh's gal. I s'pose Tom 's got to swing fer it, 'less you kin kinder bewilder the jury, like, an' get him off. Ole Mis' Grayson's in the settin'-room now, a-waitin' to see you about it."

Captain Biggs turned his face, on which was a week's growth of stubby beard, towards that of his guest to see how he would take this information. The tall, awkward young lawyer only drew his brow to a frown and said nothing; but turned and went into the tavern with his saddle-bags on his arm, and walking stiffly from being so long cramped in riding. Passing through the cool bar-room with its moist odors of mixed drinks, he crossed the hall into the rag-carpeted sitting-room beyond.

"Oh Abra'm, I 'm that glad to see you!" But here the old lady's feelings overcame her and she could not go on.

"Howdy, Mrs. Grayson. It's too bad about Tom. How did he come to do it?"

"Lawsy, honey, he *did n't* do it."

"You think he did n't?"

"I know he did n't. He says so himself. I 've been a-waitin' here all the mornin' to see you, an' git you to defend him."

The lawyer sat down on the wooden settee by Mrs. Grayson, and after a little time of silence said:

"You 'd better get some older man, like Blackman."

"Tom won't have Blackman; he won't have nobody but Abe Lincoln, he says."

"But — they say the evidence is all against him; and if that 's the case, an inexperienced young man like me could n't do any good."

Mrs. Grayson looked at him piteously as she detected his reluctance.

"Abra'm, he 's all the boy I 've got left. Ef you 'll defend him I 'll give you my farm an' make out the deed before you begin. An' that 's all I 've got."

"Farm be hanged!" said Lincoln. "Do you think I don't remember your goodness to me when I was a little wretch with my toes sticking out of my ragged shoes! I would n't take a copper from you. But you 're Tom's mother, and of course you think he did n't do it. Now what if the evidence proves that he did?"

Barbara had been sitting in one corner of the room, and Lincoln had not observed her in the obscurity produced by the shade of the green slat curtains. She got up now and came forward. "Abra'm, do you remember me?"

"Is this little Barby?" he said, scanning her face. "You 're a young woman now, I declare."

There was a simple tenderness in his voice that showed how deeply he felt the trouble that had befallen the Graysons.

"Well, I want to say, Abra'm," Barbara went on, "that after talking to Tom we believe that he does n't know anything about the shooting. Now you 'd better go and see him for yourself."

"Well, I 'll tell you what, Aunt Marthy," said he, relapsing into the familiar form of address he had been accustomed to use towards Mrs. Grayson in his boyhood; "I 'll go over and see Tom, and if he *is* innocent, as you and Barby think, we 'll manage to save him or know the reason why. But I must see him alone, and he must n't know about my talk with you."

Lincoln got up, and laying his saddle-bags down in one corner of the room went out immediately. First he went to inquire of Sheriff Plunkett what was the nature of the evidence likely to be brought against Tom. Then he got the sheriff to let him into the jail and leave him alone with his client. Tom had been allowed to remain in the lighter apartment since there was no fear of his escape on this day, when all the town was agog about the murder, and people were continually coming to peer into the jail to get a glimpse of the monster who in the darkness had shot down one that had helped him out of a gambling scrape.

Lincoln sat down on the only stool there was in the room, while Tom sat on a bench.

"Now, Tom," said the lawyer, fixing his penetrating gaze on the young man's face, "you want to remember that I 'm your friend and your counsel. However proper it may be to keep your own secret in such a situation as you are, you must tell me the whole truth, or else I cannot do you any good. How did you come to shoot Lockwood?"

"I did n't shoot Lockwood," said Tom brusquely; "and if you don't believe that, it 's no use to go on."

"Well, say I believe it then, and let 's proceed. Tell me all that happened between you and that young man."

Tom began where this story begins and told all about turning the Bible at Albaugh's; about the gambling in Wooden & Snyder's store and how he was led into it; about his visit to Hubbard Township to get money to pay Lockwood, and Rachel's revelation of the latter's treachery in telling Ike. Then he told of his anger and his threatening, his uncle's break with him, and his talk with Barbara the evening before the murder; and finally he gave a circumstantial account of all that happened to him on the camp-ground, and of his flight and arrest.

"But," said Lincoln, who had looked closely and sometimes incredulously at Tom's face while he spoke, "why did you take a pistol with you to the camp-meeting?"

"I did *not*. I had n't had a pistol in my hands for a week before the shooting."

"But Plunkett says there 's a man ready to swear that he saw you do the shooting. They 've got a pistol out of one of your drawers, and this witness will swear that you used just such an old-fashioned weapon as that."

"Good Lord, Abe! who would tell such an infernal lie on a fellow in my fix? That makes my situation bad." And Tom got up and walked the stone-paved floor in excitement. "But the bullet will show that I did n't do it. Get hold of the bullet, and if it fits the bore of that old pistol I won't ask you to defend me."

"But there was n't any bullet." Lincoln was now watching Tom's countenance with the closest scrutiny.

"No bullet! How in creation did they kill him, then?"

"Can't you think?" He was still studying Tom's face.

"I don't know any way of killing a fellow with a pistol that 's got no bullet unless you beat his brains out with the butt of it, and I thought they said George was shot."

"So he was. But, Tom, I 've made up my mind that you 're innocent. It 's going to be dreadful hard to prove it."

"But how was he killed?" demanded Tom.

"With buck-shot."

Tom stood and mused a minute.

"Now tell me who says I did the shooting."

"I never heard of him before. Sovine, I believe his name is."

"Dave Sovine? W'y, he 's the son of old Bill Sovine; he 's the boy that ran off four years ago, don't you remember? He 's the blackleg that won all my money. What does he want to get me hanged for? I paid him all I owed him."

Lincoln did not appear to hear what Tom was saying: he sat now with his eyes fixed on the grating, lost in thought.

"Tom," he said at length, "who was that strapping big knock-down fellow that used to be about your place — hunter, fisherman, fist-fighter, and all that?"

"Do you mean Bob McCord?"

"That must be the man. Big Bob, they called him. He 's friendly to you, is n't he?"

"Oh, yes!"

"Well, you have Big Bob come to see me next Tuesday at the tavern, as I go back. I 'll be there to dinner. And if you are called to the inquest, you have only to tell the truth. We won't make any fight before the coroner: you 'll be bound over anyhow, and it 's not best to show our hand too soon."

With that he took his leave. When he got out of the prison he found Mrs. Grayson and Barbara waiting to see him.

"Well, Aunt Marthy," he said, "it don't seem to me that your boy killed that fellow. It 's going to be hard to clear him, but he did n't do it. I 'll do my best. You must get all Tom's relations to come to the trial. And have Big Bob McCord come to see me next Tuesday."

The influence of Tom's uncle, judiciously directed by Hiram Mason, secured for the accused permission to remain in the light room of the prison in the day-time with manacles on, and to sleep in the dungeon at night without the manacles. And the influence of Janet secured from Tom's aunt the loan of the clean though ancient and well-worn bedding and bed-linen that had been afforded him during his stay in his uncle's house. This was set up in the dark room of the jail in place of the bed that had been a resting-place for villains almost ever since the town was founded.

Understanding that Tom was to be taken to the coroner's inquest that afternoon, Hiram tried to persuade the sheriff to take him to Perrysburg jail at night for safety; for he had no knowledge of Bob McCord's plan for sending the mob there. But Plunkett refused this. He knew that such a change might offend Broad Run in case it should take a notion to enforce law in its own way, and Broad Run was an important factor in an election for county officers. Plunkett felt himself to be a representative sheriff. The voters of Broad Run and others of their kind had given him his majority, and he was in his place to do their will. Elevation to office had not spoiled him; he recognized in himself a humble servant of the people, whose duty it was to enforce the law whenever it did not conflict with the wishes of any considerable number of his "constituents." To his mind it did not appear to be of much consequence that a man who deserved hanging should receive his merited punishment at the hands of a mob, instead of suffering death according to the forms of law, after a few weeks or months of delay. But he was too cautious to reveal to Mason the true state of his mind; he only urged that the removal of Tom to Perrysburg would be an act of timidity that might promote the formation of a mob while it would not put Tom out of their reach; and this Mason could not deny.

(To be continued.)

Edward Eggleston.

TO A VETERAN.

O PATRIOT! would that your last hour had come,
When, with your war-stained flag, to roll of drum
You marched, 'mid men's applause,
From fighting the great cause
Of land and liberty.
Now you are stranded like some gallant bark,
Flung helpless on the shoals, amid the dark
Of dull and starless sky.
Bravely and well you faced the tempest's strife,
But to lie sunk 'neath sands of common life.
Your pride scorns pity, yet how hard the fate
To live through all — only to die too late!

A. S. L. Gray.

SALISBURY CATHEDRAL.

THE architectural record of the great church which stands at Salisbury is unique among the records of English cathedrals. Its foundations were laid upon a virgin site in the year 1220; thirty-eight years thereafter it stood complete up to the top of the first stage of its tower; and time respected the unity thus achieved. No great calamity brought ruin upon any part of the structure, and no new needs provoked its alteration. A single style rules it from end to end, inside and out, from foundation-course to roof-crest. Only the spire and the upper stages of the tower were added in a later century, and to most observers even these look of a piece with all the rest.

It was by means of an act of transplantation, however, and not of new creation, that its thirteenth-century builders had the chance thus to make Salisbury Cathedral all their own. The body of their church was new and the spot upon which it stood, but in name and soul it had already long existed.

I.

ABOUT the year 705 the great diocese of Winchester was divided and its western portion formed into the diocese of Sherborne. In the tenth century this in its turn was cut into two or three, one being called Ramsbury or Wiltshire. At the time of the Conquest Bishop Herman occupied the chairs of both Ramsbury and Sherborne. As he was a foreigner by birth William did not dispossess him; and when William's council decreed the removal of isolated rural sees to places of more importance, Herman removed his to Old Sarum, and the names of the two earlier dioceses were lost in that of Salisbury.

Old Sarum, we say to-day. The Romans said Sorbiodunum, the English Searobyrig, or Sarisbyrig. Sarum was merely the Latinized medieval term which in the thirteenth century was applied to the neighboring new town as well as to the old. Now we call the former Salisbury, but the prefix we still use in speaking of the other perpetuates the memory of the time when they were namesakes.

From prehistoric days Old Sarum had been a strong and famous place. Nature had made it conspicuous in the levels around it, and successive races of men had fortified it to the best of their power. No spot in all England is of more curious interest now. In this crowded little land we soon learn to expect that every historic site will show signs of modern life, that in every spot where a building has stood some building will still stand — if not perfect, then in ruins; or if not the first building, then a later. Who looks in England to find a mighty place of old turned into such a "heap" as those cities of the plain whose punishment the prophets foresaw? Who expects to see the sheep feeding and the plowshare turning where there have been not only Roman roads and ramparts but a great Norman castle and a Cathedral church? Yet this, and nothing but this, is what we see at Old Sarum.

Its broad, desolate hill lies isolated in the valley near the river Avon,* not very far from the skirts of the great table-land called Salisbury Plain. Even the roadway leaves it at a distance. First we pass through an inn-garden, then cross a long stretch of slightly rising ground, and then climb successive steep and rugged though grassy slopes. These show in scarcely broken lines the trend of the ancient walls and fosses. Their main portions are of Roman origin, but, if we may believe tradition, the outermost line was added by King Alfred when the Danes were on the war-path. Once on top of the hill, we find it a wide, rolling plateau, bearing here and there a group of trees, but nowhere a building, and only in two places any relic of man's handiwork — only two shattered, ragged bits of wall. Most of it is covered with rough grass, very different from the fresh turf of English lowlands, but far off to the westward there are signs of agricultural labor. This was where the great cathedral stood; and how much else once stood where now is an almost Mesopotamian desolation — all the adjuncts of a cathedral, ecclesiastical and domestic; all the parts of a stronghold that was a royal residence as well; and all the streets and structures of a considerable city, stretching down the hill and out into the valley. Hence, as from an important center, once radiated six Roman roads. Here Briton and Saxon fought, and the victors held their parliaments, and were in their turn assaulted by the Dane. Hither were summoned all the states of the realm to do homage to William the Norman, and, a century later, all its great men to pay reverence to that young son of

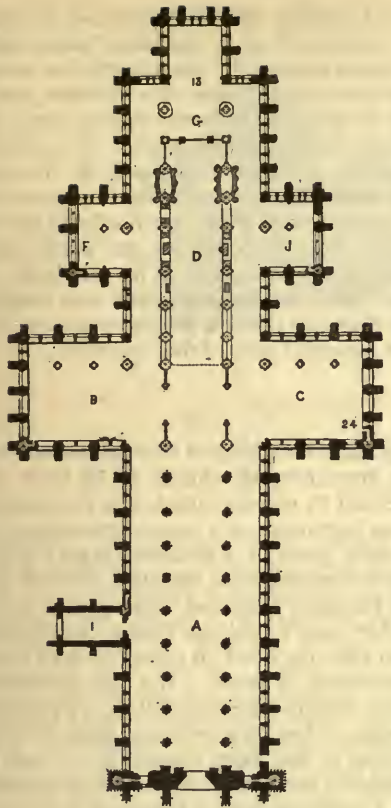
* This is not Shakspere's Avon, but another of the name which flows southward to the Channel.

Henry I. who was to perish in the wreck of the "White Ship." Here was drawn up the "Ordinal of Offices for the Use of Sarum" which became the ritual rule for the whole south of England. Here, in a word, for centuries and under the dominion of five successive races — British, Roman, English, Norman, and again in the new sense English — was one of the great centers of ecclesiastical and military power. To-day it is nothing but a heap. Citadel and lordly keep, royal hall and chapel, cathedral, chapter-house and close, convents, parish churches, municipal buildings, burghers' homes and streets, and the mighty walls which once inclosed them, all have been swept away,— their very stones removed for use in distant spots. The colossal earthworks which once bore the walls are not greatly damaged; the little village of Stratford-under-the-Castle marks perhaps the site of a valley suburb; and the two forlorn patches of wall may still stand for generations. But above ground Nature has reclaimed all else to barren unity. Below ground a long passage is known to exist, though its entrance has been closed for a century, and in 1835 curious antiquaries laid bare for a moment the foundations of the cathedral church. It was 270 feet in length, and had two western towers with a great Galilee-porch between, transepts and aisles, and a deep choir which, as was usual in later English but not in Norman days, ended in a flat east wall. It was consecrated in the year 1092, and was begun by Herman, finished by his successor Osmund, a companion of the Conqueror, and much altered and enlarged by Roger, the warrior-bishop of King Stephen's time. It seems to have been inclosed by the fortifications of the castle, and this fact typifies all those which led to its eventual abandonment.

From the beginning, the close association of ecclesiastical and military power was a source of trouble. At Durham the bishop had been the first comer and was indisputable head of the community, and the might of the sword always assisted the might of the staff. But the bishop of Sherborne and Ramsbury came to Sarum, so to say, as the guest and dependent of its military chief. Some of his successors united both titles — as in the case of the bloody and potent Roger. But from Roger's day onward church and castle were at feud, and the burghers of Sarum, who were tenants in part of the one and in part of the other, fed and fanned the discord. Municipal disputes were then not settled by words. Hand-to-hand struggles were frequent in Sarum, and naturally the priests did not often have the best of the matter. In the reign of Richard I., for instance, "such was the hot entertainment on each part" over certain disputed boundaries "that at last the Castellanes, espieing their time, gate between the cleargie and the towne and so coiled them as they returned homeward that they feared any more to gang about their bounds for the year." Moreover, the cathedral establishment was sadly cramped for space, the town "wanted water so unreasonably as [a strange kind of merchandise] it was there to be sold," the hill was cold and cheerless and the wind blew over the lifted church so that often "the people could not hear the priests say mass." And then, on general principles, "What," as one of its canons exclaimed, "has the house of the Lord to do with castles? It is the ark of the covenant in a temple of Baalim. Let us in God's name," he added, "descend into the level. There are rich champaigns and fertile valleys abounding in the fruits of the earth and profusely watered by living streams. There is a seat for the Virgin patroness of our Church to which the whole world cannot afford a parallel." Times had changed since that distraught eleventh century, when such spots as Durham and Sarum had seemed the best for churchmen's homes. What they wanted now was not convenience of defense, but freedom of access and the chance to live well, since anywhere they could live in safety. So, in the reign of Henry III. and the bishopric of Richard Poore, the first stones of a new cathedral were laid in the valley. As it stood more than a mile away from the old one, we can perhaps as readily believe that the Virgin showed the spot to the bishop in a dream as that he marked it by an arrow shot from the ramparts of Old Sarum.

With the ecclesiastics went most of the burghers of the hill-town. At once its importance departed and, more slowly but as utterly, its very life. The stages of its decline cannot be traced with surety. But the mere fact that after the time of Bishop Poore history refers to it only seldom and as though by chance proves how quickly it died. A writer who visited it in 1540 says that not a house then remained, that the castle was a heap of "notable ruinous building," and that in a chapel dedicated to Our Lady burned the only lights which proved man's presence. Nominally Old Sarum existed as a town until the year 1831. Until then two so-called representatives of its chimerical inhabitants sat in the Parliament of England. But for years out of mind it had then been as invisible as it is to-day. Perhaps when the priests shook off its inhospitable dust they cursed it as the Hebrew priests had cursed the cities of the plain.

As it gradually dwindled, the new city of priests waxed and grew, absorbing its life-blood, stealing away the stones of its body.



PLAN OF SALISBURY CATHEDRAL.

A, Nave; B, C, Main Transepts; D, Choir; F, J, Minor or Eastern Transepts; G, Retrochoir; 1, North Porch; 13, Lady Chapel; 24, Entrance to Cloisters.

Peace dwelt within the borders of New Sarum, and the only ramparts it needed were the low walls which still fence in its close — signs not of anticipated conflict, but merely of the church's isolation from the world.

II.

APART from its great central feature the modern Salisbury is not an interesting town. The main streets are commonplace, though in out-of-the-way corners we find picturesque bits of domestic work and a Perpendicular church or two; and while the chief square is spacious, it has scarcely more architectural dignity than that of some New England city of the second rank. Doubtless it was once more interesting — the scene-painter bids us think so when "Richard III." is being played and the time comes for Buckingham's execution. Beyond the suburbs, however, out in the valley of the Avon, the England of to-day is as lovely as ever, and from here the town seems a pretty enough base for the splendid spire which soars above it. All possible adjectives of description and nouns of comparison have been worn threadbare in the attempt to paint this spire. But no words can do the work. To call it a "titanic arrow" weakly pictures the way it lifts itself, seemingly not towards but into the blue of heaven. To liken it to the "spear of an angel" does not figure the strength which dwells in its buoyant outline. We may speak of it for the thousandth time as a silent "finger of faith" pointing to the home of the faithful and not hint at the significance it wears to the imaginative eye, or cite with emphasis the many feet it measures and not explain the paramount place it holds in the landscape — how it is always the center and finish of every scene, whether we stand far away or near; how it persists in our consciousness even when our backs are turned, or when the blackness of night shuts it out from corporeal vision. Standing just beneath it, we cannot but keep our eyes perpetually lifted to its aërial summit, to mark how the moving clouds appear to be at rest and it appears to move — like a gigantic, lovely dial-hand actually showing us for once the invisible revolution of the globe. When we are far away, on the desolate levels of Salisbury Plain, we see its isolated, slender stateliness for miles after town and church have vanished beneath the plateau's edge; and when it also disappears it still seems to be watching us — it is still the one thing with which imagination takes account until we are finally in presence of that huge circle at Stonehenge, in comparison with the antiquity of which Salisbury's spire is modern. The whole of architectural progress lies between the forms of these two famous monuments. Here are rough, unhewn, uncouth monoliths, raised by brute strength and standing by the force of mere inertia — there, delicately chiseled blocks piled in myriads one upon another to a dizzy height, the utmost science and the subtilest art creating and maintaining them. Here is the impressiveness of matter subdued by mind into positions full once of a meaning that now is lost but not subdued into even the remotest semblance of grace or beauty. There a strength infinitely greater is combined with the last word of grace and loveliness, and expresses meanings, faiths, emotions, which are still those of our own world. Yet there is no undecipherable stage in the long sequence which lies between. The steps are close and clear — not, indeed, in England, but in other lands that we know as well — which lead from men who were content to set two great stones over against each other and lay a third on top and call them a temple, to men who caressed their stones into exquisite forms and surfaces, piled them aloft in complicated harmonies of outline, and crowned them with pinnacles — as

light as air, as strong as iron — which all but touched the clouds.

It is interesting too to remember, that new as Salisbury seems when compared with Stonehenge, the one can boast no earlier name than the other. The Druids may very well have built Stonehenge, but the barbarians whom the Druids ruled must have camped before the Romans on the hill of Sarum. Perhaps from this same spot, indeed, went forth the constructors of the undated temple and those of the thirteenth-century church.

III.

One can well understand how attractive their new site must have seemed to the emigrating priests — low and level, warm and fertile, and close to the silver Avon's banks. But its too-tempting unlikeness to their old position brought them new discomforts. The land lay so low as to be almost swampy, and the river ran so close that in times of flood it ran into the church — an even worse visitor than the wind of the hill-city, as it could enforce the discontinuance of services for days together. Even until comparatively recent years local grumblers called the close the sink of the city and the palace the sink of the close. But no hint of such discomforts appears to the eye. The close is simply one of the greenest, freshest, and sweetest of earthly spots; and outside of fairy-land there can be nothing lovelier than the palace and its gardens, except the incomparably fairy-like garden and palace at Wells. If Durham seems the petrified portrait and interpretation of the Church Militant, Salisbury is the very type and picture of the Church of the Prince of Peace. Nowhere else does a work of Christian architecture so express purity and repose and the beauty of holiness, while the green pastures which surround it might well be those of which the Psalmist wrote. When the sun shines on the pale gray stones and the level grass and the silent trees, and throws the long shadow of the spire across them, it is as though a choir of seraphs sang in benediction of that peace of God which passeth understanding. The men who built and planted here were sick of the temples of Baalim, tired of being cribbed and cabined, weary of quarrelsome winds and voices. They wanted space and sun and stillness, comfort and rest and beauty, and the quiet ownership of their own; and no men ever more perfectly expressed, for future times to read, the ideal which they had in mind.

The cathedral stands upon a great, unbroken, absolutely level lawn which sweeps around it to west and north and east, while close beyond it to the south rise the trees of the episcopal garden. Cloisters and chapter-house lie also to the south, and upon the other sides nothing is visible except the lawn itself, the magnificent trees which circle at a distance, the low wall of the close, and over this the rows of the canons' vine-wreathed homes. The chief approach is through a gate-way at the north-east angle of the close, whence a path leads to the main door in the north side of the nave. Approaching thus, we see the whole church standing free and see it at its very best. For, as so often in England, the west front not only does not contain the entrance, but is the least beautiful part of the structure.

IV.

As fate had decreed that this should be the only great English church to be built all at once and to remain intact, it is fortunate that it was begun not in a time of transition but in the early years of a perfected style; and it is doubly fortunate that this style was one which only England practiced. Her earlier Norman and her later full-blown Gothic (or Decorated style) she practiced in common with the rest of northern Europe. But the intermediate Lancet-Pointed and the still later Perpendicular were of her own creation. Lancet-Pointed features, as has been already told, were used elsewhere, but were nowhere else developed into a homogeneous scheme of construction and decoration, and so long used as to come to full perfection. When the corner-stone of the choir of Salisbury was laid, the style had just thrown off the last trace of Norman thought. When the west front was finished, it was just beginning to develop certain ornamental motives which became characteristic of the Decorated period. If the church had been built with the express wish to show what the Lancet-Pointed style meant in its purest essence, what it could achieve without help from any other, its witness could not be plainer or more precise.

Its plan is the ideal plan of a great English church, free alike from Norman and from contemporary foreign influence. The immense length of the nave and choir (480 feet) and their comparative narrowness; the double pair of transepts, each with its single aisle; the great north porch; the square endings of all the six limbs and even of the apse (if so it may be called) which projects to the eastward — all these are thoroughly English features. When we look at the exterior we find it also typically English, by reason not only of the squareness of all its parts and the shape and finish of all its openings, but of the lowness of its roofs as well. It is this lowness which gives to central tower and spire their

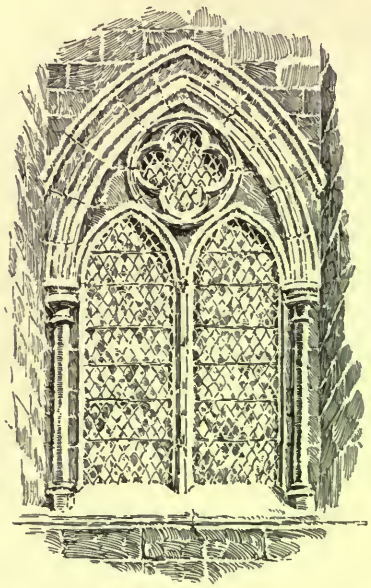
THE SPIRE, FROM THE RIVER.

unmatched effectiveness. Tall though the spire of Salisbury is, two or three others exist which are still taller. Amiens, for example, stands 22 feet above it. But at Amiens the roof-ridge is 208 feet from the ground, while at Salisbury it is only 81. I need not speak again of the vast increase in interior majesty which the high French ceiling gives. But outside, I may repeat, the advantage is the other way. The body of the church is more beautiful if less imposing, and tower and spire are thrown into incomparable relief. Yet even at Salisbury they do not seem too high for the supporting structure. They do not dwarf the church while so imperially asserting themselves. The vast length of an English church and the wide spread of its transepts compensate as evidence of strength for the lowness of its walls, and amply sustain, to the æsthetic sense, the loftiest ascending lines. In fact, no better church than Salisbury could be imagined as a preparation for one of the tallest spires in the world. Its successive portions so build themselves up from east to west in gradually increasing height that it has a graceful dignity, a buoyancy, a lifting, bearing, aspiring effect which we feel would be incomplete did a less aërial pinnacle surmount the whole.

This is the great beauty of Salisbury, the composition of its mighty body as a whole. So finely proportioned and arranged are its square masses of different heights and sizes, so splendid are the broad effects of light and shadow they produce, so appropriate is the slant of the roof lines, and so wisely placed and gracefully shaped are the simple windows, that for once we can give no thought

NORTH-EAST GATEWAY TO THE CLOSE.

of regret either to the circling apses of Continental lands or to the rich traceries and surface carvings and figure-sculptures of later generations. The openings of the main story and the capitals of their shafts are merely molded. Traceries are employed above, but sparingly and in the simplest patterns. The buttresses are small and the flying ones which support the upper walls are few. The water-tables, which play a marvelously effective part in strengthening and enlivening the walls, are but a succession of unornamented though exquisitely profiled sharp projections and recesses;



EXTERIOR OF TRIFORIUM WINDOW, NORTH TRANSEPT.

and even the arcaded cornices are not elaborate. Except upon the western front there is nothing which properly can be called sculptured decoration. The whole effect is in the strictest sense architectural. Few large buildings teach so clearly the great lesson that beauty in a building depends first of all upon composition, not decoration; upon masses, not details; upon the use and the shaping, not the ornamentation of features: and very few show half so plainly that medieval architects could realize this fact. Gothic ideals so commonly reveal themselves through forms which are strikingly varied, or very complicated, or lavishly adorned, or all these things at once, that we are too apt to think them identical with such qualities. We are too apt to think that Gothic art cannot be individual without being eccentric, or interesting without being heterogeneous, or grand without being grandiose or half-barbaric, or lovely without the riotous charms of lace-like carving and ubiquitous figure-sculpture. But Salisbury is both grand and lovely; and yet it is quiet, rational and all of a piece, clear and simple, and refined to the point of utmost purity. No building in the world is more logical, more lucid in expression, more restful to mind and eye.

Mr. Henry James, who is usually a sensitive observer, has called Salisbury a blonde beauty among churches. Certainly its chief charm is grace, not power. It is a distinctly feminine structure as compared with Ely or Durham, and we may grant that it is a blonde beauty as were those daughters of the gods who were "divinely tall and most divinely fair." But if by the term is meant any hint of weakness or mere prettiness it is a distinct misnomer. When the same pen writes that the beauty of Salisbury is a little *banal*, we are bound to dissent with emphasis. It may look so in a picture, for in architecture scale has much to do with the character of the impression we receive. The enormous size of Salisbury gives its design a force, a grandeur, an individuality which it would lack had it been executed on a smaller scale. In actual presence of its calm immensity most eyes will not find it commonplace or so lightly graceful as to want impressiveness. The truth is this, I repeat, with regard to Gothic architecture: we so often find imperfectly realized attempts that when we find completeness we are tempted to think the aim must have been an easy one to reach; we are so used to seeing virtues mixed with faults, or at least with different virtues, that when they are unmixed we hardly feel them precious; we are so cloyed with rich details that simplicity seems insipid; and we are so often met by an infinite picturesqueness that when it is absent we depreciate strict architectural beauty. It is strict architectural beauty that we find at Salisbury. If we think it feeble it will be because we cannot see strength when it has been brought to perfect poise and ease. If our verdict is *banal*, it will be because we cannot tell the commonplace from the simply and exactly right, or do not know how rare the latter is — because we long for eccentricity as a proof of personality, and need what the French call *emphase* to impress us. There is no overemphasis about Salisbury — neither in its effect as a whole nor in any of its parts, neither in its design nor in its treatment. But just in this fact lies its greatest merit; and just by reason of this fact joined to its mighty size and its exceptional unity, it is intensely individual, personal, distinct from all other churches in the world. Here, for once, we find one phase of the medieval ideal of a great Christian church perfectly expressed by constructive forms alone, and find that it has extraordinary majesty, yet a still greater degree of loveliness.

SALISBURY CATHEDRAL FROM THE NORTH-EAST.

Is there nothing better to do than to turn away with the verdict: Perfect, but too perfect; simple, but too easily understood; grand, but not grandiose enough; entirely lovely, which is a fault; exquisitely complete, but therefore unexciting?

It is not a new idea of my own that if a classic Greek could come back to life he might like Salisbury better than any other medieval building. But it came to me as a new idea when I first saw the church, and the fact is perhaps worth citing as a line of evidence in a significant direction. If this building would seem exceptionally perfect and lucid to the eye of a Greek, if we should choose it as the first to show him when explaining what medieval builders understood by a temple of their faith,—if this is true or can by any colorable license be construed as truth, is not Salisbury magnificently praised? Meat that is fit for the gods must be good, though to our jaded appetites there may seem little spice in the dish.

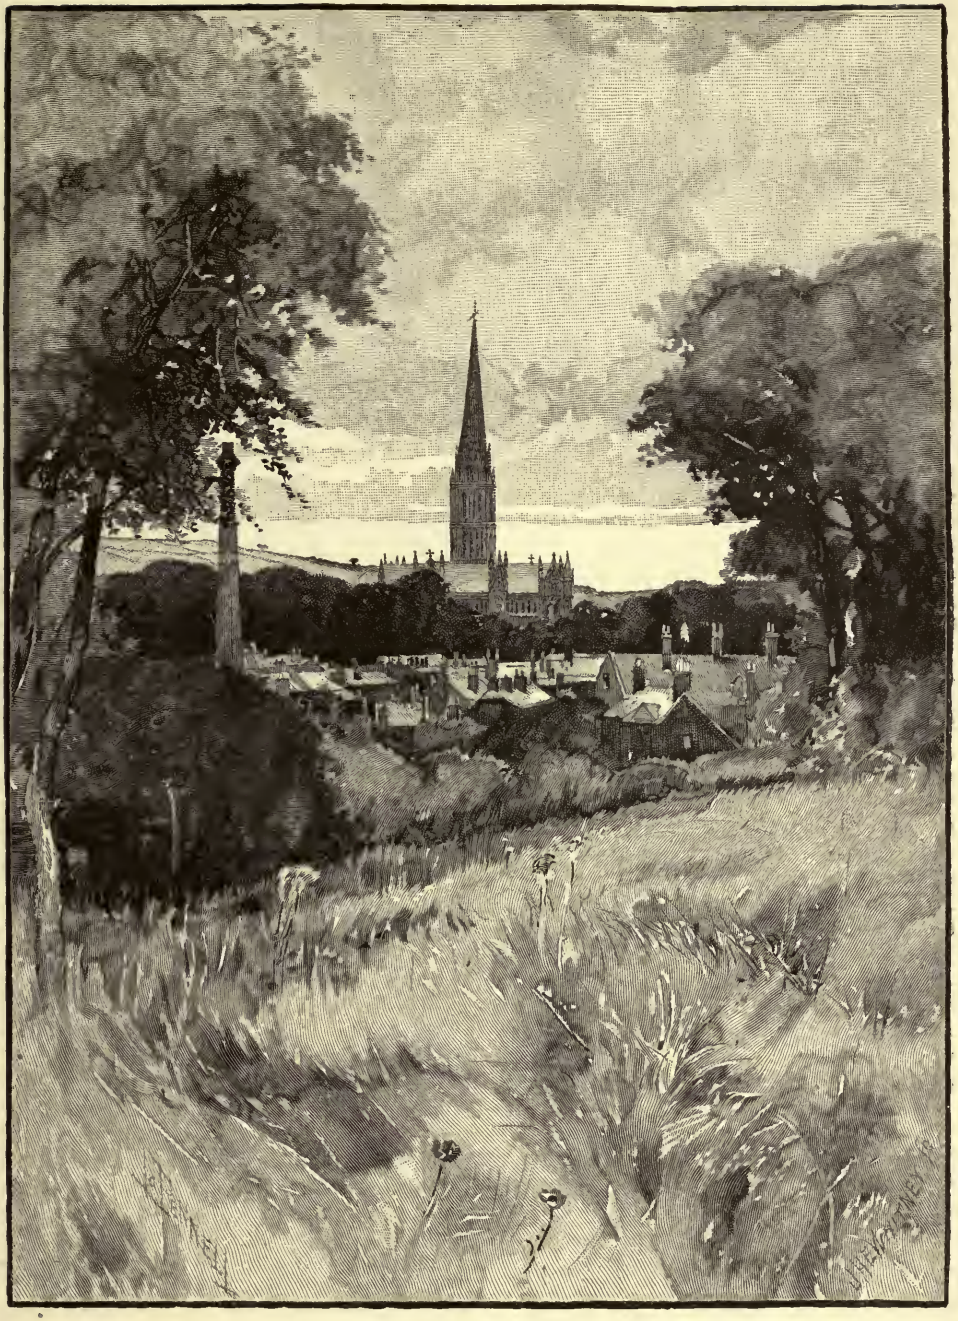
I do not wish to be understood as saying that Salisbury is the most beautiful church in the world or in England, or even as saying that so it seems to me. Moods change, and with them estimates of perfection. Architectural beauty is of many kinds, and even within the limits of the Pointed styles we may judge for different virtues with differing priorities as the result. All I mean is that Salisbury's kind of beauty is the most purely lovely among Gothic kinds, and that in its kind it stands unsurpassed, unrivaled, unapproached. If we put ornamentation out of the balance and judge for constructive beauty alone, it is one of the two or three great churches of the world—partly because of its singular completeness, but largely for more intrinsic reasons.

V.

It is well to say at once, however, that in thus estimating the merits of Salisbury I have left its west front out of mind. This front is, indeed, one of the best of its kind, but its kind is indisputably bad.

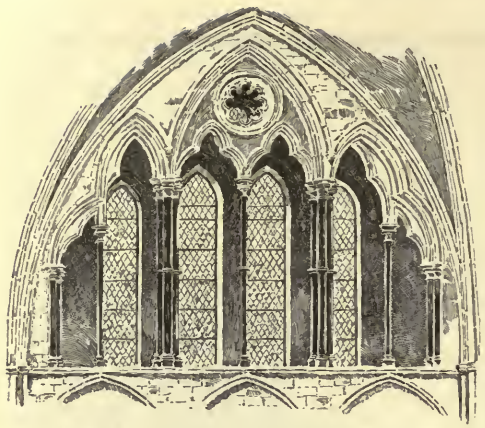
THE CLOSE AND A PART OF THE WEST FRONT.

The west façades of England offer a curious subject for study. Norman builders loved dominant central towers and English builders always persisted in this love. Across the Channel it was soon suppressed by a desire for lofty ceilings, and the west front profited by the change. Its towers became of chief importance, and their combination with the principal door-ways and with the great height of wall-curtain, which was justified by the high nave-walls behind, resulted in designs of extraordinary force and splendor—in designs which, as elevations, are by far the finest works of medieval genius. In England, where the western towers remained subordinate to the central, and where the body of the church was low and narrow, no such magnificence of front was logically possible. But great beauty



THE SPIRE OF SALISBURY.

and excellence might still have been possible but for two unfortunate facts — English builders sometimes took even their principal doors away from the west front, and they sometimes tried to simulate the grandeur of French fronts by illogical, untruthful construction. The first act was a great architectural mistake, the second was a crying architectural sin; and both fault and sin appear at Salisbury. In front of the low aisles the wall rises almost as high as in front of the nave, standing as a useless screen crossed by rows



INTERIOR OF CLERE-STORY WINDOW, NORTH TRANSEPT.

of simulated windows. Three porches exist, but they are much too small for the artistic or the expressional dignity which their place demands. It hardly needs the corroborating evidence of the great porch on the north side of the church to make them seem a mere concession to the precepts of tradition or of foreign practice; and the façade as a whole is palpably an attempt to imitate under hopeless conditions the majestic variety of French designs. It is not a true factor in the general scheme of the building, truly completing the parts which lie behind it. It is a screen whose purpose is to make the church look larger than the truth. From one point of view it accomplishes this task, but from every other the cheat is of course apparent. Strictly judged for the underlying architectural idea, it has no greater merit than a thing we may see any day in any little American town — a house-front a couple of stories in height surmounted by another sham story or two of blank wall, behind which, when we stand a little aside, we see the roofs sloping away. They were a singular race, these English architects. Sometimes they seem to possess, in the highest measure, constructive genius, architectural imagination, æsthetic feeling; sometimes they design like children who have been impressed by a certain object but have no appreciation of what factors really make its beauty; and sometimes they show both phases of their character in the same building and at the same epoch. Such is strikingly the case at Salisbury. The east end, the tower and spire, and the long reaches of nave and transepts look like the work of angel builders inspired by a supernal idea to a supernatural perfection of result, while the west front — built by the same men, or at least by their sons — shows a lack of the first principles of good art which we should condemn in a generation that had been fed on blunders only. Yet the result is as characteristically English in the one case as in the other. Neither for the supreme success nor for the crude mistake was there any foreign precedent.

The more we look at this façade the more its faults as a design appear, though there is much to delight us in its details of execution. The wings are too wide for the central division, and the middle window is too large for its place; the cornices are deplorably weak, and the rows of blank windows are a cheap device to give the wall a semblance of utility. It is less to be called a composition than a mechanical assemblage of individually attractive features. But it is far more elaborate than any other part of the church, and must at least have had great decorative charm when its multitudinous figures were intact. Time and the Reformation ruined them however, and the modern hand which replaced them was not a great sculptor's.

VI.

It is a pleasure to turn from the front of Salisbury to the tower and spire, which call for nothing but unstinted praise. The upper parts are just a century later than the lower and belong to the Decorated period. But appropriate proportioning has been observed in the shape of the windows, and the richer decoration seems entirely harmonious with the simplicity below. The tower groups and assorts with the body of the church as a blown rose groups and assorts with buds — it seems but the same idea brought to a richer, fuller development. And the work is as intrinsically beautiful as it is appropriate. Not size alone makes this steeple so famous; not merely the lowness of the roof beneath makes it so splendidly impressive. No other spire in the world is so exquisitely noble in proportions, so aspiring in expression, so graceful in outline, so felicitous in the arrangement of its parts. The angle-turrets are of just the right size, the stories of the tower and the bandings of the spire are of just the right height, the transition from tower to spire — from the four-sided to the eight-sided body — is beautifully managed, and the decoration is applied so well that we cannot dissever it in thought from the constructive forms it accents. Salisbury's spire has few rivals in the world and, to my mind, no equal. The far greater elaboration of Strasburg's is dearly purchased by a loss of purity in outline and of buoyancy of spring. The same is true with even greater emphasis of Antwerp's and of Mechlin's, whence the spire-like effect has almost entirely vanished. If the open lace-work of Freiburg's great pinnacle has a greater picturesqueness, we may still prefer the solid, pure, and noble slightness of the great English work; and in all of Europe there is no

FROM THE BISHOP'S GARDEN.

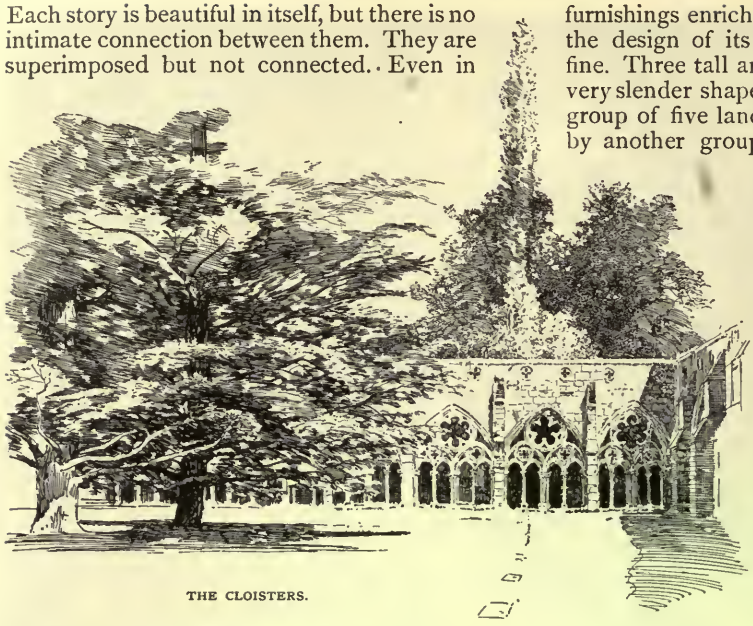
other spire of similar altitude and beauty which stands like this as the completing central feature of a great and perfect composition.

It is supposed that the builders of the church intended to carry their tower much higher than the single stage they completed. But their foundations, set on spongy soil, showed signs of weakness, and the recent fall of the great neighboring tower of Winchester warned against temerity. Strong abutments were added in the upper stages of the church, and by the aid of these the fourteenth-century architect raised his upper stories and his spire. The construction of the latter is singularly daring and scientific. To a height of twenty feet its walls are two feet thick, but above that they are only nine inches thick, while the scaffoldings which served the builders still remain within them, hung to the capstone of the spire by iron rods and serving by their cross-bars to brace the fabric. But even thus the soil refused to bear the enormous load with steadiness, and in the fifteenth century great braces were inserted between the four supporting piers to prevent them from bulging outward to their fall. The point of the spire is now twenty-three inches out of the perpendicular, but the fact is scarcely perceptible; and though signs of settlement show far more plainly within the church, they have not increased for centuries, while modern skill has done its best to guard against further movement. It is probable that the original constructors did not think of adding so lofty a finish to their tower; but their successors' thought was a happy one and, as time has proved, it was not altogether over-daring.

VII.

THE interior of the cathedral, despite its size and unity, impresses and charms us much less than the exterior. The features of its design please us best when individually considered. The plan of the great pillars is a welding together of eight circular shafts, four of larger and four of smaller size. The arches between them are sharply pointed and their moldings show that infinitude of beautifully contrasting hollows, ridges, and rolls which is the distinctive mark and the greatest merit of Early-English work. The clere-story openings are divided into coupled lights and filled with simple, strong, yet graceful traceries; and the triforium lights are in groups of three or five.

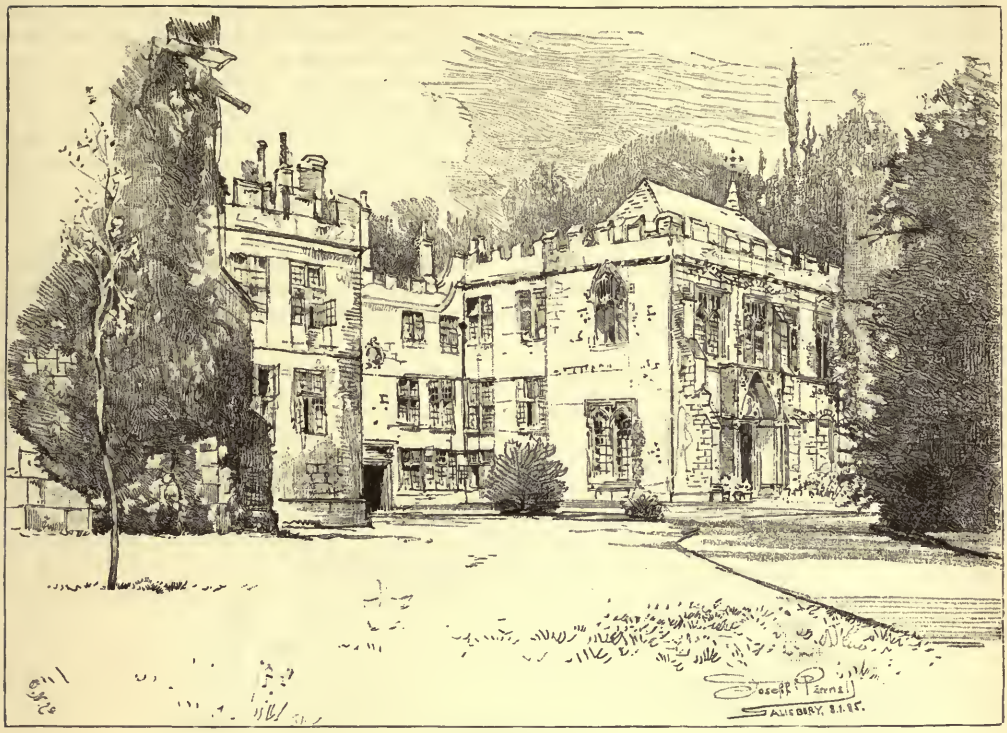
Each story is beautiful in itself, but there is no intimate connection between them. They are superimposed but not connected. Even in



THE CLOISTERS.

round-arched Norman work, where no air of consistent aspiration is expected, the effect is best when certain members rise in unbroken lines from floor to roof, uniting all parts of the design. But here, where they are far more essential, there are no such members. Each range of openings is designed in independence of the others, and the sharply pointed forms do not agree in expression with the strong horizontal demarcations thus produced — the eye is bidden continually to change from vertical to level lines, and neither an idea of rest nor an idea of aspiration is made clear. The roof, moreover, begins its curve so low down upon the walls as to have an almost crushing effect; seen in their long sequence, the features which individually are so charming look somewhat thin and "wire-drawn"; and the entire lack of sculptured decoration seems here a fault, though it seemed no fault outside. Early-English builders could decorate most lavishly when they chose, and one type of capital which they used is extremely rich and lovely. But another type consisted simply of a succession of plain moldings, and it is this alone that we find at Salisbury. Of course the effect must have been very different when the church was first constructed. Then all the untraceried windows, which now look so poor and throw so cold a glare, were filled with gorgeous low-toned glass, and the stonework throughout was brought into harmony by paint. But as we see it to-day, an architectural scheme reduced to its intrinsic terms, the nave of Salisbury leaves us a little indifferent. The choir is more attractive, for its furnishings enrich the general effect and the design of its east end is extremely fine. Three tall arches, the outer ones of very slender shape, are surmounted by a group of five lancet windows and again by another group of five. This is the end wall of the choir proper, and the upper ranges of windows look out over lower roofs and are filled with glass. But through the great arches beneath them we look under these low roofs into the retrochoir and Lady-Chapel, where slender, isolated shafts make exquisite perspectives, changing in effect with every changing step. These outlying chapels, seen thus as through a triple frame, are the English substitute for the circling apses of the Continent. The prize for picturesqueness, poetry, and mystery must be given to France, but England's device is as charming in a simpler, clearer way; and, I may say once more, there is less need for comparisons in a case like this than for gratitude that different lands show different ideals in perfect execution and not merely variants of the same kind of success.

The monuments which filled the choir and nave of Salisbury were sadly knocked about and mutilated and shifted in Protestant years, and when the "restorer" Wyatt took them in hand a century ago he re-arranged many of them after a scheme of his own. The columns of the nave are united by a low continuous plinth, prescribed, perhaps, for the better distribution of their weight, by the treacherous nature of the soil. Upon this plinth, between the pillars, Wyatt arranged a sequence of monuments. Of course their historic interest is destroyed, yet the effect, superficially speaking, is not bad, and if Wyatt had done nothing worse than this we might perhaps forgive him. How can we forgive him for shattering the ancient windows and throwing their glass "by cart-loads into a ditch"? Some remaining fragments have been patched together in two or three of the windows, but we must go to the cathedral of York to see what we might have seen at Salisbury had it not been for reformers and restorers. A multitude of tombs still remain in the choir and Lady-Chapel — old and modern, large and small, simple and elaborate. Among them is one which is supposed to commemorate Bishop Roger and to



THE BISHOP'S PALACE.

have been brought from Old Sarum, and another in which lies a woman whom a poet's lines, more imperishable than brass or stone, have made forever famous — "Sidney's sister, Pembroke's mother."

The great old choir-screen, as in so many other English churches, has been removed, and the eye now passes without hindrance from one end of the mighty perspective to the other. Or, more exactly, it would thus pass but for the huge braces that were built in the fifteenth century between the piers which support the tower. Each is formed by a strong, low arch surmounted by a straight, beam-like piece of wall. The huge original openings are thus divided, so to say, into two open stories, and the Perpendicular decoration on the lower story strikes the only note of discord in the vast architectural unity of the church. The device was constructionally clever, and doubtless was the best that could have been adopted, but the necessity for its adoption was unfortunate.

VIII.

CHAPTER-HOUSE and cloisters, like the church itself, are complete to-day as at first constructed, and they too are in the Early-English style. They were built just after the church was finished and resemble the west façade, being richer in feature and detail than the nave against the south side of which they lie. Every cathedral chapter needed, of course, a chapter-house for its assemblings; but only monastic establishments needed cloister-walks for the daily recreation of the monks who led their lives in common. Salisbury's chapter was always collegiate, and its cloisters, therefore, were a pure piece of architectural luxury. The fact speaks very plainly through the absence of other monastic structures. Nothing more than we see to-day ever stood at Salisbury except a lofty bell-tower on the north side of the churchyard. It was "multangular in form, surmounted by a leaden spire; with walls and buttresses similar to the chapter-house and cloisters, and a single pillar of Purbeck marble in the center, supporting the bells and spire." It was destroyed by Wyatt, apparently for no reason, but with full consent of dean and chapter.

The cloisters, with their coupled windows, simple traceries, and groined roofs are very beautiful, and the priests well gave the name of "Paradise" to the central square of turf with its group of dusky cedars. The chapter-house is of the typical English form — an octagon with great windows filling the space between its buttresses, and an overarching roof borne by a central column. Yet it does not charm us quite so much as some of the

sister-buildings we shall meet elsewhere. Its forms and proportions seem thin and poor, cold and mechanical, and a modern attempt to restore its painted color has given it a dismal tawdriness. If we want to see it at its best we must stand outside, to the southward, beyond the door which leads from the cloisters into the bishop's garden. Here its polygonal walls and the low walls of the cloister group wonderfully well with the varied deep velvet turf. The church seems rather to rest upon the surface of this turf than to send out roots into the soil below. The fact might be unfortunate in a smaller structure, giving it a look of slightness and insecurity. But here the structure is so immense, its lateral arms stretch out so broadly, and its square angles are so bold and steady in expression, that it has no need to show its foundations more distinctly. The simple profiling of its lower walls strikes us indeed, but as an added element in that general air of lightness, spring, and grace which so singularly distinguishes this cathedral.

GATEWAY TO THE CLOSE.

masses of the church itself. The composition is one of infinite purity, charm, and, if I so may say, soft grandeur; and the wide stretch of idyllic garden beyond, leading off to the stately palace, is a setting such as England alone can furnish to her structures.

Passing around the church again we marvel at the perfect finish of its masonry and the beauty of its color — pale ashy gray, conspicuously stained below with wide growths of red and yellow lichens. We marvel too at the lack of emphatic treatment in the foundations. Here, where Nature gave no rocky base, we might have looked for a rock-like base of masonry, but the walls rise nearly straight from the

The wall around the close was not built until the fourteenth century, when Edward III. gave permission to "embattle" the cathedral precincts and to use for the purpose the stones of the old church at Sarum. On the north the wall lies so far off from the church, and on the west it comes, comparatively speaking, so near, that the secondary rank of the façade is again explained to the eye. It is nowhere a very lofty wall and in some parts it is very low. Here and there among its stones may be seen bits of Norman carving, which are the only existing witnesses to the style and finish of the ancient hill-town church.

Beyond the wall to the west runs a row of

canons' homes, each set back in its luxuriant little garden. To the north is another expanse of green and then more houses. Most of the dwellings are of Elizabethan design, or of one of those Queen Anne or Georgian patterns which in this country we call "colonial." In size and shape they constantly remind us of things we have seen at home, but in material and color they are wholly English. They have fine red-tiled roofs, and their walls are of brick, or of brick and plaster, or of stone and flint; and where the stones have been patched with ruddy bricks there is no effort to conceal the disparity in material which gives so beautiful a variety in tint. Vines cover, trees embower, and flowers encircle them. The color effect as a whole is enchanting, and the air of mingled dignity, unworldliness, and peace which broods over the church itself broods over the dwellings of its ministrants as well.

Richard Poore, who, as bishop of Salisbury, founded its new church, was the same who a little later, as bishop of Durham, founded there the Chapel of the Nine Altars. It is unlikely that he was in either case the architect; and though the Early-English style is used in both buildings, it is so differently used as not to suggest that their designer was one and the same. The utmost simplicity of which the Lancet Pointed style is capable rules at Salisbury, the utmost luxuriance at Durham — as regards not profuseness of ornament alone but the constructional forms themselves. It is a singular coincidence, therefore, but doubtless nothing more, that the first man whom we know to have actually built at Salisbury — perhaps as architect, perhaps merely as clerk-of-the-works — bears the name of the northern town, Elias de Derham.

Although Salisbury was a cathedral church from very early times, much of its history is as void of great prelatical names as the history of Peterborough, which was merely an abbey church until the sixteenth century. Not the bishops but the earls of Salisbury, whose cross-legged effigies may be seen in the nave, made the name of their town a power in the world.

M. G. van Rensselaer.

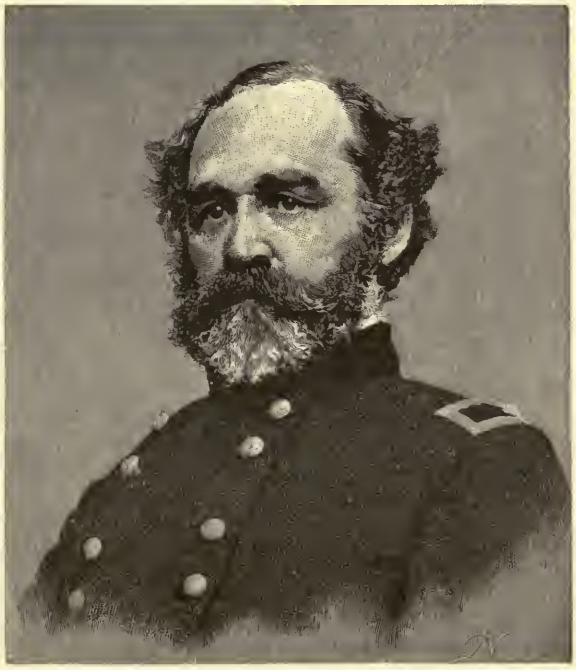
ABRAHAM LINCOLN: A HISTORY.*

THE CALL TO ARMS.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE FALL OF SUMTER.

MILITARY and naval expeditions rarely move at their first appointed time. That prepared by Captain Fox for Sumter was, by the President's order, directed to sail on April 6, but did not actually start till the 9th; that prepared by Captain Meigs for Fort Pickens was to have got off on the 2d, but only sailed on the 6th. The fitting out of both went on simultaneously at New York, but the officers concerned were not cognizant of each other's plans and measures, and it so happened that, through a misunderstanding which did not come to light until after the sailing of the latter, the war ship *Powhatan*, upon which Captain Fox depended for his most effective aid in his proposed efforts to relieve Fort Sumter, was transferred to the command of Lieutenant Porter, and sailed to Fort Pickens instead. The details of the incident are too long for the pages of this magazine and must be passed, with the simple statement that the



GENERAL M. C. MEIGS. (FROM A PHOTOGRAPH BY BRADY.)

Meigs expedition, in conjunction with the successful delivery of fresh orders to the fleet at Pensacola, made Fort Pickens entirely secure against assault by the rebel forces under Bragg, and also rendered more safe the Federal forts at Key West and Tortugas.

Meanwhile affairs at Fort Sumter were hastening to a crisis more rapidly than President Lincoln had been led to expect. The various occurrences during the month of March had created in Anderson the strong expectation that he would receive orders to evacuate the fort, and under this belief less care was taken to make his provisions hold out than might have been done. His letter of the 31st gave notice that "the last barrel of flour was issued day before yesterday"; and on the first day of April he once more wrote:

The South Carolina Secretary of War has not sent the authority asked for yesterday to enable me to send off the discharged laborers. Having been in daily expectation since the return of Colonel Lamon to Washington of receiving orders to vacate this post, I have kept these men here as long as I could. . . . I told Mr. Fox that if I placed the command on short allowance I could make the provisions last until after the 10th of this month; but as I have received no instructions from the Department that it was desirable I should do so, it has not been done. If the governor permits me to send off the laborers, we will have rations enough to last us about one week longer.*

Upon receipt of this notice President Lincoln issued his final order for the departure of the Sumter expedition, of which he gave notice to Anderson in the following instructions, drafted with his own hand:

WASHINGTON, April 4, 1861.

SIR: Your letter of the 1st instant occasions some anxiety to the President. On information of Captain Fox he had supposed you could hold out till the 15th instant without any great inconvenience, and had prepared an expedition to relieve you before that period. Hoping still that you will be able to sustain yourself till the 11th or 12th instant, the expedition will go forward; and, finding your flag flying, will attempt to provision you, and, in case the effort is resisted, will endeavor also to reënforce you.

You will therefore hold out, if possible, till the arrival of the expedition. It is not, however, the intention of the President to subject your command to any danger or hardship beyond what, in your judgment, would be usual in military life, and he has entire confidence that you will act as becomes a patriot and a soldier, under all circumstances. Whenever, if at all, in your judgment, to save yourself and command, a capitulation becomes a necessity, you are authorized to make it.†

* Anderson to Thomas, April 1, 1861. War Records.

† Lincoln, Autograph MS.

CAPTAIN GUSTAVUS V. FOX. (FROM A PHOTOGRAPH BY CUDLIP.)

This manuscript draft, in words so brief and explicit, in tone so considerate and humane, in foresight and moderation so eminently characteristic of its author, as manifested in almost every important document of his administration, was sent to the War Department, where it was copied in quadruplicate, addressed to Major Robert Anderson, signed by Simon Cameron, Secretary of War, and one copy immediately transmitted by mail to Fort Sumter,‡ while other copies were dispatched by other methods. That same afternoon the Secretary of War and General Scott gave Captain Fox—who, having completed his preliminary arrangements, had come to Washington for the purpose—his final and confidential orders for the command, the destination, the supplies, and the reënforcements of the expedition. In a conversation that afternoon Fox reminded Lincoln that but nine days would remain in which to reach Charleston from New York, a distance of six hundred and thirty-seven miles, and that with this diminished time his chances were greatly reduced. But the President, who had calculated all the probabilities of failure, and who with more comprehensive statesmanship was looking through and beyond the Sumter expedition to the now inevitable rebel attack and the response of an awakened and united North, calmly assured him that he should best fulfill

‡ Anderson to Thomas, April 8, 1861. War Records.

his duty to make the attempt.* Captain Fox returned to New York April 5, with the orders of the Secretary of the Navy for the necessary coöperation of the war vessels. On the evening of April 8 the merchant steamer *Baltic*, bearing two hundred recruits, the required supplies, and Captain Fox, dropped down the bay and went to sea early next morning, with the belief and understanding that the war ships *Powhatan*, *Pawnee*, *Pocahontas*, and *Harriet Lane*, and the steamtugs *Uncle Ben*, *Yankee*, and *Freeborn*, should meet the *Baltic* at the appointed rendezvous ten miles off Charleston bar, due east of the light-house, on the morning of the 11th of April.

Towards the end of March, while the interviews and conversations were going on between Judge Campbell and Seward, and the Sumter affair was a daily topic of discussion, Lincoln (to use his own words)

> told Mr. Seward he might say to Judge Campbell that I should not attempt to provision the fort without giving them notice. That was after I had duly weighed the matter and come to the deliberate conclusion that that would be the best policy. If there was nothing before to bind us in honor to give such notice, I felt so bound after this word was out.†

It is impossible to fix the exact date of this presidential instruction; but several allusions indicate it with sufficient nearness. A dispatch of the commissioners under date of March 22 uses the phrase: "and what is of infinite importance to us, that notice will be given him [Campbell] of any change in the existing status."‡ So also Mr. Welles, advising the Fox expedition in the Cabinet meeting of March 29, adds, "and of communicating at the proper time the intentions of the Government to provision the fort peaceably if unmolested."§ Finally, as already stated, Mr. Seward, on April 1, gave Campbell the written memorandum. "The President may desire to supply Sumter, but will not do so without giving notice to Governor Pickens."‖

Now that the Fox expedition was ready and ordered to sail, President Lincoln proceeded to carry out this part of his plan. Again, with his own hand, he prepared the following instructions:

> WASHINGTON, April 6, 1861.
>
> SIR: You will proceed directly to Charleston, South Carolina, and if, on your arrival there, the flag of the United States shall be flying over Fort Sumter, and the fort shall not have been attacked, you will procure an interview with Governor Pickens, and read to him as follows: "I am directed by the President of the United States to notify you to expect an attempt will be made to supply Fort Sumter with provisions only; and that, if such an attempt be not resisted, no effort to throw in men, arms, or ammunition will be made without further notice, or in case of an attack upon the fort." After you shall have read this to Governor Pickens, deliver to him the copy of it here inclosed, and retain this letter yourself.
>
> But if, on your arrival at Charleston, you shall ascertain that Fort Sumter shall have been already evacuated, or surrendered by the United States force, or shall have been attacked by an opposing force, you will seek no interview with Governor Pickens, but return here forthwith.¶

This autograph manuscript draft of Lincoln's was also copied, and signed "Simon Cameron, Secretary of War," and placed in the hands of Mr. R. S. Chew, a faithful clerk of the State Department, who proceeded to Charleston and delivered it to Governor Pickens.

Thus, on the evening of April 8, 1861, the Montgomery authorities received decisive information that all their hopes of recognition and peaceful disunion were at an end, and that the desperate trial of war was at length upon them. Already, to some extent, forewarned of this contingency, they hastened to make dispositions to meet it. The seven States of South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas were now united in the rebel Government; they were promptly notified of the changed condition of affairs, and each asked to raise a contingent of three thousand volunteers. Bragg, at Pensacola, was notified that "Our commissioners at Washington have received a flat refusal,"** and was instructed to put himself on the defensive, while officers, supplies, and soldiers were ordered to his support with a somewhat spasmodic energy. Beauregard was again put on the alert and ordered to increase his vigilance and vigor. "Under no circumstances are you to allow provisions to be sent to Fort Sumter."†† "Major Anderson's mails must be stopped. The fort must be completely isolated."‡‡ Beauregard complied with alacrity; issued orders, and sent detachments to his posts and batteries; armed additional guard-boats to patrol the harbor; and called out the entire balance of the contingent of five thousand men which had been authorized.

President Lincoln in deciding the Sumter question had adopted a simple but effective policy. To use his own words, he determined to "send bread to Anderson"; if the rebels fired on that, they would not be able to con-

vince the world that he had begun civil war. All danger of misapprehension, all accusations of "invasion" and "subjugation," would fall to the ground before that paramount duty not only to the nation, but to humanity.* This was universal statesmanship reduced to its simplest expression. To this end he had ordered the relief expedition to sail, and sent open notice to Governor Pickens of its coming. His own duty thus discharged, no less in kindness than in honesty, the American people would take care of the result. It is the record of history that he was right in both his judgment and his faith.

That he by this time expected resistance and hostilities, though unrecorded, is reasonably certain. The presence of armed ships with the expedition, and their instructions to fight their way to the fort in case of opposition, show that he believed the arbitrament of the sword to be at hand. His authorization to Anderson to capitulate after the ordinary risks of war is evidence that he did not expect a decisive battle or a conclusive victory. Whether the expedition would fail or succeed was a question of minor importance. He was not playing a game of military strategy with Beauregard. He was looking through Sumter to the loyal States; beyond the insulted flag to the avenging nation.

The rebels, on their part, had only a choice of evils. They were, as wrong-doers are sure to be, on the horns of a dilemma. Their scheme of peaceable secession demanded incompatible conditions — the union of the South and the division of the North. To preserve the former was to destroy the latter. If they set war in motion, they would lose their Democratic allies in the free States. If they hesitated to fight, the revolution would collapse in the slave-States. As usual on such occasions, rash advice carried the day. "Gentlemen," said an uncompromising fire-eater to Jefferson Davis and his Cabinet, "unless you sprinkle blood in the face of the people of Alabama, they will be back in the old Union in less than ten days."*

The possibility suggested to Captain Hartstene, that Sumter might be relieved by boats on a dark night, evidently decided the rebel authorities to order an immediate attack of the fort.† They could not afford the risk of its successful defense. Its capture was the very life of the rebellion.

Therefore, on the 10th of April, they telegraphed to Beauregard:

> If you have no doubt of the authorized character of the agent who communicated to you the intention of the Washington government to supply Fort Sumter by force, you will at once demand its evacuation, and, if this is refused, proceed in such a manner as you may determine to reduce it.‡

At 2 P. M. on the 11th that officer accordingly made the demand, offering facilities to remove the troops, with their arms and private property, and the privilege of saluting their flag.§ The demand was laid before a council of officers, who voted a unanimous refusal.‖ "I have the honor," thereupon replied Anderson, "to acknowledge the receipt of your communication demanding the evacuation of this fort; and to say in reply thereto, that it is a demand with which I regret that my sense of honor, and of my obligations to my Government, prevent my compliance"; at the same time thanking him for his compliments and courteous terms.¶ The rebel aides-de-camp who bore these messages engaged in informal conversation with Anderson, in the course of which, with somewhat careless freedom, he said to them: "Gentlemen, if you do not batter the fort to pieces about us, we shall be starved out in a few days."** The phrase was telegraphed to Montgomery, whence instructions came back once more to offer time to deliver up the fort; whereupon, near midnight of the 11th, Beauregard again wrote:

> If you will state the time at which you will evacuate Fort Sumter, and agree that in the mean time you will not use your guns against us unless ours shall be employed against Fort Sumter, we will abstain from opening fire upon you.††

It was long past midnight when the aides once more reached the fort and handed this second message to Anderson. Anderson in return submitted to them the following proposition in writing:

> I will, if provided with the proper and necessary means of transportation, evacuate Fort Sumter by noon on the 15th instant should I not receive prior to that time controlling instructions from my Government, or additional supplies; and that I will not in the mean

* McPherson, "History of the Rebellion," pp. 112, 113.

† As, in consequence of a communication from the President of the United States to the Governor of South Carolina, we were in momentary expectation of an attempt to reënforce Fort Sumter, or of a descent upon our coast to that end from the United States fleet then lying at the entrance of the harbor, it was manifestly an imperative necessity to reduce the fort as speedily as possible, and not to wait until the ships and the fort should unite in a combined attack upon us. time open my fire upon your forces unless compelled to do so by some hostile act against this fort or the flag of my Government, by the forces under your command or by some portion of them, or by the perpetration of some act showing a hostile intention on your part against this fort or the flag it bears.*

This cautious and resolute answer was not what the rebel commander desired; but apparently he expected nothing else, for he had given his aides discretionary authority to refuse the stipulation. They retired to an adjoining room to consult and compose their answer, and at twenty minutes past three o'clock on the morning of Friday, April 12, 1861, handed Anderson their written notice that the rebel batteries would open their fire upon the fort in one hour. Then taking their leave, they entered their boat and proceeded directly to Fort Johnson, and gave to the officer commanding that post "the order to open fire at the time indicated."†

Unwelcome as was the prospect of the impending conflict, it must in one sense have been a relief as a contrast to the uncertainty in which the fate of the garrison had hung for more than three months. The decisive moment of action was at last reached, and the spirit and strength of every inmate of the fort leaped into new life under the supreme impulse of combat. Until the full dawning of the morning, nothing could be done within the fort. Anderson gave the necessary orders about the coming attack. The sentinels were all withdrawn from their exposed stations on the parapet; every gate and opening was closed; the men were strictly enjoined not to leave the shelter of the casemates except on special summons. These few preparations hastily completed, Sumter seemed to the outside world to have relapsed into the security and silence of a peaceful sleep.

The fort had been built on an artificial island midway in the mouth of Charleston harbor; it was three miles from the city, but projecting points of the neighboring islands inclosed it in a triangle. On these the rebels had built their siege works — to the north-east Fort Moultrie on Sullivan's Island, distant 1800 yards; to the south, the Cumming's Point batteries on Morris Island, distant 1300 yards; to the west, Fort Johnson on James Island, distant 2500 yards. Some were built merely to oppose the expected reënforcements through the harbor channels; most of them were earth-works. Two were constructed of wood and protected with railroad iron; one of these had been designed to serve as a floating battery, but proving a failure in this object, was now advantageously grounded behind a protecting sea-wall. Altogether there were from fourteen to nineteen of these batteries, mounting a total of thirty guns and seventeen mortars, manned and supported by a volunteer force of four to six thousand men. The greater part of them were holiday soldiers, but among their officers were a dozen or two formerly belonging to the Federal army and possessed of a thorough military education. To these the management of the enterprise was mainly confided.

Fort Sumter, on its part, was a scarcely completed work, dating back to the period of smooth-bore guns of small caliber; its walls were of brick, forty feet high and eight feet thick; it was pierced for one hundred and forty guns, to be mounted in two tiers of casemates and on the parapet. But when Anderson inspected it on his arrival in November previous, the brick-work of walls and casemates was still unfinished, and only a few guns were mounted.‡ Foster, the engineer in charge, had, with limited help and materials, and in the face of constant obstacles and discouragements, pushed the work towards completion. There was now a total of forty-eight guns mounted and ready for use, though furnished with very rude and insufficient appliances. Of these, twenty-one were in the casemates and twenty-seven on the parapet. To man and support them Anderson had a garrison of nine commissioned officers, sixty-eight non-commissioned officers and privates, eight musicians, and forty-three non-combatant laborers — a total of one hundred and twenty-eight souls. We shall see that while the opposing artillery was nearly equal in number, there existed, in fact, a great disparity in its quality. Not only was Anderson's fire diffused and that of the enemy concentrated, but the rebels had on their side seventeen ten-inch mortars, which could deliver a vertical fire and drop large shells into the fort; while Anderson had nothing to answer them but the horizontal fire of his guns to throw missiles against the face of the rebel bomb-proofs, formed of heavy sand-banks or sloping railroad iron.

The inhabitants of Charleston were informed of the intended bombardment; months of speech-making, drilling, and war preparation had excited an intense eagerness to witness the fight. In the yet prevailing darkness they came pouring out of their houses by a common impulse, and thronged to the wharves and buildings on the bay, where they sought advantageous positions to behold the long-wished-for spectacle. At about half-past four, as the dim outline of Fort Sumter began to define itself in the morning twilight, they saw a shell rise from the mortar batteries near Fort

Johnson, and make its slow and graceful curve upon Sumter. This was the signal. Gun after gun and battery after battery responded to its summons, and in less than an hour all the besieging works were engaged in an active cannonade.

Inside of Sumter the garrison received the assault with a certain degree of deliberation. The first care was to note the effect of the firing. The opening shots of the rebels were badly aimed, and fell wide of the mark. With the advancing daylight their gunners obtained a better range; the solid shot began to strike the face of the wall, and the shells from the mortars to explode with alarming precision over the parapet. Nevertheless, no great or rapid damage was done. One vital point was, however, quickly decided. Housed in the casemates, the garrison was comparatively safe; but out on the unprotected parapet, under the concentrated fire of all the rebel artillery, Anderson's little handful of cannoneers would melt away like frost in the morning sun. With a full war garrison he could have replaced officers and men as they were shot down; but with only sufficient trained force to work nine guns, he dared not risk the loss of a single man. His first reluctant duty, therefore, was to order the abandonment of all his barbette guns. These were twenty-seven in number, more than half his available armament, and comprising nearly all his pieces of large caliber. Through this necessity alone, Fort Sumter was largely shorn of its offensive power. His twenty-one casemate guns, of which only four were forty-two pounders, and the remainder thirty-twos, constituted the total of his fighting artillery.

The rations of bread having been exhausted a day or two before, the command breakfasted on pork and water, and at about 7 o'clock Captain Abner Doubleday, the ranking officer, took his station at a casemate gun and hurled the defiance of Sumter, with a solid shot, against the formidable iron-clad battery on Cumming's Point. Fully roused by the combined excitements of resentment and danger, the men sprang with alacrity to their duty; even the forty-three engineer workmen, forgetting their character of non-combatants, eagerly volunteered and rendered active service in the defense. In fact, the enthusiasm of the garrison somewhat outstripped its prudence. They began the engagement with a supply of only seven hundred cartridges; by the middle of the day this stock had become so much reduced that the fort was compelled to slacken its fire. From this time on only six guns were kept in action — two towards Morris Island, two towards Fort Moultrie, and two towards the batteries on the west end of Sullivan's Island. These were also fired at longer intervals, while the only six needles in the fort were kept busy sewing up cartridge-bags out of the extra clothing, blankets, hospital sheets, and even coarse paper.

So the unequal combat went on throughout the first day. The journal of the bombardment kept by Captain Foster shows that no very decisive damage was effected on either side. From the fort there were occasional good shots. The iron-clad batteries were repeatedly struck, but the light balls bounded off their sloping roofs. At other batteries they buried themselves harmlessly in the impervious rebel sand-banks. Embrasures were struck; groups of rebel officers and men allowing their curiosity to draw them out from their shelter were hustled pell-mell back into their bomb-proofs; an incautious schooner, receiving a ball, hauled down her Confederate flag and hurried out of range; the two forty-two pounders bearing on Moultrie silenced a gun, riddled the barracks and quarters, and tore three holes through the rebel flag.

> The effect of the enemy's fire upon Fort Sumter [says Foster] during the day was very marked in respect to the vertical fire. This was so well directed, and so well sustained, that from the seventeen mortars engaged in firing ten-inch shells one-half of the shells came within or exploded above the parapet of the fort, and only about ten buried themselves in the soft earth of the parade without exploding. . . . The effect of the direct fire from the enemy's guns was not so marked as the vertical. For several hours' firing from the commencement, a large proportion of their shot missed the fort. Subsequently it improved, and did considerable damage to the roof and upper story of the barracks and quarters, and to the tops of the chimneys on the gorge. . . . The shots from the guns in the batteries on the west end of Sullivan's Island did not produce any considerable direct effect, but many of them took the gorge in reverse in their fall, completely riddling the officers' quarters, even down to the first story, so great was the angle of fall of many of the balls.

One additional danger manifested itself: three times during the day the wooden buildings in the fort caught fire, but were extinguished without great difficulty, being low and easily accessible. The rebel batteries, provided with several furnaces, now and then fired a hot shot; but whether these or bursting shells started the burning the officers themselves could not determine. The very work of ruin going on in the building used as officers' quarters aided in restraining the flames. The hallways were provided with iron water-tanks, which, being soon perforated by cannon-balls, deluged the chambers, and rendered the wood difficult to ignite.

Amid experience of this kind the eventful 12th of April, the first day of the Sumter bombardment, at length drew to a close. The fire of Sumter ceased; the direct fire of the

rebel batteries slackened, and was finally discontinued; only the mortars kept up a slow and sullen bombardment through the night at intervals of from ten to fifteen minutes. The work of sewing up cartridge-bags was continued until midnight; sentinels and lookouts were stationed to watch for the possible coming of boats from the fleet — possibly of boats bearing a storming party from the rebel camps. But the night proved dark and rainy, with a continuance of the prevailing gale, making the waters of the harbor too rough for either of these undertakings. Under cover of the thick gloom, Foster, the engineer, ventured outside the walls and satisfied himself "by personal inspection that the exterior of the work was not damaged to any considerable extent, and that all the facilities for taking in supplies in case they arrived were as complete as circumstances would admit." * Three United States men-of-war had been seen off the bar during the afternoon, and the fort had dipped its flag in signal to them. What was the fleet doing?

The several vessels of the Fox expedition were scarcely at sea when they encountered a driving gale. Captain Fox himself, who sailed in the *Baltic* on the morning of the 9th, was yet ignorant of the changed destination of the flag-ship *Powhatan*. This was doubtless an entirely unintentional omission, arising through the cares, the dangers, the confusion, the cross-purposes, the system of profound secrecy which for a few days prevailed at Washington. The *Baltic* reached the rendezvous off Charleston just in time to hear the opening guns of the bombardment. The *Harriet Lane* was already there. The *Pawnee* arrived at daylight. There was an apparent conflict of orders, and a hesitation to coöperate. The *Baltic* and the *Harriet Lane* stood in to offer to carry provisions to the fort; but as they neared the bar of the harbor, they saw by the quick-flashing rebel guns that the war was already begun. At this intelligence, the commander of the *Pawnee* declared his intention to go in and "share the fate of his brethren of the army." Fox, cool and practical, brought him back to reason by explaining the Government instructions, and induced him to await the chance of rendering more effective service. The two ships of war anchored near the bar, and the *Baltic* stood off and on to await the arrival of the *Powhatan* and the tugs. This, however, was a vain hope. The *Powhatan* was on her way to Pensacola, the tugs had been scattered by the storm. The *Freeborn* was not permitted to leave New York. The *Uncle Ben* was driven into Wilmington and fell into the hands of the rebels. The *Yankee* failed to reach the rendezvous till long after the whole affair was over. But, still ignorant of these disasters, and hoping hourly for the arrival of the missing vessels, the fleet waited and made signals all the long afternoon and through the dark and stormy night, while the lookouts in the garrison were anxiously scanning the turbulent waters of the bay for the coming of the boats, and the rebel gunners stood by their channel batteries in the drenching rain hoping to intercept and sink them.

Captain Fox and the officers of the fleet were sorely disappointed at the non-arrival of the *Powhatan* and the tugs. The former had on board the armed launches and the necessary sailors to man them; the tugs were to have carried the supplies and perhaps drawn the boats in tow. With these facilities for transportation, there is every probability that they would have reached the fort. The storm was both an advantage and a hindrance; it increased the friendly darkness to hide them from the rebel gunners, but at the same time it lashed the waters of the bay into fury. When morning came, such had been the pitchy gloom of the night and the roaring of the rain and the surf, that the commanders of the rebel batteries were unable to report that their watch and guard had been completely effective. "Opinions differ," wrote one of their best officers, "as to whether anything got into Sumter last night. They may or may not. The night was dark and occasionally stormy, and a heavy sea running. If anything did, it could not have been very extensive." †

With the morning of the 13th, Captain Fox and the officers began to despair of the *Powhatan* and the tugs. Unwilling to remain mere idle spectators of the fight, they cast about to use such expedients as presented themselves. Among the merchant vessels by this time collected at the bar, awaiting the issue of the contest, was an ice schooner; this they impressed and began to prepare for an attempt to enter the following night. There were plenty of volunteers among both officers and seamen for the hazardous duty; but long before nightfall the bombardment had come to an end. That Captain Fox's undertaking thus terminated without direct practical result was not his fault. With characteristic firmness and generosity, President Lincoln took upon himself the principal blame for its failure.

> The practicability of your plan [so he wrote to Fox soon afterward] was not in fact brought to a test. By reason of a gale well known in advance to be possible and not improbable, the tugs, an essential part of the plan, never reached the ground; while, by an accident for which you were in nowise responsible, and possibly I to some extent was, you were deprived of a war-vessel, with her men, which you deemed of great im-

* Foster, journal, April 12, 1861. War Records.

† Whiting to Beauregard, April 13, 1861. MS.

portance to the enterprise. . . . You and I both anticipated that the cause of the country would be advanced by making the attempt to provision Fort Sumter, even if it should fail; and it is no small consolation now to feel that our anticipation is justified by the result.*

"Fort Sumter opened early and spitefully, and paid especial attention to Fort Moultrie — almost every shot grazing the crest of the parapet, and crashing through the quarters.†" This was the rebel report of the beginning of the second day's bombardment, April 13. The garrison of Sumter was refreshed by a night of comparatively secure rest in their casemates, and, no doubt, a hearty breakfast of pork and water, and, so long as the stock of cartridges made up during the night held out, they kept up so brisk a fire from their few guns that the rebels began to be confirmed in the opinion that the fort had really been reënforced. On their side the besiegers also increased both the speed of firing and their accuracy of aim, and seeing that they were making no headway in the test of breaching the walls, they began to pay more attention to the use of red-hot shot.‡

Thus far this unequal contest of nearly fifty concentrating guns, replied to by about six, had gone on without material damage to either party — showing, in proportion to the strength of each, nothing but indented brick walls or displaced sand-bags, battered chimneys and perforated barracks, a few slight contusions from splinters, and one or two disabled guns. According to all the reports, it might have proceeded at this rate the whole week, and the waste of ammunition would have been its most serious feature. But at this stage a new element entered into the strife, and soon turned the fortune of the day against the unlucky garrison of Sumter.

At about 9 o'clock in the morning, the roof of the officers' quarters once more caught fire, either from a bursting shell or a red-hot shot; and this time a distance from water, and the exposure to the enemy's missiles, made it impossible to extinguish the flames. Worse than all, it quickly became evident that the fire would soon encircle the magazine and make it imperative to close it. At Captain Foster's suggestion, all hands not employed at the guns now sprang to the work of taking out a supply of powder. About fifty barrels were thus secured, distributed for safety in the various casemates, and covered with wet blankets, when the fire and heat so far increased that it was necessary to close the heavy metal doors of the magazine and bank it up with earth. The enemy, observing the smoke, redoubled the fire of the batteries; a strong south wind carried the flame to all the barracks inside the fort; and though the men fought the advance of the fire, they were at length compelled to give way and take refuge in the casemates. Even here they were not safe; the course of the wind was such as to fill every nook and corner of the fort with blinding, stifling smoke; the men crouched close down to the floors, covered their faces with wet handkerchiefs, or took exposed stations near the embrasures to obtain a breath of fresh air. As if this were not enough, a still subtler danger pursued them. The rapid conflagration and sweeping wind had filled the air with fire-flakes, and these drifted on the strong currents and counter-currents into the casemates to such an extent as to ignite the beds, boxes, and various small articles hastily collected there. Under such circumstances the fifty barrels of powder saved with so much exertion from the magazine could no longer be kept, and upon Anderson's order all but five barrels were thrown through the embrasures of the fort into the sea. Noon had meanwhile come, and, engaged in these pressing occupations, the garrison had ceased firing. By-and-by the wind changed a little, rendering the situation somewhat safer and more comfortable. There were but few cartridges left; still an occasional shot was fired, which the rebels themselves, roused to admiration of the garrison, received with cheers.

A new incident now engaged general attention. The flag-staff of the fort, struck seven different times during the first day and three the second, fell at about one o'clock in the afternoon. Lieutenant Snyder and a couple of men, without much delay, again hoisted the flag on a jury-mast extemporized on the parapet. The rebels had meanwhile noted the fall of the flag, and sent several different communications to Sumter. The first messenger was the ubiquitous and eccentric Senator Wigfall. Beauregard, to get rid of him, sent him as an aide to the commander of Morris Island. From there, after a short consultation among the rebel officers, he was dispatched to Fort Sumter to make inquiries. He crossed the bay dramatically in an open boat, with his handkerchief tied to his sword for a flag of truce, and clambered up the wall to an accessible embrasure, where, one account says, an astonished artilleryman, seeing this unique apparition, summarily made him a prisoner of war.§

Officers soon came, however, and after a somewhat spirited dialogue, and some further waving of Wigfall's sword and handkerchief out of an embrasure, to which the rebel batteries paid no attention, he was brought into

§ Doubleday, "Forts Sumter and Moultrie."

Anderson's presence. He made a complimentary speech to Anderson, requesting that hostilities might be suspended and terms of evacuation arranged. What then occurred Captain Foster reports as follows:

The commanding officer desiring to know what terms he came to offer, Mr. Wigfall replied, "Any terms that you may desire,— your own terms,— the precise nature of which General Beauregard will arrange with you." The commanding officer then accepted the conditions, saying that the terms he accepted were those proposed by General Beauregard on the 11th, namely: to evacuate the fort with his command, taking arms and all private and company property, saluting the United States flag as it was lowered, and being conveyed, if he desired it, to any Northern port. With this understanding Mr. Wigfall left, and the white flag was raised and the United States flag lowered by order of the commanding officer.

The officious Wigfall had not been gone a great while when two different messages arrived at Sumter from General Beauregard — the first to inquire whether Anderson needed assistance, and the second to tender him the use of a fire-engine and the services of a surgeon, both of which they had brought from the city. All of these Anderson declined with thanks, saying he had no wounded, that the fire was by this time nearly burned out, and that he thought the magazine safe. From these interviews Anderson now learned that Beauregard was entirely ignorant of Wigfall's mission or his own capitulation. He explained the circumstances, and threatened to hoist again his flag. He was persuaded, however, first to submit the matter to be fully reported at headquarters. General Beauregard, after some parley, ratified Wigfall's unauthorized proceeding and accepted Anderson's terms in detail. By eight o'clock on Saturday evening the capitulation was definitely arranged, and on the following day, Sunday, April 14, Anderson and his command sailed northward in the *Baltic*, which had come to the relief of Sumter.

In a military point of view, Anderson's capitulation was hasty. The defense of the fort can hardly be called heroic; there was not a man killed, not a casemate gun disabled, not a breach in the walls, plenty of ammunition in the magazine, and starvation not immediately impending.

The burning of the quarters [says Captain Foster] produced a great effect on the defense while the fire lasted, inasmuch as the heat and smoke were almost stifling, and as the fire burned all around the magazines, obliging them to be closed, and thus preventing our getting powder to continue the firing. It also destroyed the main gates and the gun-carriages on the parapet of the gorge. But we could have resumed the firing as soon as the walls cooled sufficiently to open the magazine, and then, having blown down the wall left projecting above the parapet, so as to get rid of flying bricks, and built up the main gates with stones and rubbish, the fort would actually have been in a more defensible condition than when the action commenced. . . . The want of provisions would soon have caused the surrender of the fort, but with plenty of cartridges the men would have cheerfully fought five or six days, and, if necessary, much longer, on pork alone, of which we had a sufficient supply. I do not think that a breach could have been effected in the gorge at the distance of the battery on Cumming's Point within a week or ten days; and even then, with the small garrison to defend it and means for obstructing it at our disposal, the operation of assaulting it, with even vastly superior numbers, would have been very doubtful in its results.*

An ambitious and combative commander, therefore, carefully noting these elements of strength and resistance, and seeing a relieving fleet at the mouth of the harbor, would have "held the fort," and sent back a message of defiance. But when Anderson first took command of Sumter he wrote that "my position here is rather a politico-military than a military one," and on this assumption he seems to have acted throughout. Viewed in a political light, his conduct is perfectly justifiable. He had faithfully maintained the authority of the Government and the honor of the flag. He had repelled force by force. Obeying President Lincoln's instructions, he had incurred the ordinary risks of war, and now possessed full authority to save himself and his command by capitulation.

In the bombardment of Sumter the insurgents for the third time made active, aggressive war upon the United States, even if we leave out of sight the occupation of forts by simple entrance or by the show of force, the building of batteries to menace Sumter, and receiving the surrender made by Twiggs in Texas. In fact, since the 27th of December, a continued series of acts had been perpetrated by them, not only outraging the authority of, but levying actual war against, the United States.

The rebels indulged in great rejoicing over their victory. Charleston, which had for two days witnessed the bombardment almost *en masse*, was once more vociferous with speeches and ablaze with bonfires; while at Montgomery the insurgent Secretary of War ordered an official salute to celebrate the surrender, and to emphasize the prediction of the previous evening that the rebel flag would

*The opinion of the rebel engineer, after the bombardment, agrees with that of Captain Foster. Major Whiting wrote as follows to Beauregard, on the 17th of April, proposing to abandon Morris Island: "Fort Sumter cannot be retaken from Morris Island alone. Your mortar batteries have accomplished that work. It cannot be touched from Cumming's Point. The late bombardment shows that. Let the enemy occupy it [Morris Island] entirely. We can shell him out from our remaining mortar batteries and keep him at a distance." Whiting to Beauregard, April 17, 1861. MS.

"float over the dome of the old Capitol at Washington before the 1st of May." *

Looking back now at the events of the first month of Lincoln's administration, we must wonder at the impression which prevailed then, and which has so often been expressed by impulsive men since, that he was too slow in making his decision to provision and reenforce Fort Sumter.

We find that on the 15th of March, only ten days after his first information about the condition of the fort, he formally asked the written opinion of his Cabinet on the subject; and that on the 6th of April, only three weeks later, he gave his final order that the expedition should proceed on its mission. The intervening time was spent by him in consulting his Cabinet and his military and naval officers about possible plans for relief and reënforcement; about alternative policies to be pursued; watching the culminating treason in the South and the slowly swelling loyalty in the North; awaiting the end of the contradictory words and acts of the Virginia Convention, whose majority protested Unionism in public and at last voted secession in secret; allowing his Secretary of State, by an unofficial negotiation with the rebel commissioners, to disclose the attitude of the Montgomery cabinet; using the delay which the rebels supposed they had contrived for their own benefit for preparing the Sumter expedition; making the individual members of his Cabinet responsible to the party and to the country for the advice they gave; and finally, by all this, to gain a coveted "choice of position" and compel the rebels to attack and thus consolidate the North.

When he finally gave the order that the fleet should sail he was master of the situation; master of his Cabinet; master of the moral attitude and issues of the struggle; master of the public opinion which must arise out of the impending conflict; master if the rebels hesitated or repented, because they would thereby forfeit their prestige with the South; master if they persisted, for he would then command a united North. And all this was done, it must be remembered, not in the retirement which gives calm reflection, but after the rush and hurry of a triumphal journey and the parade of an inauguration, in the confusion of conflicting counsel, the worry of preliminary appointments, the prevalence of an atmosphere of treason and insurrection, the daily defection of Government officials.

In the face of such self-assertion and victory, the verdict of history can never be that he was tardy or remiss; to have acted more peremptorily in that strange crisis, when all men's minds were simply groping and drifting, would have brought upon him the just criticism of recklessness. No act of his will gain him greater credit than his kindly forbearance and patient wisdom in allowing full time and reflection for the final decision at this supreme juncture. He had said in his inaugural: "In your hands, my dissatisfied fellow-countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors." This promise to the South he kept in its most vital spirit and meaning. An autocratic ruler might have acted more arbitrarily; but in a representative government it would have been imprudent to do otherwise than to await and rely upon the slow but mighty anger of an outraged patriotism.

* "Rebellion Record."

THE CALL TO ARMS.

PRESIDENT LINCOLN'S decision and orders to prepare the Sumter and Pickens expeditions brought him face to face with the serious possibilities of civil war; and better to understand any military problems with which he might have to deal, he wrote to General Scott on the 1st of April, as follows:

> Would it impose too much labor on General Scott to make short, comprehensive, daily reports to me of what occurs in his department, including movements by himself, and under his orders, and the receipt of intelligence? If not, I will thank him to do so.†

General Scott at once complied with the request, and from the 1st of April to the 4th of May sent the President nearly every day a short memorandum in his own handwriting, inclosed in an envelope marked "confidential"— the whole series forming collectively a sort of historical journal of the highest interest and authenticity; and portions of it show better than any comment what was being done by the new Administration to meet the crisis which the Fort Sumter bombardment precipitated upon the country.

"General Scott's daily report, No. 3,"— so indorsed in Lincoln's handwriting and dated April 3, 1861,— in part runs thus:

> There will remain in Washington a detachment of cavalry recruits from Carlisle recruiting depot, about 80 men and horses; Magruder's horse artillery; Griffin's ditto, belonging to the Military Academy and now needed there; Elsey's foot artillery and Haskin's ditto. The companies of foot artillery are acting as infantry. The number of marines at the Washington Navy Yard varies. We heard to-day that the number now there is some 200. There is not another company of regulars within reach of Washington, except 7 at Fort Monroe, making about 400 men, the minimum force needed there under existing circumstances; one company at the Fayetteville arsenal, N. C., to guard arms and ammunition against a thick population of blacks; a garrison of recruits (50) at Ft. Washington, ten miles

† Unpublished MS.

below us; a garrison of 100 recruits in Fort McHenry, Baltimore; about 750 recruits in New York harbor; 220 ditto at Newport Barracks opposite to Cincinnati, and about 350 men at Jefferson Barracks and the St. Louis arsenal near by, mostly recruits.*

This memorandum was supplemented two days later (April 5, 1861) by a detailed report from the Adjutant-General to the President, which showed the full strength of the army of the United States and its distribution to be as follows:

Department of the East, 3894; Department of the West, 3584; Department of Texas, 2258; Department of New Mexico, 2624; Department of Utah, 685; Department of the Pacific, 3382; miscellaneous, 686; grand total, officers and men, 17,113.*

General Scott's daily report, April 5, 1861:

I have nothing of special interest to report to-day; but that machinations against the Government and this capital are secretly going on all around us, in Virginia, in Maryland, and here, as well as farther south, I have no doubt. I cannot, however, say that they are as yet formidable, or are likely ever to come to a head. I have no policemen at my service, and no fund for the payment of detectives, but under the circumstances recommend that such agents should be at once employed in Baltimore, Annapolis, Washington, Alexandria, Richmond, and Norfolk. For the reasons stated, I am not prepared to suggest that a militia force should be called out to defend this Capital, under section 2 of the militia act, passed February 28, 1795. The necessity of such call, however, may not be very distant.*

General Scott's daily report, April 6, 1861:

A second steamer will arrive from Texas at New York in a day or two, with six troops of dismounted cavalry. In advance, I have ordered two of those companies or troops to proceed from the ship to this place, to be filled up with men (cavalry recruits) here. . . . The other four troops of cavalry I have ordered to proceed from the ship to Carlisle Barracks, Pennsylvania, to be remounted there, whence they can be readily brought here if deemed necessary.*

General Scott's daily report, April 8, 1861:

For the defense of the Government, more troops are wanted. The steamer with the dismounted cavalry (six companies) from Texas, must be in New York to-day or to-morrow, to be followed by another steamer, with about the same number of troops, from Texas, in a week. There is a growing apprehension of danger here in the meantime. I rely on the presence of a third battery of flying artillery (Sherman's) by Saturday next. It is coming from Minnesota. Three other companies of artillery on foot, serving as infantry, will be at New York, from the same quarter, in fourteen days. All these reënforcements, excepting Sherman's battery, may be too late for this place. For the interval I have sent Colonel Smith (the immediate commander of all the forces in the District of Columbia) to learn what number of reliable volunteers can be obtained in this city, and have also desired him to see whether the companies already here may not be advantageously concentrated near to the President's square. I beg leave to suggest that a small war steamer, to cruise between Alexandria and the Long Bridge over the Potomac, would be of great importance to the system of defense that we are planning. *

* Unpublished MS.

General Scott's daily report, April 9, 1861;

I suggested to the Secretary of War yesterday the calling out, say ten companies, of the militia or (by substitution) uniformed volunteers of this city to aid in the defense of the public buildings and other public property of the Capital against "an invasion or insurrection, or probable prospect thereof." The necessity for this additional force, and the manner of employing it, were yesterday pretty fully discussed before the Secretary of War by Colonel Smith, Colonel Stone (two most excellent officers), and myself. Colonel Stone, inspector-general to Major-General Weightman's division, thinks that twice that number of loyal volunteers can be promptly furnished by the division, and I apprehend that the twenty companies may be deemed necessary in a few days. I hope that the President may give the Secretary of War the authority to make the call for ten companies at once. . . . I have this moment received the President's instructions of this date, through the Secretary of War, on the safety of this District.*

WAR DEPARTMENT,
WASHINGTON, D. C., April 9, 1861.

LIEUTENANT-GENERAL SCOTT.

Sir: I am instructed by the President of the United States to direct you to take all necessary precautions for protecting this Capital against a surprise or any assault whatever, and that for this object, among other means, you proceed forthwith to mature a plan under the 24th Section of the Act of Congress entitled "An Act more effectually to provide for the organization of the militia of the District of Columbia," approved March 3, 1803, and that you advise the President whenever in your judgment the occasion shall have arisen for the President's action under said section.

Very respectfully, SIMON CAMERON,
Secretary of War.

WAR DEPARTMENT, ADJ.-GENERAL'S OFFICE,
WASHINGTON, April 9, 1861.

GENERAL ORDERS No. 9.

I. A Military Department to be taken from the Department of the East and called the Department of Washington is hereby constituted, to consist of the State of Maryland and the District of Columbia, according to its original boundary.

Brevet-Colonel C. F. Smith, 10th Infantry, is assigned to the command of this Department according to his brevet rank. Headquarters at Washington City. . . . By order:

L. THOMAS, *Adjutant-General.*†

General Scott's daily report, April 11, 1861:

Several companies of District volunteers were mustered into the pay and service of the United States yesterday and this forenoon, and the process is still going on. A few individuals in several companies declining to take the oath of allegiance to the United States were of course rejected; but I am happy to report that five or six other companies have sworn allegiance without excepting a man. The stripping of the rejected men yesterday of their arms, accoutrements and uniforms, by their own officers, has, I learn, had a fine effect upon the patriotism and devotion of the entire militia of the District. A fine company, not one of the ten called for, having presented itself this morning, of its own motion, and requested it might be accepted, I did not hesitate to consent, and hope for approval. Before night we shall have probably eleven companies sworn in. The Clerk of the House of Representatives having, through the Secretary of War, desired that a company might be assigned to guard the Capitol, I shall instruct Col. Smith to comply with that reasonable request.*

† War Records.

General Scott's daily report, April 13, 1861:

The two companies of dismounted cavalry arrived last night, as I had anticipated in my report of yesterday. At my instance the Secretary of War has called for four other companies of District volunteers, which will make in all fifteen companies of this description for the defense of the Capital, besides six companies of regulars, the marines at the Navy Yard, and (I hope very soon) the war steamer to cruise on the Potomac between the Long Bridge and a point a little below Alexandria. The next regular reënforcements to be expected here are: Sherman's battery of flying artillery from Minnesota, and the companies of foot artillery from the same quarter, in five and seven days; and a portion of the troops expected in the next steamer from Texas. From the same steamer I shall have the means of reënforcing Fort McHenry (at Baltimore), a most important point.*

These extracts show us the steps which were being quietly taken by the Government to meet the possible dangers growing out of the Fox expedition to Charleston. They included every resource which the regular army then afforded; and to call upon the militia of the States was, of course, at that moment out of the question, as it would have frustrated the very result the President had planned and anticipated.

The Sumter fleet finally at sea, the official notice sent to Governor Pickens, and the work of enrolling militia for the defense of Washington progressing so satisfactorily, Lincoln again set himself, during the brief respite, to the work of making the new appointments. Ordinarily this was only an act of official favor or partisan reward, which might be performed at leisure; but now it was also a work of pressing need, because of the imperative duty of substituting faithful and loyal agents for indifferent or treasonable ones in the public service. That such abounded, the numerous resignations and still more plentiful avowals made manifest beyond a doubt. The city was full of strangers; the White House full of applicants from the North. At any hour of the day one might see at the outer door and on the staircase one file going, one file coming. In the anteroom and in the broad corridor adjoining the President's office there was a restless and persistent crowd,— ten, twenty, sometimes fifty, varying with the day and hour,— each one in pursuit of one of the many crumbs of official patronage. They walked the floor; they talked in groups; they scowled at every arrival and blessed every departure; they wrangled with the door-keepers for right of entrance; they intrigued with them for surreptitious chances; they crowded forward to get even as much as an instant's glance through the half-opened door into the Executive chamber. They besieged the representatives and senators who had privilege of precedence; they glared with envy and growled with jealousy at the Cabinet ministers who, by right and usage, pushed through the throng and walked unquestioned through the doors. At that day the arrangement of the rooms compelled the President to pass through this corridor and the midst of this throng when he went to his meals in the other end of the Executive Mansion; and thus, once or twice a day, the waiting expectants would be rewarded by the chance of speaking a word, or handing a paper direct to the President himself — a chance which the more bold and persistent were not slow to improve.

At first, Lincoln bore it all with the admirable fortitude acquired in Western political campaigns. But two weeks of this experience on the trip from Springfield to Washington, and six weeks more of such beleaguering in the Executive office, began to tell on his nerves. What with the Sumter discussion, the rebel negotiation, the diplomatic correspondence, he had become worked into a mental strain and irritation that made him feel like a prisoner behind the Executive doors, and the audible and unending tramp of the applicants outside impressed him like an army of jailers. We can well imagine how it intensified the suspense with which he awaited the news from the fleet and the answer to his official communication to the governor of South Carolina.

Amid such surroundings and labors the President received the news which now reached the whole country from Sumter. It came very gradually — first the military scurry about Charleston; then Beauregard's demand for a surrender, followed by Anderson's prompt refusal; and finally, on the morning of Saturday, April 13, the newspapers of Washington, like those of every city in the Union, North and South, were filled with the startling head-lines and the thrilling details of the beginning and progress of an actual bombardment. That day, however, there was little change in the routine of the Executive office. Mr. Lincoln was never liable to sudden excitement or sudden activity. Through all his life, and through all the unexpected and stirring events of the rebellion, his personal manner was one of steadiness of word and act. It was this quality which, in the earlier stages of the war, conveyed to many of his visitors the false impression of his indifference. His sagacity gave him a marked advantage over other men in enabling him to forecast probable events; and when they took place, his great caution restrained his comments and controlled his outward bearing. Oftentimes, when men came to him in the rage and transport of a first indignation over some untoward incident,

* Unpublished MS.

they were surprised to find him quiet, even serene,— perhaps with a smile on his face and a jest on his lips,— engaged in routine work, and prone to talk of other and more commonplace matters. Of all things the strut and stagey exhibition of mock-heroism were foreign to his nature. Generally it happened that when others in this mood sought him, his own spirit had already been through the fiery trial of resentment — but giving no outward sign, except at times with lowered eyebrow, a slight nodding and shaking of the head, a muttering motion or hard compression of the lips, and, rarely, an emphatic downward gesture with the clenched right hand. His judgment, like his perception, far outran the average mind. While others fumed and fretted at things that were, all his inner consciousness was abroad in the wide realm of possibilities busily searching out the dim and difficult path towards things to be. His easy and natural attention to ordinary occupations afforded no indication of the double mental process which was habitual with him.

So, while the Sumter telegrams were on every tongue and revengeful indignation was in every heart, there was little variation in the business of the Executive Mansion on that eventful Saturday. The miscellaneous gathering was larger there, as it was larger at the Departments, the newspaper and telegraph offices, and the hotels. More leading men and officials called to learn or to impart news. The Cabinet, as by a common impulse, came together and deliberated awhile. All talk, however, was brief, sententious, informal. The issue had not yet been reached. Sumter was still under fire. Nevertheless, the main question required no discussion, not even decision, scarcely an announcement. Jefferson Davis's order and Beauregard's guns had sufficiently defined the coming action of the Government. After this, President, functionaries, and people had but a single purpose, a single duty. Lincoln said little beyond making inquiries about the current reports and criticising the probability or accuracy of their details, and went on receiving visitors, listening to suggestions or recommendations, and signing routine papers as usual throughout the day.

One important exception deserves to be noticed. A committee from the Virginia convention had an appointment for a formal audience with him that morning. The doubling and drifting attitude of the Old Dominion has already been described. The boasted conservatism of that convention was a sham. Its Unionism was vague and traditional; its complaint and contumacy were real and present. Day by day, with the loudest professions of loyalty on their lips, its majority was apologizing to its minority, and by labored argument against secession steadily convincing itself that treason was a necessity if not a duty. Recoiling from the fire of civil war, it yielded itself the more than half-willing cat's-paw of conspiracy. Bewailing the denial of shadowy claims of constitutional rights, it soon voluntarily put on the handcuffs of a grinding military despotism. A step in this road to political ruin was the appointment of a committee to visit Lincoln, requesting that he should define his policy, which request was only a covert and threatening demand for the evacuation of the Southern forts.

To this committee, Messrs. Preston, Stuart, and Randolph, respectively a "conservative," a "Unionist," and a "secessionist," the President read his reply just written,* on this morning of Saturday, April 13. The paper is temperate and dispassionate even to coldness, and indicates his ability to lift questions of public consideration out of the hot, blinding plane of personal feeling into the cool light of reason and expediency. While the rebel guns were still raining bombs and red-hot shot on Sumter, he had already mapped out his course of procedure, based on the facts within his knowledge, but free from all trace of excitement or feeling of revenge.

He told them he had distinctly defined his policy in the inaugural address. It was still the plain and unmistakable chart of his intentions. It had been his plan to hold only the forts still occupied by the Government when he became President.

> But if [he continued], as now appears to be true, in pursuit of a purpose to drive the United States authority from these places an unprovoked assault has been made upon Fort Sumter, I shall hold myself at liberty to repossess, if I can, like places which had been seized before the Government was devolved upon me. And in every event I shall, to the extent of my ability, repel force by force. In case it proves true that Fort Sumter has been assaulted, as is reported, I shall perhaps cause the United States mails to be withdrawn from all the States which claim to have seceded, believing that the commencement of actual war against the Government justifies and possibly demands this. I scarcely need to say that I consider the military posts and property situated within the States which claim to have seceded as yet belonging to the Government of the United States as much as they did before the supposed secession. Whatever else I may do for the purpose, I shall not attempt to collect the duties and imposts by any armed invasion of any part of the country; not meaning by this, however, that I may not land a force deemed necessary to relieve a fort upon a border of the country. From the fact that I have quoted a part of the inaugural address, it must not be inferred that I repudiate any other part, the whole of which I reaffirm, except so far as what I now say of the mails may be regarded as a modification.†

* Committee, Report. "Richmond Enquirer," April 16, 1861.

† Lincoln to committee, April 13, 1861. MS.

In this reply of the President we have his entire administrative policy regarding the rebellion; but it must be noted that it goes only to the extent of his actual information — it deals only with accomplished facts. The programme of the inaugural is already modified; the modification is slight but significant, and based not upon caprice or resentment, but on necessity. According to fair interpretation of language, the programme of the inaugural was that he would execute the laws of the Union in all the States to the extent of his ability; hold, occupy, and possess the property and places belonging to the Government, and collect the duties and imposts. This he would do, however, only so far as it was necessary to protect and defend the Federal authority, not merely against domestic violence, but more especially against foreign influence or aggression. He would not invade, subjugate, menace, or harass local communities. All boundaries of the nation, sea-board or inland, he must, of necessity, hold and guard; he must occupy and control every custom-house or an efficient equivalent for it. The favorite theory was that duties might be collected on ship-board in insurgent ports, and thus avoid the friction of customs officers with the local populace. On inland boundaries other substitutes might perhaps be devised. So, also, he explains in his reply, the military posts he had intended to "hold, occupy, and possess" were this cordon of forts on the exterior boundary, all of which were still in Union hands when he was inaugurated. The interior places seized under Buchanan's administration he would not immediately grasp at with the military hand; he would forego the exercise of Federal offices in disaffected districts in the interior; as a means of reassurance and reconciliation he would even send the malcontents their regular mails, if they would permit him. All this not as a surrender of a single Federal right, but to avoid violence, bloodshed, irritation; to create a feeling of safety; to induce calm reflection; to maintain peace; to restore fraternal sympathies and affections. "You can have no conflict," he had told them, "without being yourselves the aggressors."

But, in immediate connection with the tender of this benign policy, he had also warned them that it would be modified or changed if "current events and experience shall show a modification or change to be proper." That experience had now come. The rebels had rejected the tendered immunity, spurned the proffered peace, become the aggressors, opened the conflict in deliberate malice. He therefore modified his plan. He would repel force by force. He would withdraw the mails. He would recapture Sumter, taken since his inauguration, and, if he could, such other forts and places taken under his predecessor as were essential to safety. Thus much was necessary for protection and for precaution. Less he could not do and fulfill his oath of office. Once more he told them that while he now felt himself by their act compelled to close and bolt the strong doors of Federal authority, he would yet refrain from even the appearance of punishment. Though he gave them to understand that he might attack the rebel batteries on Morris Island, or recapture Pensacola Navy Yard, or build a fort on Arlington Heights to protect Washington, yet he would "not attempt to collect the duties and imposts by any armed invasion of any part of the country."

His reply to the committee must be received with the same qualification which he attached to his inaugural. He still reserved the right to use his best discretion in every exigency, and to change his acts under the inspiration of current events and experiences. The events of the day were his beacons; the necessities of the hour formed his chart. Throughout the tedious four-years' war he pretended to no prophecy and recorded no predictions. When souls of little faith and great fear came to him with pertinacious questioning, he might possibly tell them what he had done; he never told them what he intended to do. "My policy is to have no policy," was his pithy axiom oftentimes repeated; whence many illogically and most mistakenly inferred him to be without plans or expedients. His promise to the Virginia committee must therefore be regarded as binding under the conditions of that day, namely: seven cotton-States leagued in rebellion; actual war begun; seven thousand rebels in arms at Charleston; Sumter under fire with prospect of capitulation; Virginia, North Carolina, Arkansas, and other border States yet in the Union under loud protestations of loyalty and unceasing deprecation of civil war. Lincoln's reservation was well considered. One week from that day these conditions were transformed almost beyond comparison, compelling him to a widely different line of action. On the day they received their answer, the Virginia committee had an engagement to dine with Secretary Seward; but in view of the Sumter telegrams, they excused themselves and hurried back to Richmond.

By the next morning (Sunday, April 14) the news of the close of the bombardment and capitulation of Sumter was in Washington. In the forenoon, at the time Anderson and his garrison were evacuating the fort, Lincoln and his Cabinet, together with sundry military officers, were at the Executive Mansion, giving final shape to the details of the action the

Government had decided to take. A proclamation, drafted by himself, copied on the spot by his secretary, was concurred in by his Cabinet, signed, and sent to the State Department to be sealed, filed, and copied for publication in the next morning's newspapers. The document bears date April 15 (Monday), but was made and completed on Sunday. This proclamation, by authority of the Act of 1795, called into service seventy-five thousand militia for three months, and convened Congress in extra session on the coming 4th of July. It commanded treasonable combinations to disperse within twenty days, and announced that the first object of this military force was to repossess the forts and places seized from the Union.* This limit of time was made obligatory by the terms of the second section of the Act of 1795, under which the call was issued. It was necessary to convene Congress, and the law only authorized the use of the militia "until the expiration of thirty days after the commencement of the then next session of Congress."

In view of the subsequent gigantic expansion of the civil war, eleventh-hour critics continue to insist that a larger force should have been called at once. They forget that this was nearly five times the then existing regular army, and that in the Mexican war Scott had marched from Vera Cruz to the capital with twenty-five thousand men. They forget that only very limited quantities of arms, equipments, and supplies were in the Northern arsenals. They forget that the treasury was bankrupt, and that an insignificant eight million loan had not two weeks before been discounted nearly six per cent. by the New York bankers, some bids ranging as low as eighty-five.† They forget that the shameful events of the past four months had elicited scarcely a single spark of war feeling; that the great American public had suffered the siege of Sumter and firing on the *Star of the West* with a dangerous indifference. They forget the doubt and dismay, the panic of commerce, the division of counsels, the attacks from within, the sneers from without — that faith seemed gone and patriotism dead. Twenty-four hours later all this was measurably changed. But it was under such circumstances that Lincoln issued his call for seventy-five thousand men to serve three months. Even that number appeared a hazardous experiment — an immense army, a startling expenditure. As matters stood, it seemed enough to cope with the then visible forces of the rebellion; the President had no means of estimating the yet undeveloped military power of the insurgent States. The ordinary *indicia* to accurate administration were wanting. To a certain degree the Government was compelled to sail in a fog. But it is precisely in such emergencies that men like Lincoln are the inestimable possession of free nations. Hopeful, moderate, steadfast, he never for an instant forgot that he was the pilot, not the ship. He remembered what he had said in the inaugural:

> If the Almighty Ruler of nations with his eternal truth and justice be on your side of the North, or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal of the American people.

He felt quite as confident that this popular justice would ultimately translate itself into armed might. But, holding this faith, he was not carried away by any too sanguine impulses. While discussing the proclamation, some of his advisers made a disparaging contrast of Southern enterprise and endurance with the Northern. This indulgent self-deception he checked at the very outset.

> We must not forget [he said] that the people of the seceded States, like those of the loyal ones, are American citizens, with essentially the same characteristics and powers. Exceptional advantages on one side are counterbalanced by exceptional advantages on the other. We must make up our minds that man for man the soldier from the South will be a match for the soldier from the North and *vice versâ*. ‡

The action of the Government brought in its train countless new duties and details. Both at the departments and the Executive Mansion the Sunday was one of labor, not of rest — no end of plans to be discussed, messages to be sent, orders to be signed. The President's room was filled all day as by a general reception. Already the patriotic echoes were coming in from an excited country. Governor Ramsey of Minnesota telegraphed that he could send a thousand men, and other localities made similar tenders. Senators and representatives yet in Washington felt authorized to pledge the support of their States by voice and arms. Of all such words of cheer, it is safe to say none were personally so welcome and significant as the unreserved encouragement and adhesion of Senator Douglas of Illinois.

* Lincoln, proclamation April 15, 1861.

† The following letter to President Lincoln, dated Treasury Department, April 2, 1861, is from unpublished MS.:

> My Dear Sir: The bids for the $8,000,000 loan exceed 33,000,000 — the average advance from Mr. Dix's loan is from 3 to 4 per cent. The highest bid — for only $1000 though — is par, and near $3,000,000 at 94; and I hardly think of taking any at lower rates. I am offered ⅛ per cent. premium on $2,000,000 treasury notes. All this shows decided improvement in finances and will gratify you.
>
> Yours, most truly, S. P. Chase.

‡ J. G. N., personal recollection.

Having, through a friend, signified his desire for an interview, Douglas went to the Executive Mansion between 7 and 8 o'clock on this same Sunday evening, April 14, and being privately received by the President, these two remarkable men sat in confidential interview, without a witness, nearly two hours. What a retrospect their singular careers must have forced into memory, if not into words, in this eventful meeting! — their contemporary beginnings in Illinois; the flat-boatman in Sangamon, the auctioneer's clerk in Scott county; their first meetings in country lawsuits; their encounters in the legislature; their greetings in society; their intellectual wrestlings on the stump; their emulation in local politics; their simultaneous leadership of opposing parties in the State; their champion contest for the Senate, ending in Douglas's triumph; their rival nominations for the Presidency, resulting in Lincoln's success. This was not the end. Both men were in the conscious prime of intellect; both believed themselves still in the undiminished vigor of physical manhood. Recognizing his defeat, Douglas was by no means conquered. If Lincoln was in the White House, he was yet in the Senate. Already in a Senate debate he had opened his trenches to undermine and wreck Lincoln's administration. Already he had set his subtle sophistry to demonstrate that the revenue laws gave the Executive no authority for coercion. His usual skill in debate, however, failed him on this occasion; and allowing himself to be carried along in a singularly weak and illogical argument, intended to force Mr. Lincoln and the Republican party into compromises to satisfy the border States and through their influence reclaim the cotton-States, he committed the serious blunder of declaring it unlawful and unwise to enforce the revenue laws in the insurrectionary ports or to recapture or hold their harbor defenses, except at Key West and Tortugas, which alone, he seemed to think, were "essentially national." He strongly deprecated the "reduction" and "subjugation" of the seceded States; and, declaring himself in favor of peace, said, with emphasis: "War is disunion. War is final, eternal separation." Perhaps intending merely to emphasize his attitude of mediation, he carelessly permitted himself to make a plea to tolerate accomplished secession.* All this was very far short of the language of his letter of acceptance, that "the laws must be administered, the constituted authorities upheld, and all unlawful resistance to these things must be put down with firmness, impartiality, and fidelity." The adjournment of the Senate had terminated the debate without issue. Douglas was still lingering in Washington, when suddenly the whole country was holding its breath at the report of the outrage in Charleston harbor.

Wedded too closely to the acts of the demagogue, Douglas nevertheless possessed the vision and power of the statesman in a high degree. Past failures had come to him not so much through lack of ability, as through adherence to vicious methods. Estimating success above principle, he had adopted reckless expedients, and leagued himself with questionable and dangerous combinations; and his speech of the 15th of March was only a new instance of his readiness to risk his consistency and his fame for a plausible but delusive trick in party strategy. Until this time, throughout all his minor heresies, he had kept himself true and unspotted on one high point of political doctrine. The Union must be preserved, the laws enforced. In the face of temptation and defeat, in New Orleans and in Norfolk as boldly as in New York, he had declared that if Lincoln were elected he must be inaugurated and obeyed. This was popular sovereignty, genuine and undefiled. It was against this principle that the challenge had been hurled at Sumter, and the incident furnished Douglas the opportunity to retrieve the serious mistake of his recent Senate speech. That assault could no longer be disguised as lawful complaint or constitutional redress — it was the spring of a wild beast at the throat of the nation. It changed the issue from coercion to anarchy.† No single act of Douglas's life so strongly marks his gift of leadership as that he now saw and accepted the new issue, and without a moment's hesitation came forward and placed himself beside Lincoln in defense of the Government — the first as well as the greatest "war Democrat." An army with banners, not a marshal with a writ, was now the constitutional remedy. In the face of unprovoked military assault Douglas waived all personal rivalry and party issues, and assured Lincoln, without questions or conditions, of his help to maintain the Union.

With frankness and generosity as Lincoln's ruling instincts, his long-continued political contests with Douglas had always been kept within the bounds of personal and social courtesy, if we except their Illinois joint debates, where the heat of discussion had once or twice carried them to the verge of a personal quarrel. Those passages, however, were long since

* Douglas, Senate speech, March 15, 1861. "Globe."

† The very existence of the people in this great valley depends upon maintaining inviolate and forever that great right secured by the Constitution, of freedom of trade, of transit, and of commerce, from the center of the continent to the ocean that surrounds it. . . .

forgotten by both. The present emergency was too grave for party feeling. Lincoln knew Douglas too well to underrate him. It was the President's method to apply the representative principle to problems of statesmanship. It did not need an instant's reflection to remember that next in value to the rank and file of the Republican party was the voluntary alliance of a great leader whom more than a million voters in the North had so lately followed unflinchingly to inevitable political defeat, and with whom that leader now offered to reënforce the defenders of the Union. If Lincoln had ever doubted the wisdom of his Sumter policy, which had kept open the road to this alliance, it was here vindicated. On the following morning, side by side with Lincoln's proclamation, the whole country read the telegraphic announcement of the interview and the authorized declaration that while Douglas was yet "unalterably opposed to the Administration on all its political issues, he was prepared to sustain the President in the exercise of all his constitutional functions to preserve the Union, and maintain the Government, and defend the Federal capital." * If there had been any possible uncertainty in the premises before, this was sufficient to make the whole North a unit in demanding the suppression of the rebellion.

The proposition now is to separate these United States into little petty confederacies. First, divide them into two; and then, when either party gets beaten at the next election, subdivide again; then, whenever one gets beaten again, another subdivision; and then, when you beat on governor's election, the discomfited will rebel again, and so it will go on. And if this new system of resistance by the sword and bayonet to the results of the ballot-box shall prevail here in this country of ours, the history of the United States is already written in the history of Mexico. . . . It is not a question of union or disunion. It is a question of order; of the stability of the Government; of the peace of communities. The whole social system is threatened with destruction and with disruption. Douglas, speech at Bellair, April 22, 1861.

* Press telegram, April 15, 1861.

AN EASTERN LEGEND.

AT his Beloved's door he knocked, unheeding
The mocking echoes drifting idly by:
Then called a voice — the while his glad heart bounded —
"Ah, who is there?" He answered, "It is I."
"Think not these walls," the sweet, clear voice resounded,
"These palace walls will me and thee contain."
The shining door stood barred! His fervent pleading
Was spent in vain.

In solitude, where desert sands are gleaming,
Burned on his changeless love through patient years;
Once more he comes, and knocks with trembling fingers;
Once more his soul a thrilling music hears.
Once more that voice across the silence lingers —
"Ah, who is there?" He answers, "*It is thou!*"
The door flies back! The sudden splendor, streaming,
Enfolds him now!

Charlotte W. Thurston.

A FAR CRY TO HEAVEN.

WHAT! dost thou pray that the outgone tide be rolled back on the strand,
The flame be rekindled that mounted away from the smoldering brand,
The past-summer harvest flow golden through stubble-lands naked and sear,
The winter-gray woods up-gather and quicken the leaves of last year? —
Thy prayers are as clouds in a drouth; regardless, unfruitful, they roll;
For this, that thou prayest vain things, 't is a far cry to Heaven, my soul,—
Oh, a far cry to Heaven!

Thou dreamest the word shall return, shot arrow-like into the air,
The wound in the breast where it lodged be balmed and closed for thy prayer,
The ear of the dead be unsealed till thou whisper a boon once denied,
Thy white hour of life be restored, that passed thee unprized, undescried! —
For this, that thou prayest fond things, thy prayers shall fall wide of the goal;
God bloweth them back with a breath, 't is a far cry to Heaven, my soul,—
Oh, a far cry to Heaven!

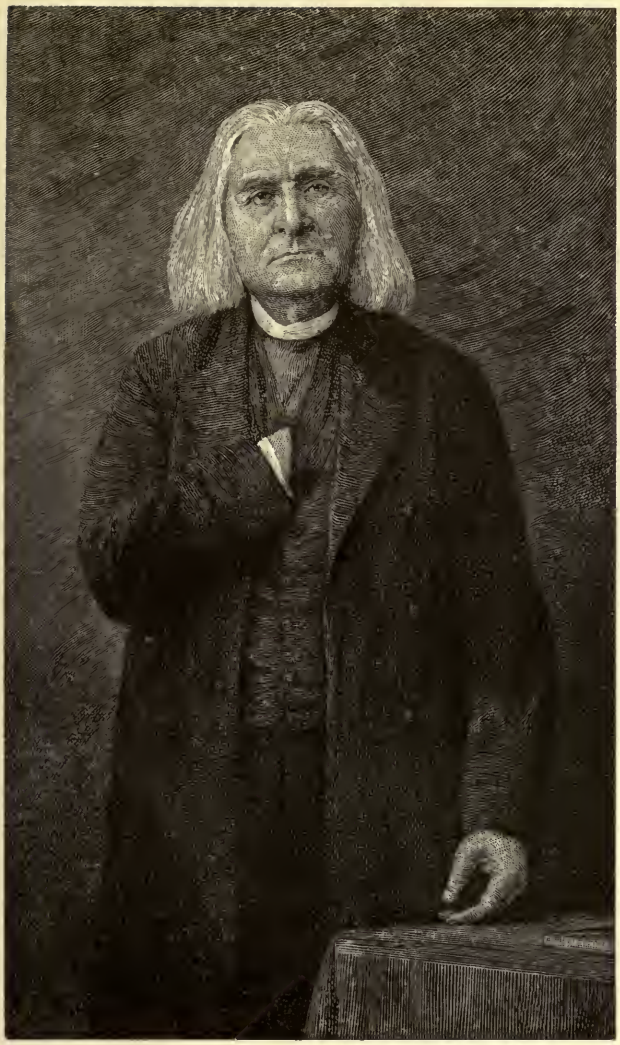
And cravest thou fondly the quivering sands shall be firm to thy feet,
The brackish pool of the waste to thy lips be made wholesome and sweet?
And cravest thou subtly the bane thou desirest be wrought to thy good,
As forth from a poisonous flower a bee conveyeth safe food? —
For this, that thou prayest ill things, thy prayers are an anger-rent scroll;
The chamber of audit is closed,—'t is a far cry to Heaven, my soul,—
Oh, a far cry to Heaven!

Edith M. Thomas.

SOME PUPILS OF LISZT.

ONE sultry noonday in July, 1885, a small group of musical celebrities from Berlin stood hatless — having converted their head-covering into temporary fans — in the shade of a low, uneven row of ancient houses in the city of Weimar and expectantly watched the nearest turn in the street. Just as the heat was pronounced insupportable two well-known figures sauntered arm-in-arm around the corner — one, the venerable form of Franz Liszt, his flowing white locks surmounted by an old-fashioned tile hat, his shirt-collar thrown open revealing a throat which rivaled in color the high flush of his visage; and the other, Eugene d'Albert, a short youth with a round face and small black eyes, whose heavy shock of dark brown hair fell about his neck *à la* Liszt and was topped by an artist's wide-brimmed slouch hat, the crown of which just brushed the master's shoulder. It was not the odd contrasting couple which so forcibly impressed all beholders alike. It was the two great men of genius walking side by side — a tottering old man with one foot already in the grave, and his pupil, the younger by half a century and in the very spring-time of life: one, the greatest piano virtuoso of any time, behind whom lay an unprecedentedly brilliant career of more than three-score years; the other, though scarcely more than a lad, the most famous musical artist of his generation, with a future of unlimited possibilities just opening up for him. Little D'Albert had only three years previously severed his leading strings, and now with half Europe at his feet, the central figure in the musical world that his genius had conquered, he had returned to the guide and counselor of his student days. These two exchanged greetings with the gentlemen who had come, with D'Albert, on a twenty-four-hours' visit to the city, and then they crossed the stony way in a body to the cooler shade of Chemnitiuss' restaurant garden to partake of a dinner in Liszt's honor.

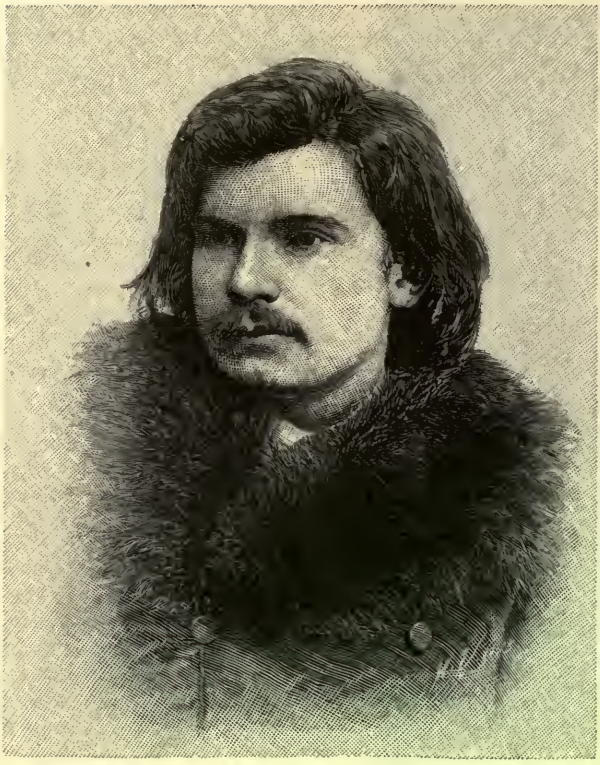
This noteworthy meeting of master and pupil always recurs to my mind when asked, "Do any of Liszt's later pupils give promise of greatness, or at least of proving themselves eminently worthy such a teacher?" If in reply I begin with Eugene d'Albert, it is because he was the first of the group to come prominently before the public; and justice to others compels me to add in the same sentence Arthur Friedheim, Alfred Reisenauer, Alexander Siloti, and Adèle aus der Ohe. It



FRANZ LISZT.

is easy to begin but more difficult to end the list, for I might add those fine artists who came already formed, later than the first five, to the master: — Moritz Rosenthal, Conrad Ansorge, Bernhard Stavenhagen,— but the line must be drawn somewhere, though history will extend it. I venture the assertion that Liszt never at any time numbered among his pupils a more notable coterie of promising talent than during the last six or seven years of his life. The youth of this day live in a time when greater technical and artistic achievements aré required to arouse a public grown critically exacting after a quarter of a century of the best music the world has ever enjoyed. Under Liszt's supervision these were always developed to the utmost. The history of modern piano-forte playing demonstrates the power of his influence in the shaping of the great virtuosos, and this last group of his training must be accorded a place in their foremost ranks.

Eugene d'Albert is more widely known than his youthful contemporaries. A lad of exceptional gifts and attainments, he made his Berlin début in 1882, at an age favorable to success. The masses were dazzled by such virtuosity in a youth of nineteen summers. The critics marveled at his power and the maturity of his intellect, but praised conditionally the "wonder child." After his second season he was no longer a mere "wonder child." He had earned his right to be classed with the greatest virtuosos and musicians of the day. His compositions for orchestra, and more especially for piano, are adding to his renown. Since Tausig — to whom the young artist bears a most striking facial resemblance — perhaps no pianist has awakened such universal interest and enthusiasm as D'Albert. Germany claims him, and indeed she may, for it is a case of mutual adoption, though he is of English parentage and spent his early childhood in England. His father was the widely known and recently deceased composer of dance-music, Charles d'Albert. In an open letter, a few years since, the son denounced English music and his English training, attributing his success to German music and instruction. He received the latter from Hans Richter and Franz Liszt, with the second of whom he studied much the longer term. The master knew the boy was worthy of it and bestowed extreme care upon his education. About the time he reached his majority he wed at Weimar an actress of the Grand Ducal Theater, his senior by several years. Now in affluent circumstances, he passes his summers at Eisenach with his wife and infant son in his own villa, which commands a charming view of the Wartburg. As an artist D'Albert is versatile and eminently well rounded. Technical difficulties do not exist for him. He has a small hand, with a touch of exquisite delicacy and refinement,



EUGENE D'ALBERT.

which is also equally capable of immense power. The warmth and abandon of his style invariably affect his auditors with intense emotions. His interpretations of Beethoven, Chopin, Schumann, and Liszt claim equal merit. One day in speaking of his own "D minor Concerto," Rubinstein averred D'Albert's performance of it the most satisfactory he had ever heard. The very name D'Albert calls to life bits of Chopin's lovely "Berceuse" and Beethoven's "Sonata Appassionata," which received ideal treatment under his fingers. The young artist divided with Arthur Friedheim the honor of having given one of the greatest two-piano performances with orchestra heard in Berlin during that musically prolific and memorable season of 1884–85. The former played Liszt's "E flat major Concerto" and the latter the same composer's "A major Concerto."

Friedheim! What delightful musical memories and happy recollections of the rare days spent together in Weimar that name excites! D'Albert left there before my time, and though I met him on his flying visits to Weimar, I generally think of him as I first saw him, seated at a piano on the concert platform.

One late afternoon in August, 1885, Liszt stood before a wide open window of his salon on the second floor of the court gardener's residence in Weimar, and his thoughtful gaze wandered out beyond the long row of hot-houses and narrow beds of rare shrubs to the rich leafy growth which shaded the glorious park inclosing this modest home. He was in a serene state of mind after an hour at whist in which he had won the rubber, and now, while his young companions were putting the card-table and chairs back into their accustomed places about the room, he stood silent and alone. Any one of us would have given more than "a penny for his thoughts," a fact which he probably divined, for, without turning his head, he said: "Ansorge did indeed play beautifully!" referring to the young pianist's performance of his "A major Concerto" that afternoon in the class lesson.

"And the accompaniment was magnificently done too!" added one of the small party.

"Ah!" exclaimed the master, with an animated look and gesture which implied, "that goes without saying." "Friedheim," said he, and lifted his hand with a proud sweep to indicate his estimation of his favorite pupil, who had supplied the orchestral part on a second piano. After Friedheim's triumphal début in Leipsic in the spring of 1884, Liszt was so much gratified that he expressed with unwonted warmth his belief that the young man would yet become the greatest piano virtuoso of the age. He was then just twenty-four years old, and his career since that event points towards the fulfillment of the prophecy.

Arthur Friedheim is the most individual performer I have ever heard. A very few executants equal him in mere finger dexterity, but he surpasses them all in his gigantic strength at the instrument and in marvelous clearness and brilliancy. At times he plays with the unbridled impetuosity of a cyclone; and even while apparently dealing the piano mighty blows, which from other hands would sound forced and discordant, they never cease to be melodious. This musical, penetrating quality of touch is the chief charm of Friedheim's playing. He makes the piano sing, but its voice is full and sonorous. If he play a pianissimo passage the effect is as clear and sweet as a perfectly attuned silver bell, and his graduated increase or diminu-

tion of tone is the acme of artistic finish. No living pianist performs Liszt's compositions so well as Friedheim. This fact was unanimously mentioned by the critics upon his first appearance in Berlin in a "Liszt Concert," in conjunction with the fear that he would not succeed as an interpreter of Beethoven and Chopin; which, however, the new virtuoso has since proved groundless. Friedheim is one of the most enjoyable and inspiriting of the great pianists. His playing of Liszt's "Second Rhapsody" produces an electric shock; and once heard from him "La Campanella" remains in the memory an ineffaceable tone poem. To me he has made likewise indelible Chopin's lovely "D flat major Prelude."

Friedheim is of medium height and weight; has regular, clear-cut features, dark brown eyes, and hair pushed straight back from a high, broad forehead, and falling over his coat-collar artist fashion. In his street-dress, with a bronze-velvet jacket, great soft felt hat, and a gold medallion portrait of Liszt worn as a scarf-pin, he is the typical musician. His resemblance to the early pictures of Liszt is as marked as that of D'Albert to Tausig. Friedheim was born and bred in St. Petersburg, though his parents are German. I know nothing of his early instructors, but it is sufficient to say that he was at least nine years with Liszt. Fortune favored him with a relative of unusual mental power who has made his advancement her life-work. To these zealous mothers of musicians the world is indebted for some of the greatest artistic achievements of every time and period. There are many celebrated instances where application is almost entirely lacking or fluctuating in the child of genius, and the mother supplied the deficiency of character until the artist was fully developed, and steadiness of purpose had become routine with him. One evening I was sitting with Friedheim and his mother in one of those charming restaurant gardens which abound in Weimar when we were joined by two of the Lisztianer, convivial spirits who led a happy-go-lucky existence. "Come, Arthur," said one, "we will go to the 'Armbrust' for a few minutes — music there to-night. Will be right back, Frau Friedheim." "No," replied the mother, pleasantly, "Arthur remains with me this evening." "But, mother, we will be gone only a few minutes, and I have already practiced seven hours to-day," entreated the son. "Yes, dear child, and you must practice seven more to-morrow. I think you would better remain with me," responded his parent. Friedheim good-naturedly assented to his mother's speech, for the nocturnal merry-makings of a certain clique of divers artists at the "Hotel zum Elephanten" were too well known to risk denial.

In some way the master was constantly made aware of the doings of the Lisztianer and as regularly divulged the fact in a manner befitting the deed. It was generally in class too, which made it none too easy for the unlucky individual. However, he had a humorous solution for everything. In pursuance of a promise, Liszt was compelled one morning to accompany two of us several blocks from home. He heard that we had

ARTHUR FRIEDHEIM.

ordered a carriage, and, without our knowledge, sent the coachman word not to come, declaring that he could walk and the young gentlemen should not spend their money for him. At the appointed hour we two reached the court gardens in a sprinkling rain, and, being informed of the official decision, immediately started a servant for a covered vehicle which was standing at the door when Liszt came down. He stepped into the carriage without asking an explanation, but on our way down the street he pointed to the prison and laughed significantly as he observed that it frequently became "an asylum for spendthrifts." Liszt lived within his income, and well too, though it did not permit the gratification of the same luxurious tastes that characterized his residence at the Altenburg many years ago. He deeply deplored extravagance in others. Liszt cited as a warning to us a dear friend of his, a German poet, who had spent his fortune in giving costly dinners, and referred to the poet's former opulence as a time when he was in "dinner

circumstances." He said he would like to be in "dinner circumstances" himself.

During the eleven years that Alfred Reisenauer passed with Liszt he was accounted by his fellow-students the greatest musical genius of his time. He was more thoroughly grounded in the precepts and more completely imbued with the traditions of the great master than any pupil he ever had. When I went to Weimar in 1884 this was a common saying among the Lisztianer if any one was lauded for fine work: "Oh, yes, it was well played, but Reisenauer would have done it better!" As a sight-reader, he was supreme. I have seen him take a complicated orchestral score in manuscript and play it off at the first reading with apparently the same facility that he would

ALEXANDER SILOTI.

have done the printed piano arrangement. Unfortunately for himself and humanity in general, that admirable managerial ability which had opened up careers for D'Albert, Friedheim, and Siloti has not been his heritage. As he and the first-named virtuoso are about the same age, youth is in his favor, and the world may yet have an opportunity to judge of his phenomenal talent and artistic superiority. Reisenauer is a native of Königsberg, where he studied several years with Louis Köhler, now deceased, whom he considered the first teacher of piano technique in Europe. At dusk one day in October, 1884, Liszt was still engaged with his pupils at the tri-weekly lesson. "Now," said he, "we will have one more piece and then stop. What shall it be?" He raised his eye-glasses to glance at the music placed on the table by those who desired to play, and remarked as he gathered up a composition: "Oh, yes! Here, Reisenauer, you shall play this for us!" With that he settled himself comfortably on a sofa at the opposite end of the room, leaned back, and closed his eyes as if anticipating enjoyment. The crowd about the piano dispersed and found places along the wall. The young artist seated himself before the instrument and by the last gleams of fading light was barely able to decipher Liszt's impressive "Funérailles," one of the "Harmonies poétiques et religieuses." The character of the piece was suited both to the mood of the pianist and the dying day. As the music proceeded, the hush that had stolen over the assembly seemed to intensify with the twilight. By the very perfection of his art the performer made his auditors oblivious to his presence. Consciousness of the composer's meaning only remained. Night had come on, and the twinkling stars were just beginning to show through the great windows against a darkening sky, as, with bated breath, we listened to the final notes die away under Reisenauer's magic touch. Who is not loath to break the silence following a like inspired performance of a splendid artist? The master was the first to speak, but his voice was husky with emotion as he said, "I thank you, Reisenauer!" Adieus were quietly said, and we all slipped out of the room, still under the influence of the wonderful music. What fond remembrances and echoes of divine harmonies cling to that eternally desolated home in the Grand Ducal Gardens at Weimar! Alfred Reisenauer is one of the greatest artists identified with this period. Will he bury himself in the past, or rise to a sense of the duty that his genius imposes?

Early in the eighties there came to Liszt an unusually tall, overgrown stripling with hands and feet that seemed to belong to a later period. The ensuing years transformed the lad into a handsome, well-proportioned man, with winning manners and a graceful bearing. His frank, open countenance mirrored the upright, generous nature of a true gentleman, and with young and old alike he became a prime favorite. This was the Russian, Alexander Siloti, a former student at the Imperial Conservatory at Moscow under Nicholas Rubinstein. Liszt found in him a pupil of extraordinary musical gifts and perseverance, and a companion fitted by training and instinct to adorn the first society of Europe. His was a fine, well-balanced nature, in which even great musical talent did not outweigh the social qualifications. His courteous treatment and thoughtful attentions won the undisputed good-will of his colleagues. "Silotissimus," as Liszt sportively called him, richly repaid with strong partisanship the debt

of gratitude due his teacher. He and Friedheim undertook to win the favor of the German musicians for Liszt's greater orchestral works. As a preliminary thereto they gave in Weimar a performance on two pianos, entirely from memory, of his Dante and Faust Symphonic Poems. Later, they repeated the same at the old Gewandhaus in Leipsic. In response to their efforts some staunch adherents of Liszt organized in the winter of 1885–86 the now large and powerful Liszt Society, with headquarters at Leipsic and with the protecting name of Grand Duke Carl Alexander of Saxe-Weimar. The object of the union is to produce in several concerts each winter season not only the less known orchestral compositions of Liszt, but also "the neglected or totally unknown creations of other writers, modern and classic." This gives the society a more liberal tone, and is in direct emulation of the practices and teachings of Liszt himself. The latter was, naturally, unspeakably gratified with the formation of this great musical body bearing his name. Its existence brightened the last few months of his life, and its success was the object of his dearest hope and solicitude.

Siloti is not only a great virtuoso; he is a thorough artist and musician as well. He has a large, beautiful, sympathetic tone, with great breadth and nobility of style. At his Berlin début in 1884 he made a splendid impression upon public and press. He was then just nineteen years of age. His performance of Scarlatti's "E minor Pastorale" was one of the most exquisite bits of tone-production conceivable. In contrast, he gave Chopin's spirited "A major Polonaise" with a reckless dash and phenomenal strength in which only Rubinstein and Friedheim can compete. His interpretation of Liszt's "Pester Carneval" is the climax of bravura playing. Personally, he was dear to the master and almost like a son.

At a large musicale in Berlin one evening in February, 1885, I first met Adèle aus der Ohe. Upon reminding her that I had made her acquaintance in America several years previously, she exclaimed in surprise: "How is that possible? I have never been there."

"Through Miss Fay's book," I replied.

"Ah!" she said, and smiled. "Then you made my acquaintance at an early age. I hope though to go to America some day." That wish was to be fulfilled earlier than she then thought. Unheralded and comparatively unknown Fräulein Aus der Ohe landed in New York in October, 1886. Her brilliant success in the metropolis and the principal cities of the Union is too recent to need recapitulation. Aus der Ohe is the name of a very old and noble German family, dating from the eleventh or twelfth century, when various prefixes—

ALFRED REISENAUER.

i.e., von, au, zu, aus, etc.—denoted high birth. Many families afterward altered the original form to the more common von; but the Ohes have retained the ancient aus before their patronymic. The pianiste is a daughter of the late Professor Aus der Ohe, of the Royal Artillery and Engineers' School at Berlin, but formerly of Hanover, where she was born and passed the first five or six years of her life. When three and a half years old she first gave evidence of her remarkable talent. An elder sister was strumming Arditi's "Il bacio" one day in the nursery where the children were at play. When she had finished, the tiny Adèle, crying, "Ich! Ich!" begged to be placed on the stool, and to their astonishment repeated the entire waltz, giving the correct bass with her left hand. "Mamma! Papa!" cried the children in chorus as they threw open the door: "Come! Come and hear Adèlchen!" There was great rejoicing that day in the family Ohe. The parents themselves began at once to instruct her in piano-playing. In her fifth year she became acquainted with the talented musical couple Bronsart, who took her to Hans von Bülow for advice. "Let me first look in her eyes," he said; and continued, "Yes, there really is music there!" He proposed that she be placed under his instruction at Munich where he was then residing, but the fond parents could not consent to a separation from so young a child. Adèle was seven years old when Professor Aus der Ohe moved with his family to Berlin. Here she became a pupil of Franz Kullak, and several months later of his father, the celebrated Dr. Theodore Kullak,

ADÈLE AUS DER OHE.

with whom she remained until her thirteenth year. At eight years of age she made her first public appearance. Two years later she gave concerts with orchestra at Berlin and Hanover in which she played Beethoven's "B flat major Concerto" with the Moscheles "Cadenza." Shortly after leaving Kullak she came to Liszt at Weimar and, barring occasional interruptions, benefited by seven years of his instruction. Several long concert tours — the first when in her fourteenth year — were made during this period in Germany. Previous to her American début she had never played outside her native land. At her last public appearance there she performed Taubert's "Piano Concerto" in the four hundredth Jubilee Soirée of the Royal Orchestra, with that superb body of musicians, at the Berlin Royal Opera House. In the salons of the German capital Adèle aus der Ohe is as great a social as musical favorite. She enjoyed the friendship and chaperonage of the late lamented Princess Alma of Carolath-Beuthin, a noble woman, distinguished for her charities and as a patroness of the fine arts. She is very popular at the Imperial Palace, where she has often played privately and in state concerts. Adèle aus der Ohe is not merely a gifted musical artiste, but a young woman of varied accomplishments. Besides her mother-tongue, she speaks and

writes French, Italian, and English; is a student in the arts and sciences; writes poetry, and is a composer of music — under an assumed name. She has been rightly taught to believe in the necessity of a broad and liberal education for all who aspire above mediocrity in her chosen profession. After hearing her play and meeting her almost daily in Weimar, I comprehended Liszt's deferential bearing towards her which had struck me the first time I saw her at his lessons. As he honored the true gentlewoman, just so did he admire her intellectual and artistic gifts. Although Liszt was ever willing and ready to aid young pianists from the wealth of his knowledge, he was exceedingly discriminating and gave in plenty only to those who evinced uncommon aptitude. The earnestness of his work with Adèle aus der Ohe was the most telling compliment he could pay the mental endowments of any pupil. She was by all odds the best among the ladies, and one of the most accomplished artists in his class. He habitually commented upon her improvisations introductory to a piano composition, and frequently bade her extricate some frightened player from the dangers of an impromptu prelude. At his especial request she compiled a volume of such preludes and modulations, which he desired her to dedicate to him. This Fräulein Aus der Ohe did — though it has not yet been published — and sent Liszt a copy of the same. It gave him much pleasure, as I can substantiate. In the lessons he frequently remarked her "intrepidity" and "fearless certainty" in playing; and in one of the last soirées musicâles that he gave, said in an aside, "She has a wonderful touch; it is like velvet!" Perhaps I heard him express himself more in approval of Adèle aus der Ohe's performances than of any others; for she had been absent from Weimar some time when she returned in 1885, and her splendid artistic development was a source of gratification to him. In his letters to her, Liszt varied the conventional form of address to "My honored colleague," "My dear virtuoso," etc. Her public life is so arduous that Fräulein Aus der Ohe finds little time for society. Her personal tastes are quiet and unassuming. Once I heard her retort rather warmly to a complimentary remark of a friend: "I have no time to be vain and conceited. My art is holy to me and requires my every effort. If there is anything that I dislike, it is an arrogant artist. He should be thankful to God that he has given him such a talent, and guard it sacredly." Such sentiments add dignity to the character of a great artiste like Adèle aus der Ohe.

Albert Morris Bagby.

COMING SHADOWS.

MY soul goes wandering in the wilderness
All the day long — nor through the hours of light
Can any foe my constant footing fright,
Although I fare alone and weaponless;

But when deep shadows fall, and lay their stress
Upon me, and ravening creatures glare in sight,
The panther Terror, leaping from the night,
The fiery-eyed, soft-pacing lioness,—

How guard the pilgrim then, and compass him,
And beat Abaddon from him, in the hour
When age o'ertakes him in the desert dim?

The torch of Poesy shall cast a shower
Of shielding radiance — and the monsters grim
Shall flee the spot protected by its power!

THE TORNADO.

THE DEATH.

THE Acadian stooped at once and with a quick splash launched his canoe. A minute later he was in it, gliding along and just within the edge of the forest where it swept around nearly at right angles to the direction in which the steamboat was coming. Thus he could watch the approaching steamer unseen, while every moment putting distance between himself and the lugger.

The strange visitor came on. How many men there were on her lower deck! Were they really negroes, or had they blackened their faces, as men sometimes do when they are going to hang a poor devil in the woods? On the upper deck are two others whose faces do not seem to be blackened. But a moment later they are the most fearful sight of all; for only too plainly does the fugitive see that they are the same two men who stood before the door-way of his hut six days before. And see how many canoes on the lower deck!

While the steamer is yet half a mile away from the hidden lugger, her lamps and fires and their attendant images in the water beneath glow softly in the fast deepening twilight, and the night comes swiftly down. The air is motionless. Across the silent waste an engine bell jangles; the puff of steam ceases; the one plashing paddle-wheel at the stern is still; the lights glide more and more slowly; with a great crash and rumble, that is answered by the echoing woods, the anchor-chain runs out its short measure, and the steamer stops.

Gently the pot-hunter's paddle dipped again, and the pirogue moved back towards the lugger. It may be that the flood was at last numbing his fear, as it had so soon done that of all the brute life around him: it was in his mind to do something calling for more courage than he had ever before commanded in his life, save on that one day in Carancro when, stung to madness by the taunts of a brave man and driven to the wall, he had grappled and slain his tormentor. He had the thought now to return and, under cover of the swamp's deep outer margin of shadow, silently lift into the canoe the bit of iron that anchored the lugger, and as noiselessly draw her miles away to another covert; or if the storm still held back, even at length to step the mast, spread the sail, and put the horizon between him and the steamer before daybreak. This he had now started to do, and would do, if only courage would hold on and the storm hold off.

For a time his canoe moved swiftly; but as he drew near the lugger his speed grew less and less, and eye and ear watched and hearkened with their intensest might. He could hear talking on the steamer. There was a dead calm. He had come to a spot just inside

the wood, abreast of the lugger. His canoe slowly turned and pointed towards her, and then stood still. He sat there with his paddle in the water, longing like a dumb brute; longing, and, without a motion, struggling for courage enough to move forward. It would not come. His heart jarred his frame with its beating. He could not stir.

As he looked out upon the sky a soft, faint tremor of light glimmered for a moment over it without disturbing a shadow below. The paddle stirred gently, and the canoe slowly drew back; the storm was coming to betray him with its lightnings. In the black forest's edge the pot-hunter lingered trembling. Oh for the nerve to take a brave man's chances! A little courage would have saved his life. He wiped the dew from his brow with his sleeve; every nerve had let go. Again there came across the water the very words of those who talked together on the steamer. They were saying that the felling of trees would begin in the morning; but they spoke in a tongue which Acadians of late years had learned to understand, though many hated it, but of which he had never known twenty words, and what he had known were now forgotten — the English tongue. Even without courage, to have known a little English would have made the difference between life and death. Another glimmer spread dimly across the sky, and a faint murmur of far-off thunder came to the ear. He turned the pirogue and fled.

Soon the stars are hidden. A light breeze seems rather to tremble and hang poised than to blow. The rolling clouds, the dark wilderness, and the watery waste shine out every moment in the wide gleam of lightnings still hidden by the wood, and are wrapped again in ever-thickening darkness over which thunders roll and jar and answer one another across the sky. Then, like a charge of ten thousand lancers, come the wind and the rain, their onset covered by all the artillery of heaven. The lightnings leap, hiss, and blaze; the thunders crack and roar; the rain lashes; the waters writhe; the wind smites and howls. For five, for ten, for twenty minutes — for an hour, for two hours — the sky and the flood are never for an instant wholly dark, or the thunder for one moment silent; but while the universal roar sinks and swells, and the wide, vibrant illumination shows all things in ghostly half-concealment, fresh floods of lightning every moment rend the dim curtain and leap forth; the glare of day falls upon the swaying wood, the reeling, bowing, tossing willows, the seething waters, the whirling rain, and in the midst the small form of the distressed steamer, her revolving paddle-wheels toiling behind to lighten the strain upon her anchor chains; then all are dim ghosts again, while a peal, as if the heavens were rent, rolls off around the sky, comes back in shocks and throbs, and sinks in a long roar that before it can die is swallowed up in the next flash and peal.

The deserted lugger is riding out the tornado. Whirled one moment this way and another that, now and again taking in water, her forest-shelter breaks the force of many a gust that would have destroyed her out in the open. But in the height of the storm her poor substitute for an anchor lets go its defective hold on the rushy bottom and drags, and the little vessel backs, backs, into the willows. She escapes such entanglement as would capsize her, and by and by, when the wind lulls for a moment and then comes with all its wrath from the opposite direction, she swings clear again and drags back nearly to her first mooring and lies there, swinging, tossing, and surviving still, — a den of snakes.

The tempest was still fierce, though abating, and the lightning still flashed, but less constantly, when at a point near the lugger the pirogue came out of the forest, laboring against the wind and half-filled with water. On the face of the storm-beaten man in it each gleam of the lightning showed the pallid confession of mortal terror. Where that frail shell had been, or how often it had cast its occupant out, no one can ever know. He was bareheaded and barefooted. One cannot swim in boots; without them, even one who has never dared learn how may hope to swim a little.

In the darkness he drew alongside the lugger, rose, balanced skillfully, seized his moment, and stepped safely across her gunwale. A slight lurch caused him to throw his arms out to regain his poise; the line by which he still held the canoe straightened out its length and slipped from his grasp. In an instant the pirogue was gone. A glimmer of lightning showed her driving off sidewise before the wind. But it revealed another sight also. It was dark again, black; but the outcast stood freezing with horror and fright, gazing just in advance of his feet and waiting for the next gleam. It came, brighter than the last; and scarcely a step before him he saw three great serpents moving towards the spot that gave him already such slender footing. He recoiled a step — another; but instantly as he made the second a cold, living form was under his foot, its folds flew round his ankle, and once! twice! it struck! With a frantic effort he spurned it from him; all in the same instant a blaze of lightning discovered the maimed form and black and red markings of a "bastard horn-snake," and with one piercing wail of despair,

that was drowned in the shriek of the wind and roar of the thunder, he fell.

A few hours later the winds were still, the stars were out, a sweet silence had fallen upon water and wood, and from her deck the watchmen on the steamer could see in the northeastern sky a broad, soft illumination and knew it was the lights of slumbering New Orleans, eighteen miles away.

By and by, farther to the east, another brightness began to grow and gather this light into its outstretched wings. In the nearest wood a soft twitter came from a single tiny bird. Another voice answered it. A different note came from a third quarter; there were three or four replies; the sky turned to blue and began to flush; a mocking-bird flew out of the woods on her earliest quest for family provision; a thrush began to sing; and in a moment more the whole forest was one choir.

What wonderful purity was in the fragrant air; what color was on the calm waters and in the deep sky; how beautiful, how gentle was Nature after her transport of passion! Shall we ever subdue her and make her always submissive and compliant? Who knows? Who knows what man may do with her when once he has got self, the universal self, under perfect mastery? See yonder huge bull-alligator swimming hitherward out of the swamp. Even as you point he turns again in alarm and is gone. Once he was man's terror, Leviathan. The very lions of Africa and the grizzlies of the Rockies, so they tell us, are no longer the bold enemies of man they once were. "Subdue the earth"—it is being done. Science and art, commerce and exploration, are but parts of religion. Help us, brothers all, with every possible discovery and invention to complete the conquest begun in that lost garden whenceman and woman first came forth, not for vengeance but for love, to bruise the serpent's head. But as yet, both within us and without us, what terrible revolts doth Nature make! what awful victories doth she have over us, and then turn and bless and serve us again!

As the sun was rising, one of the timber-cutters from the steamer stood up in his canoe about half a mile away, near the wood and beside some willows, and halloed and beckoned. And when those on the steamer hearkened he called again, bidding them tell "de boss" that he had found a canoe adrift, an anchored boat, and a white man in her, dead.

Tarbox and St. Pierre came in a skiff.

"Is he drowned?" asked Mr. Tarbox, while still some distance off.

"Been struck by lightnin', sim like," replied the negro who had found the body.—"Watch out, Mistoo Tah-baux!" he added, as the skiff drew near; "dat boat dess lousy wid snake'!"

Tarbox stood up in the skiff and looked sadly upon the dead face. "It 's our man," he said to St. Pierre.

"Dass what I say!" exclaimed the negro. "Yes, seh, so soon I see him I say, mos' sholy dass de same man what Mistoo Tah-baux lookin' faw to show him 'roun' 'bout de swamp! Yes, seh, not-instandin' I never see him befo'! No, seh.— Lawd! look yondeh! look dat big bahsta'd hawn-snake! He kyant git away: he 's hu't! Lawd! dass what kill dat man! Dat man trawmp on him in de dark and he strack him wid his hawny tail! Look at dem fo' li'l' spot' on de man' foot! Now, Mistoo Tah-baux! You been talk' 'bout dem ah bahsta'd hawn-snake not pizen! Well, mos' sholy dey bite ain't pizen; but if dat hawn on de een of his tail dess on'y tetch you, you' gone! Look at dat man! Kill' him so quick dey wa'n't time for de place to swell whah he was hit!" But Tarbox quietly pointed out to St. Pierre that the tiny wounds were made by the reptile's teeth.

"The coroner's verdict will probably be 'privation and exposure,'" said he, softly; "but it ought to be, 'killed by fright and the bite of a harmless snake.'"

On his murmured suggestion St. Pierre gave orders that, with one exception, every woodsman go to his tree-felling, and that the lugger and canoe, with the dead man lying untouched, be towed by skiff and a single pair of oars to the head of the canal for inquest and burial.

"I 'll go with him," said Tarbox softly to St. Pierre. "We owe him all we 're going to get out of these woods, and I owe him a great deal more." When a little later he was left for a moment without a hearer, he said to the prostrate form: "Poor fellow! And to think I had her message to you to come out of this swamp and begin to live the life of a live man!"

The rude funeral moved away, and soon the woods were ringing with the blow of axes and the shout and song of black timber-men as gayly as though there never had been or was to be a storm or a death.

XIX.

"TEARS AND SUCH THINGS."

MARGUERITE and her friend had no sooner taken their seats to drive home from the studio the day the sketch was made than Marguerite began a perfect prattle. Her eyes still shone exaltedly, and leaped and fell and darkened and brightened, with more than the swift variety of a fountain in the moonlight, while she kept trying in vain to meet her companion's looks with a moment's steady regard.

Claude was found! and she trembled with delight. But, alas! he had heard her passionate call and yet stood still; had looked down upon her in silence, and drawn again the curtain between them. She had thought until the last moment, "He will come; he will confront us as we pass out the door — will overtake us at the foot of the stairs — on the sidewalk — at the carriage window." But it had not been so; and now they were gone from the place; and here sat this friend, this gay, cynical knower of men's and women's ways, answering her chatter; in short, smiling responses, with a steady eye fixed on her, and reading, Marguerite believed, as plainly as if it were any of the sign-boards along the rattling street, the writing on her fluttering heart. And so, even while she trembled with strange delight, pain, shame, and alarm pleaded through her dancing glances, now by turns and now in confusion together, for mercy and concealment. But in fact, as this friend sat glancing upon the young face beside her with secret sympathy and admiration, it was only this wild fear of betrayal that at length betrayed.

Reaching the house, the street door was hardly shut behind them when Marguerite would have darted up to her chamber; but her friend caught her hands across the balustrade and said, with roguery in her own eyes:

"Marguerite — you sweet rowdy —"

"W'at?"

"Yes, *what.* There 's something up; what is it?"

The girl tried to put on surprise; but her eyes failed her again. She leaned on the rail and looked down, meanwhile trying softly to draw away upstairs; but her friend held on to one hand and murmured:

"Just one question, dearie; just one. I 'll not ask another; I 'll die first; you 'll probably find me *in articulo mortis* when you come downstairs. Just one question, lovie."

"*W'at* it is?"

"It 's nothing but this. I ask for information." The voice dropped to a whisper — "Is he as handsome as his portrait?"

The victim rallied all her poor powers of face and turned feebly upon the questioner:

"Po'trait? Who?" Her voice was low, and she glanced furtively at the nearest door. "I dawn't awnstan you." Her hand pulled softly for its freedom, and she turned to go, repeating, with averted face, "I dawn't awnstan you 't all."

"Well, never mind then, dear, if you don't understand," responded the tease, with mock tenderness. "But, *ma belle Créole* —"

"*Je suis Acadienne.*"

"You're an angel, faintly disguised. Only — look around here — only, Angelica, don't try to practice woman's humbug on a woman. At least, not on this old one. It does n't work. I 'll tell you whom I mean." She pulled, but Marguerite held off. "I mean," she hoarsely whispered,—"I mean the young inventor that engineer told us about. Remember?"

Marguerite, with her head bowed low, slowly dragged her hand free and moved with growing speed up the stairs, saying:

"I dawn't know what is dat. I dawn't awnstan you 't all." Her last words trembled as if nigh to tears. At the top of the stairs the searching murmur of her friend's voice came up, and she turned and looked back.

"Forgive me!" said the figure below. The girl stood a moment, sending down a reassuring smile.

"You young rogue!" murmured the lady, looking up with ravished eyes. Then she lifted herself on tiptoe, made a trumpet of both little hands, and whispered:

"Don't — worry! We 'll bring it out — all right!"

Whereat Marguerite blushed from temple to throat and vanished.

The same day word came from her mother of her return from Terrebonne, and she hastened to rejoin her in their snug rooms over the Women's Exchange. When she snatched Zoséphine into her arms and shed tears, the mother merely wiped and kissed them away, and asked no explanation.

The two were soon apart. For Marguerite hungered unceasingly for solitude. Only in solitude could she, or dared she, give herself up to the constant recapitulation of every minutest incident of the morning. And that was ample employment. They seemed the happenings of a month ago. She felt as if it were imperative to fix them in her memory now, or lose them in confusion and oblivion forever. Over them all again and again she went, sometimes quickening memory with half-spoken words, sometimes halting in long reverie at some intense juncture: now with tingling pleasure at the unveiling of the portrait, the painter's cautionary revelation of the personal presence above, or Claude's appearance at the window; now with burnings of self-abasement at the passionate but ineffectual beseechings of her violin; and always ending with her face in her hands, as though to hide her face even from herself for shame that with all her calling — her barefaced, as it seemed to her, her abject calling — he had not come.

"Marguerite, my child, it is time for bed."

She obeyed. It was all one, the bed or the window. Her mother, weary with travel, fell asleep; but she — she heard the clock downstairs strike, and a clock next door

attest, twelve — one — two — three — four, and another day began to shine in at the window. As it brightened, her spirits rose. She had been lying long in reverie; now she began once more the oft-repeated rehearsal. But the new day shone into it also. When the silent recital again reached its end the old distress was no longer there, but in its place was a new, sweet shame near of kin to joy. The face, unhidden, looked straight into the growing light. Whatever else had happened, this remained, that Claude was found. She silently formed the name on her parted lips — "Claude! Claude! Claude! Claude!" and could not stop though it gave her pain, the pain was so sweet. She ceased only when there rose before her again the picture of him drawing the curtain and disappearing; but even then she remembered the words, "Don't worry; we 'll bring it out all right," and smiled.

When Zoséphine, as the first sunbeam struck the window-pane, turned upon her elbow and looked into the fair face beside her, the eyes were closed in sleep. She arose, darkened the room, and left it.

XX.

LOVE, ANGER, AND MISUNDERSTANDING.

THE city bells had sounded for noon when the sleeper opened her eyes. While she slept Claude had arrived again at his father's cottage from the scene of the crevasse and reported to Tarbox the decision of himself and the engineer, that the gap would not be closed for months to come. While he told it they sat down with St. Pierre to breakfast. Claude, who had had no chance even to seek sleep, ate like a starved horse. Tarbox watched him closely, with hidden and growing amusement. Presently their eyes fastened on each other steadily. Tarbox broke the silence.

"*You* don't care how the crevasse turns out. I 've asked you a question now twice; and you don't even hear."

"Why you don't ass ag'in?" responded the younger man, reaching over to the meat-dish and rubbing his bread in the last of the gravy. Some small care called St. Pierre away from the board. Tarbox leaned forward on his elbows and, not knowing he quoted, said softly:

"There 's something up. What is it?"

"Op?" asked Claude, in his full voice, frowning. "Op where? — w'at, *w'at* is?"

"Ah, yes!" said Tarbox, with affected sadness. "Yes, that 's it; I thought so. 'Oh-hon for somebody, oh hey for somebody.'"

Claude stopped with a morsel half-way to his mouth, glared at him several seconds, and then resumed his eating; not like a horse now, but like a bad dog gnawing an old bone. He glanced again angrily at the embodiment of irreverence opposite. Mr. Tarbox smiled. Claude let slip, not intending it, an audible growl, with his eyes in the plate. Mr. Tarbox's smile increased to a noiseless laugh, and grew and grew until it took hopeless possession of him. His nerves relaxed, he trembled, the table trembled with him, his eyes filled with tears, his brows lifted laboriously, he covered his lips with one hand, and his abdomen shrank until it pained him. And Claude knew, and showed he knew it all; that was what made it impossible to stop. At length, with tottering knees, Mr. Tarbox rose and started silently for the door. He knew Claude's eyes were following. He heard him rise to his feet. He felt as though he would have given a thousand dollars if his legs would but last him through the door-way. But to crown all, St. Pierre met him just on the threshold, breaking, with unintelligent sympathy, into a broad, simple smile. Tarbox laid one hand upon the door for support, and at that moment there was a hurtling sound; something whizzed by Tarbox's ear, and the meat-dish crashed against the door-post and flew into a hundred pieces.

The book-agent ran like a deer for a hundred yards and fell groveling upon the turf, the laugh still griping him with the energy of a panther's jaws, while Claude, who in blind pursuit had come threshing into his father's arms, pulled his hat over his eyes and strode away towards the skiff ferry. As Mr. Tarbox returned towards the cottage, St. Pierre met him, looking very grave, if not displeased. The swamper spoke first.

"Dass mighty good for you I was yondah to stop dat boy. He would 'a' half-kill' you."

"He 'd have served me ex-actly right," said the other, and laughed again. St. Pierre shook his head, as though this confession were poor satisfaction, and said:

"Dass not safe — make a 'Cajun mad. He dawn't git mad easy, but when he *git* mad it bre'k out all ove' him, yass. He goin' feel bad all day now; I see tear' in his eye when he walk off."

"I 'm sorry," said Tarbox sincerely, and presently added, "Now while you look up a picked gang of timber-men, I 'll see if I can charter a little stern-wheel steamer, get that written permission from Madame Beausoleil to cut trees on her land, and so forth, and so forth. You 'll hardly see me before bed-time again."

It was the first hour of the afternoon when Claude left his little workroom and walked slowly down to, and across, Canal street and into Bourbon. He had spent the intervening hours seated at his work-table with his face

in his hands. He was in great bitterness. His late transport of anger gave him no burdensome concern. Indeed, there was consolation in the thought that he should by and by stand erect before one who was so largely to blame, and make that full confession and apology which he believed his old-time Grande Pointe school-master would have offered could Bonaventure ever have so shamefully forgotten himself. Yet the chagrin of having at once so violently and so impotently belittled himself added one sting more to his fate. He was in despair. An escaped balloon, a burst bubble, could hardly have seemed more utterly beyond his reach than now did Marguerite. And he could not blame her. She was right, he said sternly to himself — right to treat his portrait as something that reminded her of nothing, whether it did so or not; to play on with undisturbed inspiration; to lift never a glance to his window; and to go away without a word, a look, a sign, to any one, when the least breath or motion would have brought him instantly into her sacred presence. She was right. She was not for him. There is a fitness of things, and there was no fitness — he said — of him for her. And yet she must and would ever be more to him than any one else. He would glory in going through life unloved, while his soul lived in and on the phantom companionship of that vision of delight which she was and should ever be. The midday bells sounded softly here and there. He would walk.

As I say, he went slowly down the old rue Bourbon. He had no hunger; he would pass by the Women's Exchange. There was nothing to stop there for; was not Madame Beausoleil in Terrebonne, and Marguerite the guest of that chattering woman in silk and laces? But when he reached the Exchange doors he drifted in as silently and supinely as any driftlog would float into the new crevasse.

The same cashier was still on duty. She lighted up joyously as he entered, and, when he had hung his hat near the door, leaned forward to address him; but with a faint pain in his face, and loathing in his heart, he passed on and out into the veranda. The place was well filled, and he had to look about to find a seat. The bare possibility that *she* might be there was overpowering. There was a total suspension of every sort of emotion. He felt, as he took his chair and essayed to glance casually around, as light and unreal as any one who ever walked the tight-rope in a dream. The blood leaped in torrents through his veins, and yet his movements, as he fumbled aimlessly with his knife, fork, and glass, were slow and languid.

A slender young waitress came, rested her knuckles on the table, and leaned on them, let her opposite arm hang limply along the sidewise curve of her form, and bending a smile of angelic affection upon the young Acadian, said in a confidential undertone:

"The cashier told me to tell you those ladies have come."

Claude rose quickly and stood looking upon the face before him, speechless. It was to him exactly as if a man in uniform had laid a hand upon his shoulder and said, "You 're my prisoner." Then, still gazing, and aware of others looking at him, he slowly sank again into his seat.

"She just told me to tell you," said the damsel. "Yes, sir. Have you ordered?"

"Humph?" He was still looking at her.

"I say, have you given your order?"

"Yass."

She paused awkwardly, for she knew he had not, and saw that he was trying vainly to make her words mean something in his mind.

"Sha'n't I get you some coffee and rolls — same as day before yesterday?"

"Yass." He did not know what she said. His heart had stopped beating; now it began again at a gallop. He turned red. He could see the handkerchief that was wadded into his outer breast-pocket jar in time with the heavy thump, thump, thump beneath it. The waitress staid an awful time. At last she came.

"I waited," she sweetly said, "to get *hot* ones." He drew the refreshments towards him mechanically. The mere smell of food made him sick. It seemed impossible that he should eat it. She leaned over him lovingly and asked, as if referring to the attitude, "Would you like anything more? — something sweet?" His flesh crawled. He bent over his plate, shook his head, and stirred his coffee without having put anything into it.

She tripped away, and he drew a breath of momentary relief, leaned back in his chair, and warily passed his eyes around to see if there was anybody who was not looking at him and waiting for him to begin to eat.

Ages afterward — to speak with Claude's feelings — he rose, took up his check, and went to the desk. The cashier leaned forward and said with soft blitheness:

"They 're here. They 're upstairs now."

Claude answered never a word. He paid his check. As he waited for change, he cast another glance over the various groups at the tables. All were strangers. Then he went out. On the single sidewalk step he halted, and red and blind with mortification, turned again into the place; he had left his hat. With one magnificent effort at dignity and unconcern he went to the rack, took down the hat, and as he lowered it towards his head cast a last

look down the room, and — there stood Marguerite. She had entered just in time, it seemed to him, but just too late, in fact, to see and understand the blunder. Oh, agony! They bowed to each other with majestic faintness, and then each from each was gone. The girl at the desk saw it and was dumb.

XXI.

LOVE AND LUCK BY ELECTRIC LIGHT.

Mr. Tarbox was really a very brave man. For, had he not been, how could he have ventured, something after the middle of that afternoon, in his best attire, up into Claude's workroom? He came to apologize. But Claude was not there.

He waited, but the young man did not return. The air was hot and still. Mr. Tarbox looked at his watch — it was a quarter of five. He rose and went down to the street, looked up and down it, and then moved briskly down to, and across, Canal street and into Bourbon. He had an appointment.

Claude had not gone back to his loft at all. He was wandering up and down the streets. About four he was in Bienville street, where the pleasure-trains run through it on their way out to Spanish Fort, a beautiful pleasure-ground some six miles away from the city's center, on the margin of Lake Pontchartrain. He was listlessly crossing the way as a train came along, and it was easy for the habit of the aforetime brakeman to move him. As the last platform passed the crossing, he reached out mechanically and swung aboard.

Spanish Fort is at the mouth of Bayou St. John. A draw-bridge spans the bayou. On the farther, the eastern, side Claude stood leaning against a pile, looking off far beyond West End to where the sun was setting in the swamps about Lake Maurepas. There — there — not seen save by memory's eye, yet there not the less, was Bayou des Acadiens. Ah me! there was Grande Pointe.

"O Bonaventure! Do I owe you" — Claude's thought was in the old Acadian tongue — "Do I owe you malice for this? No, no, no! Better *this* than *less*." And then he recalled a writing-book copy that Bonaventure had set for him, of the school-master's own devising: *Better Great Sorrow than Small Delight.* His throat tightened and his eyes swam.

A pretty schooner, with green hull and new sails, came down the bayou. As he turned to gaze on her, the bridge, just beyond his feet, began to swing open. He stepped upon it and moved towards its center, his eyes still on the beautiful silent advance of the vessel. With a number of persons who had gathered from both ends of the bridge, he paused and leaned over the rail as the schooner, with her crew looking up into the faces of the throng, glided close by. A female form came beside him, looking down with the rest and shedding upon the air the soft sweetness of perfumed robes. A masculine voice, just beyond, said:

"A thing of beauty is a joy forever."

Claude started and looked up, and behold, Marguerite on the arm of Tarbox!

His movement drew their glance, and the next instant Mr. Tarbox, beaming apology and pouring out glad greetings, had him by the hand. Burning, choking, stammering, Claude heard and answered, he knew not how, the voice of the queen of all her kind. Another pair pressed forward to add their salutations. They were Zoséphine and the surveyor.

Because the facilities for entertaining a male visitor were slender at the Women's Exchange, because there was hope of more and cooler air at the lake-side, because Spanish Fort was a pretty and romantic spot and not so apt to be thronged as West End, and because Marguerite, as she described it, was tired of houses and streets, and also because he had something to say to Zoséphine, Mr. Tarbox had brought the pretty mother and daughter out here. The engineer had met the three by chance only a few minutes before, and now as the bridge closed again he passed Zoséphine over to Claude, walked only a little way with them down a path among the shrubbery, and then lifted his hat and withdrew.

For once in his life Mr. G. W. Tarbox, as he walked with Marguerite in advance of Claude and her mother, was at a loss what to say. The drollness of the situation was in danger of overcoming him again. Behind him was Claude, his mind tossed on a wild sea of doubts and suspicions.

"I told him," thought Tarbox, while the girl on his arm talked on in pretty, broken English and sprightly haste about something he had lost the drift of — "I told him I was courting Josephine. But I never proved it to him. And now just look at this! Look at the whole sweet mess! Something has got to be done." He did not mean something direct and open-handed; that would never have occurred to him. He stopped, and with Marguerite faced the other pair. One glance into Claude's face, darkened with perplexity, anger, and a distressful effort to look amiable and comfortable, was one too many; Tarbox burst into a laugh.

"Pardon!" he exclaimed, checking himself

until he was red; "I just happened to think of something very funny that happened last week in Arkansas — Madame Beausoleil, I know it must look odd,"— his voice still trembled a little, but he kept a sober face — "and yet I must take just a moment for business. Claude, can I see you?"

They went a step aside. Mr. Tarbox put on a business frown and said to Claude in a low voice:

"Hi! diddle, diddle, the cat and the fiddle; the cow jumped over the moon; the little dog laughed to see the sport, and the dish ran away with the spoon you understand I 'm simply talking for talk's sake as we resume our walk we 'll inadvertently change partners — a kind of Women's Exchange, as it were old Mother Hubbard, she went to the cupboard to get her poor dog a bone; but when she got there the cupboard — don't smile so broadly — was bare, and so the poor dog had none will that be satisfactory?"

Claude nodded, and as they turned again to their companions the exchange was made with the grace, silence, and calm unconsciousness of pure oversight — or of general complicity. Very soon it suited Zoséphine and Tarbox to sit down upon a little bench beside a bed of heart's-ease and listen to the orchestra. But Marguerite preferred to walk in and out among the leafy shadows of the electric lamps.

And so, side by side, as he had once seen Bonaventure and Sidonie go, they went, Claude and Marguerite, away from all windings of disappointment, all shadows of doubt, all shoals of misapprehension, out upon the open sea of mutual love. Not that the great word of words — affirmative or interrogative — was spoken then or there. They came no nearer to it than this:

"I wish," murmured Claude,— they had gone over all the delicious "And-I-thought-that-you's" and the sweetly reproachful "Did-you-think-that-I's," and had covered the past, down to the meeting on the bridge,— "I wish," he murmured, dropping into the old Acadian French, which he had never spoken to her before,— "I wish —"

"What?" she replied, softly and in the same tongue.

"I wish," he responded, "that this path might never end." He wondered at his courage, and feared that now he had ruined all; for she made no answer. But when he looked down upon her she looked up and smiled. A little farther on she dropped her fan. He stooped and picked it up, and, in restoring it, somehow their hands touched — touched and lingered; and then — and then — through one brief unspeakable moment, a maiden's hand, for the first time in his life, lay willingly in his. Then, as glad as she was frightened, Marguerite said she must go back to her mother, and they went.

XXII.

A DOUBLE LOVE-KNOT.

SPANISH FORT — West End — they are well enough; but if I might have one small part of New Orleans to take with me wherever I may wander in this earthly pilgrimage, I should ask for the old Carrollton Gardens.

They lie near the farthest upper limit of the expanded city. I should want, of course, to include the levee, under which runs one side of the gardens' fence; also the opposite shore of the Mississippi, with its just discernible plantation houses behind their levee; and the great bend of the river itself, with the sun setting in unutterable gorgeousness behind the distant, low-lying pecan groves of Nine-mile Point, and the bronzed and purpled waters kissing the very crown of the great turfed levee, down under whose land side the gardens blossom and give forth their hundred perfumes and bird songs to the children and lovers that haunt their winding alleys of oleander, jasmine, laurustine, orange, aloe, and rose, the grove of magnolias and oaks, and come out upon the levee's top as the sun sinks, to catch the gentle breeze and see the twilight change to moonlight on the water.

One evening as I sat on one of the levee benches here, with one whose I am and who is mine beside me, we noticed on the water opposite us, and near the farther shore, a large skiff propelled with two pairs of oars and containing, besides the two rowers, half a dozen passengers.

Then I remembered that I had seen the same craft when it was farther down the stream. The river is of a typical character about here. Coming around the upper bend, the vast current sweeps across to this, the Carrollton side, and strikes it just above the gardens with an incalculable gnawing, tearing power. Hence the very high levee here; the farther back the levee builders are driven by the corroding waters the lower the ground is under them, and the higher they must build to reach the height they reached before. From Carrollton the current rebounds, and swinging over to the other shore strikes it, boiling like a witch's caldron, just above and along the place where you may descry the levee lock of the Company Canal.

I knew the waters all about there, and knew that this skiff full of passengers, some of whom we could see were women, having toiled through the seething current below, was now

in a broad eddy, and, if it was about to cross the stream, would do so only after it had gone some hundred yards farther up the river. There it could cross almost with the current.

And so it did. I had forgotten it again, when presently it showed itself with all its freight, silhouetted against the crimson sky. I said quickly:

"I believe Bonaventure Deschamps is in that boat!"

I was right. The skiff landed, and we saw its passengers step ashore. They came along the levee's crown towards us, "by two, by two." Bonaventure was mated with a young Methodist preacher, who had been my playmate in boyhood, and who lived here in Carrollton. Behind him came St. Pierre and Sidonie. Then followed Claude and Marguerite; and, behind all, Zoséphine and Tarbox.

They had come, they explained to us, from a funeral at the head of the canal. They did not say the funeral of a friend, and yet I could see that every one of them, even the preacher, had shed tears. The others had thought it best and pleasantest to accompany the minister thus far towards his home, then take a turn in the gardens, and then take the horse-cars for the city's center. Bonaventure and Sidonie were to return next day by steamer to Belle Alliance and Grande Pointe. The thoughtful Tarbox had procured Bonaventure's presence at the inquest of the day before as the identifying witness, thus to save Zoséphine that painful office. And yet it was of Zoséphine's own motion, and by her sad insistence, that she and her daughter followed the outcast to his grave.

"Yes," she had said, laying one hand in Bonaventure's and the other in Sidonie's, and speaking in the old Acadian tongue, "when I was young and proud I taught 'Thanase to despise and tease him. I did not know then that I was such a coward myself. If I had been a better scholar, Bonaventure, when we used to go to school to the curé together — a better learner — not in the books merely, but in those things that are so much better than books teach — how different all might have been! Thank God, Bonaventure, one of us was." She turned to Sidonie to add, — "But that one was Bonaventure. We will all go" — to the funeral — "we will all go and bury vain regrets — with the dead."

The influence of the sad office they had just performed was on the group still, as they paused to give us the words of greeting we coveted. Yet we could see that a certain sense of being very, very rich in happiness was on them all, though differently on every one.

Zoséphine wore the pear-shaped pearl.

The preacher said good-day and started down the steps that used to lead from the levee down across a pretty fountained court and into the town. But my friend Tarbox — for I must tell you I like to call him my friend, and like it better every day; we can't all be one sort; you 'd like him if you knew him as I do — my friend Tarbox beckoned me to detain him.

"Christian!" I called — that is the preacher's real name. He turned back and met Tarbox just where I stood. They laid their arms across each other's shoulders in a very Methodist way, and I heard Tarbox say:

"I want to thank you once more. We 've put you to a good deal of trouble. You gave us the best you had: I 'll never forget what you said about 'them who through fear of death are all their life-time subject to bondage.' I wish you was a Catholic priest."

"Why?"

"So we could pay you for your trouble. I don't think you ought to take it hard if you get a check in to-morrow's mail."

"Thy money survive with thee," said the preacher. "Is that all you want me to be a priest for? Is n't there another reason?" His eyes twinkled — "Is n't there something else I could do for you — you or Claude — if I should turn priest?"

"Yes," said Tarbox, with grave lips but merry eyes; "we 've both got to have one."

In fact they had two. Yet I have it from her husband himself, that Madame Tarbox insists to this day, always with the same sweet dignity, that she never did say yes.

On the other hand, when Claude and Marguerite were kneeling at the altar the proud St. Pierre, senior, spoke an audible and joyously impatient affirmative every time either of them was asked a question. When the time came for kissing, Sidonie, turning from both brides, kissed St. Pierre the more for that she kissed not Claude, then turned again and gave a tear with the kiss she gave to Zoséphine. But the deepest, gladdest tears at those nuptials were shed by Bonaventure Deschamps.

George W. Cable.

BENJAMIN FRANKLIN.
(FROM THE CHEVILLET ENGRAVING OF THE DUPLESSIS PORTRAIT OF 1778 IN POSSESSION OF MISS E. F. HARWOOD.)

FRANKLIN'S HOME AND HOST IN FRANCE.

IT was on the tenth day of June, in the year of our Lord 1776, that Caron de Beaumarchais, poet, dramatist, courtier, and speculator, received from the French treasury one million francs, for which he gave the following receipt, which was destined to a greater celebrity than any equal number of lines he ever wrote:

J'ai reçu de M. Duvergier, conformément aux ordres de M. le Comte de Vergennes en date du 5 courant, que je lui ai remis, la Somme d'un million dont je rendrai compte à mon dit Sieur comte de Vergennes.

CARON DE BEAUMARCHAIS.

Bon pour un million de livres tournois.

À Paris, le 10 Juin, 1776.

The following is a translation of this letter:

I have received from M. Duvergier, in conformity with the orders of M. the Comte de Vergennes of the 5th instant, and which I have remitted to him, the Sum of one million, of which I will render an account to the said Comte de Vergennes.

CARON DE BEAUMARCHAIS.

Good for a million livres tournois.

Paris, June 10, 1776.

This was the first money contributed by the French government in aid of the revolting British colonies in America.

A little more than three months later, and on the twenty-sixth day of September of the same memorable year, a congress of the re-

volted colonies selected by ballot three persons to proceed to the court of Louis XVI. and ask his alliance and support. Dr. Benjamin Franklin, then seventy years of age, was unanimously chosen on the first ballot one of these commissioners. When the result of the balloting was announced he is reported to have turned to Dr. Rush, who sat beside him, and to have said: "I am old and good for nothing; but, as the store-keepers say of their remnants of cloth, I am but a fag end, and you may have me for what you please to give."

Upon the next ballot Thomas Jefferson, then in his thirty-third year, was chosen, but in consequence of the delicate health of Mrs. Jefferson at that time he felt obliged to decline the appointment. It was reserved for him to be Franklin's successor in Paris nine years later.

On his arrival, Dr. Franklin accepted temporary lodgings with Silas Deane at the Hôtel Hamburg, in the Rue de l'Université.

The news of the doctor's arrival at Nantes had preceded him to Paris, and almost immediately upon his reaching the Hôtel Hamburg he was waited upon by a gentleman holding intimate relations with the court, and invited to accept for the use of himself and his legation a vacant house on the visitor's estate at Passy, then one of the suburbs of Paris.† The gentleman who made this proffer of hospitality to Franklin was M. Donatien Le Ray de Chaumont, at that time honorary Superintendent of the Hôtel des Invalides, and also honorary Superintendent of Woods and Forests of the department of Berry and Blaison.

The objections to placing himself or his

CHATEAU DE CHAUMONT. (REDRAWN FROM A LITHOGRAPH BY ASSELINEAU.)

Arthur Lee and Silas Deane, both in Europe at the time as agents of the colonies, were finally chosen as Franklin's associates. Three days after this election, which occurred at the most gloomy and unpromising moment in the whole history of the revolution, the news to which we have referred, that the young King of France* had extended his hand to us, reached Philadelphia. Dr. Franklin sailed for France on the twenty-seventh day of October, 1776, and reached Paris on the 21st of December following — less than six months after the colonies had declared their independence.

government under obligations to a stranger and a foreigner yielded to superior considerations which reflection and further information revealed to him.

De Chaumont was then a gentleman of fortune; he held intimate and quite confidential relations with the ministry, and shared

* Louis had succeeded to the throne of France two years before, and was then in the twenty-second year of his age. Vergennes was his Minister of Foreign Affairs, and De Sartines his Minister of the Marine.

† Passy was incorporated into the municipality of Paris during the Second Empire.

DONATIEN LE RAY DE CHAUMONT. (FROM A PORTRAIT BY ROBIN.)

fully the enthusiasm of his countrymen for the struggling colonists and their traditional prejudices against the British government. He was probably selected by the ministry and put forward — though upon this point we have only inferential testimony — as the fittest person to have charge of Franklin and to serve as a channel through which the French and the American governments could communicate secretly and without compromising the official relations of France and Great Britain. All these advantages were duly appreciated by Franklin at a glance. A residence at Passy protected him and all his movements from public observation and officious inquisitiveness, while the opportunities for communicating with the Government which he would enjoy in such close proximity to M. de Chaumont were even greater than those enjoyed by Lord Stormont, the British ambassador, the relations of the French government with Franklin's being at that period far more sympathetic than those with Great Britain. He would here be sheltered from inconvenient curiosity without being inaccessible to friends.

This position also gave him opportunities, in no other way possible, of learning promptly what might be going on in official circles, without any sacrifice of dignity on his part and without prejudice to the government to which he was accredited — not yet prepared for and constantly hoping to avoid an open rupture with England.

Franklin accepted the invitation of M. de Chaumont.

The arrangements for his reception were soon perfected, and at the expiration of about three weeks from his arrival in France he was installed in the quarters which M. de Chaumont had appropriated to his use.

As Franklin dwelt in this hotel at Passy nine consecutive years and for the full term of his mission; as it was there that he conducted all those negotiations which procured for the colonies the open alliance of France and finally the acknowledgment of their independence by England; as it was there that he penned the largest part of his incomparable autobiography; as it was in his library there, according to the accepted traditions, that Volney conceived the extraordinary book by which he is now chiefly remembered; as it was upon the house he there occupied that he placed the first lightning-rod ever put up in France or in Europe — some account of its as well as of its proprietor's history will possess an interest to the American reader beyond the gratification of an idle curiosity.

The property of which the house occupied by Franklin was only a *dépendance*, and which M. de Chaumont had then owned but a few months, had at one time belonged to the Duchesse de Valentinois and was still known as the Hôtel Valentinois. On this considerable estate were two dwellings, one known and described in the conveyances as *le grand*, and the other as *le petit hôtel*. The larger was occupied by M. de Chaumont, and the smaller was for the remainder of his sojourn in France the residence of Franklin. According to the title-deeds, copies of which we have under our eyes, Madame la Duchesse d'Aumont was probably the first private person who ever possessed complete control of the consolidated property, and she converted it into a country residence. This must have occurred as early as 1711, for at that epoch she acquired the right of view across the property lying upon the opposite side of the *Rue des Francs Bourgeois*, and in the exercise of that right caused the upper stories of the houses which interfered with her view to be removed so as to disclose the Seine, the Champs de Mars, and the distant hills of Fleury, Meudon, Sèvres, and St. Cloud. This right of view was still reserved in 1866.

VICTOR HUGO'S DRAWING OF FRANKLIN'S HOUSE.

The property had several owners after the death of the Duchesse d'Aumont, and among them were the Chevalier de Ségur, President of the Parliament of Bordeaux; the Duc de Valentinois, and Lieutenant-General de Stainville, Governor of Strasbourg, who sold it in August, 1776, to M. de Chaumont. A part of it was still standing as late as 1866, and the façade looking upon the garden retained all the characteristics of the original structure of the second half of the eighteenth century. The columns which decorated it; the bull's-eyes surrounded with garlands; the moldings of the windows, sashes, and doors; the arrangement of the veranda,— all conspired to define and preserve the cheerful and characteristic style of the epoch.

In 1865, it was my privilege to transmit to the commissioners of the great fair held that year in New York, for the relief of the sick and wounded in the war, a sketch of the Franklin house which had been made by Victor Hugo, and which he desired me to forward as his contribution to that memorable charity. It came to me sealed, ready for dispatch. It was sold with the rest of the collection. When I was in Paris in 1877, I asked Victor Hugo if he sent the original or a copy of his sketch. He said he sent a copy, but what had become of the original he could not say.* It was somewhere among his papers, but no one would probably know where till his papers passed into other hands. He seemed to think that the task of disinterring it from the accumulated mass of his literary stores was quite beyond his strength.

The quarter of Passy where Franklin took up his abode ranked in those days among the most attractive in the environs of Paris, and is far from owing all its interest, in the eyes even of American readers, to its having been for so many years the residence of their first diplomatic representative. It was the residence of the Marquis de Pontainvilliers, the Prevost of Paris and Lord of Passy; of the illustrious and unfortunate Princesse de Lamballe, whose

* As no record was kept of the purchasers of the articles sold at this fair, it was only a few months since, and after many ineffectual efforts, that I learned what had become of the sketch sent to the United States. In March, 1885, a paragraph appeared in the New York "Critic," giving the history of the sketch up to the time of its sale and inviting information, from those who had any, of its subsequent fate. In the "Critic" of March 6, 1886, just a year later, there appeared a notice of an exhibition of pictures on exhibition at the Avery Art Gallery in New York, among which it referred specially to "Victor Hugo's drawing of Benjamin Franklin's house at Passy, . . . accompanied by the autograph letter which was sent by him with the sketch to the United States Sanitary Commission in 1865." Both were purchased by the late Samuel J. Tilden, and now form a part of his notable art collection. It is to his courtesy we are indebted for the privilege of illustrating these pages with a copy of them.

The following is a translation of Victor Hugo's letter, a fac-simile of which appears on the next page: "In 1836 I was at Passy one day with M. Raynouard, the author of the Tragedy of the *Templiers*. His white hair fell down over his shoulders. I said to him: '*You wear your hair like Franklin, and you resemble him.*' He replied, smiling, '*That is due, perhaps, to the vicinage.*' He then showed me a house in sight from his garden. '*It is there,*' he said to me, '*that Franklin resided in 1788.*'

"I have made a sketch of this house, since demolished. Here it is. I believe this to be the only picture of the house at Passy where Franklin lived that exists, and I offer it to the *United States Sanitary Commission.*

"I am happy that the *Sanitary Commission*, in doing me the honor to address me, has given me the opportunity of renewing the expression of my profound sympathy for the valiant men who struggle so gloriously to deliver the great American Republic from the shame of slavery. VICTOR HUGO.

"HAUTEVILLE HOUSE, 19th March, 1864."

En 1836, j'étais un jour à Passy, chez M. Raynouard, auteur de la tragédie des Templiers. Il avait six chevaux dans l'étable pour ses idoles. Je lui dis : Vous pouvez les atteler à votre Franklin, et vous lui assemblez. Il me répondit en riant : cela tient peut-être au voisinage. Et il me montra une maison qu'on apercevait de son jardin. — C'est là, me dit-il, que Franklin a demeuré en 1778.

J'ai dessiné cette maison, démolie aujourd'hui. Voici le dessin. Je crois que cette image de la maison de Franklin à Passy est la seule qui existe. Je l'offre à l'United States Sanitary Commission.

Je suis heureux que la Sanitary Commission, en me faisant l'honneur de s'adresser à moi, me donne l'occasion de renouveler l'expression de ma sympathie profonde aux vaillants hommes qui luttent si glorieusement pour délivrer la grande République américaine de cette honte, l'esclavage.

Victor Hugo

VICTOR HUGO'S INSCRIPTION ACCOMPANYING DRAWING.

chateau was still standing under the Second Empire: and of the Marshal d'Estaing, whose name is so honorably associated with our Revolution. Then, at Auteuil, adjoining Passy, was the residence of Madame Helvetius, whose house was the resort of all the political celebrities of France, and to whom, because of the judicious patronage she extended to people of letters, Franklin gave the name of *Notre Dame d'Auteuil.* To this circle no person seems to have been admitted upon a more intimate footing than Franklin. There was even a tradition that he had offered himself to her in marriage. Of this, however, there is no evidence nor even probability. It was the most attractive salon in Paris; one to which Napoleon on his return from Italy sought, but unsuccessfully, to secure admission. We need look no further for an explanation of Franklin's devotion to its presiding genius. If anything were yet wanting to make Passy fashionable it was to be found in the royal chateau of La Muette, which was a favorite resort of the king. It was from here that he dated the popular edict which suppressed the *Don de joyeux Avénement.* At La Muette was a laboratory constructed by Louis XV. and enlarged by his successor. Franklin was often there, with his friends Le Roy and the Abbé la Roche, both members of the Academy of Sciences, prosecuting his experiments in electricity, on the weight of the atmosphere, etc. Passy was also endowed by nature with a mineral spring renowned in those days for its medicinal properties, and which served as another veil to Franklin's real purpose — he being something of an invalid — in accepting the hospitalities of M. de Chaumont. This spring was the property of a M. le Veillard, first mayor of Passy, with whom Dr. Franklin contracted a great intimacy and life-long friendship.

Before directing our attention more particularly to Dr. Franklin's host, it will be interesting to follow hurriedly the subsequent fortunes of the property to which he was destined to give no inconsiderable part of its distinction.

We have seen that the Hôtel Valentinois was purchased by M. de Chaumont in August, 1776, and only four months before Franklin's arrival in Paris. The social, financial, and political convulsions which occurred in France soon after the peace with America and the departure of Dr. Franklin so deranged the affairs of M. de Chaumont that his property at Passy had to be sacrificed for the benefit of his creditors, and was sold on the 25th of July, 1791, to Messrs. Fulcheron and Grivel, bankers, in Paris. On the 17th of January, 1792, the estate was divided between these gentlemen, M. Fulcheron becoming proprietor of the Grand Hôtel, and the small hotel remaining the undivided property of the partners. Owing to dissensions among the creditors of the De Chaumont estate, of which Fulcheron and Grivel seemed to have been only purchasers in trust, the property was finally sold under foreclosure on the 12th of July, 1793. The large hotel was rented to and occupied by the then Royal Highness, the Prince of Condé, Duc de Bourbon.

Later, one of the descendants of Ossian's hero, Lord Fingal, occupied this hotel until after the memorable days of 1830. Later still, it was sold to the *Frères des Écoles Chrétiennes*, who transferred to it from the Faubourg St. Martin, on the 3d of April, 1839, a large boarding-school which, in 1866, had 740 pupils. The original structure, besides undergoing some changes, was very much enlarged for the accommodation of the new tenants. Of the original edifice there remained in 1866:

First. In the angle at the left the reception-room, three arcades on the ground floor, and three brackets ornamented with sculptured figures.

Second. The columns of the *porte cochère* and carriage houses on the street.

Third. The angle of the old staircase and the wainscoting in the drawing-room. I have been told by the late Count Henri de Riancey, — then editor-in-chief of the "Union" in Paris, and a resident of Passy, — who had seen them, that they were very remarkable and would pass for masterpieces of taste. They were sold in 1855 at a very high price. Of the small hotel occupied by Franklin, we have already stated that the walls and the façade towards the garden were still standing in 1866, when I visited and went through it with one of the Brothers. It next became the property of M. Dumersan, a well-known dramatic writer. In 1866 it belonged to M. Miensel, who let it to various parties, and among them to the Comte de Riancey already referred to.

Just before Franklin left Paris to return to his country, the Comte de Vergennes, still Minister of Foreign Affairs, addressed a note to M. de Chaumont in behalf of the Marchioness de Monconseil, a favorite correspondent of Chesterfield, to know if she could hire the property, and upon what conditions.

> I do not wish you [he says in this note] to make sacrifices to the friendship you have for me. But the friendship I have for Madame de Monconseil, and which is of very long standing, leads me to desire that she may reëstablish and fortify her health in the pure air of Passy, and in an abode so attractive as that she wishes to let.
>
> VERSAILLES, 3 June, 1785.

The magnificence of the Valentinois property may be inferred from the rank and distinction of its successive proprietors and

occupants. After an interval of nearly forty years, the impression of its princely elegance was still fresh in the memory of old John Adams, who, while joint commissioner with Franklin, shared the hospitality of *La petite Maison*, as appears by a letter written to a son of M. de Chaumont, in 1818, when the old statesman was in his eighty-second year.

As this letter has, I believe, never been put in print, I will give it entire. The son of M. de Chaumont had become a citizen of the United States and a very large landed proprietor in the northern part of the State of New York, of which we shall have something more to say presently.

QUINCY, February 12, 1818.

SIR: I have received and read with pleasure an address to the Agricultural Society of Jefferson County, in the State of New York, and as I know not from whom it came, who should I thank for it but its author?

I rejoice in every new society which has agriculture for its object, and see with delight that the spirit is spreading through the United States. If I could worship any of the heathen gods it would be old Saturn, because I believe him to be only an allegorical personification of agriculture, and the children he devoured to be only his own grapes and figs, apples and pears, wheat and barley.

I agree with you in the main in every sentiment, particularly relative to grapes and corn, yet we cannot have perfect roast beef, nor perfect roast spare-ribs, nor perfect poultry, without maize. We must, therefore, sacrifice a little luxury to a good deal of public good.

From the style of this address I should not have suspected it to have been written by any other than a native of this country.

Thirty-nine years ago, I little thought I should live to see the heir-apparent to the princely palaces and gardens of Passy my fellow-citizen in the republican wilderness of America laying the foundation of more ample domains and perhaps more splendid palaces. I observed the motto of the Hôtel de Valentinois, which I had then the honor to inhabit.

"Se sta bene non se move."

"If you stand well, stand still." But you have proved the maxim not to be infallible, and I rejoice in it.

The civilities I received from your family interest me so much in their happiness that any information of it would increase that of your sincere well wisher and most humble servant.

(Signed) JOHN ADAMS.

S. LE RAY DE CHAUMONT, ESQ.,
President of the Agricultural Society of Jefferson County, New York.

During my residence in Paris, 1861–67, I was urged by several of my countrymen who were familiar with the needs of the American legation to take measures to build or purchase a hotel, to be devoted to the use of our official representatives residing near the French court. They said they would raise the money without difficulty if I would take charge of it; and a good share of all the money that would have been required was at once pledged to me for this purpose. I was led to think favorably of the proposition from the circumstance that part of the old house once occupied by Franklin, with an acre of land or thereabouts, was then for sale, and was offered to me for 120,000 francs.*

Before deciding whether I would accept this trust, I determined not to prolong my stay abroad another year, and not knowing whether my successor would appreciate the need of the ample accommodations which the scheme of my friends contemplated, or would care to accept the responsibility of organizing such an enterprise and carrying it through, I allowed the opportunity of making the aforetime residence of our first Minister the permanent residence of the American legation to escape. It was the one consequence of my retirement from that honorable eminence which I have never ceased to regret.

Turn we now to the proprietor of this noble property,— upon a description of which perhaps we have dwelt too long,— whose timely and judicious hospitality has associated his name only less permanently than Franklin's with the fortunes of the great American republic. M. de Chaumont, before Franklin became his guest, had been one of the council of Louis XV. He was then, and up to the time of his death, grandmaster of the waters and forests and honorary intendant of the Invalides. He seemed to hold entirely confidential relations with the ministry of the young king, and was in the enjoyment of a fortune which, according to a statement made to the writer by his grandson, amounted to two and a half millions of francs, say $500,000, in addition, it is to be presumed, to the family chateau of Chaumont on the Loire; another at Blessois, which he afterwards tendered to John Adams;† and the Hôtel Valentinois, which

* This proposition, though I decided not to entertain it, belongs now to the history of this historical property, and I need not, therefore, apologize for inserting a translation of it here:

PARIS ARRONDISSEMENT DE PASSY, 1 June, 1866.

MR. MINISTER: I have seen the proprietor of the house situated at Paris-Passy, Rue Basse, No. 40. He would be willing to sell it at the price of 120,000 francs.

On receiving half of the amount, he would be disposed to accord some delay for the payment of the remainder.

He imposes no conditions upon the sale except the fulfillment of the current lease, which expires 1 April, 1868.

Please accept, Mr. Minister, the very humble respects of your servant, AMY.

† As appears from the following letter from Mr. Adams declining the offer:

TO M. LE RAY DE CHAUMONT.

PASSY, February 25, 1779.

SIR: I have this moment the honor of your kind billet of this day's date, and I feel myself under great obligation for the genteel and generous offer of your house at Blessois; but if I do not put Dr. Franklin to inconvenience, which I shall not do long, my residence at Passy is very agreeable to me.

To a mind as much addicted to retirement as mine, the situation you propose would be delicious indeed, provided my country were at peace and my family with me; but, separated from my family and with an heart bleeding with the wounds of its country, I should be

he had then recently purchased. The writer has the same authority for stating that the Duc de Choiseul, his neighbor in the country,— the chateau of Chaumont and of Chanteloup being in close proximity,— wished M. de Chaumont to enter the ministry with him, but the invitation was declined from the conviction that he could be more useful as the unofficial intermediary between his government and the American commissioners.

He seemed to have been at one time associated with the Duc de Choiseul in establishing a tannery at Amboise, and afterwards important glassworks on his Chaumont property, for which he imported skilled workmen from England at great expense. He was also seized with an ambition to establish a pottery on his place where he had found clay, which encouraged him to hope that he could compete with the English in that manufacture. It was here and of this clay that the Italian Nini, who was invited to Chaumont, made a class of medallions much sought for by amateurs, and among others one of Franklin which was so much admired as a work of art, and became so much in demand, that the grandson of M. de Chaumont had copies of it made, some years ago, for the gratification of his friends.

Franklin sent one of these medallions to his daughter, Mrs. Bache, to which he makes the following playful allusion in a letter written to her on the 3d of June, 1779:

> The clay medallion of me you say you gave to Mr. Hopkinson was the first of the kind made in France. A variety of others of different sizes have been made since; some to be set in the lids of snuff-boxes and some so small as to be worn in rings, and the numbers sold are incredible. These, with the pictures, busts, and prints (of which copies upon copies are spread everywhere), have made your father's face as well known as that of the moon, so that he durst not do anything that would oblige him to run away, as his phiz would discover him wherever he should venture to show it. It is said by learned etymologists that the name of doll for the image children play with is derived from the word idol. From the number of dolls now made of him he may be truly said, in that sense, to be idolized in this country.*

The medallions referred to as being in the Metropolitan Museum were both presented to that institution, with a large and precious collection of engravings and other works of art relating to Franklin, by Mr. Huntington himself shortly before his death. It was no doubt to one of these medallions that Madame de Campan alludes in the following memorable paragraph, in which she reproves the enthusiasm exhibited by the courtiers and tolerated by the king of France for Franklin and the American insurgents:

> Franklin appeared at Court in the dress of an American agriculturist. His unpowdered hair, his round hat, formed a contrast to the laced and embroidered coats and the powder and perfume of the courtiers of Versailles. This novelty turned the light heads of the Frenchwomen. Elegant entertainments were given to Dr. Franklin, who, to the reputation of a man of science, added the patriotic virtues which invested him with the character of an apostle of liberty. I was present at one of these entertainments where the most beautiful woman out of three hundred was selected to place a crown of laurels upon the white head of the American philosopher, and two kisses upon his cheek. Even in the palace of Versailles Franklin's medallion was sold under the king's eyes in the exhibition of Sèvres china. The legend of this medallion was "*Eripuit cælo fulmen, Sceptrumque tyrannis.*" The king never declared his opinion upon an enthusiasm which his correct judgment no doubt led him to blame. The queen spoke out more plainly about the part France was taking respecting the independence of the American colonies, and constantly opposed it.†

There seems to have been no definite understanding, either oral or in writing, about the

---

the most miserable being on earth in retreat and idleness. To America, therefore, in all events and at all hazards, I must attempt to go, provided I do not receive counter orders which I can execute with honor and with some prospect of advantage to the public service.

I thank you, sir, and your agreeable family for all your civilities since my arrival at Passy, and have the honor to be, with great respect,

Your most obedient and humble servant,

(Signed) JOHN ADAMS.

* Having occasion, some years ago, to mention the origin of this medallion to my valued friend the late William H. Huntington, whose recent decease has deprived Paris of one of its special charms in the eyes of all who enjoyed the privilege of his friendship, I shortly after received from him a reply in which he says: "It was curious news to me that Nini's medallions were made at Chaumont, though I 'd often heard that their place of fabric was somewhere on the Loire. There is no mention of this artist in the 'Biographie Universelle' of Didot, about the only book of biographical reference I have. He must have had a certain vogue in his time, medallions of folks of the superior classes from his hand still turning up at sales and in curiosity shops. He did two Franklins — both at the Metropolitan Museum — dated and signed. The smaller one, with the cap '1777 B. Franklin, Americain,' was among the earliest of the Franklin idols made here, and has been numerously reproduced by French, English, and other engravers. The larger, which is of the more usual size of Nini's work, is much rarer, has never been engraved from, as far as I know, and is to my notion one of the most finely characterized of all the Franklin portraits — 1799 (and in some copies MDCCLXXIX; you will find specimens of both in the museum), with Turgot's lines for the legend. In his letter to his daughter, Passy, 3d of June, B. F. writes: 'The clay medallion of me you say you gave Mr. Hopkinson was the first of the kind made in France.' This must be the one with the cap. If the Ven. F. is correct in his statement, it would curiously seem that his friend Chaumont set Nini at him as soon as he caught the artist, to start (we should now say inaugurate) his furnace at Chaumont with the likeness of his friend."— Letter from W. H. Huntington, dated No. 20, Rue de la Bruyère. Paris, April 5, 1884.

† "Private Life of Marie Antoinette," by Mme. Campan. Vol. I., pp. 253-256.

terms upon which Franklin and his colleagues should occupy La petite Maison. Franklin was far too wise a man to suppose that favors of any kind from one's fellow-creatures ever cost in the long run less than they are worth, or are worth more than they cost. When he accepted M. de Chaumont's invitation, he may have expected his government, at some future time, to make some suitable compensation to its proprietor; or, knowing the interest which France had in the success of the colonists and the advantage to her government of having him lodged where he could be accessible without compromising it, he may have regarded his residence at Passy on M. de Chaumont's estate as in itself a satisfaction of all claims against him or Congress, and the French government as M. de Chaumont's real debtor. Whatever the arrangement was, it seems to have proved entirely satisfactory both to Dr. Franklin and his host; for neither during his sojourn at Passy nor on leaving do his obligations constitute a topic of his correspondence, or even a subject of debate. Until separated by death, they lived on terms of the most friendly intimacy; and when Franklin left Paris to return to his native country, in 1785, M. de Chaumont procured for him the queen's sedan chair to mitigate the fatigues of his journey to the coast, and accompanied his illustrious guest as far as Nanterre on his journey.

Messrs. Adams and Lee, the doctor's colleagues, however, either not aware of the understanding between Dr. Franklin and M. de Chaumont, or not contented with its terms, or, perhaps, indisposed to recognize any agreement to which they had not been made parties, endeavored to put their relations with M. de Chaumont upon a more definite and, as they supposed, a more strictly business basis. To this end Mr. Adams, presumably without consulting with Dr. Franklin, addressed the following letter to M. de Chaumont:

PASSY, September 16, 1778.

SIR: As our finances are at present in a situation seriously critical, and as I hold myself accountable to Congress for every part of my conduct, even to the smallest article of my expenses, I must beg the favor of you to consider what rent we ought to pay you for this house and furniture, both for the time past and to come.

Every part of your conduct towards me and towards our Americans in general, and in all our affairs, has been polite and obliging, as far as I have had an opportunity of observing, and I have no doubt it will continue so; yet it is not reasonable that the United States should be under so great obligation to a private gentleman, as that two of their representatives should occupy for so long a time so elegant a seat, with so much furniture and such fine accommodations, without compensation; and in order to escape the danger of the disapprobation of our constituents, *on the one hand*, for living here at too great or at too uncertain an expense, and, on the other, the censure of the world for not making sufficient compensation to a gentleman who has done so much for our convenience, it seems to me necessary that we should come to an understanding upon this head.

As you have an account against the commissioners, or against the United States, for several other matters, I should be obliged to you if you would send it in as soon as possible, as every day makes it more and more necessary for us to look into our affairs with the utmost precision.

I am, sir, with much esteem and respect, etc.,

JOHN ADAMS.

To this letter, after the interval of a single day, De Chaumont sent the following reply:

PASSY, September 18, 1778.

SIR: I have received the letter which you did me the honor to write to me on the 16th inst., making inquiry as to the rent of my house in which you live for the past and the future. When I consecrated my house to the use of Dr. Franklin and his associates who might share it with him, I made it fully understood that I should expect no compensation, because I perceived that you had need of all your means to send to the succor of your country, or to relieve the distresses of your countrymen escaping from the chains of your enemies. I pray you, sir, to permit this arrangement to remain, which I made when the fate of your country was doubtful. When she shall enjoy all her splendor, such sacrifices on my part will be superfluous or unworthy of her; but at present they may be useful, and I am happy in offering them to you.

There is no occasion for strangers to be informed of my proceedings in this respect. It is so much the worse for those who would not do the same if they had the opportunity, and so much the better for me to have immortalized my house by receiving into it Dr. Franklin and his associates.

There is no doubt that Mr. Adams's mind had been poisoned by his colleague, Arthur Lee, or he would never have written the letter of the 16th of September, which was more or less of a reflection upon his senior colleague, the practical head of the commission. However, he seems to have been entirely satisfied with the result, as all his subsequent relations with M. de Chaumont and his family abundantly testify. Not so, however, Arthur Lee. He was a sort of stormy petrel, only content in foul weather, and his determination to produce bad blood between Adams and Franklin was not abandoned. He renews the effort by a proposal to have the papers of the legation kept at his lodgings, which was promptly rejected.

It cannot be expected [wrote Mr. Adams] that two should go to one, when it is as easy again for one to go to two; not to mention Dr. Franklin's age, his rank in the commission, or his character in the world, nor that nine-tenths of the public letters are constantly brought to this house, and will ever be carried where Dr. Franklin is.

It is a curious coincidence, and an instructive commentary upon Lee's mischief-making propensities, that at the very time he was pursuing this correspondence with Adams, Silas Deane, who had ceased to be an agent of the Government and was working for a settle-

ment of his accounts, was inditing a letter, of which the following is an extract, to the President of Congress:

It is not enough to say that no man in France enjoys a better character for strict honor and probity, both at court and in the city, than M. Chaumont. Justice must add, there is no man enjoys it so universally through the kingdom, among the merchants, the farmers or husbandmen, and mechanics, in all which branches of business he is constantly speculating. This man is the friend of Dr. Franklin; I have the pleasure of knowing him to be mine, and, what is more, the friend of my country, on all and in the most trying occasions. I do not wonder that Mr. Lee should appear jealous of this gentleman, as well as of everybody else, a select few excepted; and very few indeed are those who escape his jealous suspicions, either in Europe or America. It is a melancholy truth, but justice to the public requires my declaring it, that I never knew Mr. Lee, from his first coming to Paris, satisfied with any one person he did business with, whether of a public or private nature; and his dealings, whether for trifles or for things of importance, almost constantly ended in a dispute, sometimes in litigious quarrels.

Mr. Lee lived some time in M. Chaumont's house. M. Chaumont knew him perfectly well, and was not reserved in speaking his opinion of him. I am sorry to be thus long on so disagreeable a subject, a subject which I cautiously waived entering on in my narrative to Congress, not choosing to trouble them with matters which they might deem of a personal nature. I am grieved to have been forced on it at all, and hope never to be obliged to resume it.

From the moment the French government began to take an active interest in the struggle of the colonists, the duties assigned to De Chaumont by the ministry were of the most confidential and responsible character. He sent one ship-load of powder to Boston with instructions to his agent, M. Holker, the French consul-general, to claim no pay unless the Americans were successful in achieving their independence. He also sent a consignment of clothing to the army under the command of Lafayette. He appears to have been charged with purchasing and equipping most if not all of the vessels fitted out by his Government to assist the colonists, and also with the distribution of the prizes which were made by them. This brought him into intimate and constant correspondence with M. de Sartine, the Minister of Marine, and he equipped and directed the operations of five of the vessels of war with which Paul Jones made his name a terror to the inhabitants of the English and Scottish coasts. From the large correspondence preserved by the De Chaumont family, a few extracts will best afford a correct impression of the nature and importance of his part in the complicated instrumentalities by which American independence was achieved.

One of the letters relates to a proposal, from a company of which De Chaumont was the agent or attorney, to supply the French navy with "twenty cargoes of masts, spars, yards, plank, and other material coming from the forests of North America."

In a letter dated November 8, 1779, De Sartine authorized De Chaumont "to make a simulated sale of the ships *Pallas* and *Vengeance* to neutrals, who will send them to our ports with merchandise not contraband."

With Paul Jones, M. de Chaumont held the most intimate and responsible relations from the commencement to the close of the Revolutionary War. It is scarcely necessary to add that they were not always entirely harmonious. The infirmities of Captain Jones's temper and disposition were such that he was rarely, if ever, so fortunate as to be brought frequently in contact with anyone without such person becoming, sooner or later, the victim of his jealousies and suspicions. The duty devolved by the Government upon M. de Chaumont of purchasing and equipping the vessels committed to Jones's command, of directing to a greater or less extent the sphere of his operations, and of superintending the distribution of the prize money, furnished occasions for antagonisms which no one having to deal with such a nature as Jones's could have been prudent or crafty enough to avoid. Their correspondence shows that De Chaumont was not always able to meet Jones's expectations nor to escape his reproaches. Jones had many of the rare qualities of a hero, but he wholly lacked discretion and judgment. He was only great in conflict. He never was fit to be trusted with an important command, and for that reason he never received the promotion which would otherwise have naturally and promptly rewarded his professional achievements. Though the disputes of Jones with De Chaumont have long ceased to have any interest or importance, it is but justice to the latter to state that Jones recognized the unfairness of his complaints and reproaches in a manner equally creditable to himself and to the best friend he appears to have ever had.

The thoroughly confidential relations which subsisted between M. de Chaumont and his own government on the one hand and with the American commissioners on the other exposed him to perils from which no person holding a position of critical importance can hope to escape entirely. The British minister at Paris came to regard De Chaumont as the holder of the key of the position which his government sought to carry, and sent an emissary to him to find, if possible, the price of his loyalty. Instead of dismissing the emissary rudely, as a more impulsive or a less scrupulous person might have done, he laid the foundation for a second interview, and meantime took M. de Sartine, the Minister of Marine, into his confidence. All that we know

further of this incident is related in the following letters from the Minister of Foreign Affairs to M. de Chaumont:

VERSAILLES, 18 December, 1777.

I thank you, sir, for communicating to me this letter of M. B. Mayne, and can assure you that your confidence shall not compromise your friend. M. de Sartine informed me at the time of the overtures made to you. One might treat them as the scheme of a loyal subject rather than as emanating from the ministry. Now, however, when circumstances extremely critical dispel illusions, it is highly probable that this second approach may have an exalted origin, and on this supposition I think it might be well not to decline it, but to explain that you had never contemplated such a distinguished *rôle;* that you had not much heeded his first suggestions, which might have been dictated by his humanity and by his personal confidence in you; but, if he persists in regarding you as a proper instrument for so important an enterprise, it would be necessary for you to know the dispositions of those who alone can dictate the conditions, in order that you might have a sure guide for your own language and conduct. You will know how to embroider your canvass so as not to bind yourself farther than you wish. I think also, sir, that it is proper to answer through the channel indicated by M. Fullerton. This precaution may increase confidence. Possibly, too, we shall thus learn of the purposes of the British government. It intrigues in so many ways to penetrate our secrets that we are excusable for trying to penetrate theirs. I have the honor to be perfectly, sir, your very humble and very obedient servant,

DE VERGENNES.

Another letter from the Comte de Vergennes to M. de Chaumont, relating also to the secret service of the Government, shows that, even as early as 1778, it was understood in Paris that the political sympathies of the great Frederick were with the new republic which was germinating on this side of the Atlantic rather than with the government that was trying to crush it out of existence. It further shows that M. de Vergennes made lighter of the commercial rivalry of Prussia than any recent foreign minister of France has done, or any future one is likely to do.

I thank you for the information you give me of the Prussian officer just from America. I do not doubt that he was an emissary from the king, his master, but I am equally persuaded that the latter none the less prays for the independence of America. Be well assured that all that the English gazettes publish is not gospel. It would be very well to entertain this officer with talk about the ulterior advantages to commerce likely to result from liberty in America. *Such a competition, if established, will never be very dangerous to anyone.* I have the honor to be, etc.,

DE VERGENNES.

VERSAILLES, 18 November, 1778.

On the 11th of February, 1780, M. de Sartine acknowledges the receipt from M. de Chaumont of a letter dated the 26th of the preceding month, and thanks him for the details and observations he had furnished in relation to a proposition which a M. de Mauleon had made to the minister for the establishment of a line of packets between France and North America, and which the minister had referred to M. de Chaumont for a report. This was the first project for a transatlantic line of packets of which there is any record. M. de Chaumont discouraged the scheme, because at that time it was necessary to have fast sailers and armed for the proposed service, and he thought the Government could perform the service with its own ships better and with less expense.

In consequence of the confusion in the financial relations of Beaumarchais with his government growing out of the very mixed character of his operations and the indefiniteness of the line which separated private from public functions, French from American liabilities, diplomatic from commercial services, public beneficence from personal ambition, it became necessary in 1784 to appoint a commission to examine his claims against the French government. M. de Calonne, the Minister of Finance, selected M. de Chaumont as one of the three commissioners to whom this delicate duty was assigned, as we learn from a commission found among De Chaumont's papers.

It appears, however, by a subsequent letter from M. de Calonne, that M. de Chaumont declined this appointment. The reasons are not assigned, but they are not difficult to conjecture. If there is any truth in the proverb that two of a trade can never agree, it is not surprising that M. de Chaumont should have hesitated from motives of delicacy, if from no other, to accept the responsibility of passing upon the accounts of Beaumarchais.

It is manifest, from the voluminous correspondence that has survived him, that in organizing and conducting all the maritime operations of the French government in support of the insurgent American colonies M. de Chaumont was the active and most efficient agent. No vessel seems to have been equipped or commissioned for this service except with his knowledge and coöperation. A most flattering and gratifying success rewarded his efforts, and his influence near his government at the close of our war was only less than that of a cabinet minister. Unfortunately for him, in helping to lay the foundations of popular government in America he was unconsciously preparing the way for his own ruin. The French Revolution was among the first fruits of the revolution in America, and made swift havoc of the fortunes of all whose estates were at all dependent upon public and even private credit; of M. de Chaumont's among the rest. His troubles at home were aggravated by troubles of a different character in the United States.

Because of the different currencies of the several colonies, and the depreciation of the colo-

nial paper, the accounts of M. de Chaumont with our Government could not be, or at least were not, adjusted. To stimulate Congress to a consideration of these claims, M. de Chaumont sent his son Le Ray to the United States, either with or immediately after the return of Dr. Franklin, in 1785, to look after them. Le Ray, as I shall call him by way of distinction from his father, was then only twenty-five years of age. He bore letters from Dr. Franklin, John Jay, Lafayette, Rochambeau, Count de Montmorin, and others. He was specially commissioned to claim from Congress the face of the depreciated paper money held in large quantities by French subjects. Barbé Marbois, the French *chargé d'affaires*, was instructed to second his efforts.

The government of the Confederation, however, was so weak, and its credit so impaired, that it was finally deemed impolitic to press these claims, and they shared the fate of all other claims against the revolutionary government; not, however, until Le Ray had exhausted his influence with others and his personal resources. Among the letters to which these efforts gave rise there are two, though written nearly four years after Le Ray's arrival in the country, which may find a suitable place in this stage of our narrative. They were from Dr. Franklin, one to President Washington and the other to Le Ray himself, who appears to have applied to the doctor for a loan or an indorsement. Meantime, De Chaumont the father, yielding to his embarrassments, had made an assignment to his son.

FRANKLIN TO WASHINGTON.

PHILADELPHIA, 3 June, 1789.

I have made a rule to myself that your Excellency should not be troubled with any solicitations from me for favors to any even of my nearest connections, but here is a matter of justice in which the honor of our country is concerned, and therefore I cannot refuse giving this line for your information. Mr. Le Ray de Chaumont, father of the young gentleman who will have the honor of waiting on you with this, was the first in France who gave us credit, and before the Court showed us any countenance trusted us with 2000 barrels of gunpowder, and from time to time afterwards exerted himself to furnish the Congress with supplies of various kinds, which, for want of due returns, they being of great amount, has finally much distressed him in circumstances. Young Mr. Chaumont has now been here near four years, soliciting a settlement of the accounts merely, and though the payment of the balance, to be sure, would be acceptable, yet proposing to refer that to the time when it shall better suit the convenience of our Government.

This settlement, if the father had it to show, would tend to quiet his creditors, and might be made use of for that purpose; but his son has not hitherto been able to obtain it, and is detained in this country at an expense that answered no end. He hopes, however, now, that your Excellency may prevail to have some settlement made of those accounts, that he may carry home to his father the statement of them; and I the rather hope this likewise, that we may thereby be freed from the imputation of adding ingratitude to injustice.

FRANKLIN TO LE RAY.

PHILADELPHIA, October 31, 1789.

DEAR FRIEND: I was too much indisposed yesterday to write in answer to your affecting letter, but I have considered the case very attentively and will now give you the results. In the first place, what you demand of me is impracticable, the sum I have to draw upon in France being but little more than half of what you require; and upon that small sum, though my late extraordinary expenses have much straitened me in furnishing my ordinary expenses, I dare not draw, under the present circumstances of affairs in that country, lest through the lowness of the funds I should lose perhaps half my property in selling out to pay the bills, or in case of public bankruptcy, which I find is apprehended by many as a possible case, my bill should be returned under a protest, which, besides the damages, would extremely embarrass me. By the last accounts I received, I suffered a loss of fifteen per cent. in the sale of my funds to produce money for the payment of a bill for ten thousand livres which I sold towards the end of the last year; and we now learn from the public prints that the new proposed loan of thirty millions does not fill, and that Mr. Neckar is discouraged and in bad health, which, together, has occasioned the funds to fall much lower. In the next place, it seems to me that in your present circumstances (excuse my freedom in presuming to give you my advice) it would be more advisable for you to remain here a few months longer, in order to finish your affair with the Congress.

They meet again in the beginning of January, and there is no doubt but the officers through whose hands such affairs must pass will be present, and your accounts having already been examined and passed, I am of your opinion, that they will probably be some of the first paid. Money, I think, will not be wanting, as it is thought the immense importation of goods lately made into this port must produce at least one-fourth of the impost expected from the whole of the United States.

If you should be absent at the next meeting of Congress it may occasion a still further delay of payment, for want of somebody present to solicit the business, which would be a further prejudice to the creditors. If you should conclude to stay I would write a letter to your father, which he might show to them, expressing that your stay was by my counsel, with the reasons, and that as soon as the Congress should meet I would support your application for immediate payment with my strongest interest. This delay of two or three months, I should think, cannot make much difference in your father's affairs, the present disorders of that country being considered; or, if you apprehend, as you have mentioned, that the creditors may suspect your having an intention of assuming to your own use the property of your father, you may, to prevent such suspicion, offer the creditors to deliver up to them, or to any person they shall please to appoint, all the papers ascertaining your father's claim upon the Congress; thereby enabling them to solicit for and receive the same. I wish I could give you still better counsel; but this is what occurs (in my present inability of otherwise serving you) to your affectionate friend,

(Signed) B. FRANKLIN.

It appears by a letter from M. Luzerne, the French ambassador at London, that M. le Ray had aspirations for the place occupied by M. Marbois as the diplomatic representative of the French government in the United States. He was promised the cordial coöpera-

tion of M. Luzerne, but if there was at any time a chance of his aspirations being crowned with success, it was swept away by the revolutionary whirlwind which was already threatening France.

Pending these operations Louis Chassanis, a brother-in-law of Le Ray, acting for an association of gentlemen in Europe, purchased several large tracts of land in the northern part of the State of New York. The purchasers formed themselves into a land company with a view of disposing of these lands to refugees. The scheme of colonization was perfected and put forth only a few days before Louis XVI. was guillotined.* Five commissioners were charged with the management of this property, two to reside on it and three in Paris. The two commissioners sent here, Simon Desjardiniers and Peter Pharoux, arrived in New York in September, 1793. At Albany they fell in accidentally with a young exiled countryman whose address and accomplishments impressed them so favorably that they invited him to join them, and made him their captain. He became a shareholder in the company and ultimately the proprietor of five hundred acres of land. Later, he and Pharoux were employed to survey a canal that should connect the waters of the Hudson and of Lake Champlain,—the first canal ever surveyed in this country. This young man, then only twenty-four years of age, who laid the foundations of his fame as an engineer in the wilds of northern New York, was Mark Isambard Brunel, since famous as the founder of the machine shops of the Royal Navy Yard at Portsmouth in England, the builder of some of the most magnificent railway structures in the world, the engineer of the Thames tunnel, and the father of Mr. I. K. Brunel, the builder of the steamer *Great Eastern*.

The venture not proving as successful as was expected, the stock of the company was divided into 680 shares, and Gouverneur Morris, on his return from the French mission, was appointed the agent of the company on the 2d of January, 1800. A deed for half the tract, or 220,000 acres, was then executed to him, and the following day a deed was given for the other half to Le Ray. In 1809 Morris retired from the agency, taking with him a title to 26,840 acres to cover his expenses and commissions.

Le Ray, who had become proprietor of 126 shares of the stock in his own right, bought the company out on the 17th of September, 1810, opened an office for the sale of lands, built roads, mills, docks, ship-yards, and managed to effect large sales of land, but, unfortunately, not to the class of emigrants who build up a new country. He sold 4480 acres to Lord Augustin de Caulaincourt, who afterward sold them to Count Réal, Chief of Police under Napoleon. He also sold to Count de Grouchy, to General Dufernaux, and, as appears by the following note from Gouverneur Morris, to Madame de Staël:

GOUVERNEUR MORRIS TO MADAME DE STAËL.

MORRISANIA, August 23, 1807.

I flatter myself then, Madame, that next spring you will sail for America. For this purpose, about the middle of April you can embark for New York. As soon as you arrive, you will come to Morrisania, partake what our dairy affords, and refresh yourself. In the beginning of July you shall set out to visit your lands and the interior country, and return by the middle to repose after your fatigues, to gather peaches, take walks, make verses, romances — in a word, to do whatever you please.

Necker, the father of Madame de Staël, also became one of Le Ray's clients and a New York land-holder.†

But the most distinguished party to this speculation was Joseph Bonaparte (Count Survilliers), who seems to have fallen a victim to his good nature rather than to any desire of gain. How it was brought about is thus related by Hough in his "History of Lewis County":

Mr. Le Ray de Chaumont was at his estate in Touraine in 1815, when he heard of Joseph Bonaparte's arrival at Blois. He had known this prince before his great elevation and was his guest at Mortefontaine when the treaty of September 30, 1800, between the United States and France was signed there, but he had ceased meeting him afterwards. Seeing, however, that misfortune had assailed the prince, he remembered the man and hastened to Blois. The prince, having invited Mr. Chaumont to dinner, said suddenly to him: "Well, I remember you spoke to me formerly of your great possessions in the United States. If you have them still, I should like very much to have some in exchange for a part of that silver I have there in those wagons, and which may be pillaged any moment. Take four or five hundred thousand francs and give the equivalent in land." Mr. Le Ray objected that it was impossible to make a bargain where one party alone knew what he was about. "Oh," said the prince, "I know you well, and I rely more on your word than my own judgment." Still Mr. Le Ray would not be satisfied by his flattering assurances, and a long discussion followed, which was terminated by the following propositions, immediately assented to by the prince: Mr. Le Ray Chaumont would receive four hundred thousand francs, and would give the prince a letter for Mr. Le Ray's son, then on the lands, instructing him to convey a certain designated tract, if, after having visited the country (whither he was then going), the prince confirmed the transaction; otherwise, the money to be refunded.

As Count Survilliers was an alien, and therefore could not hold a title to real estate in New York, a deed for 150,260 acres of land was made out to the learned Peter Duponceau of Philadelphia, in trust, to secure the

* The original of this scheme is to be seen now in the State Library at Albany.

† See "Life of Gouverneur Morris."

repayment of the $120,000 which Le Ray had taken.

It can hardly be necessary to say that the count was obliged to accept lands instead of money when the loan came due.

Le Ray had only postponed the disaster which was inevitable. He became land poor. The abundance of better land in less rigorous climates, and the completion of the Erie Canal, which opened the States on the Ohio River to emigration, operated disastrously upon all the large land proprietors in the East — providentially, no doubt, for the country. He was unable to make head against the sea of trouble on which he found himself embarked, and at last was compelled to apply for the benefit of the insolvent laws, and, like his father before him, surrender his estates in turn to his own son for the benefit of his creditors.*

His landed property in the State of New York at the time of making the assignment consisted of

30,759 acres	in Franklin Co., valued at	$ 22,500
73,947 "	in St. Lawrence Co., valued at..	106,000
143,500 "	in Jefferson Co., valued at	574,000
100,000 "	in Lewis Co., valued at.....	133,000
348,206 acres	.....	$835,500

The winding up of his affairs was so managed as to satisfy in full all the claims of his American creditors; but Count Survilliers (Joseph Bonaparte), as early as 1820, had consented to accept 26,840 acres of land, valued at that time at $40,260, in discharge of his claims. To hold this land, the New York legislature passed an enabling act in March, 1825. In June, 1835, the count sold his land to John La Farge of New York City for $80,000, and thus dropped the curtain upon the last act of this disastrous enterprise. It gave a chill to the spirit of emigration from France, from which it never recovered. Had Le Ray invested in lands on or near any of our great water-ways, or even in a more congenial climate, it might now be the descendants of the French, rather than of the English, who would be making the laws of the United States.

Le Ray seems to have been an amiable man, and a liberal and popular landlord. The towns of Raysville and Chaumont perpetuate the remembrance of his name, his rashness, and his misfortunes. He founded the Jefferson County Agricultural Society, and was its first president. He was also one of the earliest presidents of the New York State Agricultural Society. He returned to France in 1832, and died at Paris on December 31, 1840, in the eightieth year of his age.

Le Ray's son, Vincent Le Ray de Chaumont, to whom in his troubles he assigned his property, and who at the age of eighty and upwards frequented the American colony in Paris as late as 1866, lost no time in winding up the estate, all of which has long since passed entirely out of the De Chaumont family. Charles Le Ray de Chaumont de St. Paul. great-grandson of Le Ray, and of course great-great-grandson of Franklin's host, if still alive is now the only representative of the family. As he has been many years married and is childless, with his death the name will probably become extinct.

If the De Chaumonts did not secure the Golden Fleece in America, they secured in the United States what was of far greater value — American wives. Le Ray married a Miss Coxe, and their son married a Miss Jahel, both of New York.

From a letter which appeared in the "New York Evening Post" on the 19th of November, 1885, dated from Royat, Puy de Dôme, and devoted to an account of "The Treasures of French Country Houses," I make the following extract, which fitly concludes this account of a family whom the people of the United States can do no less than hold in grateful and honored remembrance:

> It was in Blois that I first rummaged among these shops, whose attractions are almost a rival to those of the castle, though this is certainly one of the most interesting in France. The traveler will remember the long flight of stone steps which climbs the steep hill in the center of the town. Near the foot of this hill there is a well-furnished book-shop; its windows display old editions and rich bindings, and tempt one to enter and inquire for antiquities. Here I found a quantity of old notarial documents and diplomas of college or university, all more or less recently cleared out from some town hall, or unearthed from neighboring castles, and sold by a careless owner, as no longer valuable to him. This was the case with most of the parchments I found at Blois; they had been acquired within a few years from the castle of Madon, and from a former proprietor of the neighboring castle of Chaumont (the *calvus mons* of medieval time), and most of them pertained to the affairs of the *seigneurie de Chaumont*. Contracts, executions, sales of vineyards and houses, legal decisions, *actes de vente*, loans on mortgage, the marriage contract of a M. Lubin — these were the chief documents that I found and purchased.

* As a justification of his course, Le Ray published a statement entitled "Acte de transmission par M. Le Ray de Chaumont à son fils de ses propriétés, 4to, pp. 70, Paris," in which, says Hough, he vindicated himself satisfactorily. See "History of Jefferson Co." by Franklin B. Hough.

John Bigelow.

RUSSIAN STATE PRISONERS.

FURTHER DETAILS OF THE PRISON LIFE OF THE REVOLUTIONISTS.

IN considering the life of political prisoners in the fortress of Petropavlovsk, the reader must bear steadily in mind the fact that the men and women who thus languish for months or years in the silent bomb-proof casemates of the Trubetskoi bastion are all persons who have not had a trial. Their case is by no means that of condemned criminals undergoing just punishment for offenses of which they have been duly convicted in a court of justice. It is rather that of presumably innocent persons, deprived for an unreasonable length of time of the right to be heard in self-defense, and treated meanwhile as if their guilt were unquestionable. That a very large proportion of the men and women thrown into prison in Russia upon political charges are in fact innocent is not a matter of opinion, it is a matter of official record. I have shown in a previous paper that out of more than a thousand persons arrested for alleged participation in the so-called "revolutionary propaganda" of 1872–75 only 193 were ever brought to trial, and even of this relatively small number 90 were acquitted by a court of judges of the Government's own selection. Nine-tenths, therefore, of these prisoners were entirely innocent, not only of real crime but even of the vague and shadowy offenses set forth in Section 250 of the Russian Penal Code; and yet all of them were subjected before their release to from six months to three years of rigorous solitary confinement in the House of Preliminary Detention, or in the damp prison sepulchers of the Trubetskoi bastion. That a system which brings about such results is in the highest degree arbitrary and unjust, and that the subjection of presumably innocent persons to two or three years of such treatment pending trial is cruel in the extreme, are propositions that hardly admit of argument. Whether such wrongs and cruelties are adequate to excuse the violent measures of retaliation adopted by the terrorists is a question to which different answers may be given by different people; but it will, I think, be generally admitted that the confinement of an innocent man for three years in a casemate of the Trubetskoi bastion under the conditions that I have described, and the final release of such a man without reparation or apology, and perhaps without even the formality of a judicial hearing, constitute extreme provocation. Such was the view taken by the eminent Russian advocate Gerard when, in the trial of the regicides at St. Petersburg in 1881, he endeavored to show that his client Kibalchich had been changed from a law-abiding citizen to a revolutionist by unjust treatment of precisely this character; and such was evidently the view also of the Court, which refused to allow Mr. Gerard to finish his statement, and which, when he persisted, informed him sharply that the Government's treatment of its subjects was "not a matter for his judgment."*

That undeserved imprisonment and cruel treatment before trial were important factors in the development of the Russian revolutionary movement clearly appears from the later history of the 90 prisoners who were acquitted at the end of the trial of the 193 in January, 1878. According to the judgment of a court not at all likely to err on the side of clemency, these 90 young people were wholly guiltless of any offense against the laws. They had not even rendered themselves amenable to the 250th section of the Russian Penal Code by manifesting "an intention to bring about a change of government . . . at a more or less remote time in the future," and yet they all had been punished with three years of the strictest solitary confinement in the House of Detention or the Petropavlovsk fortress, and had finally been denied even the poor boon of a public trial in an open court, where they might at least have made apparent to the world the injustice from which they had suffered. The result was that which might have been anticipated. Almost every one of the persons thus punished and then found not guilty ultimately became a revolutionist, and before 1885 more than a third of them were in Siberia, and two of them — Andre Zheliaboff and Sophia Perofskaya — had perished on the scaffold with the blood of Alexander II. upon their hands.†

I do not know a more significant illustration

* Official Stenographic Report of the Trial of the Regicides, p. 217. St. Petersburg, 1881.

† Sentence of the Court in the case of the 193, p. 8. Manuscript list of names of political exiles in Siberia, now in my possession. Official Stenographic Report of the Trial of the Regicides, p. 260. St. Petersburg, 1881.

than this of one way in which revolutionary impulses in Russia are excited and kept alive. The agencies which transformed these innocent young people into revolutionists were unwarranted arrest, denial for an unreasonable length of time of the right to be heard in their own defense, and prolonged imprisonment under conditions that threatened to deprive them of health, sanity, or life. Three years — two years — or even one year of solitary confinement in a casemate of the Trubetskoi bastion is quite enough to embitter and exasperate to the last degree a consciously innocent man; and if to such unjust imprisonment be added the loss of a brother, sister, wife, or friend in prison before trial, the transformation of the surviving sufferer into a revolutionist becomes at least an understandable phenomenon.

THE FATE OF THE "CONDEMNED."

THIS, however, is by no means a complete presentation of that part of the revolutionist's case which relates to the fortress of Petropavlovsk. Political suspects awaiting trial are not the only persons therein confined, nor are the casemates of the Trubetskoi bastion the only cells in that vast state prison. The fortress is a place of punishment as well as a place of preliminary detention, and its gloomy walls hold the "condemned" as well as the "accused." When a burglar, murderer, or other common Russian felon has been tried, found guilty, and sentenced to penal servitude, he is, as a rule, released from the solitary confinement in which he has been held pending trial, is allowed to mingle with other prisoners of the same penal grade, and is forwarded without unnecessary delay to Siberia. When, however, a political offender has been tried, found guilty, and sentenced to penal servitude under the same code of laws, he is not released from solitary confinement, nor sent with reasonable promptness to Siberia, as he would be if he had merely killed his mother with an ax, but is thrown into a bomb-proof casemate in what is known as the "penal servitude section" of the Petropavlovsk fortress, or into one of the smaller cells of a "Central Convict Prison," and there lies in solitude and wretchedness for one, two, three, or even five years before he finally goes insane or is sent to the convict mines of Kara.* In what part of the fortress the "penal servitude section" is situated, the exiles whom I met in Siberia did not know. It is probable, however, that "condemned" politicals are distributed among various bastions and ravelins in that extensive fortification, and that the words "penal servitude section" designate the criminal class or grade to which such prisoners belong, rather than the particular part of the fortress in which they are confined. The material environment of the "condemned" differs little from that of the "accused." They are shut up in the same spacious but damp and gloomy casemates, with the same high grated windows looking out upon a blank wall, with the same "Judas" pierced doors through which they are constantly watched, and in the same tremorless atmosphere of eternal silence. The difference between their life and the life of the "accused" is mainly a difference of treatment.

DEPRIVATION OF ALL CIVIL RIGHTS.

WHEN a criminal in Russia is judicially condemned to a term of penal servitude, or "katorga," the sentence of the court carries with it deprivation of all civil rights. The political offender who incurs this penalty ceases to be a citizen, and loses at once not only all the privileges and immunities that appertain to his rank or social station, but also all control over his property, his family, and his own person, and all right to claim the protection of the laws, even when his life is imperiled by the treatment to which he is subjected. He is virtually outside the pale of the law, and may be dealt with by the officers of the state as if he were a slave. The fact that the term of penal servitude to which he has been condemned is a short one does not lessen the force of this secular excommunication. A hard-labor sentence of four years divests the criminal of all his civil and political rights as completely as a sentence to penal servitude for life. The property which was his before his condemnation descends to his legal heirs as if he were dead, or is sequestered by the state. The family of which he was the head ceases to belong to him, and the state may assume the custody of his children. The exemption from liability to corporal punishment which he has previously enjoyed is taken away from him, and he may be flogged with the "rods" or the cat. Finally, during what is officially known as the "period of probation," which lasts from a year and a half to eight years, he is not allowed to have either bed, pillow, blanket, money, books, writing materials, or communication with relatives; his head is kept half shaved longitudinally from the forehead to the nape of the neck; he must wear the coarse gray convict dress, must live on the convict rations, and must wear a chain and leg-fetters weighing five pounds. For violent insubordination, even when it is

* There are, of course, exceptions to this rule, and Russian officials assert that political offenders are now held in solitary confinement after sentence only in the castle of Schlüsselburg.

the result of delirium or partial insanity, he may be handcuffed, flogged, confined in a strait-jacket, fettered to the wall of his cell, or chained to a wheel-barrow.*

LIFE IN THE "PENAL SERVITUDE SECTION."

It is hardly necessary to point out the difference which this treatment makes between the life of the "condemned" and the life of the "accused," even although both may be imprisoned in the same fortress. For the "accused" there is always the hope of ultimate trial and release; for the "condemned" there is only the prospect of slow mental and physical decay in the solitude and gloom of a bomb-proof casemate, and finally death, insanity, or the mines of the Trans-Baikal.

You cannot imagine, Mr. Kennan [said a condemned revolutionist to me in Siberia], the misery of prolonged confinement in a casemate of the fortress under what are known as dungeon conditions [kartsernoi polozhenie]. My casemate was sometimes cold, generally damp, and always gloomy. Day after day, week after week, and month after month, I lay there in solitude, hearing no sound save that of the high-pitched, melancholy bells of the fortress cathedral, which slowly chimed the quarter hours, and which always seemed to me to half articulate the words, "Tee zdais seedeesh—ee seedee tee" [Here thou liest—lie here still]. I had absolutely nothing to do except to pace my cell from corner to corner and think. For a long time I used to talk to myself in a whisper; to repeat softly everything in the shape of literature that I could remember, and to compose speeches, which, under certain imagined conditions, I would deliver; but I finally ceased to have energy enough to do even this, and used to sit for hours in a sort of stupor, in which, so far as I can now remember, I was not conscious of thinking at all. Before the end of the first year I grew so weak mentally and physically that I began to forget words. I knew what ideas I desired to express, but some of the words that I needed had gone from me and it was with the greatest difficulty that I could recover them. It seemed sometimes as if my own language were a strange one to me, or one which, from long disuse, I had forgotten. I greatly feared insanity, and my apprehension was increased by the fact that two or three of my comrades in cells on the same corridor were either insane or subject to hallucinations; and I was often roused at night and thrown into a violent chill of nervous excitement by their hysterical weeping, their cries to the guard to come and take away somebody, or something which they imagined they saw, or their groans and entreaties when, in cases of violent delirium, they were strapped to their beds by the gendarmes. My inability to see what was happening in the cells from which these groans, cries, and sounds of violence came gave full play, of course, to my imagination, and thus increased my nervous excitement, until I was on the verge of hysterics myself. Several times, when I feared that I was losing all self-control, I summoned the fortress surgeon, or the "feldsher," who merely gave me a dose of bromide of potassium and told me that I must not excite myself so; that nothing serious had happened; that two or three of the prisoners were sick and delirious; but that there was nothing to be alarmed about. As the fortress contained no hospital, insane and delirious patients were treated in their cells, and were rarely removed to an asylum unless they were manifestly incurable, or the care of them became burdensome. The effect of the eternal stillness, solitude, and lack of occupation on the mind was greatly heightened by the want of proper exercise and nourishment for the body. "Accused" prisoners awaiting trial in the Trubetskoi bastion were allowed to have money in the hands of the "smatritel," or warden, and could direct its expenditure for white bread, vegetables, tea, sugar, etc., to make up the deficiencies of the prison ration; but we, the "condemned," had to live upon black rye-bread, soup which it was often impossible to eat on account of the spoiled condition of the meat from which it had been made, and a small quantity of "kasha," or barley, boiled with a little fat and served without seasoning, and sometimes only half cooked. Such food, in connection with the damp, heavy air of the casemate and the lack of proper exercise, caused derangement of the digestive organs, and this was soon followed by more or less pronounced symptoms of scurvy. Madame Lebedeva, who was in the penal servitude section with me, suffered from scurvy to such an extent that her teeth became loose and her gums greatly swollen, and she could not masticate the prison bread without first soaking it in warm water. Scurvy, even in an incipient form, intensified, of course, the mental depression due primarily to other causes and made it almost insupportable. I never seriously meditated suicide,—it always seemed to me a cowardly thing to escape from suffering by taking one's own life,—but I did speculate upon the possibility of suicide, and wondered how I *could* kill myself in a casemate where there was absolutely nothing that could be used as an implement of self-destruction. Once I went so far as to see if I could hang myself from the small cylindrical hot-air pipe which projected two or three inches into my cell from the face of the brick oven. I did not really intend to take my life, but I felt a morbid curiosity to know whether or not I could do it in that way. As soon as I threw my weight on the pipe, it pulled out of the masonry, making, as it fell to the floor, a noise which attracted the attention of the guard in the corridor. I was forthwith removed to another cell, and I never again tried a similar experiment. They say that poor Goldenberg succeeded in committing suicide in the fortress, but I cannot imagine how he accomplished it. I became satisfied that I could not kill myself in my casemate in any other way than by biting into an artery or dashing my head against the wall, and I ultimately became so weak that I doubt very much whether I could have fractured my skull by the latter method.

ARE FORTRESS PRISONERS FLOGGED AND TORTURED?

It is not my intention to create prejudice against the Russian government, nor to

* Russian Penal Code [Ulozhenie o Nakazaniakh], Official Edition, sections 22 to 25, inclusive, and sections 27 and 28: Government Printing Office, St. Petersburg, 1885. See also the rules for the treatment of convicts which are contained in the XIVth volume of the Russian Collection of Laws [Svod Zakonof], and particularly the Statutes Relating to Exiles [Ustav o Sylnikh], Part II. An exception is made in the fortress to the rule that convicts shall wear leg-fetters, for the reason that the clanking of chains would facilitate communication between cells, and would break the perfect stillness which is regarded as an essential part of prison discipline. The rule that there shall be no communication between the "condemned" and their relatives is sometimes so strictly enforced that a mother cannot even learn whether her son is living or dead. I met in Russia relatives and near friends of Muishkin, Nechaief, Gellis, and Madame Vera Phillipova, who told me that they had been unable to ascertain whether those unfortunate prisoners were in the castle of Schlüsselburg or in their graves.

excite sympathy for the Russian revolutionists, by exaggerating the sufferings of condemned politicals in the penal servitude section of the Petropavlovsk fortress. I desire to state only those things which I have the very strongest reason to believe are true. Stepniak and Prince Krapotkin have painted the life of condemned politicals in somewhat darker colors than my information would justify me in using. Of the fifty or more fortress prisoners whose acquaintance I made in Siberia, not one had ever heard of cells situated below the level of the Neva River; nor of the famous letter written by Nechaief in his own blood; nor of dungeons infested by rats; nor of the flogging of political prisoners with whips; nor of a single case of torture. I am not prepared to assert that the statements of Stepniak and Prince Krapotkin upon these points are inaccurate, or without foundation; but I must, in fairness, say that they are not sustained by the results of my investigations. There are cells in the fortress whose atmosphere is so damp that salt and sugar melt or liquefy in it after a few hours' exposure, and such cells are sometimes occupied by political offenders; but they are not situated below the level of the Neva. Nechaief was chained to the wall of his cell as a disciplinary punishment for striking the gendarme officer Potapoff; but previous to that time he had been treated fairly well, and if he was ever flogged, or ever wrote a letter in his own blood to Alexander III., or to any other person, the exiles in Siberia are ignorant of the fact. Condemned political prisoners in the fortress have frequently been beaten with the butts of guns and with the fists of the guard, but I have not been able to authenticate a single report of actual flogging with a whip, although the latter punishment is authorized by law. As for torture,—that is, the infliction of pain by means of artificial appliances,—I do not believe that it has recently been practiced, either in the fortress or in any other prison of European Russia. A distinguished revolutionist, who is well known to Stepniak and whose biography the latter has written, said to me in Siberia:

I assure you, Mr. Kennan, that torture in the fortress, in our time, has not so much as been heard of. The nearest approach to torture of which I had knowledge during my three-years' confinement there was the forcible administration of chloroform to Oboleshef and Madame Vitanieva, for the purpose of rendering them unconscious while their photographs were being taken.* Several of the prison guard revolted even at that, and one of them refused to assist in holding the struggling prisoners, declaring that he was not a "palach" [hangman], and that it was not a part of his duty to poison people.

EFFECTS OF SOLITARY CONFINEMENT IN FORTRESS CASEMATES.

In the main, however, the descriptions of fortress life given by Stepniak and Prince Krapotkin are much more nearly in accord with the results of my investigations than are those published by the Rev. Henry Lansdell and one or two other English travelers who visited and superficially inspected the Trubetskoi bastion some years ago. There can, I think, be no doubt—and in my own mind there is not even the shadow of a doubt—that prolonged solitary confinement in one of the casemates of a Russian fortress, without books, writing materials, bedding, proper food, or communication of any kind with the outside world, is a much more terrible punishment than death. Madame Vera Phillipova, a well-known revolutionist and a beautiful and accomplished woman, who was tried and condemned at St. Petersburg in 1884, asked as a last favor that she might be hanged instead of being sent to the castle of Schlüsselburg, but her request was denied. Suicides and attempts at suicide in fortress casements are comparatively common, and condemned political prisoners frequently strike some officer of their guard with the hope of being tried by court-martial and shot. The presiding judge of a Russian circuit court, whose acquaintance I made in Moscow on my way home from Siberia, told me, in reply to an inquiry, that the revolutionist Muishkin was shot in the castle of Schlüsselburg in the summer of 1885 for striking the fortress surgeon. The desperate prisoner had resolved to escape from a life of hopeless misery by starving himself to death, and the prison surgeon had been sent to his cell to feed him by force. The high judicial officer who gave me this information was not a revolutionist, nor a sympathizer with revolution; he made the statement dryly, without comment and without manifestation of feeling, and there is, so far as I am aware, no reason for doubting its truth.

The inhumanity of the treatment to which condemned political prisoners are subjected in the penal servitude section of the Petropavlovsk fortress is clearly shown by the phys-

* Oboleshef and Madame Vitanieva were thrown into the fortress upon a charge of participation in the plot to assassinate General Mezzentsef. They refused to allow their photographs to be taken, and were thereupon chloroformed by force. Madame Vitanieva became unconscious and quiet; but the chloroform excited Oboleshef, and made him so delirious and violent that the attempt to photograph him was finally abandoned. There were present on this occasion Major Nikolski, an officer of gendarmes, Doctor Vilms, the fortress surgeon, and a number of "nadziratels," or prison overseers.

ical condition of such prisoners when finally released. In April, 1883, the Department of Imperial Police sent an order to the commandant of the fortress to make up a large party of condemned politicals for deportation to the East Siberian mines. The commandant, after consultation with the fortress surgeon and with the officer appointed to take charge of the convoy, reported that most of the political prisoners named in the order were so weak that they probably could not endure three days' travel, that more than half of them were unable to stand on their feet without support, and that the convoy officer declined to take charge of prisoners who were in such physical condition unless he could be freed from all responsibility for deaths that might occur on the road. In view of this state of affairs the commandant recommended that the condemned politicals who had been selected for deportation be removed to the House of Preliminary Detention, and be held there under more favorable conditions until they should recover strength enough to render their transportation to Siberia practicable. Acting upon this suggestion, the Director of the Imperial Police ordered the removal of twenty-two prisoners, including six women, from the casemates of the fortress to comparatively light and airy cells in one of the upper stories of the House of Detention.* Of the prisoners so removed six were already in an advanced stage of consumption, and twelve were so feeble that they could not walk nor stand, and were carried from their casemates to carriages, either in the arms of the prison guard or upon stretchers.† In the House of Preliminary Detention these wrecks of human beings received medical care and were fed with nourishing food and stimulants for about three months, at the expiration of which time all except Fridenson and Emelianoff were reported convalescent. Orloff and Madame Lebedeva were still suffering from scurvy, and the others were mere shadows of their former selves; but they were officially regarded as strong enough to begin their toilsome journey of nearly five thousand miles to the mines of the Trans-Baikal.

THE DEPARTURE FOR SIBERIA.

I SHALL never forget, while I live [said to me an exile who went with these condemned prisoners to Siberia], the last night in the House of Preliminary Detention before our departure. It was the night of July 24–25, 1883. A rumor was current among the political prisoners that a large party would start for Siberia on the following morning, but no one knew who was to go, and all were awake and watchful. I did not notice any unusual sounds until shortly after midnight, when a cell near mine was thrown open, and I heard, passing my door, the once familiar footsteps of a dear friend and comrade, who had been long in prison, and whom I had not seen since the years of our early manhood, when we breathed together the air of freedom and worked hand in hand for the realization of our ideals. The convict party was evidently being made up, and my friend was to go with it to the mines of the Trans-Baikal. In ten or fifteen minutes I heard his footsteps returning, but they were not so rapid and assured as before and were accompanied by the sharp metallic clink and rattle of chains. He had been put into leg-fetters. I knew, of course, that this was inevitable, and yet the first sound of the chains chilled me with a vague sense of horror. It seemed unnatural and incredible that he — the man whom I loved like a

---

* The names of these prisoners, with their ages, stations in life, and terms of penal servitude, are as follows:

WOMEN.

1. Anna Pavlovna Korba; age 32; school-teacher, and afterward, during the Russo-Turkish war of 1877–78, a Red Cross nurse in a field hospital at the front; 20 years' penal servitude.
2. Anna Yakimova; age 27; school-teacher; penal servitude for life.
3. Praskovia Ivanofskaya; age 30; school-teacher; penal servitude for life.
4. Tatiana Lebedeva; age 31; school-teacher; penal servitude for life.
5. Nadezhda Smirnitskaya; age 31; student in women's college [*Vwyshi Zhenski Kursi*]; 15 years' penal servitude.
6. Antonina Lisofskaya; age 26; student in women's college; 4 years' penal servitude. [She died of consumption at the mines of Kara a few weeks previous to my arrival there.—G. K.]

MEN.

1. Mirski; age 26; student; penal servitude for life. [He had lain four years in a casemate of the Alexei ravelin.—G. K.]
2. Voloshenko; age 31; student; penal servitude for life.
3. Nagorni; age 25; student; penal servitude for life.
4. Fomin; age 25; army officer; penal servitude for life.
5. Yevseief; age 26; peasant; penal servitude for life.
6. Zlatapolski; age 35; technologist; 20 years' penal servitude.
7. Pribuiloff; age 25; physician; 15 years' penal servitude.
8. Kaluzhni; age 26; student; 15 years' penal servitude.
9. Orloff; age 27; student; 13 years' penal servitude.
10. Novitski; age 29; student; 12 years' penal servitude.
11. Hekker; age 19; 10 years' penal servitude.
12. Stephanovich; age 30; student; 8 years' penal servitude.
13. Liustig; age 27; army officer; 4 years' penal servitude. [I saw Liustig in the Irkutsk prison in September, 1885, but had no opportunity to talk with him alone.—G. K.]
14. Kuziumkin; age 21; peasant; 4 years' penal servitude.
15. Emelianoff.
16. Fridenson.

† The twelve prisoners carried out of the fortress were Mesdames Yakimova, Smirnitskaya, and Korba; and Messrs. Zlatapolski, Liustig, Voloshenko, Nagorni, Kaluzhni, Mirski, Hekker, Fridenson, and Emelianoff.

brother; the man whom I regarded as the embodiment of everything good, brave, and generous — had already been fettered like a common highway robber, and was about to go into penal servitude. For a time I paced my cell in uncontrollable nervous agitation, and at last, as prisoner after prisoner was taken from my corridor to the prison work-shop and came back in clanking fetters, I could endure it no longer, and throwing myself on the bed I covered my head with pillows and bed-clothing in order to shut out, if possible, the hateful sound of the chains.

About 3 o'clock in the morning an overseer unlocked and opened the door of my cell and said to me, "Come!" I followed him to the office of the prison, where the commander of the convoy made a careful examination of my person, noted my features and physical characteristics as set forth in a description which he held in his hand, compared my face with that of a photograph taken soon after my arrest, and at last, being apparently satisfied as to my identity, received me formally from the prison authorities. I was then taken down a flight of stairs to the *corps de garde*, a large room on the ground floor, at the door of which stood an armed sentry. The spacious but low and gloomy hall was dimly lighted by a few flaring lamps and candles, and in the middle of it, at two long bare tables, sat ten or fifteen men and women, in coarse gray convict overcoats, drinking tea. The heads of the men were half shaven, they all wore chains and leg-fetters, and on the back of every prisoner, between the shoulders, appeared the two black diamonds which signify that the criminal so marked is a hard-labor convict. Near the door, in a little group, stood six or eight uniformed gendarmes and officers of the detective police, who watched the prisoners intently, whispering now and then among themselves as if communicating to one another the results of their observations. The stillness of the room was unbroken save by the faint hissing of two or three brass samovars on the tables, and an occasional jingle of chains as one of the convicts moved his feet. There was no conversation, and a chance observer would never have imagined that the gray-coated figures sitting silently side by side at the tables were near friends, and in some cases relatives, who had long been buried in the casemates of the fortress, and who were looking into one another's faces for the first time in years.

As I entered the room, one of the prisoners, whose face I did not at first recognize but who proved to be an old friend, rushed forward to meet me, and as he threw his arms around me whispered in my ear, "Don't recognize anybody but me — the gendarmes are watching us." I understood the warning. The police really knew very little about the history and the revolutionary records of some of the political convicts who were present, and it was important that they should not be able to get a clew to any one's identity or past history by noting recognitions as prisoner after prisoner was brought in. The incautious manifestation of emotion by one convict as he met another might result in the return of both to the casemates of the fortress and their detention there until their mutual relations could be investigated. This was the reason for the silence which prevailed throughout the gloomy hall and for the seeming indifference with which the prisoners regarded one another. They were apparently strangers, but in reality they were bound together by innumerable ties of friendship and memories of the past; and as they looked into one another's faces, and noted the changes that time and suffering had wrought, they maintained their composure only by the most heroic effort. On one side of the table sat an old comrade of whom we had heard nothing in years and whom we had all supposed to be dead. On the other side were a young man and his betrothed, who for five years had not seen each other, and who, when thus reunited under the eyes of the gendarmes, did not dare to speak. Near them sat a pale, thin woman about twenty-seven years of age, who held in her arms a sickly baby born in a casemate of the fortress, and who looked anxiously at the door every time it opened with the hope of seeing her husband brought in to join the party. Most of us knew that her husband was dead, but no one dared to tell her that she watched the door in vain.

Nothing could have been more dramatic than the scene in that gloomy hall at half-past 4 o'clock in the morning, when the last of the condemned prisoners had been brought in. The strange and unnatural stillness in a room filled with people; the contrast between the blue and silver uniforms of the gendarmes and the coarse gray overcoats, chains, and leg-fetters of the prisoners; the furtive whisperings of the detective police; and the silence and assumed stolidity of the pale, emaciated, shaven-headed convicts would have made the scene striking and impressive even to a chance spectator. To one, however, who could look beneath the surface of things; who could appreciate the tragic significance of the situation; and who could see with spiritual insight the hot tides of hatred, agony, sympathy, and pity which surged under those gray overcoats, the scene was not merely striking and impressive, but terrible and heart-rending.

At 5 o'clock we were taken in closed carriages to the station of the St. Petersburg and Moscow railway, were put into convict cars with grated windows, and began our long and eventful journey to Siberia. I could not describe, if I would, the scenes that I witnessed in that train, when we were at last freed from the espionage of the gendarmes; when we could greet and embrace one another openly without fear; and could relate to one another the histories of our lives during the long years of our enforced separation. The experiences of all were essentially alike, and the stories were an endless epopee of suffering. We talked all day, and should perhaps have talked all night had not the over-strained nerves of the weaker members of the party given way at last under the tension of excitement and the sudden in-rush of a flood of new sensations and new emotions. To a prisoner who had lived for years in the silence and solitude of a bomb-proof casemate the noise and rush of the train, the unfamiliar sight of God's green world, and the faces and voices of friends who seemed to have been raised suddenly from the dead, were at first intensely exciting; but the excitement was soon followed by complete prostration. Early in the evening one of my comrades, without the least warning, suddenly became hysterical, and in less than ten minutes seven men in our car were either delirious or lying on the floor in a state of unconsciousness. Some of them raved and cried, some went from one long faint into another, and some lay motionless and breathless in a profound swoon until we almost gave them up for dead. The surgeon who accompanied the convoy was summoned, stimulants were administered, water was dashed into the white, ghastly faces, and everything was done that could be done to restore the sufferers to a normal condition; but all night the car was filled with moans and hysterical weeping, and the women of the party — particularly Anna Pavlovna Korba, who was stronger and more self-possessed than any of the men — went from one fainting or hysterical patient to another with restoratives, stimulants, and soothing ministrations. When we arrived in Moscow nearly half of the party had to be carried out of the car in the arms of the guard, and our journey was temporarily suspended in order that they might receive medical treatment.

It may perhaps seem to the reader that the above description, which was first given to me orally by a member of the party, and which afterward, at my request, was written out in

detail, is sensational and exaggerated; but I have simply to say that the condition of that party has been described to me many times, not only by politicals, but by officers of the Exile Administration. One of the latter, who saw the party after it left Moscow and before it crossed the Siberian frontier, said to me that the prisoners who composed it were little more than epileptics — mere wrecks of human beings, who fainted at the least excitement. He probably would not have made this admission had he not been trying to prove in an argument with me that the condition of politicals in Siberia, and even at the mines, was far better than in the fortresses and central convict prisons of European Russia.

"BREAKING THE CHARACTERS" OF POLITICAL OFFENDERS.

I HAVE never been able to obtain from any officer of the Russian government a satisfactory explanation of the fact, that while condemned murderers, highway robbers, and other common felons are allowed almost unrestricted intercommunication and association in the forwarding prisons, and are deported as speedily as practicable to Siberia, political criminals of the same grade are thrown into fortress casemates, or into the "secret" cells of central convict prisons, are detained there for years in the strictest isolation, and are sent to Siberia only when their minds and bodies have been almost hopelessly wrecked by hardships, privations, and solitude. There is a story current among the exiles in Siberia to the effect that when the penal servitude section of the Petropavlovsk fortress was organized, a late director of the Imperial Police, whose name I purposely withhold, explained its object by saying that it was intended to "break the characters" of political offenders. Whether such a remark was really made or not, and whether, if made, it was the authorized statement of a real purpose, I do not know, but in any case the words express forcibly and concisely the actual tendency of this cruel system of punishment. The records of Russian insane asylums, and particularly of the asylum at Kazan, would show, if they could be examined, in what way and to what extent the characters of political offenders are broken.

DELUSIONS OF INSANE POLITICAL CONVICTS.—"FICTITIOUS MARRIAGES."—THE EMPRESS'S PHOTOGRAPH.

IN the month of October, 1880, there arrived at the Russian provincial prison of Mtsensk a party of condemned politicals, who had just been released from four or five years of solitary confinement in the fortress of Petropavlovsk and the central convict prison of Kharkoff, and who were on their way to the East Siberian mines. It happened to be my fortune to find several of these condemned prisoners still alive in various parts of Siberia in 1885, and to make the acquaintance, near Irkutsk, of an exiled journalist named X——, who was in the Mtsensk prison when these convicts arrived there. The condition of the condemned party was pitiable in the extreme. Two of them — Plotnikoff and Donetski — were hopelessly insane, three or four others were hysterical or subject to hallucinations, and all were so worn, emaciated, and weak that it was found necessary to postpone their deportation to Siberia until they could be revived and restored to something like health by means of stimulants and nourishing food.

It was pitiful [said Mr. X——, in describing to me the appearance of these condemned convicts] to see how the mental powers of some of them had been wrecked by misery and solitude. Donetski, before his arrest, had contracted a "fictitious marriage" with a young girl in a Russian provincial town, for the purpose of freeing her from the patriarchal despotism of her home, and affording her an opportunity to educate herself at St. Petersburg.* He had parted from her at the church door and had never again seen her; but after he went insane in the central prison of Kharkoff, he constantly raved about her, and seemed to think that she would come to him if she were not prevented from doing so by the Government. He had obtained in some way while in prison a small card photograph of the Empress, taken when she was the Crown Princess

* At the time of that great spiritual and moral awakening of the youth of Russia which resulted in the so-called movement "to the people," between the years 1870 and 1875, it was a common thing for a young man to emancipate a young woman from the patriarchal tyranny and the cramped life of a Russian provincial household, by contracting with her what was called a "fictitious marriage." The ceremony was not fictitious in the sense of illegality,— it was, on the contrary, a valid and binding tie,— but the contracting parties did not live together and never expected to do so. The young man voluntarily sacrificed his domestic future, and all his anticipations of home and family, for the sake of liberating some young girl from the despotic power of the head of her household, and giving her an opportunity to educate herself and to make herself useful to "the people and the Fatherland." Hundreds of such marriages were contracted in all parts of Russia between 1870 and 1875, and in many cases the young men had never seen, previous to marriage, the young women to whom they bound themselves, and knew of their existence only through mutual friends. Sometimes fictitious husbands met and fell in love with their wives in prison or in exile many years after their nominal union; but in most cases their respective fields of activity were widely separated, and they remained strangers. The purpose of these fictitious marriages was a pure and noble one, but the method adopted to carry out that purpose was in the highest degree quixotic and impracticable, and it was ultimately abandoned. At the time when Donetski lay insane in the central prison of Kharkoff, his fictitious wife was under arrest upon a political charge in Moscow.

Dagmar, and after he became insane he imagined that it was a photograph of his fictitious wife, and would look at it for hours with the most ardent affection and admiration. In the prison of Mtsensk, where he was put into a large cell with other political convicts, he would show to the latter this worn and soiled portrait of the Empress, and say, with a sort of childish pride, "This is my wife — is n't she beautiful?" Then with a mournful intonation he would add, "I have asked them so many times to send for her — I know she would come — but [hysterically] they don't do it — they don't do it!"

Could anything [said Mr. X——] be more touching and pathetic than to find a political convict in chains and leg-fetters cherishing as his dearest possession a photograph of her Majesty the Empress — to see a revolutionist insane from ill-treatment at the hands of the Government and in love with the wife of the Tsar!

THE INSANE POLITICAL PRISONER, PLOTNIKOFF.

THE case of Plotnikoff, the other insane prisoner in this party of condemned politicals from the central prison of Kharkoff, was, if possible, even more pitiable than that of Donetski. At the time of his arrest he was a student in the Moscow University — a quiet, modest young fellow about twenty years of age, with a very attractive and lovable character and a rather serious and thoughtful disposition. He had been well educated and was a good linguist, speaking fluently four or five languages, including English, French, and German. He had never been engaged in active revolutionary work, but was a member of a so-called "circle" of young people in Moscow, known from the name of its founder as the "Dolgushintsi." He was arrested, tried, and sentenced to penal servitude, and the world of the living knew him no more.

When he came to Mtsensk [said one of my informants] he was a broken, insane, emaciated man about twenty-eight years of age, and had been eight years in solitary confinement. How long he had been insane I do not know; but his condition was evidently hopeless, as his mania had assumed a religious form and was accompanied by profound melancholy. He still retained consciousness of the fact that he was a political criminal, but that fact seemed to be a source of distress and humiliation to him, and he did not like to be reminded of it. He was particularly ashamed of his chain and leg-fetters, and used to try in every possible way to conceal them. When I first saw him he had carefully wrapped up all the links of his chain in rags, so that they should not jingle when he moved and thus call the attention of others to what he regarded as his disgrace. He saved carefully all the pieces of old clothing and foot-wrappers which fell into his hands, and finally made out of them a sort of ragged patchwork petticoat, which, when tied about his waist, fell to the floor all around like a woman's dress and entirely concealed from sight both his leg-fetters and his muffled chain. His hair was long on one side of the head and closely shaven on the other, and this, with his coarse gray prison shirt, and the patchwork petticoat hanging from his waist to the floor and concealing his legs, made him the most extraordinary figure I had ever seen.

During all the time that Plotnikoff had been in the penal servitude section of the fortress, and in the central prison of Kharkoff, his mother had neither seen him, communicated with him, nor had news of him; but as soon as she heard that he had been removed from the prison of Kharkoff to Mtsensk and was about to be sent to Siberia, she implored the Minister of the Interior to allow her a last interview with him. If the Minister had been aware that Plotnikoff was insane, he probably would have refused to allow the mother to see him; but high Government officials cannot be expected to remember the names of all the condemned politicals in Russian prisons who happen to be insane.

When Madame Plotnikoff, eager and excited, presented herself at the Mtsensk prison and asked to see her son, the warden, who was naturally a kind-hearted man, tried to dissuade her from her purpose by telling her that her son was about to go to Siberia for life; that he was virtually dead to her already; that he was greatly worn and broken by long imprisonment; and that she would be happier if she would content herself with remembering him as he was in boyhood, or as he appeared when she last saw him, and not lay up for herself a new store of bitter memories by insisting upon an interview that could only increase her grief and renew her sense of bereavement. The mother, however, would not be denied. She had been granted permission to see her son, and see him she would. The warden then tried to prepare her for a great change in her son's appearance, and finally told her frankly that he was broken down mentally and physically and that she might not know him. The mother, however, would not believe that she could fail to recognize her boy, however pale, however wasted by prison confinement, he might be. Seeing at last that argument, persuasion, and forewarning were all useless, the warden conducted the mother to the interview room of the prison, where her son sat reading a prison Bible. For a moment she gazed at him in amazement and horror. In the wild-looking figure before her, with its thin, yellowish face, half-shaven head, coarse gray prison shirt, and patchwork petticoat, she could not see even a suggestion of the boy from whom she had parted eight years before. As she looked at him, however, some maternal instinct told her that it was indeed her son, and with a cry, which was half joy and half terror, she threw herself upon him and clasped him in her arms. The insane prisoner shrank away from her in alarm and embarrassment, and as he strove to unclasp her arms and escape from her embrace she looked into his eyes and the truth suddenly

flashed upon her. The body was that of her son, but the mind was gone. The abruptness of this terrible shock was more than her overstrained nerves could bear. She sank on the floor in a deep swoon and was carried out of the room unconscious. Plotnikoff was sent to the insane asylum at Kazan, and shortly afterward died there.

The facts above set forth I obtained partly from political convicts who were confined with Plotnikoff in the prison of Kharkoff, and partly from exiles who were in the Mtsensk prison when he arrived there and when he was visited by his mother. All of my informants are still in Siberia, and most of them are in the Trans-Baikal.

ARE EXILES' ACCOUNTS OF PRISON LIFE EXAGGERATED?

It may, perhaps, seem to the reader that accounts of prison life obtained from political exiles are likely to be overcolored and exaggerated — that it must in the nature of things be impossible for a man who has had such an experience to regard it fairly and judicially and to describe it without overstatement. I fully understand and appreciate this skeptical attitude toward such facts as those set forth in these papers; but I must say, in justice to the ex-prisoners whose acquaintance I made in Siberia, that they were reluctant, rather than eager, to live over again in narration these terrible months and years of their lives, and that when, by persistent questioning, I succeeded in getting at their darkest memories, it was often at the expense of an outburst of grief which was almost as painful to me as to the narrator. A Russian author, whose name is known even in Western Europe, and who is now an exile in Eastern Siberia, attempted to describe to me one night the death in the fortress of a comrade — an army officer — to whom he was tenderly and devotedly attached. Before he ended his recital my eyes were full of tears, and he himself was pacing the floor with tightly clinched hands, striving to control his emotion and to keep his voice from breaking, while his breast heaved with the tearless, convulsive sobs which make the grief of a strong man more painful to witness than even the uncontrolled weeping of a woman. He succeeded in finishing his story; but he would talk of the fortress no more that night. In the mind of any one who heard that recital there could have been no question of exaggeration or overstatement. Men are not thus profoundly moved by the simulated recollection of unreal experience.

If his Imperial Majesty the Tsar, to whose eyes I hope these pages may come, will summon the officer who was warden of the Kharkoff Central Prison in 1880, and the commandant and the surgeon who served in the Petropavlovsk fortress in 1883, and will personally examine those officers, and, if necessary, their subordinates, as to the mental and physical condition of the political convicts who left those prisons for Siberia in the years named, he will learn at least one of the reasons why, when he goes from St. Petersburg to Moscow, it is necessary to guard the railway with twenty thousand soldiers.

THE HOUSE OF PRELIMINARY DETENTION.

One of the most interesting prisons in European Russia, and the only one containing politicals that I was permitted to inspect, is the House of Preliminary Detention in St. Petersburg. It is not, properly speaking, a political prison, since most of the persons therein confined are common criminals; but it has held at times as many as three hundred political offenders awaiting trial or exile to Siberia. It is, in a certain sense, the great show prison of the empire, and has been particularly commended by the Rev. Henry Lansdell as an illustration of "what Russia can do" in this particular field. It was constructed in 1873–75, under the supervision of a special commission appointed by the Minister of Justice and the Minister of the Interior jointly, and in accordance with plans drawn by Actual State Counselor Maiefski. It cost more than 800,000 rubles (about $400,000 at the present rate of exchange), contained all sorts of modern improvements in the shape of heating and ventilating apparatus, and was believed to embody the latest results of scientific experiment in the department of prison architecture. From the fact, however, that a criminal suit based on alleged incompetence was instituted against the architect before the building had been fairly completed, it would appear that its defects as a prison soon became manifest. To what extent, when completed, it answered the purposes for which it was designed may be inferred from the fact that between 1875 and 1880 it was formally condemned by three successive prison commissions.*

In the summer of 1886, armed with a permit from Mr. Galkin-Vrasskoi, Chief of the Prison and Exile Department, I presented myself at the door of the House of Preliminary Detention, sent my card to the warden, and was promptly admitted. The prison is situated in the heart of the city, on a corner of the Liteni Prospekt, directly behind the Circuit Court.

* "Prison and Exile" [Tiurma i Sylka], by V. N. Nikitin [one of the Directors of the St. Petersburg Prison Committee], p. 519. St. Petersburg, 1880.

It is a large, square, rather showy building, with high arched windows, and suggests to an American a town-hall or an opera-house rather than a prison. The exterior of the building, however, is merely an ornamental mask, designed apparently to disguise the real character and purpose of the structure. From the outside it appears to be only four stories in height, but upon entering the court-yard, or quadrangle around which it is built, one discovers that the high external windows are deceptive, that the building really consists of six stories, and that all the cells look out into the completely inclosed court-yard. Whether the high outside windows serve any useful purpose or not I failed to ascertain; but they certainly do not light any of the cells, and it is impossible for a prisoner to get through these windows, or any others, so much as a glimpse of the outside world. By standing on his stationary wash-basin he can look down into the quadrangle, but that is all.

The prison contains 317 solitary confinement cells, and 68 kameras, or cells for more than one person, and was designed to hold 700 prisoners. The solitary confinement cells, which are all alike, seemed to me to be about 12 feet long by 7 feet wide and 7½ feet high, with whitewashed brick walls and concrete floors. They contain a gas fixture, a stationary wash-basin, an iron bedstead which can be folded up against the wall, two hinged slabs of iron which fold up in the same way, and serve respectively as a table and a chair, and finally, in the end of the cell near the window, a modern water-closet seat and basin, with a round cover and a water trap to exclude noxious air from the soil pipe. As it is not my purpose to describe this prison more minutely than may be necessary in order to explain certain events of which it was the scene, I will merely say, briefly, that the cells and corridors shown me were scrupulously clean, and that the light in the upper stories on a pleasant day in summer was fairly good. The lower stories, however, seemed to be dark and damp, and the ventilation to be bad everywhere. As the cells all open through their windows upon the quadrangle, which is virtually nothing more than a deep square well, the wind rarely blows into or through them, and the circulation of air secured by artificial means is sluggish and inadequate. The sanitary condition of the building, as shown by hospital records, is very unsatisfactory. Even when it was new, 20 per cent. of its criminal population received hospital treatment some time in the course of the year,* and in 1884 it furnished 116 cases of anæmia and scurvy.†

The treatment of political offenders in the House of Preliminary Detention is generally lenient and fairly considerate. They are not obliged to wear any particular dress, they are allowed to have interviews with relatives and to receive from the latter unobjectionable books and articles of clothing, and they may keep money of their own in the hands of the warden and order all their own meals, if they choose, from a restaurant.

The difference between confinement in such a prison as this and incarceration in a case-mate of the fortress is very great.

When I was transferred from the Trubetskoi bastion to the House of Detention [said Dr. Sokolof to me in Siberia], it was like going from a sepulcher to a watering-place hotel. The sound of footsteps, the rumble of ventilating apparatus, the comparative lightness and airiness of the cells, the doves flying about the windows, and the faint roar of vehicles in the adjacent streets, which suggested the busy life and activity of the world, all combined to give me a sense of unwonted exhilaration. In the "monastery"‡ I never saw a human being except the guard, and rarely heard a sound except, perhaps, the low tapping of a prisoner in an adjoining cell. In the House of Detention, on the contrary, I heard noises of all sorts, and soon found myself in communication with everybody. Before I had been there a day, some one in the cell below mine knocked out to me on the steam pipe which ran up beside my door, "Scoop the water out of your basin." I went and looked into my wash-basin and found it to be empty. In a few moments the command came again in a slightly different form, "Scoop the water out of your water-closet basin." Then the significance of the direction flashed upon my mind. Somebody wished to talk to me through the soil pipe with which his basin and mine were in communication. I succeeded, after some trouble, in clearing the trap, and as I did so a babel of hollow human voices came up through the basin, and I found myself able to talk freely with the inmates of eleven other cells, most of whom were politicals.

* There were imprisoned in the House:

‡ The fortress of Petropavlovsk has received from political offenders the nickname of the "monastery."

"PIPE CLUBS" OF POLITICAL PRISONERS.

If the reader will imagine six capital Y's placed over one another in such a manner that the stem of each rests in the fork of the next one below, he will have a rough general idea of the way in which the soil pipes of the

House of Detention are arranged. The arms of the Y in each story terminate in the water-closet basins of two adjoining cells, while the stem forms a section of the large perpendicular pipe which runs from the roof to the ground, and with which twelve cells are thus connected. All that it is necessary to do, therefore, in order to open oral communication with the occupants of these twelve cells is to clear the water-traps. The political prisoners confined in the House of Detention soon discovered that they could talk with one another through these pipes, and when the number of such prisoners was so great that the dark punishment cells of the prison would not hold a tenth part of them, the authorities of the prison were almost powerless to prevent such intercommunication. Before 1876 all attempts to prevent it had been virtually abandoned, and the political prisoners had formed what they called "Water-closet Clubs" or "Pipe Clubs," for social intercourse and mutual improvement. Each club consisted of ten or twelve members, and had its own name and rules. Frequently, when I asked a political exile in Siberia whether he knew such or such a person, he would reply, "Oh, yes! I have never seen him, but I know him well — he was a member of my pipe club in the House of Detention." Educated political prisoners gave lessons through these pipes to the uneducated; languages were taught through them; newspapers were read through them; and they served all the purposes for which speaking and pneumatic tubes are employed in large public buildings. Miss Medvedieva, who afterward became the wife of the Russian author Machtet, read aloud to the members of her pipe club the whole of Turgenieff's novel "Virgin Soil." The political prisoners, however, were not contented with mere oral communication through these pipes, but made them useful also as a means of conveying packages from cell to cell within the limits of each club. A prisoner, for example, in one of the upper stories, would ravel out a part of one of the sheets from his bed, twist the threads into a long cord, fasten to it a securely inclosed package, throw or push the package through the branch pipe of the water-closet basin into the main perpendicular pipe, and then lower it. The prisoner in the cell below for whom it was intended could not reach it, as it hung in the main pipe, but he would have ready another similar cord with a small weight attached, would throw that out through the branch pipe into the main pipe, and the two prisoners would then jerk their respective cords up and down until they became intertwined, when the lower prisoner would haul in the package through his branch pipe and basin. In this way, and by means of weighted cords, swung like pendulums from window to window between clubs, small articles were circulated and distributed throughout the whole prison.

PRISON CELEBRATION OF THE CENTENNIAL FOURTH OF JULY.

In the summer of 1876, when there were confined in the House of Detention more than three hundred political offenders, it was decided to have a general prison celebration of the Centennial Fourth of July — the birthday of the American Republic. As early as the first week in June the prisoners began to make preparations for the proposed celebration, by requesting relatives who visited them to send to the prison for their use as many red and blue handkerchiefs, neckerchiefs, shirts, and pairs of red flannel drawers as could be sent without exciting suspicion, and at the same time all the prisoners who were permitted to have movable lights began to purchase and hoard candles. The colored garments were torn into strips, the candles were cut into inch-long bits, and both were distributed by means of the water-closet pipes throughout the whole prison. Some of the women, who were allowed to have needles and thread and to sew in their cells, succeeded in making rude American flags, and before the 1st of July almost every political offender in the prison had either a flag, or a few strips of red, white, and blue cloth, and an inch or two of candle.

Day breaks in the latitude of St. Petersburg, in summer, very early, and on the morning of the Fourth of July, 1876, hours before the first midnight cannon announced the beginning of the great national celebration in Philadelphia, hundreds of American flags and streamers of red, white, and blue fluttered from the grated windows of the politicals around the whole quadrangle of the great St. Petersburg prison, and the members of the prison "clubs" were faintly hurrahing, singing patriotic songs, and exchanging greetings with one another through the water-closet pipes which united their cells. The celebration, of course, was soon over. The prison guard, although they had never heard of the Declaration of Independence and did not understand the significance of this extraordinary demonstration, promptly seized and removed the flags and tricolored streamers. Some of the prisoners, however, had more material of the same kind in reserve; and at intervals throughout the whole day scraps and tatters of red, white, and blue were furtively hung out here and there from cell windows or tied around the bars of the gratings. Late in the evening, at a preconcerted hour, the

politicals lighted their bits of candle and placed them in their windows, and the celebration ended with a faint but perceptible illumination of the great prison quadrangle.

There seems to me to be something profoundly mournful and touching in this attempt of three hundred political offenders to celebrate together, in the loneliness and gloom of a Russian prison, the centennial birthday of a free people. Compared with the banners, the fireworks, the martial music, and the glowing pageantry of triumphant liberty in Philadelphia, the rudely fashioned stars and stripes hung out from grated cell windows, the faint hurrahing and singing of patriotic songs through water-closet pipes, and the few bits of tallow candle, illuminating faintly at night the dark, silent quadrangle of the prison in St. Petersburg, may seem pitifully weak, ineffective, and insignificant; but judged by a spiritual standard, the celebration in the House of Preliminary Detention in the Russian capital of the American Centennial Fourth of July, is an event almost as extraordinary, and to the heart and imagination of a freeman almost as impressive, as the splendid demonstration in Philadelphia. Human actions are not to be judged solely by the scenic effect which they produce, but are also to be regarded as manifestations of human emotion and purpose. When Mary Magdalene anointed the feet of her Lord and Master as an expression of her devotion and love it was a simple thing, almost a trivial thing, but Christ said, "She hath done what she could." When the Russian revolutionists hung out rude imitations of the star-spangled banner from their cell windows and lighted at night their hoarded bits of candle as an expression of their devotion to liberty and their sympathy with the rejoicings of a freer and happier people, it too was a simple thing, almost a trivial thing, but they did what they could. Some of them were weak from sickness and long solitary confinement; some of them had just come from the voiceless casemates of the Petropavlovsk fortress, where they had lost count of days and months; some of them were living in anticipation of the unknown hardships and privations of Siberia, and upon some of them rested already the dark shadow of the scaffold; but in all their solitude, their loneliness, and their misery they did not forget the Centennial Fourth of July. What little they could do to show their devotion to the cause of freedom and their sympathy with a freedom-loving people on the centennial anniversary of the latter's emancipation, that little they bravely did; and the spirit by which they were animated transfigured their pitiful celebration, with its tricolored rags and its paltry bits of candle, and made it something infinitely more significant in the world's history than all the pomp and ceremony which attend the coronation of a Tsar.

George Kennan.

BISMARCK.

TWO colossal figures stand forth in the history of this century overtopping all their contemporaries, the first Napoleon and Bismarck, both creators of great empires — Napoleon, the first warrior of his time, who welded the revolutionary forces of France into a military machine to satisfy his own imperial ambition in subduing all Europe and making its kings his vassals; Bismarck, the foremost statesman of his time, the political leader of a military people, whose strength he called forth to satisfy their yearnings for national unity, their ambition to become once more a great national power. Napoleon's gigantic plans broke down, after a period of amazing military triumphs, because the statesmanship which guided his warlike enterprises lost itself in fantastic conceptions, and, satisfied with no achievement or conquest, exhausted his means in attempting the impossible. Bismarck's statesmanship,

leaning upon the military strength of his country, directs its efforts to the end of safely maintaining, against the dangers surrounding it, the national power that has been achieved, without striving for anything beyond — and his creation still stands.

In one important respect Bismarck's position is far stronger than Napoleon's ever could be. Napoleon was, and felt himself as, a soldier of fortune. Sprung from low degree, he won his imperial crown by the splendor of his military exploits, and he was constantly disquieted by the consciousness that by new splendors of achievement he had to preserve it. He had to prove the necessity of his remaining at the head of the state from day to day. He had to create exigencies which in the opinion of the people he alone could satisfy. He felt himself obliged to hurry from enterprise to enterprise without end, each to be more dazzling than that which preceded it. Thus there could be no stable condition of things, no repose for him and his people. Bismarck, not a monarch himself, enjoys all the advantage conferred by the historic "legitimacy" of the monarch whom he serves as minister. The hereditary loyalty of the people to the dynasty and their affection for the monarch are an essential part of the minister's power. The two together are not obliged to win popular admiration, and to make good their title to their places, by spectacular effects from day to day. They can stop without impunity. There is no necessity, there is hardly any temptation, for them to follow a policy of adventure and to run new risks for the purpose of maintaining their greatness. They can confine themselves to preserving and fortifying what has been won, and cultivate peace and repose without dangerous loss of prestige.

Yet the question is frequently asked, What will become of the German Empire when the old Kaiser, with his phenomenal popularity, and the old Chancellor, with his phenomenal genius, quit the scene? That question is asked and discussed not without reason. The Kaiser will be followed on the throne by another legitimate "sovereign," who will indeed not inherit the sentimental affection cherished by the people for his predecessor, but who will have the benefit of that hereditary loyalty with which the people regard the reigning dynasty. And so long as Bismarck is chancellor,— that is, so long as he lives, for no new Kaiser will be likely to take the responsibility of displacing him,— things will probably continue to run in the accustomed course. But who or what is there to replace Bismarck when he too disappears?

He is a born commander of men, and as such insists upon accomplishing his objects in his own way. He is a born autocrat, and as such profoundly convinced that his will must prevail. Those who have to work with him are to him not co-workers, but simply instruments. He employs them so long as they promise to be useful. He throws them aside as soon as their usefulness appears exhausted. He cares little, if anything, for what is commonly called political principle. No doubt he is loyal to his sovereign, but not because he unconditionally believes, as a matter of principle, in the divine right of kings; for while he clings with the utmost devotion to the house of Hohenzollern, which represents the strength of Germany, he did not hesitate to drive princes who were just as "legitimate," but who stood in the way of German unity under Prussian leadership, from their thrones and to confiscate their territories. When the constitution of the empire was made, he favored universal suffrage — not because he believed in the principle that the citizen is entitled to active participation in the government, but because he thought that its establishment would be apt to attach the people to the empire, and that, as he had to submit to some sort of representative institution, universal suffrage, embracing the poor as well as the rich, the ignorant as well as the educated, would be most likely to furnish representatives accessible to his influence. He has been a free-trader and a protectionist — not as if he had seen in either free trade or protection a principle consistently to be recognized and adhered to, but because he looked at different times first upon one and then the other as the system most likely to strengthen the country or to array on his side its political forces.

He has no respect for political parties, his policy being to use them each and all as it may temporarily serve his purposes. Before the war of 1866 he appeared identified with the Absolutists, in order to make preparation for the war which was to drive Austria out of the German federation and begin the unification of Germany under Prussian leadership, and for which the Prussian landtag refused to furnish the means. After that war he appeared to side with the Liberals — not as if he had shared their principles or approved of their ultimate aims, but because he depended upon them for the measures required to strengthen the new national organization. Then he turned to the Conservatives for support, because the Liberals aspired to the introduction of parliamentary government, which he thought would weaken the power of the monarch necessary for the defense of the country.

He was a fierce Anti-Clerical, because he feared the influence of the Catholic clergy as a dangerous element of disintegration in the empire. Then he endeavored to win the friendship of the clergy by abandoning some of the

principal features of the *Kultur Kampf*, and admitted even the friendly interference of the Pope in the elections for the German Reichstag, when he found the continuance of the fight against the Church useless and needed the votes of the clerical party for his military and fiscal measures. Thus he cajoles or rebuffs, attracts or repels, treats as friends or as enemies, each and all political parties in turn as they appear fit or unfit to serve the objects he has in view, trying to form, with each session of the parliament, new combinations of political forces to furnish to the government the necessary majority. The party is, for the time being, that which obeys his will. He accepts the advice only of those who agree with him. To those who differ from him he yields only as much as he must, and then only temporarily, to resume the fight with the same stubborn determination at the next convenient moment until he carries his point. In this manner has Bismarck achieved his great successes.

Such a statesman must needs have certain peculiar advantages to sustain him in power. One of these is a constitutional system which raises him above the control of parliamentary majorities. In this respect Bismarck is situated comfortably enough. As minister of the Prussian crown and as chancellor of the German Empire he is, according to the prevailing constitutional theory, responsible only to the King and Kaiser. His official acts, done in the King's and Kaiser's name, are "government acts" of the sovereign, who is responsible only to God. According to this constitutional system, the parliament may pass or defeat bills, grant or withhold supplies, but it cannot drive a minister out of his place by a direct or implied vote of want of confidence. There is no minister living whose measures have been so often defeated in parliament as Bismarck's have been; but, undisturbed, he holds his post, regarding the adverse vote of a parliamentary majority not as a decision, but merely as an adjournment of the struggle.

Still, all these constitutional advantages would not suffice to secure his position did he not possess another and far more potent element of strength. It is not merely his ability as a debater, which, however, although he is not an orator in the ordinary sense, shines the more brilliantly the more difficult the occasion: it is rather that imposing authority acquired by the greatness of his achievements. It is the immense personality which seems to preside over the destinies of the Old World, and which, standing behind what he says and does, overawes the minds of men. Certainly, not a few of his measures of home policy have called forth much well-grounded criticism; his startling political marches and countermarches, the fierce outbursts of his autocratic temper, his undisguised contempt for the principles of parliamentary government, the petty police prosecutions which pursue those who offend him, have deeply irritated many men of liberal views and of self-esteem. Nobody else could have done these things without serious harm to himself. But, in spite of it all, Bismarck's popularity has grown larger from year to year. He can say to his opponents what no one else can say: Remember your resistance to me when I prepared the first blow for German unity. Those who most bitterly denounced me had then to confess that I knew better than they what was good for the Fatherland — that they were wrong and I was right.

This, indeed, does not prove that he is always right; but it goes far to nourish the popular impression that he may be right again, his opponents not knowing it, and that those who are against Bismarck may turn out to be against their country. Thus a large portion of the German people have, under the fascination of this imposing authority, gradually lapsed into the acquiescence of the consciously inferior understanding, trusting that whatever Bismarck may do will be well done. And this condition of things is not now unlikely to last while Bismarck stands at the head of affairs.

But his disappearance will at once reveal the fact that he has no successor. Whoever may follow him will look small in his place. The spell of mysterious superiority will be broken. Bismarck's peculiar power cannot be bequeathed to any one else. His system of policy, if it may so be called, fitted only him. Neither has he suffered to be developed any other system that might take the place of his own. No statesman has been permitted to grow into greatness by his side, nor have parliamentary parties, under his rule, been allowed opportunity to acquire the sense of governmental responsibility. The participation of the representatives of the people in practical government has of late years in Germany rather shrunk than expanded; and yet nothing is more certain than that a determined effort to expand it will be made as soon as the great one-man authority which stands in the way is removed. Germany is full of able men, and a thousand hitherto suppressed ambitions will then make themselves felt. Had they been trained to larger responsibilities, the changes which will inevitably come would probably be easier. It is said that no man is necessary in this world; but Bismarck has been and still is so tremendous a factor in the history of his time, that the uncertainty which his disappearance will leave behind it appears uncommonly obscure.

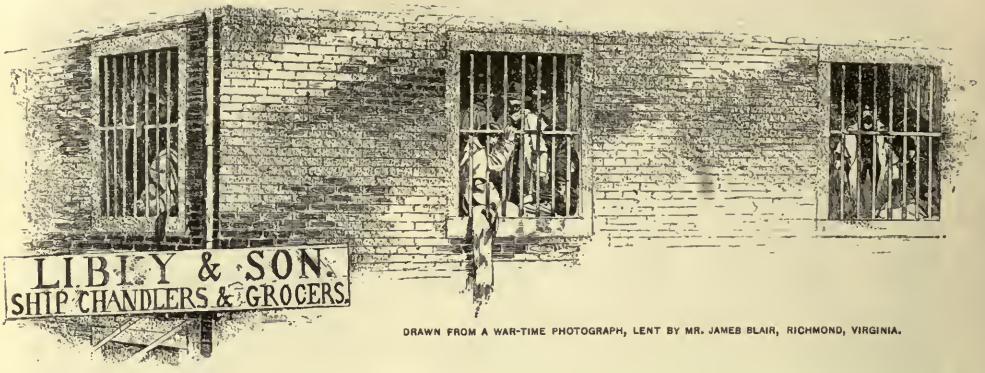
PRINCE OTTO EDWARD LEOPOLD BISMARCK.



DRAWN FROM A WAR-TIME PHOTOGRAPH, LENT BY MR. JAMES BLAIR, RICHMOND, VIRGINIA.

COLONEL ROSE'S TUNNEL AT LIBBY PRISON.

AMONG all the thrilling incidents in the history of Libby Prison none exceeds in interest the celebrated tunnel escape which occurred on the night of February 9, 1864. I was one of the 109 Union officers who passed through the tunnel, and one of the ill-fated 48 that were retaken. I and two companions — Lieutenant Charles H. Morgan of the 21st Wisconsin regiment, who has since served several terms in Congress from Missouri, and Lieutenant William L. Watson of the same company and regiment — when recaptured by the Confederate cavalry were in sight of the Union picket posts. Strange as it may appear, no accurate and complete account has ever been given to the public of this most ingenious and daring escape made on either side during the civil war. Twelve of the party of fifteen who dug the tunnel are still living, including their leader.

Thomas E. Rose, colonel of the 77th Pennsylvania Volunteers, the engineer and leader in the plot throughout,— now a captain in the 16th United States Infantry,— was taken prisoner at the battle of Chickamauga, September 20, 1863. On his way to Richmond he escaped from his guards at Weldon, N. C., but, after a day's wandering about the pine forests with a broken foot, was retaken by a detachment of Confederate cavalry and sent to Libby Prison, Richmond, where he arrived October 1, 1863.

Libby Prison fronts on Carey street, Richmond, and stands upon a hill which descends abruptly to the canal, from which its southern wall is only divided by a street and having a vacant lot on the east. The building was wholly detached, making it a comparatively easy matter to guard the prison securely with a small force and keep every door and window in full view from without. As an additional measure of safety, prisoners were not allowed on the ground-floor, except that in the day-time they were permitted to use the first floor of the middle section for a cook-room. The interior embraced nine large warehouse-rooms 105x45, with eight feet from each floor to ceiling, except the upper floor, which gave more room, owing to the pitch of the gable roof. The abrupt slant of the hill gives the building an additional story on the south side. The whole building really embraces three sections, and these were originally separated by heavy blank walls. The Confederates cut doors through the walls of the two upper floors, which comprised the prisoners' quarters, and they were thus permitted to mingle freely with each other,

COLONEL THOMAS E. ROSE.

but there was no communication whatever between the three large rooms on the first floors. Beneath these floors were three cellars of the same dimensions as the rooms above them, and, like them, were divided from each other by massive blank walls. For ready comprehension, let these be designated the east, middle, and west cellars. Except in the lofts known as "Streight's room" and "Milroy's room," which were occupied by the earliest inmates of Libby in 1863, there was no furniture in the building, and only a few of the early comers possessed such a luxury as an old army blanket

LIBBY PRISON IN 1865.

or a knife, cup, and tin-plate. As a rule, the prisoner, by the time he reached Libby, found himself devoid of earthly goods save the meager and dust-begrimed summer garb in which he had made his unlucky campaign.

At night the six large lofts presented strange war-pictures, over which a single tallow-candle wept copious and greasy tears that ran down over the petrified loaf of corn-bread, Borden's condensed milk can, or bottle in which it was set, and where it struggled on until "taps," when the guards, with unconscious irony, shouted, "Lights out!" at which signal it usually disappeared amid a shower of boots and such other missiles as were at hand. The sleepers covered the six floors, lying in ranks, head to head and foot to foot, like prostrate lines of battle. For the general good, and to preserve something like military precision, these ranks (especially when cold weather compelled them to lie close for better warmth) were subdivided into convenient squads under charge of a "captain," who was invested with authority to see that every man lay "spoon fashion."

No consideration of personal convenience was permitted to interfere with the general comfort of the "squad." Thus, when the hard floor could no longer be endured on the right side,— especially by the thin men,— the captain gave the command, "Attention, Squad Number Four! Prepare to spoon! One— two—spoon!" And the whole squad flopped over on the left side.

The first floor on the west of the building was used by the Confederates as an office and for sleeping-quarters for the prison officials, and a stair-way guarded by sentinels led from this to Milroy's room just above it. As before explained, the middle room was shut off from the office by a heavy blank wall. This room, known as the "Kitchen," had two stoves in it, one of which stood about ten feet from the heavy door that opened on Carey street sidewalk, and behind the stove was a fire-place. The room contained also several long pine tables with permanent seats attached, such as may be commonly seen at picnic grounds. The floor was constantly inundated here by several defective and overworked water-faucets and a leaky trough.

A stair-way without banisters led up on the south-west end of the floor, above which was a room known as the "Chickamauga room," and chiefly occupied by Chickamauga prisoners. The sentinel who had formerly been placed at this stair-way at night, to prevent the prisoners from entering the kitchen, had been withdrawn when, in the fall of 1863, the horrible condition of the floor made it untenable for sleeping purposes.

The uses to which the large ground-floor-room east of the kitchen was put varied during the first two years of the war, but early in

October of 1863, and thereafter, it was permanently used and known as the hospital, and it contained a large number of cots, which were never unoccupied. An apartment had been made at the north or front of the room, which served as a doctor's office and laboratory. Like those adjoining it on the west, this room had a large door opening on Carey street which was heavily bolted and guarded on the outside.

The arrival of the Chickamauga prisoners greatly crowded the upper floors, and compelled the Confederates to board up a small portion of the east cellar at its south-east corner as an additional cook-room, several large caldrons having been set in a rudely built furnace; so, for a short period, the prisoners were allowed down there in the day-time to cook. A stairway led from this cellar to the room above, which subsequently became the hospital.

Such, in brief, was the condition of things when Colonel Rose arrived at the prison. From the hour of his coming, a means of escape became his constant and eager study; and, with this purpose in view, he made a careful and minute survey of the entire premises.

From the windows of the upper east or "Gettysburg room" he could look across the vacant lot on the east and get a glimpse of the yard between two adjacent buildings which faced the canal and Carey street respectively, and he estimated the intervening space at about seventy feet. From the south windows he looked out across a street into the canal and James River, running parallel with each other, the two streams at this point being separated by a low and narrow strip of land. This strip periodically disappeared when protracted seasons of heavy rains came, or when spring floods so rapidly swelled the river that the latter invaded the cellars of Libby. At such times it was common to see enormous swarms of rats come out from the lower doors and windows of the prison and make head for dry land in swimming platoons amid the cheers of the prisoners in the upper windows. On one or two occasions Rose observed workmen descending from the middle of the south side street into a sewer running through its center, and concluded that this sewer must have various openings to the canal both to the east and west of the prison.

The north portion of this cellar contained a large quantity of loose packing straw, covering the floor to an average depth of two feet; and this straw afforded shelter, especially at night, for a large colony of rats, which gave the place the name of "Rat Hell."

In one afternoon's inspection of this dark end Rose suddenly encountered a fellow-prisoner, Major A. G. Hamilton, of the 12th Kentucky Cavalry. A confiding friendship

MAJOR A. G. HAMILTON.

followed, and the two men entered at once upon the plan of gaining their liberty. They agreed that the most feasible scheme was a tunnel, to begin in the rear of the little kitchen apartment at the south-east corner of Rat Hell. Without more ado they secured a broken shovel and two case-knives and began operations.

Within a few days the Confederates decided upon certain changes in the prison for the greater security of their captives. A week afterward the cook-room was abandoned, the stair-way nailed up, the prisoners sent to the upper floors, and all communication with the east cellar was cut off. This was a sore misfortune, for this apartment was the only possible base of successful tunnel operations. Colonel Rose now began to study other practicable means of escape, and spent night after night examining the posts and watching the movements of the sentinels on the four sides of Libby. One very dark night, during a howling storm, Rose again unexpectedly met Hamilton in a place where no prisoner could reasonably be looked for at such an hour. For an instant the impenetrable darkness made it impossible for either to determine whether he had met a friend or foe: neither had a weapon, yet each involuntarily felt for one, and each made ready to spring at the other's throat, when a flash of lightning revealed their identity. The two men had availed themselves of the darkness of the night and the roar of the storm to attempt an escape

from a window of the upper west room to a platform that ran along the west outer wall of the prison, from which they hoped to reach the ground and elude the sentinels, whom they conjectured would be crouched in the shelter of some door-way or other partial refuge that might be available; but so vivid and frequent were the lightning flashes, that the attempt was seen to be extremely hazardous.

Rose now spoke of an entrance from the south side street to the middle cellar, having frequently noticed the entrance and exit of workmen at that point, and expressed his belief that if an entrance could be effected to this cellar it would afford them the only chance of slipping past the sentinels.

He hunted up a bit of pine-wood which he whittled into a sort of wedge, and the two men went down into the dark, vacant kitchen directly over this cellar. With the wedge Rose pried a floor-board out of its place, and made an opening large enough to let himself through it. He had never been in this middle cellar, and was wholly ignorant of its contents or whether it was occupied by Confederates or workmen; but as he had made no noise and the place was in profound darkness, he decided to go down and reconnoiter.

He wrenched off one of the long boards that formed a table-seat in the kitchen, and found that it was long enough to touch the cellar base and protrude a foot or so above the kitchen floor. By this means he easily descended, leaving Hamilton to keep watch above.

The storm still raged fiercely, and the faint beams of a street lamp revealed the muffled form of the sentinel slowly pacing his beat and carrying his musket at a "secure" arms. Creeping softly towards him along the cellar wall, he now saw that what he had supposed was a door was simply a naked opening to the street; and further inspection disclosed the fact that there was but one sentinel on the south side of the prison. Standing in the dark shadow, he could easily have touched this man with his hand as he repeatedly passed him. Groping about, he found various appurtenances indicating that the south end of this cellar was used for a carpenter's shop, and that the north end was partitioned off into a series of small cells with padlocked doors, and that through each door a square hole, a foot in diameter, was cut. Subsequently it was learned that these dismal cages were alternately used for the confinement of "troublesome prisoners"—*i. e.*, those who had distinguished themselves by ingenious attempts to escape—and also for runaway slaves, and Union spies under sentence of death.

At the date of Rose's first reconnoissance to this cellar, these cells were vacant and unguarded. The night was now far spent, and Rose proceeded to return to the kitchen, where Hamilton was patiently waiting him.

The very next day a rare good fortune befell Rose. By an agreement between the commissioners of exchange, several bales of clothing and blankets had been sent by our Government to the famishing Union prisoners on Belle Isle, a number of whom had already frozen to death. A committee of Union officers then confined in Libby, consisting of General Neal Dow, Colonel Alexander von Schrader, Lieut.-Colonel Joseph F. Boyd, and Colonel Harry White, having been selected by the Confederates to supervise the distribution of the donation, Colonel White had, by a shrewd bit of finesse, "confiscated" a fine rope by which one of the bales was tied, and this he now presented to Colonel Rose. It was nearly a hundred feet long, an inch thick, and almost new.

It was hardly dark the following night before Rose and Hamilton were again in the kitchen, and as soon as all was quiet Rose fastened his rope to one of the supporting posts, took up the floor-plank as before, and both men descended to the middle cellar. They were not a little disappointed to discover that where there had been but one sentinel on the south side there were now two. On this and for several nights they contented themselves with sly visits of observation to this cellar, during which Rose found and secreted various tools, among which were a broad-ax, a saw, two chisels, several files, and a carpenter's square. One dark night both men went down and determined to try their luck at passing the guards. Rose made the attempt and succeeded in passing the first man, but unluckily was seen by the second. The latter called lustily for the corporal of the guard, and the first excitedly cocked his gun and peered into the dark door through which Rose swiftly retreated. The guard called, "Who goes there?" but did not enter the dark cellar. Rose and Hamilton mounted the rope and had just succeeded in replacing the plank when the corporal and a file of men entered the cellar with a lantern. They looked into every barrel and under every bench, but no sign of Yankees appeared; and as on this night it happened that several workmen were sleeping in an apartment at the north end, the corporal concluded that the man seen by the sentinel was one of these, notwithstanding their denial when awakened and questioned. After a long parley the Confederates withdrew, and Hamilton and Rose, depressed in spirits, went to bed, and Rose as usual concealed his rope.

Before the week was out they were at it again. On one of these nights Rose suddenly came upon one of the workmen, and, swift as

thought, seized the hidden broad-ax with the intention of braining him if he attempted an alarm; but the poor fellow was too much paralyzed to cry out, and when finally he did recover his voice and his wits, it was to beg Rose, "for God's sake," not to come in there again at night. Evidently the man never mentioned the circumstance, for Rose's subsequent visits, which were soon resumed, disclosed no evidence of a discovery by the Confederates.

Hamilton agreed with Rose that there remained apparently but one means of escape, and that was by force. To overpower the two sentinels on the south side would have been an easy matter, but how to do it and not alarm the rest of the guard, and, in consequence, the whole city, was the problem. To secure these sentinels, without alarming their comrades on the east, west, and north side of the prison, would require the swift action of several men of nerve acting in concert. Precious time was passing, and possibly further alterations might be decided upon that would shut them off from the middle cellar, as they had already been from their original base of operations. Moreover, a new cause of anxiety now appeared. It soon transpired that their nocturnal prowlings and close conferences together had already aroused the belief among many observant prisoners that a plan of escape was afoot, and both men were soon eagerly plied with guarded inquiries, and besought by their questioners to admit them to their confidence.

Hamilton and Rose now decided to organize an escaping party. A number of men were then sworn to secrecy and obedience by Colonel Rose, who was the only recognized leader in all operations that followed. This party soon numbered seventy men. The band was then taken down by Rose in convenient details to the middle cellar or carpenter's shop on many nights, to familiarize each man with the place and with his special part in the plot, and also to take advantage of any favoring circumstances that might arise.

When all had by frequent visits become familiar with the rendezvous, Rose and the whole party descended one night with the determination to escape at whatever hazard. The men were assigned to their several stations as usual, and a selected few were placed by the leader close to the entrance, in front of which the sentinel was regularly passing. Rose commanded strict silence, and placed himself near the exit preparatory to giving the signal. It was an exciting moment, and the bravest heart beat fast. A signal came, but not the one they looked for. At the very moment of action, the man whom Rose had left at the floor-opening in the kitchen gave the danger signal! The alert leader had, with consummate care, told every man beforehand that he must never be surprised by this signal,—it was a thing to be counted upon,—and that noise

LIBBY PRISON AS IT NOW IS.

and panic were of all things to be avoided as fatal folly in their operations. As a consequence, when this signal came, Rose quietly directed the men to fall in line and re-ascend to the kitchen rapidly, but without noise, which they did by the long rope which now formed the easy means of communication from the kitchen to the cellar.

Rose remained below to cover the retreat, and when the last man got up he followed him, replaced the board in the floor, and concealed the rope. He had barely done so when a detail of Confederate guards entered the kitchen from the Carey street door, and, headed by an officer, marched straight in his direction. Meantime the party had disappeared up the stair-way and swiftly made their way over their prostrate comrades' forms to their proper sleeping places. Rose, being the last up, and having the floor to fix, had now no time to disappear like his companions, at least without suspicious haste. He accordingly took a seat at one of the tables, and, putting an old pipe in his mouth, coolly awaited the approach of the Confederates. The officer of the guard came along, swinging his lantern almost in his face, stared at him for a second, and without a remark or a halt marched past him and ascended with his escort to the Chickamauga room. The entrance of a guard and their march around the prison, although afterward common enough after taps, was then an unusual thing, causing much talk among the prisoners, and to the mind of Rose and his fellow-plotters was indicative of aroused suspicion on the part of the Confederates.

The whispering groups of men next day, and the number of his eager questioners, gave the leader considerable concern; and Hamilton suggested, as a measure of safety rather than choice, that some of the mischievous talk of escape would be suppressed by increasing the party. This was acted upon; the men, like the rest, were put under oath by Rose, and the party was thus increased to four hundred and twenty. This force would have been enough to overpower the prison guard in a few minutes, but the swift alarm certain to ensue in the streets and spread like wild-fire over Richmond, the meager information possessed by the prisoners as to the strength and position of the nearest Federal troops, the strongly guarded labyrinth of breastworks that encircled the city, and the easy facilities for instant pursuit at the command of the Confederates, put the success of such an undertaking clearly out of the range of probability, unless, indeed, some unusual favoring contingency should arise, such as the near approach of a coöperating column of Federal cavalry.

Nor was this an idle dream, as the country now knows, for even at this period General Kilpatrick was maturing his plans for that bold expedition for the rescue of the prisoners at Richmond and Belle Isle in which the lamented and heroic young cripple, Colonel Ulric Dahlgren, lost his life. Rose saw that a break out of Libby without such outside assistance promised nothing but a fruitless sacrifice of life and the savage punishment of the survivors. Hence the project, although eagerly and exhaustively discussed, was prudently abandoned.

All talk of escape by the general crowd now wholly ceased, and the captives resigned themselves to their fate and waited with depressed spirits for the remote contingency of an exchange. The quiet thus gained was Rose's opportunity. He sought Hamilton and told him that they must by some stratagem regain access to Rat Hell, and that the tunnel project must be at once revived. The latter assented to the proposition, and the two began earnestly to study the means of gaining an entrance without discovery into this coveted base of operations.

They could not even get into the room above the cellar they wanted to reach, for that was the hospital, and the kitchen's heavy wall shut them off therefrom. Neither could they break the heavy wall that divided this cellar from the carpenter's shop, which had been the nightly rendezvous of the party while the break-out was under consideration, for the breach certainly would be discovered by the workmen or Confederates, some of whom were in there constantly during daylight.

There was, in fact, but one plan by which Rat Hell could be reached without detection, and the conception of this device and its successful execution was due to the stout-hearted Hamilton. This was to cut a hole in the back of the kitchen fire-place; the incision must be just far enough to preserve the opposite or hospital side intact. It must then be cut downward to a point below the level of the hospital floor, then eastward into Rat Hell, the completed opening thus to describe the letter "S." It must be wide enough to let a man through, yet the wall must not be broken on the hospital side above the floor, nor marred on the carpenter's-shop side below it. Such a break would be fatal, for both of these points were conspicuously exposed to the view of the Confederates every hour in the day. Moreover, it was imperatively necessary that all trace of the beginning of the opening should be concealed, not only from the Confederate officials and guards, who were constantly passing the spot every day, but from the hundreds of uninitiated prisoners who crowded around the stove just in front of it from dawn till dark.

WORKING AT THE TUNNEL.

Work could only be possible between the hours of 10 at night, when the room was generally abandoned by the prisoners because of its inundated condition, and 4 o'clock in the morning, when the earliest risers were again astir. It was necessary to do the work with an old jack-knife and one of the chisels previously secured by Rose. It must be done in darkness and without noise, for a vigilant sentinel paced on the Carey street sidewalk just outside the door and within ten feet of the fire-place. A rubber blanket was procured, and the soot from the chimney carefully swept into it. Hamilton, with his old knife, cut the mortar between the bricks and pried a dozen of them out, being careful to preserve them whole.

The rest of the incision was made in accordance with the design described, but no conception could have been formed beforehand of the sickening tediousness of cutting an "S" shaped hole through a heavy wall with a feeble old jack-knife, in stolen hours of darkness. Rose guarded his comrade against the constant danger of interruption by alert enemies on one side and by blundering friends on the other; and, as frequently happens in human affairs, their friends gave them more trouble than their foes. Night after night passed, and still the two men got up after taps from their hard beds, and descended to the dismal and reeking kitchen to bore for liberty. When the sentinel's call at Castle Thunder and at Libby announced 4 o'clock, the dis-

lodged bricks were carefully replaced, and the soot previously gathered in the gum blanket was flung in handfuls against the restored wall, filling the seams so entirely between the bricks as to defy detection. At last, after many weary nights, Hamilton's heroic patience and skill were rewarded, and the way was open to the coveted base of operations, Rat Hell.

Now occurred a circumstance that nearly revealed the plot and nearly ended in a tragedy. When the opening was finished, the long rope was made fast to one of the kitchen supporting posts, and Rose proceeded to descend and reconnoiter. He got partly through with ease, but lost his hold in such a manner that his body slipped through so as to pinion his arms and leave him wholly powerless either to drop lower or return — the bend of the hole being such as to cramp his back and neck terribly and prevent him from breathing. He strove desperately, but each effort only wedged him more firmly in the awful vise. Hamilton sprang to his aid and did his utmost to effect his release; but, powerful as he was, he could not budge him. Rose was gasping for breath and rapidly getting fainter, but even in this fearful strait he refrained from an outcry, that would certainly alarm the guards just outside the door. Hamilton saw that without speedy relief his comrade must soon smother. He dashed through the long, dark room up the stairway, over the forms of several hundred men, and disregarding consequences and savage curses in the dark and crowded room, he trampled upon arms, legs, faces, and stomachs, leaving riot and blasphemy in his track among the rudely awakened and now furious lodgers of the Chickamauga room. He sought the sleeping-place of Major George H. Fitzsimmons, but he was missing. He however found Lieutenant F. F. Bennett, of the 18th Regulars (since a major in the 9th United States Cavalry), to whom he told the trouble in a few hasty words. Both men fairly flew across the room, dashed down the stairs, and by their united efforts, Rose, half-dead and quite speechless, was drawn up from the fearful trap.

Hamilton managed slightly to increase the size of the hole and provide against a repetition of the accident just narrated, and all being now ready, the two men entered eagerly upon the work before them. They appropriated one of the wooden spittoons of the prison, and to each side attached a piece of clothes-line which they had been permitted to have to dry clothes on. Several bits of candle and the larger of the two chisels were also taken to the operating-cellar. They kept this secret well and worked alone for many nights. In fact, they would have so continued, but they found that after digging about four feet their candle would go out in the vitiated air. Rose did the digging, and Hamilton fanned air into him with his hat: even then he had to emerge into the cellar every few minutes to breathe. Rose could dig, but needed the light and air; and Hamilton could not fan, and drag out, and deposit the excavated earth, and meantime keep a lookout. In fact, it was demonstrated that there was slim chance of succeeding without more assistance, and it was decided to organize a party large enough for effective work by reliefs. As a preliminary step, and to afford the means of more rapid communication with the cellar from the fire-place opening, the long rope obtained from Colonel White was formed by Hamilton into a rope-ladder with convenient wooden rungs. This alteration considerably increased its bulk and added to Rose's difficulty in concealing it from curious eyes.

He now made a careful selection of thirteen men beside himself and Hamilton, and bound them by a solemn oath to secrecy and strict obedience. To form this party as he wanted it required some diplomacy, as it was known that the Confederates had, on more than one occasion, sent cunning spies into Libby disguised as Union prisoners, for the detection of any contemplated plan of escape. Unfortunately, the complete list of the names of the party now formed has not been preserved, but among the party, besides Rose and Hamilton, were Captain John Sterling, 30th Indiana; Captain John Lucas, 5th Kentucky Cavalry; Captain Isaac N. Johnson, 6th Kentucky Cavalry; and Lieutenant F. F. Bennett, 18th Regulars.

The party being now formed were taken to Rat Hell and their several duties explained to them by Rose, who was invested with full authority over the work in hand. Work was begun in rear of the little kitchen-room previously abandoned at the south-east corner of the cellar. To systematize the labor, the party was divided into squads of five each, which gave the men one night on duty and two off, Rose assigning each man to the branch of work in which experiments proved him the most proficient. He was himself, by long odds, the best digger of the party; while Hamilton had no equal for ingenious mechanical skill in contriving helpful little devices to overcome or lessen the difficulties that beset almost every step of the party's progress.

The first plan was to dig down alongside the east wall and under it until it was passed, then turn southward and make for the large street sewer next the canal and into which Rose had before noticed workmen descending. This sewer was a large one, believed to be fully six feet high, and, if it could be gained,

there could be little doubt that an adjacent opening to the canal would be found to the eastward. It was very soon revealed, however, that the lower side of Libby was built upon ponderous timbers below which they could not hope to penetrate with their meager stock of tools — such, at least, was the opinion of nearly all the party. Rose nevertheless determined that the effort should be made, and they were soon at work with old pen-knives and case-knives hacked into saws. After infinite labor they at length cut through the great logs, only to be met by an unforeseen and still more formidable barrier. Their tunnel, in fact, had penetrated below the level of the canal. Water began to filter in — feebly at first, but at last it broke in with a rush that came near drowning Rose, who barely had time to make his escape. This opening was therefore plugged up; and to do this rapidly and leave no dangerous traces put the party to their wit's end.

An attempt was next made to dig into a small sewer that ran from the south-east corner of the prison into the main sewer. After a number of nights of hard labor, this opening was extended to a point below a brick furnace in which were incased several caldrons. The weight of this furnace caused a cave-in near the sentinel's path outside the prison wall. Next day, a group of officers were seen eying the break curiously. Rose, listening at a window above, heard the word "rats" repeated by them several times and took comfort. The next day he entered the cellar alone, and felt that if the suspicions of the Confederates were really awakened a trap would be set for him in Rat Hell, and determined, if such were really the case, that he would be the only victim caught. He therefore entered the little partitioned corner room with some anxiety, but there was no visible evidence of a visit by the guards, and his spirits again rose.

The party now reassembled, and an effort was made to get into the small sewer that ran from the cook-room to the big sewer which Rose was so eager to reach; but soon it was discovered, to the utter dismay of the weary party, that this wood-lined sewer was too small to let a man through it. Still, it was hoped by Rose that by removing the plank with which it was lined the passage could be made. The spirits of the party were by this time considerably dashed by their repeated failures and sickening work; but the undaunted Rose, aided by Hamilton, persuaded the men to another effort, and soon the knives and toy saws were at work again with vigor. The work went on so swimmingly that it was confidently believed that an entrance to the main sewer would be had on the night of January 26, 1864.

On the night of the 25th two men had been left down in Rat Hell to cover any remaining traces of a tunnel, and when night came again it was expected that all would be ready for the escape between 8 and 9 o'clock the following night. Meantime, the two men were to enter and make careful examination of the main sewer and its adjacent outlets. The party, which was now in readiness for its march for the Federal camps, waited tidings from these two men all next day in tormenting anxiety, and the weary hours went by on leaden wings. At last the sickening word came that the planks yet to be removed before they could enter the main sewer were of seasoned oak — hard as bone, and three inches thick. Their feeble tools were now worn out or broken; they could no longer get air to work or keep a light in the horrible pit which was reeking with cold mud; in short, any attempt at further progress, with the utensils at hand, was foolish.

Most of the party were now really ill from the foul stench in which they had lived so long. The visions of liberty that had first lured them to desperate efforts under the inspiration of Rose and Hamilton had at last faded, and one by one they lost heart and hope and frankly told Colonel Rose that they could do no more. The party was therefore disbanded, and the yet sanguine leader, with Hamilton for his sole helper, continued the work alone. Up to this time thirty-nine nights had been spent in the work of excavation. The two men now made a careful examination of the north-east corner of the cellar, at which point the earth's surface outside the prison wall, being eight or nine feet higher than at the canal or south side, afforded a better place to dig than the latter, being free from water and with clay-top enough to support itself. The unfavorable feature of this point was that the only possible terminus of a tunnel was a yard between the buildings beyond the vacant lot on the east of Libby. Another objection was that, even when the tunnel should be made to that point, the exit of any escaping party must be made through an arched wagon-way under the building that faced the street on the canal side, and every man must emerge on the sidewalk in sight of the sentinel on the south side of the prison, the intervening space being in the full glare of a gas-lamp. It was carefully noted, however, by Rose, long before this, that the west end of the beat of the nearest sentinel was between fifty and sixty feet from the point of egress, and it was concluded that by walking away at the moment the sentinel commenced his pace westward, one would be far enough into the shadow to make it improbable that the color

of his clothing could be made out by the sentinel when he faced about to return towards the eastern end of his beat, which terminated ten to fifteen feet east of the prison wall. It was further considered that as these sentinels had for their special duty the guarding of the prison, they would not be eager to burden themselves with the duty of molesting persons seen in the vicinity outside of their jurisdiction, provided, of course, that the retreating forms — many of which they must certainly see — were not recognized as Yankees. All others they might properly leave for the challenge and usual examination of the provost guard who patrolled the streets of Richmond.

The wall of that east cellar had to be broken in three places before a place was found where the earth was firm enough to support a tunnel. The two men worked on with stubborn patience, but their progress was painfully slow. Rose dug assiduously, and Hamilton alternately fanned air to his comrade and dragged out and hid the excavated dirt, but the old difficulty confronted him. The candle would not burn, the air could not be fanned fast enough with a hat and the dirt hidden, without better contrivances or additional help.

Rose now reassembled the party and selected from them a number who were willing to renew the attempt.* Against the east wall stood a series of stone fenders abutting inward, and these, being at uniform intervals of about twenty feet, cast deep shadows that fell towards the prison front. In one of these dark recesses the wall was pierced, well up towards the Carey street end. The earth here has very densely compressed sand, that offered a strong resistance to the broad-bladed chisel, which was their only effective implement, and it was clear that a long turn of hard work must be done to penetrate under the fifty-foot lot to the objective point. The lower part of the tunnel was about six inches above the level of the cellar floor, and its top about two and a half feet. Absolute accuracy was of course impossible, either in giving the hole a perfectly horizontal direction or in preserving uniform dimensions; but a fair level was preserved, and the average diameter of the tunnel was a little over two feet. Usually one man would dig, and fill the spittoon with earth; upon the signal of a gentle pull, an assistant would drag the load into the cellar by the clothes-lines fastened to each side of this box, and then hide it under the straw; a third constantly fanned air into the tunnel with a rubber blanket stretched across a frame, the invention of the ingenious Hamilton; a fourth would give occasional relief to the last two; while a fifth would keep a lookout.

The danger of discovery was continual, for the guards were under instructions from the prison commandant to make occasional visits to every accessible part of the building; so that it was not unusual for a sergeant and several men to enter the south door of Rat Hell in the day-time, while the diggers were at labor in the dark north end. During these visits the digger would watch the intruders with his head sticking out of the tunnel, while the others would crouch behind the low stone fenders, or crawl quickly under the straw. This was, however, so uninviting a place, that the Confederates made this visit as brief as a nominal compliance with their orders permitted, and they did not often venture into the dark north end. The work was fearfully monotonous, and the more so because absolute silence was commanded, the men moving about mutely in the dark. The darkness caused them frequently to become bewildered and lost; and as Rose could not call out for them, he had often to hunt all over the big dungeon to gather them up and pilot them to their places.

The difficulty of forcing air to the digger, whose body nearly filled the tunnel, increased as the hole was extended, and compelled the operator to back into the cellar often for air, and for air that was itself foul enough to sicken a strong man.

But they were no longer harassed with the water and timbers that had impeded their progress at the south end. Moreover, experience was daily making each man more proficient in the work. Rose urged them on with cheery enthusiasm, and their hopes rose high, for already they had penetrated beyond the sentinels' beat and were nearing the goal.

The party off duty kept a cautious lookout from the upper east windows for any indication of suspicion on the part of the Confederates. In this extreme caution was necessary, both to avert the curiosity of prisoners in those east rooms and to keep out of the range of bullets from the guards, who were under a standing order to fire at a head if seen at a

* The party now consisted of Colonel Thomas E. Rose, 77th Pennsylvania; Major A. G. Hamilton, 12th Kentucky; Captain Terrance Clark, 79th Illinois; Major George H. Fitzsimmons, 30th Indiana; Captain John F. Gallagher, 2d Ohio; Captain W. S. B. Randall, 2d Ohio; Captain John Lucas, 5th Kentucky; Captain I. N. Johnson, 6th Kentucky; Major B. B. McDonald, 101st Ohio; Lieutenant N. S. McKean, 21st Illinois; Lieutenant David Garbett, 77th Pennsylvania; Lieutenant J. C. Fislar, 7th Indiana Artillery; Lieutenant John D. Simpson, 10th Indiana; Lieutenant John Mitchell, 79th Illinois; and Lieutenant Eli Foster, 30th Indiana. This party was divided into three reliefs, as before, and the work of breaking the cellar wall was successfully done the first night by McDonald and Clark.

window, or at a hand if placed on the bars that secured them. A sentinel's bullet one day cut a hole in the ear of Lieutenant Hammond; another officer was wounded in the face by a bullet, which fortunately first splintered against one of the window-bars; and a captain of an Ohio regiment was shot through the head and instantly killed while reading a newspaper. He was violating no rule whatever, and when shot was from eight to ten feet inside the window through which the bullet came. This was a wholly unprovoked and wanton murder; the cowardly miscreant had fired the shot while he was off duty, and from the north sidewalk of Carey street. The guards (home guards they were) used, in fact, to gun for prisoners' heads from their posts below pretty much after the fashion of boys after squirrels; and the whiz of a bullet through the windows became too common an occurrence to occasion remark unless some one was shot.

Under a standing rule, the twelve hundred prisoners were counted twice each day, the first count being made about 9 in the morning, and the last about 4 in the afternoon. This duty was habitually done by the clerk of the prison, E. W. Ross, a civilian employed by the commandant. He was christened by the prisoners, by reason of his diminutive size, "Little Ross."* Ross was generally attended by either "Dick" Turner, Adjutant Latouche, or Sergeant George Stansil, of the 18th Georgia, with a small guard to keep the prisoners in four closed ranks during the count. The commandant of the prison, Major Thomas P. Turner (no relative of Dick's), seldom came upstairs.

To conceal the absence of the five men who were daily at work at the tunnel, their comrades of the party off digging duty resorted, under Rose's supervision, to a device of "repeating." This scheme, which was of vital importance to hoodwink the Confederates and avert mischievous curiosity among the uninformed prisoners, was a hazardous business that severely taxed the ingenuity and strained the nerve of the leader and his coadjutors. The manner of the fraud varied with circumstances, but in general it was worked by five of Rose's men, after being counted at or near the head of the line, stooping down and running towards the foot of the ranks, where a few moments later they were counted a second time, thus making Ross's book balance. The whole five, however, could not always do this undiscovered, and perhaps but three of the number could repeat. These occasional mishaps threatened to dethrone the reason of the puzzled clerk; but in the next count the "repeaters" would succeed in their game, and for the time all went well, until one day some of the prisoners took it into their heads, "just for the fun of the thing," to imitate the repeaters. Unconscious of the curses that the party were mentally hurling at them, the meddlers' sole purpose was to make "Little Ross" mad. In this they certainly met with signal success, for the reason of the mystified clerk seemed to totter as he repeated the count over and over in the hope of finding out how one careful count would show that three prisoners were missing and the next an excess of fifteen. Finally Ross, lashed into uncontrollable fury by the sarcastic remarks of his employers and the heartless merriment of the grinning Yanks before him, poured forth his goaded soul as follows:

"Now, gentlemen, look yere: I can count a hundred as good as any blank man in this yere town, but I 'll be blank blanked if I can count a hundred of you blanked Yankees. Now, gentlemen, there 's one thing sho, there 's eight or ten of you-uns yere that ain't yere!"

This extraordinary accusation "brought down the house," and the Confederate officers and guards, and finally Ross himself, were caught by the resistless contagion of laughter that shook the rafters of Libby.

The officials somehow found a balance that day on the books and the danger was for this once over, to the infinite relief of Rose and his anxious comrades. But the Confederates appeared dissatisfied with something, and came upstairs next morning with more officers and with double the usual number of guards; and some of these were now stationed about the room so as to make it next to impossible to work the repeating device successfully. On this day, for some reason, there were but two men in the cellar, and these were Major B. B. McDonald and Captain I. N. Johnson.

The count began as usual, and, despite the guard in rear, two of the party attempted the repeating device by forcing their way through the center of the ranks towards the left; but the "fun of the thing" had now worn out with the unsuspecting meddlers, who resisted the passage of the two men. This drew the attention of the Confederate officers, and the repeaters were threatened with punishment. The result was inevitable, the count showed two missing: it was carefully repeated, with the same result. To the dismay of Rose and his little band, the prison register was now brought upstairs and a long, tedious roll-call by name was endured, each man passing through a narrow door as his name was called, and between a line of guards.

No stratagem that Rose could now invent could avert the discovery by the Confederates

* "Little Ross" was burned to death with other guests at the Spotswood House, Richmond, in 1873.

that McDonald and Johnson had disappeared, and the mystery of their departure would be almost certain to cause an inquiry and investigation that would put their plot in peril and probably reveal it.

At last, the "J's" were reached and the name of I. N. Johnson was lustily shouted and repeated, with no response. The roll-call proceeded until the name of B. B. McDonald was reached. To the increasing amazement of everybody but the conspirators, he also had vanished. A careful note was taken of these two names by the Confederates, and a thousand tongues were now busy with the names of the missing men and their singular disappearance.

The conspirators were in a tight place, and must choose between two things. One was for the men in the cellar to return that night and face the Confederates with the most plausible explanation of their absence that they could invent, and the other alternative was the revolting one of remaining in their horrible abode until the completion of the tunnel.

When night came the fire-place was opened, and the unlucky pair were informed of the situation of affairs and asked to choose between the alternatives presented. McDonald decided to return and face the music; but Johnson, doubtful if the Confederates would be hoodwinked by any explanation, voted to remain where he was and wait for the finish of the tunnel.

As was anticipated, McDonald's return awakened almost as much curiosity among the inhabitants of Libby as his disappearance, and he was soon called to account by the Confederates. He told them he had fallen asleep in an out-of-the-way place in the upper west room, where the guards must have overlooked him during the roll-call of the day before. McDonald was not further molested. The garrulous busybodies, who were Rose's chief dread, told the Confederate officials that they had certainly slept near Johnson the night before the day he was missed. Lieutenant J. C. Fislar (of the working-party), who also slept next to Johnson, boldly declared this a case of mistaken identity, and confidently expressed his belief to both Confederates and Federals who gathered around him that Johnson had escaped and was by this time, no doubt, safe in the Union lines. To this he added the positive statement that Johnson had not been in his accustomed sleeping-place for a good many nights. The busybodies, who had indeed told the truth, looked at the speaker in speechless amazement, but reiterated their statements. But others of the conspirators took Fislar's bold cue and stoutly corroborated him.

Johnson was, of course, nightly fed by his companions, and gave them such assistance as he could at the work; but it soon became apparent that a man could not long exist in such a continuously pestilential atmosphere. How long were the days and nights the poor fellow passed among the squealing rats no tongue can tell — the sickening air, the deathly chill, the horrible, interminable darkness. One day out of three was an ordeal for the workers, who at least had a rest of two days afterward. As a desperate measure of relief it was arranged, with the utmost caution, that late each night Johnson should come upstairs, when all was dark and the prison in slumber, and sleep among the prisoners until just before the time for closing the fire-place opening, about 4 o'clock each morning. As he spoke to no one and the room was dark, his presence was never known, even to those who lay next to him; and indeed he listened to many earnest conversations between his neighbors regarding his wonderful disappearance.*

As a matter of course, the incidents above narrated made day-work on the tunnel too hazardous to be indulged in, on account of the increased difficulty of accounting for absentees, but the party continued the night-work with unabated industry.

When the opening had been extended nearly across the lot, some of the party believed they had entered under the yard which was the intended terminus; and one night when McDonald was the digger, so confident was he that the desired distance had been made, that he turned his direction upward, and soon broke through to the surface. A glance showed him his nearly fatal blunder, against which, indeed, he had been earnestly warned by Rose, who from the first had carefully estimated the intervening distance between the east wall of Libby and the terminus. In fact, McDonald saw that he had broken through in the open lot which was all in full view of a sentinel who was dangerously close. Appalled by what he had done, he retreated to the cellar and reported to his companions the disaster. Believing that discovery was now certain, the party sent one of their number up the rope to report to Rose, who was asleep. The hour was about midnight when the leader learned of the mischief. He quickly got up, went down cellar, entered the tunnel, and examined the break. It was not so near the sentinel's path as McDonald's excited report indicated, and fortunately the breach was at a point whence the surface sloped downward towards the east. He took off his blouse and stuffed it into the

* In a volume entitled "Four Months in Libby," Captain Johnson has related his experience at this time, and his subsequent escape.

opening, pulling the dirt over it noiselessly, and in a few minutes there was little surface evidence of the hole. He then backed into the cellar in the usual crab fashion, and gave directions for the required depression of the tunnel and vigorous resumption of the work. The hole made in the roof of the tunnel was not much larger than a rat hole, and could not be seen from the prison. But the next night Rose shoved an old shoe out of the hole, and the day afterward he looked down through the prison-bars and saw the shoe lying where he had placed it, and judged from its position that he had better incline the direction of the tunnel slightly to the left.

Meantime Captain Johnson was dragging out a wretched existence in Rat Hell, and for safety was obliged to confine himself by day to the dark north end, for the Confederates often came into the place very suddenly through the south entrance. When they ventured too close, Johnson would get into a pit that he had dug under the straw as a hiding-hole both for himself and the tunnelers' tools, and quickly cover himself with a huge heap of short packing straw. A score of times he came near being stepped upon by the Confederates, and more than once the dust of the straw compelled him to sneeze in their very presence.

On Saturday, February 6, a larger party than usual of the Confederates came into the cellar, walked by the very mouth of the tunnel, and seemed to be making a critical survey of the entire place. They remained an unusually long time and conversed in low tones; several of them even kicked the loose straw about; and in fact everything seemed to indicate to Johnson — who was the only one of the working party now in the cellar — that the long-averted discovery had been made. That night he reported matters fully to Rose at the fire-place opening.

The tunnel was now nearly completed, and when Rose conveyed Johnson's message to the party it caused dismay. Even the stout-hearted Hamilton was for once excited, and the leader whose unflinching fortitude had thus far inspired his little band had his brave spirits dashed. But his buoyant courage rose quickly to its high and natural level. He could not longer doubt that the suspicions of the Confederates were aroused, but he felt convinced that these suspicions had not as yet assumed such a definite shape as most of his companions thought; still, he had abundant reason to believe that the success of the tunnel absolutely demanded its speedy completion, and he now firmly resolved that a desperate effort should be made to that end. Remembering that the next day was Sunday, and that it was not customary for the Confederates to visit the operating-cellar on that day, he determined to make the most in his power of the now precious time. He therefore caused all the party to remain upstairs, directing them to keep a close watch upon the Confederates from all available points of observation, to avoid being seen in whispering groups,— in short, to avoid all things calculated to excite the curiosity of friends or suspicion of enemies,— and to await his return.

Taking McDonald with him, he went down through the fire-place before daylight on Sunday morning, and, bidding Johnson to keep a vigilant watch for intruders and McDonald to fan air into him, he entered the tunnel and began the forlorn hope. From this time forward he never once turned over the chisel to a relief.

All day long he worked with the tireless patience of a beaver. When night came, even his single helper, who performed the double duty of fanning air and hiding the excavated earth, was ill from his hard, long task and the deadly air of the cellar. Yet this was as nothing compared with the fatigue of the duty that Rose had performed; and when at last, far into the night, he backed into the cellar, he had scarcely strength enough to stagger across to the rope-ladder.

He had made more than double the distance that had been accomplished under the system of reliefs on any previous day, and the non-appearance of the Confederates encouraged the hope that another day, without interruption, would see the work completed. He therefore determined to refresh himself by a night's sleep for the finish. The drooping spirits of his party were revived by the report of his progress and his unalterable confidence.

Monday morning dawned, and the great prison with its twelve hundred captives was again astir. The general crowd did not suspect the suppressed excitement and anxiety of the little party that waited through that interminable day, which they felt must determine the fate of their project.

Rose had repeated the instructions of the day before, and again descended to Rat Hell with McDonald for his only helper. Johnson reported all quiet, and McDonald taking up his former duties at the tunnel's mouth, Rose once more entered with his chisel. It was now the seventeenth day since the present tunnel was begun, and he resolved it should be the last. Hour after hour passed, and still the busy chisel was plied, and still the little wooden box with its freight of earth made its monotonous trips from the digger to his comrade and back again.

From the early morning of Monday, Febru-

ary 8, 1864, until an hour after midnight the next morning his work went on. As midnight approached, Rose was nearly a physical wreck: the perspiration dripped from every pore of his exhausted body; food he could not have eaten if he had had it. His labors thus far had given him a somewhat exaggerated estimate of his physical powers. The sensation of fainting was strange to him, but his staggering senses warned him that to faint where he was meant at once his death and burial. He could scarcely inflate his lungs with the poisonous air of the pit; his muscles quivered with increasing weakness and the warning spasmodic tremor which their unnatural strain induced; his head swam like that of a drowning person.

By midnight he had struck and passed beyond a post which he felt must be in the yard. During the last few minutes he had turned his course upward, and to relieve his cramped limbs he turned upon his back. His strength was nearly gone: the feeble stream of air which his comrade was trying, with all his might, to send to him from a distance of fifty-three feet could no longer reach him through the deadly stench. His senses reeled; he had not breath nor strength enough to retreat backward through his narrow grave. In the agony of suffocation he dropped the dull chisel and beat his two fists against the roof of his grave with the might of despair — when, blessed boon! the crust gave way and the loosened earth showered upon his dripping face, purple with agony; his famished eye caught sight of a radiant star in the blue vault above him; a flood of light and a volume of cool, delicious air poured over him. At that very instant the sentinel's cry rang out like a prophecy — "Half-past one, and all 's well!"

Recovering quickly under the inspiring air, he dragged his body out of the hole and made a careful survey of the yard in which he found himself. He was under a shed, with a board fence between him and the east-side sentinels, and the gable end of Libby loomed grimly against the blue sky. He found the wagon-way under the south-side building closed from the street by a gate fastened by a swinging bar, which, after a good many efforts, he succeeded in opening. This was the only exit to the street. As soon as the nearest sentinel's back was turned he stepped out and walked quickly to the east. At the first corner he turned north, carefully avoiding the sentinels in front of the "Pemberton Buildings" (another military prison north-east of Libby), and at the corner above this he went westward, then south to the edge of the canal, and thus, by cautious moving, made a minute examination of Libby from all sides.

Having satisfied his desires, he retraced his steps to the yard. He hunted up an old bit of heavy plank, crept back into the tunnel, feet first, drew the plank over the opening to conceal it from the notice of any possible visitors to the place, and crawled back to Rat Hell. McDonald was overjoyed, and poor Johnson almost wept with delight as Rose handed one of them his victorious old chisel and gave the other some trifle he had picked up in the outer world as a token that the Underground Railroad to God's Country was open.

Rose now climbed the rope-ladder, drew it up, rebuilt the fire-place wall as usual, and, finding Hamilton, took him over near one of the windows and broke the news to him. The brave fellow was almost speechless with delight, and, quickly hunting up the rest of the party, told them that Colonel Rose wanted to see them down in the dining-room.

As they had been waiting news from their absent leader with feverish anxiety for what had seemed to them all the longest day in their lives, they instantly responded to the call and flocked around Rose a few minutes later in the dark kitchen where he waited them. As yet they did not know what news he brought, they could scarcely wait for him to speak out; and when he announced, "Boys, the tunnel is finished," they could hardly repress a cheer. They wrung his hand again and again, and danced about with childish joy.

It was now nearly 3 o'clock in the morning. Rose and Hamilton were ready to go out at once, and indeed were anxious to do so, since every day of late had brought some new peril to their plans. None of the rest, however, were ready; and all urged the advantage of having a whole night in which to escape through and beyond the Richmond fortifications, instead of the few hours of darkness which now preceded the day. To this proposition Rose and Hamilton somewhat reluctantly assented. It was agreed that each man of the party should have the privilege of taking one friend into his confidence, and that the second party of fifteen thus formed should be obligated not to follow the working party out of the tunnel until an hour had elapsed. Colonel H. C. Hobart, of the 21st Wisconsin, was deputed to see that the programme was observed. He was to draw up the rope-ladder, hide it, and rebuild the wall; and the next night was himself to lead out the second party, deputing some trustworthy leader to follow with still another party on the third night; and thus it was to continue until as many as possible should escape.

On Tuesday evening, February 9, at 7 o'clock, Colonel Rose assembled his party in

the kitchen, and, posting himself at the fire-place, which he opened, waited until the last man went down. He bade Colonel Hobart good-by, went down the hole, and waited until he had heard his comrade pull up the ladder and finally heard him replace the bricks in the fire-place and depart. He now crossed Rat Hell to the entrance into the tunnel, and placed the party in the order in which they were to go out. He gave each a parting caution, thanked his brave comrades for their faithful labors, and, feelingly shaking their hands, bade them God-speed and farewell.

He entered the tunnel first with Hamilton next, and was promptly followed by the whole party through the tunnel and into the yard. He opened the gate leading towards the canal and signaled the party that all was clear. Stepping out on the sidewalk as soon as the nearest sentinel's back was turned, he walked briskly down the street to the east, and a square below was joined by Hamilton. The others followed at intervals of a few minutes, and disappeared in various directions in groups usually of three.

The plan agreed upon between Colonels Rose and Hobart was frustrated by information of the party's departure leaking out; and before 9 o'clock the knowledge of the existence of the tunnel and of the departure of the first party was flashed over the crowded prison, which was soon a convention of excited and whispering men. Colonel Hobart made a brave effort to restore order, but the frenzied crowd that now fiercely struggled for precedence at the fire-place was beyond human control.

Some of them had opened the fire-place and were jumping down like sheep into the cellar one after another. The Colonel implored the maddened men at least to be quiet, and put the rope-ladder in position and escaped himself.

My companion, Sprague, was already asleep when I lay down that night; but my other companion, Duenkel, who had been hunting for me, was very much awake, and seizing me by the collar, he whispered excitedly the fact that Colonel Rose had gone out at the head of a party through a tunnel. For a brief moment the appalling suspicion that my friend's reason had been dethroned by illness and captivity swept over my mind; but a glance towards the window at the east end showed a quiet but apparently excited group of men from other rooms, and I now observed that several of them were bundled up for a march. The hope of regaining liberty thrilled me like a current of electricity. Looking through the window I could see the escaping men appear one by one on the sidewalk below, opposite the exit-yard, and silently disappear, and without hindrance or challenge by the prison sentinels. While I was eagerly surveying this scene I lost track of Duenkel, who had gone in search of further information, but ran against Lieutenant Harry Wilcox, of the 1st New York, whom I knew, and who appeared to have the "tip" regarding the tunnel. Wilcox and I agreed to unite our fortunes in the escape. My shoes were nearly worn out and my clothes were thin and ragged. I was ill prepared for a journey in midwinter through the enemy's country: happily I had my old overcoat, and this I put on. I had not a crumb of food saved up, as did those who were posted; but as I was ill at the time, my appetite was feeble.

Wilcox and I hurried to the kitchen, where we found several hundred men struggling to be first at the opening in the fire-place. We took our places behind them and soon two hundred more closed us tightly in the mass. The room was pitch dark and the sentinel could be seen through the door-cracks, within a dozen feet of us. The fight for precedence was savage, though no one spoke; but now and then fainting men begged to be released. They begged in vain: certainly some of them must have been permanently injured. For my own part, when I neared the stove I was nearly suffocated; but I took heart when I saw but three more men between me and the hole. At this moment a sound as of tramping feet was heard, and some idiot on the outer edge of the mob startled us with the cry, "The guards, the guards!" A fearful panic ensued, and the entire crowd bounded towards the stair-way leading up to their sleeping-quarters. The stair-way was unbanistered, and some of the men were forced off the edge and fell on those beneath. I was among the lightest in that crowd; and when it broke and expanded I was taken off my feet, dashed to the floor senseless, my head and one of my hands bruised and cut, and my shoulder painfully injured by the boots of the men who rushed over me. When I gathered my swimming wits I was lying in a pool of water. The room seemed darker than before; and, to my grateful surprise, I was alone. I was now convinced that it was a false alarm, and quickly resolved to avail myself of the advantage of having the whole place to myself. I entered the cavity feet first, but found it necessary to remove my overcoat and push it through the opening, and it fell in the darkness below.

I had now no comrade, having lost Wilcox in the stampede. Rose and his party, being the first out, were several hours on their journey; and I burned to be away, knowing well that my salvation depended on my passage beyond the city defenses before the pursuing

FIGHTING THE RATS.

guards were on our trail, when the inevitable discovery should come at roll-call. The fact that I was alone I regretted; but I had served with McClellan in the Peninsula campaign of 1862, I knew the country well from my frequent inspection of war maps, and the friendly North Star gave me my bearings. The rope-ladder had either become broken or disarranged, but it afforded me a short hold at the top; so I balanced myself, trusted to fortune, and fell into Rat Hell, which was a rayless pit of darkness, swarming with squealing rats, several of which I must have killed in my fall. I felt a troop of them run over my face and hands before I could regain my feet. Several times I put my hand on them, and once I flung one from my shoulder. Groping around, I found a stout stick or stave, put my back to the wall, and beat about me blindly but with vigor.

In spite of the hurried instructions given me by Wilcox, I had a long and horrible hunt over the cold surface of the cellar walls in my efforts to find the entrance to the tunnel; and in two minutes after I began feeling my way with my hands I had no idea in what part of the place was the point where I had fallen: my bearings were completely lost, and I must have made the circuit of Rat Hell several times. At my entrance the rats seemed to receive me with cheers sufficiently hearty, I thought, but my vain efforts to find egress seemed to kindle anew their enthusiasm. They had received large reënforcements, and my march around was now greeted with deafening squeaks. Finally, my exploring hands fell upon a pair of heels which vanished at my touch. Here at last was the narrow road to freedom! The heels proved to be the property of Lieutenant Charles H. Morgan, 21st Wisconsin, a Chickamauga prisoner. Just ahead of him in the tunnel was Lieutenant William L. Watson, of the same company and regiment. With my cut hand and bruised shoulder the passage through the cold, narrow grave was indescribably horrible, and when I reached the terminus in the yard I was sick and faint. The passage seemed a mile long; but the crisp, pure air and first glimpse of freedom, the sweet sense of being outdoors, and the realization that I had taken the first step towards liberty and home, had a magical effect in my restoration.

I have related before, in a published reminiscence,* my experience and that of my two companions above named in the journey towards the Union lines, and our recapture, but the more important matter relating to the plot itself has never been published. This is the leading motive of this article, and therefore I will not intrude the details of my personal experience into this narrative. It is enough to say that it was a chapter of hair-breadth escapes, hunger, cold, suffering, and, alas! failure. We were run down and captured in a swamp several miles north of Charlottesville, and when we were taken our captors pointed out to us the smoke over a Federal outpost. We were brought back to Libby and put in one of the dark, narrow dungeons. I was afterwards confined in Macon, Georgia; Charleston and Columbia, South Carolina; and in Charlotte, North Carolina. After a captivity of just a year and eight months, during which I had made five escapes and was each time retaken, I was at last released on March 1, 1865, at Wilmington, North Carolina.

Great was the panic in Libby when the next morning's roll revealed to the astounded Confederates that 109 of their captives were missing; and as the fire-place had been rebuilt by some one and the opening of the hole in the yard had been covered by the last man who went out, no human trace guided the keepers towards a solution of the mystery. The Richmond papers having announced the "miraculous" escape of 109 Yankee officers from Libby, curious crowds flocked thither for several days until some one, happening to remove the plank in the yard, revealed the tunnel. A terrified negro was driven into the hole at the point of the

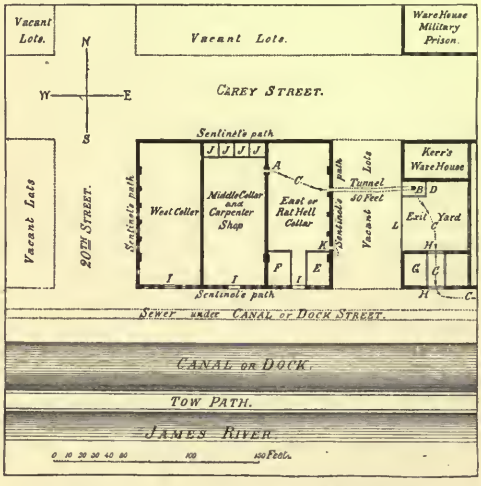
bayonet, and thus made a trip to Rat Hell that nearly turned him white.

Several circumstances at this time combined to make this escape peculiarly exasperating to the Confederates. In obedience to repeated appeals from the Richmond newspapers, iron bars had but recently been fixed in all the prison windows for better security, and the guard had been considerably reënforced. The columns of these same journals had just been aglow with accounts of the daring and successful escape of the Confederate General John Morgan and his companions from the Columbus, Ohio, jail. Morgan had arrived in Richmond on the 8th of January, exactly a month prior to the completion of the tunnel, and was still the lion of the Confederate capital.



GROUND PLAN OF LIBBY PRISON AND SURROUNDINGS.

At daylight a plank was seen suspended on the outside of the east wall; this was fastened by a blanket-rope to one of the window-bars and was, of course, a trick to mislead the Confederates. General John H. Winder, then in charge of all the prisoners in the Confederacy, with his headquarters in Richmond, was furious when the news reached him. After a careful external examination of the building and a talk, not of the politest kind, with Major Turner, he reached the conclusion that such an escape had but one explanation — the guards had been bribed. Accordingly, the sentinels on duty were marched off under arrest to Castle Thunder, where they were locked up and searched for "greenbacks." The thousand and more prisoners still in Libby were compensated, in a measure, for their failure to escape by the panic they saw among the "Rebs." Messengers and dispatches were soon flying in all directions, and all the horse, foot, and dragoons of Richmond were in pursuit of the fugitives before noon. Only one man of the whole escaping party was retaken inside of the city limits.* Of the 109 who got out that night 59 reached the Union lines, 48 were recaptured, and 2 were drowned.

Colonel Streight and several other officers who had been chosen by the diggers of the tunnel to follow them out, in accordance with the agreement already referred to, lay concealed for a week in a vacant house, where they were fed by loyal friends, and escaped to the Federal lines when the first excitement had abated.

After leaving Libby, Rose and Hamilton turned northward and cautiously walked on a few squares, when suddenly they encountered some Confederates who were guarding a military hospital. Hamilton retreated quickly and ran off to the east; but Rose, who was a little in advance, walked boldly by on the opposite walk and was not challenged, and thus the two friends separated.

Hamilton, after several days of wandering and fearful exposure, came joyfully upon a Union picket squad, and received the care he painfully needed and was soon on his happy journey home.

Rose passed out of the city of Richmond to the York River Railroad, and followed its track to the Chickahominy bridge. Finding this guarded, he turned to the right, and, as the day was breaking, he came upon a camp of Confederate cavalry. His blue uniform made it exceedingly dangerous to travel in daylight in this region; and seeing a large sycamore log that was hollow, he crawled into it. The February air was keen and biting, but he kept his cramped position until late in the afternoon, and all day he could hear the loud talk in the camp and the neighing of the horses. Towards night he came cautiously forth, and finding the Chickahominy fordable within a few hundred yards, he succeeded in wading across: the uneven bed of the river, however, led him into several deep holes, and before he reached the shore his scanty raiment was thoroughly soaked. He trudged on through the woods as fast as his stiffened limbs would bear him, borne up by the hope of early deliverance, and made a brave effort to shake off the horrible ague. He had not gone far, however, when he found himself again close to some Confederate cavalry, and was compelled once more to seek a hiding-place. The day seemed of interminable length, and he tried vainly in sleep to escape from hunger and cold. His teeth chattered in his head, and when he rose at dark to continue his journey his tattered clothes were frozen stiff. In this plight he pushed on resolutely, and was obliged to wade to his waist for hundreds of yards through one of those deep and treacherous morasses that proved such deadly fever-pools for McClellan's army in the campaign of 1862. Finally he reached the high ground, and as the severe exertion had set his blood again in motion and loosened his limbs, he was making better progress, when suddenly he found himself near a Confederate picket. This picket he easily avoided, and, keeping well in the shadow of the forest and shunning the roads, he pressed forward with increasing hopes of success. He had secured a box of matches before leaving Libby; and as the cold night came on and he felt that he was

really in danger of freezing to death, he penetrated into the center of the cedar grove and built a fire in a small and secluded hollow. He felt that this was hazardous, but the necessity was desperate, since with his stiffened limbs he could no longer move along fast enough to keep the warmth of life in his body. To add to his trouble, his foot, which had been broken in Tennessee previous to his capture, was now giving him great pain, and threatened to cripple him wholly; indeed, it would stiffen and disable the best of limbs to compass the journey he had made in darkness over strange, uneven, and hard-frozen ground, and through rivers, creeks, and bogs, and this without food or warmth.

The fire was so welcome that he slept soundly — so soundly that waking in the early morning he found his boot-legs and half his uniform burned up, the ice on the rest of it probably having prevented its total destruction.

Resuming his journey much refreshed, he reached Crump's cross-roads, where he successfully avoided another picket. He traveled all day, taking occasional short rests, and before dark had reached New Kent Court House. Here again he saw some pickets, but by cautious flanking managed to pass them; but in crossing an open space a little farther on he was seen by a cavalryman, who at once put spurs to his horse and rode up to Rose, and, saluting him, inquired if he belonged to the New Kent Cavalry. Rose had on a gray cap, and seeing that he had a stupid sort of fellow to deal with, instantly answered, "Yes," whereupon the trooper turned his horse and rode back. A very few moments were enough to show Rose that the cavalryman's report had failed to satisfy his comrades, whom he could see making movements for his capture. He plunged through a laurel thicket, and had no sooner emerged than he saw the Confederates deploying around it in confidence that their game was bagged. He dashed on as fast as his injured foot would let him, and entered a tract of heavily timbered land that rose to the east of this thicket. At the border of the grove he found another picket post, and barely escaped the notice of several of the men. The only chance of escape lay through a wide, clear field before him, and even this was in full view from the grove that bordered it, and this he knew would soon swarm with his pursuers.

Across the center of this open field, which was fully half a mile wide, a ditch ran, which, although but a shallow gully, afforded a partial concealment. Rose, who could now hear the voices of the Confederates nearer and nearer, dove into the ditch as the only chance, and dropping on his hands and knees crept swiftly forward to the eastward. In this cramped position his progress was extremely painful, and his hands were torn by the briers and stones; but forward he dashed, fully expecting a shower of bullets every minute. At last he reached the other end of the half-mile ditch, breathless and half-dead, but without having once raised his head above the gully.

Emerging from this field he found himself in the Williamsburg road, and bordering the opposite side was an extensive tract thickly covered with pines. As he crossed and entered this tract he looked back and could see his enemies, whose movements showed that they were greatly puzzled and off the scent. When at a safe distance he sought a hiding-place and took a needed rest of several hours.

He then resumed his journey and followed the direction of the Williamsburg road, which he found picketed at various points, so that it

LIBERTY.

was necessary to avoid open spaces. Several times during the day he saw squads of Confederate cavalry passing along the road so near that he could hear their talk. Near nightfall he reached Diasen Bridge, where he successfully passed another picket. He kept on until nearly midnight, when he lay down by a great tree and, cold as he was, slept soundly until daylight. He now made a careful reconnoissance and found near the road the ruins of an old building, which, he afterwards learned, was called "Burnt Ordinary."

He now found himself almost unable to walk with his injured foot, but, nerved by the yet bright hope of liberty, he once more went his weary way in the direction of Williamsburg. Finally he came to a place where there were some smoking fagots and a number of tracks, indicating it to have been a picket post of the previous night. He was now nearing Williamsburg, which, he was inclined to believe, from such meager information as had reached Libby before his departure, was in possession of the Union forces. Still, he knew that this was territory that was frequently changing hands, and was therefore likely to be under a close watch. From this on he avoided the roads wholly and kept under cover as much as it was possible; and if compelled to cross an open field at all, he did so in a stooping position. He was now moving in a south-easterly direction, and coming again to the margin of a wide opening, he saw, to his unutterable joy, a body of Union troops advancing to the road towards him.

Thoroughly worn out, Rose, believing that his deliverers were at hand, sat down to await their approach. His pleasant reverie was disturbed by a sound behind and near him, and turning quickly he was startled to see three soldiers in the road along which the troops first seen were advancing. The fact that these men had not been noticed before gave Rose some uneasiness for a moment, but, as they wore blue uniforms, and moreover seemed to take no note of the approaching Federal troops, all things seemed to indicate that they were simply an advanced detail of the same body. This seemed to be further confirmed by the fact that the trio were now moving down the road, apparently with the intent of joining the larger body; and as the ground to the east rose to a crest, both of the bodies were a minute later shut off from Rose's view.

In the full confidence that all was right he rose to his feet and walked towards the crest, to get a better view of everything and greet his comrades of the loyal blue. A walk of a hundred yards brought him again in sight of the three men, who now noticed and challenged him.

In spite of appearances a vague suspicion forced itself upon Rose, who however obeyed the summons and continued to approach the party, who now watched him with fixed attention. As he came closer to the group, the brave but unfortunate soldier saw that he was lost.

For the first time the three seemed to be made aware of the approach of the Federals, and to show consequent alarm and haste. The unhappy Rose saw before the men spoke that their blue uniform was a disguise, and the discovery brought a savage expression to his lips. He hoped and tried to convince his captors that he was a Confederate, but all in vain; they retained him as their prisoner, and now told him that they were Confederates. Rose, in the first bitter moment of his misfortune, thought seriously of breaking away to his friends so temptingly near; but his poor broken foot and the slender chance of escaping three bullets at a few yards made this suicide, and he decided to wait for a better chance, and this came sooner than he expected.

One of the men appeared to be an officer, who detailed one of his companions to conduct Rose to the rear in the direction of Richmond. The prisoner went quietly with his guard, the other two men tarried a little to watch the advancing Federals, and now Rose began to limp like a man who was unable to go farther. Presently the ridge shut them off from the view of the others. Rose, who had slyly been staggering closer and closer to the guard, suddenly sprang upon the man, and before he had time to wink had twisted his gun from his grasp, discharged it into the air, flung it down, and ran off as fast as his poor foot would let him towards the east and so as to avoid the rest of the Confederates. The disarmed Confederate made no attempt at pursuit, nor indeed did the other two, who were now seen retreating at a run across the adjacent fields.

Rose's heart bounded with new hope, for he felt that he would be with his advancing comrades in a few minutes at most. All at once a squad of Confederates, hitherto unseen, rose up in his very path, and beat him down with the butts of their muskets. All hands now rushed around and secured him, and one of the men called out excitedly, "Hurry up, boys; the Yankees are right here." They rushed their prisoner into the wooded ravine, and here they were joined by the man whom Rose had just disarmed. He was in a savage mood, and declared it to be his particular desire to fill Rose full of Confederate lead. The officer in charge rebuked the man, however, and compelled him to cool down, and he went along with an injured air that excited the merriment of his comrades.

The party continued its retreat to Barhamsville, thence to the White House on the Pamunkey River, and finally to Richmond, where Rose was again restored to Libby, and, like the writer, was confined for a number of days in a narrow and loathsome cell. On the 30th of April his exchange was effected for a Confederate colonel, and on the 6th of July, 1864, he rejoined his regiment, in which he served with conspicuous gallantry to the close of the war.

As already stated, Hamilton reached the Union lines safely after many vicissitudes, and did brave service in the closing scenes of the rebellion. He is now a resident of Reedyville, Kentucky. Johnson, whose enforced confinement in Rat Hell gave him a unique fame in Libby, also made good his escape, and now lives at North Pleasantville, Kentucky.

Of the fifteen men who dug the successful tunnel, four are dead, viz.: Fitzsimmons, Gallagher, Garbett, and McDonald. Captain W. S. B. Randall lives at Hillsboro, Highland County, Ohio; Colonel Terrance Clark at Paris, Edgar County, Illinois; Captain Eli Foster at Chicago; Colonel N. S. McKean at Collinsville, Madison County, Illinois; and Captain J. C. Fislar at Lewiston, I. T. The addresses of Captains Lucas, Simpson, and Mitchell are unknown at this writing.

Colonel Rose has served faithfully almost since the end of the war with the 16th United States Infantry, in which command he holds a captain's commission; and no one meeting him in these peaceful days would hear from his reticent lips, or read in the placid face of the veteran, the thrilling story that links his name in so remarkable a manner with the history of the famous Bastile of the Confederacy.

Frank E. Moran.

THE ROADS THAT MEET.

ART.

ONE is so fair, I turn to go,
As others go, its beckoning length;
Such paths can never lead to woe,
I say in eager, early strength.
What is the goal?
Visions of heaven wake;
But the wind's whispers round me roll:
"For you, mistake!"

LOVE.

ONE leads beneath high oaks, and birds
Choose there their joyous revelry;
The sunbeams glint in golden herds,
The river mirrors silently.
Under these trees
My heart would bound or break;
Tell me what goal, resonant breeze?
"For you, mistake!"

CHARITY.

WHAT is there left? The arid way,
The chilling height, whence all the world
Looks little, and each radiant day,
Like the soul's banner, flies unfurled.
May I stand here?
In this rare ether slake
My reverential lips,— and fear
No last mistake.

Some spirits wander till they die,
With shattered thoughts and trembling hands;
What jarred their natures hopelessly
No living wight yet understands.
There is no goal,
Whatever end they make;
Though prayers each trusting step control,
They win mistake.

This is so true, we dare not learn
Its force until our hopes are old,
And, skyward, God's star-beacons burn
The brighter as our hearts grow cold.
If all we miss,
In the great plans that shake
The world, still God has need of this,—
Even mistake.

Rose Hawthorne Lathrop.

IMMIGRATION BY PASSPORT.

THERE is a strong tendency — strongest perhaps in the worthiest if not greatest minds — to contend unduly for an ideal state of society. We could not advance one step without this tendency, but the excess of it is to be guarded against in practical social science. The tendency to push some one principle through to its ideal end, to make some few laws universal, and in so doing to override other principles and laws that are less obtrusive or that wear the suspicious garb of expediency, is one which has always characterized and vitiated human thought, — balanced, indeed, and rendered serviceable by even a stronger tendency to tread the path of mere expediency. Hence such men as George Fox and Fourier, Shelley and Emerson. The thing never to be forgotten by one engaged in the study of great subjects is that every principle, law, and method has its limits, and that it is played upon by other forces that seem to be opposite. The constant temptation is to become fascinated with either unity or complexity, forgetting one while we kneel before the other. The wise man encounters no question more difficult than how far to insist on ideal, and how far to be content with imperfect, conditions. It is the steadily recurring question between the conservative and the radical, and in every-day life, without which the judgment would have no field of action, and that thing called wisdom or common sense would have no existence because no ground of exercise. To pursue ideals or to consult expediency is small tax on our powers; rightly to join them is the special function of wisdom.

This nation began its career under lofty ideals; personal liberty, freedom of conscience, social equality, government in the interest of the poor and defenseless, — the contrast of the ideas and methods prevailing in Europe which prompted the first emigrations. The early settlers took up the line of progress in England, but leaped over its intermediate stages and formed a State of almost ideal perfection in its political forms. It can hardly be said that this nation developed its institutions; it decreed them, and the struggle has been to live up to them. We are finding out that we have too much liberty and too little restriction; enough law but a vast amount of lawlessness. Liberty slips easily into license; we are impatient of restraint; we legislate in crude ways; our political action is without moral earnestness and dignity. In the main, we have followed in the line of the early ideals, but we insist on them in a blind way; we turn them into a cry and use them in a wholesale way and without much regard to consequences: "It is a free country — keep it free; the asylum of the poor and oppressed — let them come; the refuge from tyranny — open wide the ports; the land of equal rights — give every man an equal chance." It will not be denied that these are brave words, full of noble sentiments, nor that the realization of them is to be sought. The only question is whether we can carry all this sail of lofty purpose and keep a steady keel; whether we must not ballast the ship of State with solid citizenship instead of filling its decks with a promiscuous throng. There is no question as to the value of liberty and equality and humanity as social factors, but only by what process they are to be realized. Public opinion inclines to the view that they are to be assumed with all their incidental evils, which are to be endured, or worked out, or left to correct themselves under their own educating and disciplining processes.

Another preliminary question — one which perplexes many minds — is: Should this nation, in view of its providential history and the divineness of its institutions, be interfered with? — a weighty question, for few will deny that there is a mysterious force directing the course of history, which is best named as Providence. To determine the relation between Divine will and human conduct is the never-settled problem in philosophy, and will not be raised here beyond saying that its application to national and to individual life is the same. Providence does not relieve either the individual or the nation from the necessity of using its faculties in determining action. It was a favorite expression of Dr. Mulford, that "the nation fulfills its vocation in freedom," by which he meant, in part, that it is itself to work out its life by self-chosen processes. It is as free as man, and is not a necessary evolution of certain forces, nor the product of certain principles blindly followed and turned into laws of fate.

Such considerations as these underlie our subject and meet in advance the position of those who would settle this question of foreign

immigration with the brief logic that we are a free nation and must continue free; that, having started out as the asylum of the poor and oppressed, we should continue in this line, come what may; a logic that hurries into thoughtless enthusiasm, and cap-in-air hurrahs, and stump oratory over the vast resources and glorious privileges of this country, "the biggest on earth and quite able to take care of itself,"— a proposition that need not be disputed, but may be objected to as a substitute for statesmanship.

This method of reasoning was universal a generation ago, but it has given place in thoughtful minds to solicitude before the startling facts of immigration and the transformations of social and political life which threaten to follow. One may not be popular who contends for a closer restriction of immigration, but one may be sure of an audience which has sufficiently swerved from traditional notions to be open to conviction.

The Declaration of Independence has been thought to stand in the way of a restricted immigration. It is a brave utterance, but it is not a binding document. The organic law of the country offers no impediment to a sharply restricted immigration. While it defines and guards citizenship, especially by its amendments, it does not prescribe the terms on which citizenship may be transferred from other nations to this,— a matter that is left to State legislation; nor does it invite or forbid the transfer of other populations to this country. The silence of the Constitution on so grave a subject plainly indicates that it is to be regarded as a matter for legislation, which may vary according to circumstances.

It is a sound political principle that it is the first duty of a nation to secure the conditions necessary to its physical life.

It was once a favorite theory among sociologists that the perfect nation would be gained through the amalgamation of all races, the typical man being the union of all — a plausible idea and one wearing a religious color, reflected from the declaration that of one blood are all the nations of the earth. But science no longer permits us to think in this direction. Whatever it may ultimately say of the origin of man, it has plainly shown that the best development of man is along certain fixed racial lines closely adhered to. Any mingling of the three families, the white, the yellow, the black, is always attended with disastrous physical and moral results. When the Aryan forsakes his family and mingles with either of the others, he mingles only to produce a progeny which runs out after a few increasingly weak generations. Nor do remote branches of the same family unite favorably. There is a certain trend or propulsive force wrought into tribes and families — the product of climate, food, habits, religion, and general environment — that seems destined to go on its own way and in its own place. The ancient emigrations were not rapid movements, but a slow pressing out, covering a degree of space in a generation, or moving along lines of similar environment. When a family moves to remote countries and mingles with other families, the subtle currents of thought and physical habit combine inharmoniously and with mutual injury. The mustangs of Mexico are the descendants of the Arab horse and are fit representatives of their riders. When the ripe or over-ripe apple of Mexico drops into our lap, it will be when an ill-combined blood has no longer enough vitality to retain its hold. The combinations of races by emigration which have been most successful have been that slow spreading of the Aryan along the Mediterranean and northward, where it met no change of environment for which it was not prepared, encountering tribes similarly nurtured, which it absorbed or annihilated; and that in Great Britain where the Teutonic tribes and the Normans made a short journey into a land not unlike their own. The Roman left no population in Britain. It does not follow that because tribes are of the Aryan stock they can safely mingle; the propulsive force of long-continued diverse environment may stand in the way. This point is emphasized by the fact that the invading emigrations carried their institutions with them, and, by conquering, secured for themselves the best possible environment and preserved their original habits. The successful emigrations did not conform to the ways of the countries to which they went, but, crossing the narrow sea, did not change their mind. The emigrations that have promoted civilization have been invasions by stronger tribes which carried and kept their institutions. Before such a fact a nation may well hesitate to admit an emigration of a weaker element which is required to give up its institutions. If it should prove beneficial, it would contradict all historical precedents. Nothing justifies a nation in admitting an emigration which cannot become both a healthy blood-factor and a sympathetic element in its population.

Such considerations are usually set aside as too general to enter into the practical conduct of a nation, and as pertaining to natural science rather than to government; but it is through indifference to just such generalities and scientific facts that nations are involved in calamities, confusions, and conflicts which last through centuries. The hardest problems

before this country are not moral, for the moral is amenable to effort; it generates its own course, cures its own evils, and transforms by its own divine alchemy. Our problems are largely physiological,— how to mingle, or rather not mingle, our diverse bloods so that the physical stock shall not degenerate, and how to keep the strong, fine strain ascendant. We have already several such problems on hand. The fatal feature of the early importation of blacks was not slavery,— for a strong nation may long safely cherish such an institution,— but their presence as a large fraction and factor of the population. This problem cannot now be touched practically; ancient wrong binds the nation hand and foot, and its outcome must be awaited as we await the gathering of tempests,— powerless to avert, and trembling over the steady approach. We have also the Indian, happily a lessening factor, and probably not one to become a blood-element nor a political force in the national life. There is a graver problem in that immense population in the South-west, liable at any time to be increased by additions of Mexican territory, a population of mixed Spanish and Indian blood, sharing in the degeneracy of the stronger stock and the inherent weakness of the other. In California this population was overwhelmed and nearly exterminated by the sudden and vast movement from the East in '49, but in New Mexico and the Mexico that is coming such a process cannot be expected. This population will enter, a weak and vitiating element, into the national body, where it will work immense mischief. In the mingling of greatly diverse bloods the weaker drags down the stronger. Nature, in such a case, does not work towards a cure, but by destruction protests against the mistake. The Indian drew the Spanish towards itself, and the mingled blood will act in like manner,— a vitiating element, too large in these new territories to be crowded out as was done in California. This nation has already had two lessons on this subject, and has their unsolved problems on hand; namely, the negro, with whom the white mingles fatally, and the Mexican, with whom he mingles only to his hurt. It would seem to be the part of statesmanship to scrutinize this matter of race-mingling. Science is forcing theology, jurisprudence, sociology, to face facts and to change theories and methods, and it would not be amiss for statesmen to consult science as to what populations shall enter the ports of New York and San Francisco. It is the right and the duty of a nation, however originally constituted, to prevent physical degeneration of its stock. It is akin to that first duty and instinct of the individual, the preservation of life,— overriding morals, or rather, creating its own law of morals. Such scientific scrutiny might embrace certain classes of certain nations, and especially that stratum of foreign population which has sunk below the average of its own national life. There is in all Europe an immense pauper class physically and mentally incapable of recuperation, fixed, like a natural species, in an enduring form, and another large class hovering on its border. In the changes brought about by steam navigation it is becoming possible for such populations to come hither in great numbers. Our wharves and cities already swarm with them, held back only by some feeble enactments as to paupers, which have regard only to our pauper institutions and not to the effect upon the vitality and well-being of the nation itself. There are no enactments that are scientific; none that make close and reasonable discrimination, or other than is based on economic interests. This is, indeed, a good general ground to go upon, based as it is on the principle that a man who can get across the Atlantic can earn his living. Property is to a certain degree an evidence of fitness, and, like children, is a hostage to fortune. But a nation is something more than economic; it is physical and intellectual and moral and political. If immigration is to be restricted at all, it should be on a basis inclusive of qualifications beyond those of property.

It is also a sound principle that a nation should secure, so far as possible, political homogeneousness.

In those nations where the government is monarchical, and therefore largely by force, there may safely be a lack of homogeneousness so long as the force is superior to the divergent influences, but in a democracy homogeneousness is the first requisite. If the people of a democracy do not think and feel within certain lines of sympathy they will not act together, and in that case the attitude of one party or class will be regarded by others as tyrannical. Government which is not understood always wears that aspect.

This nation began its career with a fair degree of homogeneousness. The Puritan and the Cavalier, the Dutchman and the Quaker, at least understood each other, and coöperated intelligently in the formation of the government. But we are to-day breeding a diversity in religions, languages, customs, conditions, blood, sentiments, and temperaments such as no nation, except possibly Russia, ever experienced. Granting the assimilating power of free and favoring institutions, of climate, food, education, and moral effort, the question remains whether the nation is able to digest the heterogeneous masses it is taking in. If we could rid

ourselves of that blind optimism which seems to be the political vice of the American people, and look at this process with a calm and measuring eye, it would wear its proper cast of audacity. Our politics play in limited fields— fisheries on the North and border-quarrels on the South — and are mostly a strife of parties to get in and keep out. The questions which are bearing the nation on to an uncertain destiny are passed by and left to work themselves out as may happen. The national life has been so simple that we have not been trained to consider complex and subtle questions. The very perfection of our institutions tempts us to leave them to enforce themselves, as an engineer may be tempted to sleep before a good engine. Meanwhile, great generic changes are taking place in the composition of the nation beside which the general run of our political questions is of the smallest account. A nation must do more than administer its laws and enforce its precedents. There is no charm nor secret power in institutions that renders them self-operative or self-preserving. We dwell on the formation of the government as the great fact of our history, and honor the founders by ascribing almost the weight of law to their intentions; but questions as new and radical as those which engaged them are constantly arising, and among them is the one under discussion. Instead of an immigration from kindred stocks, mainly homogeneous in morals and political principles, as at the first, we have one literally of all sorts and conditions of men. "Let them come," cries the political optimist; "we can take care of them,"— indifferent to the possibility of a social compound that may explode, like carelessly mixed chemicals.

There is flowing into this country an immense stream of foreigners who are not only ignorant, in every sense of the word, but who are worn out by poverty and oppression, exhausted in vitality, and sunk below all possibility of recovery except by processes as long as those which have made them what they are. Five hundred years of political training lie behind and enter into the American citizen; it has taken that time to teach men how to vote and to govern themselves, but we are now creating their peers in as many months. These foreigners are not simply here, but they are here clad with citizenship, to act and to be used, make-weights to be thrown on the side of any party that may win them, the special tool of the saloon politician, open to bribery, ready to be massed in labor troubles and the chief factor in them. The almost hopeless complications of the labor question are wholly due to this foreign element, which not only leads and comprises the mob, but so widens the range of the price of labor that the American laborer cannot endure the competition. Thus, the foreigner first depresses the labor market and then joins in a murderous struggle for its rise. Capital and blind statesmanship are simply reaping what they have sown: they wanted cheap labor, but, having got it, they are finding it dear,— a hopeless complication, because the largest and strongest factor in it is incapable of reason, distrustful of employers and superiors, hostile to law, suspicious of all except those of its own class, capable of great endurance, and familiar only with indirect and brutal means of gaining ends; hopeless, also, because this main factor is both unfit and unwilling to enter upon the only possible solution of the labor question; namely, an intelligent and cooperative relation to employers. The ground for the elevation of this class does not yet present itself; it shows but little sign of tendency in right directions save in individual cases; the mass gravitates towards the atheistic and anarchical parties, or if it escapes this direction, it falls under the control of the saloon politicians, when the doom of its political value is irrevocably fixed. The ignorant emigrant does not fall into the embrace of free institutions and education and Christian civilization; these angels do not welcome him at Castle Garden, nor get much access to him later on. That other angel, which if not tutelar is presiding,— the saloon,— takes him in charge and educates him in its political creed of spoils and brutality. The Scandinavian peasant taking land in Minnesota is but a small sample of immigration: the greater part of it goes to the cities where already is one-tenth of our population, and it is in cities that the foreigner is to learn the graces of American citizenship. When it is remembered that the municipal governments of our larger cities are simply schools of intrigue and corruption, and occasions of plunder to which almost any bold man can put his hand, we need not expect any great improvement in the foreigner; he becomes simply another fang of the serpent that is poisoning the life of the nation. To meet this growing influx of chaotic and depraved citizenship we have only some feeble and ineffective legislation against the importation of paupers and insane. This country can be made an asylum for the poor and oppressed, but it is neither a hospital nor a foundling institution. It is not within its vocation to receive the sick and cure them of their age-long diseases; nor the unborn, as it were, of other nations, and deliver them into political life. We are free and humane, but not for this.

This degraded and heterogeneous population is already seriously felt in both municipal and

national legislation. More and more it assumes the form of evasion and compromise and bargaining, or undisguised action in favor of some class. It busies itself about trifles in order to avoid questions of real importance. In municipal government the main feature is jobbery, and in national government, patronage and retention of power. The only steady and uncompromising force in politics is the saloon, an institution of American origin but now almost wholly in the hands of foreigners of the first or second generation,— the bright, consummate flower of the policy of unrestricted immigration. Such processes cannot go much farther without causing paralysis of legislative action. The strong point in Mr. Gladstone's Home Rule policy is his plea that the Irish question blocks legislation. But several questions of like nature are looming up in our horizon,— questions based on race or religion or deep-rooted prejudice; questions which draw their support from ignorance or climatic temperament, or from long-endured wrongs, like agrarian abuses. Such questions produce a state of things quite different from that caused by the rivalry of political parties in a homogeneous state. These are normal, and necessary to healthy political life. But the Irish member not only votes for Ireland every time, but votes against everything else; and Mr. Parnell commands the situation. The example is fraught with instruction. The struggle of England since those early conflicts which Milton describes as the "wars of kites and crows" has been to govern a heterogeneous people. This history is to be viewed favorably only on Pope's principle that "whatever is, is right," but is not a history that statesmanship should aim to repeat.

The statistics of foreign immigration and the sources of it are so well known that they scarcely need mention. In the last thirty years, seven and a half millions of immigrants have come to us,— a considerable fraction of the present population. They and their children number fifteen millions, or one-fourth of the people. During the decade ending in 1884 the immigration numbered about four millions. Much of this is in the same racial line with our own — English, Teutonic, and Scandinavian — and so far as blood goes reenforces the national type. But whatever is gained in this respect is more than offset by the blacks, and the mixed Spanish and Indian populations of the South-west, so that we still have from ten to fifteen millions utterly alien to our stock, and for the most part unfit for citizenship. Generalizing these statistics, we have the grave fact that one-fifth of our population is either of blood outside of the national strain or defective in political capacity.

It now costs thirty dollars or less to transport a Bohemian or Italian from his home to our ports, and five dollars more will place him in the middle of the continent. Absolute paupers cannot make this journey, and there are laws shutting them out, the only penalty of which is the trouble of taking back those who may be detected as paupers or insane. The feebleness of the legislation is exceeded by the weakness of its enforcement. Consequently, we are already burdened with a large element of European paupers and insane. Our beggars are nearly all foreigners, and nearly one-third of our insane are immigrants,— a fact that emphasizes nearly every point that has been named. This proneness to insanity among immigrants reveals their worn-out vitality, their ignorance, and their inability to endure so great a change; it is the protest of nature against it. But there is a class just above that of the pauper, and into which it is constantly slipping, hardly more desirable, which now avails itself of this cheap transportation. The foreign element is not only increasing, but it is deteriorating. It is beneath the dignity of argument to contend that much of the immigration from Southern and Central Europe, and some also of that from England and Ireland, is unfit, on physical, moral, and political grounds, for incorporation into American life. It is equally beyond dispute that it constitutes a large factor in labor troubles, crowding the market and depressing wages below the American living point. Mr. Carroll D. Wright, in his first annual report as Commissioner of Labor, tells us that already 31.9 per cent. of our mechanical laborers are immigrants, and, while recognizing their value in some respects, finds in the fact a main cause of overproduction and excessive competition. His wise inference is that this immigration should be restricted for the sake of a sound industry. Equally weighty considerations of a political and moral nature could be urged. Baneful as the process and the degree of it are, it seems likely to go on in geometrical ratio. Larger and swifter ships, cheaper railway transportation, the crowding out in Europe, its military laws, the increasing attractions on this continent, and especially the fact that overproduction here through immigration reacts on the labor market there,— such are the forces that swell the current. Thus, the greater the immigration the faster will it increase, and without possibility of end till the balance in populations and resources is reached, and America becomes, in one brief, rapid rush of changing population, another Europe,— a work which, if done at all, should fill centuries. Europe is steady and strong, so far as it is so, be-

cause there are behind it two thousand years of consolidating life packed full of binding tradition and usage. We have no past, no traditions, no usage, but only some sound principles of government upon which we rely to do the work of history. We propose to convert and transform the basest populations of the civilized world by the Constitution,— the caucus and the ballot being the nominal teachers, though the real ones are the saloon and the ward politician. Locomotion may be increased to an untold degree, but not the paces of life. Neither the stature of the body nor the growth of the nation can be hastened. We have a population, such as it is, but it is an open question if we have a true nation, or can have one until we take more pains to secure its proper elements. We successfully played the part of the leaven for a long time, but the meal is now not only increasing beyond all measure, but is of a character not to be leavened. The principle of exclusion already recognized in our laws should be made to embrace any element which is not already well fitted to enter harmoniously into the life of the nation. Such legislation would, of course, shock the traditional American sentiment, but there are some things this nation sadly needs to learn if it would remain true to itself; such as courage to resist the clamor of sentimental religionists, political idealists, and atheistic anarchists. These unconsciously play into one another's hands, paralyze parties by their converging streams of talk, and prevent the adoption of any strong, intelligent, and patriotic action. When a board of health was first established in London, Charles Kingsley prayed God that they might be saved from "Idealism." The most homely, practical, unsentimental people in the world, we are yet the most given to following a vague and general idealism. We regulate the details of private life by the severest common sense, but leave great matters of public interest to be settled by what we call *principles*. Reasons for this may be found in our history and in the better parts of human nature, but none the less do they prevent us from drifting into a political life that is without order or reason or purpose.

There is nothing which calls more loudly for a closer restriction of immigration than the inroad of criminals from Europe. Like the first murderer, the criminal is a wanderer; and this being a free country and full of chances, he naturally wanders hither. Seventy-five per cent. of the crime in New England is committed by foreigners. Seventy-four per cent. of the discharged Irish convicts come to this country. It is a common practice of the Irish courts to discharge those accused of crime with the understanding that they shall go to America, and the same thing is done in Switzerland. There are laws against the landing of convicts, but none against accused criminals; still, it is doubtful if one class is hindered more than the other. The hunted anarchists and fugitive nihilists of course come hither, and amuse themselves by publishing treasonable journals and scattering bombs among the police.

The passage of a discharged criminal from one country to another cannot in individual cases be prevented by ordinary legislation, but when there is an immigration of masses of criminals, and the fact enters into the administration of foreign courts of justice, some extraordinary legislation would seem to be necessary. These imported criminals keep our saloons, whence they dictate our politics; they rob our houses, murder us on the street, and crowd our prisons. The time has come when it is not amiss for the American sociologist to fix his eye upon this word *foreign* and measure its import in our social and political life. There is not an evil thing among us, not a vice, nor crime, nor disturbing element, which is not for the most part of foreign origin. Mobs, murder, burglary, ruffianism, boycottism, drunkenness, lawlessness, atheism, bribery, anarchism, political corruption and intrigue,— it is a simple fact that the largest element in each member of this fearful category is mainly composed of foreigners. There are Americans who are criminals, but it can hardly be said that there is an American criminal class.

There is, of course, a worthy and decent immigration, the continuance of which we may invite and even covet; but it should be under restrictions that are effective, and that sharply discriminate against criminals, paupers, insane, Mormons, anarchists, and also against those classes whose depraved social condition renders them unfit to assume the duties of American citizenship. Only the last point is controverted on the ground that it shuts out the ignorant who may become intelligent, the poor who may prove industrious, and that it is a policy essentially inhuman. Such considerations deserve respectful treatment.

It is urged that it is not just and merciful to close our ports against the poor, the ignorant, the oppressed, and the debased of other lands. It may not be easy to distinguish between the moral duty of the individual and of the nation, so close is the analogy between them; but it is clear that one may do some things as an individual which one may not do as the head of a family, some things as the father of a household which he may not as a citizen. The welfare or safety of others comes in to limit his action and shut it off from what it

might be his duty to risk or endure as an individual. If the house of Victor Hugo's good bishop had held a wife and children, it would not have been right for him to open his doors to Jean Valjean; something more than the spoons would have been endangered. The law of mercy and humanity which justifies a man in taking his life in his hand and encountering the last degree of risk and sacrifice does not require him to drag others along his path. It is not asserted that a nation should not be merciful and humane, nor that there are two kinds of morality, but only that the enforcement of even the highest principles has limitations that become moral standards. A corporate body cannot go so fast and so far in sacrificial ways as an individual. The spirit of humanity and mercy is to be always cherished by political bodies, but the degree of its enforcement should be regulated and determined by inseparable circumstances. The head of man may touch the stars, but his feet rest on the dust of the earth.

But it is a question if this nation is pursuing a merciful and humane course in permitting a nearly unrestricted immigration. What is the function of this nation as related to other nations? Chiefly that it shall offer to them the spectacle and example of a true nation.

This we have done so far as institutions go, and the sight has moved the world. We can still render the nations no better service than by making our own homogeneous in blood and sentiment, intelligent, moral, harmonious and strong in unity. Such an example is an achievement of mercy and humanity far beyond any spasmodic and sentimental embrace of suffering humanity; it says to the nations, "Go, and do thou likewise." We thus start the currents of mercy and good-will where they most need to flow, and where also are their natural channels. But small service is rendered to the cause of humanity by relieving other nations of their proper duties. The exodus of immense populations from Europe has delayed healthful and necessary processes which otherwise would there have gone on. The pressure against existing evils has been taken off, when it would have been better if it had been continued. The spectacle of a heterogeneous and discordant nation staggering under heavy burdens of ignorance and crime and political corruption and unenforced laws, and bewildered by unsolvable problems of race, serves to strengthen institutions and usages in Europe that need to be modified or swept away. The evils from which we suffer through excessive immigration react in favor of the very causes that produce it. It is not only wiser, but more humane, to return these problems to their sources, and thus force each nation to bear its own burdens and work out its own salvation. What mercy, in the larger view, is there in permitting an immigration which encourages the hideous military system of Europe? It is far easier for a nation to deplete itself of a population whose miseries drive it to threaten the injustice and oppression that render it miserable than to correct the abuses. That which makes the municipal government of our larger cities intolerable contributes to a peace in Europe which it does not deserve. Chicago has had the expense and trouble of trying and executing several men whose careers ought to have been run in the land where they were born. So long as we receive this fugitive and crushed-out immigration, we are playing into the hands of institutions and usages against which our nation is, by its nature, a protest. More than this: we are playing into the hands of organized inhumanity by fostering that combination of throne and class and land-monopoly and military service which drains the life-blood of the European populations. If it is humanity that seems most to justify the present immigration, the tide should be reversed and sent back where it will compel the nations from which it comes to give their own children land and bread, justice and equality. The resources of Europe are not exhausted, but are either monopolized or undeveloped,— often one and the same thing. Let England break up her parks and game preserves, and give Ireland a good land-bill; let Ireland drain her bogs, and cultivate the deep-sea fisheries that Lord Churchill proposed to foster and the industries that Home Rule will reëstablish. Let Scotland send Winans home, or to Australia, and restore the deer preserves to the crofters, and so rectify the most inhuman wrong of the century. Let Russia either exterminate or pacify her revolutionists. Let Prussia and Italy and Austria disband the armies which starve one part of their populations by keeping the other part in enforced and costly idleness. Let the Great Powers form alliances in behalf of their people instead of the dignity of their crowns. Instead of emigrating, these oppressed multitudes should stay and hammer at the doors of palaces and the gates of hedged forests and untilled parks, and cast their burdens of military despotism, and taxation, and groaning want upon the floors of Parliament and Reichstag,— demanding relief, and taking it if it be not granted. Here is a field for the exercise of humanity worth considering. The time has come when this nation can best fulfill its lofty mission of mercy and good-will by transferring the field of their action beyond its shores. There can be no act of humanity until there

is a standard of character; the moral, the fit, the necessary underlie all beneficent conduct. Such a standard this nation once had, but it is a question if it can long be retained.

The only restrictive legislation now in force is that which forbids the immigration of Chinese, paupers, and insane, and "an act to prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, its Territories, and the District of Columbia." These restrictions are easily evaded. There might be more stringent laws of the same sort, and possibly an honest commission might be secured to enforce them, but evasion and deception are so easy that it is doubtful if much would be gained. The question of legislation is confessedly one of great difficulty, and any new measures are suggested only in a tentative way. I venture, however, to name a method which the free and independent American has been accustomed to associate with "the effete and crumbling monarchies of Europe" as, perhaps, the completest symbol of their tyrannical disposition,— namely, the *passport*. There are many American citizens who, if they should search the archives of their households, would find a document so named, secured at a cost of five dollars and some trouble, regarded first as a jest but later as an occasion of profane ejaculation in the streets of Italian and Austrian cities, and preserved as a memento of foreign wanderings and despotic governments. The passport, however, is not necessarily a symbol of tyranny. It represents a political necessity in the past, and it may be a useful political instrument in the future. It is not tyrannical in its nature; it contravenes no right; for it does not follow that because a man has feet he may go wherever he chooses. It may be a limitation of personal independence, but it is not different from, nor greater than, many others which are necessary to social welfare, and it is less severe and arbitrary than the requirements of vaccination or military service. The passport simply indicates that the time has not yet come when men may go from one country to another without some guarantee of good intention, worthy character, and general fitness to make such a change. It is better for society that some people should stay at home. The political value of the passport is not to be set aside by crude talk about the freedom of God's earth and international hospitality and the right of a man to go wherever he sees fit. Its use in immigration would emphasize the gravity of a transfer of citizenship from one nation to another. It is not a slight thing for a man to change continents, language, citizenship, institutions, customs, hereditary surroundings, and present ties and throw himself into an environment new in every respect save the sky above him. Such an act should be made difficult, so that men shall not rashly undertake it, and it should be suffered only on the ground of entire fitness. The most fit are those whose intelligence renders them least dependent upon environment; and the least fit are those who are still the creatures of environment. Immigration is largely tragical, as is shown by the statistics of insanity. The ratio of insane foreigners to native born is about three to one; of those born of foreign parents to native born, nearly four to one. These facts do not show that the insane come hither, but that the coming makes them insane. The reasons are evident and full of warning significance. Immigration is an act fraught with tremendous risks, not only to those who undertake it, but to those among whom it is consummated. It is not only a religious but a political truth that the bounds of our habitations are appointed. No man should break over them without the best of reasons and distinct fitness; least of all should the weak and the ignorant, for the simple reason that they most need a molding and restraining environment. When such come hither, they are practically without environment, being too ignorant to perceive and come under that which exists. Concretely stated, such immigrants do not become Americans. Hence that social and political condition which now so obtrudes itself upon public attention,—anarchism, lawlessness, hoodlumism, pauperism, boycottism, labor strikes, and a general violation of personal rights such as the Anglo-Saxon race has not witnessed since Magna Charta. The combined tyranny of Europe during the last half-century does not afford such a spectacle of cruel and unreasonable tyranny, of trampling upon personal freedom, as that witnessed in the United States during the last three or four years. This horrible tyranny is wholly of foreign origin,— the plain and simple fruit of ignorance of American institutions and of the meaning of the word *rights*. If we suffer from this, we have ourselves to thank for it. We invoked ignorance, and it is tormenting us with its proper weapons. The negro problem aside, there is scarcely a great public evil in this nation but has its roots in this indiscriminate immigration. It is the foreign element that poisons politics, blocks the wheels of industry, fills our prisons and hospitals and poor-houses, defies law, perplexes our schemes of education, lowers the grade of public virtue, atheizes the state, confuses labor, supplants the caucus by the saloon, feeds the drink-evil, and turns municipal government into a farce and a shame.

It is getting to be felt in many quarters that

this process has gone far enough, and that it may be well to exchange our grand idealism for a little common sense and practical statesmanship. The passport seems to be the only available means of restricting immigration so as to exclude that which is undesirable. No scrutiny by a commission in our ports will turn back any considerable number. The restriction must be made before the journey hither begins. For this purpose the consulate could easily be employed.* It is not proposed to prohibit foreign immigration; but it is proposed to make it, at least, not so easy a matter as it is at present. To this end it is suggested that laws be enacted requiring every person to show before an American official his fitness to become an American citizen,— laws strong on the negative side, shutting out the grossly degraded and ignorant, the physically degenerate, the criminal; and still stronger on the positive side, requiring some inceptive preparation for entering into American life, and some real intention to fall into the current of the national life and to support its institutions.

We are aware that a government cannot do everything that needs to be done for its people; also that human society, as distinct from government, must work out many of its problems without the aid of law, and that, being an organism, it is fitted to do this. We are also aware that social regeneration must be largely left to science and ethical teaching and religion. Society has laws and forces of its own which work towards the elimination of evil and the creation of good and require no aid from the civil law. But these social forces presuppose a normal constitution of society,— potentially, at least. When society is suffered by law, or by the absence of law, to become abnormally constituted,— heterogeneous, ill-balanced, overweighted with bad elements alien to itself,— then civil law may be invoked to take off the hindrances, and thus make the way clear for society to enforce its own redemptive methods.

* Since these pages were written, the subject has engaged the attention of Congress, and bills have been introduced which call for the use of the consulate to determine the fitness of emigrants. The press, and especially the New York "Evening Post" in its able columns, criticise this feature of the bills as unworthy of consideration on the ground of the utter inability of consuls to do the required work. I would not insist upon this or any other specific method, but only that some method shall be adopted which will shut out a part, at least, of the undesirable and already illegal immigration. It would seem that a commissioner in the ports of departure would find no greater difficulty than a commission in the ports of arrival; that it is as easy to determine embarkation as disembarkation. It would also seem that a consul or a commission in Queenstown could more easily ascertain if Irish emigrants are discharged criminals than a commission in New York. The difficulty in all cases would not be with the consul or commission, but with those who are required to produce the proper and sufficient certificates of good character,— that is, the emigrants themselves.

An "Ex-Consul," in the New York "Evening Post" (December 24), ridicules the use of the consulate for the purpose named, but suggests that "it might be well to require of every one [emigrants] a certificate of good conduct from the local authorities of the place from which he came, and this might be legalized by the consul at the place of shipment, or the consul nearest the place from which he came, as in the case of merchandise."

The suggestion is well worthy of consideration as suggesting the ground upon which a consul or commission might grant a passport. The humanity of checking paupers and insane in the ports of departure rather than in ports of arrival is too obvious to need mention.

I will add that this paper was written nearly two years ago, and before the suggestions as to the use of the consulate, now so frequently heard, were made.

T. T. Munger.

AUSPICIUM.

LIKE a beautiful flying bird it came
Out of the sunlight and breath of Spring;
I could not name it by any name
Half fair enough for so fair a thing.

Into my life and my heart's deep heart
Bringing a song and a laugh — a dream,
Sweet tears, glad silence, and that strange art
That makes Life's shadow like sunshine seem.

Safe on my breast, with swift wing still,
And dear head nestled, it long had lain;
I could not dream that the yearning thrill
For flight would waken, ever again.

But out of my life it swept one day,
With song and silence and shadow-flame;
And I never knew by what unseen way
It came and went — nor its unnamed name.

Mary Ainge De Vere.

TOPICS OF THE TIME.

"English as She is Taught."

WHEN last year, in the April number of this magazine, "English as She is Taught" was published, and editorial notice of the article was taken, it was hoped that something for the good of the schools might come from the discussion. Unfortunately, not many of the letters received have been of a character to justify the faith. They have been, as a rule, either hopelessly acquiescent or helplessly resentful. Many teachers have sent us similar lists of answers, but few have made suggestions; others have admitted that such lists might be made by any teacher, but protest against the conclusions drawn from them. The range of protestation has been wide, and some fierce minds have even accused us of attempting to overthrow the public-school system of the country and of unpatriotic criticism of one of the elements of our national greatness.

Tacitly, and often irritably, the teachers who have taken exception to "English as She is Taught" have recognized the fact that it is not the child, but the system and, indirectly, the teacher that these examination-results bear most severely against. Briefly stated, the main points of their arguments run in this wise: Such answers as Miss Le Row has collected — annotated by Mark Twain in "English as She is Taught" — are valueless, because they can in no sense be considered representative of the character of the work done in our public schools. They are, they claim, the attempts of exceptionally dull or careless pupils; of pupils absorbed in thoughts of sport or completely unnerved by the examination; or of those few found in every school who have a genius for misapprehension and misstatement. Instruction in our schools, they say, is of necessity given by classes, and examination-papers must have reference to the average capability or advancement of the class examined. In each class may be found pupils of all degrees of capacity, individuality, and environment, and the surprising results of Miss Le Row's collection must be ascribed to the incompletely assimilated elements in these incongruous masses. Therefore, they add, in order to obtain from examination-papers any trustworthy information as to the quality of the teaching, one must take into consideration all the answers of the child who makes one absurd error, and the answers of his classmates, and must know, besides, the temper and condition of the children's minds.

All this is true, but it does not entirely satisfy. Now, at the very beginning, it may be admitted that the public schools have many difficulties with which to contend. In the city there is overcrowding; in the country there is a multiplicity of classes. This demands too great an amount of mere police duty of the teacher, and renders individual teaching, with too great ambition, impossible. Straightway mechanical methods creep in, and the child is treated as one of an average, and not as an individual. So this assumption becomes the foundation-stone of our public-school system,— that what one can do another must. The practical result is, that if the same work cannot be done by all, the next best thing is to appear to do it. So long as a teacher feels that his reputation, popularity, and position depend in a great measure upon his ability to "pass" nearly all of his class, the temptation to promote thoroughly incompetent pupils, from motives of policy or cowardice, or from a desire to get rid of stupid or troublesome pupils, is too strong to be wholly disregarded in considering the causes of failure in the working of our school system.* Now, much as may be said of the share of the dull and careless pupil in the poor work of Miss Le Row's collection, it is painfully apparent that the questions are too ambitious and that the children are beyond their depth. No one who has watched our schools in the past ten years can fail to note the influence of a growing class of teachers who are working out results that are steadily becoming better and better; but improvements in our schools have too often been the heaping of accretion upon accretion, the multiplying of studies. We attempt too much; we strive for all knowledge, and we load childhood with a jargon of confused facts and theories that disciplines nothing, that effects nothing, that is forgotten as soon as the brilliant hour of its parrot-like repetition has passed. The truth is that most of what we teach is simply thrown away; and, were it not for the negative evils that keep step with all this misdirected direction, it would not matter. We have too little sense of proportion, and entirely lose sight of the fact that thought and expression should be the first qualities to develop in a pupil. The child — not examinations, not promotions, not courses of study — should be the objective point in all teaching. Develop habits of strict attention, and you have gone far towards developing powers of thought and quick comprehension.

The fatal element about such answers as, "*Mendacious*, what can be mended," and "*Parasite*, the murder of an infant," is, that the words are but sounds to the child, and the effort to express them and their meanings is but a dull, unreasoning groping after a set of sounds committed to memory in a perfunctory way. And in the answer, "The chyle flows up the middle of the backbone and reaches the heart, where it meets the oxygen and is purified," it is evident that the pupil has no understanding of the matter, though it is manifest that he has gone through the form of studying the subject. He is simply the victim of a stupid theory that we are trying to harbor; namely, that a wide acquaintance with facts and phenomena means education, and that examination-papers are the highest expressions of culture. A wise man might be glad to know that a boy of his, in a walk with him through the fields, could correctly name the beech and

* See "The Public-School Problem," in "Open Letters."

the white-oak, could spy out greenstone and granite, and could tell which was snakeroot and which saxifrage, or name the bird whose song was heard in the green hedge beyond, if his knowledge were the natural growth of healthy methods; and if he found that his words were to the point and his sentences well constructed and idiomatic, that he knew his vocabulary thoroughly and could write it automatically, unhampered by ignorance of words or expressions, he would have but a large and kindly fellow-feeling for him if he knew that he had defined quaternions as "a religious convention held every hundred years," and he would certainly wonder why a child were asked such a question; and if he found that the boy had been taught to think, and bore himself well, he would not be greatly troubled if he knew nothing about the chyle, and had a very fleeting knowledge of Chaucer and Addison. Now, it would be well enough to let the boy learn of Chaucer and Addison, of Bryant and Byron, and the host of other names of whom he had committed dreary and barren paragraphs, if it were the beginning that would lead him up to literature and wide reading. But too often it is the end, so far as public-school teaching goes. There is no beyond to such teaching. It bears with it a sense of completeness; it incites to nothing; it is content with low results and incompleteness; it has no high aims; it is satisfied with itself.

The Growing Independence of American Journalism.

WHILE there are phases of current journalism which are discouraging, there are others which are most hopeful. Chief among these is the remarkable development of the spirit of independence. Until comparatively recent times the party newspaper — and every political journal in the old days was a party newspaper — was an organ, which made it a part of its regular business to praise every action of its own side and to condemn whatever was done by the opposition. To admit that the other party had nominated an unexceptionable candidate, or had taken a praiseworthy position on some issue, was a thing not to be thought of.

The course of the press since the advent of the present Administration at Washington shows that a change has occurred which amounts almost to a revolution. We have only to refer to the support given by a large part of the Republican press to certain of President Cleveland's vetoes during the Forty-ninth Congress. There has been remarkable independence, too, among Republican party papers in the reception of the views of the President on the surplus as given in his Message to the Fiftieth Congress.

The Southern press, being very largely Democratic, has not had such opportunity as that of the North for the display of fairness towards a political opponent in the White House. But the leading newspapers in the South have manifested of late years a spirit of independence quite as striking and even more creditable. Throughout the whole period of the renaissance in that region the conductors of the chief journals, as a rule, have been far in advance of their readers. They early saw that the new South must learn the necessity and dignity of labor; that it must drop the "code," and abandon the false social theory upon which the code was based; that it must make the education of blacks as well as whites the corner-stone of its future, and must tax itself to provide schools for the children of the men and women whom under slavery it had been a crime to teach the alphabet. To a large element in their constituency — in some cases, at first, probably to a majority — this was an unwelcome gospel, which it required no little courage and faith to preach. It is now so generally accepted that we are in danger of forgetting that there has really been a revolution in public sentiment throughout a great region within a score of years, and that the chief element in bringing it about so quickly has been the independence of a small number of journalists, who were brave enough to speak frankly to those upon whom they depended for support.

It is thus evident that a spirit of real independence characterizes the press of the whole country more generally now than at any previous time in our history. Discouraging as certain manifestations of journalism may appear, they are offset by this pronounced drift in the right direction of the underlying motives of action.

American Architecture in English Eyes.

"THE progress of American architecture has been remarkable within the last few years, and though there is much that is bad, vulgar, and pretentious, it has begun to exhibit artistic and peculiar features of a very high order. The best specimens are scholarly and refined in detail, but adhere less slavishly to precedent than European work. New combinations are introduced, dictated by, and growing out of, the necessities of the building, without violating the character of the style. The best work is accordingly living and interesting — less the production of a dry-as-dust archæology, and more in accordance with the true principles of all great architecture."

These words sound like an echo of many that have already been printed in these pages, but gain a new significance from the fact that they were spoken by an Englishman and an architect. At the annual meeting of the Royal Institute of British Architects in March, 1886, Mr. John B. Gass, an Associate of the Institute, submitted full reports upon the architectural works which he had seen during a recent trip through the United States and Canada, and exhibited a collection of pictures representing many among them. He also read a paper in which the results of his observations were summarized, and it is from an abstract of this (as published in the Institute's official report) that the foregoing sentences have been quoted. The mere fact that his journey had been thought worth making speaks a great deal for the growing reputation of American art; for he made it, not as a tourist seeking private pleasure, but as the holder for 1885 of the Godwin Bursary — a prize which entails upon its recipient the obligation to study for a time foreign works of sufficient importance to promise that his report shall be of interest and profit to the profession at large.

Most of Mr. Gass's address was devoted to the consideration of American methods of construction, to which he gave great praise, especially as regarded fire-proof construction and systems of ventilation. In the discussion which followed, and in which several eminent architects took part, his views in regard to these matters were echoed with emphasis. Mr.

John Slater, for example, remarked: "It appears to me that with regard to the structural methods of America there is a boldness, a thoroughness, a directness of aim, and lack of conventionality which are extremely refreshing. Whether the same lack of conventionality on the art side is a success is open to question, but as to the structural part there can be no doubt of the success attained"; and Professor Kerr said: "With regard to ingenious construction the Americans, in their own language, beat all creation. The whole population of America seems to grasp the necessity for new inventions, and when an invention is brought to bear fully upon any requirement it seems to be done, not in the rough-and-ready way as we are too much accustomed to think it is, but in a precise and practical way which, to my judgment, shows the Anglo-Saxon intellect at its very best. . . . I have no doubt in my own mind that in the course of the next generation American inventors in respect of building will do a great deal, for there is a great deal to be done. We seem in this country to be too much trammeled with old traditions; we do not seem to get beyond the instruction that we received at school. The Americans throw all that to the winds and strike out for themselves."

As regards the purely æsthetic side of American art there was less unanimity of almost unmixed praise. But enough praise was here also given to fill us with a righteous pride. Most of the speakers had visited America themselves, and spoke, therefore, with full knowledge of the relative proportion which our good works bear to our bad, and of the rate of speed at which the former are increasing. Mr. Thomas M. Rickman remarked: "Seeing the buildings in Canada and the United States, one sees in all their phases a very great change from the architecture of this country. One sees the survivalism which we have here, which has been transplanted, and also buildings in every style corresponding to our own; but one also sees, when one gets to the United States, a class of buildings altogether different. There architects have thrown aside survivalism and have worked according to their own ideas. Now, one thing I noticed when there was, that, though there were buildings most objectionable according to any canon of taste, one was not so much struck with the *bizarrerie* of their appearance as was to be expected." The President of the Institute, Mr. Ewen Christian, spoke in a similar strain: "Nobody can pass through any city of America without learning at every step. He will see much that will disgust him, no doubt, because people who go ahead in the way the Americans do, do a great many things that we should be ashamed of here in matters of art. But the impression that I derived from what I saw in America was that there was a great revolution going on, that a great deal of bad work had been done, but that there was a foundation of good work laid, and that a grand future was before its architects."

"With regard to Mr. Richardson's work" (which naturally had received the chief share of praise from more than one speaker), the President added, "I was never more surprised in my life than when I saw the tower of the church that he built at Boston. It is a tower that is a real pleasure to look upon on account of its enormous mass. It must be double the size of any tower with which I am acquainted that has been erected in modern times in England. . . . It is not a lofty tower, but its grand square mass is very striking indeed. Then the plan of the church itself is very good. . . . I cannot say that I agree with Mr. Gass as to the details, because I do not think them up to the mark; but it is a question of growth. American art is a giant that has grown rather too rapidly, and therefore there is not the amount of finish about it that there should be." As against these last phrases, however, we may quote Mr. R. Phené Spiers, who called especial attention to the photographs of Mr. Richardson's Harvard Law School, saying that they "contain a large amount of original and peculiar refinement mixed with extreme breadth and boldness of treatment. It would have been impossible," he continued, "for an English architect to have dared to go to that extent; he would have had against him all the criticisms of all those who are afraid of sinning against the laws of recognized archæology. I remember I could not help thinking that when Professor Ware went home he would be in one sense a happy man, because he would be able to found a style upon principles; his pupils would not always be bound by precedent, and he would be able to bring materials into use which we find it difficult to do in England. That has been borne out, I think, in the work of his pupils."

Not the least welcome part of the praise given by various speakers is that which refers to this same point of education. One gentleman said that he heard Mr. Richardson was not only producing exceedingly good work himself, but "doing one of the most useful things that can be done for American architecture in that he is training in his office men who will worthily succeed him"; and another referred to the course of study at the Massachusetts Institute of Technology, because it seemed to him that "the student in that country has before him an opportunity of acquiring which is wanting here. . . . They are a young nation and we are an old one, yet they have done infinitely more" [in respect to providing thorough courses of training].

The degree to which we recognize the necessity for supplementing home instruction by foreign study and travel was also commented upon with approval, and many judicious references were made to the strong influence which French architecture has had upon American in recent years. In some instances, however, the extent of this influence was exaggerated — as, for example, with regard to Mr. Richardson, who owed France an enormous debt for the thorough training which he received in her schools, but chose to owe her modern art a very small debt as regarded the conceptions, features, and details which he put to use in his subsequent work.

It has seemed worth while to quote these verdicts here because, as regards matters of art at least, we are still timid in estimating our own successes — we are still too apt to appreciate them and believe in their prophecies only in proportion as they are indorsed by foreign critics. Many Americans certainly now appreciate the exceptional excellence of our best recent buildings, the exceptional talent of our foremost architects, and the rapid way in which their influence is spreading through the profession at large. But the public as a whole does not appreciate them, intrinsically considered, and is very far from knowing how great is their excellence when judged by the standards set by contemporary work abroad. The praise of these distinguished

Englishmen may therefore do a useful work among us; but at least as useful a work ought to be done by the sentences of blame with which it was interspersed.

It would be well, for instance, if we should give ear to the note of warning struck by one speaker, who referred to Mr. Gass's statement that when he went to examine the ventilating-shafts which we had so cleverly constructed, he most often found them all closed up. It would be well, too, if we could realize the pity of the fact that, despite most excellent opportunities for study, "the Americans cannot bear to go slowly. They will not give the time for studying which they ought to do." But it would be still better if we could distinctly realize and determine to remedy an unfortunate state of affairs to which the President of the Institute referred as "the universal tendency to jobbery" in public work. This he truly affirmed to be the most damaging thing with which we have to contend in our public buildings. "At Chicago," he explained, "I saw a great building in progress, and I do not know how many architects had been employed upon it. When the Government changes the architect changes, and the consequence is you get all kinds of styles mixed up, and a building which ought to be a fine one is utterly discreditable. There is only one comfort — that in a place like Chicago, where they think more of business than of beauty, they cover up the whole façade with such a net-work of telegraph and telephone wires that you cannot see it. This tendency to jobbery is a very serious matter for architecture: we are not entirely free from it in this country, but we are freer from it than they are."

In conclusion, a fact may be referred to which our visitors overlooked, or the unfortunate nature of which they were not in a position to understand. It is not only jobbery in municipal and State architecture which makes our public buildings inferior as a class to those built by private enterprise. It is not only because the architect of the United States Government is changed from time to time that the works for which that Government is responsible are so often discreditable. The whole system by means of which the Government manages such matters is a bad one — bad not merely in the sense that it is not always well administered, but in the sense that it cannot be so administered as to result in an average of works which would rightly represent the standing of American architecture to-day. Until the system is radically changed — until the architectural business of the United States Government is put upon such a basis that it will tempt the hands of our very best architects, and will permit that many of them shall join in devoting to it a portion of their time — until this good day comes, American *citizens* may feel sure of being as well served (if they wish) as any individuals in the world, but the American *people* must be content with a worse service than any other nation accepts. It must be satisfied to put itself on record as too blind or too indifferent to see and appreciate and secure a quality of work which year by year excites an ever-growing admiration among our foreign visitors. It must submit to perpetuate the sins of a past generation of architects when it might be giving immense assistance to the virtues of the generation which is now at work and of those others which are to follow in its steps, if we may trust our English critics, with still greater freedom of effort and power and skill.

Landscape Gardening and Forestry.

A FEW months ago we spoke in these columns of the status and needs of the landscape-gardener's art in America. A little later we drew attention to the relative value of native and foreign trees for American planting. In both cases we believed that the subject would prove as interesting to the public as it certainly was important, and in both our belief has been justified. Many letters have come to us asking where further information could be obtained. Perhaps the most welcome have been those which showed a desire on the writers' part to study landscape gardening with a view to its professional practice. As was said before, few professions offer so good a future to the young American of to-day. There are few in which laborers are so scarce and in which a growing demand for intelligent labor is so clearly promised. The renewed interest with which New York City has turned to the improvement of its partly completed parks and to the establishment of others is but one hopeful sign among very many. The success of Tuxedo Park has already led to the projecting of other suburban resorts of the kind. A scheme is on foot in Boston to redeem the islands in the harbor from the deplorable state of nudity to which they have gradually been reduced. In Boston also and in many Western towns new parks are under way. Everywhere there seems to be a nascent desire to preserve or to restore the beauty of the water-fronts of cities. And to those who keep a keen eye upon such matters, private owners as well as corporations seem to be taking a new interest in the art. Senator Stanford, for instance, in establishing his great university for California has chosen a rural site, and has associated Mr. Olmsted with his architects in its arrangement; and the same artist's services were demanded not long ago for so purely utilitarian a scheme as the building of a new hotel near Salt Lake City.

One of the most encouraging facts to be mentioned, however, as affecting both the subjects discussed in our previous articles is the recent establishment in New York of a weekly journal devoted to the interest of horticulture, forestry, and landscape gardening. It is not a botanical journal properly so-called; but the name of its editor — Professor C. S. Sargent of Harvard University — guarantees scientific accuracy to all its presentations of facts, and its special departments have been intrusted to gentlemen as well entitled to confidence as he. Its discussion of flowers, shrubs, and trees will supply a necessary basis for its discussion of the forest interests of the country and of the artistic aspects of the gardener's art. There is no place in America where this art can be studied as a whole. There is no place where preparatory teaching in its problems can be obtained except the office of one of the few artists who practice it with success. The books which relate to it are not very numerous and are sometimes hard to get, and the best of them are in foreign tongues. We have had no medium for popular instruction with regard to our existing forests or to questions of economic tree-planting, and no recognized organ for bringing such subjects to the notice of our legislators. All these wants "Garden and Forest" gives good promise of meeting in so far as they can be met by printed words. We have therefore called attention to it as the best way of answering our numerous correspondents.

Longfellow on International Copyright.

FROM A LETTER TO MR. WILLIAM DULLES, JR., DATED OCTOBER 8, 1878.

* * * Whatever is just is for the benefit of all; and I wish we could have a Law providing, between England and America, that "a Copyright taken out in either country shall be equally valid in both." * * *

Yours very truly
Henry W. Longfellow.

The Public-School Problem.

THE statement is made editorially by THE CENTURY, "We need [in our public schools] less ambition and more thoroughness; less of the *what* and more of the *why*," and the question is asked, "Who is to teach the American people this?" My answer is, that a large part of the people are already convinced of it. If the genuine evils of the present system can be shown still more plainly and a remedy for them suggested, surely the progressive American spirit may be trusted to apply it.

One of the best instructors in the country asserts that "in no work to-day is there so much quackery as in the so-called educational work of the schools."

Of what is the public-school system accused? As Herbert Spencer forcibly states it, "The wrong things are taught at the wrong time and in the wrong way." Whether this sweeping assertion is entirely true or not, it is certainly true that our schools teach too many things at the same time, even if — which is not the case — every one of them was taught as it should be.

There is no time given in our schools to the development of a strong and symmetrical body; no time to allow the reasoning faculties to draw the breath of life; no time for anything but to crowd the memory with facts, the *why* of them all being as utterly unknown to the pupil as it is to the wooden desk upon which he piles his many books.

There is no need to argue the statement that the health of many children suffers in this process of holding the metaphorical nose and pouring instruction down the metaphorical throat. Why should the word of the majority of parents, teachers, and physicians be doubted? Because a child does not drop dead or have a fit on the spot, it does not follow that he is uninjured. Even ignoring all physical evils resulting from this cause, what vast and dreadful mental damage is done him by the starvation of his reasoning faculties in proportion to the stuffing of his memory, by requiring him to grapple with many subjects, some beyond his intellectual strength, and even, under such circumstances, to do the work of a year in six months' time!

Teachers are not responsible for this state of things. They are, in common with their pupils, the victims of this great crime — "the assassination of intellect." Teachers work for wages as do the other laboring classes of the community, and in this special pro-

fession the supply is always in excess of the demand. The overworked and discouraged teacher has her choice of evils,— to resign her position and with it her bread and butter, or to keep it and make the best of a bad matter.

The remedy for this condition of affairs lies in the creation of a public sentiment against the universal and destructive "cramming" process. Let a strong public sentiment demand a reform in this matter, and the reform will follow as surely as the earth will continue to revolve upon its axis.

The courses of study for our public schools and the amount of time to be given to each branch are planned by committees, trustees, and boards of education. Generally they are the most influential and honored men of the community. They spend gratuitously much time and labor in the interests of the schools. But it is not enough that they should be moral and "well-meaning" men. They should comprehend the duties required and possess the necessary sort of ability for their performance. The overseers of these great mental mills should at least be as familiar with their workings, and as good judges of the quality of the material produced, as the foreman of a woolen factory would be. It is a stupid and illogical procedure to elect to such positions men who, though they may be skillful manufacturers or successful merchants, know little or nothing of the laws of mental development, and possess no practical knowledge of school-room work.

Caroline B. Le Row.

Mind Training.

Is it not plain, in order that the student of average ability shall obtain the power and intelligence that is expected, in view of her so-called advantages, that either the years spent at school must be extended, or some more efficient methods of acquiring knowledge must be employed? As to the former, every teacher of private schools knows that no more time will be allowed. The years granted to the school-girl are grudgingly given, and often from these much time is pilfered by social distractions.

Persuaded that some *direct means* must be found for the development of more intelligent and efficient working power, and aided by the observation and experience gained in contact with the minds of nearly two thousand pupils, I was led to conclude that the power our pupils need lies in *the ability to concentrate the attention*. Then arose the question, How may the powers of perception and of concentration be gained at school, and made to become habits of the mind? Plainly, in no other way than by regular and systematic training to this end. Then was formulated a variety of exercises, to be practiced by the pupils from ten to twenty minutes each day, with no effort at learning or memorizing, although these would be attained, but solely to the end of acquiring the power of attention.

To insure *quickness and accuracy in seeing*, the reversible blackboard may be made a valuable auxiliary. A collection of figures, groups of circles or marks for unconscious counting, lists of words, and long sentences may each be presented for an instant, and the pupils be required to write or to repeat precisely what they have seen.

These exercises, it must be understood, are as distinct and apart from the work of learning lessons as are gymnastic exercises from the habits which follow their use, and, like such physical exercises, are to be considered only as means to an end.

Various and multiform are the means to which the awakened teacher may resort to quicken the minds of her pupils, and to obtain that all-important result of attention — accuracy in seeing and hearing. One of the most renowned of French educators was accustomed to require the boys under his charge to run with all speed past the shop windows of the streets, and on returning to write the names of all the articles exposed to view. It has been proved that the power to concentrate the attention may be cultivated and strengthened to such a degree, the mind becoming more and more obedient to the will, that pupils thus prepared are able to learn lessons, within their comprehension, in less than one-half of the time formerly required.

I venture to assert that a very large part of the time spent in studying lessons in school and at home is wasted for lack of early training to habits of perception and attention.

Instead of vexing the mind of the delinquent with persistent questioning, for the mere sake of "hearing the lesson," an endeavor as hopeless as that of trying to pump water from an empty cistern, let the teacher first make clear the meaning of the lesson, emphasizing with marked distinctness the principal points; this done, require the learner either to write or to repeat the precise words, or words of the same meaning, which she has just heard. This requirement, be it understood, is not for the sake of committing the words to memory, but is a means of holding the pupil's entire attention until she has full possession of the lesson to be learned. To know that the results must be produced at once will stimulate the dullest mind to its full measure of activity, and in the effort to recall the exact meaning, and the corresponding words, all other issues must be laid aside: the teacher is calling her to a quick account, and there is no escape.

The teacher will find it expedient to set apart, each day, short periods of time, varying in length from ten to twenty minutes, according to the age of her pupils, for the single purpose of developing and strengthening those faculties which will, at last, enable them to study, according to the true meaning of the word.

In order to show how much may be accomplished by training the mind to *accuracy in hearing*, when the power of attention has been acquired, some examples, by way of results, are here given. In my school were assembled about forty girls from fourteen to eighteen years of age. A poem by Wordsworth, consisting of twenty-four lines, was perfectly recited by the entire class in seven minutes; the teacher, as is her invariable rule, read each verse once only. An extract of seventeen lines from one of Charles Lamb's stories was accurately repeated after nine minutes. Twenty-one lines read from Washington Irving's "Sketch Book" were instantly reproduced without an error.

A part of the description of the battle of Waterloo by Victor Hugo was read aloud once, and the listeners immediately recalled thirty-six lines, or four hundred and sixteen words, precisely as they had heard them; and this was done without the least mental strain. The power had been acquired by a slow and

systematic process of training, lasting but a few minutes at once.

Many specimens of good literature have been learned in a minute portion of the time which would be found necessary to the untrained student.

It is undeniably true that the mind retains longest that to which it gives the closest attention; therefore, it need be no matter of astonishment that the pupils are able to recall selections, or lessons, thus learned, after months or even years have passed.

Classes in history, literature, and art have been conducted with little use of text-books. There have been readings, lectures, and familiar talks on the part of the teacher, the oral method having been found to impart more of the substance to be learned than the pupil could gain from the mere study of the book. Many examples might be given proving the efficacy of a system which strives to develop to the fullest extent, in each individual, the power of attention and concentration.

With this important part of the mental machinery in efficient working condition, the judicious teacher, ever watchful of the physical welfare of the youth intrusted to her care, will gladly dispense with many brain-wearying hours for her pupils, and will rejoice in being able to afford them sufficient time for play and physical development. She will not insist upon a verbal recitation, in order that she may "hear a lesson," but will require of the scholars an oral or written account of what has been learned in listening to her instructions, and as the result of their own research and observation.

In a school where the pupils are daily exercised to the end of securing habits of attention, much time will be economized, more instruction will be imparted, fewer text-books will be used, a clearer and broader intelligence will be secured, by direct contact with the teacher's mind; and last, but by no means least, a truer sympathy will exist between teacher and pupil.

Catharine Aiken.

The Education of the Blind.

A REPLY.

IT is in no spirit of controversy, but from a feeling that the schools and institutions for the blind are placed in a false light, that I enter a protest against certain sentiments expressed in the "Open Letter" entitled "The Blind as Students," in the November CENTURY.

After the faint praise of the opening sentence we are told that the schools "are fearfully one-sided in their training, lamentably limited in their scope." First, let us see what their scope is. That of one, according to the words of the director, taken from its prospectus, is, "in all cases to fit them [the pupils] for usefulness in life, and for maintaining themselves, if necessary, by their own efforts"; of another, "to furnish to the blind children of the State the best known facilities for acquiring a thorough education, and to train them in some useful profession or manual art, by which they may be enabled to contribute to their own support after leaving the institution." There seems to be nothing "lamentably limited" thus far, and these are but specimens of many which might be cited.

Just what is meant by their being "fearfully one-sided in their training" is not made very clear. They are charged with conducing to "blindisms," such as "snapping the fingers to indicate the position of the extended hand when about to exchange a friendly greeting or pass an object." How it may have been in time past I am unable to say, but in an experience of three years' teaching, and having witnessed their greetings and hand-shakings scores of times, I have never yet noticed the "snapping of fingers," nor until the perusal of Mr. Perry's letter had I heard of such an expedient. On the other hand, however, I have known cases where pupils have come to the school with "blindisms" acquired at home, such as moving the body and making grotesque motions with the hands and arms, which gradually disappeared under the timely and friendly admonitions of teachers and the influence of their new companions, many of whom have gone through the same experience and are on the lookout for these peculiarities in new-comers.

It is true that not all is accomplished that might be wished, but the same is true of the public schools. The course of study pursued in the schools for the blind with which I am acquainted is at least equal to that up to and including the ordinary high school.

Last year a lady, known as a lecturer in an adjoining State, visited a class of blind in algebra. After listening to the recitation, which consisted in solving problems of two and three unknown quantities, from books printed in the ordinary raised type, the time spent in the learning of which Mr. Perry considers "wholly wasted," she told them that they recited as well as any seeing scholars she ever heard. A young man from the same school last year entered a theological seminary, passing the required examination without a single "condition," while several other candidates, some of whom were college graduates, were "conditioned" on two or more subjects. I give these merely as examples of what the institutions are doing educationally. I would not discourage the education of the blind in the public schools, as the writer recommends, if it were practicable. But we must take the facts as they are, and as the case now stands it is unquestionably impracticable. Of this, however, it is not my purpose now to speak.

We are told that our methods are "slow and clumsy." It is only fair to judge of the methods by the results. The young man referred to was congratulated upon his successful examination by a seeing classmate, who said, "If my college had done for me what your little school has for you, I should be satisfied." It is further objected that "the competition at such institutions is always and in every department only with those hampered by a like disadvantage," and that the pupil "needs the constant spur to his pride of seeing those about him accomplishing more in less time, to stimulate his ambition." What stimulus can there be to the ambition of a pupil capable of learning a lesson from one or two readings, in surrounding him with children who, "with fingers crammed into their ears, buzz over a lesson of three pages for the fifteenth time"?

The efficiency of wooden maps and globes in teaching geography is admitted; but "an excellent substitute may be furnished by any friend at home who will carefully trace the outlines of maps in a common atlas." "Whatever these contrivances lack, the native ingenuity and aptitude of the pupil must supply." This is

followed by the sage remark that "after all, the stimulating of these is of far more value than any number of facts or theories crammed into his brain by patent processes." Why should not this hold as true for the "clumsy methods" of the schools in question? Why should the writer take into consideration, at all, the methods of instruction if, as he further says of the pupil, "it is what he is, and not what he is taught, that makes him a success or a failure"? A casual reader would be led to infer that a school for the blind assumes to take in hand any "individual under thirty" and turn him out a "finished specimen of its educational excellence." As, however, the school age is usually placed at from six to twenty years, it will be seen that this does not fall within its "scope."

In short, Mr. Perry, notwithstanding his characterization of the methods pursued in the schools as "clumsy," recommends, especially in the home, the use of the Braille-board for writing, maps in relief, and the type-board for arithmetical calculations.

These constitute in effect nearly all the apparatus, designed specially for the blind used in the schools, with the exception that here their use is directed by experienced teachers.

J. T. Morey.

PERKINS INSTITUTION FOR THE BLIND, SO. BOSTON, MASS.

The American of the Future.

IT has been observed that the bulk of American citizens now engaged in the attempt to free labor from the tyranny of capital were not born in this country; and this fact has been mentioned as if, in some way, it cast a reflection upon the expediency or wisdom of the attempt in question. Native-born Americans, it is urged, trained from birth and by inheritance in the traditions of American independence and in the principles of the Constitution of the United States, would never lend themselves to such "foreign" and aggressive measures as the boycott, the strike, and the bomb. This position, however, will be found upon examination to be both logically and morally indefensible. In the first place, it is much to be doubted whether one native-born American in ten could repeat from memory a single clause of the Constitution of his country; and this ignorance bears practical point in the uncomplaining submission with which most native-born Americans endure insolence, imposition, and robbery that would stimulate to rebellion the least warlike denizens of the effete monarchies of Europe. Our foreign-born population, on the other hand, especially those of recent importation, are still instinct with something of the same enthusiasm for liberty and for having their own way which distinguished the Pilgrims of 1620 and the patriots of 1776; they have not yet succumbed to the apathy and timidity which seem inseparable from a prolonged residence in the land of the free. It is not the descendants of the "Mayflower," in short, who are the representative Americans of the present day; it is the Micks and the Pats, the Hanses and the Wilhelms, redolent still of the dudeen and the sauerkraut barrel; and it is to them that a prudent public sentiment will intrust the reins of power and the destinies of the republic. Nor should we stop here. There is a further step to be taken; one which the increasing enlightenment of this age will be certain, sooner or later, to force upon us. America, unlike all other countries of the world, is an idea rather than a place; a moral rather than a geographical expression. It is not so much the land, as the principle, of Freedom. To be an American, therefore, it is by no means necessary to be an inhabitant of the United States. In a higher and truer sense, an American is a man of European birth, who renders himself obnoxious to the land or social proprieties of his birthplace. And since, as has been shown, the genuine American spirit deteriorates in direct ratio with the length of the individual's residence in America, it follows that the most genuine Americanism must be that which has been free from this enervating influence altogether. If this reasoning be valid, an amendment to the Constitution should be introduced without delay, providing that no person of American birth or descent should be allowed to hold any political or public office in the United States; that the most recent immigrants should be intrusted with the most controlling offices of government; and that no man shall be eligible for the Presidency unless he can prove that he is an outlaw in his own country, and that he has never set foot in this.

Julian Hawthorne.

Christian Union.

IN reading the profoundly interesting second paper on the "United Churches of the United States," in the December CENTURY, I was struck by the omission of all reference to an episcopal church (probably on account of its numerical weakness) which, owing to its peculiar history, would have been deserving of mention in Professor Shields's scholarly essay. I refer to the Moravian Episcopal Church, with its historical name of Unitas Fratrum. Taking its rise in the forces set in motion by the Bohemian-Moravian Reformation of Hüss in the fifteenth century, and experiencing a renewal under German influences in the eighteenth century, it possesses the oldest Protestant historic episcopate, antedating the Anglican, continuing in an unbroken succession to the present day from 1467, at which time the episcopate was obtained from the Romish Church through the medium of two Waldensian bishops, regularly consecrated by Roman prelates. After a searching examination, the church was legally acknowledged as an "Ancient Episcopal Church" by an act of the English Parliament in 1749, and thus, so far as I know, is the only church whose clergy is officially acknowledged by the Anglican church.

So early as 1840 the late Right Rev. B. B. Smith, the then Presiding (Anglican) Bishop of Kentucky, proposed an organic union between the Methodist Episcopal and Protestant Episcopal churches through the medium of Moravian ordination, *i. e.*, that the Methodist clergy were to be ordained by Moravian bishops, as "this was an episcopate which both churches acknowledged." The two Wesleys, John and Charles, were converted through the instrumentality of the Moravian bishop Peter Boehler.

The Moravian Church, while admitting of the greatest freedom of worship, has a rich scriptural liturgy, which, with its pure historic episcopate, it prizes as its richest treasure.

Although historically an episcopal church, its government is largely synodical and conferential, and thus presents an example of a church combining these two forms of government.

It has from its origin always been of strong union tendencies, and of a truly catholic spirit, ever recognizing, even in times of prevalent bigotry, all sister churches, and standing in friendly relations with them where they would let it. It possesses this same spirit to day, and hails with delight all signs of union in the great denominations of our country, for its churchly watch-word has ever been the high-priestly prayer of Christ, "that they may be one."

Paul de Schweinitz.

MEDFIELD, MINN.

To the Deaf.

THE conditions and troubles of defective hearing may not interest the general reader, for none but the sufferers themselves have any idea of the burden of sorrow imposed by the impairment or deprivation of the sense of hearing. Nothing save blindness is so hard to bear, especially for those full of ambition, and otherwise capable of the full enjoyment of life.

But there are comforts even in deafness. We can see the faces of our loved ones, we can enjoy all beautiful sights,— the lovely flowers, the rich landscapes, the glorious sunsets, and all the beauties of nature,— while all arts save music lay their treasures and achievements at our feet. The pleasures of travel, too, are not less to us,— perhaps in many respects they are rather enhanced.

We can make the pen available by correspondence, and so benefit ourselves and our friends. We can use the brush, and enjoy our labor at the easel; and we can employ our hands for our own and others' comfort and happiness in a thousand ways.

Deafness is far more common than is generally supposed, and is especially prevalent among the middle-aged. Medical works assert that fully one-third of our population between the ages of twenty-five and fifty are partly deaf, the trouble having come on so gradually that fully one-half of those afflicted are unaware of it until sufficiently advanced to become troublesome.

We believe the best aurists agree that there is no help for hereditary and congenital deafness, or those cases where the nerves are paralyzed. A very common cause of temporary deafness is hardening of the wax of the ear; and the trouble may become serious if not relieved by prompt and proper treatment at the hands of a good aurist. Where such aid is not available, it is safe and possible to remove the wax by putting into the ear two or three drops of pure glycerine three times a day for three days, and then syringing with warm water (as warm as can be comfortably borne) in which a little carbonate of soda has been dissolved. Use a teaspoonful to one quart of water.

The ear being a very intricate, delicate, and sensitive organ, no patent nostrum should ever be introduced into it nor any quack ever allowed to tamper with it. Only the very best aurists should treat it. Many disorders and conditions of the inner parts of the organ are beyond the reach of medical skill. Such cases are disheartening. Obstruction of the Eustachian tube (the tube that connects the tympanum, or ear-drum, with the back upper part of the throat) is a frequent cause of deafness. Inflammation of the throat, affecting this tube, also causes it. In either case, a good aurist can afford speedy relief by removing the obstruction or allaying the inflammation.

Catarrhal deafness usually disappears when the cause is removed, if the trouble has not become too deeply seated. Early manifestations of deafness should not be overlooked or neglected. Elderly people are often deaf because vitality is declining generally; the hearing, in common with the other powers, shows the approaching weakness and decay of age. Some persons whose hearing is ordinarily very acute are quite deaf when extremely weary.

Rupture of the drum membrane by an accidental puncture, by whooping-cough, or by a blow on the head, is among the causes of deafness. The sudden concussion of air against the delicate tympanum, caused by the discharge of heavy artillery, has often more or less impaired the sense of hearing, and, strangely enough, in some reported cases where the hearing was already weakened, has restored it. Many soldiers were made deaf during the war. The ears sometimes seem entirely stopped up by a severe cold; but let them alone, treat and remove the cause, and the effect will probably disappear.

Climatic causes produce deafness. We have visited a county in central Pennsylvania where deaf people are the rule and those with good hearing the exception. In districts in Alpine Switzerland the same peculiarity has been observed. Another cause of deafness is thickening of the lining membranes of the ear, and for this there is no known remedy. It may be constitutional, or caused by ulceration after scarlet fever, or by other diseases; but it sometimes comes on without any known or apparent cause. All that can be done in this case is to palliate the trouble by using an ear-trumpet, or, better still, an audiphone. The latter is now oftenest made in the form of a fan of vulcanite, and being black, and a seeming accessory to the toilet, is in no respect objectionable, as was the large ear-trumpet of former days. There is a very small ear-trumpet made that is helpful. These instruments are of great assistance in hearing lectures and the like, as well as in lending distinctness to conversation.

It has been said that "Deaf people are always proud." Call it pride, if you will; but why needlessly proclaim a misfortune (which, unlike blindness, is not often evident) by using a conspicuous and forbidding instrument? One does not care to emphasize his own personal afflictions for the observation and comment of others.

If people only knew how to talk to the deaf, a great many heart-aches would be saved. First, have a little consideration, and by a very trifling motion, which they readily see and understand, call their attention to you; then articulate clearly and distinctly — not too fast, and not too loud. It is this shouting into the ear of a deaf person that fills him with confusion and sends all the blood to his face; by his wavering and equivocal responses he sometimes hardly gets credit for due intelligence, although he may really be very well informed on the subject under discussion. He had hoped you would speak low and distinctly; he could then have heard you, acted like himself, and been himself; but now all within hearing know he is deaf, think he is very deaf, and look upon him with com-

miseration perhaps, as well they may; perhaps gaze at him much, and long and rudely too. This only adds to his perplexity, and induces fresh resolves never to go again where there is any danger of the occurrence being repeated. Strange as it may seem, some deaf people often hear much better in the noisy street, or traveling in the cars, than in a quiet place.

This is the reason why deaf people shun society, for there lie the rough places in their pathway, because few know *how* to talk to them. We do not mean the very deaf, but those who enjoy a chat or a conversation with a friend without discomfort. Their greatest trouble is to hear mixed conversation, sermons, and the like. Familiar voices are easily heard by the partly deaf: so they are happiest at home, and avoid general society. The annoyances that seem to accompany the deaf are numerous, and often very hard to bear. It leads them very often to renew their determination to stay closer at home, plunge deeper into books, and try there to find compensation for the unattainable pleasure of social intercourse.

Katharine Armstrong.

Names.

An amateur painter was once strolling through the streets of a coast town, when he suddenly espied, standing in the door of a little cottage, a beautiful young woman with a sturdy child in her arms. The pretty picture framed in the dusky doorway attracted him, and with an eye to a "study" he accosted the unconscious Madonna. The young mother answered that she was n't particular about herself, but that she should admire to have Iddy's picture taken. "Iddy!" rejoined the painter; "what 's the rest of his name?" "Oh," said she, with an air of pardonable pride, "you know he 's our first baby, and we did n't want him to have a name like everybody else; so *he* found some nice words in a book, and Iddy's name is one of 'em — Idiosyncrasy!"

That the above is a true story as to the main fact makes it none the less melancholy. But at the same time there was the germ of reform wrapped up in the idea of an original name for the child. This motive governed our friend Mrs. Kenwigs, when she composed the immortal cognomen of her Morleena; and I knew a lady who bravely carried about the appellation of Garaphelia Mohalba. This was certainly unique, though for purposes of convenience it had to be dwarfed to the commonplace and every-day Garry.

In these complex times it is useless to hope that the simplicity and truth of the old Hebrew nomenclature can ever be restored. But what an amazing effect might be predicted if names were all at once to resume their old-time elasticity, and could be donned and doffed as character suggested. Think of being known as "Supplanter," or "Dishonest," or "Repentant," as the case might require. And what an immense stimulus to self-righteousness there would be, supposing a man had really begun to mend his ways, in being addressed as "Virtuous," or "Excellent," or "Pure." It would never do. It would be "living in a lantern" with a vengeance. The present fashion of newspaper publicity would be retirement and secrecy compared with it, and something more serious than "dramatic situations" would inevitably result. It is probably for the general good, therefore, that the moral condition of language renders such a state of things impossible. No doubt speech was orignally an honest interpreter of thought, but the interpreter has trifled with his moral sense until it is hopelessly degraded, and he has no longer even the courage of his opinions left. So we give a child his father's name just because it is his father's name, and not from any special fitness. Indeed, the whole question of fitness seems to be lost sight of, except in rare cases. The original significance of baptismal names is buried under a mountain of associations, and we characterize certain ones as stately, or somber, or piquant, chiefly because of the qualities of some former possessor. And as with "Iddy's" parents, the mere sound of a name goes far to recommend it to many people. The melodious arrangement of vowels and consonants is, after all, one of the main motives; and as tastes differ in regard to what constitutes melody, the standard has to vary in a somewhat trying manner. A large class of excellent people confine themselves with praiseworthy fidelity to Bible names, on account of which a girl now and then finds herself weighted in the race of life with such a burden as Keren-happuch, or a boy is forever jeered by his mates on account of being known as Tiglath-Pileser. Even this, however, is an improvement on the Cromwellian style of using whole formularies of theology, such as, "Through much tribulation we enter into the kingdom of Heaven" (which was irreverently condensed to Tribby), or the famous Praise-God Barebones. That was a quaint and not unpleasing usage of two generations back which gave our aunts and grandmothers such names as Patience, Mercy, Thankful, Submit, etc. But how an occasional "high-strung" maiden must have rebelled against the meekness of such an appellation. A mode which finds more or less favor in the Western States has at least the merit of being patriotic. Thus a boy born on the Fourth of July was christened Independence, and I remember such combinations as Indiana Martin, Peoria Frye, and Minneapolis Forsyth. There is a certain breadth and freshness, as it were, about these specimens which smack of wide rivers and wider prairies.

There is one aspect of the case against which the writer feels bound especially to protest. It is the nefarious practice of altering a child's name, now happily taking its place among other relics of barbarism — a very different thing, you will perceive, from the honesty of the Hebrew usage; but it has been largely sanctioned, even among the most intelligent people. Say, for instance, that a child has, after much anxious thought and search, been given her great-great-grandmother's majestic and honorable name. All the associations of early infancy naturally cling about it. The baby's silver cup and the little spoon and fork bear the three stately initials, and various precious heirlooms are held in trust for the future pleasure of the fortunate namesake. But an elder sister dies, and straightway, through some occult law of sympathy or sentiment, away goes the grand old name to give place to — Susie! It is nothing short of robbery. That obnoxious "ie" reminds me of another practice which is almost too absurd to combat. Can any reasonable being give a valid excuse for the strange fatuity which makes grown-up women, and business women at that, announce themselves to the world as Jennie, Mattie,

Maggie, etc., *ad nauseam?* How can they help seeing the increased dignity of Jane and Martha and Margaret? May a new baptism into the eternal fitness of things come to the rescue!

I have known several bright children who refused to be known by the name which had been given them, and desired to be called by a name of their own choosing. "I am not Mary; my name is Rosalind," or whatever it was. I also knew one child who was actually not named at all till she was seven years old, when she proceeded to take things into her own hands, and name herself. What a comfortable way is here suggested of shirking an alarming responsibility, and at the same time revolutionizing the whole matter. Let there be some convenient generic term for children till the age of six or seven years, and then boldly rely on the genius of the coming generation to name itself!

E. W. Denison.

BRIC-À-BRAC.

To a Little Girl in "Punch."

WHO SAID:

GRANDMA, after giving the subject every consideration, I have come to the conclusion that — the World is Hollow, and my Doll is stuffed with Sawdust; so — I — should like — if you please, to be a Nun!

Here still in "Punch's" page you stand
Where younger eyes may view you,
Quaint as when Leech's skillful hand
For older laughers drew you.

Here grandma sits, and, type of joys
By Fate untimely shattered,
In sad confusion dolls and toys
About the floor are scattered.

So early wise, Life's vanity
With prescient gaze discerning!
How found you out the truth that we
Are all our lives in learning?

Alas! what cynic moralist
(Few, let us hope, as youthful)
But proves, O tiny pessimist,
Your quaint conclusion truthful?

Yet, we may trust *your* words expressed
A transient melancholy,
From which you soon, with gayer zest,
Returned to play and Dolly.

With *us*, alas! — But why pursue
The dismal allegory?
Far pleasanter to laugh at you,
And trace in "Punch" your story.

For surely in the magic glass
Of those delightful pages
We see your little figure pass
At various youthful ages.

And later, smiling through your curls,
You greet us, kind and witty,—
One of your artist's English girls,
Fresh, rosy, round, and pretty.

And still you live (but older grown)
In some gay land of fable,
And have for children of your own
Du Maurier's "Jack" and "Mabel"!

Robertson Trowbridge.

Uncle Ezek's Wisdom.

OBSTINACY is the characteristic of the ignorant; and, after all, it is their only safety.

WHEN I look around me and see the bickerings and strifes among us Christians here on earth, I sometimes wonder what we shall do to enjoy ourselves when we reach heaven, where all bickerings and strifes are unknown.

INTEREST is remorseless; it knows no rest, no mercy, no limits. One penny put at interest when Adam was created, and compounded, would bankrupt creation when Gabriel comes.

AS base as slander is, it is never lost for the want of listeners.

VANITY is the one thing that every one seems to have more than his neighbor has.

COMMON sense is the rarest of all possessions, and those who have the most of it seem to know it the least.

ACT natural, my friend, and though you may not be very strong, you won't be ridiculous.

OPINION is a kind of half-way house, where people meet to exchange lies and guess at what they don't understand.

AN old man in love is as helpless as a blind kitten.

IT is very rare indeed that a man is too great for his creditors, and it is equally common that his condition is too great for him.

IGNORANCE makes a man impudent; you would think it ought to make him modest.

GHOSTS are a thin package — so thin, that only one man can see them at a time.

THERE is one instrument that no clever woman has ever learned to play on, and that is a second fiddle.

WHAT a miserable time we should have in this life if we were obliged to mind our own business and let our neighbors mind theirs.

MY friend, don't forget this,— if you lie down, the world will go out of its way to drive over you; but if you stand up, and look severe, it will give you half the road at least.

THE man who has no home generally does n't want one; he is ever verging towards vagrancy, and is pretty sure to reach there at last.

A SPOONFUL of molasses will catch more flies than a barrel of vinegar; every one will tell you this, but how few try it.

IT is easier to control a hundred men than one man.

YOU may argue ever so elegantly against a success; the success wins every time.

THERE are certain things that virtue won't mix with; ingratitude is one of them.

Uncle Ezek.

"Just the thing for a sleamen cap. artistic, comfortable looking & serviceable" says the salesman
Some effects of the mind on the "Tam".
Training mate
upon uncanny quarter your hair always looks nice.
When saluting a lady passenger it never fails to stick
Finale
"Why didn't you blow away before I ever saw you"

A TAM O' SHANTER.

The Reason.

"GET married," say my friends, and I,
Who 've just turned thirty-four,
Join their lament and, sigh for sigh,
My loneliness deplore.

It is not that I fear to speak,
By bashfulness distressed —
In fact, I 'm noted for my cheek,
And know the bold are blest.

My reason, then, if I must give,
Is simple, short, and clear —
I know that I can't wed and live
On half-enough a year.

Wood B. Benedict.

The Question.

SPAKE the youth Adam, to the maiden Eve:
"Dost love me? Answer! answer, or I die!"
"Not so!" she said, with instinct to deceive:
Then downward glanced, and blushed from No to Ay.
"Dost love me, love me?" And denial failed,
With love's first kiss.—"Be sure I love thee."—Nay,
Not sure was he: with sharper doubt he wailed,
"Dost love me, love me?"—Till, upon a day,
Suspecting him by vaster thoughts beguiled,
Quoth she, more softly than the widowed bird,
"Dost love me, Adam?" And his quick ears heard:
With half a sigh, and half a yawn, he smiled,
As one convinced: and thenceforth, o'er and o'er,
Answered the question — which he asked no more.

William Young.

The Glacier versus the Editor.

ADOWN a Glacier's steep crevasse I dropped a little song,
And far within the shining depths it slipped and slid along.
Then to an Editor I sent the self-same song away;
The Editor accepted it upon that self-same day.
He did not print it — but his words were courteous, warm, and kind.
The Glacier held with frigid grasp my little song enshrined.
The Glacier or the Editor? — I fain would see revealed
Which icy heart would be the first my little song to yield.
Far, far above, through sun and storm, the Glacier gleamed and shone;
I took my little rocking-chair and climbed the Alps alone;
For fifty years I sat and watched that Glacier's glittering way,
In hope to see it bring my song again to upper day.
For fifty years I watched the date the magazine appears —
No murmur once escaped my lips in all those fifty years;
But still, with meek humility,— heart-sick with hope deferred,—
Deferred to judgment wiser far, and never once demurred.
And yet again the pages scanned each month with hope renewed,
Each month, in deep dejection lost, the cruel pages viewed.
Again Hope spake with cheering voice, and waved her drooping wing,
"Take heart! THE CENTURY of next month your song will surely bring!"
At last, with heart all turned to ice, despair too deep to name,
I calmly gave my poem up — the Glacier did the same!

Charlotte W. Thurston.

His Grave.

BY no friend's footstep is it visited;
No flowers are there, not even a hardened wreath
Of immortelles; no marble at its head
Tells the cold secret of who sleeps beneath.

Though he has charmed a world with fire and soul,
His lowly grave is never visited.
Sad? strange? — Well, not so very, on the whole:
You see, this charming man is not yet dead.

A. W. R.

Multum in Parvo.

A RHYME OF COMPOSITE PHOTOGRAPHY.

IN love! And the picture belonged to Joe!
Photograph — cabinet size:
Sort of ethereal style, you know —
Dark hair, and bottomless eyes.

We were college chums, but, powder and flame!
How can a fellow keep cool?
He never would even tell me her name,
And laughed, and called me a fool.

He liked her, too, I was sure he did,
He was praising her high and low,
And he 'd give me a look from under his lid—
Well, I certainly hated Joe!

Did I ever swear I was bound to win
If the kindly fates approved? —
She was "more to him than friend or kin,"
And "the sum of all he loved."

In short, it was something else than play,
And at last I said so too,
And vowed in a most convincing way
He should tell me all he knew.

"Well — it 's my brother at home," said he,
Checking him off on his thumb;
"My two little sisters,— that makes three,—
And my cousin, and his chum:

"My mother, my aunt, and my uncle John —
It 's the latest thing, you know.
Now of course you 're really in love, my son,
But *which is the girl?*" said Joe.

Dora Read Goodale.

Ballade of Rejected MS.

I 'VE "submitted" my verse and my prose
To the editors' "reading machines,"
Yet my name 's unfamiliar to those
Who subscribe for the best magazines.
I began to write verse in my teens,
By the light of sweet Erato's face; —
Now, what is it the editor means
By, "We 're sorry we have n't the space"?

Here are madrigals written to Rose —
'T is to Rose that my preference leans;
Here are triolets, rondels, rondeaux,
And the charms they portray our *Fifines;*
Here 's "A Plea for our Gallant Marines"—
'T was the Admiral "stated the case";
Pray, what is it the editor means
By, "We 're sorry we have n't the space"?

Here are tales quite as ghastly as Poe's,
And weird legends; — the "limit" still screens
All I fain to the world would disclose,
So I clasp my portfolio's shagreens:
But just here a grim thought supervenes —
Does my "style" lack acceptable grace?
And is *that* what the editor means
By, "We 're sorry we have n't the space"?

ENVOY.

Friend,— for you 're at the back of the scenes,—
Does my Pegasus halt in his pace?
Can *you* tell what the editor means
By, "We 're sorry we have n't the space"?

Andrew Hussey Allen.

In Silken Hose.

IN silken hose and powdered hair,
And gay pumps twinkling at the toes,
He had no vulgar flesh to spare
In silken hose!

His cheeks were like Moore's laggard rose;
And though he breathed Parisian air,
Insidious wrinkles were his woes.
Time planned for him no sudden snare,
But probing age — his worst of foes —
Laid all his imperfections bare
In silken hose!

William H. Hayne.

THE CENTURY MAGAZINE.

VOL. XXXV. APRIL, 1888. No. 6.

DRUSE SHEPHERD.

FROM DAN TO BEERSHEBA.

THE humble fishermen of Tyre and Sidon, the capitals of Phenicia, had become rich and influential merchants long before the Christian era. By their enterprise they had made their cities the ports of the East, and had gained commercial intercourse with other countries bordering on the Mediterranean and with those beyond. Instead of being a barbarous people, with unattractive surroundings, they possessed many of the signs of elegance and taste which marked the cities of the West. Theaters were numerous; baths abounded; and the shows, the games, and the combats of wild beasts caused the people from all parts to pour into the Phenician cities.

But little remains at Tyre or Sidon now to give evidence of their past. Seldom does a modern vessel touch at either port. The rapid traveler of to-day is content with a passing glimpse of them through a marine glass. When the weather is fair, the Mediterranean steamers pass near the shore and make such an opportunity possible, though that "soft artistic haze," so fascinating to the painter, is apt to obscure the distance, and shut from view the inclines bare, yet lovely, which reach inland. But when Tyre and Sidon were in their glory, how beautiful the scene must have been! Then the richly cultivated farms reached down to the very borders of the sea, and each cape, promontory, and hill-top exposed to the glittering rays of the sun the white walls of some prosperous town or the sumptuous dwelling of a landed proprietor.

A small but magnificent port was then part of the glory of each city. When Herod ruled in Phenicia, these harbors were continually crowded with the vessels of all nations. The noise and confusion were scarcely less than at Antioch or Rome. The cities and the ports, though not extensive, always teemed with life, and were vivid with a wealth of color. The moving vessels, the rude encounters of the sailors, the ravings of the wild beasts which were brought from the far East and South for the public games, the songs of the fishermen, the busy movements of the merchants — all together made up picturesque scenes in endless variety.

How changed it all is now!

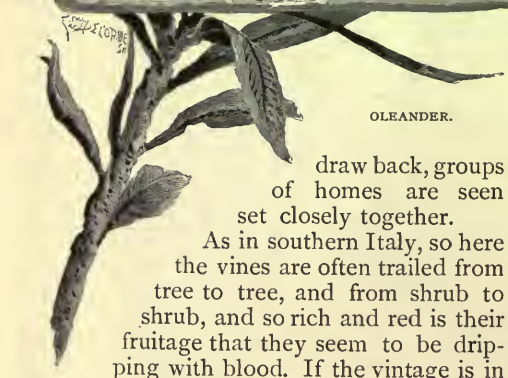
Eastward are the undulating, fruitful plains, gay and bright with flowers and verdure, backed by the southern ridges of Lebanon. These plains, extending from one city to the other, twenty-five miles, constituted "the coasts of Tyre and Sidon," or, as the New Revision calls them, "the borders."

One may start from Sidon on the old road and then go through the wooded pathways and the romantic ravines of the spurs of Lebanon, until a height of six thousand feet or more is reached. Soon after the descent on the eastern side, the natural bridge which spans the Leontes is crossed, and then the road is good until the valley of the upper Jordan comes into view, and a turn to the south is made. If the start is made early in the day, the air will be fresh. The first rays of the sun, coming up over the mountains, set aglow one line of hills after another as the

Copyright, 1888, by THE CENTURY CO. All rights reserved.

light descends and diffuses itself in the valley, at the same time awakening the laggard clouds and sending them up whence they came. Peasants are met, now singly, now in twos, now in groups, with loaded mule or camel, on their way to the markets of the Phenician capital; others are seen coming out from their humble dwellings, or humbler tents, it may be, to begin the labor of the day. It is a region full of beauty. Now the sun is well up, and the most striking features of northern Syria begin to be revealed. Hills of considerable height abound, and remind one of the lower ridges of the Apennines, or of the New England Appalachians. Some are bare and rocky, but the majority are clothed with verdure. Far above the narrow road are the terraced vineyards, with the dwellings of the inhabitants scattered among them, the dwelling and the watch-tower all in one. Wherever the prospect opens and the hills draw back, groups of homes are seen set closely together.

THE COASTS OF TYRE AND SIDON.



OLEANDER.

As in southern Italy, so here the vines are often trailed from tree to tree, and from shrub to shrub, and so rich and red is their fruitage that they seem to be dripping with blood. If the vintage is in progress, the wild and merry songs of the laborers will be heard right and left, only silenced for a moment as you are greeted with their hearty "Salaam ahlaykoom!" ("Peace go with you!") and a free and abundant gift of the fruit is pressed upon you.

Now the second climb begins. The outlooks from the narrow way are wonderfully impressive. One seems to be traveling in the center of the world. For there, far below, and each hour growing farther, lies spread all the world the eye can see, while upward the stupendous masses of what seem to be parts of another world pierce the clouds and invite the pilgrim on. As the higher points are gained, the expanses below widen and the glory of the scene increases. On the west is the sea, whose breakers carry the warm breath of the Orient to the shores of Europe; on the east is the wonderful desert, whose golden carpet stretches to the Persian Gulf.

The land westward, over which we have traveled, looks like a miniature landscape. The squatty woods, the glistening streams, the steep inclines, the dots of villages, the feeble shouts of the fellahin, even the thunder as it rumbles among the clouds far below — all strike one as insignificant in comparison with the noble surrounding peaks.

Now we turn to the east. Away across a deep valley is another range of mountains, snow covered, stream scarred, broken by chasms and ravines through its great length. This is the Anti-Lebanon,— Mount Hermon its crown,— and runs almost parallel with the range of Lebanon itself. These two stupendous ranges have been pushed up from the earth-crust to an altitude, in some places, of thirteen thousand feet. The great depression between them is Cœle-Syria, or "Hollow-Syria." Through it run the two great rivers of Syria: the Orontes flowing north and entering the Mediterranean at Antioch; and the Leontes, crossed on our way, and ending near Tyre.

The plain is nine miles wide, and for centu-

ries has been the track of invading armies. Nearly every foot has been fought over by Assyrians, Egyptians, Persians, Romans, Greeks, Moslems, and Crusaders.

When the atmosphere is free from haze, one can see an incredible distance north and south

MOUNT HERMON.

— almost from "Dan to Beersheba." Northward, the Leontes may be traced almost to Baalbec. South-eastward, the country of Bashan lies outspread with a surface undulating as gently as the waves of the summer sea — Gilead, dotted with its dark-green groves of oaks, rounded and inclined to suit the humor of its rising and falling expanses; the first swell of the Jordan at Lake Hûleh, the "waters of Merom"; the second widening of the sacred river — the Sea of Galilee — and the twisting of the connecting torrent-broken stream, with miles of country beyond, are in full view. If your geography serves you, there is no trouble in locating Mount Ebal and Mount Gerizim, in Samaria; Mount Tabor, at the head of the plain of Esdraelon; Mount Gilboa, far to the south; and Mount Carmel, by the Mediterranean.

The eastern incline of the Lebanon range is not so attractive as the side towards the sea, and traveling there is fatiguing. In some places the path is so narrow and runs so near the verge of frightful precipices, that one shudders every time his carefully-stepping animal grazes its side against the walls of rock. The views are magnificent. Here and there, on the left, bright golden lines are seen, strangely smooth in contrast with the rugged scenery. They are parts of the diligence road running from Baalbec to Beyrout. When the plain is reached, the scenes of the western slope are repeated. The journey across is a delightful one. The whole way seems to be cultivated, and at places thick groves of poplar and walnut are seen. Villages are conspicuous on all sides;

THE FOUNTAIN OF DAN.

the husbandmen are busy, and flocks of sheep and cattle are plenty.

There are khans, or inns, by the wayside. These the caravan merchant considers very desirable; but they have only an æsthetic attraction to the European or the American, and are without any comforts.

When the shades of evening come on, crowds of travelers, with their camels, asses, and other beasts of burden, throng the gateways of the khan. There is always a storm of bickering going on between the keeper of the khan and his patrons, or among the attachés of the caravan — merchants and servants. The khan is usually built around a court-yard, with sheds or booths for the animals occupying the ground floor, while the travelers may take what chance there is for sleep on the more elevated platforms.

Our route brings our crossing of the Leontes at the natural bridge, near the town of Belat. The bridge seems to be formed of immense

NATURAL BRIDGE OVER THE LEONTES.

LEBANON TO ANTI-LEBANON.

rocks which have fallen from the sides of the chasm. It supplies a safe and easy passage across the stream, which here is very narrow and is broken up by tumbling cascades, but it is so hidden by the foliage that one uninformed as to its location would scarcely discover it. The length of the bridge is perhaps less than 100 feet. The width is barely ten feet, but its height above the stream is fully 100 feet. One's admiration for it increases when, after a difficult and dangerous descent, it is viewed from the level of the stream. The walls of the chasm are 400 to 500 feet high. In season, the oleanders reach out from their rocky hold and offer their pink flowers to any one who will be tempted to risk his life to obtain them. The view up the gorge towards Baalbec is grand and impressive. When standing upon any spur of Lebanon, one would hardly believe that what there appeared to be only a green, velvety line, like a length of soft chenille on edge, could in reality be such a deep-cut scar in the lovely valley, with a tumultuous, deafening warfare of waters going on between its walls.

A return to the caravan route brings the Anti-Lebanon range into full view. A few miles directly eastward is the Hasbany, the northernmost tributary of the Jordan, and Mount Hermon is in full view, its snowy range half hidden by the clouds. The river is but a passive stream, in comparison with the uneasy Leontes, and there is but little of interest attending it until, as we journey southward, the bridge over which we cross on the way to Cæsarea Philippi is reached. There quite a deep gorge has been cut by the Hasbany, for the descent is considerable and the water is turbulent. The bridge is one of the largest and strongest in the land, and yet it shows plainly that it has had some fierce struggles with the torrents which come down from Mount Hermon in the spring of the year; for its walls are broken, and many a stone has been carried away from the strong masonry of the parapet. The sides of the river are lined with oleanders, reeds, rushes, and wild flowers of infinite variety. The scenery hereabouts is as lovely as that of the St. Gothard Pass; but all thoughts of Switzerland are dissipated when

one sees an Arab caravan, with its fifty awkward camels laden with merchandise and as many dark-skinned attendants with their noisy bluster and pompous demeanor, crossing the bridge, on its way to Cæsarea Philippi. The music of the stream sounds all the sweeter when the caravan is lost in silence.

After crossing the bridge, we change our course to the right for a mile, and come upon the Fountain of Dan, which is the largest spring in Syria, if not in the world, and one of the loveliest spots in Palestine. Here is another source of the Jordan nestled among the wild flowers. Its waters once supplied the ancient city after which it is named. It also marks the northern border of Palestine. To possess its cool waters, more than one fierce combat has taken place. Here Lot was brought a prisoner from Sodom by the five kings of Mesopotamia, and hither came Abram to rescue him. The growth of flowers is charming. It includes our own red poppy, the daisy, white and yellow roses, the thistle, the blue flag, and the "lily of the field." A few rods down the stream is a grove of oak trees of immense girth. These shade the grave of an Arab sheik, and are hung with rags — the offerings of pilgrims. Upon a portion of the hill once stood the city of Dan. A search amidst the neighboring jungle of grasses, shrubs, and scrubs will reward the explorer with a sight of the broken-down walls of the old-time town and disclose some of the débris of its once splendid structures. Mount Hermon's snowy range is in full view, in strange contrast with the surrounding loveliness of the well-cultivated farms of Bashan which form the plain. From this plain rises the hill of Dan.

Bursting forth from the rocks, the water tumbles down the hill and then forms the "fountain," or lake. From this it hurries on southward, and is known as the Leddân until, four miles below, it joins a stream coming from Banias, which we are yet to visit. A mile farther on, these two are joined by the Hasbany, the largest of the three Jordan tributaries; then, together, they plunge through the marshes and "waters of Merom" to Lake Hûleh. Thus the upper Jordan is created.

Four miles from Dan is Cæsarea Philippi. After the oaks of Bashan are left, the path winds towards the north-east. As we approach the city, the varying landscape presents some lovely views. A broad terrace is now seen, cut in the side of the mountain by some strange forces of Nature. Upon its rocky floor is located Banias,— the Paneas of old,— the Cæsarea Philippi of our Saviour's day, and the northernmost limit of his wanderings. The terrace is bounded by two deep, uninviting ravines, one on the north and the other on the south. Between these, and beyond the city, rises an isolated peak a thousand feet high, crowned by the magnificent ruins of the castle of Subeibeh. By whom this wondrous pile was erected, no one can tell. It is attributed to the Crusaders, but there is evidence that the Phenicians erected at least a part. From the yawning, fractured mouth of a cave which covers a fathomless pit the waters gush with tremendous power and roar down the ravine through a portion of the city, supplying a magnificent, but almost unused, mill-power.

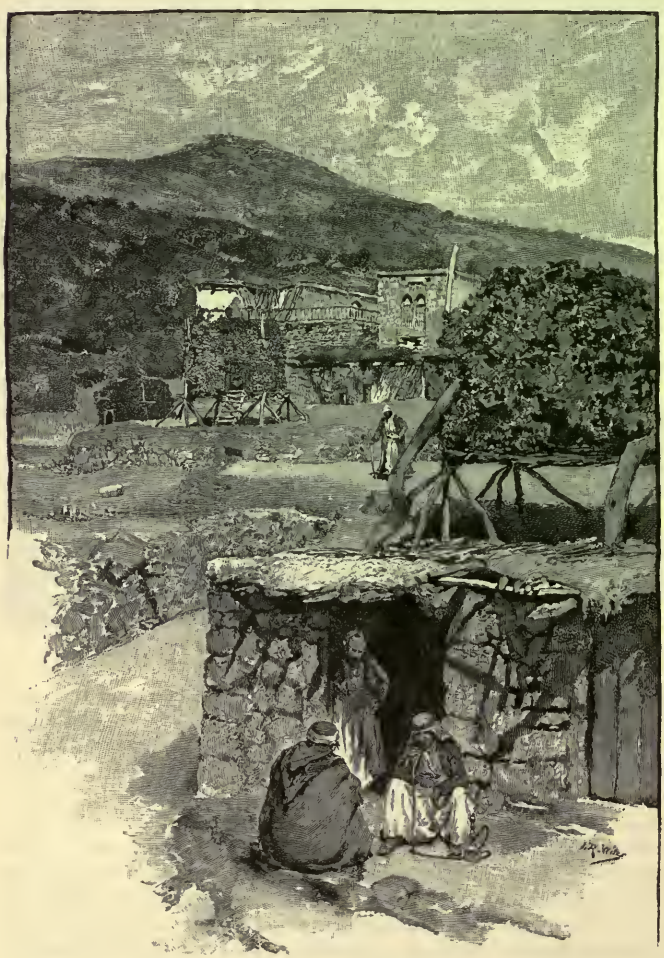
BRIDGE OVER THE HASBANY.

Cæsarea Philippi does not profit, however, by its superb site. Like nearly all the towns of Palestine, its houses are rude and out of repair; its people are shiftless and idle; and its bazars are scarcely worth a visit. Nature supplies the bric-à-brac; she also supplies the centipedes and scorpions which infest the houses in the wet season and cause the poor, suffering inhabitants to exercise sufficient industry to erect booths of tree branches upon their flat roofs, in which they may sleep until the plague ceases.

The past holds the principal points of interest concerning Cæsarea Philippi. When the Phenicians were there, they established the idolatrous worship of Baal, and enjoyed their splendid possessions until Joshua drove them out. Then it was Baal-gad. When the Greeks came, the shrine of Pan, the god of the shepherd and of the huntsman, was located here. This gave it the name of Paneas. It is now called Banias by the Arab inhabitants. In the course of time this region became part of the possessions of "Philip, tetrarch of Iturea and Trachonitis," son of Herod the Great, who rebuilt the city, enlarged it, and named it Cæsarea, in order to gain the favor of his emperor, Tiberius Cæsar. That it might not thus become confused with Cæsarea on the Mediterranean, he added his own name and called it Cæsarea Philippi.

All that now remains of the past are the ruins of the old citadel, and the shrines which, similar to those at Petra, are cut in the face of the rock.

At the base of a cliff, over one hundred feet high, is a cave as dark as the worship to which it was devoted. Near its mouth are many fragments of the splendid edifices which must have been erected near by, and doubtless some of the broken columns which adorned the cave itself, for it was the temple of Pan — so a Greek inscription on the face of the cliff informs us. No wilder place could have been chosen for the worship of a pagan god. A pretty fluted roof with an arched canopy adds to the interest of one of the shrines, while several tablets with defaced inscriptions are found in another. The whole neighborhood has a wild, uncanny appearance. To the left is the tomb of the Moslem Saint George. The little white structure covers also a fragment of the white marble temple which, Josephus tells us, Herod the Great erected to the memory of Augustus.



CÆSAREA PHILIPPI.

Last of all is the momentous incident of the visit of our Lord to Cæsarea Philippi. "And after six days Jesus . . . bringeth them up into a high mountain apart, and was transfigured before them."

Authorities disagree as to the locality of this "high mountain apart." No record is given of the employment of the "six days." If they were filled with acts of mercy at Cæsarea Philippi, then undoubtedly the Transfiguration took place on one of the peaks of Mount Hermon. If the six days were occupied in crossing over to Galilee, a journey

"THE FOAL OF AN ASS."

which really was taken between the visit to Cæsarea Philippi and the journey from Capernaum to Perea, then Mount Tabor has some claims to the honor of being the site of that transcendent occurrence. Mount Hermon, again, is entitled to the most favor, if being the loftiest of all the Holy Land mountains gives it any claim. It is not a single peak indeed, but a long ridge running northward from Banias, and eastward for many miles, supplying the highest points of the Anti-Lebanon range. It is now called by the Arabs "Jebel-esh-Sheikh" (the Mountain of the Old Chief), and it still serves as the guiding point of the nomads who wander over the desert. The Palestine sojourner sees it oftener than any other spot in the land. From the Mediterranean above Joppa, almost to Tyre, its long snowy inclines are visible. It may be seen from the Dead Sea shores, and it is constantly making its appearance to the tourist as he climbs up towards it from Jerusalem to Nazareth and the Sea of Galilee, and thence to the Fountain of Dan.

The ascent of Mount Hermon may be made by several routes. Each one of these will reward the traveler for the labor involved by a disclosure of relics of the genius, intrepidity, and faith of the people who chose to dwell there in the ages long past. From almost every peak a fine view is gained. Running northward, from wherever one stands, is the Anti-Lebanon range, near the terminus of which is the magnificent cluster of ruins at Baalbec. The valley of Buka'a resembles the hold of a gigantic ship, smooth and gray, with the line of the Leontes coursing through its center like a limitless keelson. On the other side, the Lebanon range rises, and we know that the great sea is still beyond. Turning east, we may discern the serpentine caravan-route reaching far out towards the Arabian desert and again towards Damascus, with the great country of the Druses intervening. Damascus, with its

olive-orchards, its gardens, and its plantations, seems so near that one is almost tempted to try to startle the field laborers with a shout. Gaulanitis and Galilee lie outstretched on either side of the Jordan; Lake Hûleh and the Sea of Galilee are plainly in view; the whole depressed line of the Jordan may be traced until it is lost amidst the bitter waters of the Dead Sea. Bashan, Gilead, and the entire route from Dan to Decapolis come within view on the east; while Samaria, Galilee, "the coasts of Tyre and Sidon," and even Mount Carmel, jutting out into the "sea between lands," are all as plain as day. From whatever point Mount Hermon is viewed, it always inspires one with awe and veneration. Upon its summits and about its base the fragments of history abound. Nothing except the limits of the perennial snow has been changed for generations.

If we turn from Mount Hermon for the site of the Transfiguration, we must look to Mount Tabor. After their visit to Cæsarea, the Divine Traveler and his disciples returned to Capernaum and sojourned a while before visiting the cities of Decapolis. Mount Tabor could have been visited *en route* at either time. It is only two thousand feet in height, but its isolated position gives it a commanding appearance from all directions. To the very summit it is thickly wooded with walnut, oak, pistachio, and rose. Some of its inclines are so rocky and so steep that one intuitively dismounts and relieves his horse until the climb is easier. There are ruins on the top, dating at least from the time of the crusades, and there is an old gateway remaining, which the Arabs call "Bab-el-Hâwâ" (the Gate of the Wind). A convent on the summit is inhabited by a few monks who entertain the strangers that visit there.

Although the views are wide and fine, yet, looking off, one is impressed with the thought that it is the peculiar situation of Mount Tabor which gives it the appearance of great altitude. The outlook is disappointing, even though it does extend into Galilee, over the mountains of Samaria, across to Perea, and up to Mount Hermon, besides including all the glories of the land intervening — Safed, the "Horns of Hattîn," Nazareth, the deep depression of the Sea of Galilee, and the mountains of Moab, which rise beyond the Jordan like palisades. Indeed, there is no grander view than the near expanse south of this famed mountain. The vast cultivated plain of Esdraelon sweeps its base; the towns of Jezreel, Nain, Tiberias,

MOUNT TABOR.

and Endor are all within the compass of a near semicircle; while at the base of Mount Gilboa, in the south, one can see, glistening like silver, the waters of Jezreel where Gideon's band of three hundred were chosen to combat the invader.

In the past, Mount Tabor has served as a tribal boundary line; as a strategic war-point; as a symbol of glory; as the stronghold of kings; as a witness to battles from the days of Deborah and Sisera to the struggle between Kléber and the Turks. And yet it occurs to me that the quiet and retirement of some spot on Mount Hermon would have been preferred

for such an exalted scene as the Transfiguration, rather than a site whose entire surroundings only recalled scenes of sorrow and struggling.

We continue our journey directly from Cæsarea Philippi to the cities of Decapolis, though half a dozen or more routes could be taken, east or west of the Jordan. It is not our present purpose to follow any of them in detail. No strict account is given us of the route of the Divine Teacher. It probably led back to Dan, through the coasts of Galilee to the "waters of Merom," and along the Jordan to Capernaum. From there the west shore of the sea may have been followed, but probably the quieter upland country was chosen, and the bases of Mount Tabor and Little Hermon were passed within close range. The Jordan was crossed at Bethshean, the town where the corpses of Saul and his sons were fastened up to the wall by the Philistines. It is located within four miles of the Jordan, and was the only city of Decapolis west of the river. Both ford and bridge are there.

The natural scenery of Perea is lovely. There are forests of old oak-trees among whose gray, moss-covered branches song birds of tropical beauty dart in and out. Gardens, olive-groves, vineyards, and fertile meadows are numerous, all tipped towards the Jordan and the western sun. Sometimes the buildings of the villages are overrun with climbing vines. Wild flowers, plants, and shrubs grow according to their own sweet will.

Almost always one can climb to some adjacent elevation, and see the snow-clad line of Mount Hermon in the north, the blue waters of the Dead Sea in the south, and the long line of overhanging foliage which marks the track of the Jordan. Beyond the river the country from Jerusalem to Carmel is discernible, with the varied prospects of wood and hill, mountain, lake, and sea.

In the spring one can, from almost any elevation, count thousands of the black tents of the Arabs, who from north, south, and east herd their flocks here, and as warm weather approaches gradually work their way up the mountain inclines. They are usually "sahib" (friendly) with the visitor, but they themselves live in constant dread of the wild wandering Bedouin.

Nineteen hundred years ago Decapolis was not such a pastoral land as it is now. The remains of perhaps as many as twenty cities of the past may be seen from the higher ruins of any one of them. Their massive walls, their noble triumphal arches, their forests of columns still stand, because the wanderer of the country prefers his tent to a dwelling-place among these ruins, and the vandal seldom comes in this

WOMEN OF BETHANY.

direction. A massively constructed triumphal arch or gateway, with a smaller arched passage on each side, gave entrance to Gerasa, which is situated about twenty miles east of the Jordan and twenty-five miles north of Philadelphia, the ancient Rabbath-Ammon.

As one enters the main street, the ruined temple is seen on the left — a magnificent pile. It looks like a portion of Baalbec. Its columns were forty feet high and six feet in diameter. A corner pinnacle still stands erect.

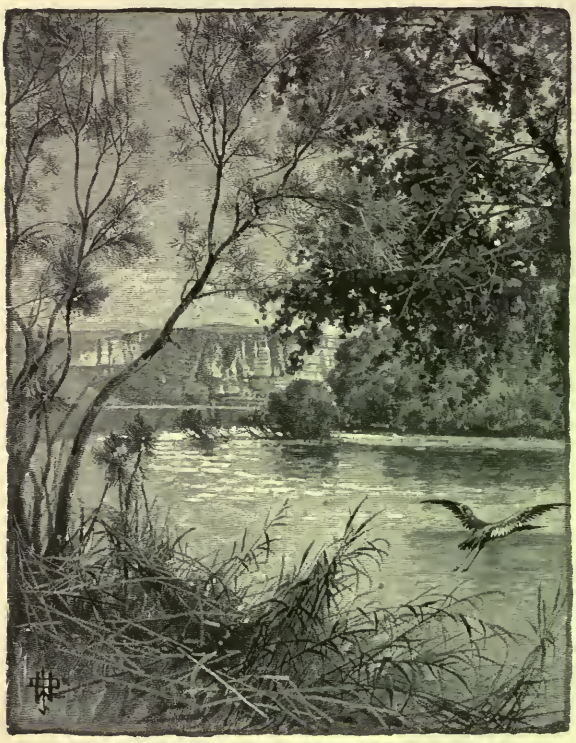
Close to the temple is a theater which would seat six thousand people. Near by are the ruins of another theater, and both show what wealth and taste were expended upon places of amusement.

No traces of any wheeled vehicle are ever seen in the majority of the towns of Palestine; but here, along the paved causeway, the deep-cut ruts of chariot-wheels are as plainly visible as those at Pompeii. Gerasa is almost unknown to history, but we are informed that it was noted for its men of learning, and that it was the "Alexandria of Decapolis."

At Philadelphia the ruins are by no means so extensive nor so picturesque, though very important and interesting. The city lies in a valley, and even in old times was famed for its water supply. It is about twenty-two miles

from the Jordan. Even some of the ancient private houses remain in a good state of preservation, for time has been gentle, and there has been no one to destroy them mischievously. Like one of those in Gerasa, the theater is very large, and is set in a depression in the side of a hill.

The houses of the ancient Jews living in opulence were constructed much as we see them to-day among the ruins of Gerasa and Philadelphia. As a rule, the wealth was not expended upon the exterior; the interior took it all. The walls were plain, the roofs were flat; frequently balconies were attached. The doorway was sometimes ornamented. Passing this, the court was entered. From this court all the various apartments of the house were reached, the upper ones by means of stairways. In the central yard trees, shrubs, and flowers grew; fountains sent up their cooling influence and broke the sun's intruding rays into fragments of rainbows; the walls, the floors, the stairways, and the seats were of marble or of some other stone. Each apartment was raised a little from the court and was reached by steps. When the women of the household came clattering through the court in their wooden "pattens," or shoes, to visit the various apartments, their curious foot-gear was always left outside before entering. The house was made bright by a multitude of lamps. When the stranger came, the table was laden not only with a wealth of service, but with all that could tempt the appetite or please the taste. After the feast, the timbrel, the pipe, and the harp were brought in, and all the members of the household, including the servants, joined in the dance. Those who chose not to take part in the rustic exercises sat upon the roof or balconies, and discussed the topics of the day while they watched the merry-making below.



THE JORDAN.

In all the pleasures of the household the children were allowed to take a moderate share. Moreover, when the noted guest came, he was expected to express his best wishes for the little ones, and impart his blessing to them. At an early age the child was taken to the synagogue, that he might have the prayers and blessings of the elders. More than usual attention was given to this duty during the times of discussion over the coming of the Messiah; for sectarianism grew apace, and the populace became divided into religious parties.

The state of society in Decapolis when its cities were visited by Jesus was anything but peaceful. The first care of their ruler seemed to be to turn the streams of wealth into his own coffers; next into those of Rome, through the appointed Zaccheus of each city and town.

A camel-back journey of a day, if the camel be fleet and his rider light and merciful, will take the traveler from Philadelphia, the easternmost city of Perea, to Jericho, the easternmost city of Judea. The ford of the Jordan is near the "pilgrims' bathing place." After the upper Zerka, or Jabbok, is crossed, in close succession one passes the spot where John must have ended his mission and entered the shadows of the mountains of Machærus, where he was beheaded. Then Mount Nebo is approached, where Moses died, and close to Attaroth the headless corpse of the Baptist must have been laid. As one descends towards the ford, the sloping plains of Jericho are approached, rising gently from the Dead Sea, 1350 feet below the Mediterranean. The mountains of Moab draw nearer, and the Dead Sea becomes plainly visible from end to end. Sometimes the scene presented is desolate and dreary in the extreme. Here the white rocks force themselves through

the parched earth; here are shifting sands, cracked and fissured soil, and deep, dry channels, cut by the torrents which in the rainy season come down from the mountains.

At the ford of the Jordan many generations have trodden down the earth or pushed their way eagerly through the marshes and the jungle. The luxuriant growth and variety of trees and shrubs remind one of a carefully made collection at some exhibition. The willows dip their yielding branches into the hurrying stream; the tamarisks flutter in the soft breeze; the oleanders stand up stiffly lest their waxen leaves and rose-tinted flowers become contaminated by the muddy water; and the wonderful blossoms and berries of many trees whose names I cannot tell help to make up a picture of great beauty. Here came the swarming millions of Israel; here the river was twice opened for Elisha and Elijah; here Naaman bathed; here John baptized; here annually still come thousands of pilgrims from all parts of the world to look, to bathe, and to vanish. A ride of six miles through a perfect jungle of reeds, thistles, and other plants of rank growth brings the traveler to the most squalid town in all Palestine — the Jericho of to-day. There were, in former times, three Jerichos. The Jericho of Joshua, it is believed, was located near the lovely Fountain of Elisha,— called "Ain es-Sultan" by the Arabs,— the place where Elisha healed the waters with salt. This was the Jericho of the Jews, whose history is so full of romance. The Jericho of the Romans — that is, of Herod's or of Christ's day — was more than a mile away, as the old aqueduct beyond Ain es-Sultan and the Roman ruins thereabouts indicate. The ruins of the Jericho of the time of the crusades probably lie beneath the modern village, only a short distance from the Fountain of Elisha. Making a composite of them, we may say that Jericho was situated on a plain nearly three thousand five hundred feet below Jerusalem. Even in the days of Christ, it was surrounded by towers and castles. If you could stand upon the roof of one of those strong structures, towards the Jordan shore, the semicircular plain would rise up like an amphitheater. Its swelling slopes, lifted one above the other to the height of seven hundred feet and running back nearly three miles, would well resemble the tiers of seats, the width stretching over eight miles from north to south, in good proportion, while a strip of dividing wilderness, clothed with the richest decorations Nature could supply, would serve for the main aisle. Perhaps there is no more torrid place in all Palestine than this sunken hollow wherein the fated city once flourished. It is magnificently fertile. There is scarce a rod unoccupied by some luxuriant growth. It must have been a lovely spot when Cleopatra persuaded the infatuated Antony to make it her private possession. It was then known as "the city of palm-trees." The balm, which so delighted even that fastidious queen, was cultivated here, together with henna, camphor, and other rare commodities. The only structures now standing here are a khan, in charge of Russian monks, and the "house of Zaccheus," a low tower-like building, doubtless a

MODERN JERICHO.

FOUNTAIN OF ELISHA.

AQUEDUCT NEAR JERICHO.

relic of the crusades. Sixty families, living in extreme degradation, now make up the population.

Jericho is about thirteen and a half miles north-north-east of Jerusalem, just opposite the opening of the valley of Achor, in which Achan, "the troubler of Israel," was stoned, and through which runs what is supposed by some to be the brook Cherith, where Elisha was fed by the ravens. A fine stone bridge, thirty-five feet high, with pointed arches, crosses the Cherith here. Standing upon it, one can see several ruined aqueducts, showing how much attention must have been given to the irrigation of the entire plain. Some of these aqueducts have two tiers of arches, and are handsome even in their ruin. Surely the skillful engineering of the Roman Campagna was followed in their construction. Some of them run into and through the hills. Here and there a great reservoir or cistern has been sunk. Even Damascus, "the earthly Paradise," could not have presented a more garden-like luxuriance than did the plains of Jericho when Jesus came here and halted to heal the blindness of poor Bartimeus. Now its glory is all gone, but the blind are not all gone. It seems true that one in ten of the native people met in the way are either blind or have diseased eyes. They still sit by the wayside, usually in couples, appealing to the charity of the stranger.

The climb from Jericho to Bethany is one of the most exasperating in Judea. There are a number of routes, but if any one is chosen, sorrow is sure to follow the preference. The journey is not a long one, and soon after leaving the sunken plain of Jericho, the air becomes more vital. The rolling hills are dotted with olive trees, and green fields lined with stone walls appear, between which the tortuous bridle-path ascends. One favorite route is by the brook Cherith, which hurries Jordanward through a deep slit in the earth, cut by some unusually awful blow of Nature.

After climbing, say five hundred feet, by turning one may gain an appreciation of the true depression of the site of Jericho and of the Dead Sea. Now the path runs up rocky defiles, amid chalk hills, through stony valleys, and over blighted soil; up, up, in the sun, until the tops of two giddy fragments of masonry are seen. These are in Bethany, and form part of what is called "the house of Martha and Mary."

There seems to be a contented community

BETHANY.

at Bethany, in pleasant contrast with the wretches of Jericho. The people politely welcome the stranger; the oldest inhabitant exhibits the few attractions of the town; the women carry their babies in sacks upon their backs, and serve fresh buffalo-milk to the visitor; the children are many, pretty, and shy. Their good traits are all the more apparent after one has been stoned by the urchins of Hebron, and hooted at by those of Jerusalem and other places.

Here, at Bethany, we saw the "father" idea illustrated as prettily as in the Arabian desert. If a child enters an apartment where its father is, it will not sit down or speak until the father notices it and bids it be seated. Moreover, if children grown up to some size enter and find the father engaged in any labor — beating coffee in the mortar, for example — the youth will assume the work and go on with it.

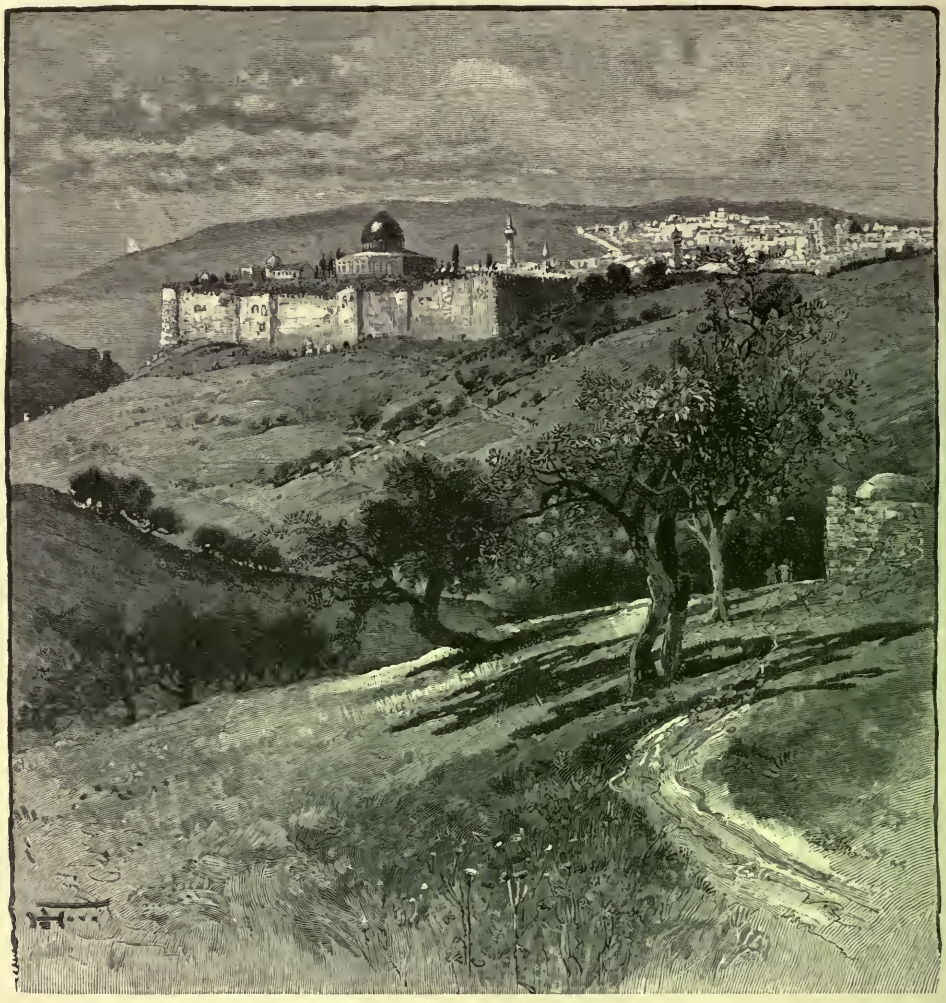
The "tomb of Lazarus," at Bethany, like many other sites in this country of ruins, is far below the street surface, and is reached by twenty-six stone steps. A simple vault excavated in the natural rock is shown as the place whence Lazarus came forth.

No one can visit Bethany without being impressed with a sense of its sacredness. It is lovely for situation, and its people are different from the rest of their countrymen.

From Bethany, Jesus rode to Jerusalem on the foal of an ass. The Mount of Olives was crossed on the way. One must always traverse it when journeying between the two towns. This may be done from the east, or its shoulder may be passed over, south and west. The path by either way is lovely, leading through richly cultivated fields and orchards of olives and fruit. And whether one follows the first-named way, and so obtains the view of the holy city from the summit of Olivet, or, going the other, gains the same just as he emerges from the groves which fringe the western brow of the sacred mountain, entering the pathway which Jesus traveled daily for so long a time, the admiration is unbounded, and the emotions are indescribable.

No matter how much of the structures of the past is buried beneath the present surface, or how much the people have changed, these hills, these valleys, were all looked upon by Jesus of Nazareth and became familiar to him; nor have they changed since he was here. The whole extent of the city is seen from Olivet, with no object intervening to divide the prospect. Mount Moriah rises from the ponderous walls which seem rather to support the hill than to rest upon it. The Temple is gone, but there within the precincts of its magnificent area are the Mosques of El Aksa and the domed Mosque of Omar. Mount Zion asserts itself, more steep of ascent than all the rest, though its glittering palaces are no more. The ragged old walls and the perfect gateways alike present visions of power and beauty; for, as they are approached, their height and thickness grow upon one, and they seem impregnable. Amid a cluster of mosque minarets the domes of the Church of the Holy Sepulcher are centered. A diagonal depression runs across the city from the Gate of St. Stephen to the Holy Sepulcher; it is one of the principal streets — *Via Dolorosa*. If water ran through it, what with its grated windows, low doorways, narrowness, prison-like walls, and

serpentine windings, one might call it a street of Venice. The monks have, through the straining endeavors of ages, located eight "events" here which took place during the compelled to bear the cross; where the weeping daughters of Jerusalem were addressed by Jesus, and where his tragical death took place."



JERUSALEM FROM THE NORTH-EAST.

last days of our Saviour, and have erected a "station" with an accompanying shrine at each traditional spot. Soon after entering St. Stephen's Gate, the wall of the Temple area is reached. In it are the stones of two ancient arches where stood Pilate's Staircase, leading into the Judgment Hall. A little farther westward is the arch of Ecce Homo, where Pilate exclaimed, "Behold the Man!" Following these are the stations "where the fainting Jesus made an impression with his shoulder in the stone wall when he fell; the house of St. Veronica, who wiped the bleeding brow of Jesus with a handkerchief; where Simon was

Shrewd Greeks are still allowed to go where the Jew is not tolerated; for, near several of these stations, we find their shops for the manufacture and sale of articles made of olive wood.

A portion of my sojourn in Jerusalem included Easter week. It must have looked then somewhat as it did during the feast, when the triumphal entry was made. All around were the pointed white tents of the stranger-pilgrims who had come from every quarter to witness the services which were to ensue. The paths and roads leading to the gates of the city, and crossing the hills and the plain in every direction, were thronged with those who were arriv-

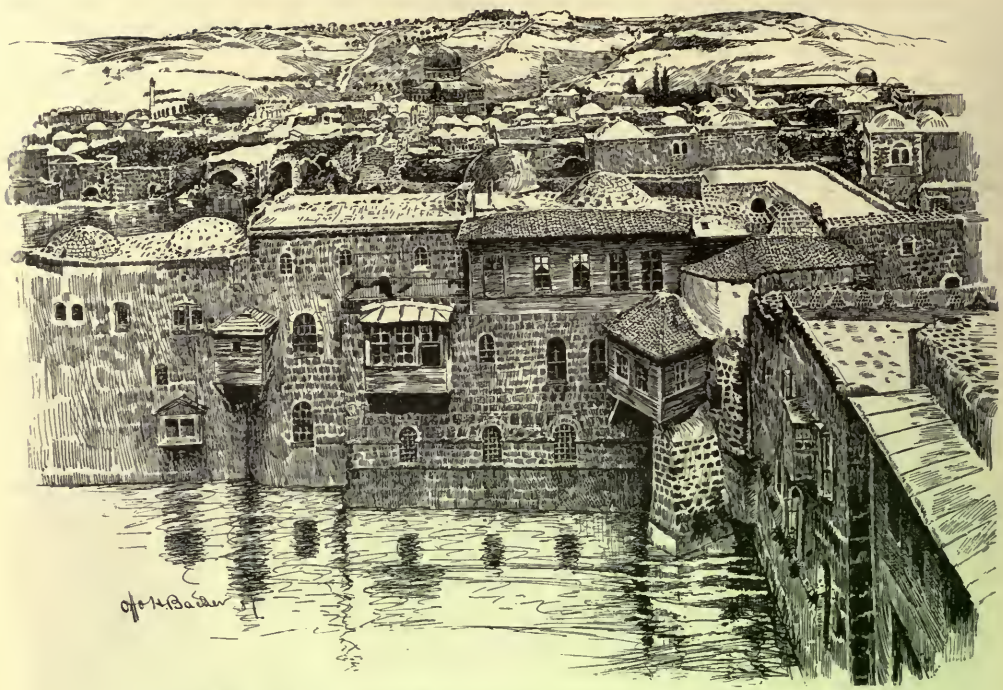
ing from the neighboring villages to share in the observances of the holy week. The noise and the confusion at all the city gates converted them into veritable bedlams and babels. The scenes were picturesque beyond all description.

Jerusalem is divided into four quarters; namely, the Mohammedan, the Jewish, the Greek, and the Latin or "Christian" quarter. nent parts of Jerusalem, that, as in Tyre and Sidon two thousand years ago, so here, they find no freedom from insult except in the Jews' quarter. There the new synagogue is located among the curious old houses with modern attachments.

The building is reached by narrow streets. Its locality is close to one of the five or six

CHURCH OF THE HOLY SEPULCHER. (FROM AN ETCHING MADE FOR THIS ARTICLE BY OTTO H. BACHER.)

The tall minarets of the Moslem enable him to keep an eye over all. The muezzin call is heard everywhere; but the sale of crucifixes and rosaries, together with chromos of the Virgin and Raphael's Madonna, is restricted to the Christian quarter. So rigidly are the Jews enjoined from visiting the more promi- palm-trees that now remain in the city. The Christian quarter includes the Church of the Holy Sepulcher and the Greek and the Latin convents. The Pool of Hezekiah is one of the authentic places of the past, and lies back of "Christian Street." On one side of the passage-way we see a fair example of those



JERUSALEM FROM THE POOL OF HEZEKIAH, LOOKING TOWARDS THE MOUNT OF OLIVES.

places so dear to the heart of every Oriental — the coffee-house, the barber-shop, and the Turkish bath. There is no palm-tree in this quarter, but there is as fine an old oak as the groves of Bashan can boast.

There are three sabbaths in Jerusalem — Friday for the Moslem, Saturday for the Hebrew, and Sunday is shared by the Greek and Latin and the Protestant sojourners together. During Passion week the area in front of the Church of the Holy Sepulcher is turned into a regular mart for the sale of carved beads, shell-work, pressed flowers, crosses, and articles fashioned from olive-wood. The salesmen are dreary and indifferent, and the general appearance of things is dull and depressing.

In an upper room of a building which stands over the reputed tomb of David, it is said that the Last Supper was eaten. This room is known as the Cœnaculum. Tradition also locates other events of a sacred character here, as follows: "The assembling of the apostles on the day of Pentecost when the miracle of the cloven tongues of fire occurred; the washing of the disciples' feet by Jesus; the giving of the 'sop' to Judas; and the departure of the sad company, going down through the Vale of Kedron to Gethsemane."

The only gate in use now, on the eastern side, is St. Stephen's Gate. It is nearest to the Mount of Olives, and from its doorway Gethsemane can be plainly seen. The path across leads first down the steep incline of Mount Moriah, and then over the stone bridge which spans the Kedron valley, and ascends to the walls of Gethsemane. There the three pathways which lead to Bethany join, and thence they separate: one leads to the summit of Olivet, through the little village there, and then down on the eastern side; the second, ascending, skirts the shoulder of Olivet on the south, and joins the first a little time before reaching Bethany; the third, and one most used, wends to the right just outside the wall and east of Gethsemane garden; this, following the base-line of Olivet on the south, leads to Bethany, and thither to Jericho, the land of Moab, Perea, and Decapolis. The summit of Olivet is about 400 feet above the Kedron valley, and 2800 feet above the Mediterranean. The ascent from Jerusalem is a steep one. From base to summit its broad terraces are devoted to the cultivation of the olive. The top is quite level, and is the site of a small village with an attendant mosque, "to protect," says the Moslem, "the Church of the Ascension and other religious buildings" located there. My tent, during the greater part of my sojourn in the neighborhood, was pitched in a grain-field beneath the shades of an olive grove just west

of the summit of the Mount of Olives. At the joining of the trio of paths described as leading to Bethany, the Garden of Gethsemane is located. It is surrounded by a stone wall which is divided by shrines facing inside the garden, all looking strangely new in comparison with the gnarled old trees that they surround. After knocking at the low gate, the visitor is questioned by an old monk and north-east of the Damascus Gate, the wall rests partly upon the natural rock. Beneath is the old-time quarry known as the "Cotton Grotto." On the opposite side of the road is "The Grotto of Jeremiah." Farther, on the left, is a hill, the face of which, with the horrid semblance of deep-sunken eyes and broken visage, looks like a human skull. Its locality and surrounding features have led modern

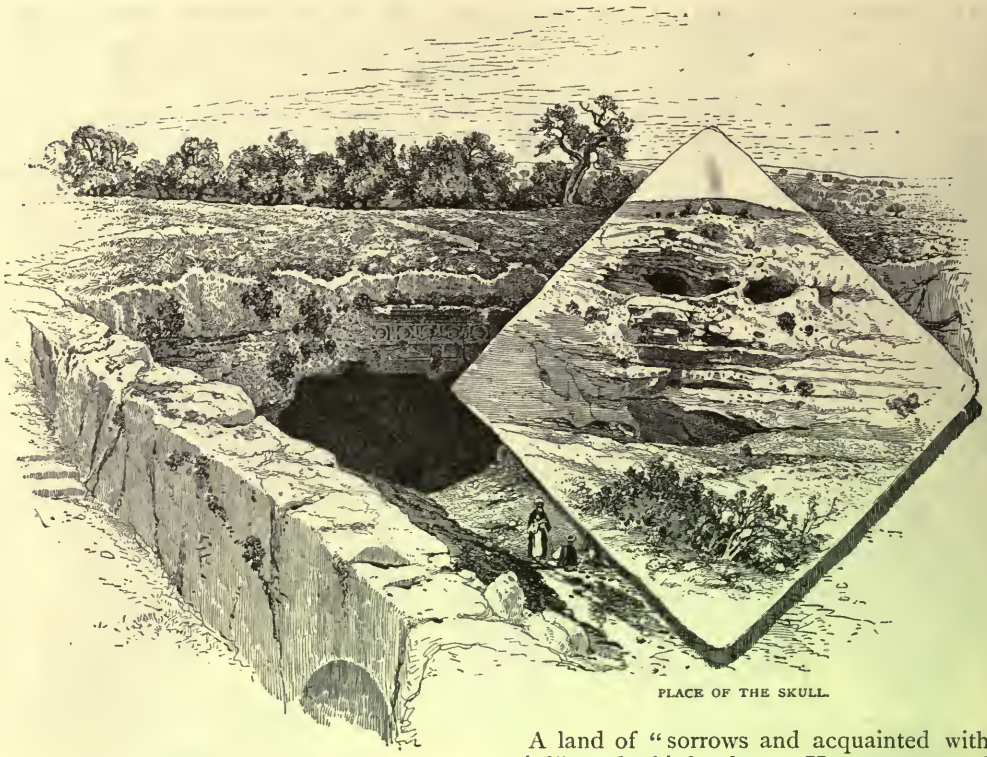
THE GARDEN OF GETHSEMANE — THE TREE OF AGONY.

then admitted. The garden is carefully kept by the venerable custodian. The whitewashed fence of paling and the trim flower garden afford another strange contrast with the gnarled and ancient olive-trees. In one corner of the garden is a well of delicious water. A bucket with rope running over a pulley are used. Near this well are the humble quarters of the monk in charge. A marble canopy with an iron gate incloses Canova's bas-relief of "The Agony." A neatly kept walk leads one around the circuit of the garden from shrine to shrine. Parts of the walls are covered with pictures representing scenes which took place during our Lord's last night on earth. Wormwood and the Passion-vine trail about the walls in profusion. It is a lovely spot.

On the west side of the city, a few rods

explorers to accept it as Mount Calvary. It is without the gates. It commands an extensive view of the city, and of the whole way to the summit of Olivet. The populace assembled on two sides of the city could see an execution on this hill.

From this spot it is but a short ride to the rock-hewn sepulchers known as the "Tombs of the Kings." The entrance to one of these subterranean villages of the dead is closed by a "rolling-stone"—a rudely cut disk, perhaps a yard in diameter, standing on edge in an inclined groove which runs, deep cut, from one side of the doorway to the other. When the tombs are open, the stone is rolled to the left, and a small wedge is placed under it to keep it from returning. When the wedge is removed, the rolling-stone immediately follows the incline to the right until it reaches a slightly



PLACE OF THE SKULL.

TOMB OF THE KINGS.

deeper depression, into which it rolls; thus it closes the entrance of the tomb. Considerable strength is required to displace it.

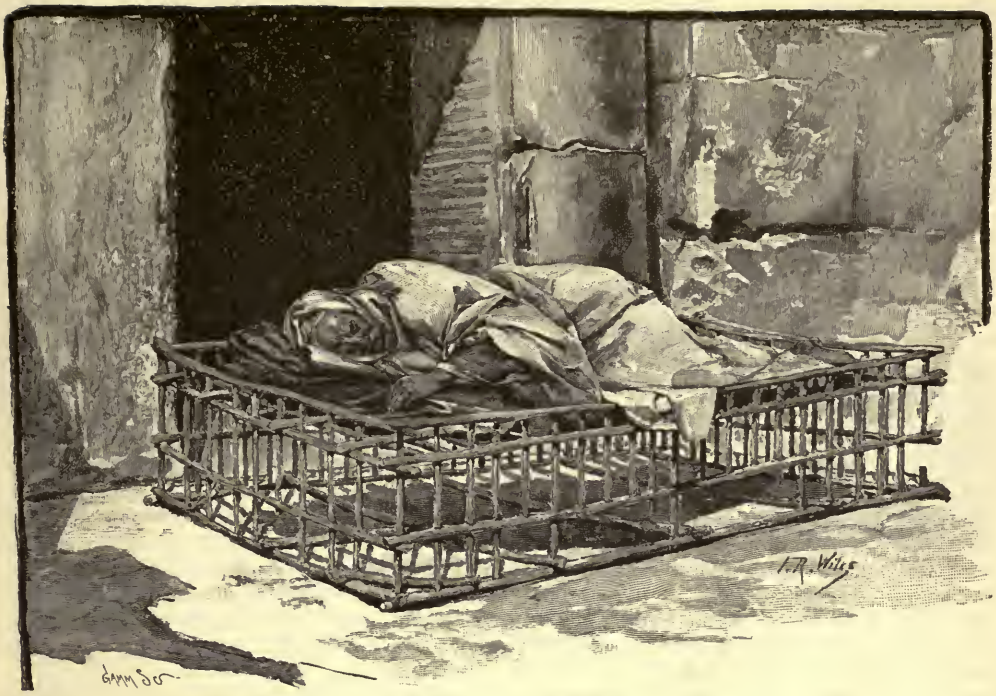
At the south-east corner of the Temple area there are a number of courses of immense stones, with their edges beveled after the Jewish fashion, undoubtedly by the quarrymen of Solomon. Under them is found a beautiful and substantial illustration of the expression in which our Lord is called "the head of the corner," and of Matt. xvi. 18 — "Upon this rock I will build my church."

In the valleys one may frequently see a circle of Arabs seated upon the ground, with their sheik at the head of the circle, acting as judge. He hears the causes of his tribe, receives the account of their stewardship, often pleads for the oppressed, and condemns when punishment is deserved. Thus the lessons of forgiveness, of the talents, and of the judgment are here enacted, over and over again, as of old.

At many of the bazars and residences of Jerusalem, as well as in other oriental cities, the "watchman at the gate" is posted night and day. His only bed is a wicker mattress, which stands on end near by during the day. He is allowed to repose upon it at the gate during the night, never forsaking his post as long as his engagement lasts.

A land of "sorrows and acquainted with grief," surely this has been. Here are some of the most splendid ruins in the world — Phenician, Jewish, Roman, Grecian, and Crusaders'. Earthquake, war, and Islam have all shattered the land and broken the spirits of the people, until now there is just as much room for missionary effort as there was when Jesus

A TOMB WITH ROLLING STONE.



THE WATCHMAN AT THE GATE.

and "the twelve" traveled the route over which we have tried to follow them. The legends, the sepulchers, the wells, the caves, the mountains, the rivers, the climate, the "land with milk and honey blest," with all its seclusion and its history, will remain. But there is room for more conquest and more history. What will it be?

Edward L. Wilson.

MOTHERHOOD.

SHE softly sings, and paces to and fro,
Patient, unwearied, bearing in her arms
The fretful, sickly child, with all his harms,
Deformed and imbecile, her love and woe.
Croons, with caressing intonation, low,
Some sweet, old minor melody, that charms
The ear that listens, and the sufferer calms,
And her own sorrow soothes with silver flow.
O holy tenderness of motherhood!
Most pitiful and patient to the child,
Foolish, unlovely, seemingly defiled
By powers of death and darkness. The All Good
Alone so loveth and remembereth,
And, like a tender parent, pitieth.

Abby S. Hinckley.

XVI.

THE CORONER'S INQUEST.

THE murder of George Lockwood furnished a powerful counter-excitement, which quite broke the continuity of religious feeling, and lacked little of completely breaking up the camp-meeting. Hundreds of men and women thronged about the place of the shooting and discussed all the probable and possible details of the affair, of which several versions were already current. The coroner ordered the body removed to a new hay-barn in the neighborhood; whereupon the people rushed thither to get a sight of the dead man, for there is no source of excitement so highly prized by the vulgar as the ghastly. At 3 in the afternoon, the barn was crowded. The people jostled one another closely upon the wide threshing-floor, and the wheat-mow alongside contained, among others, at least twenty women whose appetite for the horrible had led them to elbow their way early to this commanding situation. The hay-mow at the other end of the floor was full of men and boys, and the cross-beams were occupied by curious spectators, perched like rows of chimney-swifts at the time of autumnal flitting. More adventurous youth had managed to climb even into the dizzy collar-beams under the comb of the barn, to the dismay of the mason-swallows whose young were sheltered in adobe houses attached to the rafters. There were heads, and pendent legs, and foreshortened arms enough in the upper part of the barn to suggest a ceiling-fresco of the Last Judgment by an old Italian master. Yet other curious people had crowded into the horse stables below the wheat-mow, and were peering over the manger into the threshing-floor and intermingling their heads with those of the beasts of the stall, much as the aforementioned old Italian painters mixed up brute and human figures in their Nativity pieces. The crowd upon the floor itself stretched out of the wide-open double doors on each hand, beyond which there was a surging mass of people blindly gravitating towards the center of excitement, though all the proceedings were invisible and inaudible to them.

On two boards supported by kegs and boxes lay the lifeless body of Lockwood. The pitiful sight of the pallid face and the eyes sunken in their sockets exasperated the spectators to revenge. Between the body and the hay-mow the coroner took his place on the only chair in the barn; at the opposite side of the corpse the jury was seated on improvised benches. Markham, the sheriff's deputy, assisted by a constable, kept back the press, whose centripetal force threatened at every moment to overwhelm the innocent jurymen.

As a matter of course, the first witness sworn was a doctor. Coroners begin at the beginning by first proving that the deceased is duly dead, and so within their jurisdiction; and by finding out by just what means the knife, rope, poison, or pistol ball severed the thread of existence. The human passion for completeness is as much prone to show itself in law proceedings as in art performances; coroners' inquests like to go down to the physiological principles that underlie the great fact of practical importance, and to inquire what was the name and function of the particular artery the severance of which put an end to consciousness in a set of ganglia which, with their complicated adjuncts, constitute what we call a man. It was in this case settled very promptly that the unfortunate deceased came to his death by a charge of buckshot. I shall not entertain the reader with the anatomical particulars, although these proved to be of the most pungent interest to the auditory at the inquest, and were scientifically expounded in every cross-roads grocery in the county for months afterward. There are old men in Illinois who have n't got done explaining the manner of it yet. But the important thing was accomplished when the coroner and his jury were convinced that the man was not only apparently, but scientifically, and therefore legally, dead: thus a basis was laid for the subsequent proceedings.

It is one of the strong points of a coroner

* Copyright, 1887, by Edward Eggleston. All rights reserved.

that he knows nothing about what is held to be competent testimony,— nothing of the strict laws of relevancy and irrelevancy. He therefore goes to work to find out the truth in any way that seems good to him, without being balked by that vast network of regulations which are sure to embarrass the best endeavors of a more learned court. Markham was sworn immediately after the doctor had finished. It was his business to identify Tom's pistol. I fancy a lawyer might have insisted that no foundation had been laid for this testimony; but to the coroner it seemed the most orderly way, immediately after proving that Lockwood had been killed, to show the weapon with which he might have been killed. Markham swore to finding this pistol in Tom's room; and the ocular proof of the existence of such a weapon, in juxtaposition with the ghastly evidence before them of Lockwood's violent death, went far to establish Tom's guilt in the minds of the people. Then other witnesses swore to Tom's presence on the camp-ground; and two young men from Moscow had heard him threaten, some weeks before, that he would shoot George Lockwood.

It was just when the evidence of these two was finished that the people on the threshold of the south door of the barn began to sway to and fro in a sort of premonitory wave-motion, for outside of the door Sheriff Plunkett, having just arrived from Moscow with Tom Grayson, was battling with the condensed crowd in an endeavor to reach the presence of the coroner.

"You can't git through, Sher'f," said one man. "This crowd 's so thick you could bore a nauger into it."

But the sheriff's progress was aided by the interest of the people in Tom. They could not resist turning about to look at him, and every movement displaced some human molecules; so that Plunkett, aided by the respect shown to him as an officer, was able to push a little farther in at every budge. But the people were not content with looking at Tom.

"You 've got to swing fer it, you young rascal," said one man as Tom passed.

"Coward, to shoot a man in the dark!" muttered another.

And ever as in this slow progress Tom came nearer to the center he felt the breath of the mob to be hotter. When he got within the door there was a confused rustle among the people on the threshing-floor, a murmur from those who jostled one another in the hay-mows, and a sound of indignation from the people seated on the cross-beams and clinging to the girders; mutterings even came down from those lodged like overhanging angels in the dizzy collar beams, fast by the barn-swallows' nests. Such excited crowds are choruses who wait for some one to give them the key; the pitch of the first resolute voice determines the drift of feeling. If somebody had called out at this moment for fair play, the solvent feeling of the crowd might have crystallized about this one. But indignation got tongue first.

"Hang him!" The words came from the corner of the threshing-floor farthest from the coroner, and in an instant the tide of feeling ran swiftly to that side. Tom recognized the harsh voice, and realized his danger in perceiving that the resentful Jake Hogan was leading those who sought to lynch him.

When the sheriff, with Grayson, had penetrated to the neighborhood of the coroner, the inquest was continued by calling David Sovine. This young man, with stylish trousers strapped down to patent-leather shoes, came forward chewing tobacco and affecting a self-confident swagger. He took the oath nonchalantly.

"Tell us what you know of the murder of George Lockwood," said the coroner.

"Well, me an' George had been together, an' we parted. He was goin' to-*wards* his horse an' me to-*wards* the camp-meetin'. I was about twenty foot, or maybe twenty-five foot, away from 'im when along come Tom Grayson an' says, says he, 'I 'm boun' to git even with you wunst fer all.' I looked aroun', an' Tom was aimin' his pistol. George Lockwood says, says he, 'Don't shoot me, Tom'; but Tom he up an' fired, an' George jist keeled over like, an' never said another word. Tom run off as fast as his legs could carry him. I run up to George, an' he was layin' there dead 's a door-nail. Then the crowd come a-runnin', an' that 's about all I know about it."

"D' you remember the pistol?"

"Yes."

"Was it like this?"

"Yes; an ole-fashioned big bore single-barrel like that, I should say."

"That 'll do. You can stand aside," said the coroner.

"Hang him!" cried Jake Hogan; and there were other cries that showed how swiftly and terribly the current was setting in the direction indicated by Jake.

Tom Grayson was sworn.

"Now," said the coroner, "you don't have to criminate yourself. If you cannot answer any question asked of you without criminating you, you can decline to give an answer."

For how many ages have Anglo-Saxons made their criminal law ridiculous by this rule!

"Now," the coroner went on, "tell us just

"WHERE'S THAT PIECE OF CANDLE GONE TO?" (SEE PAGE 840.)

what you know about the shooting at the camp-meeting."

"I don't know anything at all about it," said Tom with agitation. "I have n't seen George Lockwood since I quarreled with him in Moscow till I saw him here." And he pointed with a trembling finger to the stark form of the man he had hated.

"Lie!" cried Hogan. The coroner called, "Order!"

"Aw!" said one of the women in the wheat-mow. "To think he could have the impedence to hole up his head an' talk that away un the corpse right there afore his eyes!"

"Do you know that pistol?" asked the coroner.

Tom took it up and looked at some marks on the butt of it.

"It 's mine," he said.

"Did you have it at the camp-meeting?"

"No, nor any other."

"You are not obliged to criminate yourself," said the coroner again; "but did n't you see Lockwood killed?"

"No," said Tom. "It 's all a lie that Dave Sovine swore to, and he knows it. I was n't on that part of the ground."

"Hang him!" interjected Hogan.

"The bah-y is awful plucky, upon me sowl," said Magill, who was standing on a plow-beam in order to see over the heads of the crowd. "It would be a pity to hang a man of such good stuff."

"The bare-faced villain!" growled the man next to him, and the unfavorable impression evidently had way with the crowd. When people have once made up their mind as to how a thing has happened, they do not like to have their fixed notions disturbed. Tom's heart sank; he could see that the chance for his getting back to the jail alive was growing smaller. Hiram Mason had attached himself to Tom and the sheriff, and had elbowed his way to the front in their wake; the people, supposing that he had some official function, made way for him. He now got the ear of the sheriff.

"If you don't get Tom away at once he 'll be lynched," he said.

"I know it; but I don't know what to do," said Plunkett. "If I make any move, I 'll fetch the crowd down on Tom."

"Get him down into the cow-stable under the barn, and let Markham take him off. You stay here and they won't suspect that he 's gone."

There was something pitiable about the sheriff's inability to make a decision at a critical moment. He looked at the angry crowd, who were paying little attention to the testi-

mony of unimportant witnesses, and he looked at the coroner. He did n't like to bear the responsibility of having a prisoner taken from his hands; still more he disliked to offend so many voters.

"Settle it with Markham and the coroner," he said, sneaking out of the decision he could not bring himself to make.

"Mr. Markham," whispered Hiram, "the sheriff wants you and me to get Tom off. I 'll get the horses ready, and you and Tom are to come out through the cow-stable. Speak to the coroner about it, and don't let the crowd see it. If we don't get him away before this thing breaks up he 'll never get to town alive."

"All right," said Markham. "I 'll be in the cow-stable with Tom when you 're ready."

Jake Hogan had already gone out to muster his men, and Hiram was very impatient at the long time it took him to work his way outward. He was a little annoyed when Magill, getting down from the plow-beam, stopped him to whisper:

"I say, you 're Tom's friend. Now what can I do for the bah-y? I s'pose he 's guilty, but I don't want to see such a bowld gintleman as he is lynched by such a set of howlin' blackguards as these."

"Go over there and stand in front of Tom, so that the people won't see him and Markham when they get down into the cow-stable."

Having whispered this between his teeth, Mason painfully worked his way out of the door, while Magill pushed forward towards the coroner. For Magill the people made way as best they could, supposing that the clerk was one of the functionaries without whom the performance could not proceed. The coroner had acceded to Markham's proposition and was contriving to protract the session. Magill called Sheriff Plunkett to him and made that worthy stand in unimportant conversation with him, so that they two covered from all observers first Markham's descent and then Tom's. The deputy sheriff and then his prisoner had to climb over a hay-rack and thence down to the ground. The cow-stable was beneath that end of the barn which jutted over a steep hill-side descending to a brook. As nothing was to be seen from this stable, there was nobody in it but a few boys.

When Mason came to say that he was ready, Markham passed out with his prisoner and down the hill-side to the bed of the brook, where Mason had brought the deputy's horse and old Blaze. Tom had been brought to the inquest in a wagon; but as it was necessary to avoid the main road, Mason had unharnessed Blaze for Tom to ride. As the hoofs of the horses clattered down over the stones in the bed of the stream, Tom felt as a man might who had but just eluded the coils of a boa-constrictor. In a little while the two were galloping over the open prairie towards Moscow by by-roads and short cuts.

The prisoner's absence was observed; but, as the sheriff remained, it was not at first suspected that he had got entirely away. People looked for him and inquired of one another where "they had put him." At length the testimony was all in, and the case was given to the jury. These "good men and true," as the old English law supposes them to be, retired for consultation; that is, they changed places with the coroner and stood with their faces towards the wall in the corner and their backs towards the crowd, which now buzzed like a nest of indignant bumble-bees. After a few minutes, the jury turned and their foreman read the verdict:

"We find that George Lockwood came to his death by being shot with buckshot, fired from a pistol by Thomas Grayson, Junior, and we recommend that the said Thomas Grayson be committed to answer to the charge of murder."

When this formal condemnation had been read, the passions of the crowd broke over all bounds, and the words of the coroner, formally ordering the commitment of the prisoner, were not heard. Cries of "Hang him! Hang him to the first tree!" mingled with curses, broke forth. Men swung themselves down from the high beams and there was a rush from the mows, while the women among the wheat-sheaves drew back in terror as they might have done in a rising hurricane. The crowd surged hither and thither about the outside of the barn, and surrounded the sheriff and the coroner, demanding the prisoner. It was more than five minutes after the verdict was in before it was believed that Tom had been taken away, and then the mob were bewildered by the certainty that nobody had seen him taken down the Moscow road. Foiled in their purpose, they fell away, and the tide of passion began to ebb. But the more determined rallied about Hogan, and agreed to meet him at the Broad Run grocery after dark, to make arrangements for a trip to the county-seat during the night.

XVII.

A COUNCIL OF WAR.

As soon as Zeke had eaten the frugal supper of mush and milk that Mrs. Britton set out for him, he sought the dilapidated little Broad Run grocery. The building was of logs, and had a pair of deer's antlers over the door for a sign that it was in one sense a public house. The low door, with its threshold on the level

of the ground, the one square, dingy little window, and the shabby stick chimney, in the chinks of which the clay plaster was cleaving, gave the place a run-down expression. In looking at the building, one got a notion that it would like to slink away if it could. Zeke found nobody in but the proprietor, a boozy-headed looking man, with his hands usually in his trousers' pockets, and his swollen eyelids never wide open. The stock of groceries was small; two barrels of corn-whisky and one of molasses were the dominant elements; a quart cup and some glasses stood on a dirty unpainted poplar counter, beside a pair of scales. The whole interior had a harmonious air of sloth, stupidity, and malpropriety; and its compound odors were as characteristic as indescribable. Zeke waited about awhile, wondering that no one should have come to the rendezvous.

"Where 's Jake Hogan?" he inquired of the "grocery keeper."

"I dunno."

Zeke had anticipated this answer. The man never did know anything but the price of his liquors. It was the safest way for one who kept such a resort and heard so many confidences, and it was a way of answering questions that required the least exertion.

"But I wuz to meet him here."

"Oh, you wuz!" Then, after awhile, he asked, "Been over to his house?"

"No."

The grocery keeper did not say any more, but Zeke conjectured that the meeting had adjourned to Jake Hogan's cabin for greater privacy. Zeke made his way over there with much stumbling, for the night was rather a dark one in the woods. The cabin which was now owned and occupied by Hogan was, like most of the Broad Run dwellings, built of round logs with the bark on; that is to say, the bark had been left on when the house was built, but years of rain and sun had peeled off about half of it, and left the house spotted and ragged. There was but one room, and one might enter this without ceremony, for the door stood wide open, though not on account of hospitality. This door was made of heavy puncheons and had originally hung on wooden hinges, but the uppermost hinge had come off six months before, and though Jake had "'lowed to fix it" nearly every day since, it had not been repaired, for Hogan was a public-spirited citizen, deeply interested in politics, and in reformatory movements like the present one for hanging Tom Grayson; and it was not to be expected that such a man could, in the nature of things, spare time to put a paltry hinge on a door, when grave questions were always likely to be mooted at the grocery. So every morning the clumsy door was lifted aside; at bed-time it was with difficulty partly hoisted and partly shoved back into its place. If the night was very warm, the ceremony of closing the door was omitted. Locks were not necessary in a neighborhood like Broad Run, where honesty was hardly a virtue, there being so little temptation to theft. Jake's house contained a rude home-made bedstead of poles, and two or three stools of the householder's own manufacture. Hogan "'lowed" some day to make one or two more stools and a table. At present, he and his wife patiently ate from skillet and pot, until the table should be made. It was something to have conceived the notion of a table, and with that Jake rested. There was a large fire-place built of sticks and clay; it had stones for andirons and was further furnished with a pot, not to mention a skillet, which stood on two legs and a stone and had lost its handle. Jake always 'lowed he 'd get a new skillet; but he postponed it until he should have more money than was absolutely needful to buy indispensable clothes and whisky with. There was also a hoe, on which Mrs. Jake baked cold water hoe-cakes when she had company to supper. For shovel, a rived clapboard had been whittled into a handle at one end. Some previous owner had been rich enough and extravagant enough to have the four-light window glazed, but all the panes were now broken. An old hat, too shabby even for Jake to wear, filled the place of one of the squares of glass; the rest of the sash was left open for light and ventilation.

Secure as Jake and his party felt from legal interference, they had chosen to retire to this cabin instead of remaining at the grocery. This secrecy was rather an involuntary tribute of respect for the law than an act of caution. Mrs. Hogan, whose household duties were of the lightest, had been sent away, and into Jake's cabin a party of twenty had crowded, so far as it was possible for them to get in. Some stood outside of the door, and Zeke had to find a place at the broken window in order to hear what was going on. This was a muster of the leaders and the center of the party; one of the "boys" had been sent to the camp-ground to seek recruits who were not to be trusted in this council of war. The recruits were notified to assemble at the cross-roads, "'twix' midnight un moon-up."

The first that Zeke made out was that Jake was relieving his mind in a little speech:

"D' yeh know they 've gone un set up the k-yards onto us, boys? Soon 's Uncle Lazar h-yer tole me 't Bob McCord ud come over h-yer a-huntin', I know'd he wuz arter sumpin' ur nother besides b'ars. Bob 's purty tol'able

cute, but he a'n't the on'y cute feller in the worl'. Me 'n' Uncle Lazar jes laid fer 'im. Ketch Jake Hogan asleep, won' cheh! Uncle Lazar, when he seen Bob a-comin' down the run weth a b'ar on 'is shoulder, he jes soaks 'im weth a fresh jug uv whisky, un then 'im un S'manthy worms it out 'v 'im what he wuz a-loafin' over yer fer un not at the eenques'. He would n' noways tell Uncle Lazar, but he 's kind-uh fond uv S'manthy, un she 's smart, S'manthy is. She jes kind-uh saf-sawdered 'im un coaxed 'im up, tell he could n' keep it in no longer, bein' a leetle meller, un he tole 'er 't 'e wuz a-spyin' aroun' so 's to let the shurruff know 'f we 'd got wind uv 'is plans, un 't 'e expected to have the larf on Jake tomorry. But Uncle Lazar 'n' me 'ave got that fixed up, un Bob wuz n't more 'n out-uh sight afore Uncle Lazar wuz a trit-trottin' 'n 'is way, yeh know, fer Jake Hogan's. Bob 's a-comin' over to-morry to fetch back Uncle Lazar's mar' un have the larf onto us. But he took jes one too many pulls at Lazar's jug." Here Jake paused to vent a laugh of self-complacency and exultation.

"Thunder 'n' light'in', Jake," called out one of the party who stood outside of the door, beyond the light of the flickering blaze on the hearth, "what did Bob tell S'manthy? Why don' choo tell us, anyways? You 're a long time a-gittin' to the p'int. The business afore this yer meetin' is to hang Tom Grayson to a short meter toon. Now you tell me, what 's Uncle Lazar's whisky-jug got to do weth that? What 's the needcessity uv so much jaw?"

"Don' choo fret the cattle now," said Jake. "You want to know what Bob tole S'manthy? W'y, ut the shurruff was a-sendin' Tom Grayson f'om the eenques' over to Perrysburg jail to git him out-uh your way. I 'low that 's got sumpin' to do weth the business afore the meetin', hain't it?"

"Maybe he wuz a-foolin' S'manthy," said the interlocutor, in a voice a little subdued.

"Maybe he *wuz n't*," retorted Jake.

"He wuz drunk ez a fool," piped up Uncle Lazar in a quivering treble. "He mus' 'a' tuck 'most a quart out-uh my jug, un he could n' stan' straight w'en 'e went away. He tuck keer never to say Perrysburg to me, but he talked about shootin' you-all down at Moscow, jes zif shootin'-irons wuz a-goin' to skeer sech a devilish passel uv fellers ez you-all. I could n' git nuthin' more out 'v 'im. But I seed all the time 't they wuz sumpin' kinday kep' in, like. He on'y let out to S'manthy arter I 'd gone outay doors, un when he wuz thes chock full un one over. Un he tied S'manthy up so orful tight about it, she kinday hated to tell me, un I had to thes tell 'er 't she mus'."

"Jes y' all look at the case," said Jake, with a clumsy oratorical gesture. "Tom's uncle 's one uv them ar rich men what al'ays gits the'r own way, somehow ur nuther. That 's what we 're up fer. Ef we don't settle this yer business by a short cut acrost the woods, they 'll be a pack uv lawyers a-provin' that black 's white, un that killin' hain't no murder no-ways, un Tom 'll git off 'cause he 's got kin what kin pay fer the law, un buy up the jury liker 'n not. A pore man don' stan' no kind uv a chance in this yer dodrotted country. Down in North Kerliny, whar I come from, 't wuz diff'rent. Now I say sass fer the goose is —"

"Aw, well, what 's sass got to do weth the question, Jake? We 're all in favor uv the pore man, cause that 's us," said his opponent, from outside the door.

"Well," retorted Jake, "what would ole Tom do for young Tom 't this time? Ainh? Jes you screw up yer thinkin' machine, ef you 've got ary one, un tell me that. Would n' he jes nat'rally git the shurruff to put out to Perrysburg weth 'im, un then git a change uv venoo, un then buy up a jury un a passel uv dodrotted lawyers un git 'im off; ur else hire some feller to break open the jail un sen' the young scamp to t' other side uv the Mississip'? It stan's to nater 't Tom Grayson 's in Perrysburg jail to-night."

"Un it stan's to nater," said one of the company, "that Broad Run 's a-goin' to make a frien'ly visit to the nex' county to-night. Un it stan's to nater we 're goin' to settle Hank Plunkett's hash at the next 'lection fer shurruff."

"Now yer a-talkin' sense," cried another of the crowd.

As soon as it was clear that the meeting was in favor of going to Perrysburg, the gathering began to break up, some of the men feeling by this time a strong gravitation towards the grocery. Zeke went to Jake Hogan and explained that he "mus' be a-goin'."

"You know," he added, "I 've ruther got to steal my hoss. The ole man Britton mout lemme have one ef the ole woman 'd let *him*. But I know she jest nat'rally won't. So I 'd better go back un git to bed, then when the folks is asleep I 'll crawl out."

XVIII.

ZEKE.

Two THINGS lay heavy on Zeke Tucker's mind as he hastened towards Britton's. For the life of him he could not tell whether Perrysburg was the destination to which Bob wished to send Jake, or whether Jake might not be right in supposing that Bob had incautiously betrayed his own secret. But this was

Bob's affair; what troubled him most was to devise a way by which he could get possession of a piece of candle. Mrs. Britton would not allow a hired man to have a light. "Any man that could n' feel 'is way into bed mus' be simple," she said.

Zeke found the old people out of bed later than usual. Mrs. Britton had been churning, and the butter "took a con*tra*ry streak," as she expressed it, and refused to come until she and the old man had churned alternately for two hours. She was working the butter when Zeke came in and sat down. Watching his chance, he managed to snatch a tiny bit of candle-end that had been carefully laid up on the mantel-piece. But when Mrs. Britton's lighted candle flickered in its socket, she went to get the piece that was already in Zeke's pocket.

"I declare to goodness," she said, as she fumbled among the bits of string and other trumpery on the shelf, "where 's that piece of candle gone to? Do you know, Cyrus?"

This question was addressed to her husband, who never did know where anything she wanted "had gone to." But she always gave vent to her feelings by asking him, and he always answered, as he did now, with an impassive "No."

"Zeke, d' you see that short piece of candle that was here on the shelf?"

Zeke rose and affected to look for it.

"I don't see nothin' uv it," he said at length.

"Well, if the rats ain't a-gittin' no better fast. Who'd 'a' believed they 'd 'a' got up on the shelf?" So saying, she reluctantly lighted a fresh candle to take her butter to the spring.

By the time she was well out of the back door, Zeke, with one eye on the lethargic Britton, who was now a-doze in his chair, raked a hot coal from the ashes, and blowing it to a flame lighted his bit of candle with it. Then he quickly climbed to the loft, and opening the window-shutter put the candle in the glassless window on the side of the chimney towards Perrysburg. He was shivering for fear the old woman would see the light, though she was at the other end of the house, and he was yet more afraid that Bob would not see it before it should burn out. Hearing, at length, the crack of Bob's rifle, he extinguished the expiring wick and slipped down the ladder without arousing the slumbering old man.

"I expect they 's another man shot," said Mrs. Britton, when she came back. If she had ever been a planter's wife her pronunciation had probably degenerated, though her archaic speech was perhaps a shade better than the "low down" language of Broad Run.

"Why?" asked Zeke.

"Oh! I heerd a gun go off, un guns ain't common at 9 o'clock at night. An' I thought I saw a flicker uv light in our loft jus' now, but it went out as soon as the gun went off. It made me feel creepy, like the house was ha'nted." And she again began to look on the mantel-piece for the lost bit of candle which she was loth to give up.

"I 'm a-goin' to bed," said Zeke, "ghos's ur no ghos's," and he again mounted the ladder. After he had lain on the bed with his clothes on for an hour, keeping himself awake with difficulty, he felt sure that the old couple below stairs must be sound asleep. He softly opened the square window, the wooden shutter of which made no sound, as it swung on hinges of leather cut from an ancient boot-top. Then he climbed out on the projecting ends of the sticks which composed the chimney, and cautiously descended to the ground.

"Cyrus!" said Mrs. Britton to her husband; "did n't you hear that noise?"

"What noise?"

"That scratchin' kind-uh noise inside of the chimbley."

"No, I don't hear nothin'"; and the old man made haste to resume his sleep where he had left off.

"I do believe this house is ha'nted," sighed Mrs. Britton to herself.

The next morning when she woke up she called out, according to her wont, to the hired man in the loft: "Zeke! Zeke! O Zeke!"

She got no reply. Vexed of all things that a hired man should lose a minute of time, she called again in vain. A minute later she was about to get up and go to the ladder so as to be better heard, when there came to her the sound of Zeke chopping wood at the back door.

"Well, ef the world ain't a-comin' to 'n end, when Zeke Tucker gits up an' goes to choppin' of 'is own accord!"

When Zeke came in to breakfast, she said: "You 're out bright and airly this mornin'."

"Yes; I could n' sleep. Heerd noises all aroun' the house."

"So d' I. D' you hear that scratchin' in the chimbley?"

"Ya-as," said Zeke, with hesitation. He was relieved that the conversation should be broken at this point by the entrance of the old man from the stable.

"Zeke," said Britton, as he drew his chair to the table, "what 's the matter weth ole Gray?"

"I never noticed nothin' when I gin him 'is oats. But 't wuz n't fa'rly light then."

"He 's been rode. They 's sweat marks onto him, un the saddle 's wet yet."

The old woman put down her knife and fork. "That 's witch-work," she said. "First,

the butter would n't come, then I lost that piece of candle; un it 's teetotally gone too. Now rats don't never git up onto that shelf. Then I see a flicker of light in the loft while I was puttin' away the butter, an' you 'n' Zeke a-settin' h-yer by the fire. Then I wuz waked up by that scritch-scratchin' soun' in the chimbley, fer all the world like somebody a-climbin' down into the room, though they wa' n't nobody clum down, fer I listened. It kep' Zeke awake all night un roused 'im out airly this mornin'. 'T ain't nothin' short of witch-work gits Zeke up an' sets him to choppin' wood 'thout callin'. An' it 's been a-ridin' ole Gray. Maybe the ghost of that feller that wuz shot over 't the camp-meetin' 's a-ha'ntin' roun' the country, like. I don' b'lieve it 'll ever be quiet tell the feller that shot 'im 's hung."

The old man was very taciturn, and Zeke could not divine whether he was impressed by his wife's mysterious "it," or whether, suspecting the truth about old Gray, he thought best to say nothing. For if anything should set Mrs. Britton going she would not stop scolding for days, and Britton knew well that Zeke would not be the chief sufferer in such a tempest.

As soon as he had eaten his breakfast, Zeke went out to dig early potatoes in Britton's farther field. About 9 o'clock, a clod of earth came flying past his legs and broke upon his hoe. He turned to look, and saw another one thrown from the corn-field near by ascending in a hyperbolic curve and then coming down so near to his head that he moved out of the way. He laid down his hoe and climbed the fence into the corn-field, which at this time of the year was a dense forest of green stalks higher than a man's head. Bob McCord was here awaiting Zeke. He had left Lazar Brown's horse tied in a neighboring papaw patch.

"Did you go to Perrysburg?" began Bob.

"Yes," said Zeke. "You played it onto 'em good. I wuz ruther more 'n half fooled myself. I 'lowed sometimes ut maybe S'manthy *had* come it over you."

Bob laughed all through his large frame.

"When we got to Perrysburg un come to wake up the shurruff he wuz skeerd, un ast what 't wuz we wuz arter.

"'That murderer,' says Jake Hogan, like a ghos' fum behin' his false-face.

"'What murderer?' says the shurruff. 'They hain't no murderer in the jail.'

"'They hain't, sonny?' says Jake, weth *sech* a swing. 'You ketch us with yer dodrotted foolin',' says he; 'we hain't the kind to be fooled. We know what we 're about afore we begin, we do. We hain't the sort to be tuck in by lawyers ur nobody else.'

"'I tell you they hain't no murderer h-yer,' says the shurruff, says he.

"'Tie 'is han's, boys,' says Jake, in Jake's way, yeh know, like as if he wuz king uv all creation."

"Weth Eelenoys throwed in like a spool uv thread, to make the bargain good," suggested Bob, losing all prudence and giving way to a long unrestrained peal of laughter.

"Jes so," said Zeke. "When we come to the jail un got the door open they wuz n't nobody thar but Sam Byfiel', the half-crazy feller that wuz through h-yer last ye'r a-playin' his fool tricks, un a man name' Simmons, as had stole half a cord uh wood. Simmons was *that* skeered when we come in, 't 'e got down on 'is knees un begged, un whined, un sniffled, un says, 'Boys,' says he, 'I hain't noways purpared to die. Don't hang me, un I won't never steal nothin' ag'in.'"

"I 'll bet Byfiel' wuz n't skeered," said Bob.

"Not *him*. He 'd been a-playin' the angel Gaberl about Perrysburg weth a long tin horn, blowin' it into people's winders at midnight, un the watchman had jugged him. Jake says, says he, 'Sam Byfiel', tell us whar that air murderer is.' Jake put 'is voice away down in 'is boots,— it sounded like a mad bull a-bellerin'. But Sam jest lif's Jake's false-face, this away, un peeps under, un says, 'Jake Hogan,' says 'e, 'I knowed it mus' be you by yer big-feelin' ways. It 's mighty hard fer a man that 's a nateral born to make a fool uv hisself; but, Jake, I 'll be derned ef you hain't done it this time.'

"'Hain't Tom Grayson h-yer?' says Jake.

"'No,' says Byfiel'. 'Somebody 's been a-greenin' on you, Jake; Tom hain't never been h-yer,' says he.

"'Aw, you 're a lunatic, Sam,' says Jake.

"'Ditto, brother,' says Byfiel'.

"The shurruff's folks had run out, un 'bout this time they 'd began to raise the neighbors, un somebody run to the Prisbaterian church un commenced to pull away on the new church-bell, 't a man Down East sent 'em. We thought we 'd better be a-strikin' out mighty soon. But time we wuz in our saddles crack went a gun fum behin' the court-house. I s'pose 't wuz shot into the air to skeer us; but Jake, like a fool, out weth his pistol un shot back. The Perrysburg people wuz like a bee-gum that 's been upsot. The people was now a-runnin', some one way un some t' other, un more guns wuz fired off fum some'ers,— we never stopped to eenquire fum whar, tell we 'd got safe acrost the county line. One uv them guns must 'a' been a rifle, un it must 'a' been shot in bloody yearnest, fer I heerd the bullet whiz."

"You never stopped to say good-bye!" said Bob.

"Not me! Ole Gray wuz the very fust hoss that pulled hisself acrost the corpora-

tion line. I did n' feel no interest in stayin', noways."

"What 's Jake goin' to do nex' thing?" asked Bob, not yet recovered from his merriment.

"Wal, about half the fellers rode straight on home un would n't talk to Jake at all, 'cept maybe to cuss 'im now un then fer a fool, on'y fit to hole a snipe-bag fer Bob McCord. They swore they wuz done go'n' under sech as *him*. But Jake ain't the kind to gin it up; he says 'f 'e kin git a dozen he 's boun' to go a Sunday night when they 'll be lots of fellers about the camp-meetin', un some uh them 'll go too, maybe."

"We 'll have to see about that," said Bob, getting up. "But you stick to Jake, closte ez a cuckle-burr."

"All right," said Zeke, remembering his potato patch and looking ruefully at the ascending sun as he hurried back to his work.

Bob went on his way and returned the horse to Lazar Brown's house; but Uncle Lazar was nowhere to be seen, and S'manthy was evidently out of humor.

"S'manthy, yer 's yer hoss," said Bob.

"Wal, you thes let 'im loose thar; I hain't got time to bother."

"How 'd the boys come out las' night down 't Moscow?"

"Aw, I don' know, un I don' keer, neither. You 're a low-lived passel uh loafers, all uh yeh, big *an'* leetle."

"W'y, S'manthy! You wuz that sweet las' night."

S'manthy was in a hurry about something, but she showed her irregular teeth as she disappeared around a corner of the cabin, looking back over her shoulder to say:

"You 're a purty one, hainch yeh, now?"

Bob's face shone with delight as he went on up the run to look for the bear's cubs. He succeeded in killing one of them and capturing the other alive, but he had to take them and his wounded dog home afoot. It seemed too great a venture to ask S'manthy to lend the horse a second time.

XIX.

THE MYTH.

JAKE'S leadership had received a severe blow, and Bob could hardly believe that he would be able to muster a company again. But Hogan's vindictiveness and persistence rendered it probable that he would not rest in his present ridiculous position without making an effort to redeem himself, even if he had to act with a small party.

"You see," Bob explained to Mason that Saturday night, "Jake 's got the most p'ison kind uv hold-on you ever seed. He 's shore to try 't over, fust *or* last."

"He won't let you fool him again," said Mason.

Bob smiled and picked up a chip, which he began to whittle as an aid to reflection.

"It would be a juberous thing to try again. But I 'm goin to see Pete Markham in the mornin'. He 'll go apast h-yer to the camp-meetin', fer he 's a Methodis' by marriage,—that is, his wife 's a member, un that makes Pete feel 'z if he wuz a kind-uv a member-in-law. Un Pete knows mighty well 't when the time comes roun' fer him to run fer office, it 'll be worth while to know pussidin' elders, un circus-riders, un locus' preachers, un all sorts uv camp-meetin' people. Pete 's jes as shore to go to camp-meetin' a Sunday mornin' 'z a bear is to eat honey when he comes acrost a tumble-down bee-tree."

The next morning Bob stood in his shirt sleeves leaning over Mrs. Grayson's gate and watching the people that rode to the great Sunday assembly at the Union camp-ground. Many a staid plow-horse, with collar marks on his shoulders, had been diligently curried and brushed to transform him into a stylish saddle-nag; and many a young man, with hands calloused by ax-helve and plow-handle, rode to-day in his Sunday best with a blooming girl by his side, or behind him, and with the gay heart of a troubadour in his breast. Fresh calico dresses, in which the dominant tint was either a bright pink or a positive blue, were flaunted with more pride than a princess feels in her lace and pearls. The woman who has worked and schemed and skimped to achieve her attire knows the real pleasure and victory of self-adornment.

The early comers of this Sunday morning procession are, in the main, Methodists going to eat bread and water with the brethren in the 9 o'clock love-feast assembly, to sing together the touching songs of fellowship, and to tell, and to hear told, the stories of personal trials and sorrows,—to taste the pleasure of being one of a great company wrought to ecstasy by a common religious passion. But as the summer sun mounts higher, the road is more and more thronged with a miscellaneous company. For at 11 o'clock the presiding elder, a great man of all the country round, will preach one of his favorite sermons, and all the world—believers and scoffers, doctors and lawyers, and judges and politicians—will be there to hear him marshal in new forms the oft-repeated arguments in favor of the divine origin of Christianity, or the truth of the Arminian system of Wesley, and to admire the dramatic effect of his well-told anecdotes and the masterly pathos of his peroration. The

people no longer go in couples; there are six and even ten in a group. And how well they sit their saddles! There is no "rising to the trot," in the ungraceful fashion of New York and Boston gentlemen and ladies who have put away the tradition of ancestors of unrivaled horsemanship, to adopt from England an ugly custom excusable only in a land of fox-hunting. You might find girls in their teens in this company who ride with grace and dash over difficult roads, and who could learn nothing worth their while from a riding-master,— for to ride perfectly consists chiefly in riding as naturally and unconsciously as one walks, and that is rarely given to any but those that are to the saddle born. But besides saddle-horses there are wagons, for wherever there is a prairie, wheels come early. One or two families not yet out of a pioneer state of existence go creaking painfully along in ox-carts; and there are barefoot boys skurrying afoot across fields to save distance. Everybody feels bound to go. The attraction of a crowd is proportioned to its greatness, like all other gravitation, and this one will drain the country dry of people. Scarcely any one stays at home, as you see. There are little children in the wagons and on the croups of the saddle-horses, while some superfluous ones are stowed away in front: it is in this way that the babies get their first lessons in horsemanship. At half-past 10 o'clock the roads are beclouded with dust that drifts to leeward, turning the green blades of the corn-field to gray and grizzling the foliage of the trees. All along the road there is the sound of voices in many keys,— all of them with a touch of holiday buoyancy in them. There is that universal interchange of good feeling which is only found in communities that have no lines of social cleavage. Everybody is talking to everybody,— about the weather, the crops, the latest weddings, the most recent deaths, and, above all, the murder at the camp-meeting. To this topic every party drifts when the Grayson farm-house comes in sight, if not before. Wild stories are repeated of Tom's profligacy, and of the causes that led to the feud between him and Lockwood. As the people come nearer to the house their voices fall into a lower tone, and they ride by the front gate in almost entire silence, scanning the house with eager curiosity, as though trying to penetrate the chagrin of those within. They all nod to Bob; it is the common and indispensable civility of the country. Bob nods to all in turn and grunts in a friendly way at those with whom he is acquainted; but to his best friends he gives a cheerful "Howdy!"

At length the deputy sheriff, Markham, appears, riding alongside of his wife. She is also escorted on the other side by Magill, the county clerk, who is saying the pleasantest things he can think of to her. When Markham arrives at a point nearly opposite the gate Bob does not nod, but gives his head a significant jerk backward and to the left,— a laconic invitation to stop a moment, rendered the more explicit by the utterance in a low tone of a single word, "Pete!" Markham draws rein and stops to hear what Bob has to say; and Mason, who has come out on the porch at that moment, descends to the gate to talk with Magill and Mrs. Markham, who have also pulled up. The whole five are presently engaged in conversation in one group, while the horses amuse themselves by thrusting their dusty noses through the cracks of the fence to nibble at such blades of grass as are within their reach. The sight of the deputy sheriff and the county clerk in front of the Grayson house piques yet more the curiosity of the passers-by, who wonder what those privileged folks can be talking about.

"You cannot do that," Markham said presently, in reply to a suggestion that came from Mason. "It 's no use talking to the sheriff about moving Tom to Perrysburg. He 's made up his mind not to move him; and if he did move him, Perrysburg would n't be a safe place."

"The shairiff seems to have one eye on Broad Run, ainh Pate?" said Magill chaffingly.

But Pete Markham neither smiled nor said anything in reply.

"It 's a shame something can't be done for Tom," said Mason. "He 's got a right to a fair trial; and we think he 's innocent."

"I 'll do anything I can," said Markham, whose memory had been haunted by the appealing face of Mrs. Grayson ever since his domiciliary visit in search of Tom's pistol.

"I 'm not caring much whether he 's innocent or not, meself," said Magill. "May be Lockwood aggravated 'im an' naded puttin' out of the way. All I say is, Tom faced that crowd the other day like a man, an' he 's a gintleman in me own istimation; an' I 'd niver let a gintleman be hung by a gang of blackguards, if I could help it."

"Broad Run don't vote for you, Magill," said Markham.

"You would n't ixpict it to vote for a man with a clane shirt on, now would ye?"

"Well," said Bob, "I 've been thinkin' that ef Pete could make people b'lieve that they wuz another man wanted fer the shootin', it would sort uh muddle Jake's plans fer awhile, un by that time liker 'n not Abe Lincoln 'll find out who the rale murderer is."

"Tell me what 's the color of his hair,

Pate?" said Magill. "Then I 'll help you foind him."

"Well," drawled Markham, turning a little sidewise in the saddle to rest himself, and looking perfectly serious and secretive, "I have n't found out about his hair,—he wore a straw hat, you know. But he was a youngish fellow, with foxy whiskers under his chin."

"Middlin' small?" suggested Magill, with a faint pucker of drollery about the corner of his mouth.

"Yes," said Markham, biting the butt of his beech switch meditatively. "Ruther under the average, I should say, without being small."

"One eye a leetle crossed?" Bob McCord inquired, laughing.

"Right eye a little *out*," said Markham, waving his hand outwardly. "He had quarreled with Lockwood a good while ago and owed him a grudge. That 's the man."

"Know his name?" put in Magill.

"N-o. That 's one thing we 're trying to find out. He come from off East where Lockwood used to live. We 've got to try to find if anybody knows which way he went when he left the camp-meetin' that night, and if anybody can tell just where he come from."

"Oh! I understand now what you 're after," said Magill. "'There 'll be a plinty will remimber the man when you come to spake about him. Don't you say what you want him fer. Lave all explinations to me. I 'm not responsible, an' I 'll let out the saycrits of the shairiff 's office."

The passers-by had grown visibly fewer in the last few minutes, and now the belated ones rode for the most part in a rapid trot or a gallop. Mrs. Markham began to warn her husband that there would not be a seat left; so the horses' heads were drawn up, and the trio set forward with a nod of good-bye to Bob and the schoolmaster.

Markham went to work in all seriousness to get information about the imaginary young man with red whiskers under his chin and an outward cast in one eye who had been seen on the ground the night of the murder. Magill took occasion to remark that if the praycher 'd only 'a' known what Markham was lookin' for, and all about the rale facts of the murder, he might n't have held Tom up for an awful warnin' to the young that mornin'. But he supposed it did not matter whether you had the roight fellow or the wrong one, if you were only praychin'. Some of those who heard the clerk describe the smallish man with the red goatee and one eye *out* a little, thought they could remember having seen a man answering to this description; but as they could not give any information tending to secure his arrest, Magill did not think it worth while communicating their knowledge to Markham. But he quoted their sayings and surmises to the next persons he spoke to; so that without ever straining his conscience to the point of positively asserting the substantive existence of such a red-whiskered young man with a squint, he had almost come to believe in him by the time the day was over.

The story reached Broad Run in two or three forms before night, and served to throw Jake's forlorn hope into confusion. But Magill did not think best to leave the Broad Run people to the mercy of rumor in so important a matter. He rode up to the grocery about half-past 5 in the afternoon, and having hitched his horse to a neighboring dogwood, he walked in with a good-evening to the group at the door. Going up to the counter he called up the whole party to drink with him, as became an Irish gentleman of generous spirit, who was, moreover, a prudent politician. But Broad Run had never taken a fancy to Magill; there was a ceremoniousness about his attempts to flatter them that did not harmonize with their rough-and-ready ways. If he had said, "Come, boys, liquor up!" they would have thought his manner perfect; but he bowed blandly to Jake Hogan, and said, "Have something to drink, won't you?" and so to the rest. They mentally condemned him as "too all-fired fine in his ways and too much dressed up for a free country." But they did not neglect the opportunity to drink at somebody else's expense. Jake Hogan was the more ready to accept such hospitality because he had been feeling a little depressed since his unlucky trip to Perrysburg. And now this story which he had heard of another man who might be the murderer had destroyed what chance he had of mustering a party for Moscow; for Jake's most devoted partisans did not like to run any risk of hanging the wrong man.

"Mr. Magill," said Jake, after he had turned his whisky-glass nearly to the perpendicular in the endeavor to extract the last drop, "what 's this yer story about Tom's not being the ginooine murderer? I don't take no stock in the yarn, fer my part."

"Well, it ain't best to say anything about it till they get the other man," said Magill, assuming a close look. "I hear they 're purty hot on his track."

"What kind of a lookin' creetur wuzzy?" asked Bijy Grimes, an oldish man with an effeminate chin and soft, fair cheeks which contrasted strangely with his slovenly and unkempt appearance. Bijy had drunk his liquor, and now sat resting on a keg with his mouth dropped wide open: it was a way he had of listening.

"Well, I don't know anything only what I hear," said Magill. "I 'm not the shairiff, you know. The story goes that he was a man with a red goatee —"

"Un what fer sized man?" asked Bijy.

"Rather under-sized, and with one eye a little walled," said Magill.

"I 'm derned ef 't ain't the wery man I seed," said Bijy, who never failed to know something about everything. "He wuz comin' towards the camp-meetin' that wery arternoon. Dern!" and he shut his mouth, and got to his feet in excitement. "I kind-uh suspicioned 'im too," he added.

"Well, I don't know anything," said the clerk; "but if they catch that stranger and prove it on him,—mind, I say, if they *prove* it,—count me for one that will help git the world rid of him by Broad Run law, as they call it. But I 've got to get on home, gintlemen. Good-bye, gintlemen, and good luck to you all!"

The rest nodded their heads and said good-bye.

"He 's too orful slick," said Jake, when Magill had gone. "Makes me kind uv sick. Now I like a man ut talks out like a man, you know; without so much dodrotted saf-sawder, un so on. He ain't none uh my kind, Magill hain't."

(To be continued.) *Edward Eggleston.*

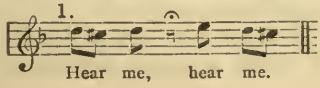
BIRD MUSIC.

THE BLUEBIRD AND THE ROBIN.

THE writer of this paper has read with great interest the books of many able ornithologists of to-day, and, in his humble way as a musician and a farmer, has for years been an admiring observer of birds. His excuse for abruptly presenting himself among his betters is the fact that, by their inadequate treatment of the chief charm of the singing birds,—their songs,—they have left a space for some one to fill. To express admiration for the music of the birds is not enough: every season the airy songsters of wood and field urge us to a more careful and fitting report. This effort is a step towards so doing. The observations here recorded were made in and about a grove of maples in a valley of south-eastern Vermont.

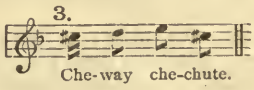
Our first two spring visitors are the bluebird and the robin, the bluebird invariably coming first. The following are the principal features of the bluebird's songs as I took them, from time to time, last season.

Early on the morning of the 17th of March my ear caught his first, far, faint, but sweet notes.



The weather was cold, and I heard no more for several days; but on the morning of the 25th one made bold to come into the orchard, where he appeared to feel quite at home. Though it was still cold, his pure, soft notes held me within hearing for half an hour, during which time some of his morning talk (the music of a bluebird is often quite as much like talking as like singing) was secured.

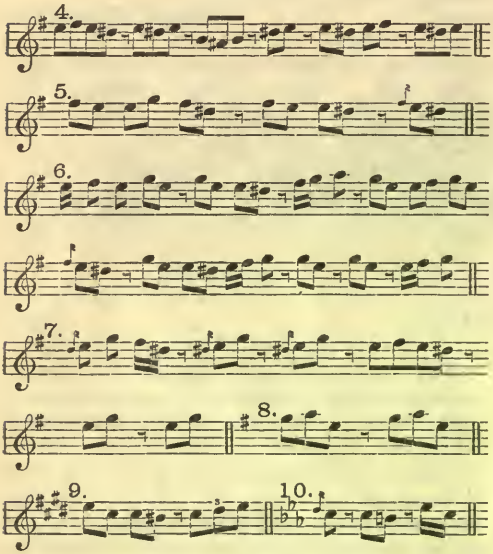
The next morning I heard him sing simply,



The morning of the 28th being rainy, I feared I should see no birds, but by 9 o'clock the clouds began to vanish, and suddenly there were three species within four rods of my window — a flock of snow-birds, a white-breasted nut-hatch, and the bluebird. The latter lit upon the stump of a small plum-tree, when white-breast lit upon the side of the stump and began to dart up and down and around, below him. The bluebird was evidently puzzled

at his friend's eccentric movements. Shifting quickly from point to point, he would peer over in a very quizzical and comical manner, as much as to say, "How do you do that?" It was a pretty pantomime; only two actors, but they acted well. Though no music was added to my notes, I was grateful for the call; and when the silent birds took to the air and left me alone again, I could not but exclaim, "How beautiful are birds, and what is so blue as a bluebird!"

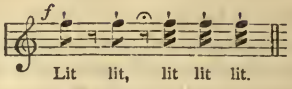
Thus far the bluebird sang in the key of D minor. I afterward heard him in several keys, as here represented:



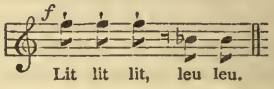
In these examples, the bluebird uses the minor key altogether: we have him in four positions of it. The fact that he sings in the minor key may partly explain the tenderness characterizing his song; but undoubtedly the plaintive quality of his tone is the more important factor. The written songs of the bluebird and the robin might lead one to conclude that their performance would produce much the same effect, but on hearing them the contrast is striking.

Last season the robin was five days behind the bluebird. The first note I heard from him proved him a magician; the sound of his voice, filling the air with joy, spread a glow of instantaneous happiness over the morning landscape. Perched on the topmost twig of a tall maple, I had only time to lift my hat when he saluted me with,

This he repeated two or three times with martial ardor and precision; then with his parting:

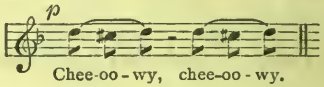


and with a flirt of his tail at each note, he left the grove. He flew high, scorning the earth, and did not return till evening. Then he did not sing: it was only

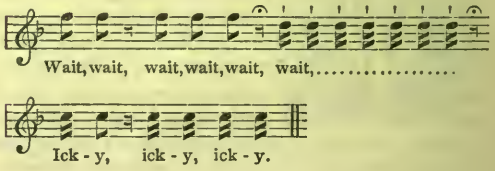


The effect was that of a call, but there was no answer. Soon he called again louder, with more rapid notes, giving another interval:

The next morning he again appeared on the same twig and called, "*Lit, lit, lit,*" to which a bluebird promptly responded,



and a nut-hatch rattled away merrily at them both,

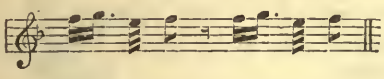


Some two weeks passed before the morning songs proper began, my first record being made May 5. On that morning, before light, I was out, and within a few feet of a robin that struck up his song in a small pear-tree, not more than ten feet from the ground. On this occasion I settled one point; namely, that the robin frequently sings other notes than those heard. He has a habit of, as it were, closing his mouth between strains, and making muffled, indistinct tones — an imperfect echo or, better, a burlesque repetition. The effect is humorous; for he seems to be shyly ridiculing his performance as he goes along, for his own private enjoyment. This after effort, not intended for the public, is usually pitched at the top of his voice — so high that his voice often breaks, when the result is truly ludicrous. I am convinced that many times when we think the robin is resting between strains, he

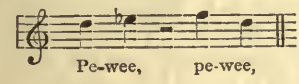
is busying himself in the manner described. His song on this occasion ran,

May 6, at 4 P. M., there were signs of rain, and redbreast seemed to be unusually inspired. He sang with great spirit,

While at my work, May 8, I heard him introducing new "kinks" in his vocal twistings. He repeated them many times, almost to tiresomeness. They were:



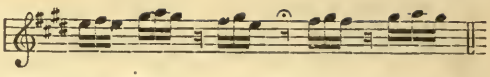
The morning of the 14th opened rainy, but the drops did not stop the concert of the birds. On putting my head out to catch the first of it, a pewee was singing,



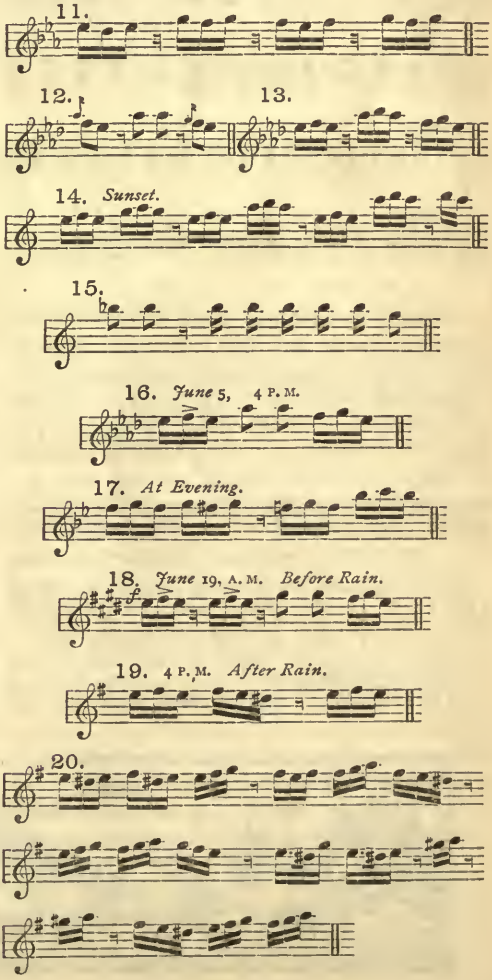
and a robin defied the shower in good set terms, as follows:

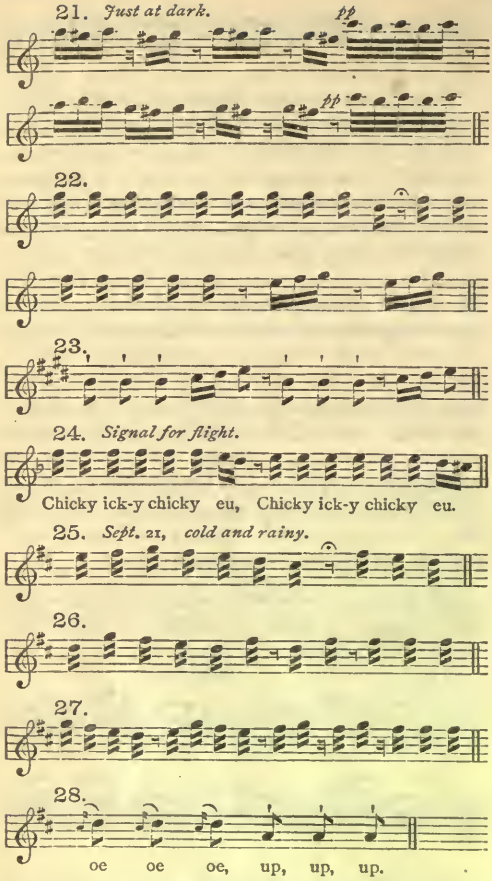
Whether he meant to sing in E major or minor, I did not decide.

May 23 I was awake before 2 o'clock A. M. and all was still; not even a frog peeped. At the first faint coming of light the rooster crowed; and in about half an hour I heard the first bird notes — the robin's. At this hour the robin does not burst into full song, but begins with a subdued twitter, which rapidly opens and attunes his throat for the splendid moment when, yielding himself to the fresh gladness, he does his best. The present performance was in a little maple close by my window, where, undoubtedly, he had spent the night. His song was,

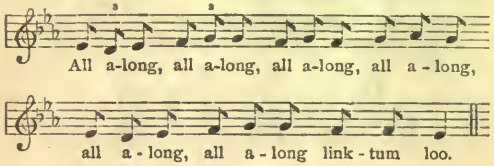


There is no mistake about this being in the major key, and a bit of choice melody. Delivered, as it was, with a delightful animation, the effect was cheering to the last degree. Other voices joined, and immediately a grand chorus resulted, in which, much to my amusement, the frogs and toads, silent up to this time, took a lively part, not to be outdone by the whole choiring hosts of orioles, catbirds, pewees, sparrows, and other feathered rivals. The only fault with the performance was its brevity; in a few minutes all was silent as before. The robin sings more hours than almost any other bird. His songs are short and he repeats them many times, but he is by no means stereotyped in his forms; indeed, he is fair at extemporizing when the mood takes him. A commendable variety will be discovered in the annexed melodies.





From these examples it will be seen that bird music is akin to our own: the same intervals are used as in the major and minor keys. No. 11 brings to mind the first half of an old melody sung by the spinning-girls fifty years ago, as a substitute for counting, while reeling their yarn:

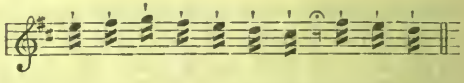


Who is the plagiarist?

The majority of singing birds make free use of triplets; the robins abound in them. They are generally separated by brief rests; but in some instances two or three triplets are given without rests, as in Nos. 17 and 20.

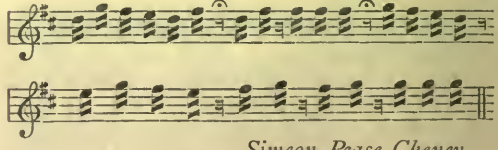
The robins sing throughout the summer, their incessant repetitions frequently becoming tiresome. They take the lead at the opening of the season, and hold it. Every morning they begin the concert, and are the principal performers; indeed, they seem to feel competent to make up the entire orchestra, if necessary. They are by no means our best singers, but were we deprived of them, we should miss their songs more than those of any other bird. They are the most social and domestic of all the migrating birds, belonging to the farm almost as much as do the hens and chickens. They come early and stay late; and after they are supposed to be gone for good, if you have a nice mountain ash, hanging thick with clusters of beautiful red berries,—the very gem of all outdoor ornaments at this season,—some very windy day a cloud of robins will swoop down upon it, when nothing will save it. In mitigation of his offense, I am willing to believe that the robin does not think himself a robber, but simply a high-handed taker of what he has earned by long service of song.

September 21, a cold, rainy day, when no other bird was to be seen, I heard a robin exclaim:



He spoke with much decision and independence, as much as to say, "I am alone, but can take care of myself!" It is a point worth noticing that the farewell of the robin is very similar in style to his first salute in the spring.

The last I saw of the robins they were collecting, at early morning, in the small trees and bushes about a pond near the grove. Very brisk, both in voice and movement, their main notes were:



Simeon Pease Cheney.

THE REALM OF REVERIE.

I SEEK its aerie shore as one enchanted,
Where falls a mystic, dim-delicious glow
On dusky violets and wistful daisies,
And ghosts of roses loved long years ago,
While pallid lily bells, slow swinging, toll
Not sounds, but silences, into the soul.

And oh! its hawthorn blossoms mock the snow-drift,
But never melt and never wear away,
While fair below the gently waving branches
Gold shimmered mists and azure shadows play,
Close where a silver streamlet runs along
So softly, it has neither laugh nor song.

This region is my own, O my beloved!
So much my own I cannot show it thee;
But when in blessed mood my spirit sees it,
This phantom realm, the Realm of Reverie,
Believe me, all the raptured quiet there
Seems waiting for thy voice to thrill its air.

Louise Vickroy Boyd.

THE ROUND-UP.

BY THEODORE ROOSEVELT.

ILLUSTRATIONS BY FREDERIC REMINGTON.

AN ARIZONA TYPE.

DURING the winter-time there is ordinarily but little work done among the cattle. There is some line riding, and a continual lookout is kept for the very weak animals; but most of the stock are left to shift for themselves, undisturbed. Almost every stock-grower's association forbids branding any calves before the spring round-up. If great bands of cattle wander off the range, parties may be fitted out to go after them and bring them back; but this is only done when absolutely necessary, as when the drift of the cattle has been towards an Indian reservation or a settled granger country, for the weather is very severe, and the horses are so poor that their food must be carried along.

The bulk of the work is done during the summer, including the late spring and early fall, and consists mainly in a succession of round-ups, beginning, with us, in May and ending towards the last of October. But a good deal may be done by riding over one's range. Frequently, too, herding will be practiced on a large scale.

More important than herding is "trail" work; cattle, while driven from one range to another, or to a shipping point for beef, being said to be "on the trail." For years, the over-supply from the vast breeding ranches to the south, especially in Texas, has been driven northward in large herds, either to the shipping towns along the great railroads, or else to the fattening ranges of the North-west; it having been found, so far, that while the calf crop is larger in the South, beeves become much heavier in the North. Such cattle, for the most part, went along tolerably well-marked routes or trails, which became for the time

being of great importance, flourishing — and extremely lawless — towns growing up along them; but with the growth of the railroad system, and above all with the filling-up of the northern ranges, these trails have steadily become of less and less consequence, though many herds still travel them on their way to the already crowded ranges of western Dakota and Montana, or to the Canadian regions beyond. The trail work is something by itself. The herds may be on the trail several months, averaging fifteen miles or less a a day. The cowboys accompanying each have to undergo much hard toil, of a peculiarly same and wearisome kind, on account of the extreme slowness with which everything must be done, as trail cattle should never be hurried. The foreman of a trail outfit must be not only a veteran cowhand, but also a miracle of patience and resolution.

Round-up work is far less irksome, there being an immense amount of dash and excitement connected with it; and when once the cattle are on the range, the important work is done during the round-up. On cow ranches, or wherever there is breeding stock, the spring round-up is the great event of the season, as it is then that the bulk of the calves are branded. It usually lasts six weeks, or thereabouts; but its end by no means implies rest for the stockman. On the contrary, as soon as it is over, wagons are sent to work out-of-the-way parts of the country that have been passed over, but where cattle are supposed to have drifted; and by the time these have come back the first beef round-up has begun, and thereafter beeves are steadily gathered and shipped, at least from among the larger herds, until cold weather sets in; and in the fall there is another round-up, to brand the late calves and see that the stock is got back on the range. As all of these round-ups are of one character, a description of the most important, taking place in the spring, will be enough.

In April we begin to get up the horses. Throughout the winter very few have been kept for use, as they are then poor and weak, and must be given grain and hay if they are to be worked. The men in the line camps need two or three apiece, and each man at the home ranch has a couple more; but the rest are left out to shift for themselves, which the tough, hardy little fellows are well able to do. Ponies can pick up a living where cattle die; though the scanty feed, which they may have to uncover by pawing off the snow, and the bitter weather often make them look very gaunt by spring-time. But the first warm rains bring up the green grass, and then all the live-stock gain flesh with wonderful rapidity. When the spring round-up begins the horses should be as fat and sleek as possible. After running all winter free, even the most sober pony is apt to betray an inclination to buck; and, if possible, we like to ride every animal once or twice before we begin to do real work with him. Animals that have escaped for any length of time are almost as bad to handle as if they had never been broken. One of the two horses mentioned in a preceding article as having been gone eighteen months has, since his return, been suggestively dubbed "Dynamite Jimmy," on account of the incessant and eruptive energy with which he bucks. Many of our horses, by the way, are thus named from some feat or peculiarity. Wire Fence, when being broken, ran into one of the abominations after which he is now called; Hackamore once got away and remained out for three weeks with a hackamore, or breaking-halter, on him; Macaulay contracted the habit of regularly getting rid of the huge Scotchman to whom he was intrusted; Bulberry Johnny spent the hour or two after he was first mounted in a large patch of thorny bulberry bushes, his distracted rider unable to get him to do anything but move round sidewise in a circle; Fall Back would never get to the front; Water Skip always jumps mud-puddles; and there are a dozen others with names as purely descriptive.

The stock-growers of Montana, of the western part of Dakota, and even of portions of extreme northern Wyoming,— that is, of all the grazing lands lying in the basin of the Upper Missouri,— have united, and formed themselves into the great Montana Stock-growers' Association. Among the countless benefits they have derived from this course, not the least has been the way in which the various round-ups work in with and supplement one another. At the spring meeting of the association, the entire territory mentioned above, including perhaps a hundred thousand square miles, is mapped out into round-up districts, which generally are changed but slightly from year to year, and the times and places for the round-ups to begin refixed so that those of adjacent districts may be run with a view to the best interests of all. Thus the stockmen along the Yellowstone have one round-up; we along the Little Missouri have another; and the country lying between, through which the Big Beaver flows, is almost equally important to both. Accordingly, one spring, the Little Missouri round-up, beginning May 25 and working down-stream, was timed so as to reach the mouth of the Big Beaver about June 1, the Yellowstone round-up beginning at that date and place. Both then worked up the Beaver together to its head, when the Yellowstone men turned to the west

and we bent back to our own river; thus the bulk of the strayed cattle of each were brought back to their respective ranges. Our own round-up district covers the Big and Little Beaver creeks, which rise near each other, but empty into the Little Missouri nearly a hundred and fifty miles apart, and so much of the latter river as lies between their mouths.

The captain or foreman of the round-up, upon whom very much of its efficiency and success depends, is chosen beforehand. He is, of course, an expert cowman, thoroughly acquainted with the country; and he must also be able to command and to keep control of the wild rough-riders he has under him — a feat needing both tact and firmness.

At the appointed day all meet at the place from which the round-up is to start. Each ranch, of course, has most work to be done in its own round-up district, but it is also necessary to have representatives in all those surrounding it. A large outfit may employ a dozen cowboys, or over, in the home district, and yet have nearly as many more representing its interest in the various ones adjoining. Smaller outfits generally club together to run a wagon and send outside representatives, or else go along with their stronger neighbors, they paying part of the expenses. A large outfit, with a herd of twenty thousand cattle or more, can, if necessary, run a round-up entirely by itself, and is able to act independently of outside help; it is therefore at a great advantage compared with those that can take no step effectively without their neighbors' consent and assistance.

If the starting-point is some distance off, it may be necessary to leave home three or four days in advance. Before this we have got everything in readiness; have overhauled the wagons, shod any horse whose fore feet are tender, — as a rule, all our ponies go barefooted, — and left things in order at the ranch. Our outfit may be taken as a sample of every one else's. We have a stout four-horse wagon to carry the bedding and the food; in its rear a mess-chest is rigged to hold the knives, forks, cans, etc. All our four team-horses are strong, willing animals, though of no great size, being originally just "broncos," or unbroken native horses, like the others. The teamster is also cook: a man who is a really first-rate hand at both driving and cooking — and our present teamster is both — can always command his price. Besides our own men, some cowboys from neighboring ranches and two or three representatives from other round-up districts are always along, and we generally have at least a dozen "riders," as they are termed, — that is, cowboys, or "cow-punchers," who do the actual cattle-work, — with the wagon. Each of these has a string of eight or ten ponies; and to take charge of the saddle-band, thus consisting of a hundred odd head, there are two herders, always known as "horse-wranglers" — one for the day and one for the night. Occasionally there will be two wagons, one to carry the bedding and one the food, known, respectively, as the bed and the mess wagon; but this is not usual.

While traveling to the meeting-point the pace is always slow, as it is an object to bring the horses on the ground as fresh as possible. Accordingly, we keep at a walk almost all day, and the riders, having nothing else to do, assist the wranglers in driving the saddle-band, three or four going in front, and others on the side, so that the horses shall keep on a walk. There is always some trouble with the animals at the starting out, as they are very fresh and are restive under the saddle. The herd is likely to stampede, and any beast that is frisky or vicious is sure to show its worst side. To do really effective cow-work a pony should be well broken; but many even of the old ones have vicious traits, and almost every man will have in his string one or two young horses, or broncos, hardly broken at all. In consequence, very many of my horses have to this day traits not calculated to set a timid or a clumsy rider at his ease. One or two run away and cannot be held by even the strongest bit; others can hardly be bridled or saddled until they have been thrown; two or three have a tendency to fall over backward; and half of them buck more or less, some so hard that only an expert can sit them.

In riding these wild, vicious horses, and in careering over such very bad ground, especially at night, accidents are always occurring. A man who is merely an ordinary rider is certain to have a pretty hard time. On my first round-up I had a string of nine horses, four of them broncos, only broken to the extent of having each been saddled once or twice. One of them it was an impossibility to bridle or to saddle single-handed; it was very difficult to get on or off him, and he was exceedingly nervous if a man moved his hands or feet; but he had no bad tricks. The second soon became perfectly quiet. The third turned out to be one of the worst buckers on the ranch: once, when he bucked me off, I managed to fall on a stone and broke a rib. The fourth had a still worse habit, for he would balk and then throw himself over backward: once, when I was not quick enough, he caught me and broke something in the point of my shoulder, so that it was some weeks before I could raise the arm freely. My hurts were far from serious, and did not interfere with my riding and working

as usual through the round-up; but I was heartily glad when it ended, and ever since have religiously done my best to get none but gentle horses in my own string. However, every one gets falls from or with his horse now and then in the cow country; and even my men, good riders though they are, are sometimes injured. One of them once broke his ankle; another a rib; another was on one occasion stunned, remaining unconscious for some hours; and yet another had certain of his horses buck under him so hard and long as finally to hurt his lungs and make him cough blood. Fatal accidents occur annually in almost every district, especially if there is much work to be done among stampeded cattle at night; but on my own ranch none of my men have ever been seriously hurt, though on one occasion a cowboy from another ranch, who was with my wagon, was killed, his horse falling and pitching him heavily on his head.

For bedding, each man has two or three pairs of blankets, and a tarpaulin or small wagon-sheet. Usually, two or three sleep together. Even in June the nights are generally cool and pleasant, and it is chilly in the early mornings; although this is not always so, and when the weather stays hot and mosquitoes are plenty, the hours of darkness, even in midsummer, seem painfully long. In the Bad Lands proper we are not often bothered very seriously by these winged pests; but in the low bottoms of the Big Missouri, and beside many of the reedy ponds and great sloughs out on the prairie, they are a perfect scourge. During the very hot nights, when they are especially active, the bed-clothes make a man feel absolutely smothered, and yet his only chance for sleep is to wrap himself tightly up, head and all; and even then some of the pests will usually force their way in. At sunset I have seen the mosquitoes rise up from the land like a dense cloud, to make the hot, stifling night one long torture; the horses would neither lie down nor graze, traveling restlessly to and fro till daybreak, their bodies streaked and bloody, and the insects settling on them so as to make them all one color, a uniform gray; while the men, after a few hours' tossing about in the vain attempt to sleep, rose, built a little fire of damp sage brush, and thus endured the misery as best they could until it was light enough to work.

But if the weather is fine, a man will never sleep better nor more pleasantly than in the open air after a hard day's work on the round-up; nor will an ordinary shower or gust of wind disturb him in the least, for he simply draws the tarpaulin over his head and goes on sleeping. But now and then we have a windstorm that might better be called a whirlwind and has to be met very differently; and two or three days or nights of rain insure the wetting of the blankets, and therefore shivering discomfort on the part of the would-be sleeper. For two or three hours all goes well; and it is rather soothing to listen to the steady patter of the great raindrops on the canvas. But then it will be found that a corner has been left open through which the water can get in, or else the tarpaulin will begin to leak somewhere; or perhaps the water will have collected in a hollow underneath and have begun to soak through. Soon a little stream trickles in, and every effort to remedy matters merely results in a change for the worse. To move out of the way insures getting wet in a fresh spot; and the best course is to lie still and accept the evils that have come with what fortitude one can. Even thus, the first night a man can sleep pretty well; but if the rain continues, the second night, when the blankets are already damp, and when the water comes through more easily, is apt to be most unpleasant.

Of course, a man can take little spare clothing on a round-up; at the very outside two or three clean handkerchiefs, a pair of socks, a change of underclothes, and the most primitive kind of washing apparatus, all wrapped up in a stout jacket which is to be worn when night-herding. The inevitable "slicker," or oil-skin coat, which gives complete protection from the wet, is always carried behind the saddle.

At the meeting-place there is usually a delay of a day or two to let every one come in; and the plain on which the encampment is made becomes a scene of great bustle and turmoil. The heavy four-horse wagons jolt in from different quarters, the horse-wranglers rushing madly to and fro in the endeavor to keep the different saddle-bands from mingling, while the "riders," or cowboys, with each wagon jog along in a body. The representatives from outside districts ride in singly or by twos and threes, every man driving before him his own horses, one of them loaded with his bedding. Each wagon wheels out of the way into some camping-place not too near the others, the bedding is tossed out on the ground, and then every one is left to do what he wishes, while the different wagon bosses, or foremen, seek out the captain of the round-up to learn what his plans are.

There is a good deal of rough but effective discipline and method in the way in which a round-up is carried on. The captain of the whole has as lieutenants the various wagon foremen, and in making demands for men to do some special service he will usually merely

THE ROUND-UP.

designate some foreman to take charge of the work and let him parcel it out among his men to suit himself. The captain of the round-up or the foreman of a wagon may himself be a ranchman; if such is not the case, and the ranchman nevertheless comes along, he works and fares precisely as do the other cowboys.

While the head men are gathered in a little knot, planning out the work, the others are dispersed over the plain in every direction, racing, breaking rough horses, or simply larking with one another. If a man has an especially bad horse, he usually takes such an opportunity, when he has plenty of time, to ride him; and while saddling he is surrounded by a crowd of most unsympathetic associates who greet with uproarious mirth any misadventure. A man on a bucking horse is always considered fair game, every squeal and jump of the bronco being hailed with cheers of delighted irony for the rider and shouts to "stay with him." The antics of a vicious bronco show infinite variety of detail, but are all modeled on one general plan. When the rope settles round his neck the fight begins, and it is only after much plunging and snorting that a twist is taken over his nose, or else a hackamore — a species of severe halter, usually made of plaited hair — slipped on his head. While being bridled he strikes viciously with his fore feet, and perhaps has to be blindfolded or thrown down; and to get the saddle on him is quite as difficult. When saddled, he may get rid of his exuberant spirits by bucking under the saddle, or may reserve all his energies for the rider. In the last case, the man, keeping tight hold with his left hand of the cheek-strap, so as to prevent the horse from getting his head down until he is fairly seated, swings himself quickly into the saddle. Up rises the bronco's back into an arch; his head, the ears laid straight back, goes down between his fore feet, and, squealing savagely, he makes a succession of rapid, stiff-legged, jarring bounds. Sometimes he is a "plunging" bucker, who runs forward all the time while bucking; or he may buck steadily in one place, or "sunfish,"— that is, bring first one shoulder down almost to the ground and then the other,— or else he may change ends while in the air. A first-class rider will sit throughout it all without moving from the saddle, quirting * his horse all the time, though his hat may be jarred off his head and his revolver out of its sheath. After a few jumps, however, the average man grasps hold of the horn of the saddle — the delighted onlookers meanwhile earnestly advising him not to "go to leather"— and is contented to get through the affair in any shape provided he can escape without being thrown off. An accident is of necessity borne with a broad grin, as any attempt to resent the raillery of the bystanders — which is perfectly good-humored — would be apt to result disastrously. Cowboys are certainly extremely good riders. As a class they

THE ROPE CORRAL.

* Quirt is the name of the short flexible riding-whip used throughout cowboy land. The term is a Spanish one.

have no superiors. Of course, they would at first be at a disadvantage in steeple-chasing or fox-hunting, but their average of horsemanship is without doubt higher than that of the men who take part in these latter amusements. A cowboy would learn to ride across country in a quarter of the time it would take a cross-country rider to learn to handle a vicious bronco or to do good cow-work round and in a herd.

On such a day, when there is no regular work, there will often also be horse-races, as each outfit is pretty sure to have some running pony which it believes can outpace any other. These contests are always short-distance dashes, for but a few hundred yards. Horse-racing is a mania with most plainsmen, white or red. A man with a good racing pony will travel all about with it, often winning large sums, visiting alike cow ranches, frontier towns, and Indian encampments. Sometimes the race is "pony against pony," the victor taking both steeds. In racing the men ride bareback, as there are hardly any light saddles in the cow country. There will be intense excitement and very heavy betting over a race between two well-known horses, together with a good chance of blood being shed in the attendant quarrels. Indians and whites often race against each other as well as among themselves. I have seen several such contests, and in every case but one the white man happened to win. A race is usually run between two thick rows of spectators, on foot and on horseback, and as the racers pass, these rows close in behind them, every man yelling and shouting with all the strength of his lungs, and all waving their hats and cloaks to encourage the contestants, or firing off their revolvers and saddle guns. The little horses are fairly maddened, as is natural enough, and run as if they were crazy: were the distances longer, some would be sure to drop in their tracks.

Besides the horse-races, which are, of course, the main attraction, the men at a round-up will often get up wrestling matches or foot-races. In fact, every one feels that he is off for a holiday; for after the monotony of a long winter, the cowboys look forward eagerly to the round-up, where the work is hard, it is true, but exciting and varied, and treated a good deal as a frolic. There is no eight-hour law in cowboy land: during round-up time we often count ourselves lucky if we get off with much less than sixteen hours; but the work is done in the saddle, and the men are spurred on all the time by the desire to outdo one another in feats of daring and skillful horsemanship. There is very little quarreling or fighting; and though the fun often takes the form of rather rough horse-play, yet the practice of carrying dangerous weapons makes cowboys show far more rough courtesy to each other and far less rudeness to strangers than is the case among, for instance, Eastern miners, or even lumbermen. When a quarrel may very probably result fatally, a man thinks twice before going into it: warlike people or classes always treat one another with a certain amount of consideration and politeness. The moral tone of a cow-camp, indeed, is rather high than otherwise. Meanness, cowardice, and dishonesty are not tolerated. There is a high regard for truthfulness and keeping one's word, intense contempt for any kind of hypocrisy, and a hearty dislike for a man who shirks his work. Many of the men gamble and drink, but many do neither; and the conversation is not worse than in most bodies composed wholly of male human beings. A cowboy will not submit tamely to an insult, and is very ready to avenge his own wrongs; nor has he an overwrought fear of shedding blood. He possesses, in fact, few of the emasculated, milk-and-water moralities admired by the pseudo-philanthropists; but he does possess, to a very high degree, the stern, manly qualities that are so valuable to a nation.

The method of work is simple. The mess-wagons and loose horses, after breaking camp in the morning, move on in a straight line for some few miles, going into camp again before midday; and the day herd, consisting of all the cattle that have been found far off their range, and which are to be brought back there, and of any others that it is necessary to gather, follows on afterwards. Meanwhile the cowboys scatter out and drive in all the cattle from the country round about, going perhaps ten or fifteen miles back from the line of march, and meeting at the place where camp has already been pitched. The wagons always keep some little distance from one another, and the saddle-bands do the same, so that the horses may not get mixed. It is rather picturesque to see the four-horse teams filing down at a trot through a pass among the buttes — the saddle-bands being driven along at a smart pace to one side or behind, the teamsters cracking their whips, and the horse-wranglers calling and shouting as they ride rapidly from side to side behind the horses, urging on the stragglers by dexterous touches with the knotted ends of their long lariats that are left trailing from the saddle. The country driven over is very rough, and it is often necessary to double up teams and put on eight horses to each wagon in going up an unusually steep pitch, or hauling through a deep mud-hole, or over a river crossing where there is quicksand.

The speed and thoroughness with which a

DRIVING TO THE ROUND-UP.

country can be worked depends, of course, very largely upon the number of riders. Ours is probably about an average round-up as regards size. The last spring I was out, there were half a dozen wagons along; the saddle-bands numbered about a hundred each; and the morning we started, sixty men in the saddle splashed across the shallow ford of the river that divided the plain where we had camped from the valley of the long winding creek up which we were first to work.

In the morning, the cook is preparing breakfast long before the first glimmer of dawn. As soon as it is ready, probably about 3 o'clock, he utters a long-drawn shout, and all the sleepers feel it is time to be up on the instant, for they know there can be no such thing as delay on the round-up, under penalty of being set afoot. Accordingly, they bundle out, rubbing their eyes and yawning, draw on their boots and trousers,—if they have taken the latter off,—roll up and cord their bedding, and usually without any attempt at washing crowd over to the little smoldering fire, which is placed in a hole dug in the ground, so that there may be no risk of its spreading. The men are rarely very hungry at breakfast, and it is a meal that has to be eaten in shortest order, so it is perhaps the least important. Each man, as he comes up, grasps a tin cup and plate from the mess-box, pours out his tea or coffee, with sugar, but of course no milk, helps himself to one or two of the biscuits that have been baked in a Dutch oven, and perhaps also to a slice of the fat pork swimming in the grease of the frying-pan, ladles himself out some beans, if there are any, and squats down on the ground to eat his breakfast. The meal is not an elaborate one; nevertheless a man will have to hurry if he wishes to eat it before hearing the foreman sing out, "Come, boys, catch your horses"; when he must drop everything and run out to the wagon with his lariat. The night wrangler is now bringing in the saddle-band, which he has been up all night guarding. A rope corral is rigged up by stretching a rope from each wheel of one side of the wagon, making a V-shaped space, into which the saddle-horses are driven. Certain men stand around to keep them inside, while the others catch the horses: many outfits have one man to do all the roping. As soon as each

has caught his horse — usually a strong, tough animal, the small, quick ponies being reserved for the work round the herd in the afternoon — the band, now in charge of the day wrangler, is turned loose, and every one saddles up as fast as possible. It still lacks some time of being sunrise, and the air has in it the peculiar chill of the early morning. When all are saddled, many of the horses bucking and dancing about, the riders from the different wagons all assemble at the one where the captain is sitting, already mounted. He waits a very short time — for laggards receive but scant mercy — before announcing the proposed camping-place and parceling out the work among those present. If, as is usually the case, the line of march is along a river or creek, he appoints some man to take a dozen others and drive down (or up) it ahead of the day herd, so that the latter will not have to travel through other cattle; the day herd itself being driven and guarded by a dozen men detached for that purpose. The rest of the riders are divided into two bands, placed under men who know the country, and start out, one on each side, to bring in every head for fifteen miles back. The captain then himself rides down to the new camping-place, so as to be there as soon as any cattle are brought in.

Meanwhile the two bands, a score of riders in each, separate and make their way in opposite directions. The leader of each tries to get such a "scatter" on his men that they will cover completely all the land gone over. This morning work is called circle riding, and is peculiarly hard in the Bad Lands on account of the remarkably broken, rugged nature of the country. The men come in on lines that tend to a common center — as if the sticks of a fan were curved. As the band goes out, the leader from time to time detaches one or two men to ride down through certain sections of the country, making the shorter, or what are called inside, circles, while he keeps on; and finally, retaining as companions the two or three whose horses are toughest, makes the longest or outside circle himself, going clear back to the divide, or whatever the point may be that marks the limit of the round-up work, and then turning and working straight to the meeting-place. Each man, of course, brings in every head of cattle he can see.

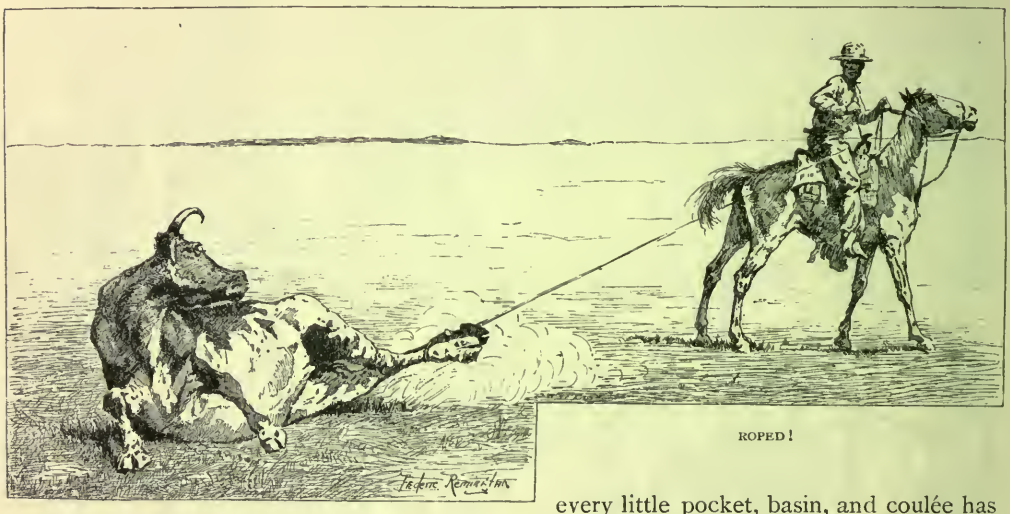
SADDLING FRESH HORSES.

These long, swift rides in the glorious spring mornings are not soon to be forgotten. The sweet, fresh air, with a touch of sharpness thus early in the day, and the rapid motion of the fiery little horse combine to make a man's blood thrill and leap with sheer buoy-

ant light-heartedness and eager, exultant pleasure in the boldness and freedom of the life he is leading. As we climb the steep sides of the first range of buttes, wisps of wavering mist still cling in the hollows of the valley; when we come out on the top of the first great plateau, the sun flames up over its edge, and in the level, red beams the galloping horsemen throw long fantastic shadows. Black care rarely sits behind a rider whose pace is fast enough; at any rate, not when he first feels the horse move under him.

Sometimes we trot or pace, and again we lope or gallop; the few who are to take the outside circle must needs ride both hard and fast. Although only grass-fed, the horses are tough and wiry; and, moreover, are each used but once in four days, or thereabouts, so they stand the work well. The course out lies across great grassy plateaus, along knife-like ridge crests, among winding valleys and ravines, and over acres of barren, sun-scorched buttes, that look grimly grotesque and forbidding, while in the Bad Lands the riders unhesitatingly go down and over places where it seems impossible that a horse should even stand. The line of horsemen will quarter down the side of a butte, where every pony has to drop from ledge to ledge like a goat, and will go over the shoulder of a soapstone cliff, when wet and slippery, with a series of plunges and scrambles which if unsuccessful would land horses and riders in the bottom of the cañon-like washout below. In descending a clay butte after a rain, the pony will put all four feet together and slide down to the bottom almost or quite on his haunches. In very wet weather the Bad Lands are absolutely impassable; but if the ground is not slippery, it is a remarkable place that can shake the matter-of-course confidence felt by the rider in the capacity of his steed to go anywhere.

When the men on the outside circle have reached the bound set them,— whether it is a low divide, a group of jagged hills, the edge of the rolling, limitless prairie, or the long, waste reaches of alkali and sage brush,— they turn their horses' heads and begin to work down the branches of the creeks, one or two riding down the bottom, while the others keep off to the right and the left, a little ahead and fairly high up on the side hills, so as to command as much of a view as possible. On the level or rolling prairies the cattle can be seen a long way off, and it is an easy matter to gather and to drive them; but in the Bad Lands



ROPED!

every little pocket, basin, and coulée has to be searched, every gorge or ravine entered, and the dense patches of brushwood and spindling, wind-beaten trees closely examined. All the cattle are carried on ahead down the creek; and it is curious to watch the different behavior of the different breeds. A cowboy riding off to one side of the creek, and seeing a number of long-horned Texans grazing in the branches of a set of coulées, has merely to ride across the upper ends of these, uttering the drawn-out "ei-koh-h-h," so familiar to the cattle-men, and the long-horns will stop grazing, stare fixedly at him, and then, wheeling, strike off down the coulées at a trot, tails in air, to be carried along by the center riders when they reach the main creek into which the coulées lead. Our own range cattle are not so wild, but nevertheless are easy to drive; while Eastern-raised beasts have little fear of a horseman, and merely stare stupidly

CUTTING OUT A STEER.

at him until he rides directly towards them. Every little bunch of stock is thus collected, and all are driven along together. At the place where some large fork joins the main creek another band may be met, driven by some of the men who have left earlier in the day to take one of the shorter circles; and thus, before coming down to the bottom where the wagons are camped and where the actual "round-up" itself is to take place, this one herd may include a couple of thousand head; or, on the other hand, the longest ride may not result in the finding of a dozen animals. As soon as the riders are in, they disperse to their respective wagons to get dinner and change horses, leaving the cattle to be held by one or two of their number. If only a small number of cattle have been gathered, they will all be run into one herd; if there are many of them, however, the different herds will be held separate.

A plain where a round-up is taking place offers a picturesque sight. I well remember one such. It was on a level bottom in the bend of the river, which here made an almost semicircular sweep. The bottom was in shape a long oval, hemmed in by an unbroken line of steep bluffs so that it looked like an amphitheater. Across the faces of the dazzling white cliffs there were sharp bands of black and red, drawn by the coal seams and the layers of burned clay: the leaves of the trees and the grass had the vivid green of spring-time. The wagons were camped among the cottonwood trees fringing the river, a thin column of smoke rising up from beside each. The horses were grazing round the outskirts, those of each wagon by themselves and kept from going

BRANDING A HORSE.

too near the others by their watchful guard. In the great circular corral, towards one end, the men were already branding calves, while the whole middle of the bottom was covered with lowing herds of cattle and shouting, galloping cowboys. Apparently there was nothing but dust, noise, and confusion; but in reality the work was proceeding all the while with the utmost rapidity and certainty.

As soon as, or even before, the last circle riders have come in and have snatched a few hasty mouthfuls to serve as their midday meal, we begin to work the herd — or herds, if the one herd would be of too unwieldy size. The animals are held in a compact bunch, most of the riders forming a ring outside, while a couple from each ranch successively look the herds through and cut out those marked with their own brand. It is difficult, in such a mass of moving beasts,— for they do not stay still, but keep weaving in and out among each other,— to find all of one's own animals: a man must have natural gifts, as well as great experience, before he becomes a good brand-reader and is able to really "clean up a herd"— that is, be sure he has left nothing of his own in it.

To do good work in cutting out from a herd, not only should the rider be a good horseman, but he should also have a skillful, thoroughly trained horse. A good cutting pony is not common, and is generally too valuable to be used anywhere but in the herd. Such an one enters thoroughly into the spirit of the thing, and finds out immediately the animal his master is after; he will then follow it closely of his own accord through every wheel and double, at top speed. When looking through the herd, it is necessary to move slowly; and when any animal is found it is taken to the outskirts at a walk, so as not to alarm the others. Once at the outside, however, the cowboy has to ride like lightning; for as soon as the beast he is after finds itself separated from its companions it endeavors to break back among them, and a young, range-raised steer or heifer runs like a deer. In cutting out a cow and a calf two men have to work together. As the animals of a brand are cut out they are received and held apart by some rider detailed for the purpose, who is said to be "holding the cut."

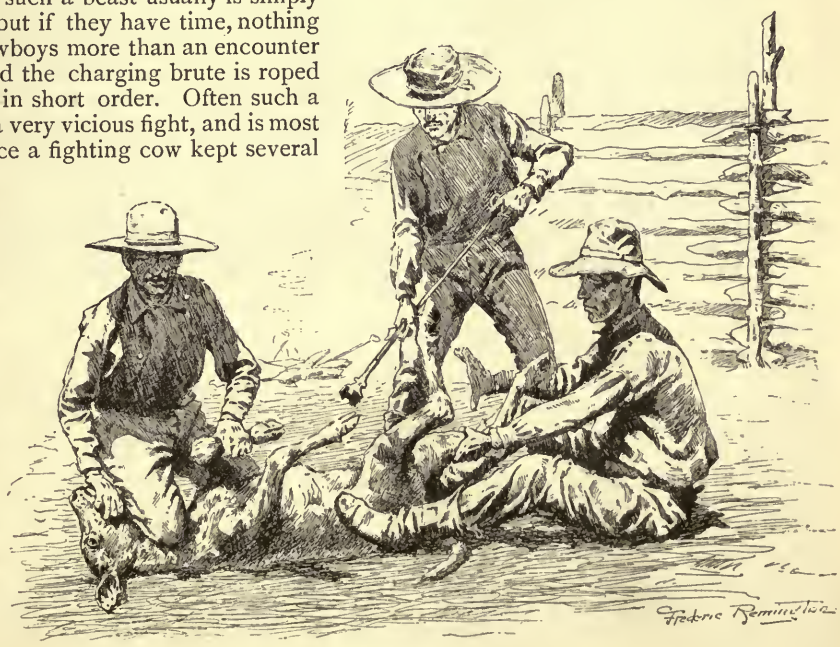
All this time the men holding the herd have their hands full, for some animal is continually trying to break out, when the nearest man flies at it at once and after a smart chase brings it back to its fellows. As soon as all the cows, calves, and whatever else is being gathered have been cut out, the rest are driven clear off the ground and turned loose, being headed in the direction contrary to that in which we travel the following day. Then the riders surround the next herd, the men holding cuts move them up near it, and the work is begun anew.

If it is necessary to throw an animal, either to examine a brand or for any other reason, half a dozen men will have their ropes down at once; and then it is spur and quirt in

the rivalry to see which can outdo the other until the beast is roped and thrown. A first-class hand will, unaided, rope, throw, and tie down a cow or steer in wonderfully short time: one of the favorite tests of competitive skill among the cowboys is the speed with which this feat can be accomplished. Usually, however, one man ropes the animal by the head and another at the same time gets the loop of his lariat over one or both its hind legs, when it is twisted over and stretched out in a second. In following an animal on horseback the man keeps steadily swinging the rope round his head, by a dexterous motion of the wrist only, until he gets a chance to throw it; when on foot, especially if catching horses in a corral, the loop is allowed to drag loosely on the ground. A good roper will hurl out the coil with marvelous accuracy and force; it fairly whistles through the air, and settles round the object with almost infallible certainty. Mexicans make the best ropers; but some Texans are very little behind them. A good horse takes as much interest in the work as does his rider, and the instant the noose settles over the victim wheels and braces himself to meet the shock, standing with his legs firmly planted, the steer or cow being thrown with a jerk. An unskillful rider and an untrained horse will often themselves be thrown when the strain comes.

Sometimes an animal — usually a cow or steer, but, strangely enough, very rarely a bull — will get fighting mad, and turn on the men. If on the drive, such a beast usually is simply dropped out; but if they have time, nothing delights the cowboys more than an encounter of this sort, and the charging brute is roped and tied down in short order. Often such a one will make a very vicious fight, and is most dangerous. Once a fighting cow kept several of us busy for nearly an hour; she gored two ponies, one of them, which was, luckily, hurt but slightly, being my own pet cutting horse. If a steer is hauled out of a mud-hole, its first act is usually to charge the rescuer.

As soon as all the brands of cattle are worked, and the animals that are to be driven along have been put in the day herd, attention is turned to the cows and calves, which are already gathered in different bands, consisting each of all the cows of a certain brand and all the calves that are following them. If there is a corral, each band is in turn driven into it; if there is none, a ring of riders does duty in its place. A fire is built, the irons heated, and a dozen men dismount to, as it is called, "wrestle" the calves. The best two ropers go in on their horses to catch the latter; one man keeps tally, a couple put on the brands, and the others seize, throw, and hold the little unfortunates. A first-class roper invariably catches the calf by both hind feet, and then, having taken a twist with his lariat round the horn of the saddle, drags the bawling little creature, extended at full length, up to the fire, where it is held before it can make a struggle. A less skillful roper catches round the neck, and then, if the calf is a large one, the man who seizes it has his hands full, as the bleating, bucking animal develops astonishing strength, cuts the wildest capers, and resists frantically and with all its power. If there are seventy or eighty calves in a corral, the scene is one of the greatest confusion. The ropers, spurring and checking the fierce little horses, drag the calves up so quickly that a dozen men can hardly hold them; the men with the irons, blackened with soot, run to and fro; the calf-wrestlers, grimy with blood, dust, and sweat, work like beavers; while with



BRANDING A CALF.

the voice of a stentor the tally-man shouts out the number and sex of each calf. The dust rises in clouds, and the shouts, cheers, curses, and laughter of the men unite with the lowing of the cows and the frantic bleating of the roped calves to make a perfect babel. Now and then an old cow turns vicious and puts every one out of the corral. Or a *maverick* bull,— that is, an unbranded bull,— a yearling or a two-years-old, is caught, thrown, and branded; when he is let up, there is sure to be a fine scatter. Down goes his head, and he bolts at the nearest man, who makes out of the way at top speed, amidst roars of laughter from all of his companions; while the men holding down calves swear savagely as they dodge charging mavericks, trampling horses, and taut lariats with frantic, plunging little beasts at the farther ends.

Every morning certain riders are detached to drive and to guard the day herd, which is most monotonous work, the men being on from 4 in the morning till 8 in the evening, the only rest coming at dinner-time, when they change horses. When the herd has reached the camping-ground there is nothing to do but to loll listlessly over the saddle-bow in the blazing sun, watching the cattle feed and sleep, and seeing that they do not spread out too much. Plodding slowly along on the trail through the columns of dust stirred up by the hoofs is not much better. Cattle travel best and fastest strung out in long lines; the swiftest taking the lead in single file, while the weak and the lazy, the young calves and the poor cows, crowd together in the rear. Two men travel along with the leaders, one on each side, to point them in the right direction; one or two others keep by the flanks, and the rest are in the rear to act as "drag-drivers" and hurry up the phalanx of reluctant weaklings. If the foremost of the string travels too fast, one rider will go along on the trail a few rods ahead, and thus keep them back so that those in the rear will not be left behind.

Generally all this is very tame and irksome; but by fits and starts there will be little flurries of excitement. Two or three of the circle riders may unexpectedly come over a butte near by with a bunch of cattle, which at once start for the day herd, and then there will be a few minutes' furious riding hither and thither to keep them out. Or the cattle may begin to run, and then get "milling"—that is, all crowd together into a mass like a ball, wherein they move round and round, trying to keep their heads towards the center, and refusing to leave it. The only way to start them is to force one's horse in among them and cut out some of their number, which then begin to travel off by themselves, when the others will probably follow. But in spite of occasional incidents of this kind, day-herding has a dreary sameness about it that makes the men dislike and seek to avoid it.

From 8 in the evening till 4 in the morning the day herd becomes a night herd. Each wagon in succession undertakes to guard it for a night, dividing the time into watches of two hours apiece, a couple of riders taking each watch. This is generally chilly and tedious; but at times it is accompanied by intense excitement and danger, when the cattle become stampeded, whether by storm or otherwise. The first and the last watches are those chosen by preference; the others are disagreeable, the men having to turn out cold and sleepy, in the pitchy darkness, the two hours of chilly wakefulness completely breaking the night's rest. The first guards have to bed the cattle down, though the day-herders often do this themselves: it simply consists in hemming them into as small a space as possible, and then riding round them until they lie down and fall asleep. Often, especially at first, this takes some time — the beasts will keep rising and lying down again. When at last most become quiet, some perverse brute of a steer will deliberately hook them all up; they keep moving in and out among one another, and long strings of animals suddenly start out from the herd at a stretching walk, and are turned back by the nearest cowboy only to break forth at a new spot. When finally they have lain down and are chewing their cud or slumbering, the two night guards begin riding round them in opposite ways, often, on very dark nights, calling or singing to them, as the sound of the human voice on such occasions seems to have a tendency to quiet them. In inky black weather, especially when rainy, it is both difficult and unpleasant work; the main trust must be placed in the horse, which, if old at the business, will of its own accord keep pacing steadily round the herd, and head off any animals that, unseen by the rider's eyes in the darkness, are trying to break out. Usually the watch passes off without incident, but on rare occasions the cattle become restless and prone to stampede. Anything may then start them — the plunge of a horse, the sudden approach of a coyote, or the arrival of some outside steers or cows that have smelt them and come up. Every animal in the herd will be on its feet in an instant, as if by an electric shock, and off with a rush, horns and tail up. Then, no matter how rough the ground nor how pitchy black the night, the cowboys must ride for all there is in them and spare neither their own nor their horses' necks. Perhaps their charges break away and are lost altogether; perhaps, by

THE HERD AT NIGHT.

desperate galloping, they may head them off, get them running in a circle, and finally stop them. Once stopped, they may break again, and possibly divide up, one cowboy, perhaps, following each band. I have known six such stops and renewed stampedes to take place in one night, the cowboy staying with his ever-diminishing herd of steers until daybreak, when he managed to get them under control again, and, by careful humoring of his jaded, staggering horse, finally brought those that were left back to the camp several miles distant. The riding in these night stampedes is wild and dangerous to a degree, especially if the man gets caught in the rush of the beasts. It also frequently necessitates an immense amount of work in collecting the scattered animals. On one such occasion a small party of us were thirty-six hours in the saddle, dismounting only to change horses or to eat. We were almost worn out at the end of the time; but it must be kept in mind that for a long spell of such work a stock-saddle is far less tiring than the ordinary Eastern or English one, and in every way superior to it.

By very hard riding, such a stampede may

sometimes be prevented. Once we were bringing a thousand head of young cattle down to my lower ranch, and as the river was high were obliged to take the inland trail. The third night we were forced to make a dry camp, the cattle having had no water since the morning. Nevertheless, we got them bedded down without difficulty, and one of the cowboys and myself stood first guard. But very soon after nightfall, when the darkness had become complete, the thirsty brutes of one accord got on their feet and tried to break out. The only salvation was to keep them close together, as, if they once got scattered, we knew they could never be gathered; so I kept on one side, and the cowboy on the other, and never in my life did I ride so hard. In the darkness I could but dimly see the shadowy outlines of the herd, as with whip and spurs I ran the pony along its edge, turning back the beasts at one point barely in time to wheel and keep them in at another. The ground was cut up by numerous little gullies, and each of us got several falls, horses and riders turning complete somersaults. We were dripping with sweat, and our ponies quivering and trembling like quaking aspens, when, after more than an hour of the most violent exertion, we finally got the herd quieted again.

On another occasion while with the round-up we were spared an excessively unpleasant night only because there happened to be two or three great corrals not more than a mile or so away. All day long it had been raining heavily, and we were well drenched; but towards evening it lulled a little, and the day herd, a very large one, of some two thousand head, was gathered on an open bottom. We had turned the horses loose, and in our oil-skin slickers cowered, soaked and comfortless, under the lee of the wagon, to take a meal of damp bread and lukewarm tea, the sizzling embers of the fire having about given up the ghost after a fruitless struggle with the steady downpour. Suddenly the wind began to come in quick, sharp gusts, and soon a regular blizzard was blowing, driving the rain in stinging level sheets before it. Just as we were preparing to turn into bed, with the certainty of a night of more or less chilly misery ahead of us, one of my men, an iron-faced personage, whom no one would ever have dreamed had a weakness for poetry, looked towards the plain where the cattle were, and remarked, "I guess there 's 'racing and chasing on Cannobie Lea' now, sure." Following his gaze, I saw that the cattle had begun to drift before the storm, the night guards being evidently unable to cope with them, while at the other wagons riders were saddling in hot haste and spurring off to their help through the blinding rain. Some of us at once ran out to our own saddle-band. All of the ponies were standing huddled together, with their heads down and their tails to the wind. They were wild and restive enough usually; but the storm had cowed them, and we were able to catch them without either rope or halter. We made quick work of saddling; and the second each man was ready, away he loped through the dusk, splashing and slipping in the pools of water that studded the muddy plain. Most of the riders were already out when we arrived. The cattle were gathered in a compact, wedge-shaped, or rather fan-shaped mass, with their tails to the wind — that is, towards the thin end of the wedge or fan. In front of this fan-shaped mass of frightened, maddened beasts was a long line of cowboys, each muffled in his slicker and with his broad hat pulled down over his eyes, to shield him from the pelting rain. When the cattle were quiet for a moment every horseman at once turned round with his back to the wind, and the whole line stood as motionless as so many sentries. Then, if the cattle began to spread out and overlap at the ends, or made a rush and broke through at one part of the lines, there would be a change into wild activity. The men, shouting and swaying in their saddles, darted to and fro with reckless speed, utterly heedless of danger — now racing to the threatened point, now checking and wheeling their horses so sharply as to bring them square on their haunches, or even throw them flat down, while the hoofs plowed long furrows in the slippery soil, until, after some minutes of this mad galloping hither and thither, the herd, having drifted a hundred yards or so, would be once more brought up standing. We always had to let them drift a little to prevent their spreading out too much. The din of the thunder was terrific, peal following peal until they mingled in one continuous, rumbling roar; and at every thunder-clap louder than its fellows the cattle would try to break away. Darkness had set in, but each flash of lightning showed us a dense array of tossing horns and staring eyes. It grew always harder to hold in the herd; but the drift took us along to the corrals already spoken of, whose entrances were luckily to windward. As soon as we reached the first we cut off part of the herd, and turned it within; and after again doing this with the second, we were able to put all the remaining animals into the third. The instant the cattle were housed five-sixths of the horsemen started back at full speed for the wagons; the rest of us barely waited to put up the bars and make the corrals secure before galloping after them. We had to ride right in the teeth of the driv-

IN A STAMPEDE.

ing storm; and once at the wagons we made small delay in crawling in under our blankets, damp though the latter were, for we were ourselves far too wet, stiff, and cold not to hail with grateful welcome any kind of shelter from the wind and the rain.

All animals were benumbed by the violence of this gale of cold rain: a prairie-chicken rose from under my horse's feet so heavily that, thoughtlessly striking at it, I cut it down with my whip; while when a jack rabbit got up ahead of us, it was barely able to limp clumsily out of our way.

But though there is much work and hardship, rough fare, monotony, and exposure connected with the round-up, yet there are few

TRAILING CATTLE.

men who do not look forward to it and back to it with pleasure. The only fault to be found is that the hours of work are so long that one does not usually have enough time to sleep. The food, if rough, is good. The men are good-humored, bold, and thoroughly interested in their business, continually vying with one another in the effort to see which can do the work best. It is superbly health-giving, and is full of excitement and adventure, calling for the exhibition of pluck, self-reliance, hardihood, and dashing horsemanship; and of all forms of physical labor the easiest and pleasantest is to sit in the saddle.

The scenery is often exceedingly striking in character, especially in the Bad Lands, with their queer fantastic formations. Among the most interesting features are the burning mines. These are formed by the coal seams that get on fire. They vary greatly in size. Some send up smoke-columns that are visible miles away, while others are not noticeable a few rods off. The old ones gradually burn away, while new ones unexpectedly break out. Thus, last fall, one suddenly appeared but half a mile from the ranch house. We never knew it was there until one cold moonlight night, when we were riding home, we rounded the corner of a ravine and saw in our path a tall white column of smoke rising from a rift in the snowy crags ahead of us. As the trail was over perfectly familiar ground, we were for a moment almost as startled as if we had seen a ghost.

The burning mines are uncanny places, anyhow. A strong smell of sulphur hangs round them, the heated earth crumbles and cracks, and through the long clefts that form in it we can see the lurid glow of the subterranean fires, with here and there tongues of blue or cherry colored flame dancing up to the surface.

The winters vary greatly in severity with us. During some seasons men can go lightly clad even in January and February, and the cattle hardly suffer at all; during others there will be spells of bitter weather, accompanied by furious blizzards, which render it impossible for days and weeks at a time for men to stir out-of-doors at all, save at the risk of their lives. Then line rider, ranchman, hunter, and teamster alike all have to keep within doors. I have known of several cases of men freezing to death when caught in shelterless places by such a blizzard, a strange fact being that in about half of them the doomed man had evidently gone mad before dying, and had stripped himself of most of his clothes, the body when found being nearly naked. On our ranch we have never had any bad accidents, although every winter some of us get more or less frost-bitten. My last experience in this line was while returning by moonlight

from a successful hunt after mountain sheep. The thermometer was 26° below zero, and we had had no food for twelve hours. I got numbed, and before I was aware of it had frozen my face, one foot, both knees, and one hand. Luckily, I reached the ranch before serious damage was done. About once every six or seven years we have a season when these storms follow one another almost without interval throughout the winter months, and then the loss among the stock is frightful. One such winter occurred in 1880–81. This was when there were very few ranchmen in the country. The next severe winter was that of 1886–87, when the rush of incoming herds had overstocked the ranges, and the loss was in consequence fairly appalling.

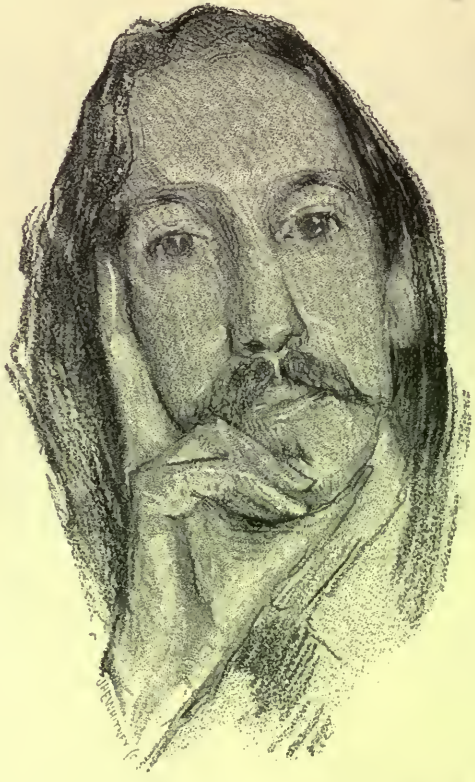
The snow-fall was unprecedented, both for its depth and for the way it lasted; and it was this, and not the cold, that caused the loss. About the middle of November the storms began. Day after day the snow came down, thawing and then freezing and piling itself higher and higher. By January the drifts had filled the ravines and coulées almost level. The snow lay in great masses on the plateaus and river bottoms; and this lasted until the end of February. The preceding summer we had been visited by a prolonged drought, so that the short, scanty grass was already well cropped down; the snow covered what pasturage there was to the depth of several feet, and the cattle could not get at it at all, and could hardly move round. It was all but impossible to travel on horseback, except on a few well-beaten trails. It was dangerous to attempt to penetrate the Bad Lands, whose shape had been completely altered by the great white mounds and drifts. The starving cattle died by scores of thousands before their helpless owners' eyes. The bulls, the cows who were suckling calves, or who were heavy with calf, the weak cattle that had just been driven up on the trail, and the late calves suffered most; the old range animals did better, and the steers best of all; but the best was bad enough. Even many of the horses died. An outfit near me lost half its saddle-band, the animals having been worked so hard that they were very thin when fall came.

In the thick brush the stock got some shelter and sustenance. They gnawed every twig and bough they could get at. They browsed the bitter sage brush down to where the branches were the thickness of a man's finger. When near a ranch they crowded into the out-houses and sheds to die, and fences had to be built around the windows to keep the wild-eyed, desperate beasts from thrusting their heads through the glass panes. In most cases it was impossible either to drive them to the haystacks or to haul the hay out to them. The deer even were so weak as to be easily run down; and on one or two of the plateaus where there were bands of antelope, these wary creatures grew so numbed and feeble that they could have been slaughtered like rabbits. But the hunters could hardly get out, and could bring home neither hide nor meat, so the game went unharmed.

The way in which the cattle got through the winter depended largely on the different localities in which the bands were caught when the first heavy snows came. A group of animals in a bare valley, without underbrush and with steepish sides, would all die, weak and strong alike; they could get no food and no shelter, and so there would not be a hoof left. On the other hand, hundreds wintered on the great thickly wooded bottoms near my ranch house with little more than ordinary loss, though a skinny sorry-looking crew by the time the snow melted. In intermediate places the strong survived and the weak perished.

It would be impossible to imagine any sight more dreary and melancholy than that offered by the ranges when the snow went off in March. The land was a mere barren waste; not a green thing to be seen; the dead grass eaten off till the country looked as if it had been shaved with a razor. Occasionally among the desolate hills a rider would come across a band of gaunt, hollow-flanked cattle feebly cropping the sparse, dry pasturage, too listless to move out of the way; and the blackened carcasses lay in the sheltered spots, some stretched out, others in as natural a position as if the animals had merely lain down to rest. It was small wonder that cheerful stockmen were rare objects that spring. Our only comfort was that we did not, as usual, suffer a heavy loss from weak cattle getting mired down in the springs and mud-holes when the ice broke up — for all the weak animals were dead already. The truth is, ours is a primitive industry, and we suffer the reverses as well as enjoy the successes only known to primitive peoples. A hard winter is to us in the north what a dry summer is to Texas or Australia — what seasons of famine once were to all peoples. We still live in an iron age that the old civilized world has long passed by. The men of the border reckon upon stern and unending struggles with their iron-bound surroundings; against the grim harshness of their existence they set the strength and the abounding vitality that come with it. They run risks to life and limb that are unknown to the dwellers in cities; and what the men freely brave, the beasts that they own must also sometimes suffer.

Theodore Roosevelt.



Robert Louis Stevenson

IF there be a writer of our language, at the present moment, who has the effect of making us forget the extinction of the pleasant fashion of the literary portrait, it is certainly the bright particular genius whose name is written at the head of these remarks. Mr. Stevenson fairly challenges portraiture, as we pass him on the highway of literature (if that be the road, rather than some wandering, sun-checkered by-lane that he may be said to follow), just as the possible model, in local attire, challenges the painter who wanders through the streets of a foreign town looking for subjects. He gives us new ground to wonder why the effort to fix a face and figure, to seize a literary character and transfer it to the canvas of the critic, should have fallen into such discredit among us and have given way to the mere multiplication of little private judgment-seats, where the scales and the judicial wig, both of them considerably awry and not rendered more august by the company of a vicious-looking switch, have taken the place, as the symbols of office, of the kindly, disinterested palette and brush. It has become the fashion to be effective at the expense of the sitter, to make some little point, or inflict some little dig, with a heated party air, rather than to catch a talent in the fact, follow its line, and put a finger on its essence; so that the exquisite art of criticism, smothered in grossness, finds itself turned into a question of "sides." The critic industriously keeps his score, but it is seldom to be hoped that the author, criminal though he may be, will be apprehended by justice through the handbills given out in the case; for it is of the essence of a happy description that it shall have been preceded by a happy observation and a free curiosity; and desuetude, as we say, has overtaken these amiable, uninvidious faculties, which have not the advantage of organs and chairs.

I hasten to add that it is not the purpose of these few pages to restore their luster, or to bring back the more penetrating vision of which we lament the disappearance. No individual can bring it back, for the light that we look at things by is, after all, made by all of us. It is sufficient to note, in passing, that if Mr. Stevenson had presented himself in an age or in a country of portraiture, the painters would certainly each have had a turn at him. The easels and benches would have bristled, the circle would have been close, and quick, from the canvas to the sitter, the rising and falling of heads. It has happened to all of us to have gone into a studio, a studio of pupils, and seen the thick cluster of bent backs and the conscious model in the midst. It has happened to us to be struck, or not to be struck, with the beauty or the symmetry of this personage, and to have made some remark which, whether expressing admiration or disappointment, has elicited from one of the attentive workers the exclamation, "Character — character is what he has!" These words may be applied to Mr. Robert Louis Stevenson: in the language of that art which depends most on observation, character — character is what he has. He is essentially a model, in the sense of a sitter; I do not mean, of course, in the sense of a pattern or a guiding light. And if the figures who have a life in literature may also be divided into two great classes, we may add that he is conspicuously one of the draped; he would never, if I may be allowed the expression, pose for the nude. There are writers who present themselves before the critic with just the amount of drapery that is necessary for decency, but Mr. Stevenson is not one of these; he makes his appearance in an amplitude of costume. His costume is part of the character of which I just now spoke; it never occurs to us to ask how he would look without it. Before all things he is a writer with a style — a model with a complexity of curious and picturesque garments. It is by the cut and the color of this rich and becoming frippery — I use the term endearingly, as a painter might — that he arrests the eye and solicits the brush.

That is, frankly, half the charm he has for us, that he wears a dress and wears it with courage, with a certain cock of the hat and tinkle of the supererogatory sword; or, in other words, that he is curious of expression, and regards the literary form not simply as a code of signals, but as the keyboard of a piano and as so much plastic material. He has that vice deplored by Mr. Herbert Spencer, a manner — a manner for a manner's sake, it may sometimes doubtless be said. He is as different as possible from the sort of writer who regards words as numbers and a page as the mere addition of them; much more, to carry out our image,

the dictionary stands for him as a wardrobe, and a proposition as a button for his coat. Mr. William Archer, in an article* so gracefully and ingeniously turned that the writer may almost be accused of imitating even while he deprecates, speaks of him as a votary of "lightness of touch" at any cost, and remarks that "he is not only philosophically content, but deliberately resolved, that his readers shall look first to his manner and only in the second place to his matter." I shall not attempt to gainsay this; I cite it rather, for the present, because it carries out my own sense. Mr. Stevenson delights in a style, and his own has nothing accidental or diffident; it is eminently conscious of its responsibilities and meets them with a kind of gallantry — as if language were a pretty woman and a person who proposes to handle it had, of necessity, to be something of a Don Juan. This element of the gallant is a noticeable part of his nature, and it is rather odd that, at the same time, a striking feature of that nature should be an absence of care for things feminine. His books are for the most part books without women, and it is not women who fall most in love with them. But Mr. Stevenson does not need, as we may say, a petticoat to inflame him; a happy collocation of words will serve the purpose, or a singular image, or the bright eye of a passing conceit, and he will carry off a pretty paradox without so much as a scuffle. The tone of letters is in him — the tone of letters as distinct from that of philosophy or of those industries whose uses are supposed to be immediate. Many readers, no doubt, consider that he carries it too far; they manifest an impatience for some glimpse of his moral message. They may be heard to ask what it is he proposes to deduce, to prove, to establish, with such a variety of paces and graces.

The main thing that he establishes, to my own perception, is that it is a delight to read him and that he renews this delight by a constant variety of experiment. Of this anon, however; and meanwhile it may be noted as a curious characteristic of current fashions that the writer whose effort is perceptibly that of the artist is very apt to find himself thrown on the defensive. A work of literature is a form, but the author who betrays a consciousness of the responsibilities involved in this circumstance not rarely perceives himself to be regarded as an uncanny personage. The usual judgment is that he may be artistic, but that he must not be too much so; that way, apparently, lies something worse than madness. This queer superstition has so successfully imposed itself that the mere fact of having been indifferent to such a danger constitutes in itself an originality. How few they are in number and how soon we could name them, the writers of English prose, at the present moment, the quality of whose prose is personal, expressive, renewed at each attempt! The state of things that would have been expected to be the rule has become the exception, and an exception for which, most of the time, an apology appears to be thought necessary. A mill that grinds with regularity and with a certain commercial fineness — that is the image suggested by the manner of a good many of the fraternity. They turn out an article for which there is a demand, they keep a shop for a specialty, and the business is carried on in accordance with a useful, well-tested prescription. It is just because he has no specialty that Mr. Stevenson is an individual, and because his curiosity is the only receipt by which he produces. Each of his books is an independent effort — a window opened to a different view. "Dr. Jekyll and Mr. Hyde" is as dissimilar as possible from "Treasure Island"; "Virginibus Puerisque" has nothing in common with "The New Arabian Nights," and I should never have supposed "A Child's Garden of Verses" to be from the hand of the author of "Prince Otto."

Though Mr. Stevenson cares greatly for his phrase, as every writer should who respects himself and his art, it takes no very attentive reading of his volumes to show that it is not what he cares for most, and that he regards an expressive style only, after all, as a means. It seems to me the fault of Mr. Archer's interesting paper that it suggests too much that the author of these volumes considers the art of expression as an end — a game of words. He finds that Mr. Stevenson is not serious, that he neglects a whole side of life, that he has no perception, and no consciousness, of suffering; that he speaks as a happy but heartless pagan, living only in his senses (which the critic admits to be exquisitely fine), and that, in a world full of heaviness, he is not sufficiently aware of the philosophic limitations of mere technical skill. (In sketching these aberrations Mr. Archer himself, by the way, displays anything but ponderosity of hand.) He is not the first reader, and he will not be the last, who shall have been irritated by Mr. Stevenson's jauntiness. That jauntiness is an essential part of his genius; but, to my sense, it ceases to be irritating — it indeed becomes positively touching, and constitutes an appeal to sympathy and even to tenderness — when once one has perceived what lies beneath the dancing-tune to which he mostly moves. Much as he cares for his phrase he cares more for life, and for a certain transcendently lovable

* "R. L. Stevenson: his Style and Thought." "The [London] Times," November, 1885.

part of it. He feels, as it seems to us, and that is not given to every one; this constitutes a philosophy which Mr. Archer fails to read between his lines — the respectable, desirable moral which many a reader doubtless finds that he neglects to point. He does not feel everything equally, by any manner of means; but his feelings are always his reasons; he regards them, whatever they may be, as sufficiently honorable, does not disguise them in other names or colors, and looks at whatever he meets in the brilliant candle-light that they shed. As in his extreme artistic vivacity he seems really disposed to try everything, he has tried once, by way of a change, to be inhuman, and there is a hard glitter about "Prince Otto" which seems to indicate that in this case, too, he has succeeded, as he has done in most of the feats that he has attempted. But "Prince Otto" is even less like his other productions than his other productions are like each other.

The part of life that he cares for most is youth, and the direct expression of the love of youth is the beginning and the end of his message. His appreciation of this delightful period amounts to a passion; and a passion, in the age in which we live, strikes us, on the whole, as a sufficient philosophy. It ought to satisfy Mr. Archer, and there are writers graver than Mr. Stevenson on whose behalf no such moral motive can be alleged. Mingled with his almost equal love of a literary surface it represents a real originality. This combination is the key-note of Mr. Stevenson's faculty and the explanation of his perversities. The feelings of one's teens, and even of an earlier period (for the delights of crawling, and almost of the rattle, are embodied in "A Child's Garden of Verses"), and the feeling for happy turns — these, in the last analysis (and his sense of a happy turn is of the subtlest), are the corresponding halves of his character. If "Prince Otto" and "Dr. Jekyll" left me a clearer field for the assertion, I should say that everything he has written is a direct apology for boyhood; or rather (for it must be confessed that Mr. Stevenson's tone is seldom apologetic) a direct rhapsody on the age of little jackets. Even members of the very numerous class who have held their breath over "Treasure Island" may shrug their shoulders at this account of the author's religion; but it is none the less a great pleasure — the highest reward of observation — to put one's hand on a rare illustration, and Mr. Stevenson is certainly rare. What makes him so is the singular maturity of the expression that he has given to young sentiments; he judges them, measures them, sees them from the outside, as well as entertains them. He describes credulity with all the resources of experience, and represents a crude stage with infinite ripeness. In a word, he is an artist accomplished even to sophistication, whose constant theme is the unsophisticated. Sometimes, as in "Kidnapped," the art is so ripe that it lifts even the subject into the general air; the execution is so serious that the idea (the idea of a boy's romantic adventures) becomes a matter of universal relations. What he prizes most in the boy's ideal is the imaginative side of it, the capacity for successful make-believe. The general freshness in which this is a part of the gloss seems to him the divinest thing in life; considerably more divine, for instance, than the passion usually regarded as the supremely tender one. The idea of making believe appeals to him much more than the idea of making love. That delightful little book of rhymes, the "Child's Garden," commemorates, from beginning to end, the picturing, personifying, dramatizing faculty of infancy, the view of life from the level of the nursery-fender. The volume is a wonder, for the extraordinary vividness with which it reproduces early impressions; a child might have written it if a child could see childhood from the outside, for it would seem that only a child is really near enough to the nursery-floor. And what is peculiar to Mr. Stevenson is that it is his own childhood he appears to delight in, and not the personal presence of little darlings. Oddly enough, there is no strong implication that he is fond of babies; he does n't speak as a parent, or an uncle, or an educator — he speaks as a contemporary absorbed in his own game. That game is almost always a vision of dangers and triumphs; and if emotion, with him, infallibly resolves itself into memory, so memory is an evocation of throbs and thrills and suspense. He has given to the world the romance of boyhood, as others have produced that of the peerage, the police, and the medical profession.

This amounts to saying that what he is most curious of in life is heroism,— personal gallantry, if need be, with a manner, or a banner,— though he is also abundantly capable of enjoying it when it is artless. The delightful exploits of Jim Hawkins, in "Treasure Island," are unaffectedly performed; but none the less "the finest action is the better for a piece of purple," as the author remarks in the paper on "The English Admirals," in "Virginibus Puerisque"— a paper of which the moral is, largely, that "we learn to desire a grand air in our heroes; and such a knowledge of the human stage as shall make them put the dots on their own i's and leave us in no suspense as to when they mean to be heroic." The love of brave words as well as

brave deeds — which is simply Mr. Stevenson's essential love of style — is recorded in this little paper with a charming, slightly sophistical ingenuity. "They served their guns merrily, when it came to fighting, and they had the readiest ear for a bold, honorable sentiment of any class of men the world ever produced." The author goes on to say that most men of high destinies have even high-sounding names. Alan Breck, in "Kidnapped," is a wonderful picture of the union of courage and swagger; the little Jacobite adventurer, a figure worthy of Scott at his best, and representing the highest point that Mr. Stevenson's talent has reached, shows us that a marked taste for tawdry finery — tarnished and tattered, some of it, indeed, by ticklish occasions — is quite compatible with a perfectly high mettle. Alan Breck is, at bottom, a study of the love of glory, carried out with extreme psychological truth. When the love of glory is of an inferior order, the reputation is cultivated rather than the opportunity; but when it is a pure passion, the opportunity is cultivated for the sake of the reputation. Mr. Stevenson's kindness for adventurers extends even to the humblest of all, the mountebank and the strolling player, or even the peddler whom he declares that in his foreign travels he is habitually taken for, as we see in the whimsical apology for vagabonds which winds up "An Inland Voyage." The hungry conjurer, the gymnast whose *maillot* is loose, have something of the glamour of the hero, inasmuch as they, too, pay with their person.

> To be even one of the outskirters of art leaves a fine stamp on a man's countenance. . . . That is the kind of thing that reconciles me to life; a ragged, tippling, incompetent old rogue, with the manners of a gentleman and the vanity of an artist, to keep up his self-respect!

What reconciles Mr. Stevenson to life is the idea that in the first place it offers the widest field that we know of for odd doings, and that in the second these odd doings are the best of pegs to hang a sketch in three lines or a paradox in three pages.

As it is not odd, but extremely usual, to marry, he deprecates that course in "Virginibus Puerisque," the collection of short essays which is most a record of his opinions — that is, largely, of his likes and dislikes. It all comes back to his sympathy with the juvenile, and that feeling about life which leads him to regard women as so many superfluous girls in a boy's game. They are almost wholly absent from his pages (the main exception is "Prince Otto," though there is a Clara apiece in "The Rajah's Diamond" and "The Pavilion on the Links"), for they don't like ships and pistols and fights; they encumber the decks and require separate apartments; and, almost worst of all, have not the highest literary standard. Why should a person marry, when he might be swinging a cutlass or looking for a buried treasure? Why should he go to the altar when he might be polishing his prose? It is one of those curious, and, to my sense, fascinating inconsistencies that we encounter in Mr. Stevenson's mind that, though he takes such an interest in the childish life, he takes no interest in the fireside. He has an indulgent glance for it in the verses of the "Garden," but to his view the normal child is the child who absents himself from the family-circle, in fact when he can, in imagination when he cannot, in the disguise of a buccaneer. Girls don't do this, and women are only grown-up girls, unless it be the delightful maiden, fit daughter of an imperial race, whom he commemorates in "An Inland Voyage."

> A girl at school in France began to describe one of our regiments on parade to her French schoolmates; and as she went on, she told me the recollection grew so vivid, she became so proud to be the countrywoman of such soldiers, and so sorry to be in another country, that her voice failed her, and she burst into tears. I have never forgotten that girl, and I think she very nearly deserves a statue. To call her a young lady, with all its niminy associations, would be to offer her an insult. She may rest assured of one thing, although she never should marry a heroic general, never see any great or immediate result of her life, she will not have lived in vain for her native land.

There is something of that in Mr. Stevenson. When he begins to describe a British regiment on parade (or something of that sort) he, too, almost breaks down for emotion, which is why I have been careful to traverse the insinuation that he is primarily a chiseler of prose. If things had gone differently with him (I must permit myself this allusion to his personal situation, and I shall venture to follow it with two or three others), he might have been an historian of famous campaigns — a great painter of battle-pieces. Of course, however, in this capacity it would not have done for him to break down for emotion.

Although he remarks that marriage "is a field of battle, and not a bed of roses," he points out repeatedly that it is a terrible renunciation, and somehow, in strictness, incompatible even with honor — the sort of roving, trumpeting honor that appeals most to his sympathy. After that step

> there are no more by-path meadows where you may innocently linger, but the road lies long and straight and dusty to the grave. . . . You may think you had a conscience and believed in God; but what is a conscience to a wife?. . . . To marry is to domesticate the Recording Angel. Once you are married, there is nothing left for you, not even suicide, but to be good. . . . How, then, in such an atmosphere of compromise, to keep honor bright and abstain from base capitulations? . . . The proper qualities of each sex are, in-

deed, eternally surprising to the other. Between the Latin and the Teuton races there are similar divergences, not to be bridged by the most liberal sympathy. . . . It is better to face the fact and know, when you marry, that you take into your life a creature of equal if unlike frailties; whose weak human heart beats no more tunefully than yours.

If there is a grimness in that, it is as near as Mr. Stevenson ever comes to being grim, and we have only to turn the page to find the corrective — something delicately genial, at least, if not very much less sad:

"The blind bow-boy" who smiles upon us from the end of terraces in old Dutch gardens laughingly hails his bird-bolts among a fleeting generation. But for as fast as ever he shoots, the game dissolves and disappears into eternity from under his falling arrows; this one is gone ere he is struck; the other has but time to make one gesture and give one passionate cry; and they are all the things of a moment.

That is an admission that though it is soon over, the great sentimental surrender is inevitable. And there is geniality too, still over the page (in regard to quite another matter), geniality, at least, for the profession of letters, in the declaration that there is

one thing you can never make Philistine natures understand; one thing which yet lies on the surface, remains as unseizable to their wits as a high flight of metaphysics — namely, that the business of life is mainly carried on by the difficult art of literature, and according to a man's proficiency in that art shall be the freedom and fullness of his intercourse with other men.

Yet it is difficult not to believe that the ideal in which our author's spirit might most gratefully have rested would have been the character of the paterfamilias, when the eye falls on such a charming piece of observation as these lines about children, in the admirable paper on "Child's Play":

If it were not for this perpetual imitation, we should be tempted to fancy they despised us outright, or only considered us in the light of creatures brutally strong and brutally silly, among whom they condescended to dwell in obedience, like a philosopher at a barbarous court.

II.

We know very little about a talent till we know where it grew up, and it would halt terribly at the start any account of the author of "Kidnapped" which should omit to insist promptly that he is a Scot of the Scots. Two facts, to my perception, go a great way to explain his composition, the first of which is that his boyhood was passed in the shadow of Edinburgh Castle, and the second, that he came of a family that had set up great lights on the coast. His grandfather, his uncle, were famous constructors of light-houses, and the name of the race is associated above all with the beautiful and beneficent tower of Skerryvore. We may exaggerate the way in which, in an imaginative youth, the sense of the "story" of things would feed upon the impressions of Edinburgh — though I suspect it would be difficult really to do so. The streets are so full of history and poetry, of picture and song, of associations springing from strong passions and strange characters, that for my own part I find myself thinking of an urchin going and coming there as I used to think — wonderingly, enviously — of the small boys who figured as supernumeraries, pages, or imps in showy scenes at the theater; the place seems the background, the complicated "set" of a drama, and the children the mysterious little beings who are made free of the magic world. How must it not have beckoned on the imagination to pass and repass, on the way to school, under the Castle rock, conscious acutely, yet familiarly, of the gray citadel on the summit, lighted up with the tartans and bagpipes of Highland regiments! Mr. Stevenson's mind, from an early age, was furnished with the concrete Highlander, who must have had much of the effect that we nowadays call decorative. I encountered somewhere a fanciful paper of our author's* in which there is a reflection of half-holiday afternoons and, unless my own fancy plays me a trick, of lights red, in the winter dusk, in the high-placed windows of the Old Town — a delightful rhapsody on the penny sheets of figures for the puppet-shows of infancy, in life-like position, and awaiting the impatient yet careful scissors. "If landscapes were sold," he says in "Travels with a Donkey," "like the sheets of characters of my boyhood, one penny plain and twopence colored, I should go the length of twopence every day of my life."

Indeed, the color of Scotland has entered into him altogether, and though, oddly enough, he has written but little about his native country, his happiest work shows, I think, that she has the best of his ability. "Kidnapped" (whose inadequate title I may deplore in passing) breathes in every line the feeling of moor and loch, and is the finest of his longer stories; and "Thrawn Janet," a masterpiece in thirteen pages (lately republished in the volume of "The Merry Men"), is, among the shorter ones, the strongest in execution. The latter consists of a gruesome anecdote of the supernatural, related in the Scotch dialect; and the genuineness which this medium — at the sight of which, in general, the face of the reader grows long — wears in Mr. Stevenson's hands is a proof of how living the question of form always is to him, and what a variety of answers he has for it. It never would have occurred to us that the style of "Travels with a Donkey," or "Virginibus Puerisque," and the

* Since reprinted in "Memories and Portraits."

idiom of the parish of Balweary could be a conception of the same mind. If it is a good fortune for a genius to have had such a country as Scotland for its primary stuff, this is doubly the case when there has been a certain process of detachment, of extreme secularization. Mr. Stevenson has been emancipated — he is, as we may say, a Scotchman of the world. None other, I think, could have drawn with such a mixture of sympathetic and ironical observation the character of the canny young Lowlander David Balfour, a good boy but an exasperating. "Treasure Island," "The New Arabian Nights," "Prince Otto," "Doctor Jekyll and Mr. Hyde," are not very directly founded on observation; but that quality comes in with extreme fineness as soon as the subject is Scotch.

I have been wondering whether there is something more than this that our author's pages would tell us about him, or whether that particular something is in the mind of an admirer, because he happens to have had other lights upon it. It has been possible for so acute a critic as Mr. William Archer to read pure high spirits and the gospel of the young man rejoicing in his strength and his matutinal cold bath between the lines of Mr. Stevenson's prose. And it is a fact that the note of a morbid sensibility is so absent from his pages, they contain so little reference to infirmity and suffering, that we feel a trick has really been played upon us on discovering by accident the actual state of the case with the writer who has indulged in the most enthusiastic allusion to the joy of existence. We must permit ourselves another mention of his personal situation, for it adds immensely to the interest of volumes through which there draws so strong a current of life to know that they are not only the work of an invalid, but have largely been written in bed, in dreary "health resorts," in the intervals of sharp attacks. There is almost nothing in them to lead us to guess this; the direct evidence, indeed, is almost all contained in the limited compass of "The Silverado Squatters." In such a case, however, it is the indirect that is the most eloquent, and I know not where to look for that, unless in the paper called "Ordered South" and its companion "Æs Triplex," in "Virginibus Puerisque." It is impossible to read "Ordered South" attentively without feeling that it is personal; the reflections it contains are from experience, not from fancy. The places and climates to which the invalid is carried to recover or to die are mainly beautiful, but

in his heart of hearts he has to confess that they are not beautiful for him. . . . He is like an enthusiast leading about with him a stolid, indifferent tourist. There is some one by who is out of sympathy with the scene, and is not moved up to the measure of the occasion; and that some one is himself. . . . He seems to himself to touch things with muffled hands and to see through a veil. . . . Many a white town that sits far out on the promontory, many a comely fold of wood on the mountain-side, beckons and allures his imagination day after day, and is yet as inaccessible to his feet as the clefts and gorges of the clouds. The sense of distance grows upon him wonderfully; and after some feverish efforts and the fretful uneasiness of the first few days he falls contentedly in with the restrictions of his weakness. . . . He feels, if he is to be thus tenderly weaned from the passion of life, thus gradually inducted into the slumber of death, that when at last the end comes it will come quietly and fitly. . . . He will pray for Medea: when she comes, let her rejuvenate or slay.

The second of the short essays I have mentioned has a taste of mortality only because the purpose of it is to insist that the only sane behavior is to leave death and the accidents that lead to it out of our calculations. Life "is a honeymoon with us all through, and none of the longest. Small blame to us if we give our whole hearts to this glowing bride of ours"; the person who does so "makes a very different acquaintance with the world, keeps all his pulses going true and fast, and gathers impetus as he runs, until, if he be running towards anything better than wildfire, he may shoot up and become a constellation in the end." Nothing can be more deplorable than to "forego all the issues of living in a parlor with a regulated temperature." Mr. Stevenson adds that as for those whom the gods love dying young, a man dies too young at whatever age he parts with life. The testimony of "Æs Triplex" to the author's own disabilities is, after all, very indirect; it consists mainly in the general protest not so much against the fact of extinction as against the theory of it. The reader only asks himself why the hero of "Travels with a Donkey," the historian of Alan Breck, should think of these things. His appreciation of the active side of life has such a note of its own that we are surprised to find that it proceeds in a considerable measure from an intimate acquaintance with the passive. It seems too anomalous that the writer who has most cherished the idea of a certain free exposure should also be the one who has been reduced most to looking for it within, and that the figures of adventurers who, at least in our literature of to-day, are the most vivid, should be the most vicarious. The truth is, of course, that, as the "Travels with a Donkey" and "An Inland Voyage" abundantly show, the author has a fund of reminiscences. He did not spend his younger years "in a parlor with a regulated temperature." A reader who happens to be aware of how much it has been his later fate to do so may be excused for finding an added source of interest — something, indeed, deeply

and constantly touching — in this association of peculiarly restrictive conditions with the vision of high spirits and romantic accidents of a kind of honorably picturesque career. Mr. Stevenson is, however, distinctly, in spite of his occasional practice of the gruesome, a frank optimist, an observer who not only loves life, but does not shrink from the responsibility of recommending it. There is a systematic brightness in him which testifies to this and which is, after all, but one of the innumerable ingenuities of patience. What is remarkable in his case is that his productions should constitute an exquisite expression, a sort of whimsical gospel, of enjoyment. The only difference between "An Inland Voyage," or "Travels with a Donkey" and "The New Arabian Nights," or "Treasure Island," or "Kidnapped," is, that in the later books the enjoyment is reflective,— though it stimulates spontaneity with singular art,— whereas in the first two it is natural and, as it were, historical.

These little histories — the first volumes, if I mistake not, that introduced Mr. Stevenson to lovers of good writing — abound in charming illustrations of his disposition to look at the world as a not exactly refined, but glorified, pacified Bohemia. They narrate the quest of personal adventure — on one occasion in a canoe on the Sambre and the Oise, and on another at a donkey's tail over the hills and valleys of the Cévennes. I well remember that when I read them, in their novelty, upward of ten years ago, I seemed to see the author, unknown as yet to fame, jump before my eyes into a style. His steps in literature presumably had not been many; yet he had mastered his form — it had in these cases, perhaps, more substance than his matter — and a singular air of literary experience. It partly, though not completely, explains the phenomenon, that he had already been able to write the exquisite little story of "Will of the Mill," published previously to "An Inland Voyage," and now republished in the volume of "The Merry Men"; for in "Will of the Mill" there is something exceedingly rare, poetical, and unexpected, with that most fascinating quality a work of imagination can have, a dash of alternative mystery as to its meaning, an air — the air of life itself — of half inviting, half defying, you to interpret. This brief but finished composition stood in the same relation to the usual "magazine story" that a glass of Johannisberg occupies to a draught of table d'hôte *vin ordinaire*.

> One evening, he asked the miller where the river went. . . . "It goes out into the lowlands, and waters the great corn country, and runs through a sight of fine cities (so they say) where kings live all alone in great palaces, with a sentry walking up and down before the door. And it goes under bridges with stone men upon them, looking down and smiling so curious at the water, and living folks leaning their elbows on the wall and looking over too. And then it goes on and on, and down through marshes and sands, until at last it falls into the sea, where the ships are that bring parrots and tobacco from the Indies."

It is impossible not to open one's eyes at such a paragraph as that, especially if one has taken a common texture for granted. Will of the Mill spends his life in the valley through which the river runs, and through which, year after year, post-chaises and wagons, and pedestrians, and once an army, "horse and foot, cannon and timbrel, drum and standard," take their way, in spite of the dreams he has once had of seeing the mysterious world, and it is not till death comes that he goes on his travels. He ends by keeping an inn, where he converses with many more initiated spirits, and though he is an amiable man, he dies a bachelor, having broken off, with more plainness than he would have used had he been less untraveled,— of course he remains sadly provincial,— his engagement to the parson's daughter. The story is in the happiest key, and suggests all kinds of things, but what does it in particular represent? The advantage of waiting, perhaps — the valuable truth, that, one by one, we tide over our impatiences. There are sagacious people who hold that if one does n't answer a letter it ends by answering itself. So the sub-title of Mr. Stevenson's tale might be "The Beauty of Procrastination." If you don't indulge your curiosities your slackness itself makes at last a kind of rich element, and it comes to very much the same thing in the end. When it came to the point, poor Will had not even the curiosity to marry; and the author leaves us in stimulating doubt as to whether he judges him too selfish or only too philosophic.

I find myself speaking of Mr. Stevenson's last volume (at the moment I write) before I have spoken, in any detail, of its predecessors, which I must let pass as a sign that I lack space for a full enumeration. I may mention two more of his productions as completing the list of those that have a personal reference. "The Silverado Squatters" describes a picnicking episode, undertaken on grounds of health, on a mountain-top in California; but this free sketch, which contains a hundred humorous touches, and in the figure of Irvine Lovelands one of Mr. Stevenson's most veracious portraits, is perhaps less vivid, as it is certainly less painful, than those other pages in which, some years ago, he commemorated the twelvemonth he spent in America — the history of a journey from New York to San Francisco in an emigrant-train, performed as the sequel to a voyage across the Atlantic in the same severe conditions. He has never

made his points better than in that half-humorous, half-tragical recital, nor given a more striking instance of his talent for reproducing the feeling of queer situations and contacts. It is much to be regretted that this little masterpiece has not been brought to light a second time, as also that he has not given the world — as I believe he came very near doing — his observations in the steerage of an Atlantic liner. If, as I say, our author has a taste for the impressions of Bohemia, he has been very consistent and has not shrunk from going far afield in search of them. And as I have already been indiscreet, I may add that if it has been his fate to be converted in fact from the sardonic view of matrimony, this occurred under an influence which should have the particular sympathy of American readers. He went to California for his wife; and Mrs. Stevenson, as appears moreover by the title-page of the work, has had a hand — evidently a light and practiced one — in "The Dynamiter," the second series, characterized by a rich extravagance, of "The New Arabian Nights." "The Silverado Squatters" is the history of a honeymoon — prosperous, it would seem, putting Irvine Lovelands aside, save for the death of dog Chuchu "in his teens, after a life so shadowed and troubled, continually shaken with alarms, and the tear of elegant sentiment permanently in his eye."

Mr. Stevenson has a theory of composition in regard to the novel, on which he is to be congratulated, as any positive and genuine conviction of this kind is vivifying so long as it is not narrow. The breath of the novelist's being is his liberty; and the incomparable virtue of the form he uses is that it lends itself to views innumerable and diverse, to every variety of illustration. There is certainly no other mold of so large a capacity. The doctrine of M. Zola himself, so meager if literally taken, is fruitful, inasmuch as in practice he romantically departs from it. Mr. Stevenson does not need to depart, his individual taste being as much to pursue the romantic as his principle is to defend it. Fortunately, in England to-day, it is not much attacked. The triumphs that are to be won in the portrayal of the strange, the improbable, the heroic, especially as these things shine from afar in the credulous eye of youth, are his strongest, most constant incentive. On one happy occasion, in relating the history of "Doctor Jekyll," he has seen them as they present themselves to a maturer vision. "Doctor Jekyll" is not a "boys' book," nor yet is "Prince Otto"; the latter, however, is not, like the former, an experiment in mystification — it is, I think, more than anything else, an experiment in style, conceived one summer's day, when the author had given the reins to his high appreciation of Mr. George Meredith. It is perhaps the most literary of his works, but it is not the most natural. It is one of those coquetries, as we may call them for want of a better word, which may be observed in Mr. Stevenson's activity — a kind of artful inconsequence. It is easy to believe that if his strength permitted him to be a more abundant writer he would still more frequently play this eminently literary trick — that of dodging off in a new direction — upon those who might have fancied they knew all about him. I made the reflection, in speaking of "Will of the Mill," that there is a kind of anticipatory malice in the subject of that fine story; as if the writer had intended to say to his reader, "You will never guess, from the unction with which I describe the life of a man who never stirred five miles from home, that I am destined to make my greatest hits in treating of the rovers of the deep." Even here, however, the author's characteristic irony would have come in; for — the rare chances of life being what he most keeps his eye on — the uncommon belongs as much to the way the inquiring Will sticks to his door-sill as to the incident, say, of John Silver and his men, when they are dragging Jim Hawkins to his doom, hearing, in the still woods of Treasure Island, the strange hoot of the Maroon.

The novelist who leaves the extraordinary out of his account is liable to awkward confrontations, as we are compelled to reflect in this age of newspapers and of universal publicity. The next report of the next divorce case — to give an instance — shall offer us a picture of astounding combinations of circumstance and behavior, and the annals of any energetic race are rich in curious anecdote and startling example. That interesting compilation, "Vicissitudes of Families," is but a superficial record of strange accidents; the family — taken, of course, in the long piece — is, as a general thing, a catalogue of odd specimens and strong situations, and we must remember that the most singular products are those which are not exhibited. Mr. Stevenson leaves so wide a margin for the wonderful — it impinges with easy assurance upon the text — that he escapes the danger of being brought up by cases he has not allowed for. When he allows for Mr. Hyde he allows for everything; and one feels, moreover, that even if he did not wave so gallantly the flag of the imaginary and contend that the improbable is what has most character, he would still insist that we ought to make believe. He would say we ought to make believe that the extraordinary is the best part of life, even if it were not, and to do so because the finest feelings — suspense, daring,

decision, passion, curiosity, gallantry, eloquence, friendship — are involved in it, and it is of infinite importance that the tradition of these precious things should not perish. He would prefer, in a word, any day in the week, Alexandre Dumas to Honoré de Balzac; and it is, indeed, my impression that he prefers the author of "The Three Musketeers" to any novelist except Mr. George Meredith. I should go so far as to suspect that his ideal of the delightful work of fiction would be the adventures of Monte Cristo related by the author of "Richard Feverel." There is some magnanimity in his esteem for Alexandre Dumas, inasmuch as in "Kidnapped" he has put into a fable worthy of that inventor a fineness of grain with which Dumas never had anything to do. He makes us say, Let the tradition live, by all means, since it was delightful; but at the same time he is the cause of our perceiving afresh that a tradition is kept alive only by something being added to it. In this particular case — in "Doctor Jekyll" and "Kidnapped" — Mr. Stevenson has added psychology.

"The New Arabian Nights" offers us, as the title indicates, the wonderful in the frankest, most delectable form. Partly extravagant, and partly very specious, they are the result of a very happy idea, that of placing a series of adventures which are pure adventures in the setting of contemporary English life, and relating them in the placidly ingenious tone of Scheherezade. This device is carried to perfection in "The Dynamiter," where the manner takes on more of a kind of high-flown serenity in proportion as the incidents are more "steep." In this line "The Suicide Club" is Mr. Stevenson's greatest success; and the first two pages of it, not to mention others, live in the memory. For reasons which I am conscious of not being able to represent as sufficient, I find something ineffaceably impressive — something really haunting — in the incident of Prince Florizel and Colonel Geraldine, who, one evening in March, are "driven by a sharp fall of sleet into an Oyster Bar in the immediate neighborhood of Leicester Square," and there have occasion to observe the entrance of a young man followed by a couple of commissionaires, each of whom carries a large dish of cream-tarts under a cover — a young man who "pressed these confections on every one's acceptance with exaggerated courtesy." There is no effort at a picture here, but the imagination makes one of the lighted interior, the London sleet outside, the company that we guess, given the locality, and the strange politeness of the young man, leading on to circumstances stranger still. This is what may be called putting one in the mood for a story. But Mr. Stevenson's most brilliant stroke of that kind is the opening episode of "Treasure Island" — the arrival of the brown old seaman, with the saber-cut, at the "Admiral Benbow," and the advent, not long after, of the blind sailor, with a green shade over his eyes, who comes tapping down the road, in quest of him, with his stick. "Treasure Island" is a "boy's book," in the sense that it embodies a boy's vision of the extraordinary; but it is unique in this, and calculated to fascinate the weary mind of experience, that what we see in it is not only the ideal fable, but, as part and parcel of that, as it were, the young reader himself and his state of mind: we seem to read it over his shoulder, with an arm around his neck. It is all as perfect as a well-played boy's game, and nothing can exceed the spirit and skill, the humor and the open-air feeling, with which the whole thing is kept at the critical pitch. It is not only a record of queer chances, but a study of young feelings; there is a moral side in it, and the figures are not puppets with vague faces. If Jim Hawkins illustrates successful daring, he does so with a delightful, rosy good-boyishness, and a conscious, modest liability to error. His luck is tremendous, but it does n't make him proud; and his manner is refreshingly provincial and human. So is that, even more, of the admirable John Silver, one of the most picturesque, and, indeed, in every way, most genially presented, villains in the whole literature of romance. He has a singularly distinct and expressive countenance, which, of course, turns out to be a grimacing mask. Never was a mask more knowingly, vividly painted. "Treasure Island" will surely become — it must already have become, and will remain — in its way a classic; thanks to this indescribable mixture of the prodigious and the human, of surprising coincidences and familiar feelings. The language in which Mr. Stevenson has chosen to tell his story is an admirable vehicle for these feelings; with its humorous braveries and quaintnesses, its echoes of old ballads and yarns, it touches all kinds of sympathetic chords.

Is "Dr. Jekyll and Mr. Hyde" a work of high philosophic intention, or simply the most ingenious and irresponsible of fictions? It has the stamp of a really imaginative production, that we may take it in different ways, but I suppose it would be called the most serious of the author's tales. It deals with the relation of the baser parts of man to his nobler — of the capacity for evil that exists in the most generous natures, and it expresses these things in a fable which is a wonderfully happy invention. The subject is endlessly interesting, and rich in all sorts of provocation, and Mr.

Stevenson is to be congratulated on having touched the core of it. I may do him injustice, but it is, however, here, not the profundity of the idea which strikes me so much as the art of the presentation — the extremely successful form. There is a genuine feeling for the perpetual moral question, a fresh sense of the difficulty of being good and the brutishness of being bad, but what there is above all is a singular ability in holding the interest. I confess that that, to my sense, is the most edifying thing in the short, rapid, concentrated story, which is really a masterpiece of concision. There is something almost impertinent in the way, as I have noticed, in which Mr. Stevenson achieves his best effects without the aid of the ladies, and "Dr. Jekyll" is a capital example of his heartless independence. It is usually supposed that a truly poignant impression cannot be made without them, but in the drama of Mr. Hyde's fatal ascendency they remain altogether in the wing. It is very obvious — I do not say it cynically — that they must have played an important part in his development. The gruesome tone of the tale is, no doubt, deepened by their absence; it is like the late afternoon light of a foggy winter Sunday, when even inanimate objects have a kind of wicked look. I remember few situations in the pages of mystifying fiction more to the purpose than the episode of Mr. Utterson's going to Dr. Jekyll's to confer with the butler, when the doctor is locked up in his laboratory and the old servant, whose sagacity has hitherto encountered successfully the problems of the sideboard and the pantry, confesses that this time he is utterly baffled. The way the two men, at the door of the laboratory, discuss the identity of the mysterious personage inside, who has revealed himself in two or three inhuman glimpses to Poole, has those touches of which irresistible shudders are made. The butler's theory is that his master has been murdered, and that the murderer is in the room, personating him with a sort of clumsy diabolism. "Well, when that masked thing like a monkey jumped from among the chemicals and whipped into the cabinet, it went down my spine like ice." That is the effect upon the reader of most of the story. I say of most rather than all, because the ice rather melts in the sequel, and I have some difficulty in accepting the business of the powders, which seems to me too explicit and explanatory. The powders constitute the machinery of the transformation, and it will probably have struck many readers that this uncanny process would be more conceivable (so far as one may speak of the conceivable in such a case), if the author had not made it so definite.

I have left Mr. Stevenson's best book to the last, as it is also the last he has given, at the present speaking,* to the public — the tales comprising "The Merry Men" having already appeared; but I find that, on the way, I have anticipated some of the remarks that I had intended to make about it. That which is most to the point is that there are parts of it so fine as to suggest that the author's talent has taken a fresh start, various as have been the impulses in which it had already indulged, and serious the impediments among which it is condemned to exert itself. There would have been a kind of perverse humility in his keeping up the fiction that a production so literary as "Kidnapped" is addressed to immature minds; and though it was originally given to the world, I believe, in a "boy's paper," the story embraces every occasion that it meets to satisfy the higher criticism. It has two weak spots, which need simply to be mentioned. The cruel and miserly uncle, in the first chapters, is rather in the tone of superseded tradition, and the tricks he plays upon his ingenuous nephew are a little like those of country conjurers; in these pages we feel that Mr. Stevenson is thinking too much of what a "boy's paper" is expected to contain. Then the history stops without ending, as it were; but I think I may add that this accident speaks for itself. Mr. Stevenson has often to lay down his pen for reasons that have nothing to do with the failure of inspiration, and the last page of David Balfour's adventures is an honorable plea for indulgence. The remaining five-sixths of the book deserve to stand by "Henry Esmond," as a fictive autobiography in archaic form. The author's sense of the English idiom of the last century, and still more of the Scotch, have enabled him to give a gallant companion to Thackeray's *tour de force*. The life, the humor, the color of the central portions of "Kidnapped" have a singular pictorial virtue; these passages read like a series of inspired foot-notes on some historic page. The charm of the most romantic episode in the world — though perhaps it would be hard to say why it is the most romantic, when it was intermingled with so much stupidity — is over the whole business, and the forlorn hope of the Stuarts is revived for us without evoking satiety. There could be no better instance of the author's talent for seeing the actual in the marvelous, and reducing the extravagant to plausible detail, than the description of Alan Breck's defense in the cabin of the ship, and the really magnificent chapters of "The Flight in the Heather." Mr. Stevenson has, in a high degree (and doubtless for

* Since the above was written, "Underwoods," as well as "Memories and Portraits," has been published.

good reasons of his own), what may be called the imagination of physical states, and this has enabled him to arrive at a wonderfully exact notation of the miseries of his panting Lowland hero, dragged for days and nights over hill and dale, through bog and thicket, without meat or drink or rest, at the tail of an Homeric Highlander. The great superiority of the book resides, to my mind, however, in the fact that it puts two characters on their feet in an admirably upright way. I have paid my tribute to Alan Breck, and I can only repeat that he is a masterpiece. It is interesting to observe that, though the man is extravagant, the author's touch exaggerates nothing; it is, throughout, of the most truthful, genial, ironical kind, full of penetration, but with none of the grossness of moralizing satire. The figure is a genuine study, and nothing can be more charming than the way Mr. Stevenson both sees through it and admires it. Shall I say that he sees through David Balfour? This would be, perhaps, to underestimate the density of that medium. Beautiful, at any rate, is the expression which this unfortunate though circumspect youth gives to those qualities which combine to excite our respect and our objurgations in the Scottish character. Such a scene as the episode of the quarrel of the two men on the mountain-side is a real stroke of genius, and has the very logic and rhythm of life — a quarrel which we feel to be inevitable, though it is about nothing, or almost nothing, and which springs from exasperated nerves and the simple shock of temperaments. The author's vision of it has a profundity which goes deeper, I think, than "Dr. Jekyll." I know of few better examples of the way genius has ever a surprise in its pocket — keeps an ace, as it were, up its sleeve. And in this case it endears itself to us by making us reflect that such a passage as the one I speak of is in fact a signal proof of what the novel can do at its best and what nothing else can do so well. In the presence of this sort of success we perceive its immense value. It is capable of a rare transparency — it can illustrate human affairs in cases so delicate and complicated that any other vehicle would be clumsy. To those who love the art that Mr. Stevenson practices he will appear, in pointing this incidental moral, not only to have won a particular triumph, but to have given a delightful pledge.

Henry James.

SURPRISES.

O EARTH, that had so long in darkness lain,
Waiting and listening for the Voice that cried,
"Let there be light!"—on thy first eventide
What woe, what fear, wrung thy dumb soul with pain!
In darkling space down dropt the red sun, slain,
With all his banners drooping. Far and wide
Spread desolation's vast and blackening tide.
How couldst thou know that day would dawn again?
But the long hours wore on, till lo! pale gleams
Of faint, far glory lit the eastern skies,
Broadening and reddening till the sun's full beams
Broke in clear, golden splendor on thine eyes.
Darkness and brooding anguish were but dreams,
Lost in a trembling wonder of surprise!

Even so, O Life, all tremulous with woe,
Thou too didst cower when, without sound or jar,
From the high zenith sinking fast and far,
Thy sun went out of heaven! How couldst thou know
In that dark hour, that never tide could flow
So ebon-black, nor ever mountain-bar
Breast night so deep, without or moon or star,
But that the morning yet again must glow?
God never leaves thee in relentless dark.
Slowly the dawn on unbelieving eyes
Breaketh at last. Day brightens,—and, oh hark!
A flood of birdsong from the tender skies!
From storm and darkness thou hast found an ark,
Shut in with this great marvel of surprise!

Julia C. R. Dorr.

THE RUSSIAN PENAL CODE.

IN the formation of a judgment with regard to the character of a people, or the nature of a government, few considerations are of greater importance than those which are suggested by the crimes that the people commit and the punishments that the government inflicts. The penal code of a state is in a certain sense an index to the national life, since it not only reveals the nature of the disorders from which the social organism suffers and the methods of treatment to which the governing power resorts, but also shows approximately the stage of moral culture and enlightenment which the people have reached and the extent of the influence for good or evil which the ruling authorities exert. It is my purpose in the present paper to review briefly some of the salient features of the penal code of Russia, and to point out, as clearly as I can, the bearing which that code seems to me to have upon the social condition of the Russian people, the distinctive characteristics of the Russian system of government, and the causes that underlie Russian discontent and disorder.

The Russian penal code, as revised, amended, and republished at St. Petersburg in 1885, makes a compact octavo volume of nearly seven hundred pages. In the arrangement of its contents it is not unlike the volume known as the Revised Statutes of the United States. The crimes and offenses with which it deals are grouped into twelve principal classes, each of which corresponds roughly with what is called in the Revised Statutes a "Title." These groups, or "titles," are subdivided into chapters, varying in number from two to fourteen, and the chapters are in turn broken into sections, the latter being numbered continuously, as in the Revised Statutes, without reference to the larger subdivisions of the text. The scope of the code, the manner in which offenses are classified, and the proportion which each separate category of crime and punishment bears to the whole body of criminal law will be understood from the following syllabus:

TITLE I. Crimes and offenses in general and degrees of guilt. 175 sections.

TITLE II. Crimes against the Faith [religion] and violations of the ordinances for its safeguard. 65 sections.

TITLE III. Crimes against the State, viz.: treason, rebellion, and all offenses against the sacred persons of the sovereign emperor and the members of the imperial house. 23 sections.

TITLE IV. Crimes and offenses against administrative order. 67 sections.

TITLE V. Crimes and offenses committed in the imperial or public service. 178 sections.

TITLE VI. Violations of the ordinances relating to the duties and obligations which individuals owe to the imperial and local authorities. 43 sections.

TITLE VII. Crimes against the property and revenues of the state. 283 sections.

TITLE VIII. Crimes against social order and well-being. 574 sections. [This title does not include offenses committed by one person against another, such as assault, robbery, or murder, but merely offenses which have the nature of disobedience to certain general ordinances intended to promote the public welfare.]

TITLE IX. Violations of the laws which relate to the rights of station, rank, position, etc. 44 sections. [This title comprises such offenses as the fraudulent concealment of the name and rank of an infant, the illegal assumption of titles, decorations, or other marks of distinction, etc.]

TITLE X. Crimes against the life, well-being, freedom, and honor of private individuals. 263 sections.

TITLE XI. Crimes against family and domestic rights. 51 sections. [This title includes all violations of the laws that relate to marriage and divorce, and to the reciprocal duties of fathers, mothers, and children, guardians and wards, etc.]

TITLE XII. Crimes and offenses against the property of private persons. 111 sections.

The intention of the codifiers in making this classification of crimes seems to have been to arrange them as far as practicable in the order of their estimated gravity or importance. Offenses against church and state* are therefore given the first place, and crimes which merely affect the life, liberty, and honor of

* I use the words "church" and "state" throughout this article in a somewhat restricted sense — to mean in one case the sacerdotal hierarchy, and in the other the political mechanism as embodied in the official class. It is impossible to speak of the church as a collective body of believers when church membership is enforced by imprisonment and exile; and it is equally impossible to make the state include the people when every attempt of a citizen to take part in the life of the state is punished with penal servitude.

private citizens come last. Crimes which have a tendency to weaken the dominant authority of church and state are furthermore given a disproportionate amount of space, as compared with crimes which threaten merely the lives or property of private persons. All the provisions of law contained in the first seven titles, and most of those in the eighth and ninth, have a direct bearing upon the welfare of the state as a political organism, and are intended to guard its existence, confirm its supremacy, and tighten the grasp in which it holds its subjects, the people. Almost every human action that can by any possibility injure the state or weaken the power of the ruling authorities is made by law a crime, and is punished with extreme if not barbarous severity. That this is not too sweeping an assertion will, I think, abundantly appear from the citations which I shall presently make from the statutes themselves.

The first important title or division of the Russian penal code is that which comprises what are called "Crimes against the Faith," and the severity with which such crimes are punished furnishes a striking illustration of the importance which the state attaches to the church as the chief bulwark of its own authority. The first section, which may be taken as fairly indicative of the spirit of the whole title, is as follows:

"SECTION 176. Whoever dares with premeditation, and publicly in a church, to blaspheme [literally, 'to lay blame upon'] the glorious Triune God, or our Most Pure Ruler and Mother of God, the ever-Virgin Mary, or the illustrious Cross of the Lord God Our Saviour Jesus Christ, or the Incorporeal Heavenly Powers, or the Holy Saints of God and their Images, such person shall be deprived of all civil rights and exiled for life, with not less than twelve nor more than fifteen years of penal servitude. If such crime shall be committed not in a church but in a public place, or in the presence of a number of assembled people, be that number large or small, the offender shall be deprived of all civil rights and exiled for life, with not less than six nor more than eight years of penal servitude."

The next section, which deals with another aspect of the same crime, is as follows:

"SECTION 177. If the offense described in the foregoing section [No. 176] be committed not in a public place nor before a large assemblage of people, but nevertheless in the presence of witnesses, with an intention to shake the faith of the latter or lead them astray, the offender shall be deprived of all civil rights and exiled for life to the most remote part of Siberia."

Section 178 provides that "Whoever, with premeditation, in a public place and in the presence of a large or small assemblage of people, dares to censure [or condemn] the Christian faith, or the orthodox church, or to revile [or abuse] the Sacred Scriptures or the Holy Sacraments [literally, 'mysteries'], such person shall be deprived of all civil rights and exiled for life, with not less than six nor more than eight years of penal servitude. If such crime shall be committed not in a public place nor in the presence of an assemblage of people, but nevertheless before witnesses, and with an intention to shake the latter's faith and lead them astray [literally, 'to seduce them'], the offender shall be deprived of all civil rights and exiled for life to the most remote part of Siberia."

Section 179 declares that if any person shall witness or have personal knowledge of the commission of the crimes set forth in sections 176–178, and shall fail to inform the authorities thereof, he shall be imprisoned for not less than four nor more than eight months, according to the circumstances of the case.

Section 181 is as follows: "Whoever, in a printed work, or even in a written composition, if the latter be by him in any manner publicly circulated, indulges in blasphemy or speaks opprobriously of the Saints of the Lord, or condemns the Christian faith or the orthodox church, or reviles the Sacred Scriptures or the Holy Sacraments, such person shall be deprived of all civil rights and exiled for life to the most remote part of Siberia. The same punishment shall be inflicted upon all persons who knowingly sell, or in any other way publicly circulate such works or compositions."

Section 182 provides that "All persons who shall be found guilty of so-called scoffing—that is, of making sneering or sarcastic gibes that show manifest disrespect for the rules or ceremonies of the orthodox church, or for Christianity in general—shall be imprisoned for not less than four nor more than eight months."

It would be hard, I think, to find in the criminal laws of any other civilized state punishments of such severity attached to crimes of such a nature. In most countries an insulting or contemptuous reference, even in a church and during service, to the "Incorporeal Heavenly Powers" [the angels] would be regarded merely as a misdemeanor, and would be punished with a small fine or with a brief term of imprisonment, as a disturbance of the public peace. In Russia, however, disrespectful remarks concerning the "Saints of the Lord and their Images," even although such remarks be made to three or four acquaintances, in the privacy of one's own house, may be punished with "deprivation of all civil rights and exile for life to the most remote part of Siberia"—

that is, to the coast of the Arctic ocean in the territory of Yakutsk.

Such extraordinary penal legislation as this naturally suggests the inquiry: "What seems to be, in the estimation of the law-maker, the relative gravity of the offenses described in the sections above cited in comparison with such common-law crimes as assault, highway robbery, and murder?" An examination of the statutes contained in Titles VIII. and X. of the code shows that a sarcastic gibe at the expense of the orthodox church is as heinous a crime as a personal assault which ends in homicide, provided such assault is not made with homicidal intent. [Compare Section 182 with Section 1464.] Public censure or condemnation of the orthodox church is put on a penal level with the organization of a band of counterfeiters, robbers, or incendiaries. [Compare Section 178 with Section 924.] Finally, the punishment for blasphemous remarks made publicly in a church with regard to the "Incorporeal Heavenly Powers," or the "Saints of the Lord, and their Images," is precisely the same punishment which is prescribed for willful manslaughter, and is only one degree lighter than the penalty for the deliberate and premeditated murder of a pregnant woman, with full knowledge of her condition. [Compare Section 176 with Sections 1452 and 1455.]

It is not my intention, of course, to excuse or to palliate such offenses as those set forth in the quoted sections of the Russian code, nor to raise any question as to the propriety of punishing them; but I do mean to call attention to what seems to me the barbarous injustice of putting such offenses on a level with highway robbery and murder. Russian churches and cathedrals are full of so-called "miracle-working images," or pictures of the Madonna and of various "Holy Saints of the Lord." I never entered even the cathedral of St. Isaac in St. Petersburg without finding on the frame of the *ikon* * of the Madonna, which stands at the head of two or three steps on the right of the *ikonostas*, a number of small articles of apparel, such as head kerchiefs, handkerchiefs, scarfs, etc., which had been placed there by their owners with the expectation that they would acquire, through contact with the ikon, some miraculous virtue. It would be perfectly natural for an intelligent man, and even for a good man and a good Christian, to express irreverent if not contemptuous doubt as to the miracle-working power of this gilded and bejeweled picture; and it would be strange if he did not, in addition, say something disrespectful of a church which not only permits, but encourages, such delusions. Under the provisions of Section 177 of the penal code, such a man, for making such remarks, might be exiled for life to the remotest part of Siberia. In the summer of 1886, while visiting with my wife one of the holiest cathedrals in Moscow, I saw a number of ignorant Russian peasants devoutly kissing in succession twenty or thirty black decaying fragments of human bone which were set in the squares of what looked precisely like a checker-board. The bones were supposed to be finger joints, toe joints, and other osseous fragments of various "Holy Saints of the Lord"; and many of the peasants pressed their lips to every bone in the collection, taking them row by row successively, from the lower right hand to the upper left hand corner of the checker-board. As I watched this performance, I could not help expressing aloud to my wife an opinion with reference thereto which the ecclesiastical authorities would undoubtedly have regarded as blasphemous, and which, had I been a Russian, might have sent me to the most remote part of Siberia, if not into penal servitude. Many of the rites and ceremonies of the Russo-Greek church are extremely injurious to the health of the people, and this is particularly the case with the universal custom of kissing sacred pictures and bones. Nothing probably has done more than this practice to spread contagious diseases among the ignorant peasants of the empire, and the terrible ravages of diphtheria in some of the provinces of European Russia are attributable mainly to this cause. A porous and partly decayed bone of a "Holy Saint of the Lord" which is breathed upon and kissed by thousands of men, women, and children becomes in time a poisonous source of contagion; and the encouragement by the priests of the belief that an application of the lips to such a bone is pleasing to God, or beneficial to man, seems to me in the highest degree immoral and criminal. If I were a Russian and lived in Russia, I should undoubtedly express this opinion at the first opportunity, in the most forcible and emphatic manner possible. Under the provisions of Section 177 I should thereupon be condemned as a blasphemer, and should go in chains and leg-fetters to the remotest part of eastern Siberia.

Blasphemous or disrespectful remarks concerning holy persons or things are not, however, the only offenses contemplated by Title II., and included among "Crimes against

* An ikon is a painted portrait of the Madonna, or of some holy saint of the orthodox church. It is, as a rule, heavily overlaid with gold in such a manner that only the head and one hand of the figure can be seen, and it is often framed in solid gold or silver and richly jeweled. The "miracle-working" ikon of Our Lady of Kazan, in the Kazan Cathedral at St. Petersburg, is adorned with jewels to the value of $60,000.

the Faith." One whole chapter is devoted to heresy and dissent, and punishments of the most cruel severity are prescribed for abjuration of the orthodox faith, for secession from the true church, and for the public expression of heretical opinions. Section 184, for example, provides that if a Jew or Mohammedan shall, by persuasion, deception, or other means, induce an orthodox Christian to renounce the true church and become an adherent of the Jewish or Mohammedan faith, he shall be deprived of all civil rights and exiled for life, with not less than eight nor more than ten years of penal servitude.

Section 187 declares that if any person tempt or persuade an adherent of the Russo-Greek church to leave that church and join some other Christian denomination, he shall be banished to Siberia for life.

Section 188 provides that if any person shall leave the orthodox church and join another Christian denomination, he shall be handed over to the ecclesiastical authorities for instruction and admonition; his minor children shall be taken into the custody of the Government, his real estate shall be put into the hands of an administrator, and until he abjures his errors he shall have no further control over either.

Parents who are required by law to bring up their children in the true faith, but who, in violation of that duty, cause such children to be christened or educated in accordance with the forms and tenets of any other Christian church, shall be imprisoned for not less than eight nor more than sixteen months. During such time the children shall be taken in charge by orthodox relatives, or shall be turned over to a guardian appointed by the Government. [Section 190.]

If a Jew or a Mohammedan shall marry an orthodox Christian and shall fail to bring up the children of such marriage in the orthodox faith, or shall throw obstacles in the way of the observance by such children of the rules and forms of the orthodox church, the marriage shall be dissolved, and the offender shall be exiled for life to the most remote part of Siberia. [Section 186.]

All persons who shall be guilty of aiding in the extension of existing sects, or who shall be instrumental in the creation of new sects hostile or injurious to the orthodox faith, shall be deprived of all civil rights and exiled for life, either to Siberia or to the Trans-Caucasus. [Section 196.]

I met large numbers of dissenters exiled under this section, both in the Caucasus and in all parts of Siberia. It is the unvarying and universal testimony of both the civil and military officers of the Russian Government that these dissenting Christians form the most honest, the most temperate, the most industrious, and altogether the most valuable part of the whole population in the regions to which they have been banished. The ispravnik, or chief police officer, of Verkhni Udinsk, in eastern Siberia, speaking to me of three or four settlements of dissenters in his okrug, or circuit, said: "If all the people in my territory were only exiled heretics I could shut up the jails and should have little or nothing to do; they are the best people within my jurisdiction." I need hardly comment upon the cruel injustice of sending good citizens like these to the remotest part of eastern Siberia simply because they do not believe in worshiping images and kissing bones, or because they cross themselves with two fingers instead of three.

It would be easy to fill pages with illustrative examples of the unjust and oppressive character of Russian penal legislation in the field of religious crime. Every paragraph fairly bristles with threats of "imprisonment," "exile," and "penal servitude," and the whole title seems to the occidental mind to breathe a spirit of bigotry and intolerance. One might perhaps expect to find such laws in a penal code of the Middle Ages; but they strike one as an extraordinary anachronism when they appear in a code which was revised and amended in the capital of a so-called Christian state in the year of our Lord 1885.

The shortest title or division in the Russian penal code is that which relates to "Crimes against the State," or, speaking more precisely, "Crimes against the Sovereign Ruler of the Empire and his authority." This title contains altogether only 23 sections, and occupies only 10 out of the 700 pages of the volume, but what it lacks in extent it more than makes up in severity. It begins with the brief but comprehensive declaration that "Every evil design and criminal action against the life, welfare, or honor of THE GOSSUDAR THE EMPEROR, and every intention to cast him from the throne or to deprive His Supreme Authority of its freedom or to restrict its rights, or to commit any violence whatever against His Sacred Person, shall subject the offender to deprivation of all civil rights and the penalty of death."

It is not necessary, it will be observed, that a man should commit an overt act in order to be brought under the sweeping condemnation of this section, nor that the overt act, even if committed, should be directed against the life or safety of the Tsar. If the offender simply harbors an evil design or forms a mere intention, not to assault the Tsar's "Sacred Person," but to restrict his rights, or,

in other words, to limit his supreme authority, it is enough to justify the infliction of the death penalty.

Section 242 states this plainly in terms and says that "An evil design . . . shall be regarded as an actual crime, not only in a case where the offender has made an attempt to carry such design into execution, but also in every case . . . where he has orally or in writing given such thought or design expression."

Sections 243 and 244 extend the death penalty to all persons who take part in evil designs or criminal actions having for their object the Sacred Person of the Gossudar the Emperor; to all persons who aid or abet such designs or actions; to all persons who afford refuge or concealment to the evil-thinkers or evil-doers; to all persons who have knowledge of such evil designs or actions and fail to give notice thereof to the authorities; and to all persons who commit an act of violence against a soldier or a sentry who is guarding the sacred persons of the Gossudar the Emperor or the members of the imperial house. All the inherited or acquired property of persons found guilty of the offenses set forth in these sections shall be confiscated by the state.

Section 246 provides that if any person shall speak impudent, insulting words of the Gossudar the Emperor, or shall deliberately injure or destroy a portrait, statue, bust, or other representation of him set up in a public place, such person shall be condemned as an insulter of MAJESTY to deprivation of all civil rights and exile for life, with not less than six nor more than eight years of penal servitude.

Section 249, which is known to the political exiles in Siberia as the "omnibus section," on account of its wide scope and applicability, was quoted in my article upon the "Prison Life of the Russian Revolutionists," in THE CENTURY MAGAZINE for December. This section also directs the infliction of the penalty of death.

Section 266 declares that if any person shall compose and circulate a written or printed notice, call, or proclamation with the intention of inciting the people to rebellion or to open insubordination, such person shall be deprived of all civil rights and exiled for life, with not less than eight nor more than ten years of penal servitude.

Section 252 provides that if any person shall compose and circulate any printed work or written document, or shall make a public speech which does not directly and manifestly incite to rebellion against the Supreme Authority, but which nevertheless attempts to dispute or throw doubt upon the inviolability of the rights of such Supreme Authority, or which audaciously condemns the form of administration established by the laws of the state or the fixed order of succession to the throne, such person shall be deprived of all civil rights and exiled for life, with not less than four nor more than six years of penal servitude. Any person who keeps such a work or document in his possession without obtaining permission from the higher authorities shall be imprisoned for not less than seven days nor more than three months, and shall then be subjected to police surveillance for not less than one nor more than three years. [The offender in such a case may be put under police surveillance either at his own place of residence or in a Siberian village a thousand miles away, to which he may be banished by "administrative process."]

In order to appreciate the extraordinary severity of these laws for the protection of the Sacred Person, the Dignity, and the Supreme Authority of the Tsar it is only necessary to compare them with the laws contained in Title X. for the protection of the personal rights and honor of private citizens. From such a comparison it appears that to injure a portrait, statue, bust, or other representation of the Tsar set up in a public place is a more grievous crime than to so assault and injure a private citizen as to deprive him of eyes, tongue, an arm, a leg, or the sense of hearing. [Compare Section 246 with Section 1477.] To organize or take part in a society which has for its object the overthrow of the Government or a change in the form of the Government, even although such society does not contemplate a resort to violence nor immediate action, is a crime of greater gravity than to so beat, maltreat, or torture a human being as partly to deprive him of his mental faculties. [Compare Section 250 with Section 1490.] The making of a speech or the writing of a book which disputes or throws doubt upon the inviolability of the rights or privileges of the Supreme Authority is as serious an offense as the outraging of a woman. [Compare Section 252 with Section 1525.] The mere concealment of a person who has formed an evil design affecting the life, welfare, or honor of the Tsar, or the affording of refuge to a person who intends to bring about a restriction of the rights or privileges of the Supreme Authority, is a more serious matter than the premeditated murder of one's own mother. [Compare Section 243 with Section 1449.] Finally, in the estimation of the penal code, the private citizen who makes or circulates a caricature of the Sacred Person of the Tsar, for the purpose of creating disrespect for his personal characteristics or for his management of the empire, commits a

more heinous crime than the jailer who outrages in a cell until she dies an imprisoned, helpless, and defenseless girl fifteen years of age. [Compare Section 245 with Sections 1525, 1526, and 1527.]

If, in the face of the tremendous penalties set forth in the above-quoted sections of the code, the intelligent and freedom-loving classes of Russia continue to form societies intended to bring about a change of government, or if they still "audaciously" question or throw doubt upon the inviolability of the rights claimed by the Supreme Authority, it certainly cannot be denied that they have the courage of their convictions.

It may be said in defense of the Russian Government that it does not construe these laws strictly nor enforce them with rigorous and indiscriminate severity against all political offenders. I do not care to dispute the truth of this proposition; but, even if it be true, it does not alter the fact that these laws stand on the pages of a statute-book revised as lately as the year 1885.

It is not necessary, for my present purpose, to go minutely into the details of the legislative provisions contained in the titles which relate to "Crimes against Administrative Order" and "Violations of the Ordinances relating to the Duties and Obligations which Individuals owe to the Imperial and Local Authorities." Their form and spirit are clearly indicated or foreshadowed in the sections of Title III. above quoted, and I need therefore only say of them that more effective laws for the suppression of individual freedom and the right of popular self-government were probably never devised. They not only render impossible all association or combination on the part of individual citizens to oppose the tyrannical exercise of power, but they punish with imprisonment or exile the mere expression of a judgment with regard to the expediency of a law or the propriety of an official action. Section 281, for example, says that "All persons who shall be found guilty of composing and circulating written documents [as, for instance, a circular letter] containing unpermitted judgments with regard to the ordinances and actions of the Government shall be imprisoned for not less than sixteen months nor more than two years."

Section 1035 provides that "All persons who shall . . . . print [in a newspaper or book] remarks calculated to shake the trust or confidence of the people in the laws of the empire, or in the ordinances and directions of the administrative or judicial authorities, or who shall allow themselves to dispute [or question] the obligatory force of such laws, or to approve or justify actions that are by such laws forbidden, with a view to bringing those laws into disrespect, shall be imprisoned for not less than two nor more than sixteen months."

It is hard for an American to realize a state of affairs in which the public expression of a judgment or an opinion with regard to Governmental action is "unpermitted," and in which it is more or less hazardous for a dozen law-abiding citizens to meet at regular intervals in a private house for the discussion of public questions. Section 320 of Title IV. declares that "Persons guilty of belonging to a society which employs any means whatever to conceal from the Government its existence, its nature, or its aims, or to keep secret its meetings, the subject of its deliberations, or the relations between its members, or a society which secretly disseminates any doctrines whatever, shall be imprisoned in a fortress for not less than four nor more than eight months, or in a prison for not less than one nor more than three weeks, according to the circumstances of the case."

Of course, persons who meet regularly for any purpose in a private house render themselves liable to an accusation based upon this section. As soon as their meetings attract the attention of the secret police, they are made the subject of an official examination, which almost always leads to consequences more or less unpleasant for the participants. I know a group of gentlemen in St. Petersburg who meet at stated intervals for the discussion of public affairs, and who, although they are neither conspirators nor revolutionists, spend the evening in making a pretense of gambling, in order that neither the servants nor the police may suspect them of secret machinations. In the eyes of the Government a club of gamblers is a safe and innocent organization, but a private debating society is a dangerous menace to social order and to the rights and privileges of the Supreme Authority.

Under the reform laws of Alexander II., certain public assemblies, such as those of the nobles, and meetings of the town councils and provincial assemblies, must be recognized and tolerated; but every possible precaution is taken to prevent the discussion in them of imperial affairs, and to suppress in their proceedings everything that might have a tendency to "excite the public mind." Section 1038 of Title VIII. of the code provides that "For printing and publishing, without permission of a local governor, the proceedings [even the legal and innocent proceedings] of any assembly of nobles, provincial assembly, or town council, the offender shall pay a fine of three hundred rubles, or suffer imprisonment for three weeks, or both."

When one considers that in Russia a cen-

tralized bureaucracy attempts to regulate everything, and that in its dispositions and operations it touches private life and invades the field of private activity at innumerable points, one can understand how unbearable must be the position of persons whose affairs are thus "regulated," and how intolerable must become the complete suppression of the right of free speech. The sufferer from the misdirected or tyrannically exercised power of a subordinate official cannot even protest. He must simply lay his hand on his mouth, bow his head, and submit.

I have been asked many times by friends in America why intelligent and liberty-loving Russians do not get out of such a country. Many answers might be given to this question, but perhaps the most comprehensive and cogent of them will be found in Sections 325–328 of the Russian penal code, which are as follows:

"SECTION 325. Whoever leaves the fatherland and enters the service of a foreign Government without the permission of his own Government, or becomes a subject of a foreign power, such person, for violation of his allegiance and his oath, shall be deprived of all civil rights and expelled from the limits of the empire forever. If he returns, he shall be exiled to Siberia for life.

"SECTION 326. Whoever leaves the fatherland and does not return at the summons of the Government shall for this disobedience be deprived of all civil rights, and expelled from the limits of the empire forever — unless, within a period to be fixed at the discretion of a court, he shows that his disobedience was due to causes which were beyond his control, or which mitigate his guilt. Until he shall make such proof, he shall be regarded as missing, and his property shall be controlled by the bureau of guardianship.

"SECTION 327. Any person who, without permission of the Government and without adequate reason, lives abroad beyond the period fixed by law for persons of his station shall also be regarded as missing [literally, 'absent without news'], and his property shall be taken in charge by the bureau of guardianship.

"SECTION 328. Any person who persuades a subject of the empire to emigrate to another country shall be punished with penal servitude in a convict company for not less than twelve nor more than eighteen months, or be banished to Siberia for life."

Under one of the above-quoted sections (326) Turgenief, while living in Paris in 1863, was summoned to St. Petersburg to answer before the Directing Senate for something that he had written or said. One can see from his letters to his friend, P. V. Annenkoff, how humiliating and exasperating obedience was to him, but — he obeyed.*

The Government does not recognize the right of its subjects to go abroad or to live abroad without its permission; and if, therefore, a Russian takes refuge from oppression in a freer country, he must face the prospect of expatriation, outlawry, the loss of all the property left behind him, and exile to Siberia if he ever returns. Few people are willing to separate themselves for life in this way from friends, relatives, home, country, and all that man naturally holds dear. What alternative, then, is left to the oppressed when oppression becomes intolerable? They must either submit or fight; and if they are not willing to submit and are not able, under the provisions of this code, to oppose tyranny by peaceful collective action, they will inevitably resort to violence and fight, singly or in small groups, as they are now fighting, until they go to Siberia in leg-fetters or perish on the scaffold.

George Kennan.

A SONG OF LIFE.

A SONG, boys, a song
Life is young yet,
Love has tongue yet;
Why should Life and Love go wrong?
Come, boys, a song!

A song, boys, a song!
Life 's at flush still,
Love 's ablush still;
What though cares and curses throng?
Come, boys, a song!

A song, boys, a song!
Life is gray now,
Love 's away now,
We are left to limp along;
Still, boys, a song!

A song, boys, a song!
Death is here soon,
Death will cheer soon,
Death is nigh, and Love is strong;
So, boys, a song!

Richard E. Burton.

THEFTS OF THE MORNING.

"The early death of a youth was frequently called in poetic language a seizure or theft by Aurora."

BIND us the Morning, mother of the stars
And of the winds that usher in the day!
Ere her light fingers slide the eastern bars,
A netted snare before her footsteps lay;
Ere the pale roses of the mist be strown:
Bind us the Morning, and restore our own!

With her have passed all things we held most dear,
Most subtly guarded from her amorous stealth;
We nothing gathered, toiling year by year,
But she hath claimed it for increase of wealth;
Our gems make bright her crown, incrust her throne:
Bind us the Morning, and restore our own!

Where are they gone who round our myrtles played,
Or bent the vines' rich fruitage to our hands,
Or breathed deep song from out the laurels' shade?
She drew them to her; who can slack the bands?
What lure she used, what toils, was never known:
Bind us the Morning, and restore our own!

Enough, that for her sake Orion died,
Slain by the silver archer of the sky,—
That Ilion's prince amid her splendors wide
Lies chained by age, nor wins his prayer to die;
Enough! but hark! our captive loves make moan:
Bind us the Morning, and restore our own!

We have beheld them whom we lost of old,
Among her choiring Hours, in sorrow bowed.
A moment gleam their faces faint and cold
Through some high oriel window wreathed with cloud,
Or on the wind before her they are blown:
Bind us the Morning, and restore our own!

They do her service at the noiseless looms
That weave the misty vesture of the hills;
Their tears are drink to thirsting grass and blooms,
Their breath the darkling wood-bird wakes and thrills;
Us too they seek, but far adrift are thrown:
Bind us the Morning, and restore our own!

Yea, cry her *Thief!* from where the light doth break
To where it merges in the western deep!
If aught of ours she, startled, should forsake,
Such waifs the waiting Night for us will keep.
But stay not; still pursue her, falsely flown:
Bind us the Morning, and restore our own!

Edith M. Thomas.

FINIS

IT is the pathetic feature of the early death of this man that his generation had little knowledge of him while he was of it. His name stands almost for a shadow. He was a great and substantial person to those who knew him well, but so secluded was his life, so unobtrusive was his character, so scant was his career of special achievements, that it is difficult to convey a distinct picture of him except by arbitrary assertion. Even then the terms employed produce conflicting impressions and leave an indistinct image. Never speaking in public; engaging in no controversies; heading no party; following no leader; identified with no school; touching here and there many creeds and philosophies but falling in with none; suspected by the reputedly orthodox, yet so evidently Christian that unbelief never claimed him; an Episcopalian by sincere preference, yet uttering no word for his church in any page of his writing; holding that schism is deadly, yet an ardent admirer of the Puritan and the Quaker; a good Catholic and yet a stout Protestant,—how shall such an one be rendered explicable to an age that cannot think of men except as ranged under some school or church or party.

Nor does he grow much clearer to the majority when his books are read. It is claimed that in "The Nation" he has presented a lofty and philosophical conception of the state: the book is opened to find it constantly asserted that the nation is a moral organism, with illustrations drawn from American institutions and nearly forgotten pages of Hebrew history, rising at last into the mystic allusions of the Apocalypse, which the author regards as a clear and substantial utterance of political wisdom. What relation can such a book have to American politics? Or take his "Republic of God": it is asserted that it is a scientific and rational presentation of Christianity. The book is found to consist of continuous assertion, without a suggestion of argument or formal proof, and even without quotation of Scripture except in way of illustration. What is there here scientific or peculiarly rational? Nothing, it must be confessed, unless one is able of one's self to discern the logic that is more than its forms. The majority fail to understand the book because they miss the grinding logic, the theological wrangle, the defense of church or school, and the massing of texts; because also they fail to comprehend the attitude of a mind that looks directly at the faith and measures it by its own light.

The external life of Dr. Mulford does not throw much light upon him, yet there was a singular harmony between his history and his thought. He came of excellent lineage; the blood of his ancestry for two hundred years had been of a full Puritan strain. He was born in Montrose, Pa.; was prepared for college in Homer, N. Y., under Dr. Woolworth; and was graduated from Yale College in 1855.

One who had skill in discerning character might early have detected signs of the greatness that followed, and even the form it would take. His imagination — a large feature in his mental organization — led the way at first, and he seemed about to enter the field of *belles-lettres*. But even before college days he had declared to himself that he would write great books, if any. He never lost his love for literature as a fine art and always responded keenly to a well-turned sentence or a fine verse; but his main concern, first and last, was with high thought. The two tastes led to what has not been fully recognized in him,—namely, a double life, or rather, a life so broad that it had that appearance. His early indications as a writer and his constant habit of discussing literature and art in a critical way led many of his friends to underrate the solidity of his mind; but even in college, while neglecting his studies for the literature which was then being rapidly poured upon the world by Tennyson, the Brownings, Dickens, Thackeray, Hawthorne, and Longfellow, and also for the social life of college, then peculiarly brilliant, he was leading another life than that which appeared. He was not careful to prepare himself to meet in full the demands of the class-room, but he startled his classmates with disquisitions on the authors there read such as they did not hear from the tutors. That the college did not do more for him and that he did not get more from the college was not the fault of either, but was rather due to ill adjustment between a mind like his and the methods of education which then prevailed. The college furnished at least a good shelter while his powers were uniting and taking shape, and it provided him with a sufficient knowledge of Latin and Greek for practical purposes.

After a college life that could hardly be called earnest, though in no way open to grave charge, the real seriousness of his nature became apparent in the choice of theology as a profession. In this choice the true man was disclosed, for Dr. Mulford was preëminently a theologian. He spent two years in Andover, but, as in college, saw more truth than he heard, and ended his studies with undisguised protest against the theology then taught in that institution. He was perhaps the first Protestant of his kind in New England, after Dr. Bushnell and Dr. Washburn. Heretofore those who dissented from the prevailing theology had turned towards Unitarianism or Universalism, but Mulford did not feel himself shut up to these somewhat beaten paths, discerning another that has since become well known and is much used. The separation from Andover was wide and thoroughly mutual. The year in which he was buried found Andover busily engaged over points that then were clear to his mind, and in substantial accord with his views of humanity and the reach of Christ's work. After leaving Andover he spent a year in Europe, traveling, and hearing lectures on theology, but chiefly brooding,— for such was his life-long habit,— and returned home, hurried by the outbreak of the war. He was in no way fitted to become a soldier: a better task awaited him, to which he was drawn by an inward voice which was also a divine call. He took orders in the Episcopal Church, not merely because there was no other place for him, but because upon the whole he thought along its lines, or rather, as he then believed, it suffered him to think in his own way. The point of contact, however, did not reach far within. Æsthetically he felt with his church and could easily have gone into some lengths of ritualism; no excess of it would have troubled him so long as it did not involve dogmatic assumption. He prized the catholicity of the Episcopal Church as to doctrine, but its rubrics had little interest for him, and the lines that separate it from other churches had for him no existence. Only in a very limited degree is he to be regarded as belonging to the Episcopal Church. He never violated her canons; he served obediently at her altars; he taught theology under her name; but he wrote no line in her support, received no honors and but the barest recognition from her hands. There was repeated in him the story of all ages,— the prophet is never accepted by his age, and a great man is always greater than any institution that holds him.

Dr. Mulford took a parish in New Jersey, and immediately found himself face to face with a congregation disposed through business interests to sympathize with the South in the war then raging. It is at this point, perhaps, that a certain aspect of his character can be best explained. To a certain extent he did not make the impression of a man of courage. His manner was calm but was not strongly charged with assurance. He almost never pointedly disagreed with any, but indicated his variance by suggesting another view of the subject, leaving the other to find out the difference. His intense sympathy and absolute courtesy held him back from controversy and made him over-tolerant in conversation, so that dull persons often suspected him of weakness and mental dishonesty, not discerning the delicacy and fineness of his dissent. He also carried any difference into the region of principles — often very remote and general, and apparently of slight consequence to any save himself. But if he differed in principle he differed all the way through, and saw little need of formal explanation. His real character in this respect is seen in his position as a preacher. The influences about him would have led him to remain silent; no man more yearned for sympathy or more hated a wrangle; he seemed incapable of living without one or of enduring the other. But, contrary to his superficial disposition, he carried the war into his pulpit, overcoming all opposition by simple weight of utterance and solemnity of conviction. It is here that his character offers itself in one of its finest lights; his general attitude throughout his life was taken and held in opposition to much in himself. He had no great endowment of natural courage; he was not born with the clinched fist of a reformer or a polemic; he was sensitive in the highest degree to human sympathy and was made for fellowship; but his thought led and kept him apart, and his path through life was for the most part solitary. His divergences were not great enough to call out denial or denunciation, but were sufficient to awaken suspicion. He was not impeached, but he was made to feel a mild, ill-defined ostracism; there were no blows and wounds, but there was a fretting irritation; no turning of the back, but a somewhat doubtful offering of the hand. This sort of treatment, which is the form persecution takes in these later ages, being restrained by law and public opinion from any other, calls for a finer and more spiritual courage than that demanded by the grosser forms.

His retirement from parish labor, brought about by the claims of private business and by a growing deafness, seems now a divine shaping of his life to the high end in store for him, but along a path not then easily traced. The close of the war found him in his native county, living in the ancestral home of his wife twelve miles distant from Montrose.

Greater seclusion could hardly have been found, but the appointments of his life were generous and appropriate. Most men in his circumstances would have drifted into politics or turned to money-making, but Dr. Mulford was not fitted for one and for the other he had no taste. The nature and force of his intellectual gifts in no way more clearly appear than in the life he now entered upon. So far as books, reading, and daily occupation were concerned, he might have been living in New Haven or Cambridge. I have never met a person the current of whose intellectual habit flowed in so steady and strong a stream as his. Nothing diverted or lessened it, or apparently added to it, being always at the full. No variation in his intellectual register could be discovered. Whether in the woods of Pennsylvania or in the streets of Cambridge, the same themes engaged his attention, and his sense of them was always about the same. No separation from men and books dulled him, nor could I discover that any contact with them greatly quickened him. The reservoir of his thought was within himself and sprang from fountains that seemed to be inexhaustible.

Dr. Mulford carried with him to Friendsville a purpose, conceived in college days, of writing upon political themes. He had read Aristotle and had been profoundly moved by his political wisdom. He early noticed the fact that the German theologians found themselves led to write on the constitution of society. His own theological conceptions from the first carried him into the same field. His mental cast was of such a character and so ample that it was simply impossible for him to keep away from such subjects. But these influences were as nothing compared with those of the civil war just closing. Here was a most weighty fact in history to be accounted for. A great, prosperous, Christian nation, one by every consideration of nature and self-interest, suddenly breaks itself in two and appeals to war to enforce the unnatural action. That such a thing should happen seemed to him to indicate a defective consciousness of itself in the nation. Slavery and sectional ambition and party heat were not enough to explain so mighty a revolt of the nation against itself; its sense of itself must be at fault.

Thus his mind worked on the problem, and hence those years of thought and writing and re-writing that produced "The Nation." His object was not simply to explain the civil war, but to teach the people the nature of the state and the grounds of their government. Hence his book bore the sub-title, "The Foundations of Civil Order and Political Life in the United States." His argument with himself was: If I can reveal to the people the nature of the nation so that they shall see how divine a thing it is, it will be forever sacred in their eyes. Such was the aim of this young scholar, conceived and entered upon before the smoke of battle had cleared away. He provided himself with all needful books,—leisure and a free mind were already provided; his theological conceptions formed a nourishing atmosphere for his purpose, and the fresh memory of the war keenly stirred his interest. Everything was favorable except the solitude in which he worked and the greater solitariness of the path he was opening through the tangle of history; for it may safely be said that if Dr. Mulford's conception of the nature of the nation is not new, it has never been so fully worked out, nor has it ever been presented with the illustration of a nation that reflected the conception; for never before in the course of history has there been a nation whose political order bore out the divine plan of a nation. While Dr. Mulford's conscious aim in "The Nation" was to unfold the lesson of the civil war, we now see that he was working on a larger plan. Society is now making the dangerous transition from the aristocratic to the democratic idea of government, and with the change there is danger lest that truth be lost which alone makes any government real and binding,—namely, that it is by the grace of God. Kings planted themselves on this truth, and hence had power and majesty. The pomp of courts is not the reflection of human pride, but of the divineness of government. In passing from one form to the other the insignia of power and majesty are largely dropped, and with them there is danger lest the conception of government as a divine thing be also given up and it come to be regarded, even as it already is by some schools of social science, as a mere matter of police, a negative check on crime, with the result of resolving society into nearly absolute individualism, the idea of humanity as a social fact lost, and progress reduced to a go-as-you-please scramble for the most that can be got, or to selfish combinations that turn society into a war between labor and capital — a condition already existing in part and sure to prevail unless it is checked by the conception of government as existing by the will of God and for righteousness, and as God's own instrument for blessing humanity — not an instrument merely, but a creatively ordained order, in which men must live if they would live at all. Dr. Mulford, whose work was always constructive and at heart conservative, saw the necessity of unfolding the truth that a democracy not only rests on the grace of God, but, beyond all other forms of government, is so grounded and must be so interpreted. Hence

his continual assertion that the nation is a moral organism and has a life of its own, with certain necessary institutions and characteristics working towards certain ends. Being an organism, its processes are necessary as in all organic bodies. Hence social science is possible, and hence also there is no occasion for or justification of the empiricism that so marks its history. If society is an organism, social science consists in finding out the laws of the organism and their methods and ends — a process the reverse of arbitrarily shaping society so as to get rid of certain evils and to secure certain good results. If society is a moral organism, its aim is righteousness and its action will be in freedom. His main thesis is that the nation is such a moral organism, that it transcends physical conditions, and finds the constituents of its life in freedom and law and in the conscious fulfillment of a vocation. He carries this thought through more than four hundred pages, with much apparent repetition but always with some advance of the argument, which is chiefly illustrated in the laws and institutions of the United States, but is abundantly reënforced by quotations from literature and history. The constant refrain from first to last is that the nation is not constituted in the necessary process of the physical world, but in the order of a moral world; the ties of the nation are the ties of humanity, and the life of the individual in the two is one life, and it is moral. Moral action is conditioned on freedom, which is the law or essence of the nation. He makes the analogy between the life of the individual and of the nation exact and imperative, but each working out its destiny in mutual dependence and along the same lines.

This theory is a repudiation of all social compact and police theories of government as something to be shaped by chance or apparent need. The outcome of such a line of thought, as we might suppose, is in the loftiest heights of religion,— the nation is divine; its vocation is righteousness; it lives in freedom; its laws are moral, and are like those over the individual; it exists in God. In short, Dr. Mulford, by a scientific examination and in the actual process of our own institutions and in the confirming testimony of the great thinkers, reaches the same conception of the nation as that of the Puritans. They leaped, or rather flew, to the height of their truth on the wings of spiritual sight; he reaches it by an examination of humanity and by an elaboration of details often as dry as the statute-book itself. He reaches it also by an exhaustive study of the nation in its antagonisms, as against the idea of confederacy and the empire and other arbitrary or tyrannical conceptions. He finds himself carried by his argument beyond the limits usually set about politics, even to the very throne of God, from which he does not hold back, but draws nigh and lays down the allegiance of the nation where it receives its life,— in no rhetorical or sentimental way, but with full logical necessity. The book closes in a strain matching at once the loftiest visions of the Apocalypse and the profoundest feeling of the country as it emerged from the war of sacrifice, finding each to be in accord with the other and one equally to be realized with the other.

It presents a conception of the nation never before so fully wrought out: it is a work done once and finally; its definitions of the nation cannot be varied more than the definitions of geometry; all future treatment of social science will be upon the foundations laid by him and along the lines which he pursued. He made that clear and logical connection between the social life of humanity and the kingdom of God which has always been felt to exist but which had not been put into scientific form. He showed that Christianity is the order of the world and that its laws are the laws of society,— truths long well understood and often asserted, but not before wrought into the details of a theory of social science. It is a book that could not have been written at an earlier period; it was inevitable that it should have been written when it was. Dr. Mulford simply transcribed the evolution — or rather, revelation — of society as he beheld it. The ideal of the nation had been unfolded on this continent; the war for the Union was the seal of its divineness. It was given to him to see this ideal and to connect it with the life of humanity as revealed in the Christ. He had that endowment of profound thought and mental grasp, that patience in research, that divisive glance which separated the real from the unreal, that rare gift of accurately detecting law, that moral sense which made him responsive to the moral and the divine, that sure conviction that God is not absent from the world but is a living order within it, and that loftiness of nature which kept the great facts of human society before him as vital and moving realities; — these qualities fitted and enabled him to fulfill the task set him by Providence.

The fault of the book is that of style, and may be simply indicated as lack of clearness. This does not reach to the thought, but has its origin in excessive pondering and so of penetrating farther and farther into the abstract forms of the subject, and also in some mannerisms caught from the Germans and reenforced by personal peculiarities. In dignity, majesty, and massiveness of expression, in occasional eloquence, it cannot well be sur-

passed. It is, with all its abstractness and far-awayness, still a most near and vital book, and bears as much trace of feeling and devotion as of thought. One lays it down querying whether one has been reading a book of politics or of theology, but with a dawning suspicion that they may possibly be one. This was exactly Dr. Mulford's position. The nation is divine; theology is realized in organized humanity; the laws and methods of each are the same and run indistinguishably into each other. Thus he says: "The morality of a people, and so also its politics, will always correspond to its actual theology, and will be but the sequence of that."

The influence of this book has been great but peculiar. It can hardly be said to be popular. Dr. Mulford had so great confidence in his thought, and such respect for the intelligence of the people, that he fancied its publication would influence the fall elections; but its effect upon the masses was about that of the Beatitudes upon a mob,— the exact truth needed, but not quite in moral range. It is a book for the leaders, and not for the rank and file. No one who legislates, or writes on political science, or speaks on social subjects can afford to pass it by; and one should hesitate long before one allows one's self to conceive of human society as having any other basis or end than that here indicated, for the book simply presents the life of the nation as included within Christianity. So ably is this done, and so firmly is political life linked to the work of the Christ, that there could be no better book of Evidences than this. The skeptic who doubts Christianity when looked at directly cannot fail to see in this picture of national life, which he cannot doubt, the full lineaments of essential Christianity. In a secondary way the influence of the book has been marked. Many statesmen have pondered its great truths and baptized their principles afresh in its divine spirit. The abler editors have caught its meaning and now interpret the nation under its conception. Its undertone may be heard in presidential messages and in the forms of legislation. It reënforces social reformers and guides them along safe and winning lines. It has helped to create a popular sentiment against those conceptions of society which are based on the hard analogies of physical science. But its chief office is to link the necessary life of the nation to the processes of Christianity, or to establish the identity of political action with Christian faith, or, in simpler words still, it presents the kingdom of God as coming in the order of human society.

This book was the product of long and wide study and much brooding and rewriting. Dr. Mulford fulfilled the Horatian maxim, and kept his work till the "ninth year" before giving it to the world. He was not insensible to the ambition of an author; still the book came from him like the message of a prophet, and almost as if without will of his own.

In 1880 Dr. Mulford removed to Cambridge, where he became a lecturer on theology in the Episcopal School. No other position was ever offered him in the ecclesiastical world, and the recognition of a theological degree was carefully withheld; for it must be stated that he early fell under that suspicion of "unsoundness" which blasts so much of fresh and independent thought in this country. Why this suspicion should have fastened on him, it is hard to tell, unless it was occasioned by a disposition to ask questions within theological precincts — a habit which is never unobserved nor forgiven. It may also have been due to his undisguised sympathy with Maurice, who had come into prominence through the Jelf controversy and awakened an interest if not a following in this country while Mulford was in college. That this suspicion followed him even to the last with its mild but real defamation, shutting off all but a grudging and half-hearted recognition, illustrates the degree of intelligence and charity which still mark our theological world. One may deny the multiplication table with impunity, but if one intimates that *eternal* may not be synonymous with *everlasting*, he is a heretic though he have all the graces of St. John; and when this suspicion once fastens on a man, musk is not so diffusive and persistent. While Dr. Mulford was conscious of the fact that he was suspected where he ought to have been understood, he seldom spoke of it, and was the farthest from courting such a reputation or meeting it in a bravado way; he was not keyed to such a spirit. He was no come-outer; the whole cast of his mind was profoundly conservative; there was in him nothing of the iconoclast; he was to the last fiber constructive. One searches in vain along his pages for denials except for the sake of definition; his sense of human society and of personal relation to it was such as to hold him off from eccentric thought and conduct; he was nearly devoid of those qualities which usually belong to heretics, yet he bore most unjustly that imputation. His appeal from it was not to the right of private opinion or merely to intelligence and reason, but to the consensus of the centuries. Hence at the close of "The Republic of God" he prints the Nicene creed,— as though he would say, "See, I have said nothing new, but only this"; and most significantly he adds the two dates, "A. D. 381–1881."

This book, like "The Nation," was born, as

it were, by an impulse of its own. He was no self-determining maker of books or collaborator with publishers, but finding himself with a message, he had no rest till it was spoken. The history of such a mind in its relation to the religious thought of the age is worth heeding, if we can get at it. It is now quite the custom to regard special thought or belief as a matter of pedigree; if one puts an emphasis upon his faith or shows a lack, it must be traced to some other mind, and so back to some great final name like Coleridge or Hegel or Calvin. But spiritual history cannot be so compassed; it may be self-originating. Some event in personal history, some peculiarity of mind, some obscure and remote influence may indeed cause a rift in the frame-work of belief through which it all flows out to be remolded in a form consonant with later knowledge. The origin of doubt, or denial, or question, or protest in matters of religion is often obscure and unknown even to self, and is quite as likely to spring out of depths within or from seeming accident as from what is called the spirit of the age. On my first serious interchange of thought with Dr. Mulford in 1856, I found him permeated with the influence of Maurice to a degree that suggested an absence of criticism, but I am now inclined to think that the main lines of his theology were fixed before the Jelf controversy made Maurice known here. In minds of the cast of Dr. Mulford's the reaction against Calvinism comes early and with power. Some features of his life in college are to be regarded in the light of a transition from one form of faith to another; there was a seeming indifference which was the mask of agonizing doubt. It is probable that he had mainly thought himself clear before he had opened a book of theology, and that his teachers then, as ever after, were the Bible, the masters in literature, and human life itself within and about him. But Maurice came to him like native air, the vast complement of his own immature thought, and he reveled in him without limit or criticism. He never wavered nor lessened in his almost boundless regard for Maurice, but he came to quote and name him less frequently. He may be regarded as very early ceasing to sit at the feet of his master and soon coming to walk by his side, and at last as having as long and stout a stride. Both are now beyond the reach of human comparison, and so I may say that in the last few years of his life his intellectual grasp seemed stronger and his vision clearer than that of his great teacher. He had not the saintliness of Maurice, nor did he trouble himself with such questions as subscription, which Maurice deemed important, nor did he enter upon so broad fields of study; but he thought subjects through which Maurice only touched, staid and toiled where Maurice simply alighted. Hence the two books that he produced cannot be matched by any in Maurice's voluminous collection. It is also true that the tie was not more that of theological agreement than of sympathy with the intellectual temper and feeling of Maurice, with his general characteristics and attitude quite as much as with his specific opinions. I do not intend to convey the impression that Dr. Mulford was not responsive to the religious thought of the age. On the contrary, he was keenly alive to what is called the modern spirit in theology; but his part in it was not that of following, but leading. Follow indeed he seems to have done; but for the same reason and in the same way that he did original work in politics, so he would have done in theology had the subject come to him as freshly. Had there been no Coleridge and Thomas Erskine and Maurice and Bushnell and Robertson, Mulford would have been a theologian of the same general character as now. His work on "The Nation" shows his ability to grasp a great theme in an original way; and the close alliance he discovered between political science and Christianity would have led him to substantially the same theological conceptions. Every page of "The Republic of God" may be read between the lines of "The Nation." It is sometimes said of him that he is vague, that he has no system and no formal logic; but it would be difficult to find an author whose years from first to last are linked together in such harmony, and whose positions on all subjects are joined by so rigid and consistent a logic.

While Dr. Mulford responded fully to the modern movement in theology, he was little affected by it as it appeared in New England. The protest made by him in Andover was total and fundamental. The strife in the always progressive theology of New England — and it was never more rapid in its onward movement than it was thirty years ago — was towards reasonableness and breadth, but it was without freedom. It must first be Calvinistic and then, if possible, in some way reasonable; it must be broad and free, but always under some overshadowing doctrine of divine sovereignty; it was always paying out cable to the same old anchor and interpreting the larger swing as a voyage. Hence it did not succeed in preventing, nor later in counteracting, the Unitarian defection. It beat a path for Methodism and Universalism. It grew more and more intellectual, but it never reached the end of its argument; and so, while protesting against rationalism, it became itself a system of mere reason and formal logic with some wire-like attachments of bib-

lical texts. Dr. Bushnell broke away from the orthodoxy of the day — made indifferent to him by his genius and doubly indifferent by insight and breadth of vision. Dr. Mulford, though profoundly admiring Dr. Bushnell, never fell into his habit of thought. It is very significant and revealing that Bushnell, with his superb rhetoric and spiritual insight and lofty freedom, made less appeal to the young Mulford than such an author as Thomas Erskine. The reason is that in one there was a subordination of the logical sense to the imagination, while the other struck straight to the heart of the Gospel with undivertible gaze. Dr. Bushnell often suggests the suspicion that he is trying to prove what he has already, by some other process, decided to be true; his way often lies through the air, and sometimes through the clouds. But Erskine and Maurice, whatever else may be said of them, were pitiless exegetes, with very slight regard for any systems or methods or conclusions beyond what they found in the revelation of God. Mulford is often spoken of, as these men were, as vague and fanciful; but these impressions are caught from surface features of his style. His strongest quality — and few men ever possessed it in a higher degree — is a relentless logic; but his logic is not that of dialectics.

The modern movement in theology may be said to have two main features,— rationality and breadth; it consists with knowledge and it is larger than any system. These features are conspicuously illustrated in "The Republic of God." It begins by affirming that the consciousness of God comes into the consciousness of man through experience. Here is the appeal to life — a keynote that sounds throughout the book. The experience of the individual, the family, and the nation in the life of humanity,— here is the revelation of God. This experience tends towards personality through freedom and morality, and so comes to a consciousness of God as personal and free and moral. As man becomes a person, he knows God as a person, and so comes into relations with God. Upon such a foundation — the denial and reverse of agnosticism and materialism — the author builds his fabric by a succession of statements, each one of which is the result of close reasoning, but is without its dialectic form. He is careful to show that personality does not involve limitation. The personality of man is grounded in the personality of God, and God is known through a realization of personality; as man knows himself he knows God, and so comes to a sense of freedom and morality and immortality. The most striking part of the book is that in which Dr. Mulford discusses the relations of Christianity to religion and philosophy, shocking his readers at first by his emphatic assertion that "the revelation of and in Christ is not a religion and it is not a philosophy," — regarding it as a universal or total under which these are specifics. Christianity is not a religion, but a revelation; it is not one of ten great religions, but is God revealed in the life of humanity. It is not a *cultus* nor a speculative system, but is the divine order of human society. The main part of the book is devoted to the revelation by Christ,— the central thought of which is Christ's perfect oneness with the Father, and also with humanity; the latter is personal and universal; the history of Christ in death and resurrection and ascension and in the Holy Spirit is the history of humanity; the work of the Spirit in the conviction of sin and of righteousness and of judgment is the continuous revelation of God in and by Christ in the life of humanity. This is not a far-away, a future, a here-and-there and now-and-then process, but is a present, continuous, and universal process. It is here that Dr. Mulford links the revelation in Christ to that sentiment of humanity now so prevalent, making the former inclusive of the latter. His treatment of eschatological subjects is under a conception of eternity as a term of absoluteness, and not of time; the eternal world is here and now, not there and thereafter. He makes no dogmatic assertions as to destiny, but leaves such themes under the general spirit, scope, and trend of the Gospel as a redemption of the world, and so enveloped in an atmosphere of hope, but with an absolute and eternal emphasis of condemnation upon sin.

If it were asked in what the power of this book consists, or what is its peculiarity, the answer would be that it is not marked so much by originality as by thoroughness and intensity of vision from a certain standpoint,— namely, the living God. His point of view gives him his vision and scope, and his fidelity to it is his power. The book seems to be dogmatic — an appearance that passes away when it is seen that the assertions are a succession of apprehensions or sights which when taken together form a self-supporting unity. As a whole, the book is the reverse of dogmatic and is profoundly scientific, presenting a view of theology in harmony with the human mind and dealing with the problems of life in a satisfactory way. It is like a look from the sun at the solar system, which so becomes a simple and self-explaining thing — the point of view rendering needless the long and intricate calculations necessary if the view be taken from the earth. As astronomy is a simple science to one who stands in the sun, so theology is a plain matter to one who stands beside God.

The larger synthesis which Dr. Mulford thus makes displaces smaller theories, and vindicates itself by its simplicity and large reasonableness. In other words, he sees his subject in "the totality of its relations." When a writer does this, we do not accuse him of dogmatism, nor ask him to prove a point; if he will mount on his wings and tell us what he sees, we will accept his report. Still, while Dr. Mulford appeared simply to announce his thought, his discovery of it was by a slow, severe, plodding process and by exact logical stages. He spoke as a seer, but he was first a patient and careful thinker and student. His sympathy and imagination were large and active, but they never so gilded a sophistry that it dazzled his judgment.

While "The Republic of God" is eminently a fair and correct interpretation of Christianity, we value more highly the atmosphere of the book, and find here its greatest power and originality. It is the utterance of a great mind and bears its stamp. It is lofty beyond the usual sense of the word. It is passionless as to earthly feeling, but it is keyed to the fervency of heaven. It is world-wide apart from all theological strife; it makes no recognition of parties or schools, but is taken up and possessed by the one thought of the revelation of God in and by Christ in the life of humanity. In form it has the loftiest dignity; it shows no strife or struggle of words after emphasis, but has the calm of absolute conviction. The thought runs along the borders of poetry and sentiment, and one step aside would lead into the world of prophetic ecstasy. Indeed, the scriptural key to his theological and political thought would be found in the Apocalypse,—a book to him of intense reality and present meaning. His style is not at first an easy one to read; it presupposes too much in the reader; it gives the last stages only of a process of thought, and requires one's assent to the whole; it is abstract and without emphasis, but it has a charm fully realized only when his pages were read by himself. Then the rhythmic form of the sentences appeared,—falling from his deep and, as it were, distant voice like the breaking of waves on a sandy beach.

I would thus, if possible, indicate the spirit in which this man wrote upon theology. If a hard dialectic; if casting down other systems and setting up one's own; if a deft dove-tailing of doctrines and texts; if outcry for a school or zeal for orthodoxy are the signs of a theologian,—then he was not one. But if unfolding the relation of Christianity to the world is the real work of a theologian, he was one. That he possessed a glorious imagination; that he was awed almost into silence before eternal and infinite truth; that his thought trembled with deepest emotion and was always ready to burst into adoring ecstasy; that his sense of humanity ensphered and colored the whole action of his mind,—these qualities serve to make him that sort of theologian now needed, and still more to be needed as Christianity is applied in the redemption of society and comes to its own fullness. Dr. Mulford might be styled a *social* theologian. Theology has chiefly played about the individual; it needs no prophet to see that its field is to be humanity in a collective sense. It is henceforth to interpret the truth that "God so loved the *world* that he gave his only begotten Son." Hence his work in some sense is prophetic in its nature; it provides for the questions which are now rising into the consciousness of the age and pressing to the front. It is the gravest mistake to regard him as the exponent of certain minor questions of destiny; his indifference to the current discussions of such questions was so great as to shut them out from even private conversation. Still, he allowed no inhuman theology or narrow exegesis to blur the glory and the reality of Redemption.

The true field of his life and activity is in the future. As the nation unfolds its life and discloses the divine plan on which it is built, it will be seen that this young scholar traced its lines and revealed its secret. And so also as humanity moves on in fulfillment of the redemptive purpose of God, it will be seen that the same hand has traced its mighty movement,—if not with absolute correctness, yet so near that he may be counted among the prophets and teachers sent from God. His character and his work have been well set down in the lines which Whittier addressed to his memory:

Unnoted as the setting of a star
He passed; and sect and party scarcely knew
When from their midst a sage and seer withdrew
To fitter audience, where the great dead are
In God's republic of the heart and mind,
Leaving no purer, nobler soul behind.

T. T. Munger.

MARSE PHIL.

WELL, well, you is Marse Phil's son — yo' favor 'm might'ly too; —
We wuz like brothers, we wuz — me an' him;
You tried to fool d' ole nigger, but, marster, 't would n' do —
Not ef you is done growed so tall an' slim.

Hi! Lord! I 'se knowed you, honey, sence long befo' you born —
I mean, I 'se knowed de fambly dat long;
An' dee 's all white-folks, marster, dee hands white as young corn;
An' ef dee want to — could n' do no wrong.

You' gran'pa buyed my mammy at Gen'l Nelson's sale;
An' Deely she come out de same estate;
An' blood is jes like pra'r is, hit tain' gwine nuver fail —
Hit 's sutney gwine to come out soon or late.

When I was born, you' gran'pa gi' me to young Marse Phil,
To be his body-servent like, you know;
An' we growed up togerr, like two stalks in one hill,
Bofe tasslin' an' den shootin' in de row.

Marse Phil was born in harves', an' I dat Christmas-come,
My mammy nussed bofe on we de same time;
No matter what one got, suh, de urr one sho git some,
We wuz two fibe-cent pieces in one dime.

We cotch ole hyahs togerr, an' 'possums, him an' me;
We fished dat mill-pawn over night an' day,
Rid horses to de water, treed coons up de same tree;
An' when you see one, turr warn' fur away.

When Marse Phil went to college, 't wuz, "Sam — Sam 's got to go"—
Ole marster say, "Dat boy 's a fool 'bout Sam."
Ole Mistis jes say, "Dear, Phil wants him." An', you know,
Dat *Dear* hit use' to sooth' him like a lamb.

So we all went to college, way down to Williamsbu'g,
But 't warn' much larnin' out o' books we got;
Dem urrs warn' no mo' to him 'n a' ole wormy lug —
Yes, suh, we wuz de ve'y top de pot.

An' ef he did n't study dem Latins an' sich things
He wuz de popularitest all de while;
De ladies use' to call him a' "angel widout wings,"
An' when he come I lay, dee use' to smile!

You see he wuz ole marster's on'y chile — besides,
He had a body-servent at he will;
An' wid dat big plantation dee 'd all like to be brides,
Dat is, ef dee could have de groom Marse Phil.

'T wuz dyah he meet young mistis, — she is you' ma, of co'se!
I disremembers now which mont' it wuz;
One night he come, an', says he, "Sam, I need new clo'es";
An' I says, "Marse Phil, yes, suh, so you does."

Well, suh, he made dat tailor meck ev'ything bran' new;
He would n' wear one stitch he had on han'—
Jes th'owed 'em in de chip-box, an' says, "Sam, dem 's for you"—
Marse Phil, I tell you, wuz a gentleman!

So Marse Phil cotes de mistis, an' Sam he cotes de maid—
We al'ays sot we traps upon one parf;
An' when ole marster hear we bofe wuz gwine, he say'd,
"All right; we 'll have to kill de fatted calf."

An' dat wuz what dee did, suh; de Prodigal was home;—
Dee put de ring an' robe upon you' ma;
Den you wuz born, young marster, an' den de storm hit come—
An' den de darkness settled from afar.

De storm hit comed, an' wrenchted de branches from de tree,
De war,—you' pa,—he 's sleep dyah on de hill;
An' dough I know, young marster, de war hit sot me free,
I jes says, "Yes, but tell me, whar 's Marse Phil?"

—"A dollar"— thankee, marster, you sutney is his son;
His ve'y spi't-an'-image, I declar'!
What say, young marster? Yes, suh, you say, it 's "*fibe*, not one"—
You favors, honey, bofe you' Pa an' Ma!

ABRAHAM LINCOLN: A HISTORY.*

THE NATIONAL UPRISING.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE NATIONAL UPRISING.

JOHN A. ANDREW, GOVERNOR OF MASSACHUSETTS (1861–66).

THE guns of the Sumter bombardment awoke the country from the political nightmare which had so long tormented and paralyzed it. The lion of the North was fully roused. Betrayed, insulted, outraged, the free States arose as with a cry of pain and vengeance. War sermons from pulpits; war speeches in every assemblage; tenders of troops; offers of money; military proclamations and orders in every newspaper; every city radiant with bunting; every village-green a mustering-ground; war appropriations in every legislature and in every city or town council; war preparations in every public or private workshop; gun-casting in the great foundries; cartridge-making in the principal towns; camps and drills in the fields; parades, drums, flags, and bayonets in the streets; knitting, bandage-rolling, and lint-scraping in nearly every household. Before the lapse of forty-eight hours a Massachusetts regiment, armed and equipped, was on its way to Washington; within the space of a month the energy and intelligence of the country were almost completely turned from the industries of peace to the activities of war. The very children abandoned their old-time school-games, and played only at soldiering.

From every governor of every free State to whom the President's proclamation and the requisition of the Secretary of War were addressed, most gratifying and loyal answers were promptly returned. They not only promised to obey the call and furnish the regiments asked for, but in their replies reflected the unanimity with which their people rallied to the defense of the assaulted Union. "The governor's call was published on yesterday, and he has already received the tender of forty companies,"† said Illinois. "Our citizens throughout the State will respond with great enthusiasm to any call for sustaining the Government against the designs of the conspirators,"‡ said Vermont. "Ten days ago we had two parties in this State; to-day we have but one, and that one is for the Constitution and Union unconditionally,"§ said Iowa. The war spirit rose above all anticipation, and the offer of volunteers went far beyond the call. "We have 6000 men in camp here and will have 8000 men by to-morrow night. . . . I have also made a tender of six additional regiments to which I have received no answer. I shall put the six additional regiments in camp and under discipline, and hold them subject to the Government's order at least for a time."‖ Such was the greeting from Indiana. A no less inspiring report was made by her sister State. "I find

that I have already accepted and have in camp, or ready to march instantly to it, a larger force than the thirteen regiments named as the contingent of Ohio under the late requisition of the President. Indeed, without seriously repressing the ardor of the people, I can hardly stop short of twenty regiments."* The telegrams and letters here quoted from are fair samples of the language and spirit, the promptness and devotion, with which the people of the North answered the President's official summons. Especial mention deserves to be made of the untiring zeal and labors of the various executives of the free States in organizing and equipping troops, which earned for them the popular and honorable title of the "war governors."

If we would catch a glimpse of the dramatic forms in which popular fervor manifested itself in the President's own State, we need but read how the town of Quincy, Illinois, sent away her first company:

> Yesterday, Sunday, Captain Prentiss left with his command for Springfield. At 12 M. all the pastors of the city, with their congregations, met the gallant captain and his loyal company in Washington Square, to give them a parting benediction. Six or seven thousand persons were present. A banner was presented, a hymn was sung, prayer was made, and the soldiers addressed by one of the clergymen and myself. We then marched with them to the depot, where the "Star Spangled Banner" was sung, many thousands joining in the chorus. The scene altogether was the most solemn and impressive I have ever witnessed, and showed unmistakably how intensely the fires of patriotism are burning in the hearts of our people.†

In the Gulf States the revolutionary excitement rose to a similar height, but with contrary sentiment. All Union feeling and utterance instantly vanished; and, overawed by a terrorism which now found its culmination, no one dared breathe a thought or scarcely entertain a hope for the old flag. The so-called Government of the Confederate States, finally convinced that it must at length confront actual war, made such haste as it could to put an army in the field, manifesting meanwhile an outward gayety at the prospect which its members could hardly have felt at heart. Montgomery telegrams stated that the cabinet of the Confederate States read President Lincoln's proclamation "amid bursts of laughter."‡ Mr. A. H. Stephens was reported as saying in an Atlanta speech that it would require 75 times 75,000 men to intimidate the South. In addition to the 21,000 volunteers conditionally asked for on April 8, the rebel Secretary of War notified the governors of the seven cotton-States that 32,000 more must be immediately got ready to take the field,§ and also asked that the forts and military posts in their limits be formally turned over to the control of the Montgomery authorities.‖ Arkansas and Tennessee not yet being members of the Confederacy, permission was asked of their executives to plant batteries to blockade the Mississippi.¶ Spare guns from the captured Charleston forts were sent South, and extraordinary efforts were made to concentrate an army at Pensacola for the reduction of Fort Pickens.

It was at this time (April 17) that Jefferson Davis issued a proclamation, inviting applications for letters of marque and reprisal, under which privateers were offered the opportunity to roam the high seas and ravage the commerce of the United States "under the seal of these Confederate States." The final hope of the rebel leaders was in cotton and free trade; and they believed that privateering was the easy stepping-stone to European intervention. The reasoning was plausible, and the time not ill-chosen; but the proclamation found itself confronted by the prompt precautionary act of the United States Government. Two days later (April 19) President Lincoln issued a counter-proclamation, setting on foot a blockade of the rebel ports "in pursuance of the laws of the United States and of the laws of nations," and declaring that offenders under the pretended letters of marque would be held amenable to the laws against piracy.

Thus sixteen States in the North and seven States in the South stood opposed in the attitude and preparation of war. Between these two extremes of sentiment lay the debatable land of the border slave-States, the greater portion of their citizens tormented with anxiety, with doubt, with their affections evenly balanced between the Union on one hand and slavery on the other; with ties of consanguinity permeating alike the North and the South; with the horrible realization that in the impending conflict they were between the upper and the nether millstones. To a certain extent the governors of these States had hitherto professed to share the irresolution of their people. Openly they had still expostulated with the cotton-States against precipitate disunion, and urged instead that all the slave States should join in a convention and demand constitutional guarantees from the North. All this, however, was largely a mere pretext, because

SOME WAR GOVERNORS.

they very well knew that the extreme demands which they formulated would not be granted. Secretly, most of them were in the revolutionary plot; and when, by the assault on Sumter and President Lincoln's call for troops, they were compelled to take sides, all save two immediately gave their voice and help more or less actively in aid of rebellion.

This course they began by refusing the regiments called for under the President's proclamation. "Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States," answered Governor Magoffin. "I can be no party to this wicked violation of the laws of the country, and to this war upon the liberties of a free people. You can get no troops from North Carolina." So ran the response from Governor Ellis. "The people of this commonwealth are freemen, not slaves, and will defend to the last extremity their honor, lives, and property against Northern mendacity and usurpation," was the reply from Governor Rector of Arkansas. "In such unholy crusade no gallant son of Tennessee will ever draw his sword," wrote Governor Harris. "Your requisition, in my judgment, is illegal, unconstitutional, and revolutionary in its object, inhuman and diabolical, and cannot be complied with," said Governor Jackson of Missouri.

Chief among the plotting border-State executives was Governor Letcher of Virginia. A former chapter has set forth the drift of that State towards revolution under his leadership and inspiration. The apparent Union majority in the Virginia convention had somewhat restrained and baffled him and his coadjutors; but now they adroitly turned the fresh war excitement to their own advantage. The Virginia Unionists, like those of the other border States, had illogically aided secession by clamoring for the unconditional evacuation of Sumter and other forts. Now that the Government and the North resolved to repel force by force, the ground necessarily sank from under them. They were overwhelmed with arguments and reproaches. One or two vainly essayed to stem the tide. But when Anderson's flag went down even their measured and conditional patriotism withered in Richmond like Jonah's gourd. There was nothing more but brass-bands, meetings, war speeches, and torchlight processions. The Virginia commissioners reported Lincoln's answer to the convention without comment, and shrinking Unionists admitted that "if the President meant subjugation of the South, Virginia had but one course to pursue." Governor Letcher did not need any stronger hint. With a dramatic affectation of incredulity and deliberation, to impress not only public opinion, but especially the wavering, dissolving majority, he waited a day before telegraphing his refusal to furnish troops — repeating the staple phrase about "subjugation." Then, in the face of his own avowed project to capture Fort Monroe, and with the assaulting guns of Beauregard still ringing in his ears, he replied to Cameron, "You have chosen to inaugurate civil war."*

Meanwhile, the fever heat of the populace communicated itself to the convention. An outside "States Rights" assemblage of prominent Virginia politicians, which thronged into Richmond at this juncture, added its not inconsiderable tribute of pressure to the sweeping tide of treason. Under such impulses the convention went into secret session on Wednesday, April 17, and by a vote of 88 to 55 passed an ordinance of secession — or, as they softly phrased it, "An ordinance to repeal the ratification of the Constitution of the United States." On the same day Governor Letcher signed a proclamation announcing the dissolution of the Union and the existence of the rebel Provisional Government, and calling on all the armed regiments and companies of volunteers in the State to hold themselves in readiness for orders. Nor did his zeal confine itself to paper edicts. Under his instructions, doubtless matured and prepared in advance, seizures of the custom-house and Government buildings in Richmond, of a private powder depot in Lynchburg, and of a number of steamers in the James River were hurriedly made, and military movements set on foot to capture the United States arsenal at Harper's Ferry and the United States navy yard at Norfolk.

Of the two remaining border slave-States, Delaware lay in such an isolated geographical position, and had withal so few slaves within her limits, that she was practically a part of the North, though still dominated in her local politics by pro-slavery influence.† Allied to the South rather by tradition than by present interest, her executive took refuge in a course of inaction. He replied by saying that the laws of Delaware gave him no authority to comply with the requisition of the Secretary of War, and that the organized volunteer companies of the State might at their option tender their services to the United States;‡ and to this effect he issued his official proclama-

* Letcher to Cameron, April 16, 1861. War Records.

† It would seem from the following that Delaware was not altogether free from the taint of rebellion:

"I sent to New Castle a regiment with which I design seizing the arms of four companies of secessionists now drilling in that place and Wilmington."— Patterson to Townsend, May 27, 1861. War Records.

‡ Burton to Cameron, April 25, 1861. War Records.

tion.* The people took him at his word, and by their own action bore a patriotic and honorable part in the dangers and achievements of the Union army.

Of more immediate and vital importance, however, than that of any other border slave-State, was the course of Maryland in this crisis. Between that State and Virginia lay the District of Columbia, originally ten miles square of Federal territory, containing the capital, the Government, and the public archives. In her chief city, Baltimore, centered three of the great railroad routes by which troops must approach Washington. It was a piece of exceptional good fortune that the governor of Maryland was a friend of the Union, though hardly of that unflinching fearlessness needed in revolutionary emergencies. Whatever of hesitancy or vacillation he sometimes gave way to resulted from a constitutional timidity rather than from a want of patriotism; and, with brief exceptions, to be more fully narrated, he was active and energetic in behalf of the Government. The population of the State was divided by a sharp antagonism, the Unionists having the larger numbers, the secessionists the greater persistence and daring. The city of Baltimore was so far corrupted by treasonable influences that Wigfall had established a successful recruiting office there for the rebel armies.† As yet, disunion was working secretly; but this for the present increased rather than diminished its effectiveness.

Like the other border-State executives, Governor Hicks had urged concession, compromise, peace, and joint border-State action to maintain the Union. In this, while his colleagues for the greater part merely used such talk to cover their meditated treachery, he was entirely sincere and patriotic. When Lincoln's call for troops reached him, he had no thought of refusing or resisting, but nevertheless hurried over to Washington to deprecate civil war, and to ask that Maryland soldiers should not be sent to subjugate the South.‡ Since the President had never entertained any purpose of "subjugation," he readily promised that the Maryland regiments should be employed to defend Maryland itself and the Federal district and capital. The governor thereupon wrote to the Secretary of War: "The condition of affairs in this State at this time requires that arms shall be placed in the hands of true men and loyal to the United States Government alone," and requested arms "for arming four regiments of militia for the service of the United States and the Federal Government."§ Other prominent Marylanders were already combining for demonstrative action to sustain the Government. A congressional election in the State was near at hand. On the day of the President's proclamation Henry Winter Davis announced himself, in a Baltimore evening paper, as a candidate for Congress "upon the basis of the unconditional maintenance of the Union." But the official announcements and the exciting rumors with which the newspapers were filled had also stirred the disunion elements of Maryland into unwonted activity, and the pressure of sentiment hostile to Federal authority was quickly brought to bear on Governor Hicks, and developed the timid and hesitating qualities of his character. He issued his proclamation April 18, containing, among many sage counsels in behalf of quiet and peace, two paragraphs doubtless meant by him for good, but which were well calculated to furnish the disunionists hope and encouragement:

> I assure the people that no troops will be sent from Maryland, unless it may be for the defense of the national capital. . . . The people of the State will in a short time have the opportunity afforded them, in a special election for members of the Congress of the United States, to express their devotion to the Union, or their desire to see it broken up. ‖

With this outline view of the political condition of the country at large, and especially of the border States of Virginia and Maryland, let us follow events at the Federal capital as recorded in the daily reports of General Scott to the President. On April 15, the day on which Lincoln issued his first call for 75,000 troops, the general says, in his report No. 13:

> I have but little of special interest to report to-day, except that Colonel Smith, the commander of the Department of Washington, like myself, thinks our means of defense, with vigilance, are sufficient to hold this city till reënforcements arrive. I have telegraphed the commander at Harper's Ferry armory to say whether he can station, to advantage, for the defense of that establishment, additional recruits from Carlisle. The ground about the armory is very contracted and rocky.¶

General Scott's daily report, No. 14, April 16, then proceeds:

> For the President. He has no doubt been informally made acquainted with the reply of the officer commanding at Harper's Ferry, yesterday, viz.: that he wants no reënforcement. Nevertheless, as soon as the capital, the railroad to the Delaware at Wilmington, and Fort Monroe are made secure, my next object of attention will be the security of Harper's Ferry — proposing, in the mean time, or rather suggesting that the spare marines from the navy yards of Philadelphia, Brooklyn, and Boston be promptly sent to

¶ Unpublished MS.

the Gosport navy yard. This relief may serve, by compelling the secessionists to enlarge their preparations, to give us time to send a regiment of volunteers to that important point, in advance of any formidable attack upon it. With the authority of the Secretary of War we are engaged in mustering into the service eight additional companies of District volunteers. These, I think, place the capital a little ahead of impending dangers, and we will maintain, at least, that advantage, till by the arrival (in a week) of regulars and abundant volunteers our relative advantage will, I trust, be more than doubled.*

General Scott's daily report, No. 15, April 17, 1861:

I repeat in writing some details which I had the honor to submit verbally to the President this forenoon. Three or four regiments from Massachusetts (believed to be the first ready under the recent call) may be expected (three of them) to arrive here, and (one of them) at Fort Monroe in two or three days. One of the three may, I think, be safely spared for Harper's Ferry, if the danger there (and I shall know to-morrow) shall seem imminent. Captain Kingsbury, a most capable officer of the Ordnance Department, goes up this afternoon for that purpose, and to act a few days as superintendent; that is, till a new appointment (of a civilian) can be made. Two of the Massachusetts regiments are needed here; one of them I shall endeavor to intercept at Baltimore and direct it to Harper's Ferry. As soon as one of the four reaches Fort Monroe, it perhaps may be safe to detach thence for the Gosport Navy Yard two or three companies of regulars to assist in the defense of that establishment. By to-morrow, or certainly the next day, we shall have Colonel Delafield here, an excellent engineer, to send to Gosport (with a letter from the Secretary of the Navy giving the necessary authority) to devise, in conjunction with the naval commander there, a plan of defense. Colonel Delafield will take instructions to call for the two or three companies of regulars as mentioned above. Excepting the reënforcement of marines suggested yesterday, and until the arrival of more volunteers, I know not what else can be done for the security of the Gosport Navy Yard. To-night all the important avenues leading into Washington shall be well guarded.*

General Scott's daily report, No. 16, April 18, 1861, shows how the undefined yet thickening dangers made themselves felt at headquarters:

For the President. I am (placed between many fires, Fort Monroe, Harper's Ferry, Gosport Navy Yard, etc., etc.) much embarrassed by the non-arrival of troops. Monday, the 15th instant, Senator Wilson had the quota of Massachusetts doubled, and on the ground of being entirely ready (as I understood) got permission that it should be at once pushed (farthest) to the South. Though equal to any volunteers in the world, the preference of being in the advance must have been given on that ground. In reply to Governor Andrew's telegram, I said (Tuesday night, the 16th) "Send first regiment which is ready by rail here. The second by rail or sea, as you prefer, to Fort Monroe." (I had but an hour before pointed out the route via Baltimore and the Chesapeake.) When I sent those telegrams (late in the night) I did not know that the War Department had already telegraphed the governor for one of his regiments to take a fast steamer to Fort Monroe and to send the other three here by rail.

Two and a half o'clock P. M. I have not heard anything further respecting the Massachusetts quota. At this instant the War Department has a telegram from Philadelphia saying that "The Massachusetts troops are here this afternoon. Leave to-morrow (Friday) morning early." Also another telegram to this effect: "Tell General Cameron [we] think that troops must go through from here to Washington, by day, in numbers of about 2000 at a time, so as to be ready to meet any emergency on the way." The Philadelphia [dispatch] does not say whether three or four regiments are there. I hope but three, and that the fourth will be to-night in Fort Monroe.

Last night I received a telegram from Major-General Sandford (of the city of New York) saying that "Under the orders of the governor, the 7th regiment (a crack corps) is ready to report to me. How shall it be sent?" I instantly replied, by rail, and added, "Telegraph me the hour of departure." I have as yet heard nothing further from Gen. S.

In respect to Harper's Ferry and the Gosport Navy Yard, both of which are in great peril, I can do nothing before the arrival of troops, beyond the instructions given this morning to send the third regiment that might arrive at Baltimore to Harper's Ferry — the first and second to continue on to Washington.

(Here a report reaches me that the railroad bridge over the Gunpowder, 28 miles beyond Baltimore, has been burned. †)

Colonel Delafield, whom I intended to send to Fort Monroe and the Gosport Navy Yard, has not arrived. If he comes to-night I shall send him to-morrow, hoping that he will find a Massachusetts regiment in position.

If land batteries should be planted on the Potomac to cut off our water communication, we must send an expedition and capture them.*

The current demoralization of politics in the country had infected the army and the navy; deadened the energy of Anderson, misdirected the zeal of Adams, caused the dishonor of Twiggs; had struck high and low — in New Orleans as in Charleston, in Texas as in Washington, carrying off now a paymaster or a lieutenant, now the quartermaster-general and the adjutant-general of the army. Among these victims of the States Rights heresy was yet another individual destined to a melancholy prominence in the rebellion, whom a pitiless fate called to the maintenance of a principle and a policy, not only of itself false and monstrous, but by him so recognized and acknowledged. This was Robert E. Lee, a West Point graduate, an accomplished and experienced soldier, frequently recognized and promoted, the captor of John Brown at Harper's Ferry, and recently (March 16, 1861) made colonel of the First Cavalry by the Lincoln administration; of fine presence, ripe judgment, and mature manhood, being then about two years older than President Lincoln. Lee was a favorite of Scott: under the call for troops the General-in-Chief at once selected him in his own mind as the most capable and promising officer in the service to

* Unpublished MS.

† This rumor proved incorrect. Such an occurrence, however, took place two days later, as we shall see.

become the principal commander in the field; and of this intention he spoke at the time to many without reserve, having no misgiving as to his loyalty.

Scott's confidence proved to be sadly misplaced. Repeated resignations and defections had very naturally engendered in the minds of President and Cabinet a distrust of every officer of Southern birth. Lincoln therefore requested F. P. Blair, senior, an intimate friend, to ascertain Lee's feelings and intentions. On the 18th of April, the third day after the President's call for troops, the day after Virginia's secret secession ordinance, and the day before the Baltimore riot, Mr. Blair invited Lee to an interview, informed him of the promotion and duties to which he was soon likely to be called, and thus unofficially offered him the command of the Union army. A flat contradiction exists as to the character of Lee's answer. Cameron, then Secretary of War, says he accepted the offer.* Montgomery Blair, then Postmaster-General, says he was undecided what he would do.† Both these gentlemen apparently derived their information from the elder Blair. On the other hand, Lee himself asserts that he declined the proposition, because, "though opposed to secession and deprecating war, I could take no part in an invasion of the Southern States."‡ He further explains his motive to have been an unwillingness to "take part against my native State," or to "raise my hand against my relatives, my children, my home."§ But in his interview with Blair he also affirmed that secession was anarchy; that if he owned the whole four million slaves of the South he would sacrifice them all to the Union; and he appears to have substantially repeated the sentiment written to his son a few weeks before, as follows:

> Secession is nothing but revolution. The framers of our Constitution never exhausted so much labor, wisdom, and forbearance in its formation, and surrounded it with so many guards and securities, if it was intended to be broken by every member of the confederacy at will. It was intended for "Perpetual Union," so expressed in the preamble, and for the establishment of a government, not a compact, which can only be dissolved by revolution, or the consent of all the people in convention assembled. It is idle to talk of secession. Anarchy would have been established, and not a government, by Washington, Hamilton, Jefferson, Madison, and the other patriots of the Revolution.‖

Under a liberal interpretation, Lee's personal denial must be accepted; but the times, the circumstances, his qualifying declarations, and the strong statements of Cameron and Blair clearly reveal his hesitation and indecision. After his interview with Blair, Lee sought an interview with Scott, where the topics which filled men's hearts and occupied men's lips — Union, secession, Virginia, subjugation, duty and honor, defection and treason — were once more, we may be quite sure, thoroughly discussed. It is morally certain that Scott, also a Virginian, gave Lee a lesson in patriotism; but he caught no generous emulation from the voice and example of his great chief. From Scott's presence Lee seems to have retired to his home and family at Arlington, to wrestle with the haunting shadows of duty. Pregnant news came to him, thick and fast. The secession of Virginia was verified in Washington that same evening. The next evening the Massachusetts 6th marched in mingled pride and sorrow to the Capitol, having an immortal record of service to their country. Here were new and important elements to influence his decision. Virginia seceded, Maryland in revolt, Washington threatened, Sumter lost, the border States defiant, the Confederate States arming, and uttering a half-official threat that the rebel flag should float over the Capitol by the 1st of May. If the walls of Arlington heard secret or open conferences with conspirators from Washington, or conspirators from Richmond,

* General Lee called on a gentleman who had my entire confidence, and intimated that he would like to have the command of the army. He assured that gentleman, who was a man in the confidence of the Administration, of his entire loyalty, and his devotion to the interests of the Administration and of the country. I consulted with General Scott, and General Scott approved of placing him at the head of the army. The place was offered to him unofficially with my approbation, and with the approbation of General Scott. It was accepted by him verbally, with the promise that he would go into Virginia and settle his business, and then come back to take command.—[Hon. Simon Cameron, debate in U. S. Senate, Feb. 19, 1868.]

† General Lee said to my father when he was sounded by him, at the request of President Lincoln, about taking command of our army against the rebellion, then hanging upon the decision of the Virginia convention, "Mr. Blair, I look upon secession as anarchy. If I owned four millions of slaves in the South, I would sacrifice them all to the Union; but how can I draw my sword upon Virginia, my native State?" He could not determine then; said he would consult with his friend General Scott, and went on the same day to Richmond, probably to arbitrate difficulties; and we see the result.—[Hon. Montgomery Blair to Bryant, "National Intelligencer," August 9, 1866.]

‡ I never intimated to any one that I desired the command of the United States army, nor did I ever have a conversation but with one gentleman, Mr. Francis Preston Blair, on the subject, which was at his invitation, and, as I understood, at the instance of President Lincoln. After listening to his remarks, I declined the offer he made me, to take command of the army that was to be brought into the field, stating, as candidly and as courteously as I could, that, though opposed to secession and deprecating war, I could take no part in an invasion of the Southern States.—[Lee to Reverdy Johnson, Feb. 25, 1868. Jones, "Life of Lee," p. 141.]

§ Lee to his sister, April 20, 1861. Ibid., p. 139.

‖ Lee to his son, Jan. 23, 1861. Ibid., p. 137.

no record of them has come to light; but Saturday, April 20, Lee wrote to his old commander:

GENERAL: Since my interview with you on the 18th instant, I have felt that I ought not longer to retain my commission in the army. I therefore tender my resignation, which I request you will recommend for acceptance. It would have been presented at once, but for the struggle it has cost me to separate myself from a service to which I have devoted all the best years of my life and all the ability I possessed. . . . Save in defense of my native State, I never desire again to draw my sword.

Lee was at the time, in military phrase, "on leave of absence"; and without waiting to hear whether his resignation had been accepted, or even recommended for acceptance, as he himself had urged — without awaiting further orders, or permission, or discharge, or dismissal from service, on the 22d of April he was, by the governor and the convention of Virginia, appointed to, and on the 23d, in Richmond, publicly invested with, chief command of the Virginia Confederate forces under the secret secession ordinance and Letcher's revolutionary proclamation, with all his military obligations to the United States intact and uncanceled; thus rendering himself guilty of desertion and treason.* No danger whatever menaced his "native State" — the President had positively disclaimed all intention to invade it. In due course of events we find him not alone defending his native State, to which he owed nothing, but seeking to destroy the Union, which had done everything for him; opposing war by promoting "revolution," and redressing grievances by endeavoring to establish "anarchy."

In instructive contrast with the weakness and defects of Lee, we have the honorable conduct and example of General Scott. He, too, was a Virginian who loved his native State. He, too, was opposed to secession and deprecated war. He, too, as officer, commander, diplomatist, and statesman, had learned from books and from men the principles and practice of loyalty, and perhaps better than any American exemplar was competent to interpret a soldier's oath, a soldier's duty, a soldier's honor. His sympathies were at least as earnestly with the South as with the North. To avoid bloodshed he had declared his individual willingness to say to the seceded States, "Wayward sisters, depart in peace." But underneath pride of home, affection of kindred, and horror of war, on the solid substratum of consistency and character, lay his recognition of the principle of government, his real, not simulated, veneration of the Constitution, his acceptance of the binding force of law, his unswerving fidelity to his oath, his undying devotion to his flag. The conspirators had long hoped for the assistance of his great name and authority. They filled the air with rumors of his disaffection. Since its abrupt secession ordinance, the Virginia convention had sat with closed doors; but through a responsible witness, we know that on the day on which Lee wrote his resignation (April 20) a committee of that convention called on General Scott to tempt him with the offer of the command of the Virginia forces. Senator Stephen A. Douglas, on his way home to arouse the great West in aid of Lincoln's proclamation, told the circumstance in graphic language to excited listeners:

I have been asked whether there is any truth in the rumor that General Scott was about to retire from the American army. It is almost profanity to ask that question. I saw him only last Saturday. He was at his desk, pen in hand, writing his orders for the defense and safety of the American capital. Walking down the street I met a distinguished gentleman, a member of the Virginia convention, whom I knew personally, and had a few minutes' conversation with him. He told me that he had just had an interview with Lieutenant-General Scott; that he was chairman of the committee appointed by the Virginia convention to wait upon General Scott and tender him the command of the forces of Virginia in this struggle. General Scott received him kindly, listened to him patiently, and then said to him, "I have served my country under the flag of the Union for more than fifty years, and as long as God permits me to live I will defend that flag with my sword, even if my own native State assails it."

Other eye-witnesses report that the rebuke contained an additional feature of unusual impressiveness. When the spokesman of the committee, a man of venerable years and presence, had vaguely and cautiously so far unfolded the glittering lure of wealth and honor which Virginia held out that the general could catch the drift of the humiliating

* The Army Regulations of 1857, having the authority and force of law, contained the following provisions:

"24. No officer will be considered out of service on the tender of his resignation, until it shall have been duly accepted by the proper authority.

. . . . . .

"28. In time of war, or with an army in the field, resignations shall take effect within thirty days from the date of the order of acceptance."

For the offense thus defined by the Regulations of 1857, the Act of August 5, 1861, provided specific punishment, as follows:

"SEC. 2. And be it further enacted, That any commissioned officer of the army, navy, or marine corps, who, having tendered his resignation, shall, prior to due notice of acceptance of the same by the proper authority, and, without leave, quit his post or proper duties with the intent to remain permanently absent therefrom, shall be registered as a deserter, and punished as such."

If it be contended that Lee's offense was committed prior to this last statute, the answer is that his transgression was a much graver one, for he not only absented himself with intent to remain, but immediately entered into hostile service, an act punishable under the broad principles of general military law.

proposal, Scott held up his hand and said emphatically, "Friend Robertson, go no farther. It is best that we part here before you compel me to resent a mortal insult."* That same afternoon Scott also telegraphed to Senator Crittenden, in response to an anxious inquiry based on the false rumors set afloat about him, "I have not changed. I have not thought of changing. Always a Union man." And in that unshaken mood of sublime patriotism he lived and died, beloved of his country, and honored by the world.

The Virginia secession ordinance, though secretly adopted on the 17th, became quickly known to the people of Richmond. It was immediately announced to the States Rights convention in session in another hall, and Governor Letcher, Senator Mason, ex-President Tyler, and ex-Governor Wise, from the convention, soon appeared there and glorified the event with speeches — the latter lamenting the "blindness which had prevented Virginia from seizing Washington before the Republican hordes got possession of it." Nevertheless, an effort was still made to prevent the news from going North.† But that evening some of the unconditional Union delegates from West Virginia — then yet a part of the Old Dominion — deemed it prudent to shake the Richmond dust from their feet and secure their personal safety by prompt departure. Delegates Carlisle and Dent were in Washington on the 18th, and in all probability informed Mr. Seward and the President how irretrievably Virginia was committed to rebellion, even if Governor Letcher's reply and proclamation had left any doubt on that point. Ominous rumors came from Harper's Ferry, and also (as we have seen) a premature report of the burning of the railroad bridges beyond Baltimore. On that day, too, a detachment of 460 Pennsylvania volunteers, "almost entirely without arms," and a company of regulars from Minnesota had been hurriedly forwarded from Harrisburg to Washington.‡ The unruly elements of Baltimore were already in commotion, the cars containing these men being in their passage through that city cheered by the crowd at some points and hooted and stoned at others, though no casualties occurred.§ Noting all these rumors and acts of hostility, Secretary Cameron telegraphed to Governor Hicks that "the President is informed that threats are made and measures taken by unlawful combinations of misguided citizens of Maryland to prevent by force the transit of United States troops across Maryland on their way, pursuant to orders, for the defense of this capital" — and strongly intimated to the governor that the loyal authorities of Maryland ought to put them down.‖

The events of the week — the daily mustering of volunteers, the preparations for defense, the telegrams from the various State capitals — had thrown Washington into a military fever. All the social sympathies of the permanent population of Washington, and especially of its suburbs, Georgetown and Alexandria, were strongly Southern; but the personal interests of its inhabitants and property holders were necessarily bound up with the course and fate of the existing Government. The Union manifestations were for the moment dominant, and volunteers came forward readily, even somewhat enthusiastically, to fill up the District quota. The city was also yet full of office-seekers from various States north and west. Cassius M. Clay of Kentucky, and Senator-elect James H. Lane of Kansas, both men of mark and courage, after an evening or two of flaming speech-making, organized them into respectively the "Clay Battalion" and the "Frontier Guards." These companies, of from thirty to sixty men each, were what might be called irregular volunteers — recruits from East and West, of all ranks in the great army of politics, who came forward to shoulder a musket without enlistment, commission, paymaster, or commissariat. By this time the danger had become so threatening that every scrap and show of military force was welcome and really useful. The Government furnished them arms, and gave them in charge of Major (afterwards General) David Hunter, who, on the evening of the 18th, stationed Clay's company in Willard's Hall, with orders to patrol the streets, and took Lane's Frontier Guards to the post of honor at the Executive Mansion. At dusk they filed into the famous East Room, clad in citizens' dress, but carrying very new, untarnished muskets, and following Lane, brandishing a sword of irreproachable brightness. Here ammunition-boxes were opened and cartridges dealt out; and after spending the evening in an exceedingly rudimentary squad drill, under the light of the gorgeous gas chandeliers, they disposed themselves in picturesque bivouac on the brilliant-patterned velvet carpet — perhaps the most luxurious cantonment which American soldiers have ever enjoyed. Their motley composition, their too transparent motive, their anomalous surroundings, the extraordinary emergency, their mingled awkwardness and earnestness,

‖ Cameron to Hicks, April 18, 1861. War Records.

rendered the scene a medley of bizarre contradictions,— a blending of masquerade and tragedy, of grim humor and realistic seriousness,— a combination of Don Quixote and Daniel Boone altogether impossible to describe. However, their special guardianship of the East Room lasted only for a night or two, until more suitable quarters could be extemporized; and for many days they lent an important moral influence in repressing and overawing the lurking treason still present in a considerable fraction among the Washington inhabitants.

The graphic pen of Bayard Taylor, who happened to be in Washington on this same afternoon of April 18, has left us a sharp and strong historical picture of the city at the time:

> Everywhere around me the flag of the Union was waving; troops were patrolling the streets, and yonder the watchful Marshal Lamon was galloping on the second horse he had tired out since morning. Everybody seemed to be wide awake, alert, and active. On reaching Willard's Hotel, the scene changed. The passages were so crammed that I had some difficulty in reaching the office. To my surprise, half the faces were Southern — especially Virginian — and the conversation was carried on in whispers. Presently I was hailed by several Northern friends, and heard their loud, outspoken expressions of attachment to the Union. The whisperers near us became silent and listened attentively. I was earnestly questioned as to whether the delay of the mails was occasioned by rails being torn up or bridges destroyed. Every one seemed to suspect that a treasonable demonstration had taken place in or near Baltimore. The most exciting rumors were afloat. Harper's Ferry was taken — Virginia had secretly seceded — Wise was marching on Washington — always winding up with the impatient question, "Why don't the troops come on?"

From Willard's Bayard Taylor went to the State Department, and afterwards to make a call on Lincoln. He continues:

> I need not describe the President's personal appearance, for nearly everybody has seen him. Honesty, firmness, and sound common sense were the characteristics with which personally he impressed me. I was very glad to notice the tough, enduring vitality of his temperament — he needs it all. He does not appear to be worn or ill, as I have heard, but, on the contrary, very fresh and vigorous. His demeanor was thoroughly calm and collected, and he spoke of the present crisis with that solemn, earnest composure which is the sign of a soul not easily perturbed. I came away from his presence cheered and encouraged.

BALTIMORE.

BALTIMORE, in 1861, was the great gateway of military approach from the Northern States to Washington. Lying at the head of the magnificent Chesapeake Bay, impossible to close by forts, it was also the common center and terminus of three principal railroad routes — respectively, from the Ohio River and the west; from Harrisburg and the lake region northward; from Philadelphia, covering New York and New England. With the South in rebellion, Washington had but two established routes of transportation left her — the Potomac River, a fine water highway, but flowing through hostile territory, and liable to be quickly obstructed by land batteries at narrow points; and a single line of railway, a distance of forty miles to Baltimore, subject entirely to the will or caprice of that great city of over two hundred thousand inhabitants, somewhat notorious for disorderly tendencies. It is therefore no marvel that the authorities, both State and Federal, watched the temper of her people with anxious solicitude. Two days after the President's call, Cameron asked the president of the great Pennsylvania road to take charge of the military transportation,* who, going personally to Baltimore, reported the secession feeling very strong, and expressed fears lest the secession of Virginia might carry Maryland with her.†

The Massachusetts men were the first under arms. Governor Andrew of that State had quietly organized and equipped a few regiments of militia in view of possible emergencies. The President's proclamation was published in the Boston morning papers on Monday, April 15; on Tuesday forenoon the 6th Massachusetts began mustering on Boston Common; on Wednesday evening, April 17, the completed regiment, with new rifles and filled cartridge-boxes, with benedictions on the regimental flag and amid the silent blessings of the multitude, embarked in railroad cars. As they sped southward they witnessed the manifestation of the popular uprising in the New England towns, the literally packed streets and the demonstrations of honor in New York, and the crowning enthusiasm in Philadelphia, where they arrived on the evening of the 18th. Here Colonel Jones, commanding the regiment, found General Robert Patterson organizing the Pennsylvania militia, and received from the military and railroad officers warning of apprehended danger in Baltimore; but, in obedience to what he deemed imperative orders from his governor, he determined to go forward — only delaying his progress that his somewhat wearied men might bivouac until after midnight, which arrangement would also permit them to pass through Baltimore by day. Before daylight the men were roused, and the train started from Philadelphia. Reaching the Susquehanna River, it overtook a corps of Pennsylvania volunteers — Small's brigade, over a thousand men — which, by

* Cameron to Thomson, April 17, 1861. War Records.

† Thomson to Cameron, April 17, 1861. War Records.

some neglect or disobedience of orders, had started for Washington without uniforms or arms. This corps was also attached to the train, which thus numbered more than thirty cars. The railroad officials, to guard against accident or treachery, sent a pilot engine ahead, and had arranged an interchange of cipher messages with their Baltimore office, from which, at succeeding stations as the train safely approached the city, repeated assurances were received that all was quiet, and no trouble need be feared. Nevertheless, with due soldierly caution, Colonel Jones made deliberate preparation; his command loaded and capped their rifles, while he went personally through the cars and issued the following explicit order:

> The regiment will march through Baltimore in column of sections, arms at will. You will undoubtedly be insulted, abused, and perhaps assaulted, to which you must pay no attention whatever, but march with your faces square to the front, and pay no attention to the mob, even if they throw stones, bricks, or other missiles; but if you are fired upon, and any one of you is hit, your officers will order you to fire. Do not fire into any promiscuous crowds; but select any man whom you may see aiming at you, and be sure you drop him.

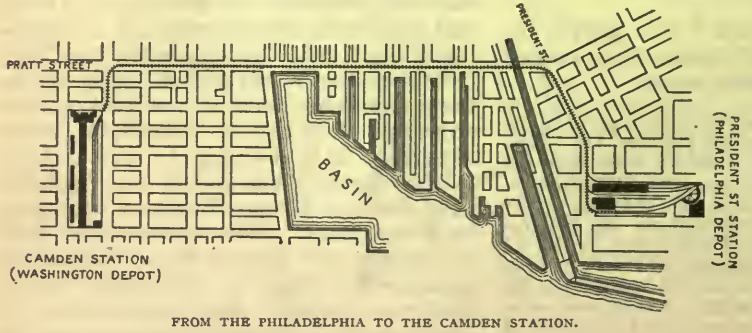
This order clearly contemplated a march through the city by the regiment in a body, which by some misunderstanding or change of plan on the part of the railroad managers was not carried out.

The train arrived at the Philadelphia or President street station, and the troops were again to take cars for Washington at the latter station. Accordingly, it was at this point that danger was apprehended, and protection of the police had been asked. The Baltimore authorities assert that, though they only received about half an hour's notice, they responded promptly, and the mayor, chief of police, and a considerable force were on hand and rendered effective service in protecting the transfer of the troops at the Washington station.

When, therefore, the train first halted at the Philadelphia or President street station on its arrival, Colonel Jones, instead of being notified to form his regiment for a march, as he expected, was astonished to find the first few cars drawn rapidly and separately through the streets by horses, which had been attached before he was well aware of what was going on. His own and seven or eight succeeding cars thus made the transit safely, and arriving at the Washington station the troops began to change cars. Here an immense crowd was gathered, and demonstrations of hostility immediately began. Says a newspaper account:

> The scene, while the troops were changing cars, was indescribably fearful. Taunts clothed in the most outrageous language were hurled at them by the panting crowd, who, almost breathless with running, pressed up to the car windows, presenting knives and revolvers, and cursed up into the faces of the soldiers. The police were thrown in between the cars, and forming a barrier, the troops changed cars, many of them cocking their muskets as they stepped on the platform.*

The peaceful passage of the cars through the streets was not, however, of long duration. When the ninth† car, containing the seventh company, issued from the Philadelphia depot, it was greeted with riotous insults by the crowd which had, during the unavoidable delay, rapidly gathered; and while passing over a portion of Pratt street, where certain street repairs were going on, the mob gathered up a pile of loose paving-stones which they hurled at the car, smashing in the windows and blinds, and adding to this method of assault an occasional shot from a pistol or a gun. Says a trustworthy account:



FROM THE PHILADELPHIA TO THE CAMDEN STATION.

> The men were very anxious to fire on their assailants, but Major Watson forbade them. One or two soldiers

Washington or Camden station. The two depots were perhaps a mile apart, the track connecting them running for the greater distance straight westward along Pratt street, excepting a short bend to the north at the beginning, and a corresponding short bend to the south near the end. It seems at the last moment to have been decided to follow the ordinary method of hauling the loaded cars from the Philadelphia depot to the Washington depot with horses, and to make the troops change cars at the

* "Baltimore Sun," April 20, 1861.

† There are discrepancies between the different accounts.

were wounded by paving-stones and bricks, and at length one man's thumb was shot, when, holding up the wounded hand to the major, he asked leave to fire in return. Orders were then given to lie on the bottom of the car and load, and rising to fire from the windows at will. These orders were promptly obeyed.*

Three times during the passage obstructions were laid on the track, requiring the car to be stopped till they could be removed. Under such repeated attacks this car reached the Washington depot. It had been a fight at long range, and in the shelter of the car no death had resulted to the troops. It is apparently at this juncture that the various authorities at the Washington depot became aware of the serious character of the riot. Colonel Jones was informed by the railroad superintendent that cars could no longer be hauled across the city, and he hurriedly wrote an order to the missing companies to join him by a forced march.*

Mayor Brown started immediately on foot for the scene of the disturbance. Marshal Kane, Chief of Police, devolved his command on a subordinate, and, collecting as many policemen as could be spared, also hastened eastward to join the mayor.

Exciting scenes were meanwhile enacted about the Philadelphia depot. The car of the seventh company having escaped their clutches as described, the rioters bethought themselves of permanently breaking communication between the two stations. Certain street repairs were at the time in progress along a portion of Pratt street. They seized the laborers' picks and shovels and tried to pry up the rails, but without success. Then they piled loose stones, and at another place a load of sand, on the track. Elsewhere they laid on the rails a number of heavy anchors dragged from a neighboring wharf. At still another place, they partly tore up a bridge. While the remaining four companies were waiting their turn to proceed, two of the railroad men informed them of the condition of affairs. Colonel Jones's order had failed to reach them; but the officers consulted together and, placing Captain Follansbee in command, resolved to go forward. The companies filed out of their cars, formed deliberately on the sidewalk, and, calling a policeman to lead the way, started on the perilous march. Almost at the very outset they encountered a hastily improvised procession, following a secession flag and marching directly towards them, which refused to yield the way. In an instant there were crowding, hustling, confusion, groans, hooting, cries of "nigger thieves," and a struggle for the capture and possession of the rebel flag. The soldiers pushed doggedly ahead, and, thinking to pass the crowd, broke into a double-quick. This encouraged the rioters, who took it as a sign of fear. They redoubled their yells, called them cowards, and followed them with showers of clubs and stones. After two or three blocks of such progress the soldiers reached the torn-up bridge. "We had to play 'Scotch-hop' to get over it," says Captain Follansbee. "As soon as we had crossed the bridge, they commenced to fire upon us from the street and houses. I ordered the men to protect themselves, and then we returned their fire and laid a great many of them away." At this point Mayor Brown met the advancing column. He writes:

> An attack on them had begun, and the noise and excitement were great. I ran at once to the head of the column, some persons in the crowd shouting as I approached, "Here comes the mayor." I shook hands with the officer in command, saying, as I did so, "I am the mayor of Baltimore." I then placed myself at his side and marched with him as far as the head of Light street wharf, doing what I could by my presence and personal efforts to allay the tumult. The mob grew bolder and the attack became more violent. Various persons were killed and wounded on both sides. The troops had some time previously begun to fire in self-defense; and the firing, as the attack increased in violence, became more general.†

Captain Follansbee confirms this statement:

> The mayor of the city met us almost half-way. He said there would be no trouble, and that we could get through, and kept with me for about a hundred yards; but the stones and balls whistled too near his head, and he left. . . . That was the last I saw of him.*‡

The mayor's separation from the troops was probably caused by an important diversion which occurred at this point in their progress. Marshal Kane, hurrying to the rescue at the head of about fifty policemen, met the struggling and fighting column of soldiers, with Captain Follansbee and Mayor Brown at their head; and, taking in the situation and remedy at a glance, executed a movement which was evidently the turning-point in the affray. By his order the line of policemen opened their ranks, and, having allowed the column of troops to pass through, immediately closed again behind them, forming a firm line across the street. The marshal directed his men "to draw their revolvers and shoot down any man who dared to break their line."§ This opposed an effectual barrier to the farther advance of this portion of the mob, which the police continued to hold in check, while the column of

† Mayor's message, July 11, 1861. War Records.

‡ In his volume, "Baltimore and the 19th of April, 1861," published in 1887, ex-Mayor Brown says (p. 51): "The statement in Colonel Jones's report that I seized a musket and killed one of the rioters is entirely incorrect."

§ Report of Marshal Kane, May 3, 1861. "Congressional Globe," July 18, 1861.

troops pursued its way to the Washington depot with only one or two further attacks. Arrived there, the four companies were hurried into cars. The trouble, however, was not yet over. The immense crowd gathered here manifested a dangerous turbulence. Their savage temper had only grown during the delay, the receipt of news and rumors, and by the final arrival of the harried rear-guard. More threatening than all, the crowd repeatedly rushed ahead of the standing train and piled heavy stones, telegraph poles, and other objects on the track, which the police as often succeeded in removing. Colonel Jones and his officers had their men well under control; they kept them still, the blinds of the cars well drawn down, and thus prevented any unnecessary challenge or irritation to the mob. All being at length ready, the train moved slowly and cautiously away; but as it did so, a discharge of muskets blazed from a window of the rear car, and a prominent citizen of Baltimore fell dying to the ground. The bystanders declared the act was without provocation; the soldiers and their officers maintained that it was in response to a volley of stones or a shot. The total casualties of the day were never accurately ascertained or published. The soldiers lost 4 men killed and 36 wounded; the citizens perhaps two or three times that number. The single death which thus occurred as the train moved out, however, created more subsequent excitement in Baltimore than the scores who were slain and wounded in the mêlée on Pratt street.

Marshal Kane, having stopped the progress of the mob along Pratt street, had marched his policemen back to the Washington depot, where he learned that the train was gone; and, supposing that all danger was at last over, dismissed his force and was proceeding to his office when he was notified that there were yet other troops at the Philadelphia depot. These proved to be the regimental band of the Massachusetts men, and Small's Pennsylvania brigade, all unarmed. It is probable that the great length of the train had compelled the halting, at a considerable distance from the depot, of the cars in which they were, and that they had remained in ignorance of the occurrences described. When Marshal Kane arrived there, he found that the members of the band were already driven from their car and dispersed, and that the Pennsylvania men were just coming into the depot. "Some of these troops," he says, "commenced jumping from the train just as I got there, and were immediately set upon by an infuriated populace. I fought hard for their protection; at first almost alone, but soon had the assistance of a part of my force who hurried from the neighboring beats."* Meanwhile the railroad officials at Philadelphia were hastily consulted by telegraph, and orders soon came to have the remainder of the train and troops withdrawn from Baltimore without unloading, and carried back on the railroad towards Philadelphia as far as the Susquehanna River. The dispersed members of the band and other stragglers for the most part found sympathy, shelter, and concealment among humane Baltimoreans not engaged in the riot, until rescued and sent home by the police.†

All this rioting occurred in the forenoon between 10 and 12 o'clock. During the remainder of the day mob feeling, if not mob violence, controlled the city of Baltimore. The military companies were ordered out, and a mass meeting called to meet at 4 o'clock in Monument Square. At the appointed time a huge gathering assembled: the speakers, for the greater part, delivered strong anti-coercion speeches; instead of the national banner, a flag was displayed bearing the arms of Maryland. In substance, the occasion was a great secession meeting. Mayor Brown and Governor Hicks were called to the rostrum and made professions and promises in the prevailing tone, the governor declaring that he bowed in submission to the people. "I am a Marylander," said he, "and I love my State, and I love the Union; but I will suffer my right arm to be torn from my body before I will raise it to strike a sister State."‡ How completely the city was in revolt is told by Governor Hicks in a dispatch sent on the following day to Secretary Cameron:

> Up to yesterday there appeared promise, but the outburst came; the turbulent passions of the riotous element prevailed; fear for safety became reality; what they had endeavored to conceal, but what was known to us, was no longer concealed, but made manifest; the rebellious element had the control of things. We were arranging and organizing forces to protect the city and

* Report of Marshal Kane, May 3, 1861.

† In response to a request from Governor Andrew, of Massachusetts, the mayor and authorities of Baltimore took immediate steps to care for the wounded and to pay respect to the dead of the Massachusetts regiment, a courtesy which was properly acknowledged. One year later the legislature of Maryland appropriated $7000 for the families of Massachusetts soldiers killed or disabled by wounds in the riot.

‡ "Baltimore Sun," April 20, 1861. The "Baltimore American" gives a slightly different version of the governor's remarks. It is probable that both reports are somewhat inaccurate:

> The Union was now apparently broken, but he trusted that its reconstruction may yet be brought about [cries of "Never"]. Resuming, he said: "But if otherwise, I bow in submission to the mandate of the people. If submit we must, in God's name let us submit in peace; for I would rather this right arm should be separated from my body than raise it against a brother."—[Speech of Governor Hicks, April 19, 1861, as reported in the "Baltimore American" of April 20.]

preserve order, but want of organization and of arms prevented success. They had arms; they had the principal part of the organized military forces with them; and for us to have made the effort, under the circumstances, would have had the effect to aid the disorderly element. They took possession of the armories, have the arms and ammunition, and I therefore think it prudent to decline (for the present) responding affirmatively to the requisition made by President Lincoln for four regiments of infantry.*

This temporary bending before the storm of riot by the powerless authorities might have been pardoned under the emergency; but now they proceeded to stultify their courageous conduct of the forenoon by an act, if not of treason, at least of cowardice. At midnight Mayor Brown, Marshal Kane, and the Board of Police, and, as these assert, also Governor Hicks, consulted together, and deliberately ordered the destruction of the railroad bridges between Baltimore and both Harrisburg and Philadelphia.† Two strong parties of men were sent out, one of them headed by Marshal Kane, who before daylight burned the bridges at Melvale, Relay House, and Cockeysville on the Harrisburg road, and over the Bush and Gunpowder rivers and Harris Creek on the Philadelphia road. Governor Hicks soon after totally denied his consent to, or complicity in, the business, while the others insist that he was equally responsible with themselves.‡ The fact remained that the authorities had, by an act of war, completely cut off the national capital from railroad communication with the North.

The authors of this destruction attempt to justify their conduct by the excuse that they were informed of the approach of another large body of Northern troops, and they feared that under prevailing excitement the troops would wreak vengeance on the city for that day's attack on the Massachusetts 6th. They however cite nothing in the form of such a threat reaching them before their order, except a telegram from the railroad officer at Philadelphia, "that it was impossible to prevent these troops from going through Baltimore; the Union men must be aroused to resist the mob." Angry and ugly threats did soon come from the North; but not till after the burning, and largely excited by that act itself. It is impossible to resist the conviction that Mayor Brown and Marshal Kane were secessionists at heart; and while they were too sagacious to have prompted or encouraged the mob of April 19, they were quite ready to join in any sweeping popular movement to precipitate Maryland into rebellion, even if they were not actually then in a secret conspiracy to that end. While on his way to burn the bridges, Marshal Kane sent a telegram to a kindred spirit, which leaves no doubt of his then treasonable intent:

Thank you for your offer. Bring your men in by the first train, and we will arrange with the railroad afterwards. Streets red with Maryland blood. Send expresses over the mountains and valleys of Maryland and Virginia for the riflemen to come without delay. Fresh hordes will be down on us to-morrow (the 20th). We will fight them, and whip them or die.§

General Scott's report and Cameron's dispatch of the 18th, quoted in the last chapter, show the already serious apprehensions of the Administration about the condition of Maryland, and particularly Baltimore. The rumors and news received on the 19th made the outlook still worse. It was definitely ascertained in the forenoon that Harper's Ferry had been so threatened by the Virginia rebels as to induce Lieutenant Jones to burn the arsenal and armory and retreat into Maryland with his little handful of soldiers. Other news convinced the authorities that there was no reasonable prospect of saving the Gosport navy yard at Norfolk, Virginia; and that night the war steamer *Pawnee* was started on her mission, with discretionary authority to destroy that immense establishment with its millions' worth of Government property. Shortly after noon there came, both by telegraph and messenger, the dreaded dispatch from Governor Hicks and Mayor Brown:

A collision between the citizens and the Northern troops has taken place in Baltimore, and the excitement is fearful. Send no more troops here. We will endeavor to prevent all bloodshed. A public meeting of citizens has been called, and the troops of the State and the city have been called out to preserve the peace. They will be enough.

Carefully scrutinized, this dispatch was found to be, like an ancient oracle, capable of a twofold meaning. The President and part of the Cabinet supposed Hicks meant to say he needed no troops to put down the riot. On the other hand, General Scott and Mr. Seward, usually so hopeful, thought they could read between the lines that it was desired no more troops should be passed through Baltimore. The arrival of the assaulted Massachusetts 6th about 5 o'clock added nothing to the current information except to demonstrate the seriousness of the day's occurrences. A crowd of five thousand people received the

regiment at the depot with enthusiastic cheers of welcome, and escorted its march to the rotunda of the Capitol, whence it went to quarters in the Senate Chamber. After tea that evening special messengers came from Governor Hicks to say that the Pikesville arsenal, eight miles from Baltimore, having been abandoned by the army officer in charge, the governor had caused it to be occupied and protected for the United States. The President showed them the dispatch; but they could give no explanation beyond reiterating the governor's and their own loyalty. The true interpretation soon came, though in a roundabout way. The riot had thrown all the railroad companies into a panic. Hicks and Brown had advised, and the Board of Police ordered, all troops en route to be sent back towards Pennsylvania.* To its compliance with this advice and order the Baltimore and Ohio road added a refusal to undertake any further transportation;† and to this refusal the Philadelphia and Wilmington road had also given its assent.‡ A few hours' reflection showed the Philadelphia railroad officials the suicidal nature of such refusal, not only to the Government, but especially to their own business, and they now telegraphed to Washington to know what was to be done — laying the blame rather more heavily than he deserved at the door of Governor Hicks. At Washington the question was pretty fully debated by the President, Cabinet, and General Scott, and a sharp dispatch in cipher sent back to Philadelphia:

> Governor Hicks has neither right nor authority to stop troops coming to Washington. Send them on, prepared to fight their way through, if necessary.§

This decision having been reached, the President and various officials sought their rest for the night, not by any means assured of a tranquil sleep. The possible contingencies of the hour are briefly expressed in a memorandum made on the night of the Baltimore riot by an occupant of the Executive Mansion:

> We are expecting more troops here by way of Baltimore, but are also fearful that the secessionists may at any hour cut the telegraph wires, tear up the railroad track, or burn the bridges, and thus prevent their reaching us and cut off all communication. We have rumors that 1500 men are under arms at Alexandria, seven miles below here, supposed to have hostile designs against this city; and an additional report that a vessel was late this evening seen landing men on the Maryland side of the river. All these things indicate that if we are to be attacked at all soon, it will happen to-night. On the other hand, we have some four to five thousand men under arms in the city, and a very vigilant watch out in all the probable directions of approach. The public buildings are strongly guarded; the Secretary of War will remain all night in his Department, and General Scott is within convenient reach. I do not think any force could be brought against the city to-night which our men could not easily repel.‖

Soon after midnight a special train brought a committee of Baltimoreans. The authorities of that unhappy city were, first by the riot, and afterwards by the public meeting and the popular demonstrations in the streets, worked into a high state of excitement. About an hour before their determination and order to burn the bridges, Mayor Brown wrote a request to the President to stop the transit of troops, saying, "It is my solemn duty to inform you that it is not possible for more soldiers to pass through Baltimore, unless they fight their way at every step."¶ Being by this time in one of his yielding moods, Governor Hicks concurred in the request by a written note.** It was too late to see the President when the committee bearing the letter arrived; they therefore applied to Cameron at the War Department, who refused flatly to entertain their request, turning over on his sofa for another nap. From the chief clerk they learned that no troops were then actually on the way, and with this bit of relief they contented themselves till daylight.

Next morning (April 20) the President had just finished his breakfast when General Scott's carriage stopped under the White House portico. The general was suffering from gout, which made it painful for him to mount to the Executive chamber; and to save him this exertion, Lincoln came down to exchange a word with him at the door. At the foot of the staircase the President encountered the Baltimore committee, read their brief letter, and took them at once to General Scott's carriage, where they rehearsed their errand, eloquently portraying the danger — nay, the impossibility — of bringing soldiers through Baltimore; whereupon the general, looking solely to the extreme urgency of getting troops to the capital, and perceiving no present advantage in fighting a battle in that city, suggested promptly, "March them around" — the change from the dispatch sent the previous evening to Philadelphia being purely one of expediency under an alleged state of facts. The committee returned with the President to his office, where he wrote them a reply to Governor Hicks's and Mayor Brown's letters:

> For the future troops must be brought here, but I make no point of bringing them through Baltimore. Without any military knowledge myself, of course I

must leave details to General Scott. He hastily said this morning, in the presence of these gentlemen, "March them around Baltimore, and not through it." I sincerely hope the general, on fuller reflection, will consider this practical and proper, and that you will not object to it. By this a collision of the people of Baltimore with the troops will be avoided, unless they go out of the way to seek it.*

This arrangement was, on being communicated to the governor, duly accepted by him. He wrote:

I hoped they would send no more troops through Maryland; but as we have no right to demand that, I am glad no more are to be sent through Baltimore.†

"Give an inch, he'll take an ell." The proverb is especially applicable in times of revolution, when men act under impulse, and not on judgment. President Lincoln did not lose sight of this human weakness while dealing with the Baltimore committee. When about to write his letter for them, he said half playfully, "If I grant you this concession, that no troops shall pass through the city, you will be back here to-morrow demanding that none shall be marched around it."‡ They protested to the contrary; but the President's words were literally verified. When the committee returned to Baltimore, the alleged popular dread of invasion had already changed to extensive preparation for meditated but not yet avowed insurrection. So far from being thankful for their success in changing the march of Union troops, the incensed secessionists upbraided the committee for consenting to allow them to pollute the soil of Maryland. Two members of the legislature were sent back to the President§ to formulate new demands. This, with the governor's withdrawal of his offer to furnish the four regiments, already cited, and the scattering sensational telegrams received, induced Lincoln, on the afternoon of Saturday, April 20, to telegraph to Governor Hicks and Mayor Brown to come by special train, as he desired to consult them "relative to preserving the peace of Maryland." The governor had gone to Annapolis, and after the interchange of various messages, the mayor himself was asked to come.

So soon as the Baltimore route was closed by the riot of the 19th of April, the railroad authorities‖ at Philadelphia had with commendable energy devised and prepared a new

MAP OF THE APPROACHES TO WASHINGTON.

route—by rail to Perryville on the Susquehanna; thence by water on Chesapeake Bay to Annapolis; thence by railroad, or, if that were destroyed, common wagon-roads to Washington. This they suggested to General Scott on the 20th, and he ordered it adopted the same day. That same forenoon Hon. David Wilmot, making his way northward from Washington as best he could, wrote back from Baltimore to the General-in-Chief, confirming the rumor that some of the bridges of the Philadelphia road had been destroyed, the telegraph interrupted, and rapid communication with the North cut off; and added, "Troops coming on your road [from Harrisburg to Baltimore] could leave it about three miles from Baltimore, and by a march of five miles reach the Washington road some two

§ Scharf, "History of Maryland."
‖ Great credit is due to Mr. S. M. Felton, then president of the Philadelphia, Wilmington, and Baltimore Railroad, the same who devised the precautions at the time of Mr. Lincoln's night journey through Baltimore. Mr. Felton, heartily seconded by J. Edgar Thomson, then president of the Pennsylvania Railroad, by intimate knowledge and control of facilities, railroad cars, and steam vessels, was able at once to order such new combinations on an extensive scale as were rendered necessary by the Baltimore riot and the requirements of the large numbers of troops hurrying to the defense of Washington. For this patriotic service the Secretary of War sent his official acknowledgment to these gentlemen, including also Mr. E. S. Sanford, president of the American Telegraph Company.

and a half miles from the city."* It was with some such idea that General Scott had first proposed the march around Baltimore; and strengthened by Wilmot's suggestion, he on the following day wrote to General Patterson, who held command in Philadelphia, that this Harrisburg and Baltimore route was perhaps the most important military avenue to Washington, closing with the injunction, "Give your attention in part to this line."† The Washington authorities were, however, not long in finding that this assumption was a vital error. General Scott wrote:

> In my letter to you yesterday, I intended that the railroad via Harrisburg and York towards Baltimore was more important, perhaps, for reënforcing Washington, than that from Philadelphia to Perryville, etc. That supposition was founded on the Secretary's belief that the distance from a certain point on the Harrisburg railroad to the Relay House, eight miles this side of Baltimore, was but some seven miles by a good wagon road, whereas there is no good common road between the two railroads of less than thirty miles. This fact renders the railroad from Harrisburg to Baltimore of no value to us here, without a force of perhaps ten thousand men to hold Baltimore, to protect the rails and bridges near it.‡

Bearing in mind this change of view, let us return to the affairs of Baltimore. Through various delays it happened that Mayor Brown did not reach Washington until Sunday morning, April 21, in obedience to Lincoln's request of the previous afternoon. The mayor brought with him two members of the first Baltimore committee, and besides these a prominent and active secessionist. Through all of Friday night and Saturday the secession feeling steadily rose in Baltimore; the city, to the full extent of its ability, made ready to resist the further passage of troops by force; and to a considerable degree the same excitement, and the same resolve and preparation, spread like wild-fire to the country villages of Maryland. Naturally, Mayor Brown and his committee-men, while they carefully kept secret their own official bridge-burning, did not undercolor their description of this insurrectionary mood of their people. The discussion was participated in by General Scott and the Cabinet, and took a wide range, lasting all Sunday forenoon (April 21). The President insisted that troops must come. General Scott explained that they could only come in one of three ways: First, through Baltimore; second, by the Harrisburg route and a march round Baltimore; and third, by the Annapolis route. The last two routes were therefore agreed upon.

General Scott said if the people would permit them to go by either of these routes uninterruptedly, the necessity of their passing through Baltimore would be avoided. If the people would not permit them a transit thus remote from the city, they must select their own best route, and, if need be, fight their way through Baltimore, a result which he earnestly deprecated. The President expressed his hearty concurrence in the desire to avoid a collision, and said that no more troops should be ordered through Baltimore if they were permitted to go uninterrupted by either of the other routes suggested. In this disposition the Secretary of War expressed his participation. Mayor Brown agreed to this arrangement, and promised on his part "that the city authorities would use all lawful means to prevent their citizens from leaving Baltimore to attack the troops in passing at a distance.§

With this agreement the committee took their leave, and the President proceeded to other pressing business, when, to his astonishment, Mayor Brown and his companions once more made their appearance, between 2 and 3 o'clock in the afternoon. They brought a highly sensational telegram just received by them at the depot from Mr. Garrett, president of the Baltimore and Ohio Railroad, which read:

> Three thousand Northern troops are reported to be at Cockeysville; intense excitement prevails; churches have been dismissed, and the people are arming in mass. To prevent terrific bloodshed, the result of your interview and arrangement is awaited.‖

Cockeysville is on the Harrisburg route, fifteen miles from Baltimore; and because they had no previous notice of such approach, the committee now intimated that advantage had been taken of their presence in Washington to bring these forces within striking distance of Baltimore. The Cabinet and Scott were again summoned, and the whole discussion was opened up anew.

> The President, at once, in the most decided way urged the recall of the troops, saying he had no idea they would be there to-day, and lest there should be the slightest suspicion of bad faith on his part in summoning the mayor to Washington, and allowing troops to march on the city during his absence, he desired that the troops should, if it were practicable, be sent back at once to York or Harrisburg.§

Orders were accordingly issued to this effect, the President, however, notifying the committee that he should not again in any wise interfere with the military arrangements.

In this, as in his Sumter policy, Lincoln interposed his authority in pursuance of his constant exercise not alone of justice and firm-

ness, but of the very utmost liberality and forbearance. He did not expect to appease the Maryland rebels, but to make them clearly responsible for further bloodshed, should any occur, and thereby to hold the Maryland Unionists; and the result vindicated his judgment. These were sufficient motives; and underlying them he had yet another, still more conclusive. All this examination of maps and discussion had brought the conviction to his quick penetration, in advance of any of his councilors, that the Harrisburg route was, in the present state of affairs, entirely impracticable and useless, which fact General Scott so fully set forth on the following day in his already cited letter to General Patterson.

WASHINGTON IN DANGER.

THANKS to the preparations and promptness of Governor Andrew, the Massachusetts 8th was not far behind the 6th. It assembled on Boston Common on Thursday morning, and was in Philadelphia on Friday evening, April 19, just in time to hear the authentic reports as well as the multiplied and exaggerated rumors of that day's doings of the Baltimore mob, and the tragic fate of some of their comrades of the 6th. Massachusetts having agreed to double her quota, the four regiments thus to be received formed a brigadier-general's command, and for this command Governor Andrew designated Benjamin F. Butler, who already held that office and rank under the State militia laws. He was a lawyer by profession, but possessed in an eminent degree the peculiarly American quality of ability to adapt himself to any circumstance or duty, with a quick perception to discover and a ready courage to seize opportunities. It must be noted in passing that he was a radical Democrat in politics, and could boast that he had voted fifty times in the late Charleston convention to make Jefferson Davis the Democratic candidate for President. But with the same positive zeal he denounced secession, and helped to prepare the Massachusetts regiments to join in suppressing it by the authority and with the power of the Federal Government. Arrived with the Massachusetts 8th at Philadelphia, General Butler that night telegraphed further news of the day's disaster to Governor Andrew.

> I have reason to believe that Colonel Jones has gone through to Washington. Two killed only of the Massachusetts men. We shall go through at once. The road is torn up through Baltimore. Will telegraph again.*

Later and more definite information caused him to modify his intention to press on: first, the Baltimore railroad refused to carry any more troops into that city; secondly, the burning of the bridges made it impossible for them to do so. In this dilemma, the Philadelphia railroad authorities had bethought them of a new route — that by Annapolis, previously described. This plan required not only much discussion, but great additional preparation; and Friday night and a part of Saturday passed before it was pronounced even probably feasible. By this time the 7th regiment of New York — the *corps d'élite* of the whole Union, which on Friday afternoon started its march down Broadway "through that tempest of cheers two miles long" — had also reached Philadelphia, where it too, like the Massachusetts 8th, was obliged seriously to study the further ways and means of getting to Washington. The various railroad and military officials of Philadelphia strongly advised the Annapolis route, and Colonel Lefferts, commanding the New York 7th, telegraphed to Cameron asking orders to go that way.† There was long delay in transmitting the dispatch and awaiting a reply; and before the requested permission came, Colonel Lefferts changed his purpose, chartered a steamship, placed his regiment on board, and started for Washington via the Delaware river and bay and the Potomac River — this decision being apparently not a little hastened by certain military rivalries and jealousies which instantly sprang up between Colonel Lefferts and Brigadier-General Butler, acting as yet under separate State authority, and being therefore independent of each other's control. Scott's reply to send troops by Havre de Grace and Annapolis,‡ as suggested, at length came through the somewhat deranged telegraph offices; and Lefferts being gone, the order was communicated to Butler.§ While the New York 7th, under Lefferts, was steaming down Delaware Bay on the transport *Boston*, the Massachusetts 8th, under Butler, proceeded by cars to Perryville (opposite Havre de Grace), and, embarking on the ferry-boat *Maryland*, steamed down Chesapeake Bay, and by midnight was anchored off Annapolis. As events turned out, this division of forces proved an advantage, since neither of the boats was capable of containing both regiments; and twenty-four hours later, as we shall see, the *Boston* joined the *Maryland* at Annapolis before either regiment had disembarked.

The small and antiquated town of Annapolis, the capital of Maryland and the seat of

the United States Naval Academy, was for the moment in sympathy with secession. Governor Hicks had returned here from Baltimore, it being his official residence, to make ready for the coming special session of the Maryland legislature, which, in one of his moments of timidity, he had been prevailed upon to call together on the 26th. The governor and the mayor of Annapolis both strongly urged Butler not to land his men; to which he replied that he must land to get provisions, and in turn requested the governor's formal consent. Pending this diplomatic small-talk, he found a piece of work to do. The old frigate *Constitution*, of historic fame, was anchored off the grounds of the Naval Academy as a training-ship; a few boat-loads of Baltimore roughs might easily cut her out and convert her into a privateer. Commandant Blake, who, with the majority of his officers and cadets, remained loyal, asked Butler to help pull her farther out into the bay for better security against capture. In this enterprise the greater part of Sunday, the 21st of April, was spent.

The two Sunday interviews of the mayor of Baltimore with President Lincoln, and the resulting arrangement that troops should hereafter come by the Annapolis route, have been detailed. The telegraph, in the mean time, was still working, though with delays and interruptions. As an offset to the disagreeable necessity of ordering the Pennsylvania troops back from Cockeysville, the cheering news of Butler's arrival at Annapolis had come directly to hand. That same Sunday afternoon President Lincoln and his cabinet met at the Navy Department, where they might deliberate in greater seclusion, and the culminating dangers to the Government underwent scrutinizing inquiry and anxious comment. The events of Friday, Saturday, and Sunday, as developed by the military reports and the conferences with the Baltimore committees, exhibited a degree of real peril such as had not menaced the capital since the British invasion in 1814. Virginia was in arms on one side, Maryland on the other; the railroad was broken; the Potomac was probably blockaded; a touch would sever the telegraph. Of this occasion the President afterwards said:

> It became necessary for me to choose whether, using only the existing means, agencies, and processes which Congress had provided, I should let the Government fall into ruin, or whether, availing myself of the broader powers conferred by the Constitution in cases of insurrection, I would make an effort to save it, with all its blessings, for the present age and for posterity.*

Surveying the emergency in its remote as well as merely present aspects, and assuming without hesitation the responsibilities which existing laws did not authorize, but which the needs of the hour imperatively demanded, Lincoln made a series of orders designed to meet, as well as might be, the new crisis in public affairs. A convoy was ordered out to guard the California steamers bringing heavy shipments of gold; fifteen merchant steamers were ordered to be purchased or chartered, and armed at the navy yards of Boston, New York, and Philadelphia for coast protection and blockade service; two million dollars were placed in the hands of three eminent citizens of New York, John A. Dix, George Opdyke, and Richard M. Blatchford, to be in their judgment disbursed for the public defense; another commission of leading citizens of New York, George D. Morgan, William M. Evarts, Richard M. Blatchford, and Moses H. Grinnell, in connection with Governor Morgan, was empowered to exercise practically the full authority of the War and Navy Departments in organizing troops and forwarding supplies; two of the ablest naval officers were authorized each to arm two additional merchant vessels to cruise in the Potomac River and Chesapeake Bay, together with sundry minor measures and precautions. Before these various orders could even be prepared for transmittal, the crowning embarrassment had already come upon the Government. On that Sunday night (April 21) the telegraph operator at Baltimore reported that the insurrectionary authorities had taken possession of his office; to which the Washington telegraph superintendent laconically added, "Of course this stops all."

So the prospect closed on Sunday night. Monday forenoon brought, not relief, but rather an exaggeration of the symptoms of danger. Governor Hicks, influenced by his secession surroundings at Annapolis, neither having consented to Butler's landing nor yet having dissuaded him from that purpose, now turned his appeals to the President. "I feel it my duty," he wrote, "most respectfully to advise you that no more troops be ordered or allowed to pass through Maryland, and that the troops now off Annapolis be sent elsewhere; and I most respectfully urge that a truce be offered by you, so that the effusion of blood may be prevented. I respectfully suggest that Lord Lyons be requested to act as mediator between the contending parties of our country."† The suggestion was not only absurd in itself, but it awakened painful apprehension lest his hitherto friendly disposition might suddenly change to active hostility. This was a result to be avoided by all possible means; for, even in his present neutral mood, he was still an effective breakwater against

* Lincoln, special message, May 27, 1862.

† Hicks to Lincoln, April 22, 1861. War Records.

those who were striving day and night to force Maryland into some official act of insurrection. Mr. Seward therefore wrote the governor a very kindly worded and yet dignified rebuke, reminding him of the days "when a general of the American Union with forces designed for the defense of its capital was not unwelcome anywhere in the State of Maryland, and certainly not at Annapolis"; and suggesting at its close "that no domestic contention that may arise among the parties of this republic ought in any case to be referred to any foreign arbitrament, least of all to the arbitrament of an European monarchy."*

Meanwhile, as an additional evidence of the yet growing discontent, another large Baltimore committee found its way to the President — this time from one of the religious bodies of that city, with a Baptist clergyman as its spokesman, who bluntly proposed that Mr. Lincoln should "recognize the independence of the Southern States." Though such audacity greatly taxed his patience, he kept his temper, and replied that neither the President nor Congress possessed the power or authority to do this; and to the further request that no more troops be sent through Maryland, he answered in substance:

You, gentlemen, come here to me and ask for peace on any terms, and yet have no word of condemnation for those who are making war on us. You express great horror of bloodshed, and yet would not lay a straw in the way of those who are organizing in Virginia and elsewhere to capture this city. The rebels attack Fort Sumter, and your citizens attack troops sent to the defense of the Government, and the lives and property in Washington, and yet you would have me break my oath and surrender the Government without a blow. There is no Washington in that — no Jackson in that — there is no manhood or honor in that. I have no desire to invade the South; but I must have troops to defend this capital. Geographically it lies surrounded by the soil of Maryland; and mathematically the necessity exists that they should come over her territory. Our men are not moles, and can't dig under the earth; they are not birds, and can't fly through the air. There is no way but to march across, and that they must do. But in doing this, there is no need of collision. Keep your rowdies in Baltimore, and there will be no bloodshed. Go home and tell your people that if they will not attack us, we will not attack them; but if they do attack us, we will return it, and that severely.

Washington now began to take on some of the aspects of a siege. The large stores of flour and grain at the Georgetown mills, and even that already loaded for shipment on schooners, were seized, and long trains of carts were engaged in removing it to safer storage in the public buildings. Prices of provisions were rising. The little passenger steamers plying on the Potomac were taken possession of by the military officers to be used for guard and picket duty on the river. The doors, windows, and stairways of the public buildings were protected by barricades, and the approaches to them guarded by sentinels. All travel and nearly all business came to a standstill, and theaters and places of amusement were closed. With the first notice of the burning of the railroad bridges, the strangers, visitors, and transient sojourners in the city became possessed of an uncontrollable desire to get away. So long as the trains ran to Baltimore, they proceeded to that point; from there they sought to escape northward by whatever stray chances of transportation offered themselves. By some of these fugitives the Government had taken the precaution to send duplicates of important orders and dispatches to Northern cities. This *sauve qui peut* quickly denuded Washington of its redundant population. While the Unionist non-combatants were flying northward, the latent secessionists were making quite as hurried an escape to the South; for it was strongly rumored that the Government intended to impress the whole male population of Washington into military service for the defense of the city.

One incidental benefit grew out of the panic — the Government was quickly relieved of its treasonable servants. Some hundreds of clerks resigned out of the various departments on this Monday, April 22d, and the impending danger not only brought these to final decision, but also many officers of high grades and important functions. Commodore Buchanan, in charge of the Washington navy yard, together with nearly all the subordinate officers, suddenly discovered their unwillingness longer to keep their oaths and serve the United States; and that night this invaluable naval depot, with all its vast stores of material, its immense workshops and priceless machinery, was intrusted solely to the loyalty and watchfulness of Commander John A. Dahlgren and a little handful of marines, scarcely enough in numbers to have baffled half a dozen adroit incendiaries, or to ascertain the street gossip outside the walls of the establishment.† Among the scores of army and navy resignations reported the same day was that of Captain John B. Magruder, 1st Artillery, then in command of a light battery

* Seward to Hicks, April 22, 1861.

† Mem. for the War Department. The *Anacostia*, a small Potomac steamer, anchored off Gilsboro' Point, and after remaining a short time returned down the river. The *Harriet Lane*, supposed revenue cutter, is now off the Arsenal and has been there a short time. I have not been able to communicate with her. I should wish to have a company of Massachusetts or United States troops in the yard at night if they can be spared. — John A. Dahlgren, Acting Commandant, 22d April. MS.

on which General Scott had placed special reliance for the defense of Washington. No single case of defection gave Lincoln such astonishment and pain as this one. "Only three days ago," said he, when the fact was made known to him; "Magruder came voluntarily to me in this room, and with his own lips and in my presence repeated over and over again his asseverations and protestations of loyalty and fidelity." * It was not merely the loss of an officer, valuable and necessary though he might be in the emergency, but the significance of this crowning act of perfidy which troubled the President, and to the suggestiveness of which he could not close his eyes. Was there not only no patriotism left, but was all sense of personal obligation, of every-day honesty, and of manliness of character gone also? Was everything crumbling at his touch? In whom should he place confidence? To whom should he give orders, if clerks, and captains, and commodores, and quartermaster-generals, and governors of States, and justices of the Supreme Court proved false in the moment of need? If men of the character and rank of the Magruders, the Buchanans, the McCauleys, the Lees, the Johnstons, the Coopers, the Campbells were giving way, where might he not fear treachery? There was certainly no danger that all the officers of the Government would thus prove recreant; but might not the failure of a single one bearing an important trust cause a vital and irreparable disaster?

The perplexities and uncertain prospects of the hour are set forth with frank brevity by General Scott, in the report which was sent to the President that night of Monday, April 22:

I have but little that is certain to report, viz.: (1) That there are three or four steamers off Annapolis, with volunteers for Washington; (2) that their landing will be opposed by the citizens, reënforced from Baltimore; (3) that the landing may be effected nevertheless by good management; and (4) that the rails on the Annapolis road (20 miles) have been taken up. Several efforts to communicate with those troops to-day have failed; but three other detached persons are repeating the attempt, and one or more of them will, I think, succeed. Once ashore, the regiments (if but two, and there are probably more) would have no difficulty in reaching Washington on foot, other than the want of wagons to transport camp equipage, etc. The quartermaster that I have sent there (I do not know that he has arrived) has orders to hire wagons if he can, and if not, to impress, etc. Of rumors, the following are probable, viz.: (1) That from 1500 to 2000 troops are at the White House (4 miles below Mount Vernon, a narrow point in the Potomac) engaged in erecting a battery; (2) that an equal force is collected or in progress of assemblage on the two sides of the river to attack Fort Washington; and (3) that extra cars went up yesterday to bring down from Harper's Ferry about 2000 other troops to join in a general attack on this capital — that is, on many of its fronts at once. I feel confident that with our present forces we can defend the Capitol, the Arsenal, and all the executive buildings (seven) against ten thousand troops not better than our district volunteers.†

Tuesday morning came, but no news from Annapolis, no volunteers up the Potomac. It was Cabinet day; and about noon, after the President and his councilors were assembled, messengers announced the arrival of two steamers at the navy yard. There was a momentary hope that these might be the long-expected ships from New York; but inquiries proved them to be the *Pawnee* and a transport on their return from the expedition to Norfolk. The worst apprehensions concerning that important post were soon realized — it was irretrievably lost. The only bit of comfort to be derived from the affair was that the vessels brought back with them a number of marines and sailors, who would now add a little fraction of strength to the defense of the capital. The officers of the expedition were soon before the President and Cabinet, and related circumstantially the tale of disaster and destruction which the treachery of a few officers and the credulous duplicity of the commandant had rendered unavoidable.

The Gosport navy yard, at Norfolk, Virginia, was of such value and importance that its safety, from the very beginning of Mr. Lincoln's administration, had neither been neglected nor overlooked. But, like every other exposed or threatened point,— like Sumter, Pickens, Tortugas, Key West, Fort Monroe, Baltimore, Harper's Ferry, and Washington itself,— its fate was involved in the want of an army and navy of adequate strength. On the day that the President resolved on the Sumter expedition, two hundred and fifty seamen had been ordered from Brooklyn to Norfolk to render Gosport more safe. Instead of going there, it was immediately necessary to change their destination to Sumter and Pickens. And so, though the danger to Gosport was never lost sight of, the reënforcements to ward it off were never available. Officer after officer and letter after letter were sent by the department to enjoin vigilance, to prepare defenses, and to remove valuable ships. The officers of the navy yard professed loyalty; the commandant had grown gray in the service of his country, and enjoyed the full confidence of his equals and superiors. It was known that the secessionists had designs upon the post; but it was believed that the watchfulness which had been ordered and the measures of precaution which had been arranged under the special supervision of two

* J. H., Diary. Unpublished MS.

† Unpublished MS.

trusted officers of the Navy Department, who were carrying out the personal instructions of Secretary Welles, would meet the danger. At a critical moment, the hitherto correct judgment of Commandant McCauley committed a fatal mistake. The subordinate officers of the yard, professing loyalty, practiced treason, and lured him unwittingly into their designs.

Several valuable vessels lay at the navy yard. To secure them eventually for Virginia, Governor Letcher had, among his first acts of hostility, attempted to obstruct the channel from Norfolk to Fort Monroe by means of sunken vessels. But the effort failed; the passage still remained practicable. Ascertaining this, Commodore Alden and Chief Engineer Isherwood, specially sent for the task by Secretary Welles, had, with the help of the commandant of the yard, prepared the best ships — the *Merrimac*, the *Germantown*, the *Plymouth*, and the *Dolphin* — for quick removal to Fort Monroe. The engines of the *Merrimac* were put in order, the fires under her boilers were lighted, the moment of her departure had been announced, when suddenly a change came over the spirit of Commandant McCauley. Virginia passed her ordinance of secession; the traitorous officers of the navy yard were about to throw off their mask and desert their flag; and, as a parting stroke of intrigue, they persuaded the commandant that he must retain the *Merrimac* for the security of the yard. Yielding to this treacherous advice, he countermanded her permission to depart and ordered her fires to be put out. Thus baffled, Isherwood and Alden hastened back to Washington to obtain the superior orders of the Secretary over this most unexpected and astounding action of the commandant.

They reached Washington on this errand respectively on the 18th and 19th of April, just at the culminating point of insurrection and danger. Hasty consultations were held and energetic orders were issued. The *Pawnee*, just returned from her Sumter cruise, was again coaled, supplied, and fitted out — processes consuming precious hours, but which could not be omitted. On the evening of April 19 she steamed down the Potomac under command of Commodore Paulding, with discretionary orders to defend or to destroy. Next evening, April 20, having landed at Fort Monroe and taken on board three to five hundred men of the 3d Massachusetts, only that morning arrived from Boston, and who embarked without a single ration, the *Pawnee* proceeded to Norfolk, passing without difficulty through the seven sunken hulks in the Elizabeth River. But Commodore Paulding found that he had come too late to save anything. The commandant, once more successfully plied with insidious advice, had yielded to the second suggestion of his juniors, and had scuttled the removable ships — ostensibly to prevent their being seized and used by the rebels. As they were slowly sinking, no effort to remove them could succeed, and no resource was left but to destroy everything so far as could be done. Accordingly, there being bright moonlight, the greater part of that Saturday night was devoted to this work of destruction. Several parties were detailed to fire the ships and the buildings and to lay a mine to blow up the dry-dock, and the sky was soon lighted up from an immense conflagration. Yet, with all this effort, the sacrifice was left incomplete. Not more than half the buildings were consumed. The workshops, with their valuable machinery, escaped. The 1500 to 2000 heavy cannon in the yard could neither be removed nor rendered unserviceable. Some unforeseen accident finally prevented the explosion of the dry-dock. Of the seven ships burned to the water's edge, the hull of the *Merrimac* was soon afterwards raised, and in the course of events changed by the rebels into the iron-clad *Merrimac*, or, as they named her, the *Virginia*. At 5 o'clock on Sunday morning the *Pawnee* considered her work finished, and steamed away from Gosport, followed by the sailing-ship *Cumberland*.

No point of peril had been so clearly foreseen, so carefully provided for, and apparently so securely counteracted as the loss of the three or four valuable ships at Norfolk; and yet, in spite of foresight and precaution, they had gone to worse than ruin through the same train of circumstances which had lost Sumter and permitted the organization of the Montgomery rebellion. The loss of ships and guns was, however, not all; behind these was the damaging moral effect upon the Union cause and feeling. For four consecutive days each day had brought a great disaster — Virginia's secession on the 17th; the burning of Harper's Ferry on the 18th; the Baltimore riot and destruction of railroad bridges on the 19th; the abandonment and destruction of this great navy yard and its ships on the night of the 20th. This began to look like an irresistible current of fate. No popular sentiment could long stem such a tide of misfortune. The rebels of Virginia, Maryland, and especially of Washington began to feel that Providence wrought in their behalf, and that their cherished conspiracy was already crowned with success. Evidently with such a feeling, on this same Tuesday, Associate Justice John A. Campbell, still a member of the Supreme Court and under oath to support the Constitution of the United States, again sent a

letter of aid and comfort to Jefferson Davis. He wrote:

> Maryland is the object of chief anxiety with the North and the Administration. Their fondest hope will be to command the Chesapeake and relieve the capital. Their pride and their fanaticism would be sadly depressed by a contrary issue. This will be the great point of contest in all negotiations.
>
> . . . I incline to think that they are prepared to abandon the south of the Potomac. But not beyond. Maryland is weak. She has no military men of talents, and I did hear that Colonel Huger was offered command and declined it — however, his resignation had not been accepted. Huger is plainly not competent for such a purpose. Lee is in Virginia. Think of the condition of Baltimore and provide for it, for there is the place of danger. The events at Baltimore have placed a new aspect upon everything at the North. There is a perfect storm there. While it has to be met, no unnecessary addition should be made to increase it.*

Another night of feverish public unrest, another day of anxiety to the President — Wednesday, April 24. There was indeed no attack on the city; but, on the other hand, no arrival of troops to place its security beyond doubt. Repetition of routine duties; repetition of small, unsubstantial rumors; long faces in the streets; a holiday quiet over the city; closed shutters and locked doors of business houses; the occasional clatter of a squad of cavalry from point to point; sentinels about the departments; sentinels about the Executive Mansion; Willard's Hotel, which a week before was swarming with busy crowds, now deserted as if smitten by a plague — with only furtive servants to wake echoes along the vacant corridors, and in all its vast array of chambers and parlors but a single lady guest to recall the throng of fashion and beauty which had so lately made it a scene of unceasing festivity from midday to midnight. Ever since the telegraph stopped on Sunday night the Washington operators had been listening for the ticking of their instruments, and had occasionally caught fugitive dispatches passing between Maryland secessionists, which were for the greater part immediately known to be unreliable; for General Scott kept up a series of military scouts along the Baltimore railroad as far as Annapolis Junction, twenty miles from Washington, from which point a branch railroad ran at a right angle to the former, twenty miles to Annapolis, on Chesapeake Bay. The general dared not risk a detachment permanently to hold the junction; no considerable secession force had been encountered, and the railroad was yet safe. But it was known, or at least strongly probable, that the volunteers from the North had been at Annapolis since Sunday morning. Why did they not land? Why did they not advance? The Annapolis road was known to be damaged; but could they not march twenty miles? The previous day (April 23) had, by some lucky chance, brought a New York mail three days old. The newspapers in it contained breezy premonitions of the Northern storm — Anderson's enthusiastic reception; the departure of the New York 7th regiment; the sailing of Governor Sprague with his Rhode Islanders; the monster meeting in Union Square, with the outpouring of half a million of people in processions and listening to speeches from half a dozen different stands; the energetic measures of the New York Common Council; the formation of the Union Defense Committee; whole columns of orders and proclamations; the flag-raisings; the enlistments; the chartering and freighting of ships; and from all quarters news of the wild, jubilant uprising of the whole immense population of the Free States. All this was gratifying, pride-kindling, reassuring; and yet, read and re-read with avidity in Washington that day, it would always bring after it the galling reflection that all this magnificent outburst of patriotism was paralyzed by the obstacle of a twenty miles' march between Annapolis and the junction. Had the men of the North no legs?

Lincoln, by nature and habit so calm, so equable, so undemonstrative, nevertheless passed this period of interrupted communication and isolation from the North in a state of nervous tension which put all his great powers of mental and physical endurance to their severest trial. General Scott's reports, though invariably expressing his confidence in successful defense, frankly admitted the evident danger; and the President, with his acuteness of observation and his rapidity and correctness of inference, lost no single one of the external indications of doubt and apprehension. Day after day prediction failed and hope was deferred; troops did not come, ships did not arrive, railroads remained broken, messengers failed to reach their destination. That fact itself demonstrated that he was environed by the unknown — and that whether a Union or a Secession army would first reach the capital was at best an uncertainty. To a coarse or vulgar nature such a situation would have brought only one of two feelings — either overpowering personal fear, or overweening bravado. But Lincoln, almost a giant in physical stature and strength, combined in his intellectual nature a masculine courage and power of logic with a sentimental tenderness as delicate as a woman's, and an ideal sensitiveness of conscience. This presidential trust which he had assumed was to him not a mere regalia of rank and honor. Its terrible duties and responsibilities seemed rather a coat

* Campbell to Davis, April 23, 1861. MS.

of steel armor, not only heavy to bear, but cutting remorselessly into the quick flesh. That one of the successors of Washington should find himself even to this degree in the hands of his enemies was personally humiliating; but that the majesty of a great nation should be thus insulted and its visible symbols of authority be placed in jeopardy; above all, that the hitherto glorious example of the republic to other nations should stand in this peril of surprise and possible sudden collapse, the Constitution be scoffed and jeered, and human freedom become once more a by-word and reproach — this must have begot in him an anxiety approaching torture. In the eyes of his countrymen and of the world he was holding the scales of national destiny; he alone knew that for the moment the forces which made the beam vibrate with such uncertainty were beyond his control. In others' society he gave no sign of these inner emotions. But once, on the afternoon of the 23d, the business of the day being over, the Executive office deserted, after walking the floor alone in silent thought for nearly half an hour, he stopped and gazed long and wistfully out of the window down the Potomac in the direction of the expected ships; and, unconscious of any presence in the room, at length broke out with irrepressible anguish in the repeated exclamation, "Why don't they come! Why don't they come!"

One additional manifestation of this bitterness of soul occurred on the day following (April 24), though in a more subdued manner. The wounded soldiers of the Massachusetts 6th, including several officers, came to pay a visit to the President. They were a little shy when they entered the room — having the traditional New England awe of authorities and rulers. Lincoln received them with that sympathetic kindness and equality of bearing which put them at ease after the interchange of the first greetings. His words of sincere thanks for their patriotism and their suffering, his warm praise of their courage, his hearty recognition of their great service to the public, and his earnestly expressed confidence in their further devotion, quickly won their trust and respect. He spoke to them of the position and prospect of the city, contrasting their prompt arrival with the unexplained delay which seemed to have befallen the regiments from the various States supposed to be somewhere on the way. Pursuing this theme, he finally fell into a tone of irony to which only intense feeling ever drove him. "I begin to believe," said he, "that there is no North. The 7th regiment is a myth. Rhode Island is another. You are the only real thing."* There are few parchment brevets as precious as such a compliment, at such a time, from such a man.

* J. H., Diary. Unpublished MS.

However much the tardiness of the Annapolis reënforcements justified the President's sarcasm, they were at last actually on the way. We left Butler engaged in assisting the school-ship *Constitution* to a more secure position. The aid proved effectual; but the day's work ended by the ferry-boat *Maryland* — the Massachusetts 8th being still on board — getting hard aground in the shoal water of Annapolis Harbor. In this helpless predicament, with only hard pilot-bread and raw salt pork furnished from the *Constitution* to eat, and no water to drink, the regiment passed the night of Sunday. Early next morning (Monday, April 22) brought the arrival of another ship, which proved to be the *Boston*, containing the New York 7th; and thus these two regiments, so lately parted at Philadelphia, were once more united. Colonel Lefferts had proceeded on his independent course to Fort Monroe; but receiving no intelligence concerning the Potomac route, concluded, after all, to adopt the more prudent plan of steaming up Chesapeake Bay to Annapolis.

The *Boston* at once set to work, but without eventual success, to pull the *Maryland* into deeper water. Meanwhile the officers of the two regiments were holding interviews and correspondence with Commandant Blake of the Naval School on the one hand, and with the Maryland authorities on the other. Governor Hicks, in punctilious assertion of the paramount State sovereignty of Maryland, protested, in writing, against landing the troops. The mayor of Annapolis joined in the protest; though privately both declared Maryland was loyal to the Union, and that they would make no military resistance. That afternoon both regiments were landed. There was still a certain friction of military jealousy and refusal to coöperate between Butler and Lefferts; both were eager to proceed to Washington, but differed in their plans; and the many and apparently authentic rumors of the opposing force that would meet them from Baltimore caused discussion and delay. They had no transportation, few rations, and little ammunition. Butler took the first practical measures, by ordering the railroad depot and buildings to be occupied. Here an old locomotive was found, the machinery of which had been carefully disarranged. The mechanical skill of the Yankee militiamen now asserted its value. Private Charles Homans, of the Massachusetts 8th, at once recognized the locomotive as having been built in "our shop"; and calling to his help several machinists like himself from among the Massachusetts boys, they had no great difficulty in putting it in running or-

der. Tuesday morning (April 23) showing still no warlike demonstrations from any quarter, the surroundings of the town were reconnoitered, and two companies of the Massachusetts 8th pushed out three and a half miles along the railroad. A beginning was also made towards repairing the track, which was found torn up and displaced here and there. In this work, and in testing the newly repaired locomotive and improvising a train, another day slipped by. In the evening, however, two of the eight messengers sent out from Washington to Annapolis succeeded in reaching there, the second one bringing the definite orders of General Scott that Butler should remain and hold the place, and that the advancing troops should repair the railroad. That night, also, came four or more steamships with as many additional regiments of volunteers.

Wednesday morning, April 24, being the fourth day at Annapolis for the Massachusetts 8th and the third for the New York 7th, they started on their twenty miles' march to the junction. A couple of extemporized platform cars on which the "7th" mounted their little brass howitzers, the patched-up locomotive, and two rickety passenger cars constituted their artillery-baggage-supply-ambulance-and-construction train all in one. Thus provided, the two regiments marched, scouted, laid track, and built bridges as occasion required; now fraternizing and coöperating with hearty good-will. It was slow and tedious work; they were not inured to nor provided for even such holiday campaigning as this. Luckily they had fine weather — a warm, sunny, spring day, succeeded by a clear night with a full moon to light it. So they clung pluckily to their duty, hungry and sleepy though they were, all day and all night of Wednesday, and arrived at the junction about daybreak of Thursday. All the previous rumors had taught them that here they might expect a rebel force and a fight. The anticipation proved groundless; they learned, on the contrary, that a train from Washington had come to this place for them the day before. It soon again made its appearance; and quickly embarking on it, by noon the New York 7th was at its destination.

Those who were in the Federal capital on that Thursday, April 25, will never, during their lives, forget the event. An indescribable gloom and doubt had hung over Washington nearly a week, paralyzing its traffic and crushing out its very life. As soon as their coming was known, an immense crowd gathered at the depot to obtain ocular evidence that relief had at length reached the city. Promptly debarking and forming, the 7th marched from the Capitol up Pennsylvania Avenue to the White House. As they passed up the magnificent street, with their well-formed ranks, their exact military step, their soldierly bearing, their gayly floating flags, and the inspiring music of their splendid regimental band, they seemed to sweep all thought of danger and all taint of treason not only out of that great national thoroughfare, but out of every human heart in the Federal city. The presence of this single regiment seemed to turn the scales of fate. Cheer upon cheer greeted them, windows were thrown up, houses opened, the population came forth upon the streets as for a holiday. It was an epoch in American history. For the first time, the combined spirit and power of Liberty entered the nation's capital.

LOVE'S IMAGINING.

DEAR Love, I sometimes think how it would be
If thou shouldst love me, if, on such a day,
O day of wonder! thou shouldst come and say
"I love thee, or but let me guess thy plea —
If once thine eyes should brighten suddenly,
If once thy step should hasten or delay
Because of me, if once thy hand should stay
A needless instant in my own! Ah, me!
From such imaginings I wake and start,
And dull and worthless life's endeavors seem
Before the tender beauty of my dream —
And then I whisper my impatient heart,
"Be still, be comforted, O heart of mine,
Thou art not all bereft, the dream is thine."

Hopestill Goodwin.

TO CARMEN SYLVA.

(THE LAST POEM OF EMMA LAZARUS.)

OH, that the golden lyre divine
Whence David smote flame-tones were mine!
Oh, that the silent harp which hung
Untuned, unstrung,
Upon the willows by the river,
Would throb beneath my touch and quiver
With the old song-enchanted spell
Of Israel!

Oh, that the large prophetic Voice
Would make my reed-piped throat its choice!
All ears should prick, all hearts should spring,
To hear me sing
The burden of the isles, the word
Assyria knew, Damascus heard,
When, like the wind, while cedars shake,
Isaiah spake.

For I would frame a song to-day
Winged like a bird to cleave its way
O'er land and sea that spread between,
To where a Queen
Sits with a triple coronet.
Genius and Sorrow both have set
Their diadems above the gold —
A Queen three-fold!

To her the forest lent its lyre,
Hers are the sylvan dews, the fire
Of Orient suns, the mist-wreathed gleams
Of mountain streams.
She, the imperial Rhine's own child,
Takes to her heart the wood-nymph wild,
The gypsy Pelech, and the wide,
White Danube's tide.

She who beside an infant's bier
Long since resigned all hope to hear
The sacred name of "Mother" bless
Her childlessness,
Now from a People's sole acclaim
Receives the heart-vibrating name,
And "Mother, Mother, Mother!" fills
The echoing hills.

Yet who is he who pines apart,
Estranged from that maternal heart,
Ungraced, unfriended and forlorn,
The butt of scorn?
An alien in his land of birth,
An outcast from his brethren's earth,
Albeit with theirs his blood mixed well
When Plevna fell?

When all Roumania's chains were riven,
When unto all his sons was given
The hero's glorious reward,
Reaped by the sword,—
Wherefore was this poor thrall, whose chains
Hung heaviest, within whose veins
The oldest blood of freedom streamed,
Still unredeemed?

O Mother, Poet, Queen in one!
Pity and save — he is thy son.
For poet David's sake, the king
Of all who sing;
For thine own people's sake who share
His law, his truth, his praise, his prayer;
For his sake who was sacrificed —
His brother — Christ!

MALVERN, JULY, 1886. *Emma Lazarus.*

THE AMERICAN INVENTORS OF THE TELEGRAPH.*

WITH SPECIAL REFERENCES TO THE SERVICES OF ALFRED VAIL.

THE University of the City of New York, then but recently organized, established, in 1835, a professorship of the Literature of the Arts of Design, and chose Samuel Finley Breese Morse, who had already achieved reputation as an historical painter, as the incumbent. In July of that year Professor Morse took possession of a suite of apartments which had been provided for him in the new University building on Washington Square and entered upon his duties.

Eleven years prior to this date, Alfred Vail, a youth of seventeen, having completed his studies in the village school of Morristown, New Jersey, found congenial opportunity to gratify his inherited mechanical tastes by going to work in the Speedwell Iron Works, of which his father, Judge Stephen Vail, was the proprietor. One of his characteristics, from an early age, had been a marked fondness for study and investigation in matters relating to the natural sciences; and as his mind gradually matured and unfolded itself, his aspirations for a broader and more systematic mental culture, and a higher degree of attainment than was possible under the conditions which then surrounded him, were with difficulty repressed. It was the natural desire and expectation of Judge Vail that both his sons, Alfred and George, should identify themselves with the manufacturing business, an extensive one for those days, which he himself had prosecuted with industry and success. In compliance with his father's wishes, Alfred contented himself for a time with the duties of his position. Upon attaining his majority, however, his inclination for a more appropriate field of labor could no longer be restrained; and, after much anxious consideration of the matter, he determined to prepare himself for the ministry of the Presbyterian Church. In 1832, at the age of twenty-five, he entered the University of the City of New York, from which institution he was graduated in due course in October, 1836.

Towards the close of his term his health became impaired, and as his physical condition precluded the prosecution of his theological studies, he appears for a time to have labored under much uncertainty as to his future course. The problem of his life-work was, as the event proved, soon to be solved by a fortunate and unexpected incident.

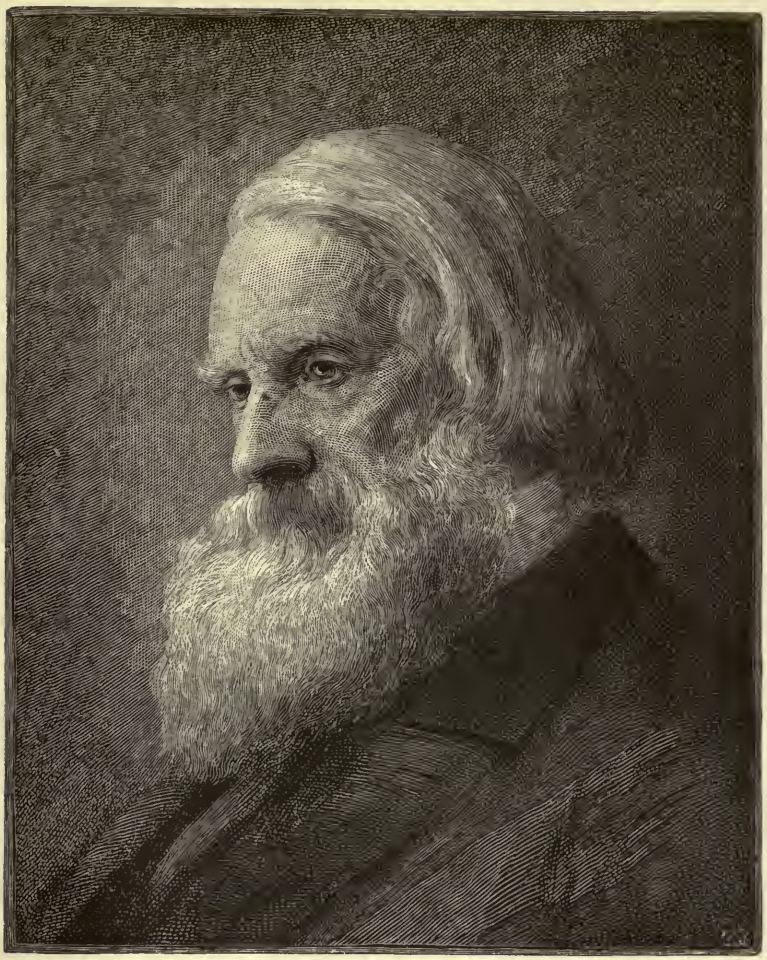
In the year 1832 Professor Morse, on a voyage from Havre to New York in the packet *Sully*, had conceived and drawn in his sketch-book an apparatus for recording signals at a distance by electro-magnetism.

The history of the inception and early development of Morse's invention is familiar and need not be repeated, except as may be necessary to enable the successive steps by which it was wrought into a practical and commercial form to be properly understood. Until Morse became one of the faculty of the University, he had been prevented, by the nomadic life imposed upon him by his straitened circumstances, from making any effort beyond the molding and casting of a set of leaden type to reduce that conception to practice. This, according to his original scheme, was automatically to open and close an electric circuit and thereby transmit certain signals, to which an arbitrary numerical signification was to be given.

During the latter portion of the time in which Alfred Vail had been a student in the University the chair of chemistry had been occupied by Professor Leonard D. Gale. In January, 1837, Professor Morse, who in the privacy of his apartments had constructed a rude but nevertheless operative experimental model, exemplifying the principle of the recording telegraph which he had devised on board the *Sully*, took Professor Gale into his confidence and exhibited to him the invention, so far as it had then been developed by his unaided hands and brain.

Professor Gale, whose knowledge and acquirements were of a character which enabled him to appreciate the ingenuity of the inventor and to forecast the possible success of the invention, became at once deeply interested in the plans of his colleague, and thenceforth the

* See also "Professor Morse and the Telegraph," by Benson J. Lossing, in this magazine for March, 1873, and a communication by Professor J. W. Draper, in May, 1873.



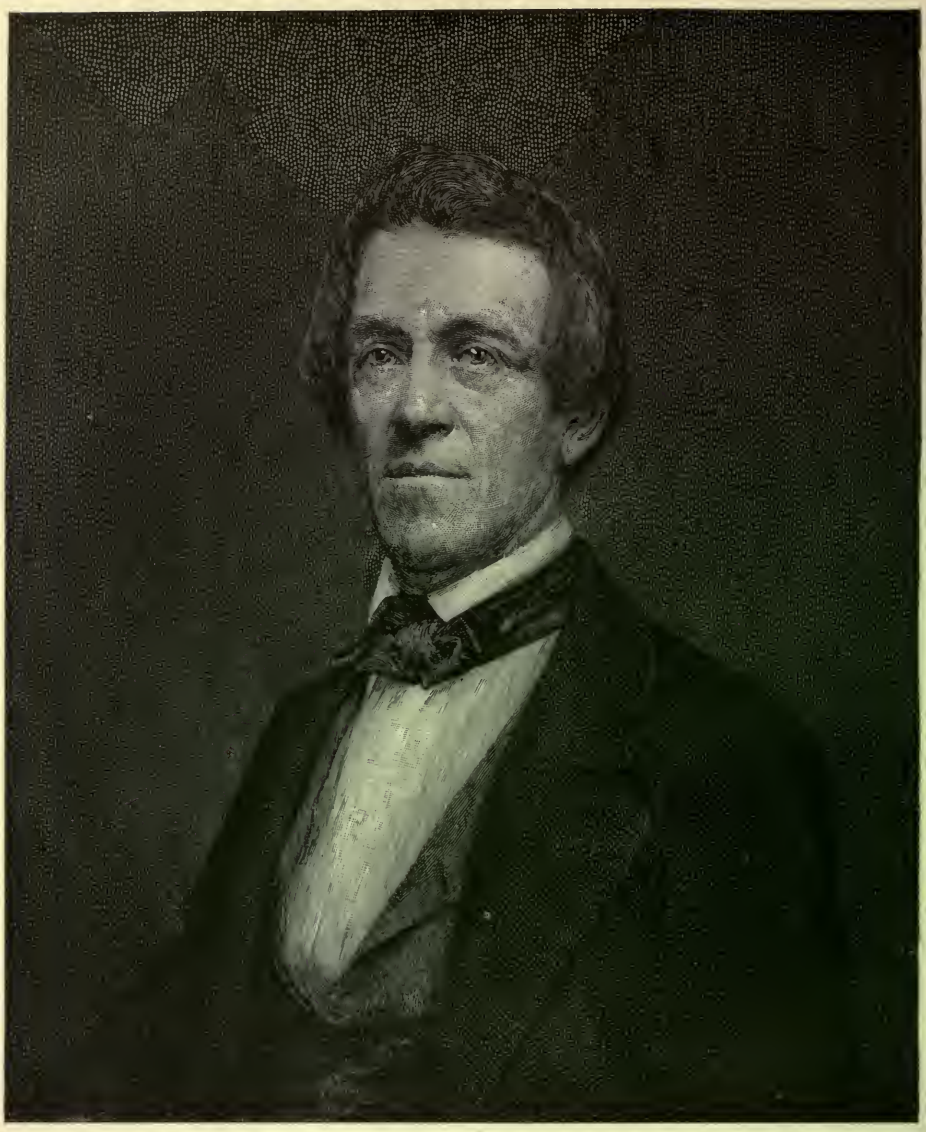
SAMUEL F. B. MORSE.

assistance which he rendered Morse in his experiments was of the utmost importance and value. For some time, the experimental instrument remained substantially unchanged. Morse himself possessed but moderate mechanical skill, while his poverty debarred him from employing trained workmen to put the invention into a more permanent form.

In February, 1837, the House of Representatives had passed a resolution requesting the Secretary of the Treasury to report upon the propriety of establishing a "system of telegraphs for the United States." With the view of gathering the necessary material for his report, the Secretary of the Treasury, on March 10, 1837, issued a circular of inquiry, a copy of which fell into the hands of Professor Morse, and doubtless led to his determination to complete his invention and, if possible, to secure its acceptance by the Government.

On Saturday, September 2, 1837, Professor Daubeny of Oxford University, then visiting the United States, was invited with others to witness the operation of the electro-magnetic telegraph at the University. The apparatus had been set up with a circuit of copper wire, stretched back and forth along the walls of a large room. Among the spectators was Alfred Vail, who then saw the apparatus for the first time. Notwithstanding the crude and imperfect character of the machinery in which the invention was embodied, the results were such as conclusively to demonstrate the possibility of recording signals at a considerable distance by the instantaneous action of electricity.

This exhibition produced a profound effect upon the mind of Vail. His inherited and acquired mechanical skill, and the knowledge of construction which his apprenticeship in his



ALFRED VAIL.

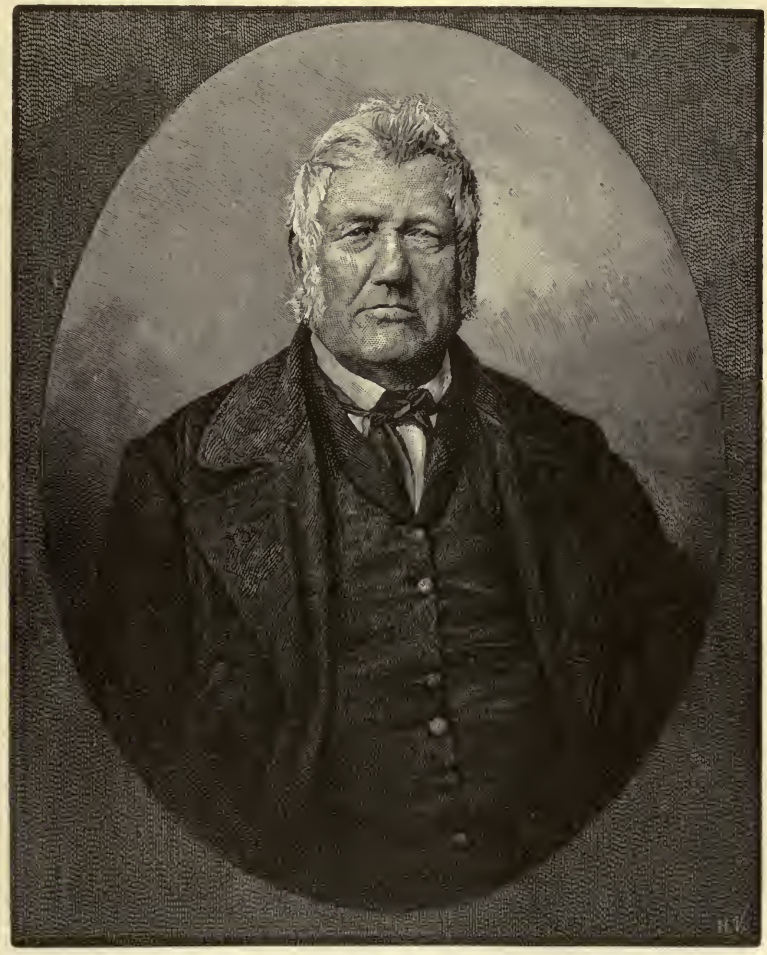
father's works had given him, satisfied him that it was possible to embody this grand conception in a concrete form, which should insure its successful employment for public purposes. More than this, his education and training at the University had given him some insight into the affairs of the world, and his mind intuitively formed a distinct conception of the vast scope and future importance of the invention.

Among the papers left by Mr. Vail is one giving an account of this incident. Referring to his occasional visits to New York during the year following his graduation, he says:

On one of these visits, prior to September 4, 1837, I accidentally and without invitation called upon Professor Morse at the University and found him, with Professors Torrey and Daubeny, in the mineralogical cabinet and lecture room of Professor Gale, where Professor Morse was exhibiting to these gentlemen an apparatus which he called his "Electro-Magnetic Telegraph." There were wires suspended in the room running from one end to the other and returning many times, making a length of seventeen hundred feet. The two ends of the wire were connected with an electro-magnet fastened to a vertical wooden frame. In front of the magnet was its armature, and also a wooden lever or arm fitted at its extremity to hold a lead pencil. . . . I saw this instrument work and became thoroughly acquainted with the principles of its operation, and, I may say, struck with the rude machine, containing, as I believed, the germ of what was destined to produce great changes in the condition and relations of mankind. I well recollect the impression which was then made upon my mind. I rejoiced to

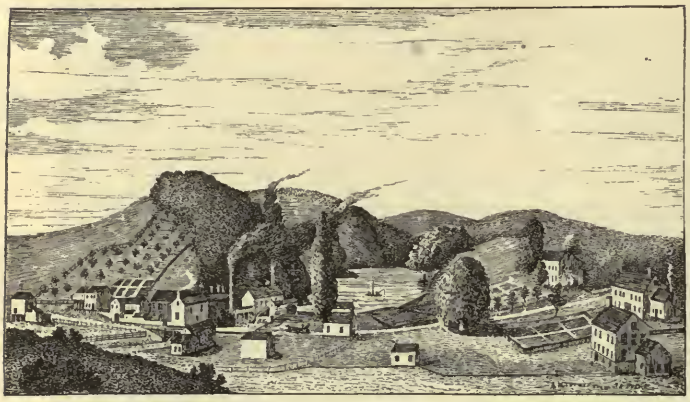
think that I lived in such a day, and my mind contemplated the future in which so grand and mighty an agent was about to be introduced for the benefit of the world. Before leaving the room in which I beheld for the first time this magnificent invention, I asked Professor Morse if he intended to make an experiment on a more extended line of conductors. He replied that he did, but that he desired pecuniary assistance to carry out his plans. I promised him assistance provided he would admit me in a share of the invention, to which proposition he assented. I then returned to my boarding-house, locked the door of my room, threw myself upon the bed, and gave myself up to reflection upon the mighty results which were certain to follow the introduction of this new agent in meeting and serving the wants of the world. With the atlas in my hand, I traced the most important lines which would most certainly be erected in the United States, and calculated their length. The question then rose in my mind whether the electro-magnet could be made to work through the necessary lengths of line; and after much reflection I came to the conclusion that provided the magnet would work even at a distance of eight or ten miles there could be no risk in embarking in the enterprise. And upon this I decided in my own mind to *sink* or *swim with it*.

This remaining doubt on the part of Vail was dispelled by a visit to Morse, during which the latter explained to him the plan, already conceived, but not embodied in the exhibited apparatus, of repeating signals from one circuit into another. The explanation of this feature appears to have convinced him of the truth of Morse's remark, "*If I can succeed in working a magnet ten miles, I can go round the globe.*"



JUDGE STEPHEN VAIL.
(FROM A DAGUERREOTYPE TAKEN IN HIS SEVENTY-THIRD YEAR, BY BESKER & RAW, 1852.)

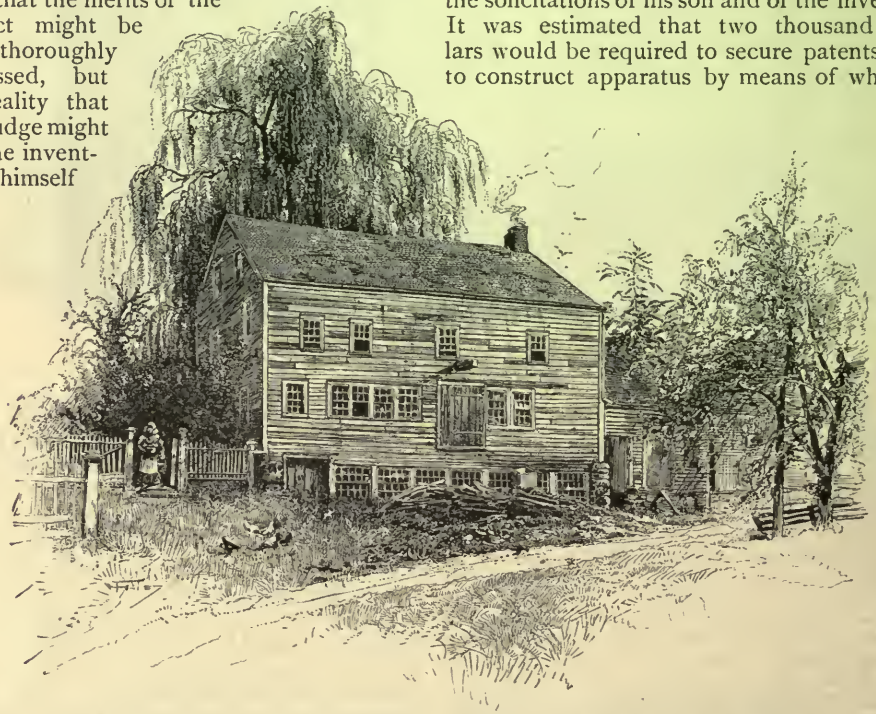
When Vail had once satisfied himself of the feasibility of the scheme of electric communication, his mind became fascinated with the field of achievement which opened before him. Here was indeed the promise of a career which satisfied alike his scientific and mechanical tastes and his highest aspirations. Having an opportunity thus opened to him to acquire an



THE SPEEDWELL IRON WORKS. (REDRAWN FROM AN INVOICE OF 1837.)

interest in the invention and to associate himself with Professor Morse in its development, he sought to interest his father in the enterprise, and to secure his sympathy and material assistance. The sanguine faith of young Vail in the future of the electric telegraph, exceeding, if possible, that of the inventor himself, was not without effect upon his father's mind. Judge Vail was a man whose ideas were in advance of his time. He had almost unconsciously acquired a marked respect for the judgment of his elder son in scientific matters, and so it came about that Alfred received permission to invite Professor Morse to Speedwell, ostensibly that the merits of the project might be more thoroughly discussed, but in reality that the Judge might see the inventor for himself before deciding to embark in such a novel and unprecedented enterprise. Having accepted the invitation, Morse was introduced by Alfred to his father and brother, who, as copartners, were carrying on the Speedwell works.

Judge Vail's business experience had been such as to dispose him towards the favorable consideration of an invention of this character. The annals of the Speedwell Iron Works had already become a part of the history of intercommunication in the United States. Here was forged the shaft of the *Savannah*, the first steamship which crossed the Atlantic. Here were manufactured the tires, axles, and cranks of the first American locomotives, and Judge Vail himself had invested no small share of the profits of his business in these and similar enterprises. It may be presumed that, with his characteristic shrewdness, he did not overlook the substantial benefits which would be likely to accrue from the ownership of a share in the telegraph patents, should the enterprise ultimately prove successful. At all events, he did not lend an unwilling ear to the solicitations of his son and of the inventor. It was estimated that two thousand dollars would be required to secure patents and to construct apparatus by means of which a



SHOP IN WHICH VAIL AND BAXTER CONSTRUCTED APPARATUS FOR EXHIBITION BEFORE CONGRESS.

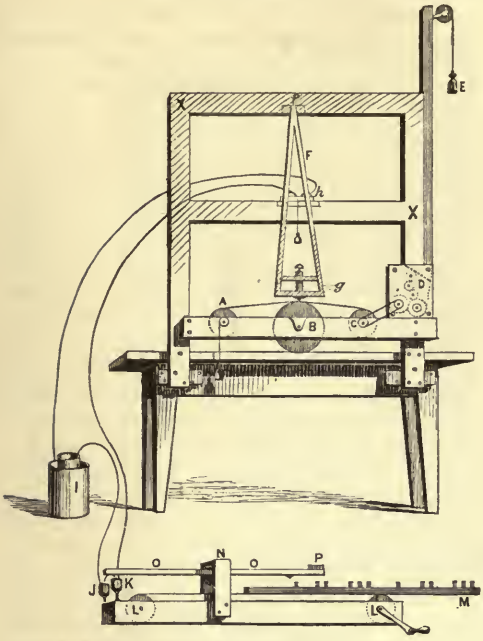


DIAGRAM OF MORSE'S EXPERIMENTAL INSTRUMENT, 1837.

sufficient demonstration could be made before Congress to secure a liberal appropriation for the construction of the first link in a system of Government telegraph lines.

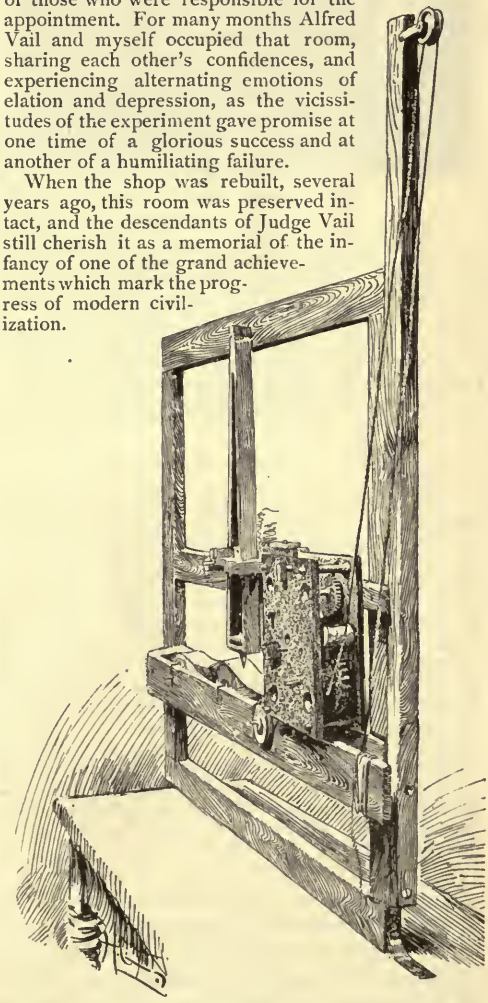
The occurrences which have been narrated took place during the incipient stages of a severe financial depression. It is almost impossible now to form an adequate conception of the difficulty of raising at that time even so small a sum as two thousand dollars, especially for a project so apparently illusive as the electric telegraph. It would be far easier to raise two millions for a like purpose at the present day. Under these circumstances, the timely and generous assistance given by Judge Vail at a most critical period, not only in the history of the telegraph, but in the condition of commercial affairs, entitles him to the grateful remembrance of the world.

These negotiations resulted in an agreement between Samuel F. B. Morse and Alfred Vail, on September 23, 1837, in which it was stipulated that the latter should construct at his own expense and exhibit before a committee of Congress one of the telegraphs "of the plan and invention of Morse"; that he should give his time and personal services to the work, and assume the expense of exhibiting the apparatus and of procuring patents in the United States. In consideration, Vail was to receive one-fourth of all rights in the invention in the United States. Provision was made for securing to Vail an interest in any foreign patents which he might furnish the means to obtain.

An interesting account of the operations at Speedwell during the construction of the early apparatus has been given by William Baxter, a skillful mechanic and inventor, well known as the designer of the "Baxter Engine." Mr. Baxter, who was an apprentice at Speedwell at that time, died in 1885, and was perhaps the last of those who were associated with the invention in its inception. Mr. Baxter says:

As it was important to keep the invention a secret from the public until it had been perfected and a patent secured, a special room in the shop was fitted up with tools and provided with a lock and key. It was necessary to employ a mechanic who could comprehend new ideas, execute accurate work, and who at the same time had the necessary judgment and discretion to keep an important secret. I was at that time an employee of the works and was in my fifteenth year. It was a high compliment for a boy of that age to be selected for such a trust, but it is not for me to criticise the judgment of those who were responsible for the appointment. For many months Alfred Vail and myself occupied that room, sharing each other's confidences, and experiencing alternating emotions of elation and depression, as the vicissitudes of the experiment gave promise at one time of a glorious success and at another of a humiliating failure.

When the shop was rebuilt, several years ago, this room was preserved intact, and the descendants of Judge Vail still cherish it as a memorial of the infancy of one of the grand achievements which mark the progress of modern civilization.



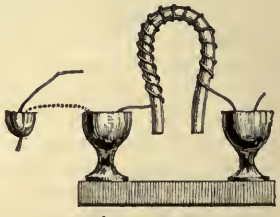
THE FIRST RECORDING TELEGRAPH, 1837.
(IN THE CABINET OF THE WESTERN UNION TELEGRAPH COMPANY, NEW YORK.)

PROFESSOR LEONARD D. GALE.

It is interesting, in looking back, to contrast the prevalent ignorance and misconception of that day with the present realization. No one could be made to believe that an electric telegraph, even if practicable, was either necessary or desirable. The more intelligent conceded that it might perhaps prove an interesting scientific toy, but the hard-fisted New Jersey farmers looked upon the experiment as a wanton and inexcusable waste of money, and were accustomed to speak of it as the one solitary instance of bad judgment on the part of the Vails. . . .

The mechanical difficulties of the undertaking can scarcely be comprehended by an electrician of the present day, who finds every conceivable material and appliance in the market ready to his hand. Our first voltaic battery was constructed of a rectangular box of cherry wood, subdivided into eight compartments, and lined with beeswax, in order to resist the action of acids. The form of the zinc and copper elements — and, in fact, the elaboration of every detail — involved a new series of experiments. Insulated wire was then unknown in the market, the best substitute obtainable being milliner's wire, such as was used to give outline to the sky-scraper bonnets of the day. It was of copper, that it might be made to take and retain any form that the deft fingers of the artist chose to give it, and was found to serve sufficiently well as a conductor, although the insulation of the cotton covering was somewhat imperfect. However, it was the best obtainable, and the entire New York market was drained for our experiments.

Before giving a further account of the work of Vail at Speedwell, in the autumn of 1837, it is desirable to understand the precise point of development which the original apparatus of Morse had reached when it was placed in his hands for reconstruction, and we therefore give a sketch and a brief description of the apparatus, which at that time formed the only material embodiment of the invention. The identical machine is still preserved, at the office of the Western Union Telegraph Company in New York City. The support for the mechanism is a rectangular frame of pine, x x, which, when in use, was fastened in an upright position to the edge of a table. Upon the lower part of this frame three wooden rollers, A B C, are mounted. A ribbon of paper is so arranged that it may be unwound from the first roller, passed over the second, and finally rewound upon the third. This movement is effected by the machinery, D, of a wooden clock put in motion by a weight, E, and cord passing over a pulley. A wooden pendulum, F, suspended from the upper part of the frame, swings transversely across the paper as it moves uniformly over the middle roller. A pencil, *g*, in the lower end of the pendulum has its point in constant contact with the paper. Midway of the length of the pendulum an electro-magnet, *h*, is mounted upon a stationary shelf, facing a soft-iron armature fastened upon the pendulum. This constituted the register, or recording apparatus. The arbitrary signs are written or drawn upon the moving paper by a transverse movement to and fro of the pendulum. This movement is effected by the alternate magnetization and demagnetization of the iron of the electro-magnet, caused by the alternate flow and cessation of an electric current traversing the wire coiled upon it. The manipulation of the current from battery, I, was to be effected by a circuit-breaking device at the transmitting point, consisting of metallic type, representing by convention numerical characters, set up in a "type-rule," M, in an order depending upon the matter to be transmitted. The type-rule and type were then placed upon an endless band of carpet-binding, and were carried forward by points extending downward into the band which passed over two rollers, L L, and was turned by a crank. The projections upon the face of the type impinged upon a tooth affixed to the extremity of a lever, o o, which carried a metallic fork. Thus, as each successive projection upon the type came in contact with the tooth upon the lever, the fork was caused to dip into two mercury cups, J K, completing the circuit of the battery through a few feet of wire and the coils of the electro-magnet.



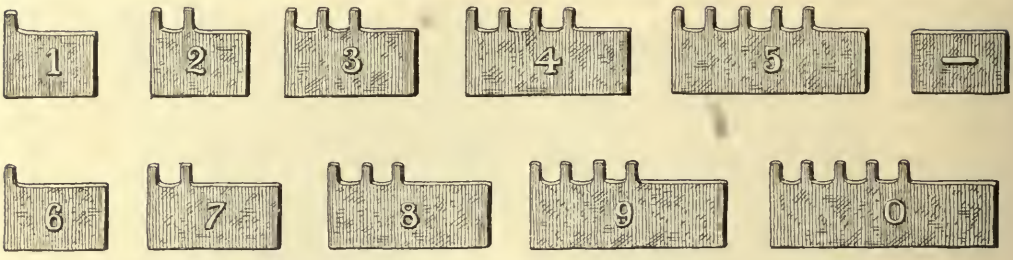
STURGEON'S ELECTRO-MAGNET.

This was the state of the invention when first shown to Professor Gale, in January, 1837.

PROFESSOR JOSEPH HENRY.

The recording machinery had been constructed, but could be made to operate through a very short wire only, the addition even of forty feet rendering the apparatus ineffective. Although Morse was doubtless at the time entirely ignorant of the fact that any other person had even conceived the possibility of the instantaneous transmission of intelligence to a distance by electricity, yet, as we now know, this had actually been attempted by a number of experimenters, who had one after another been confronted with the apparently insurmountable obstacle which now presented itself to Morse. Very fortunately, Professor Gale not only comprehended the nature of the difficulty, but was able to suggest the means of overcoming it. In a letter to Professor Joseph Henry, dated April 7, 1856, he writes:

This apparatus was Morse's original instrument, usually known as the type apparatus, in which the types, set up in a composing stick, were run through a circuit-breaker, and in which the battery was the cylinder battery, with a single pair of plates. This arrangement also had another peculiarity, namely, it was the electro-magnet used by Moll, and shown in drawings of the older works on that subject, having only a few turns of wire in the coil which surrounded the poles or arms of the magnet. The sparseness of the wires in the magnet coils and the use of the single cup battery were to me, on the first look at the instrument, obvious marks of defect, and I accordingly suggested to the professor, without giving my reasons for so doing, *that a battery of many pairs should be substituted for that of a single pair*, and that *the coil on each arm of the magnet should be increased to many hundred turns each;* which experiment, if I remember aright, was made on the same day with a battery and wire on hand, furnished, I believe, by myself, and it was found that while the original arrangement would only send the electric current through a few feet of wire, say 15 to 40, the modified arrangement would send it through as many hundred. Although I gave no reasons at the time to Professor Morse for the suggestions I had proposed in modifying the arrangement of the machine, I did so afterward, and referred in my explanations to the paper of Professor Henry, in the 19th volume of the "American Journal of Science." . . Professor Morse professed great surprise at the contents of the paper when I showed it to him, but especially at the remarks on Dr. Barlow's results respecting telegraphing, which were new to him, and he stated at the time



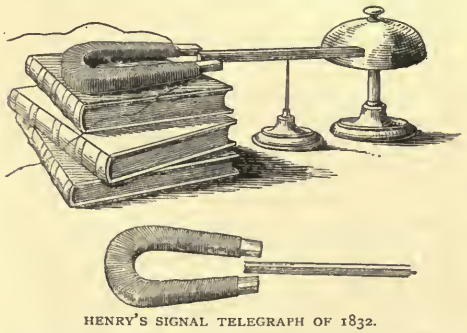
that he was not aware that any one had even conceived the idea of using the magnet for such purposes.

The original telegraph type cast by Prof. Morse at his brother's house.

Prior to the investigations of Professor Henry, in 1830, the means of developing magnetism in soft iron had been but imperfectly known. The electro-magnet, as originally devised by Sturgeon of England, in 1825, consisted of an iron rod in the form of a horse-shoe, coated with varnish, and surrounded with a helix of naked wire composed of a small number of turns at a considerable distance from each other. A copy of this magnet was made by Professor Dana as early as 1827, and was familiar to Morse, and thus it happened that it was the Sturgeon magnet which Morse employed in his first experiment. It was found by Henry that the projectile force necessary to send the electric current effectively through a long conductor required a battery of a series of many pairs of plates; and that in order to utilize that power at the distant station it is necessary to surround the magnet with many turns of one long wire, superposed upon each other and insulated, so as to multiply the effect of the current enfeebled by its transmission through the long conductor.

But Henry, in 1832, had done much more than this. He had actually constructed and operated an electro-magnetic signaling apparatus which was as truly an electric telegraph as that of to-day. Not only was it a telegraph, but it was essentially what now goes by the name of the "Morse" telegraph. Professor Henry describes his apparatus of 1832 as follows:

I arranged around one of the upper rooms in the Albany Academy a wire of more than a mile in length, through which I was enabled to make signals by sounding a bell. The mechanical arrangement for effecting this object was simply a steel bar permanently magnetized, of about ten inches in length, supported on a pivot, and placed with its north end between the two arms of a horse-shoe magnet. When the latter was excited by the current, the end of the bar thus placed was attracted by one arm of the horse-shoe and repelled by the other, and was thus caused to move in a horizontal plane and its farther extremity to strike a bell suitably adjusted.



HENRY'S SIGNAL TELEGRAPH OF 1832.

This apparatus is shown in the accompanying illustration, and was seen in operation by many witnesses. It is therefore certain that Henry was the first actually to magnetize a piece of iron at a distance by electricity and to produce acoustic signals thereby; that he was the first to point out and experimentally demonstrate the relation between the battery, the conductor, and the electro-magnet necessary to develop magnetic power at a distance; and, moreover, he did not omit publicly to call attention to the fact of the applicability of this experiment to an electric telegraph.*

The statement of Professor Gale clearly establishes the fact that the principles laid down by Henry were applied by himself, in 1837, to render Morse's machine effective at a distance. It is therefore certain, that although Morse had recorded signals by means of his Sturgeon magnet through a few feet of wire, yet, for any

* In the words of Professor A. M. Mayer: "This was the first electro-magnetic telegraph which had worked through so great a length of wire; it was the first telegraph in which an electro-magnet had worked successfully; it was the first sounding electric telegraph."

TELEGRAPHIC WRITING BY MORSE'S FIRST INSTRUMENT. (FROM ORIGINAL IN ARCHIVES OF NEW JERSEY HISTORICAL SOCIETY.)

telegraphic purpose, his previous experiments had been utterly unavailing.

It is also important to remember that the code of conventional signals which had been devised by Morse, and which, in connection with his machine, he proposed to use for the transmission of intelligence, were *numerical* and not *alphabetical*. According to his scheme a specially prepared dictionary was required, in which every word in the English language was represented by an arbitrary number. A separate type represented each numeral, having a corresponding number of projections or teeth. We reproduce a specimen of telegraphic writing by this numerical code. The numbers refer to words in the telegraphic dictionary. They are translated by counting the points at the bottom of the line, and then, by referring to the dictionary, the corresponding words are found and the communication translated.

The construction of the machines referred to by Mr. Baxter was begun early in September, 1837, immediately after the partnership between Morse and Vail had been determined upon. Meanwhile, Morse remained in New York, engaged in the preparation of his caveat. This document was subscribed by him on the third day of October, 1837, and from it we may learn precisely of what his invention then consisted. He enumerates the essential parts of his apparatus as follows:

First, a *system of signs*, by which numbers, and consequently words and sentences, are signified; second, a *set of type*, adapted to regulate and communicate the signs, with rules in which to set up the type; third, an *apparatus called the port-rule*, for regulating the movement of the type-rules, which rules, by means of the type, in their turn regulate the times and intervals of the passage of electricity; fourth, a *register*, which records the signs permanently; fifth, a *dictionary*, or vocabulary of words, numbered and adapted to this system of telegraph; sixth, *modes of laying conductors* to preserve them from injury. This, then, was Morse's telegraph, as it existed in October, 1837. It was the first apparatus to *record* simple numerical signs at a distance by electricity. Writing as late as 1867, and giving what may be regarded as his own mature opinion of his work, Morse claims, and with justice, to be the first inventor of a *recording or printing telegraph*, as distinguished from a *semaphore*, giving only evanescent signs, either visual, as in the apparatus of Schilling and others, or acoustic, as in the apparatus of Henry. He inquires:

> What else was necessary to be added to the catalogue of facts known in 1832 to construct a telegraph? One other fact only was wanting, and that was a system of signs adapted to the capabilities of the mechanism for printing at a distance; and this system of signs I invented in 1832, and adding to it the inventory of known facts *successfully combined* them to produce the telegraph.

But, as we shall hereafter see, the telegraph invented by Morse in 1832, and described in his caveat of 1837, has nothing in common with the *essentials* of the modern system of telegraphy which is known in the United States as Morse's; nor is the code of alphabetical signs now universally used in telegraphy throughout the world the same, either in principle or in construction, as that of the caveat.

As soon as the caveat had been safely lodged in the Patent Office, Morse began the preparation of a dictionary. October 24, he writes to Vail:

> The dictionary is at last done. You cannot conceive how much labor there has been, but it is accomplished, and we can now talk or write anything by numbers. . . .
>
> The spark passes freely as yet three and a half miles, and magnetizes well at that distance, though evidently with diminished strength, which would seem to indicate that there is a limit somewhere. We have just heard that Professor Wheatstone had tried an experiment with his method — twenty miles — with success; we have, therefore, nothing to fear.

On the 29th, Morse went to Speedwell for a few days, partly to observe the progress of the new machinery, and partly with the intention of painting the portraits of the members of Judge Vail's household, in fulfillment of a commission which had been given him as a delicate and considerate manner of relieving his pressing pecuniary necessities. After his return to New York, he wrote to Vail, November 13:

> You will be gratified and agreeably surprised when I inform you that the result now is, that, with a little addition of wire to the coil of the small magnet which I had all along used, the power was as great apparently through *ten* as through three miles. The result has surprised us; and yet there is no mistake, and, I conceive, settles the whole matter.

Meanwhile Alfred Vail and his young assistant, William Baxter, were engaged night and day in pushing forward the construction of the new machinery. Writing of this period, Mr. Baxter says:

> Alfred was singularly modest and unassuming, while Professor Morse was very much inclined to insist on the superiority of his own plans and methods — if for no other reason, *because* they were his own. As we all looked upon him with the respect due to a professor, we were at first quite willing to defer submissively to his dicta. It resulted from this, that the

first machine which was constructed at Speedwell was substantially a copy of the original model, although constructed of metal, in a more symmetrical and practical form.

As we became acquainted with Morse it became evident to us that his mechanical knowledge and skill were limited, and his ideas in matters relating to construction of little value. As the weak points in the apparatus were one after another developed, Alfred began to draw upon the resources of his own wonderful power of invention in substituting practical and commercially valuable mechanical combinations for the more or less impracticable designs of Morse.

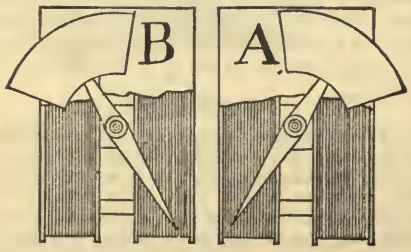
We found, for example, that the pencil of the recording apparatus frequently required repointing, and that when freshly sharpened it made a different mark from that made by a worn point, which tended to render the record obscure and difficult to decipher. Alfred contrived a fountain-pen that made a uniform line. This device, however, was not satisfactory to him, as it threw the ink in all directions when jerked by the sudden action of the magnet, and he spent some time in diligent study in the endeavor to devise a remedy.

He was a mechanical draughtsman of surpassing skill, as is fully attested by some of his work still in possession of his family.* He brought to me one day, after working for an hour at his drawing-table, a sketch of a new marking device, in which a vertical motion was given to the lever instead of the transverse movement which had hitherto been employed. We constructed the new lever, and thus for the first time produced a register capable of making *dots*, *dashes*, and *spaces*.

Alfred's brain was at this time working at high pressure, and evolving new ideas every day. He saw in these new characters the elements of an alphabetical code by which language could be telegraphically transmitted in actual words and sentences, and he instantly set himself at work to construct such a code. His general plan was to employ the simplest and shortest combinations to represent the most frequently recurring letters of the English alphabet, and the remainder for the more infrequent ones. For instance, he found upon investigation that the letter *e* occurs much more frequently than any other letter, and accordingly he assigned to it the shortest symbol, a single dot (·). On the other hand, *j*, which occurs infrequently, is expressed by dash-dot-dash-dot (—·—·). After going through a computation, in order to ascertain the relative frequency of the occurrence of different letters in the English alphabet, Alfred was seized with sudden inspiration, and visited the office of the Morristown local newspaper, where he found the whole problem worked out for him in the type-cases of the compositors.

In this statement I have given the true origin of the misnamed "Morse" alphabet, the very foundation and corner-stone of a new system, which has since become the universal telegraphic language of the world.

* As an illustration of Vail's skill as a draughtsman, we give a fac-simile of his drawing of one of his original conceptions, embodying the principle of the modern electric annunciator. This was probably made in 1845.



FAC-SIMILE OF VAIL'S DRAWING OF ELECTRIC ANNUNCIATOR.

The construction of the apparatus, and the accompanying experiments, were carried forward as rapidly as possible during the last three months of 1837. Meantime, Professor Gale, in New York, was engaged in planning the batteries, which were of the Cruikshank, or trough pattern, having sixty pairs of plates each. By November 13, as we have seen, Gale had transmitted signals through ten miles of wire with the old experimental instrument. At length, on January 6, 1838, the new instruments were set up in a vacant room at Speedwell; and on the 10th and 11th of the same month they were publicly exhibited to the people of Morristown, in operation through three miles of wire.

Writing of this period in the progress of the work, Mr. Baxter says:

> The path to this land of promise was not by any means strewn with roses. It could hardly have been expected that the Judge, who was the actual financial supporter of the enterprise, would go on for months making a constant outlay without seeing any result. It was too large a sum of money to be to all appearances thrown away on an invention the practical use of which was little understood or appreciated, and the ultimate success of which was, to say the least, problematical. The superior wisdom of his neighbors and the sarcastic remarks of the villagers irritated and discouraged him, so that by degrees he grew morose and ill-tempered, and at length utterly refused to look at the machinery or to assist in its construction, thus leaving us to find our own way out of the accumulating difficulties as best we could.
>
> It was a trying ordeal, for we were convinced that if a favorable result were not reached at an early day the Judge would order the experiment discontinued. During the last days of 1837 the crisis seemed so close at hand that Morse and Alfred carefully avoided meeting the Judge, for fear of precipitating the *dénouement*. We confined ourselves closely to the room and worked assiduously at the apparently endless task, determined, if possible, to accomplish it before our opportunity for doing so was withdrawn. Each succeeding day, at noon, I was directed to watch and report when the Judge left the works to go to his dinner, whereupon Morse and Vail would steal out and dine at the house of Dr. Cutler,—a brother-in-law of Alfred's who lived near by,—and hurry back to the room before the Judge returned.
>
> It was a time of extreme anxiety for us, as well as a critical point in the history of the telegraph. We well knew that unless a satisfactory result were soon reached the work must stop, never to be resumed by us, and we felt that at any moment the fate of a great invention might be decided for all time.
>
> But time and patience conquer all, and at length we had the unutterable satisfaction of knowing that the machine was at last in working condition. . . .
>
> I recall vividly, even after the lapse of so many years, the proud moment when Alfred said to me: "William, go up to the house and invite Father to come down and see the telegraph machine work."
>
> I did not stop to don my coat, although it was the 6th of January, but ran in my shop-clothes as fast as I possibly could. It was just after dinner when I knocked at the door of the house and was ushered into

the sitting-room. The Judge had on his broad-brimmed hat and surtout, as if prepared to go out, but he sat before the broad fire-place, leaning his head on his cane, apparently absorbed in deep meditation. As I entered the room he looked up, and said, "Well, William?" and I answered, "Mr. Alfred and Mr. Morse sent me to invite you to come down to the room and see the telegraph machine work." He started up as if the importance of the message impressed him deeply, and in a few minutes we were standing in the experimental room. After a short explanation, he called for a piece of paper, and writing upon it these words, "*A patient waiter is no loser*," he handed it to Alfred, saying, "If you can send this, and Mr. Morse can read it at the other end, I shall be convinced." He knew that Morse could not possibly be cognizant of the contents of the message, and hence that there could be no collusion between the experimenters, and in any event he had perfect faith in both; so that when the message was translated from the machine by Morse and handed to him, the duplicate in every word of his own dispatch, he knew that the invention was a demonstrated success, and he then, perhaps for the first time, fully realized its actual importance. The unexpected result of the experiment overcame his usual equanimity, and he gave way in an instant, apparently wholly overcome by his emotions.

He had scarcely seen or spoken to Alfred for six weeks, and the meeting under such auspicious circumstances was a most joyous one. In the exuberance of his happiness the Judge proposed to go at once to Washington and urge upon Congress the establishment of a Government telegraph. He was perhaps the most influential adherent, in his portion of the country, of the Van Buren administration, then in power, and hence apprehended but little difficulty in effecting the desired result. But the event proved that the assistance of Congress was not so easily to be procured.

It was at once determined that an exhibition should be first given in New York, and that Morse and Vail should then take the apparatus to Washington, for exhibition before Congress. The instruments were accordingly transported to New York and set up in the University, in the same room where the early experiments had been made. A letter from Alfred to his brother, written January 23, 1838, says:

Yesterday I wrote by stage informing you of our intention to exhibit to-day. We have done so with perfect success, through ten miles, to hundreds of ladies and gentlemen. To-morrow is our last day. I shall box up, and it is decided we make a stop in Philadelphia for a few days. We are now going on very well. Our audiences were astonished and delighted.

At the conclusion of the exhibition in New York, Morse and Vail proceeded to Philadelphia and submitted the apparatus in operation to a committee of the Franklin Institute. This committee in their report expressed their high gratification with the performance of the apparatus and their hope that the Government would furnish the means to make a test on an extensive scale. This indorsement produced a most encouraging effect, and Judge Vail at once authorized papers to be prepared for securing foreign patents. After a stay of a few days at Philadelphia, Morse and Vail set out, with high hopes and anticipations, for Washington.

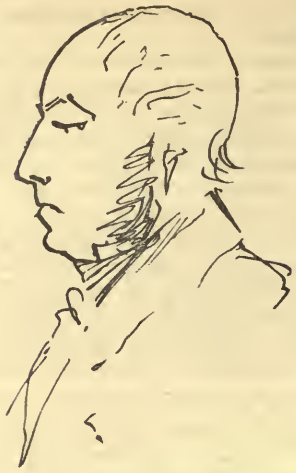
The report of the Secretary of the Treasury to the House, heretofore referred to, had been made on December 6 of the preceding year, and was accompanied by the most promising of the various replies to the circular which had been received. The Secretary said:

From these communications, and such other investigations as the pressure of business has enabled me to make, I am satisfied that the establishment of a system of telegraphs for the United States would be useful to commerce as well as the Government. It might most properly be made appurtenant to the Post Office Department, and, during war, would prove a most essential aid to the military operations of the country.

The letter of Morse in reply to this circular was written September 27, 1837, immediately after the contract with Vail had been concluded, and, together with the report, had been referred to the House Committee of Commerce. Immediately upon arriving at Washington, Morse had applied to the chairman, Hon. Francis O. J. Smith of Maine, to be heard by the committee in explanation of his plan. This permission was readily granted, together with the use of the committee room in the Capitol for the exhibition of the apparatus. At the next meeting of the committee, when the somewhat unprepossessing apparatus was first seen, the members evinced general incredulity as to the merits of the invention; but, fortunately, Mr. Smith had in the mean time become deeply interested, and had made himself acquainted with the principles and mode of operation of the apparatus. With such effect did he intreat his associates to promise attendance at a special meeting to listen to the explanations and to witness the manipulations of the partners, that the time appointed found every member present. Morse and Vail, inspired with new hope by the favorable attitude of Smith, spared no effort to make the exhibition successful. The demonstration was conclusive, and the chairman was instructed to report a bill appropriating thirty thousand dollars to construct an experimental line between Washington and Baltimore.

The following interesting letter from Alfred Vail to his father, written on February 17, 1838, gives a graphic impression of the sensation produced by the invention, as it appeared to the hopeful and enthusiastic writer:

The labors of the week have closed, and with the most unexpected success. Hundreds have witnessed the operation of the machine and its almost incredible powers. I do not represent to you the full effect which our exhibition has had upon the minds of those who have witnessed it,— for you would scarcely believe,— but I can assure you, I feel as though some strange thing had happened when I see members of Congress eager to witness the powers of the machine, and, after having seen them, utter exclamations of won-



HON. FRANCIS O. J. SMITH.
(FAC-SIMILE OF ORIGINAL PENCIL-SKETCH BY MORSE.)

der and amazement. Some say, "The world is coming to an end." Others, "What would Jefferson think should he rise up and witness what we have just seen?" "Where will improvements and discoveries stop?" "Time and space are now annihilated." "It is the most wonderful discovery ever made." Others say that "it must belong to Government," etc., etc. Some members, after having seen it themselves, go out and bring in half a dozen more, and they come again and again. Mr. Calhoun, after he had seen it, which was the day after he made his speech, sent down a dozen other senators to witness it; and so we go. The President and Cabinet have signified their intention to visit it, and you may imagine the interest they feel from the fact that it will be the first visit the President will have made to the Capitol since Congress has been in session this winter. I believe they are more desirous to have an experiment tried 200 miles than 100, but we wish to try it 100. The battery which we use has 40 plates more than we need; the fluid passes the whole circuit of 10 miles, even when it is not in action — that is, only from the moisture on the plates. Dr. Patterson has made a *very* favorable report of our exhibition at Philadelphia to the Secretary of the Treasury, which will be or has been sent to the House. Professor M. has been requested by the chairman of the Committee on Commerce to make out a full report and proposition. The committee are very much pleased and will *undoubtedly* report favorably to the House. Professor M. tells me that Ellsworth * and others inform him that it will meet with approbation by Congress, and that members frequently ask him what is his opinion. I state to you things as they are. Mr. Ellsworth said that nothing had ever been in Washington that has produced such a noise.

In the letters written by Alfred Vail at this time to his family and friends there is apparent an undercurrent of dissatisfaction in respect to the personal relations between Morse and himself. As we have seen, Vail, in accordance with the terms of the contract, had not only become a full partner in the ownership of the invention, but had supplied the entire resources and facilities for obtaining patents and for constructing the apparatus for exhibition at Washington; and, more than this, he had introduced essential improvements not only in the mechanism, but in the fundamental principles of the telegraph. In the correspondence of this period there is evidence that, notwithstanding his many admirable traits of character, Morse seems to have possessed so high an appreciation of his own abilities that he was scarcely able to do justice to the work of his coadjutors, or even fully to comprehend its essential value to him. This was particularly the case in respect to the services of his enthusiastic and faithful associate Vail. From the time when the apparatus was first exhibited in New York to the last day of his life, Morse appears to have evinced a certain disinclination to acknowledge the full proportion of credit to which, as time has shown, his associate was entitled. We find him repeatedly referring to Vail as his "mechanical assistant," rather than his associate and partner, and in terms calculated to convey the impression that the latter, instead of being a liberally educated young man, of more than ordinary ability, was but an ordinary mechanic who had been employed to put the matured conceptions of the inventor into substantial form. The sensitive spirit of Vail chafed under this ungenerous treatment. His private letters contain occasional references to this grievance. On January 22, 1838, the day before the exhibition in New York, he writes to his brother:

Since my arrival here I have been so engaged with the telegraph that I have had no time to inform you of our progress. I however have now the pleasure to inform you of its complete success through the ten miles, after some little trouble and solicitude. We received the machine on Thursday morning and in an hour we made the first trial, which did not succeed, nor did it with perfect success until Saturday — all which time Professor M. was rather *unwell*. Tomorrow we shall make our first exhibition, and continue it until Wednesday, when we must again box up. Professor M. has received a letter from Mr. Patterson inviting us to exhibit at Philadelphia, and has answered it, but has said nothing to *me* about his intentions. He is altogether inclined to operate in his own name; so much so, that he has had printed five hundred blank invitations in his own name, at your expense. . . . Professor Silliman has seen the machine in operation, and says it exceeds his expectations.

Again writing from Washington, to his brother George, February 20, 1838, in reference to the execution of a formal conveyance of their stipulated interest in the invention, which for a long time he had been urging Morse to make, Vail says:

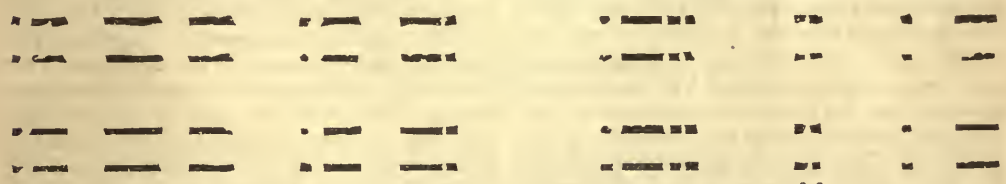
He has agreed to give us one-fourth, so you perceive the thing is settled. In regard to Professor M. calling me his "assistant," this is also settled, and he has said as much as to apologize for using the term. . . .

* Hon. Henry L. Ellsworth of Connecticut, then Commissioner of Patents.

I cannot take your advice that one should allow himself to be called all sorts of names if he can only get the "ready."

After the exhibition before the Congressional committee at Washington, the chairman, Mr. Smith, whose acute perceptions fully appreciated the vast prospective importance of the telegraph as well as its enormous pecuniary value, proposed to be admitted as a partner in the invention. Further negotiations resulted in an agreement by which Smith was to become the owner of one-fourth of the invention, to be contributed in equal shares by Vail and Morse. He was to resign his seat in Congress and become the legal adviser of the partners, and was also to accompany Morse to Europe, bearing his expenses while abroad, and providing means and adopting measures for securing European patents.

The immediate object of their visit to Washington having been accomplished, Morse and Vail returned early in March — Morse with the intention of proceeding to Europe at an early day in company with Smith, while Vail went to Speedwell to prepare apparatus for exhibition in Europe. He immediately began



FAC-SIMILE OF RECORD BY MULTIPLE FOUNTAIN-PEN INSTRUMENT OF APRIL, 1838.

two new instruments, on a plan radically different from that exhibited in Washington. The pencil hitherto used in registering was replaced by a multiple fountain-pen. This was attached to the armature-lever, making dots and lines upon a continuous ribbon of paper, which by clock-work was made to pass beneath the pens. This improved register had been completed by Vail and was in successful operation when first seen by Morse on a visit to Speedwell, April 11, 1838.

On May 16, 1838, Morse and Smith embarked for Europe, where they arrived in June. Smith returned in November, and threw himself into the political arena. Morse remained abroad until April of the following year, endeavoring, without avail, to induce the European governments to adopt the invention, but at length returned to New York. By this time the apathy and indifference of Congress towards the invention had filled its promoters with discouragement. As we have seen, Alfred Vail, supported by his father and brother, had performed every obligation placed upon him by the partnership agreement. He had defrayed the cost of patent protection; he had constructed the machinery, adding essential improvements, the work of his own hands and brain; he had borne the expense of exhibiting the apparatus in New York, Philadelphia, and Washington, demonstrations attended with such success that a report of the most eulogistic character had been made to Congress by the committee having the matter in charge; and finally, to secure the coöperation of the ex-chairman of the Congressional committee as a partner in the enterprise, he had given up one-half his original interest. Not only had he thus more than performed his part of the labor, but a large sum of money had been expended without tangible result. Under these circumstances it is not surprising that Judge Vail had become somewhat disheartened. There was no immediate prospect that a dollar could be realized from the invention either in America or in Europe. Meanwhile a cloud of financial embarrassment enveloped the country and cast its gloomy shadow over every industrial enterprise. The Speedwell works were not exempt from the effects of the general depression. It was with the utmost difficulty that its proprietors could meet their current obligations, and the condition of affairs was such that they were utterly unable to furnish Morse with further pecuniary aid.

This was a period of discouragement and depression for the proprietors of the telegraph, scarcely relieved by a ray of light from any source. At the time, there seemed little hope that Congress would ever grant the desired appropriation. The session of 1839–40 was on the eve of the most exciting and disgraceful presidential campaign that the country had ever known, and, as in later days, the members were far too much interested in legislation which would give them some imaginary advantage over their political opponents to pay attention to measures affecting the real welfare of their constituents and of the country. In December, 1842, Morse was persuaded to make one more application to Congress. The Committee on Commerce again recommended an appropriation of thirty thousand dollars in aid of the enterprise. The bill passed the House by a close vote, and only after a discussion, which, as reported in the "Congressional

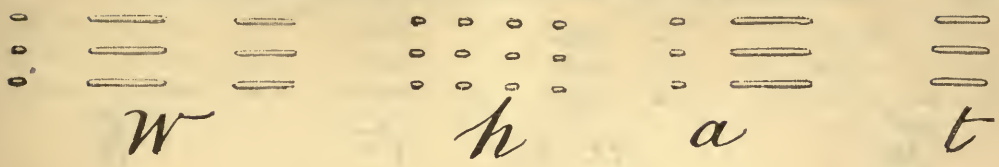
Globe," reflects scant credit upon the patriotism, to say nothing of the intelligence, of some of the participants. In the last hour of the session, March 3, 1843, the bill passed the Senate, and was signed by the President. Morse, writing to a friend in after years, says:

> This was the turning point in the history of the telegraph. My personal funds were reduced to the fraction of a dollar; and had the passage of the bill failed from any cause, there would have been little prospect of another attempt on my part to introduce to the world my new invention.

On March 4 Morse wrote to Vail the most hopeful letter he had penned in many years:

> You will be glad to learn, doubtless, that my bill has passed the Senate without a division, and without opposition, so that now the telegraphic enterprise begins to look bright. I shall want to see you in New York after my return, which will probably be the latter part of next week. I have other letters to write, so excuse the shortness of this, which, if short, is sweet at least. My kind regards to your father, mother, brothers, sisters, and wife. The whole delegation of your State, without exception, deserve the highest gratitude of us all.

On March 31 Morse tendered Vail an appointment as assistant and superintendent of the machinery department of the telegraph to be constructed between Washington and Baltimore under the Government appropriation, which was at once accepted, Vail immediately entering upon his duties with characteristic energy and industry. From this time forward the condition of the work is minutely detailed in his diary, and from this we gather much information of interest in respect to the subsequent progress of the work. On April 13 he suggested to Morse the trial of two or more circuits from one battery. The experiment was successful, and the result proved to be of the utmost importance when the telegraphic system became more widely extended. Afterward we find him experimenting with wires in pipes, winding coils for receiving magnets, and experimenting with Morse in a trial of six wires with a common return circuit. About this time he was also making working drawings for a new registering apparatus, and a new "correspondent," a machine which had been devised by Morse while in Europe as a substitute for the port-rule and type. Vail's inventive and experimental turn of mind found full scope while engaged in this congenial work. Among other discoveries which he made at this time was the self-interrupting circuit-breaker, now universally employed for ringing electric bells, and the axial-magnet, so useful in electric arc lighting, in the first of which devices, however, he had been, as afterward appeared, anticipated by Dr. C. G. Page. The operation of the axial-magnet suggested to his fertile brain the idea of utilizing the principle in the construction of a gauge for ascertaining the power of a battery — the modern ampere-meter, of which he made working drawings. Meanwhile the work of constructing the correspondents, registers, and receiving magnets had been going forward in New York. Smith was endeavoring to devise a machine to lay the underground pipe and inclosed electrical conductors between Washington and Baltimore, which he had contracted with Morse to do at the rate of one hundred dollars per mile. Ezra Cornell, afterward the founder of Cornell University, had been engaged in selling a patent plow; and, chancing to fall in with Smith in Portland, undertook, at his suggestion, to construct a pipe-laying machine. This was completed in August, 1843, on which occasion Morse went to Portland, participated in a successful experimental trial of the machine, and returned home in high spirits. At Smith's urgent solicitation, Cornell went to Baltimore, and in October began laying the wires, which had previously been prepared by Morse's assistant, Dr. Fisher. As each length was laid, Vail tested and united the conductors. Ten miles of the underground line had been laid, when the insulation, which had been gradually failing, disappeared altogether. The minds of those engaged in the enterprise were filled with consternation. Cornell dexterously managed to break the pipe-laying machine, that the apparent accident might furnish a plausible excuse to the newspapers and the public for the temporary suspension of the work. Professors Morse and Gale, Dr. Fisher, and Mr. Smith spent days in secret session at the Relay House discussing the cause of the failure and endeavoring to devise a remedy. The consultations were protracted and painful. A disastrous termination of the enterprise seemed certain. Of the Congressional appropriation $23,000 had been expended, and Smith claimed $4000 of the remaining $7000 under his contract for laying the pipe from Baltimore to Washington. He announced that he was ready to perform his obligation, and insisted upon his legal right to be paid whether the pipe was laid or not, in order to reimburse himself for the expenditure which he had incurred during the fruitless expedition of Morse and himself to Europe in 1838. Smith had for the time wholly lost his faith in the enterprise, and the spirit manifested by him put an end to all friendly relations between himself and Morse. Their differences ultimately grew into an open and bitter quarrel which ended only with the death of the participants. From this time until April another period of the deepest gloom and despondency ensued. It seemed certain that the expense of re-insulating the



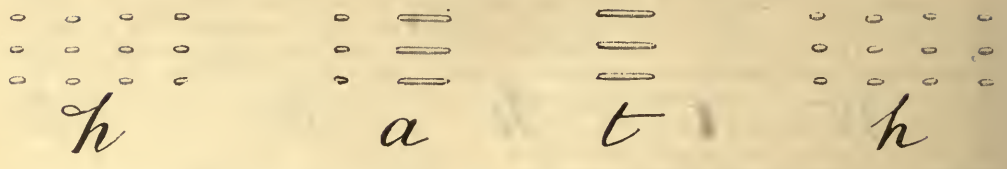
This sentence was written from Washington by me at the Baltimore Terminus at 8.h 45 min. A.M. on Friday May 24.th 1844, being the first ever transmitted from Washington to Baltimore, by Telegraph, and was indited by my much loved friend Annie G. Ellsworth.

Sam.l F. B. Morse. Superintendent of Elec. Mag. Telegraphs.

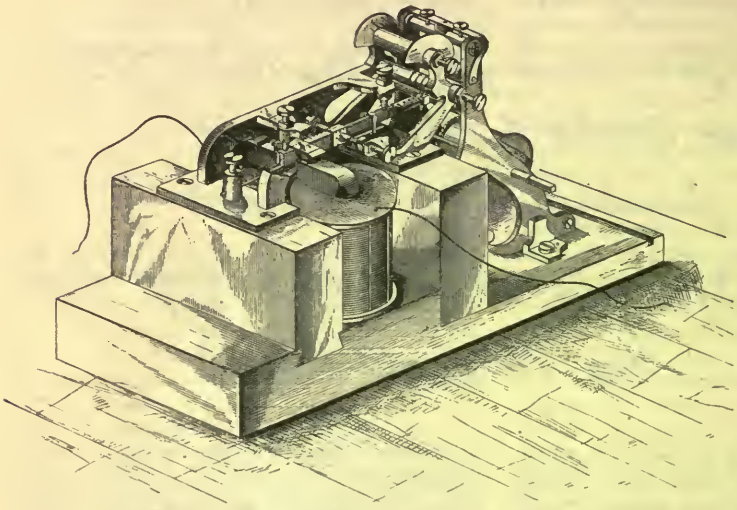
wires and completing the work would more than absorb the funds remaining on hand, and that work must inevitably be suspended to await another appropriation, any attempt to obtain which Smith openly threatened to defeat. The services of Gale and Fisher were dispensed with by way of reducing expenses. Cornell was appointed mechanical assistant, and directed to remove the wires from the pipes and re-insulate them. The dismal prospect of failure, the hostility between Morse and Smith, and the feelings of jealousy among some of the assistants rendered this period a most trying one to all concerned. Vail, though much dispirited, nevertheless labored assiduously at his experiments, and diligently studied Faraday's "Experimental Researches," determined, if possible, to find a way out of the mist of discouragement which enveloped himself and his associates. The quarrel between Morse and Smith distressed him exceedingly, especially as the latter evinced a most unfriendly spirit towards himself. January 8, 1844, he writes in his diary:

> The mode of conducting the business of the telegraph I cannot concur in. I doubt if the experiment is ever tried, and am at a loss to decide whether or not to remain in the employ of the Government. There is much inefficiency in the chief superintendence of it, much indecision, and economy ill-devised. Mr. Smith, I understand, carries his case to the Senate to-morrow. I fear if the appropriation is spent without a trial that utter disgrace will follow all concerned; so far, I can conscientiously say, I am not in any way implicated.

In February it was decided to place the conductors on poles, and accordingly Vail and Cornell were employed in the basement of the Patent Office during March in joining the ends of the wires and making them ready for the poles. On the 1st of April the stringing of the wires was begun at Washington, under the direction of Cornell. One set of apparatus was placed in the Capitol and manipulated by Morse, while Vail transported the other set from place to place along the route of the line, and corresponded with him as occasion offered. On April 12 the wires were worked successfully for twelve miles. On April 23 Vail substituted the earth for part of the metallic circuit between Bladensburg and the Capitol with satisfactory results. On April 30 the line was in operation between Annapolis Junction and Washington. While this work was going on, Smith continued to manifest undisguised hostility towards the enterprise, as appears from an entry in Vail's diary on May 6, as follows:



Professor Morse is again low spirited. He says that Smith will permit nothing to be done by Congress in reference to a further appropriation. Professor Morse's plan is to desist from further progress, to let the patent expire, and then if Government will use it and remunerate him, he will not let Professor Gale and myself want. He will not give Smith a cent; this he told me in the Capitol this morning.

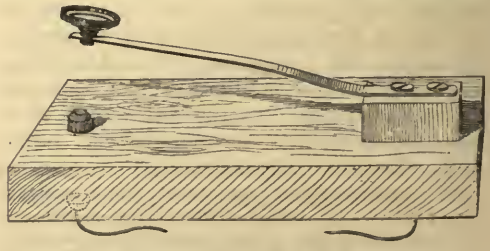


THE BALTIMORE RECORDING INSTRUMENT OF 1844, NOW IN THE NATIONAL MUSEUM.

The work went steadily forward. On May 23 the wires reached the Mount Clare depot in Baltimore, and the instruments were set up and operated with gratifying success, through forty miles of line. On May 24 the historic message, "What hath God wrought!" which had been dictated by Miss Annie Ellsworth, was transmitted from Washington by Morse and received by Vail at Mount Clare, and in the afternoon the instrument was transferred to the lower depot in Baltimore, in readiness for the regular operation of the line.*

The apparatus constructed for the experimental line, although efficient in its operation, would now be regarded as unnecessarily bulky and heavy. The receiving relay weighed 185 pounds, and it was a task for two strong men to handle it. At the present day an equally efficient receiving magnet need not weigh more than four ounces, and might be carried in the vest pocket. The register, which had been constructed by Stokell from working drawings made by Vail, embodied for the first time the beautiful mechanical conception of recording by the indentation of a steel-embossing point upon the paper, working in combination with a grooved roller. One of these instruments was used by Vail at Baltimore, and at his death was bequeathed by him to his eldest son, Stephen Vail, by whom it has been loaned to the National Museum at Washington. In removing this instrument from the place it had occupied for many years, for the purpose of exhibiting it at the Morse memorial celebration at the Academy of Music in New York, on the 10th of June, 1871, a member of Mr. Vail's family discovered a written document folded and attached to the base. A corner of the paper was unfortunately torn off before its importance was discovered. This paper reads as follows, the missing portions being supplied in italics:

This lever and roller were inv*ented by me in* the sixth story of the New York Ob*server office*, in 1844, before we put up the teleg*raph line* between Washington and Baltimore, and the *same* has been always used in

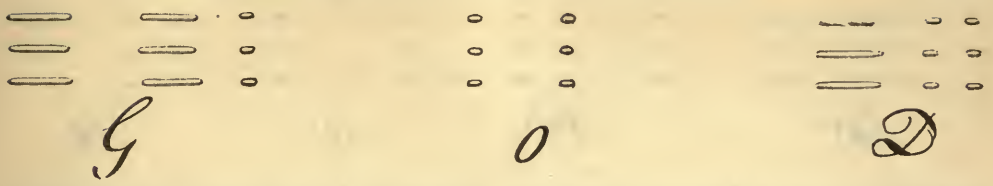


VAIL'S ORIGINAL FINGER KEY OF 1844.
(IN THE CABINET OF THE WESTERN UNION TELEGRAPH CO.)

* WASHINGTON, May 30, 1844.

DEAR VAIL: Little time to say anything. Things worked grandly yesterday. "What hath God wrought," truly. The enthusiasm here for telegraph is beyond your conception. Take courage then, and all will come right for us all. I was excessively fatigued last night, and so doubtless were you. Good-bye.

S. F. B. M.



Morse's instrument. I am the sole and only inventor of this mode of telegraph embossed writing. Professor Morse gave me no clue to it, or did any one else, and I have not asserted publicly my right as first and sole inventor, because I wished to preserve the peaceful unity of the invention, and because I could not, according to my contract with Professor Morse, have got a patent for it.

(Signed) ALFRED VAIL.

While Vail was at work along the experimental line between Baltimore and Washington, in April, 1844, he was accustomed to dispense with the mechanical correspondent, which had always been regarded by Morse as absolutely necessary for the transmission of signals, and to manipulate the apparatus by dipping the end of the conducting wire into a mercury cup. This plan had suggested itself to him before he left Speedwell, and now he found that his mental conception of the division of time, heightened by his practice and skill as a musician, served his purpose admirably — so admirably, in fact, that ere long the elaborately constructed correspondent, along with the port-rule and other crude mechanism of earlier days, was relegated to the scrap-heap. Immediately after the opening of the line to Baltimore, Vail constructed a simple circuit-closer in the form of a spring finger-key, by which the signals could conveniently be formed by hand. This he soon replaced by a more accurately constructed device, which was substantially that now used.

For some years after the introduction of the telegraph as an established means of communication, the instruments used, in all their essentials, were similar to those originally designed by Alfred Vail. The finger-key and the register indeed retained nearly the form which he had given them; and even the receiving magnet underwent but little change, except in its diminished size. The ponderous coils

first used were soon replaced by smaller ones, which Morse had discovered in Paris in 1845. The more expert of the telegraphic operators soon discovered that it was possible to interpret the telegraphic signals by the sound of the armature-lever. In vain did the proprietors and managers of the telegraph lines strive to prohibit this unauthorized method of receiving communications. Even threats of instant dismissal were unavailing to prevent the practice from being carried on whenever it could be done without detection. Morse himself, who had from the beginning regarded the production of a permanent record as the corner-stone of his invention, was most uncompromising in his opposition to the acoustic method, but the objectionable practice nevertheless continued to extend itself. Experience ultimately demonstrated the economy and the accuracy resulting from this unauthorized innovation; the recording instruments passed into disuse on one line after another, and were replaced by the modern sounder, a device consisting simply of an electro-magnet, a vibrating armature, and a retracting spring. At the present day the register is seldom seen except in the hands of inexperienced operators, who have not yet learned to interpret, with the facility that comes only from long practice, the unwritten language of the sounder.

The crucible of time alone has the power to separate the permanent and the essential from the transient and the non-essential. The law of the survival of the fittest is nowhere more clearly exemplified than in the history of the arts and inventions which form an essential part of modern civilization. Half a century has passed since the day when Morse first exhibited his recording telegraph to a circle of admiring friends gathered within the walls of the University. Within that period the electric telegraph has been spread over the globe. It has been extended across every continent and under every sea. Innumerable modifications of the original invention have been made; ingenious and beautiful systems have been invented by which communications may be printed in Roman letters, and even reproduced in a fac-simile of the handwriting of the author. Nevertheless, it is as certain as any future event can be, that one simple essential type of telegraphic apparatus is destined to supplant all its competitors, and to become universal throughout the world. This is the acoustic semaphore, or sounder, invented by Mr. Vail, which is used almost to the exclusion of everything else in North America and in India, and is rapidly making its way in every part of the civilized world. Although this system is everywhere known and recognized as the "Morse telegraph," careful analysis discloses the fact that it retains but little, if anything, which can in strict justice be said to be the offspring of the genius of its accredited inventor.

The accompanying diagram will serve to illustrate the organization of apparatus which constitutes the essential and typical electric telegraph of to-day. E represents the battery, K the finger-key at the transmitting station, and M the electro-magnet of the receiving instrument. A wire, 1, unites the negative terminal of the battery, E, with the ground plate, C. A wire, 2, extends from the other terminal of the battery to the finger-key, K, from whence proceeds the line wire, 3, the latter being continuous with the insulated coils around the legs of the electro-magnet, M, at the receiving station, and through these coils with the wire, 4, which extends to another ground-plate, G. We have, therefore, a circuit of electric conductors made up of the wires, the coils of the electro-magnet, and the earth, going out from the positive end of the battery marked + and returning to the negative end marked —, which is continuous, with the exception of the interruption at the key, K. When this key is depressed, the circuit is completed and is instantaneously traversed throughout by the electric current from the battery. The soft iron of the magnet, M, becomes magnetic, and the armature, L, is attracted, brought forcibly against

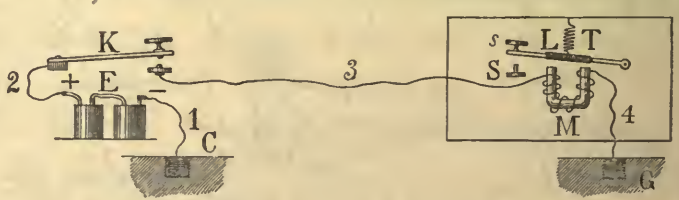

DIAGRAM ILLUSTRATING THE PRINCIPLE OF THE MODERN TELEGRAPH.

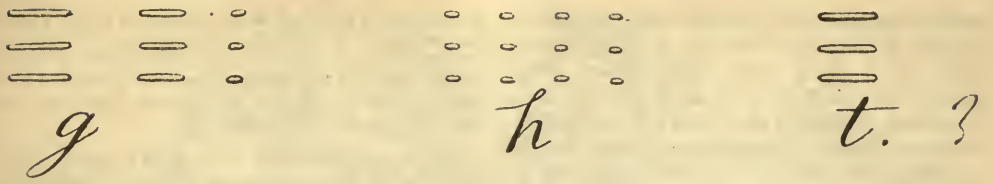


the stop, S, and retained by the influence of the magnet until released by the interruption of the current at the key, K. The magnetism now instantly disappears, the armature is released, and being raised by the spring, T, strikes against the upper stop, *s*. Hence the movements of the armature to and fro between the stops are a faithful reproduction of the movements given to the key, K, by the finger of the operator. So nearly simultaneous are these two movements that the ear is unable to separate them, even when both instruments are placed upon the same table and electrically united through a thousand miles of intervening wire.

This simple apparatus comprises all that is essential in the commercial operation of the electric telegraph. Other attachments are added for convenience, especially the relay and combined circuit for increasing the volume of sound from the receiving instrument; but this feature is in no wise indispensable, and is often omitted. The elementary mechanism illustrated on the previous page, and the alphabetical code of Vail, based on the immutable principle of the division of time and space, are essentials; all else is in a greater or less degree superfluous.

If we examine more closely this elementary apparatus, we find it almost identical with that employed by Henry in 1832. The battery, the circuit of wires, the electro-magnet, the lever, and the device which produces sounds when struck by the lever under the attractive impulse of the electro-magnet, differ in no material respect from the devices of Henry. His crude transmitting apparatus, a wire dipped in mercury, is replaced by Vail's spring finger-key. The adjustable stops between which the armature lever vibrates, originally devised by Page, were also incorporated into the telegraph by Vail.

It is self-evident, therefore, that not a single feature of the original invention of Morse, as formulated in his caveat and repeated in his original patent, is to be found among the essential constituents of the modern apparatus. Prior to 1837, it embodied the work of Morse and of Henry alone. From 1837 to 1844, it was a combination of the inventions of Morse, Henry, and Vail; but, as we have seen, the elements contributed by Morse have gradually fallen into desuetude, so that the essential telegraph of to-day, and the universal telegraph of the future, comprises solely the work of Joseph Henry and Alfred Vail. The grandeur of Vail's conception of an alphabetical code, based on the elements of time and space, has never met with the appreciation which it deserves. Its utility is not confined to electric telegraphy. It is used to signal, by intermittent flashes of light, between far distant signal stations of the Coast Survey, and between the different vessels of a fleet; it is sounded upon whistles and bells to convey intelligence to and from steamers cautiously feeling their way through the obscurity of fogs; and in fact nearly every day brings to notice some new field of usefulness for this universal symbolic language. It appeals to almost every one of our senses, for it may be interpreted with almost equal facility by the sight, the touch, the taste, and the hearing. Indeed, with a charged electrical conductor and a knowledge of Vail's alphabetical code, even the transmitting and receiving instruments of the electric telegraph may be dispensed with in emergencies.

In the minds of those who have followed the history of the invention of the telegraph, as related in the foregoing pages, the question will naturally arise why Vail did not during his lifetime publicly claim the credit for the share in the invention which was justly his. In reply to this, it may be said of him, that while we now recognize that he was an inventor of exceptional ability, yet, at the time of making his improvements, it did not occur to him that they were anything more than modifications of the invention of Morse; and he further appears to have considered that under his contract with Morse he was debarred from taking patents in his own name, even for the independent creations of his own brain — an erroneous impression, which at least one of his associates apparently took no pains to dispel. Another and perhaps controlling reason for his course is to be found in the fact, that, no sooner had the commercial value of the telegraph been demonstrated by its extension to the principal cities of the United States than rival and infringing enterprises sprung up on every hand. The ablest legal talent of the country, sustained by ample capital, was employed for years in a series of gigantic legal contests, with the avowed object of overthrowing the patents of Morse, and thus leaving the invention open to the world. The position of Vail, not only as a confidential associate of Morse, but as co-proprietor in the

patents, forbade him, both as a matter of policy and of justice, to set up a claim which might have been used with telling effect against the validity of Morse's patent. But, while Vail remained silent, so far as the public was concerned, because, in his own words, he "wished to preserve the peaceful unity of the invention," yet, his correspondence with his associates contains ample evidence that he never hesitated to assert to them his rightful claims, so far as he himself understood and appreciated them. When personal friends, familiar with the work which he had done, urged him to insist upon a recognition of his rights, he replied, "I am confident that Professor Morse will do me justice." But before the expiration of the patents, the death of Mr. Vail occurred, and from this time forward his claims received but scant consideration, although the reasons which had previously rendered this course apparently desirable and necessary no longer existed. Ten years after Vail had passed from earth, a magnificent reception and banquet was tendered to Professor Morse by the principal citizens of New York, at which Chief-Justice Chase presided. Professor Morse, referring to his invention, said:

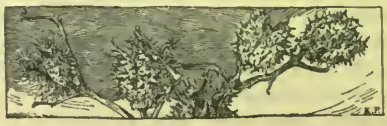
> In 1835, according to the concurrent testimony of many witnesses, it lisped its first accents, and automatically recorded them, a few blocks only distant from the spot from which I now address you. It was a feeble child indeed, ungainly in its dress, stammering in its speech; but it had then all the distinctive features and characteristics of its present manhood. It found a friend, an efficient friend, in Mr. Alfred Vail of New Jersey, who with his father and brother furnished the means to give the child a decent dress preparatory to its visit to the seat of Government.

One cannot but feel a certain surprise that this was all that Professor Morse, in the evening of his days and in the zenith of his fame, could find to say in recognition of the earnest, self-sacrificing, and life-long labors of his deceased associate.

The writer has no wish to detract from the credit which is justly due Morse for his great work, the conception and the reduction to practice of the recording telegraph. His indebtedness to those who had gone before him, whose results he embodied in his own work, and to the assistants who shared his confidence and his labors, diminishes not in the least his own merit as an inventor, although we believe even greater credit is due him for the unwearied industry, patience, and persistence with which he pressed forward, in the face of discouragements from which most men would have recoiled in dismay, until the goal of success was reached. But in the words of the distinguished associate and friend of both, the Hon. Amos Kendall:

> If justice be done, the name of Alfred Vail will forever stand associated with that of Samuel F. B. Morse in the history and introduction into public use of the electro-magnetic telegraph.

Franklin Leonard Pope.



THE STRUGGLE.

"BODY, I pray you, let me go!"
(It is a Soul that struggles so.)
"Body, I see on yonder height
Dim reflex of a solemn light;
A flame that shineth from the place
Where Beauty walks with naked face:
It is a flame you cannot see,—
Lie down, you clod, and set me free.

"Body, I pray you, let me go!"
(It is a Soul that striveth so.)
"Body, I hear dim sounds afar
Dripping from some diviner star;
Dim sounds of joyous harmony:
It is my mates that sing, and I
Must drink that song or break my heart,—
Body, I pray you, let us part.

"Comrade, your frame is worn and frail,
Your vital powers begin to fail;
I long for life, but you for rest,
Then, Body, let us both be blest.
When you are lying 'neath the dew
I'll come, sometimes, and sing to you;
But you will feel nor pain nor woe, —
Body, I pray you, let me go."

Thus strove a Being: Beauty-fain,
He broke his bonds and fled amain.
He fled: the Body lay bereft,
But on its lips a smile was left,
As if that Spirit, looking back,
Shouted upon his upward track,
With joyous tone and hurried breath,
Some message that could comfort Death.

Danske Dandridge.

TWO KENTUCKY GENTLEMEN OF THE OLD SCHOOL.

THE woods are hushed, their music is no more:
The leaf is dead, the yearning passed away:
New leaf, new life—the days of frost are o'er:
New life, new love, to suit the newer day.
TENNYSON.

THE WOODS ARE HUSHED.

IT was near the middle of the afternoon of an autumnal day, on the wide, elevated, rich, grassy plateau of central Kentucky. The Eternal Power seemed to have quitted the universe and left all nature folded in the calm of the Eternal Peace. Around the pale-blue dome of the heavens a few pearl-colored clouds hung motionless, as though the wind had been withdrawn to other skies. Not a crimson leaf floated downwards through the soft, silvery light that filled the atmosphere and created the sense of lonely unimaginable spaces. This light overhung the far-rolling landscape of field and meadow and wood, crowning with faint radiance the remoter low-swelling hill-tops and deepening into dreamy half-shadows on their eastern slopes. Nearer, it fell in a white flake on an unstirred sheet of water which lay along the edge of a mass of somber-hued woodland, and nearer still it touched to spring-like brilliancy a level, green meadow on the hither edge of the water, where a group of Durham cattle stood with reversed flanks near the gleaming trunks of some leafless sycamores. Still nearer, it caught the top of the brown foliage of a little bent oak-tree and burnt it into a silvery flame. It lit on the back and the wings of a crow flying heavily in the path of its rays, and made his blackness as white as the breast of a swan. In the immediate foreground, it sparkled in minute gleams along the stalks of the coarse, dead weeds that fell away from the legs and the flanks of a white horse, and slanted across the face of the rider and through the ends of his gray hair, which straggled from beneath his soft black hat. The horse, old and patient and gentle, stood with low-stretched neck and closed eyes half-asleep in the faint glow of the waning heat; and the rider, the sole human presence in all the scene, sat looking across the silent autumnal landscape, sunk in long, deep reverie. Both horse and rider seemed but harmonious elements in the panorama of still-life, and completed the picture of a closing scene.

To the man it was a closing scene. From the rank fallow field through which he had been riding and in which he had paused he was now surveying, for the last time, the many features of a landscape that had been familiar to him almost from the beginning of memory. In the afternoon and the autumn of his age he was about to rend the last ties that bound him to his former life, and, like one who had survived his own destiny, turn his face towards a future that was void of everything he held significant or dear. An old man on an old horse—the solitary, motionless, abstracted figure of the dying landscape—he seemed a white-haired personification of the very Past; and such, indeed, he was.

The civil war had only the year before reached its ever-memorable close. From where he sat there was not a home in sight, as there was not one beyond the reach of his vision, but had felt its influence. Some of his old neighbors had come home from its camps and prisons, aged or altered as though by half a lifetime of years. The bones of some lay whitening on its battle-fields. Families reassembled around their hearthstones spoke in low tones unceasingly of defeat and victory, heroism and death. Suspicion and distrust and estrangement prevailed. Former friends met each other on the turnpikes without speaking; brothers avoided each other in the streets of the neighboring town. The rich had grown poor; the poor had become rich. Many of

the latter were preparing to move West. The negroes were drifting blindly hither and thither, deserting the country and flocking to the towns. Even the once united rural church was jarred by the unstrung and discordant spirit of the times. At affecting passages in the sermons men grew pale and set their teeth fiercely; women suddenly lowered their black veils and rocked to and fro in their pews; for it is always at the bar of Conscience and before the very altar of God that the human heart is most wrung by a sense of its losses and the memory of its wrongs. The war had divided the people of Kentucky as the false mother would have severed the child.

It had not left the old man unscathed. His younger brother had fallen early in the conflict, borne to the end of his brief warfare by his impetuous valor; his aged mother had sunk under the tidings of the death of her latest-born; his sister was estranged from him by political differences with her husband; his old family servants, men and women, had left him, and grass and weeds had already grown over the doorsteps of the shut, noiseless cabins. Nay, the whole vast social system of the old régime had fallen, and he was henceforth but a useless fragment of the ruins.

All at once his eye turned from the cracked and smoky mirror of the times and dwelt fondly upon the scenes of the past. The silent fields around him seemed again alive with the negroes, singing as they followed the plows down the corn-rows or swung the cradles through the bearded wheat. Again, in a frenzy of merriment, the strains of the old fiddles issued from crevices of cabin-doors to the rhythmic beat of hands and feet that shook the rafters and the roof. Now he was sitting on his porch, and one little negro was blacking his shoes, another leading his saddle-horse to the stiles, a third bringing his hat, and a fourth handing him a glass of ice-cold sangaree; or now he lay under the locust-trees in his yard, falling asleep in the drowsy heat of the summer afternoon, while one waved over him a bough of pungent walnut leaves, until he lost consciousness and by-and-by awoke to find that they both had fallen asleep side by side on the grass and the abandoned fly-brush lay full across his face. From where he sat also were seen slopes on which picnics were danced under the broad shade of maples and elms in June by those whom death and war had scattered like the transitory leaves that once had sheltered them. In this direction lay the district school-house where on Friday evenings there were wont to be speeches and debates; in that, lay the blacksmith's shop where of old he and his neighbors had met on horseback of Saturday afternoons to hear the news, get the mails, discuss elections, and pitch quoits. In the valley beyond stood the church at which all had assembled on calm Sunday mornings like the members of one united family. Along with these scenes went many a chastened reminiscence of bridal and funeral and simpler events that had made up the annals of his country life.

The reader will have a clearer insight into the character and past career of Colonel Romulus Fields by remembering that he represented the flower of that social order which had bloomed in rank perfection over the blue-grass plains of Kentucky during the final decades of the old régime. Perhaps of all agriculturists in the United States the inhabitants of that region had spent the most nearly idyllic life, on account of the beauty of the climate, the richness of the land, the spacious comfort of their homes, the efficiency of their negroes, and the characteristic contentedness of their dispositions. In reality they were not farmers, but rural, idle gentlemen of easy fortunes whose slaves did their farming for them. Thus nature and history combined to make them a peculiar class, a cross between the aristocratic and the bucolic, being as simple as shepherds and as proud as kings, and not seldom exhibiting among both men and women types of character which were as remarkable for pure, tender, noble states of feeling as they were commonplace in powers and cultivation of mind. It was upon this luxurious social flower that the war naturally fell as a killing frost, and upon no single specimen with more blighting power than upon Colonel Fields. For destiny — to change the figure — had absolutely quarried and chiseled him, to serve as an ornament in the barbaric temple of human bondage. There were ornaments in that temple, and he was one. A slaveholder with Southern sympathies, a man educated not beyond the ideas of his generation, convinced that slavery was an evil, yet seeing no present way of removing it, he had of all things been a model master. As such he had gone on record in Kentucky, and no doubt in a Higher Court; and as such his efforts had been put forth to secure the passage of many of those milder laws for which his State was distinguished. Often, in those dark days, his face, anxious and sad, was to be seen amidst the throng that surrounded the blocks on which slaves were sold at auction; and more than one poor wretch he had bought to save him from separation from his family or from being sold into the plantations,— afterwards riding far and near to find him a home on one of the neighboring farms.

Now all was changed. He had but to place

the whole picture of the present beside the whole picture of the past to realize what the contrast meant for him.

At length he gathered the bridle reins from the neck of his old horse and turned his head homeward. As he rode slowly on, every spot gave up its memories. He dismounted when he came to the cattle and walked among them, stroking their soft flanks and feeling in the palm of his hand the rasp of their tongues; on his sideboard at home was many a silver cup which told of premiums at the great fairs. It was in this very pond that as a boy he had learned to swim on a cherry rail. When he entered the woods, the sight of the walnut-trees and the hickory-nut trees, loaded on the topmost branches, gave him a sudden pang. Beyond the woods he came upon the garden, which he had kept as his mother had left it,— an old-fashioned garden with an arbor in the center, covered with Isabella grape-vines on one side and Catawba on the other; with walks branching thence in four directions, and along them beds of jump-up-Johnnies, sweet-williams, daffodils, sweet-peas, larkspur, and thyme, flags and the sensitive plant, celestial and maiden's-blush roses. He stopped and looked over the fence at the very spot where he had found his mother on the day when the news of the battle came. She had been kneeling, trowel in hand, driving away vigorously at the loamy earth, and, as she saw him coming, had risen and turned towards him her face with the ancient pink bloom on her clear cheeks and the light of a pure, strong soul in her gentle eyes. Overcome by his emotions, he had blindly faltered out the words, "Mother, John was among the killed!" For a moment she had looked at him as though stunned by a blow. Then a violent flush had overspread her features, and then an ashen pallor; after which, with a sudden proud dilating of her form as though with joy, she had sunk down like the tenderest of her lily-stalks, cut from its root.

Beyond the garden he came to the empty cabin and the great woodpile. At this hour it used to be a scene of hilarious activity,—the little negroes sitting perched in chattering groups on the topmost logs or playing leap-frog in the dust, while some picked up baskets of chips or dragged a back-log into the cabins.

At last he drew near the wooden stiles and saw the large house of which he was the solitary occupant. What darkened rooms and noiseless halls! What beds, all ready, that nobody now came to sleep in, and cushioned old chairs that nobody rocked! The house and the contents of its attic, presses, and drawers could have told much of the history of Kentucky from almost its beginning; for its foundations had been laid by his father near the beginning of the century, and through its doors had passed a long train of forms, from the veterans of the Revolution to the soldiers of the civil war. Old coats hung up in closets; old dresses folded away in drawers; saddle-bags and buckskin-leggins; hunting-jackets, powder-horns, and militia-men hats; looms and knitting-needles; snuff-boxes and reticules,— what a treasure-house of the past it was! And now the only thing that had the springs of life within its bosom was the great, sweet-voiced clock, whose faithful face had kept unchanged amidst all the swift pageantry of changes.

He dismounted at the stiles and handed the reins to a gray-haired negro, who had hobbled up to receive them with a smile and a gesture of the deepest respect.

"Peter," he said very simply, "I am going to sell the place and move to town. I can't live here any longer."

With these words he passed through the yard-gate, walked slowly up the broad pavement, and entered the house.

MUSIC NO MORE.

On the disappearing form of the colonel was fixed an ancient pair of eyes that looked out at him from behind a still more ancient pair of silver-rimmed spectacles with an expression of indescribable solicitude and love. These eyes were set in the head of an old gentleman — for such he was — named Peter Cotton, who was the only one of the colonel's former slaves that had remained inseparable from his person and his altered fortunes. In early manhood Peter had been a wood-chopper; but he had one day had his leg broken by the limb of a falling tree, and afterwards, out of consideration for his limp, had been made supervisor of the woodpile, gardener, and a sort of nondescript servitor of his master's luxurious needs. Nay, in larger and deeper characters must his history be writ, he having been, in days gone by, one of those ministers of the gospel whom conscientious Kentucky masters often urged to the exercise of spiritual functions in behalf of their benighted people. In course of preparation for this august work, Peter had learned to read and had come to possess a well-chosen library of three several volumes,— Webster's Spelling-Book, Pilgrim's Progress, and the Bible. But even these unusual acquisitions he deemed not enough; for being touched with a spark of poetic fire from heaven, and enthused by the African's fondness for all that is conspicuous in dress, he had conceived for himself the creation of a unique garment which should symbolize in perfection the claims and consolations of his

apostolic office. This was nothing less than a sacred blue-jeans coat that he had had his old mistress make him, with very long and spacious tails, whereon, at his further direction, she embroidered sundry texts of Scripture which it pleased him to regard as the fit visible annunciations of his holy calling. And inasmuch as his mistress, who had had the coat woven on her own looms, from the wool of her finest sheep, was, like other gentlewomen of her time, rarely skilled in the accomplishments of the needle, and was moreover in full sympathy with the piety of his intent, she wrought of these passages a border enriched with such intricate curves, marvelous flourishes, and harmonious letterings, that Solomon never reflected the glory in which Peter was arrayed whenever he put it on. For after much prayer that the Almighty wisdom would aid his reason in the difficult task of selecting the most appropriate texts, Peter had chosen seven — one for each day in the week — with such tact and no doubt heavenly guidance, that when braided together they did truly constitute an eloquent epitome of Christian duty, hope, and pleading.

From first to last they were as follows: "Woe is unto me if I preach not the gospel"; "Servants, be obedient to them that are your masters according to the flesh"; "Come unto me, all ye that labor and are heavy laden"; "Consider the lilies of the field, how they grow; they toil not, neither do they spin"; "Now abideth faith, hope, and charity, these three; but the greatest of these is charity"; "I would not have you to be ignorant, brethren, concerning them which are asleep"; "For as in Adam all die, even so in Christ shall all be made alive."

This concatenation of texts Peter wished to have duly solemnized, and therefore, when the work was finished, further requested his mistress to close the entire chain with the word "Amen," introduced in some suitable place; but this gave rise to a rather unfortunate effect; for since, in the disposition of the various passages over the skirts, the final word of the last quotation had fallen a little to one side of the central line of his back, when this additional word was wrought in, it filled a vacant spot in the middle of his coat-tails, just half-way between the brass buttons and the hem; so that any one standing full in Peter's rear could but marvel to see clearly from that point only this word, so awful and so unaccountably placed:

AMEN.

Panoplied in this robe of righteousness, and with a worn leathern Bible in his hand, Peter used to go around of Sundays, and during the week by night, preaching from cabin to cabin the gospel of his heavenly Master.

The angriest lightnings of the sultriest skies often played amidst the awful darkness upon those sacred coat-tails and around that girdle of everlasting texts, as though the evil spirits of the air would fain have burnt them and scattered their ashes on the roaring winds. The slow-sifting snows of winter whitened them as though to chill their spiritual fires; but winter and summer, year after year, in weariness of body, often in sore distress of mind, for miles along this lonely road and for miles across that rugged way, Peter trudged on and on, withal perhaps as meek a spirit as ever grew footsore in the paths of its Master since inspired feet trod for the last time the hills of the Holy Land. Many a poor overburdened slave took fresh heart and strength from the sight of that celestial raiment; many a stubborn, rebellious spirit, whose flesh but lately quivered under the lash, was brought low by its humble teaching; many a worn-out old frame, racked with pain in its last illness, pressed a fevered lip to its hopeful hem; and many a dying eye closed in death peacefully fixed on its immortal pledges.

When Peter started abroad, if a storm threatened, he carried an old cotton umbrella of immense size; and as the storm burst, he gathered the tails of his coat carefully up under his arm-pits that they might be kept dry. Or if caught by a tempest without his umbrella, he would take his coat off and roll it up inside out, leaving his body exposed to the fury of the elements. No care, however, could keep it from growing old and worn and faded; and when the slaves were set free and he was called upon by the interposition of Providence to lay it finally aside, it was covered by many a patch and stain as proofs of its devoted usage.

One after another the colonel's old servants, gathering their children about them, had left him, to begin their new life. He bade them all a kind good-bye, and into the palm of each silently pressed some token that he knew would soon be needed. But no inducement could make Peter or Phillis, his wife, budge from their cabin. "Go, Peter! Go, Phillis!" the colonel had said time and again. "No one is happier that you are free than I am; and you can call on me for what you need to set you up in business." But Peter and Phillis asked to stay with him. Then suddenly, several months before the time at which this sketch opens, Phillis had died, leaving the colonel and Peter as the only relics of that populous life which had once filled the house and the cabins. The colonel had succeeded in hiring a woman to do Phillis's work; but her presence was a strange note of discord in

the old domestic harmony, and only saddened the recollections of its vanished peace.

Peter had a short, stout figure, dark-brown skin, smooth-shaven face, eyes round, deep-set and wide apart, and a short, stub nose which dipped suddenly into his head, making it easy for him to wear the silver-rimmed spectacles left him by his old mistress. A peculiar conformation of the muscles between the eyes and the nose gave him the quizzical expression of one who is about to sneeze, and this was heightened by a twinkle in the eyes which seemed caught from the shining of an inner sun upon his tranquil heart.

Sometimes, however, his face grew sad enough. It was sad on this afternoon, as has been said, while he watched the colonel walk slowly up the pavement, well overgrown with weeds, and enter the house, which the setting sun touched with the last radiance of the finished day.

NEW LIFE.

About two years after the close of the war, therefore, the colonel and Peter were to be found in the city, ready to turn over a new leaf in the volumes of their lives, which already had an old-fashioned binding, a somewhat musty odor, and but few written leaves remaining.

After a long, dry summer you may have seen two gnarled old apple-trees, that stood with interlocked arms on the western slope of some quiet hill-side, make a melancholy show of blooming out again in the autumn of the year and dallying with the idle buds that mock their sapless branches. Much the same was the belated, fruitless efflorescence of the colonel and Peter.

The colonel had no business habits, no political ambition, no wish to grow richer. He was too old for society, and without near family ties. For some time he wandered through the streets like one lost,—sick with yearning for the fields and woods, for his cattle, for familiar faces. He haunted Cheapside and the court-house square, where the farmers always assembled when they came to town; and if his eye lighted on one, he would button-hole him on the street-corner and lead him into a grocery and sit down for a quiet chat. Sometimes he would meet an aimless, melancholy wanderer like himself, and the two would go off and discuss over and over again their departed days; and several times he came unexpectedly upon some of his old servants who had fallen into bitter want, and who more than repaid him for the help he gave by contrasting the hardships of a life of freedom with the ease of their shackled years.

In the course of time, he could but observe that human life in the town was reshaping itself slowly and painfully, but with resolute energy. The colossal structure of slavery had fallen, scattering its ruins far and wide over the State; but out of the very débris was being taken the material to lay the deeper foundations of the new social edifice. Men and women as old as he were beginning life over and trying to fit themselves for it by changing the whole attitude and habit of their minds,—by taking on a new heart and spirit. But when a great building falls, there is always some rubbish, and the colonel and others like him were part of this. Henceforth they possessed only an antiquarian sort of interest, like the stamped bricks of Nebuchadnezzar.

Nevertheless he made a show of doing something, and in a year or two opened on Cheapside a store for the sale of hardware and agricultural implements. He knew more about the latter than anything else; and, furthermore, he secretly felt that a business of this kind would enable him to establish in town a kind of headquarters for the farmers. His account books were to be kept on a system of twelve months' credit; and he mentally resolved that if one of his customers could n't pay then, he should have another year's time.

Business began slowly. The farmers dropped in and found a good lounging-place. On county-court days, which were great market-days for the sale of sheep, horses, mules, and cattle in front of the colonel's door, they swarmed in from the hot sun and sat around on the counter and the plows and machines till the entrance was blocked to other customers. When a customer did come in, the colonel, who was probably talking with some old acquaintance, would tell him just to look around and pick out what he wanted and the price would be all right. If one of those acquaintances asked for a pound of nails, the colonel would scoop up some ten pounds and say, "I reckon that 's about a pound, Tom." He had never seen a pound of nails in his life; and if one had been weighed on his scales, he would have said the scales were wrong. He had no great idea of commercial dispatch. One morning a lady came in for some carpet tacks, an article that he had overlooked. But he at once sent off an order for enough to have tacked a carpet pretty well all over Kentucky; and when they came, two weeks later, he told Peter to take her up a double-handful with his compliments. He had laid in, however, an ample and especially fine assortment of pocket-knives, for that instrument had always been to him one of gracious and very winning qualities. Then when a friend dropped in he would say, "General, don't you need a new pocket-knife?" and, taking out one, would

open all the blades and commend the metal and the handle. The "general" would inquire the price, and the colonel, having shut the blades, would hand it to him, saying in a careless, fond way, "I reckon I won't charge you anything for that." His mind could not come down to the low level of such ignoble barter, and he gave away the whole case of knives.

These were the pleasanter aspects of his business life, which did not lack as well its tedium and crosses. Thus there were many dark stormy days when no one he cared to see came in; and he then became rather a pathetic figure, wandering absently around amidst the symbols of his past activity, and stroking the plows, like dumb companions. Or he would stand at the door and look across at the old court-house, where he had seen many a slave sold and had listened to the great Kentucky orators. Once, too, while he was deep in conversation, a brisk young farmer drove up to the door in a sulky and called in pretty sharply that he wanted him to go out and set up a machine. The colonel's mind just then was busy with certain scenes of great power in his own past life, and had swelled to the old heroic proportions; wherefore, burning over the indignity, he seized an ax-handle and started out in a manner that led the young man to drive quickly away.

But what hurt him most was the talk of the newer farming and the abuse of the old which he was forced to hear; and he generally refused to handle the improved implements and mechanical devices by which labor and waste were to be saved.

Altogether he grew tired of "the thing," and sold out at the end of the year with a loss of over a thousand dollars, though he insisted he had done a good business.

As he was then seen much on the streets again and several times heard to make remarks in regard to the sidewalks, gutters, and crossings, when they happened to be in bad condition, the "Daily Press" one morning published a card stating that if Colonel Romulus Fields would consent to make the race for mayor he would receive the support of many Democrats, adding a tribute to his virtues and his influential past. It touched the colonel, and he walked down town with a rather commanding figure. But it pained him to see how many of his acquaintances returned his salutations very coldly; and just as he was passing the Northern Bank he met the young opposition candidate,— a little red-haired fellow, walking between two ladies, with a rose-bud in his button-hole,— who refused to speak at all, but made the ladies laugh by some remark he uttered as the colonel passed. The card had been inserted humorously, but he took it seriously; and when his friends found this out, they rallied round him. The day of election drew near. They told him he would have to buy votes. He said he would n't buy a vote to be mayor of the New Jerusalem. They told him he must "mix" and "treat." He refused. Foreseeing he had no chance, they besought him to withdraw. He said he would not. They told him he would n't poll twenty votes. He replied that *one* would satisfy him, provided it was neither begged nor bought. When his defeat was announced he accepted it as another evidence that he had no part in the newer day, and regretted it only because there was thus lost to him another chance of redeeming his idleness.

A sense of this weighed heavily on him at times; but it is not likely that he realized how pitifully he was undergoing a moral shrinkage in consequence of mere disuse. Actually, extinction had set in with him long prior to dissolution, and he was dead years before his heart ceased beating. The very basic virtues on which had rested his once spacious and stately character were now but the moldy corner-stones of a crumbling ruin.

It was a subtle evidence of deterioration in manliness that he had taken to dress. When he had lived in the country, he had never dressed up unless he came to town. When he had moved to town, he thought he must remain dressed up all the time; and this fact first fixed his attention on a matter which afterwards began to be loved for its own sake. Usually he wore a Derby hat, a black diagonal coat, gray trousers, and a white necktie. But the article of attire in which he took chief pleasure was hose; and the better to show the gay colors of these, he wore low-cut shoes of the finest calf-skin, turned up at the toes. Thus his feet kept pace with the present, however far his head may have lagged in the past; and it may be that this stream of fresh fashions, flowing perennially over his lower extremities like water about the roots of a tree, kept him from drying up altogether. Peter always polished his shoes with too much blacking, perhaps thinking that the more the blacking the greater the proof of love. He wore his clothes about a season and a half — having several suits — and then passed them on to Peter, who, foreseeing the joy of such an inheritance, bought no new ones. In the act of transferring them the colonel made no comment until he came to the hose, from which he seemed unable to part without a final tribute of esteem, as: "These are fine, Peter"; or, "Peter, these are nearly as good as new." Thus Peter too was dragged through the whims of fashion. To have seen the colonel walking about his grounds and garden followed by Peter, just a

year and a half behind in dress and a yard and a half behind in space, one might well have taken the rear figure for the colonel's double, slightly the worse for wear, somewhat shrunken, and cast into a heavy shadow.

Time hung so wearily on his hands at night that he added a dress-coat to his wardrobe and accepted the first invitation to an evening party. While dressing he asked Peter nervously a great many times how he looked, in order to be soothed by the assurances of that partial critic. But his heart sank before he reached his hostess's, and he spent most of the evening in the gentlemen's room, bewildered and with a sense of loneliness. He had touched the new human life around him at various points: as he now stretched out his arms towards its society, for the first time he completely realized how far removed it was from him. Here he saw a younger generation,— the flowers of the new social order,— sprung from the very soil of fraternal battle-fields, but blooming together as the emblems of oblivious peace. He saw fathers, who had fought madly on opposite sides, talking quietly in corners as they watched their children dancing, or heard them toasting their old generals and their campaigns and the newer day over their champagne in the supper-room. He was glad of it all; but it made him feel, at the same time, that, instead of treading the velvety floors, he ought to step up and take his place among the canvases of old-time portraits that looked down from the walls. The dancing he had done had been perfected not under the blinding glare of gas-light, but by the glimmer of tallow-dips and star-candles and the ruddy glow of cavernous firesides,— not to the accompaniment of an orchestra of wind-instruments and strings, but to a chorus of girls' sweet voices, as they trod simpler measures, or to the maddening sway of a gray-haired negro fiddler standing on a chair in the chimney corner. Still, it is significant to note that his saddest thought, long after leaving, was that his shirt bosom had not lain down smooth, but stuck out like a huge cracked egg-shell; and that when, in imitation of the others, he had laid his white silk handkerchief across his bosom inside his vest, it had slipped out during the evening and had been found by him, on confronting a mirror, flapping over his stomach like a little white masonic apron.

Peter, meantime, had been finding out that his occupation too was gone.

Soon after moving to town, he had tendered his pastoral services to one of the fashionable churches of the city,— not because it was fashionable, but because it was made up of his brethren. In reply he was invited to preach a trial sermon, which he did with gracious unction. It was a strange scene, as one calm Sunday morning he stood on the edge of the pulpit, dressed in a suit of the colonel's old clothes, with one hand in his trousers pocket, and his lame leg set a little forward at an angle familiar to those who know the statues of Henry Clay.

How self-possessed he seemed, yet with what a rush of memories did he pass his eyes slowly over that vast assemblage of his emancipated people! With what feelings must he have contrasted those silk hats, and walking-canes, and broadcloths; those gloves and satins, laces and feathers, jewelry and fans — that whole many-colored panorama of life — with the weary, sad, and sullen audiences that had often heard him of old under the forest trees or by the banks of some turbulent stream!

In a voice husky, but heard beyond the flirtation of the uttermost pew, he took his text: "Consider the lilies of the field, how they grow; they toil not, neither do they spin." From this he tried to preach a new sermon, suited to the newer day. But several times the thoughts of the past were too much for him, and he broke down with emotion. The next day a grave committee waited on him and reported that the sense of the congregation was to call a colored gentleman from Louisville. Private objections to Peter were that he had a broken leg, wore Colonel Fields's second-hand clothes, which were too big for him, preached in the old-fashioned way, and lacked self-control and repose of manner.

Peter accepted his rebuff as sweetly as Socrates might have done. Humming the burden of an old hymn, he took his righteous coat from a nail in the wall and folded it away in a little brass-nailed deer-skin trunk, laying over it the spelling-book and the Pilgrim's Progress, which he had ceased to read. Thenceforth his relations to his people were never intimate, and even from the other servants of the colonel's household he stood apart. In paying them, the colonel would sometimes say, "Peter, I reckon I 'd better begin to pay you a salary; that 's the style now." But Peter would turn off, saying he did n't "have no use fur no salary."

Thus both of them dropped more and more out of life, but as they did so, only drew more and more closely to each other. The colonel had bought a home on the edge of the town, with some ten acres of beautiful ground surrounding. A high osage-orange hedge shut it in, and forest trees, chiefly maples and elms, gave to the lawn and house abundant shade. Wild-grape vines, the Virginia creeper, and the climbing oak swung their long festoons from summit to summit, while honeysuckles, clematis, and the Mexican vine clambered over arbors and trellises, or along the chipped stone

of the low, old-fashioned house. Just outside the door of the colonel's bedroom slept an ancient sun-dial.

The place seemed always in half-shadow, with hedge-rows of box, clumps of dark holly, darker firs half a century old, and aged, crape-like cedars.

It was in the seclusion of this retreat, which looked almost like a wild bit of country set down on the edge of the town, that the colonel and Peter spent more of their time as they fell farther in the rear of onward events. There were no such flower-gardens in the city, and pretty much the whole town went thither for its flowers, preferring them to those that were to be had for a price at the nurseries. There was perhaps a suggestion of pathetic humor in the fact that it should have called on the colonel and Peter, themselves so nearly defunct, to give the flowers for so many funerals; but, it is certain, almost weekly the two old gentlemen received this chastening admonition of their all-but-spent mortality. The colonel cultivated the rarest fruits also, and had under glass varieties that were not friendly to the climate; so that by means of the fruits and flowers there was established a pleasant social bond with many who otherwise would never have sought them out. But others came for better reasons. To a few deep-seeing eyes the colonel and Peter were momentous figures, disappearing types of a once vast social system, ruined landmarks on a fading historic landscape, and their devoted friendship was the last steady burning-down of that pure flame of love which can never again shine out in the future of the two races. Hence a softened charm invested the drowsy quietude of that shadowy paradise in which the old master without a slave and the old slave without a master still kept up a brave pantomime of their obsolete relations. No one ever saw in their intercourse aught but the finest courtesy, the most delicate consideration. The very tones of their voices in addressing each other were as good as sermons on gentleness, their antiquated playfulness as melodious as the babble of distant water. To be near them was to be exorcised of evil passions. The sun of their day had indeed long since set; but, like twin clouds lifted high and motionless into some far quarter of the gray twilight skies, they were still radiant with the glow of the invisible orb.

Henceforth the colonel's appearances in public were few and regular. He went to church on Sundays, where he sat on the edge of the choir in the center of the building, and sang an ancient bass of his own improvisation to the older hymns, and glanced furtively around to see whether any one noticed that he could not sing the new ones. At the Sunday-school picnics the committee of arrangements allowed him to carve the mutton, and after dinner to swing the smallest children gently beneath the trees. He was seen on Commencement Day at Morrison Chapel, where he always gave his bouquet to the valedictorian, whose address he preferred to any of the others. In the autumn he might sometimes be noticed sitting high up in the amphitheater at the fair and looking over into the ring where the judges were grouped around the music-stand. Once he had been a judge himself, with a blue ribbon in his button-hole, while the band played "Sweet Alice, Ben Bolt," and "Gentle Annie." The ring seemed full of young men now, and no one thought of offering him the privileges of the grounds. In his day the great feature of the exhibition had been cattle; now everything was turning into a horse show. He was always glad to get home again to Peter, his true yoke-fellow. For just as two old oxen — one white and one black — that have long toiled under the same yoke will, when turned out to graze at last in the widest pasture, come and put themselves horn to horn and flank to flank, so the colonel and Peter were never so happy as when ruminating side by side.

NEW LOVE.

In their eventless life the slightest incident acquired the importance of a history. Thus, one day in June, Peter discovered a young couple love-making in the shrubbery, and with the deepest agitation reported the fact to the colonel. Never before, probably, had the fluttering of the dear god's wings brought more dismay than to these ancient involuntary guardsmen of his hiding-place. The colonel was at first for breaking up what he considered a piece of underhand proceedings, but Peter reasoned stoutly that if the pair were driven out they would simply go to some other retreat; and without getting the approval of his conscience to this view, the colonel contented himself with merely repeating that they ought to go straight and tell the girl's parents. Those parents lived just across the street outside his grounds. The young lady he knew very well himself, having a few years before given her the privilege of making herself at home among his flowers. It certainly looked hard to drive her out now, just when she was making the best possible use of his kindness. Moreover, Peter walked down street and ascertained that the young fellow was an energetic farmer living a few miles from town and son of one of the colonel's former friends; on both of which accounts the latter's heart went out to him. So when, a few days later,

PETER'S LOVE-STORY.

the colonel, followed by Peter, crept up breathlessly and peeped through the bushes at the pair strolling along the shady perfumed walks, and so plainly happy in that happiness which comes but once in a lifetime, they not only abandoned the idea of betraying the secret, but ever afterwards kept away from that part of the grounds, lest they should be an interruption.

"Peter," stammered the colonel, who had been trying to get the words out for three days, "do you suppose he has already — asked her?"

"Some 's pow'ful quick on de trigger, en some 's mighty slow," replied Peter, neutrally. "En some," he added exhaustively, "don' use de trigger 't all!"

"I always thought there had to be asking done by somebody," remarked the colonel, a little vaguely.

"I nuver axed Phillis!" exclaimed Peter, with a certain air of triumph.

"Did Phillis ask *you*, Peter?" inquired the colonel, blushing and confidential.

"No, no, Marse Rom! I could n't er stood dat from no 'oman!" replied Peter, laughing and shaking his head.

The colonel was sitting on the stone steps in front of the house, and Peter stood below, leaning against a Corinthian column, hat in hand, as he went on to tell his love-story.

"Hit all happ'n dis way, Marse Rom. We wuz gwine have pra'r-meetin', en I 'lowed to walk home wid Phillis en ax 'er on de road. I been 'lowin' to ax 'er heap o' times befo', but I ain' jes nuver done so. So I says to myse'f, says I, 'I jes mek my sermon to-night kiner lead up to whut I gwine tell Phillis on de road home.' So I tuk my tex' from de *lef'* tail o' my coat: 'De greates' o' dese is char-

ity'; caze I knowed charity wuz same ez love. En all de time I wuz preachin' an' glorifyin' charity en identifyin' charity wid love, I could n' he'p thinkin' 'bout what I gwine say to Phillis on de road home. Dat mek me feel better; en de better I *feel*, de better I *preach*, so hit boun' to mek my *heahehs* feel better likewise,— Phillis 'mong um. So Phillis she jes sot dah listenin' en listenin' en lookin' like we wuz a'ready on de road home, till I got so wuked up in my feelin's I jes knowed de time wuz come. By en by, I had n' mo' 'n done preachin' en wuz lookin' roun' to git my Bible en my hat, 'fo' up popped dat big Charity Green, who been settin' 'longside o' Phillis en tekin' ev'y las' thing I said to *her*se'f. En she tuk hole o' my han' en squeeze it, en say she felt mos' like shoutin'. En 'fo' I knowed it, I jes see Phillis wrap 'er shawl roun' 'er head en tu'n 'er nose up at me right quick en flip out de dooh. De dogs howl mighty mou'nful when I walk home by myse'f *dat* night," added Peter, laughing to himself, "en I ain' preach dat sermon no mo' tell atter me en Phillis wuz married.

"Hit wuz long time," he continued, "'fo' Phillis come to heah me preach any mo'. But 'long 'bout de nex' fall we had big meetin', en heap mo' 'um j'ined. But Phillis, she ain't nuver j'ined yit. I preached mighty nigh all roun' my coat-tails till I say to myse'f, D' ain't but one tex' lef', en I jes got to fetch 'er wid dat! De text wuz on de *right* tail o' my coat: 'Come unto me, all ye dat labor en is heavy laden.' Hit wuz a ve'y momentous sermon, en all 'long I jes see Phillis wras'lin' wid 'erse'f, en I say, 'She *got* to come *dis* night, de Lohd he'pin' me.' En I had n' mo' 'n said de word, 'fo' she jes walked down en guv me 'er han'. Den we had de baptizin' in Elkhorn Creek, en de watter wuz deep en de curren' tol'ble swif'. Hit look to me like dere wuz five hundred uv 'um on de creek side. By en by I stood on de edge o' de watter, en Phillis she come down to let me baptize 'er. En me en 'er j'ined han's en waded out in the creek, mighty slow, caze Phillis did n' have no shot roun' de bottom uv 'er dress, en it kep' floatin' on top de watter till I pushed it down. But by en by we got 'way out in de creek, en bof uv us wuz tremblin'. En I says to 'er ve'y kin'ly, 'When I put you un'er de watter, Phillis, you mus' try en hole yo'se'f stiff, so I can lif' you up easy.' But I had n't mo' 'n jes got 'er laid back over de watter ready to souze 'er un'er when 'er feet flew up off de bottom uv de creek, en when I retched out to fetch 'er up, I stepped in a hole; en 'fo' I knowed it, we wuz flounderin' roun' in de watter, en de hymn dey was singin' on de bank sounded mighty confused-like. En Phillis she swallowed some watter, en all 't oncet she jes grap me right tight roun' de neck, en said mighty quick, says she, 'I gwine marry whoever gits me out'n dis yere watter!'

"En by en by, when me en 'er wuz walkin' up de bank o' de creek, drippin' all over, I says to 'er, says I:

"'Does you 'member whut you said back yon'er in de watter, Phillis?'

"'I ain' out'n no watter yit,' says she, ve'y contemptuous.

"'When does you consider yo'se'f out'n de watter?' says I, ve'y humble.

"'When I get dese soakin' clo'es off 'n my back,' says she.

"Hit wuz good dark when we got home, en atter a while I crope up to de dooh o' Phillis's cabin en put my eye down to de key-hole, en see Phillis jes settin' 'fo' dem blazin' walnut logs dressed up in 'er new red linsey dress, en 'er eyes shinin'. En I shuk so I 'mos' faint. Den I tap easy on de dooh, en say in a mighty tremblin' tone, says I:

"'Is you out'n de watter yit, Phillis?'

"'I got on dry dress,' says she.

"'Does you 'member what you said back yon'er in de watter, Phillis?' says I.

"'De latch-string on de outside de dooh,' says she, mighty sof'.

"En I walked in."

As Peter drew near the end of this reminiscence, his voice sank to a key of inimitable tenderness; and when it was ended, the ensuing silence was broken by his merely adding:

"Phillis been dead heap o' years now"; after which he turned away.

This recalling of the scenes of a time long gone by may have awakened in the breast of the colonel some gentle memory; for after Peter was gone he continued to sit awhile in silent musing. Then getting up, he walked in the falling twilight across the yard and through the gardens until he came to a secluded spot in the most distant corner. There he stooped or rather knelt down and passed his hands, as though with mute benediction, over a little bed of old-fashioned China pinks. When he had moved in from the country he had brought nothing away from his mother's garden but these, and in all the years since no one had ever pulled them, as Peter well knew; for one day the colonel had said, with his face turned away:

"Let them have all the flowers they want; but leave the pinks."

He continued kneeling over them now, touching them softly with his fingers, as though they were the fragrant, never-changing symbols of voiceless communion with his past. Still it may have been only the early dew of the even-

ing that glistened on them when he rose and slowly walked away, leaving but the pale moonbeams to haunt the spot.

Certainly it was true that after this day he showed increasing concern in the young lovers who were holding clandestine meetings in his grounds.

"Peter," he would say, "why, if they love each other, do they not get married? Something may happen."

"I been spectin' some'n' to happ'n fur some time, ez dey been quar'lin' right smart lately," replied Peter.

Whether or not he was justified in this prediction, before the end of another week the colonel read a notice of their elopement and marriage; and several days later he came up from down-town and told Peter that everything had been forgiven the young pair, who had gone to housekeeping in the country. It gave him pleasure to think he had helped to perpetuate the race of farmers.

THE YEARNING PASSED AWAY.

It was in the twilight of a late autumn day in the same year that nature gave the colonel the first direct intimation to prepare for the last summons. They had been passing along the garden walks, where a few pale flowers were trying to flourish up to the very winter's edge, and where the dry leaves had gathered unswept and rustled beneath their feet. All at once the colonel turned to Peter, who was a yard and a half behind, as usual, and said:

"Give me your arm, Peter"; and thus the two, for the first time in all their lifetime walking abreast, passed slowly on.

"Peter," said the colonel gravely, a minute or two later, "we are like two dried-up stalks of fodder. I wonder the Lord lets us live any longer."

"I reck'n He 's managin' to use us *some* way, or we would n' be heah," said Peter.

"Well, all I have to say is, that if He 's using me, He can't be in much of a hurry for his work," replied the colonel.

"He uses snails, en I *know* we ain' ez slow ez *dem*," argued Peter, composedly.

"I don't know. I think a snail must have made more progress since the war than I have."

The idea of his uselessness seemed to weigh on him, for a little later he remarked, with a sort of mortified smile:

"Do you think, Peter, that we would pass for what they call representative men of the New South?"

"We done *had* ou' day, Marse Rom," replied Peter. "We got to pass fur what we *wuz*. Mebbe de Lohd 's got mo' use fur us yit 'n people has," he added, after a pause.

From this time on the colonel's strength gradually failed him; but it was not until the following spring that the end came. A night or two before his death his mind wandered backward, after the familiar manner of the dying, and his delirious dreams showed the shifting, faded pictures that renewed themselves for the last time on his wasting memory. It must have been that he was once more amidst the scenes of his active farm life, for his broken snatches of talk ran thus:

"Come, boys, get your cradles! Look where the sun is! You are late getting to work this morning. That is the finest field of wheat in the county. Be careful about the bundles! Make them the same size and tie them tight. That swath is too wide, and you don't hold your cradle right, Tom. . . .

"Sell Peter! Sell Peter Cotton! No, sir! You might buy *me* some day and work *me* in your cotton-field; but as long as he 's mine, you can't buy Peter, and you can't buy any of my negroes. . . .

"Boys! boys! If you don't work faster, you won't finish this field to-day. . . . You 'd better go in the shade and rest now. The sun 's very hot. Don't drink too much ice-water. There 's a jug of whisky in the fence-corner. Give them a good dram around, and tell them to work slow till the sun gets lower." . . .

Once during the night a sweet smile played over his features as he repeated a few words that were part of an old rustic song and dance. Arranged, not as they now came broken and incoherent from his lips, but as he once had sung them, they were as follows:

> "O Sister Phœbe! How merry were we
> When we sat under the juniper-tree,
> The juniper-tree, heigho!
> Put this hat on your head! Keep your head warm;
> Take a sweet kiss! It will do you no harm,
> Do you no harm, I know!"

After this he sank into a quieter sleep, but soon stirred with a look of intense pain.

"Helen! Helen!" he murmured. "Will you break your promise? Have you changed in your feeling towards me? I have brought you the pinks. Won't you take the pinks, Helen?"

Then he sighed as he added, "It was n't her fault. If she had only known —"

Who was the Helen of that far-away time? Was this the colonel's love-story? How much remained untold?

But during all the night, whithersoever his mind wandered, at intervals it returned to the burden of a single strain,— the harvesting.

PETER'S LAST SERMON.

Towards daybreak he took it up again for the last time:

"O boys, boys, *boys!* If you don't work faster you won't finish the field to-day. Look how low the sun is! . . . I am going to the house. They can't finish the field to-day. Let them do what they can, but don't let them work late. I want Peter to go to the house with me. Tell him to come on." . . .

In the faint gray of the morning, Peter, who had been watching by the bedside all night, stole out of the room, and going into the garden pulled a handful of pinks,— a thing he had never done before,— and, reëntering the colonel's bedroom, put them in a vase near his sleeping face. Soon afterwards the colonel opened his eyes and looked around him. At the foot of the bed stood Peter, and on one side sat the physician and a friend. The night-lamp burned low, and through the folds of the curtains came the white light of early day.

"Put out the lamp and open the curtains," he said feebly. "It 's day." When they had drawn the curtains aside, his eyes fell on the pinks, sweet and fresh with the dew on them.

He stretched out his hand and touched them caressingly, and his eyes sought Peter's with a look of grateful tenderness.

"I want to be alone with Peter for a while," he said, turning his face towards the others.

When they were left alone, it was some minutes before they could speak. Peter, not knowing what he did, had gone to the window and hid himself behind the curtains, drawing them tightly around his form as though to shroud himself from the coming sorrow.

At length the colonel said, "Come here!"

Peter, almost staggering forward, fell at the foot of the bed, and, clasping the colonel's feet with one arm, pressed his cheek against them.

"Come closer!"

Peter crept on his knees and buried his head on the colonel's thigh.

"Come up here,— *closer*"; and putting one arm around Peter's neck he laid the other hand softly on his head, and looked long and tenderly into his eyes.

"Peter," he said, with ineffable gentleness, "if I had served my Master as faithfully as you have served yours, I should not feel ashamed to stand in his presence."

"If my Marseter is ez mussiful to me ez you have been, he will save my soul in heaven."

"I have fixed things so that you will be comfortable after I am gone. When your time comes, I should like you to be laid close to me. We can take the long sleep together. Are you willing?"

"That 's whar I want to be laid."

The colonel stretched out his hand to the vase, and, taking the bunch of pinks, said very calmly:

"Leave these in my hand when I am dead; I'll carry them with me." A moment more, and he added:

"If I should n't wake up any more, good-bye, Peter!"

"Good-bye, Marse Rom!"

And they shook hands. After this the colonel lay back on the pillows. His soft, silvery hair contrasted strongly with his child-like, unspoiled, open face. To the day of his death, as is apt to be true of those who have lived pure lives but never married, he had a boyish strain in him,— a softness of nature, showing itself even now in the gentle expression of his mouth. His brown eyes had in them the same boyish look when, just as he was falling asleep, he scarcely opened them to say:

"Pray, Peter."

Peter, on his knees, and looking across the colonel's face towards the open door, through which the rays of the rising sun streamed in upon his hoary head, prayed, while the colonel fell asleep, adding a few words for himself now left alone.

Several hours later, memory led the colonel back again through the dim gateway of the past, and out of that gateway his spirit finally took flight into the future.

Peter lingered a year. The place went to the colonel's sister, but he was allowed to remain in his quarters. With much thinking of the past, his mind fell into a lightness and a weakness. Sometimes he would be heard crooning the burden of old hymns, or sometimes seen sitting beside the old brass-nailed trunk, fumbling with the spelling-book and the Pilgrim's Progress. Often, too, he walked out to the cemetery on the edge of the town, and each time could hardly find the colonel's grave amidst the multitude of the dead. One gusty day in spring, the Scotch sexton, busy with the blades of blue-grass springing from the animated mold, saw his familiar figure standing motionless beside the colonel's resting-place. He had taken off his hat — one of the colonel's last bequests — and laid it on the colonel's headstone. On his body he wore a strange coat of faded blue, patched and weather-stained and so moth-eaten that parts of the curious tails had dropped entirely away. In one hand he held an open Bible, and on a much-soiled page he was pointing with his finger to the following words:

"I would not have you ignorant, brethren, concerning them which are asleep."

It would seem that, impelled by love and faith, and guided by his wandering reason, he had come forth to preach his last sermon on the immortality of the soul over the dust of his dead master.

The sexton led him home, and soon afterwards a friend, who had loved them both, laid him beside the colonel.

It was perhaps fitting that his winding-sheet should be the vestment in which, years agone, he had preached to his fellow-slaves in bondage; for if it so be that the dead of this planet shall come forth from their graves clad in the trappings of mortality, then Peter should arise on the Resurrection Day wearing his old jeans coat.

James Lane Allen.

MEMORANDA ON THE CIVIL WAR.

The Opening of the Atlanta Campaign.

IN the August CENTURY General Joseph E. Johnston — *clarum et venerabile nomen* — writes:

Cantey with his division arrived at Resaca that evening (7th) and was charged with the defense of the place. During the day our cavalry was driven from the ground west of Rocky-face through the gap. Grigsby's brigade was placed near Dug Gap,— the remainder in front of our right. About 4 o'clock P. M. of the 8th, Geary's division of Hooker's corps attacked two regiments of Reynolds's Arkansas brigade guarding Dug Gap. They were soon joined by Grigsby's brigade on foot. The increased sound of musketry indicated so sharp a conflict that Lieutenant-General Hardee was requested to send Granbury's Texan brigade to the help of our people, and to take command there himself. These accessions soon decided the contest, and the enemy was driven down the hill. . . .

Information had been received of the arrival of the Army of the Tennessee in Snake Creek Gap, on the 8th. At night on the 9th General Cantey reported that he had been engaged with those troops until dark. Lieutenant-General Hood was dispatched to Resaca with three divisions immediately.

It so happened that the brigade of Kentucky cavalry was present at Dug Gap and Snake Creek Gap, and that the regiment I commanded — the 9th Kentucky Cavalry — was in front at both places; and it may not be improper to put on record an account of those affairs, and thereby correct the unintentional mistakes in the meager statements given above.

The winter having ended and all possible preparations having been made, the operations known as the Dalton-Atlanta campaign opened on May 5, 1864, by the advance of General Thomas on Tunnel Hill, and on May 7 the withdrawal of our forces within Mill Creek Gap marked the beginning of the long retreat. Including the corps of General Polk, then under orders to join him, General Johnston had under his command, available for strategic purposes, between 65,000 and 70,000 men of all arms. It was a superb army of veterans, with implicit confidence in its general, and capable of great achievements. Deficient to a certain extent in supplies, it had enough for any possible movement its commander could order. Being a Confederate army, it necessarily was inferior to the army before it in numbers, equipment, and supplies. This was generally the case. It was necessarily so. With five millions to over twenty millions; with no market, no ships, no factories, no credit; against a people commanding the sea, rich in all resources, and with all the world to buy from,— it was the fate of the Southern armies to confront larger, better equipped, and admirably supplied armies. Unless we could by activity, audacity, aggressiveness, and skill overcome these advantages it was a mere matter of time as to the certain result. It was therefore the first requisite of a Confederate general that he should be willing to meet his antagonist on these unequal terms, and on such terms make fight. He must of necessity take great risks and assume grave responsibilities. While these differences between the two armies that confronted each other in the mountains of North Georgia existed, they were no greater than always existed, and for which every Confederate general must be presumed to have prepared. I repeat, it was a superb army. While it had met defeat, and knew what retreat meant, it had fought battles which were, and are, among the bloodiest in all the annals of war; and it felt that under Johnston it could parallel Chickamauga and renew the glories of Shiloh.

It lay behind an impassable ridge, through which, on its left flank, were only two accessible gaps,— Dug Gap, less than four miles south-west from Dalton, on the main road from Dalton to Lafayette, and perhaps six miles from Mill Creek Gap, and Snake Creek Gap, some eighteen miles south from Mill Creek Gap. With these gaps fortified, the left flank and rear of that army were absolutely safe; for while the Rocky-face and Chattooga ridges protected our flank, through these gaps we had access to attack the flank of the enemy if he attempted to make a march so far to the left and rear as to threaten our communication south of the Oostenaula or Coosa. These gaps were capable of easy and impregnable fortification. Dug Gap was a mere road cut out of the mountain-side, and really needed no breastworks, for the natural palisades and contour of the mountain rendered easy its defense by resolute men. Snake Creek Gap was a gorge apparently cut through the mountains by the creek which ran through it. It was a narrow defile between Milk Mountain and Horn Mountain, which are merely a prolongation of the Chattooga Mountains, and capable of impregnable defense.

These gaps were well known to both armies. Through them ran public roads, and soldiers of both armies had marched through both. Late in February Dug Gap had been seized by an Indiana regiment and held until Cleburne retook it. As early as February General Thomas, knowing that at that time Snake Creek Gap was unguarded, proposed a campaign, the plan being to attract General Johnston's attention by a demonstration on Buzzard Roost, and to throw the main body of the army through Snake Creek Gap, and cut his communications between Dalton and the Oostenaula.

Neither of these gaps was fortified, and on May 5, when the campaign opened, Dug Gap was guarded by a small command of Arkansas troops under Colonel Williamson, numbering perhaps 250, and Snake Creek Gap was left wholly unprotected. At Resaca, where the railroad crosses the Oostenaula, Cantey's brigade was held on the evening of the 7th of May, on its route from Rome to Dalton.

General Sherman had in hand for attack nearly 100,000 men and 254 guns, divided into three armies,— the Army of the Cumberland, commanded by General Thomas, numbering 60,773; the Army of the Tennessee, General McPherson, 24,465; the Army of the Ohio, General Schofield, 13,559. It was a superb army, admirably equipped, abundantly supplied, excellently led. It was veteran, and had known victory. It had pushed its antagonist out of Kentucky with the surrender of Donelson; had captured Tennessee; captured

Vicksburg; repossessed the Mississippi River; driven its foe over Missionary Ridge in flight. It knew how to fight, and was willing to fight.

On May 7 our cavalry was driven through Mill Creek Gap. On that night, after we had gone into camp, Colonel Grigsby, who commanded the Kentucky cavalry brigade, was ordered to send a regiment to the front of Dug Gap, to guard the approaches to it. In obedience to that order the 9th Kentucky Cavalry passed over Rocky-face Ridge, and near to midnight bivouacked on Mill Creek, about a mile from, and in front of, Dug Gap. Heavy picket lines were thrown out on all the roads leading down the valley. There were several of these roads, and scouts were sent out to ascertain the movements of the enemy. By daylight it was discovered that very large bodies of troops were moving down the valley on all the roads leading to the south. General McPherson had marched from Chattanooga to Rossville, thence west of Chickamauga Mountain to Shipp's Gap and to Villanow, where the road forks,— one branch leading down the east foot of Taylor's Ridge, the other leading across towards Rocky-face; this road again forks, one leading through Dug Gap, the other down the valley to Snake Creek Gap. Until McPherson reached Villanow it was only a conjecture as to his course, and until the head of his column turned towards Snake Creek Gap his destination was uncertain. His march was concealed by Hooker's corps of the Army of the Cumberland, which corps, forming Thomas's right, marching from Ringgold via Nickajack Gap and Trickum, hid the flank movement of McPherson. The plan was for Hooker to seize Dug Gap and push forward sufficiently to protect the flank of McPherson, and strike the flank of Johnston if he turned on McPherson; while McPherson, marching through Snake Creek Gap to Resaca, should not only destroy but hold the only railroad tributary to Johnston. The possession of Dug Gap by Hooker not only rendered Dalton untenable, but made a retreat from Dalton by the line of the railroad extremely hazardous, and it completely protected McPherson from attack on his left flank. With Hooker descending from Rocky-face on our left flank and rear, McPherson holding Resaca, Thomas, with the corps of Howard and Palmer, pushing to Dalton, and Schofield to his left, our army would have been in perilous posture.

The march of Hooker and McPherson was discovered early on the morning of May 8 by the scouts of the 9th Kentucky Cavalry, and timely information given that at least an attack on Dug Gap was certain, and that the columns on the march were very heavy, and their movements guarded by forces too large to be either resisted or developed by the detachments sent out by the 9th Kentucky. On this information the remainder of Grigsby's brigade was ordered to Dug Gap, and reached there none too soon. All possible delay to the march of Hooker's corps was made, but about 2 P. M. Geary's division of that corps drove the 9th Kentucky across the creek and slowly up the mountain-side, until the regiment fell back in its proper position in the gap, where it found the brigade drawn in mere skirmish line along the edge of the mountain-side. As one-fourth of cavalry soldiers hold the horses, I presume that we had about 800 of our brigade in the fight and 250 Arkansas troops; and this handful of men held that gap until nightfall, repelling every assault. After nightfall Granbury's Texas brigade relieved us, but the assault was over. Hooker had failed in his part of the mission. That flank of our army was safe.

The importance of holding that gap was so manifest that Generals Hardee and Cleburne, with their staffs, galloped to the scene to encourage us by their presence and to aid Colonel Grigsby by their suggestions; and though the fight was made under their eye, that command needed no encouragement, and its officers and men knew that they were holding one of the doors to Dalton.

I hold in my hand the official report of General Geary, by whom that attack was made, and on the whole it is a fair and soldierly report. But he is mistaken in his belief that we had two lines of intrenchments, or that we were ever driven from our first position. Our loss was very small — in killed and wounded not a score. He reports that he made that attack with two brigades of infantry and two batteries, being an aggregate of perhaps 4500 men, or about four to one, besides the batteries. Assault after assault was made from 3 o'clock until after dark, and each assault repulsed with loss. At first, in a mere spirit of exuberant fun, some of the men rolled stones down the mountain-side; but when the effect was noticed they were directed to use these means as part of our defense; great stones were rolled down on the supporting lines on the mountain-sides or at its foot; and as these bowlders would go leaping, crashing, breaking off limbs, crushing down saplings, we fancied we could see the effect of the unexpected missiles. It also proved a valuable resource to us, for our ammunition would have given out, and was about exhausted when the attack ceased.

General Geary reports an aggregate loss of 357 officers and men, of whom some 50 were the adventurous advance, who actually reached the crest, only to be made prisoners. After dark our brigade, being relieved by the Texas brigade of Granbury, was ordered to the foot of the mountain to feed and to obtain ammunition.

While this attack had been going on, McPherson had steadily marched towards Snake Creek Gap, to protect which gap no steps had been taken. Undoubtedly if a cavalry force had been started to Snake Creek Gap at the same moment Grigsby was ordered to Dug Gap, it would have reached there before McPherson, and held it during the night of the 8th, during which time infantry support could have reached there. I do not wish to be understood as offering any criticism on these facts; I am merely stating the facts as I believe them. Why these gaps were left unguarded, why a prompt effort was not made to hold Snake Creek Gap, I neither pretend to know nor venture to guess; nor do I offer any criticism. That they were not guarded, and that this gave Sherman the easy means of causing the evacuation of Dalton and the retreat to Resaca, are undoubtedly true. That we could have held Dalton or made an attack on Sherman if these gaps had been held is a problem over which military men may differ. Whatever may have been the reason or cause, the fact is that the provision made to hold Snake Creek Gap was an order to Grigsby during the night of the 8th to move his brigade to its mouth. The 9th Kentucky had been on duty continuously for over twenty-four hours; the whole brigade for over twelve hours, and

under fire all the afternoon. But with cheerful alacrity the command began its march as soon as it could feed, after being relieved by Granbury,— possibly about 10 o'clock. The night was dark, the road rough and unfamiliar, and it was difficult to find guides. But just at dawn we came in sight of the eastern mouth of the gap, and, contrary to our information, found it in possession of the enemy. Colonel Grigsby had been informed that a company of Georgia troops were on picket on the road to the gap, and at or near its eastern outlet. We had not seen that company, and Colonel Grigsby naturally concluded that the troops we saw a few hundred yards before us were those. The usual confusion of an all-night march and the halt of the head of the column had jammed the different organizations somewhat together in a narrow lane. The advanced vidette reported the troops to be Federals. Colonel Grigsby, still supposing them to be Georgians, ordered a small scout to the front. In these few minutes the enemy, having discovered us and being concealed by the character of the ground and the forest, had formed line of battle, while our column had become more confused by many of the men dismounting to rest. Between us and the foot of the mountain was a fallow cotton-field, on the near edge of which was a row of deserted cabins. The road ran along this field a few hundred yards with a gradual descent until it passed through a fringe of willows and underbrush, beyond which there were other open fields, and then on both sides of these open fields were also thick woods.

Suddenly a long skirmish-line broke from the woods, ran to the fringe of willows, and directly through towards the row of cabins, keeping up a brisk fire as they ran. Behind the skirmish-line was developed a line of infantry. For a moment the fire staggered the head of the column, and the order to fall back and form could not be executed. The 9th Kentucky was in front, and very quickly its front companies were dismounted and a dash made for the cabins. Fortunately our men reached them first and drove the Federal skirmishers back. This gave breathing time, of which immediate and brilliant advantage was taken by Major J. Q. Chenowith, who led a portion of the 1st Kentucky, on horseback, on a détour to the right through the woods until he reached the fringe of willows, when at full run he charged the skirmish-line on the left, and the dismounted men of the 9th Kentucky charged on foot through the open field. The audacity of this sudden and unexpected dash caused the skirmish-line to run at break-neck speed, and the line of infantry to halt and to await reënforcements. This gave ample time to form the brigade for its day's work of retreating fight.

The immediate result of this was a delay to the Federal column of several hours, increased caution on the part of McPherson in his march during the day, and prompt information of his movement to our army headquarters.

The force under McPherson was so large that our small brigade of cavalry could not force it to develop its line. All that was possible was to cause the march to be as slow as that of a skirmish-line. This was done. It was late in the afternoon when McPherson drove us into the works before Resaca, which were defended only by Cantey's brigade and ours.

It was a gloomy prospect. We knew that McPherson had a force of from 15,000 to 20,000, and that there was no possibility of our receiving any reënforcements that afternoon and night. One serious attack by McPherson and Resaca must have been captured.

Fortunately McPherson knew that Hooker had failed in his attempt to seize Dug Gap, and consequently the road from Dalton was free to any Confederate column moving on him. The intrenchments at Resaca were formidable, and when McPherson felt the lines, the response was resolute and spirited. As Hardee came as reënforcements at Dug Gap, so here Hood joined us. He and part of his staff came to share our fate. Calmly we waited for the inevitable assault. We did not doubt that it would be made. McPherson was young, ambitious, and able. In our ranks he was accounted the equal, perhaps the superior, of Sherman. Here was an opportunity that Sherman might well say "does not occur twice in a single life"; and not for a moment did we doubt that such a soldier, with such an army, would seize such an opportunity.

I recall the scene, as a group stood on a knoll and watched the skirmishers advance. As the puffs of smoke arose in the distance, as the sharp-shooters paid compliments to this group, General Hood rode up, and after a few moments' gaze turned the head of his horse and rode a few feet, and by motion called Colonel Grigsby to him; in another moment Grigsby called me, and General Hood said in a cheery yet grave tone, "We must hold until night."

Just at dusk the enemy began to fall back, and to our surprise the retrograde movement ended near to where we had commenced our fight in the morning.

Wm. C. P. Breckinridge.

Lexington, Ky., August 27, 1887.

Kershaw's Brigade at Fredericksburg.

General Ransom's letter, in The Century for December, 1887, in regard to his services at Fredericksburg, contains an error in relation to the operations of my brigade. In the morning of that day, my troops were stationed at the foot of Lee's Hill. After the assaults on General Cobb's position had commenced, I was directed to send two of my regiments to reënforce Cobb, and did so. Before they had reached him, tidings arrived of the fall of General Cobb, and I was immediately ordered to take the rest of my brigade to the position held by his forces, and assume command of the troops of McLaws's division there. I preceded my troops, and as soon as possible arrived at the Stevens House at the foot of Marye's Hill. As my brigade arrived they were placed — two regiments, 3d and 7th South Carolina, at Marye's house, on the hill, and the rest of them in the sunken road, with the left resting about the Stevens House. The last regiment that arrived was the 15th South Carolina (Colonel De Saussure's). He sheltered his command behind the cemetery on the hill until his proper position was made known, when he moved deliberately and in perfect order down the road to the Stevens House, and proceeded to the right of my line. Instead of having two regiments engaged at that point, as General Ransom supposes, I had five regiments and a battalion (my entire brigade), each of which suffered more or less severely. During these operations I received no

orders or directions from any officer but my division commander, General McLaws. I requested not to be relieved that night, and remained in that position until the evacuation of Fredericksburg by the Union forces. These facts were officially reported at the time, and were then too well known to be the subject of mistake.

J. B. Kershaw.

CAMDEN, S. C., Dec. 6, 1887.

The Last Victim of the War.

TO THE traveler on the old Walnut Hills road, Cincinnati, at noon, May 11, 1865, an unwonted spectacle presented itself. To the south of the road along the ravine near by stood, in solemn silence, a regiment of soldiers facing the road, the companies at each wing at right angles, forming a hollow square. Within this, near the left, stood a squad of soldiers, arms at the shoulder, bearing upon the breast of a youth kneeling erect beside his coffin and facing them at eight paces, with hands unbound and tremorless at his side, and eyes bandaged with a white handkerchief. At the word of command the guns were fired and the youth fell dead.

Thus perished Thomas Martin, the last victim of the great civil war. The war was over, Lee had surrendered, Richmond had been taken, Johnston had yielded, Davis had been captured. Federal and Confederate, the blue and the gray, were fraternizing everywhere save in that lonely ravine, within the corporate limits of Cincinnati, where was being transacted the most revolting deed of war — the deliberate killing by overwhelming power of an unresisting human being.

Few of the citizens of Cincinnati were aware of the tragedy at the time; and how few now, as they read this narrative, will recall it. We are living in a time of reminiscences, and the history of this poor Confederate soldier may have its lesson.

Nearly a year before this execution, its victim, a native of Kentucky, had been captured in that State and brought to Cincinnati as a prisoner; there he had been brought before a court-martial upon the charge of being a guerrilla, and had been convicted and sentenced to be shot. He was a mere boy, quite illiterate, unable to read or write: he claimed that he was a regular Confederate soldier, and evidently the distinction between such a soldier and a guerrilla was beyond his knowledge.

At the time this sentence was rendered, no one expected it would be carried into execution. No member of the court, and certainly the military commandant of the city, General August Willich, did not. The sentence had been rendered for its deterrent effect upon the guerrillas in Kentucky. So little did General Willich think the sentence would be executed that he gave the boy his liberty, the freedom of the city, using him as a sort of orderly; and in his intercourse with him he became attached to him. Time passed; and the day when General Hooker would leave the department, of which he had had command since General Sherman's action retired him from the front, was approaching.

In an evil moment for the victim, General Hooker, in the first days of May, 1865, asked an aide to read over the papers on file in the department, so that he might dispose of them. In so doing, the papers relating to this boy were found. The general had forgotten the case. He inquired whether sentence had been executed. Learning that it had not, he sent for General Willich, his subordinate, and asked for the facts. General Willich stated them as above given. Next day, he received an order from General Hooker directing him to shoot the boy on the 5th of May, then only a few days off. General Willich was dumfounded. To shoot the boy who had been his attendant for nearly a year, and whom he had respected for his faithful conduct, was too much for the stern old soldier of many years and many wars. With tears in his eyes he rushed to Judge Stallo, now our minister at Rome, and besought his interference. Judge Stallo, in turn, came to me and solicited my aid.

Meanwhile General Hooker had left the city to attend the funeral of Mr. Lincoln at Springfield. Therefore I could not reach him. At my request, Mr. Gaither, then Superintendent of Adams Express Company, sent a telegram to Major Eckert to be laid before Mr. Stanton, requesting his intervention. But no order came, and preparations were made for the execution.

The boy was dressed for death. The priest, Father Garesché, brother to General Rosecrans's chief of staff,— who fell at Stone's River,— attended him. The mournful procession took its way to the ravine, yet General Willich moved slowly, hoping the order for suspension would be received. He left a mounted orderly to wait until the last moment for a telegram from Stanton. Anxiously, imploringly, he looked back for his messenger. At length, to his great joy, in the distance he saw him coming at full speed, holding in his outstretched hand a paper. It was this telegram:

WAR DEPARTMENT,
WASHINGTON, D. C., May 5, 1865.

MAJOR-GENERAL JOSEPH HOOKER: Suspend the execution of Thomas Martin, to be executed in Cincinnati this day, until further orders.

By order of the President.

E. M. STANTON, *Secretary of War.*

Great was the rejoicing. The soldiers who were to shoot the boy now congratulated him on his escape, and all returned to the city. Alas, how short-lived was this joy!

It had been my purpose to advise General Hooker, on his return, of what I had done; but my first knowledge of this was from an aide of his, who delivered a note from the general requesting my presence at his headquarters.

The moment I saw Hooker, I discovered that he was under great excitement, which he was striving to suppress, and in this effort he fairly succeeded. He did not look me full in the face, but sat sideways, looking obliquely, ever and anon casting upon me furtive glances. In slow and measured tones, he said:

"Judge Dickson, I was very angry at you on my return and had ordered your arrest; but reconsidered it, and am now more composed."

"Why, you surprise me, General! What is the matter?"

"Why, sir, on my return to the city I found my administration of this department had been interfered with; that Martin, whom I had ordered shot, had not been shot; that Mr. Stanton had suspended my order. I immediately telegraphed him, demanding why he interfered. He replied that it was in response to the Gaither telegram — your work. I demanded of him to send me a copy of this telegram, which he did. Oh, yes, sir! I have got it. I know all you did."

"Well, General, was it not all right?"

"No, sir; it was not right. No, sir. Why, sir, when I was in command of the Army of the Potomac, Lincoln would not let me kill a man. Lee killed men every day, and Lee's army was under discipline; and now, sir, Lincoln is dead, and I will kill this man. Yes, sir, I will. The order is given to shoot him to-morrow, and he will be shot; and don't you interfere."

"Did Stanton order you to shoot him?" I inquired.

"No, sir. He left the matter in my hands, and I demanded that he be shot — and shot he will be."

"Well, General," I again interposed, "this boy was only a guerrilla. The war is over. He belonged to Colonel Jesse's command. The papers of this morning tell us that the Government has given Jesse the same terms given Lee; that he is now in Louisville, where he has been feasted and fraternized with by Union officers. Will it not be shocking to shoot here one of his deluded followers?"

"It makes no difference," replied the general. "Louisville is not in my department. I am not responsible for what is done there. I will do my duty in my own. I will kill him. Yes, sir, I will; and that to-morrow."

The image of the speaker rises before me with startling distinctness. The manner as well as the words indicated that his mind was oppressed with the thought that Lincoln's humanity had thwarted his career. In some way it seemed to him a relief to sacrifice this boy. Hence his eagerness that the opportunity should not escape him.

As I gazed upon the man the uppermost thought in my mind was, not the brutality of his act, nor yet pity for the fated youth,— though these thoughts were not absent,— but simple amazement that such a man, only a few months before, in a supreme crisis, should have held in the hollow of his hand, as it were, the fate of this mighty nation.

But why revive these harrowing incidents of the war? As well ask, Why tell the story of the war at all? If it is to be told, let us have the whole. Let the young not be misled; the dread reality has something else than the pomp and circumstance, however glorious. Besides, there will be other wars and other generals. Let these remember that an abuse of power will sooner or later rise up in judgment against them.

W. M. Dickson.

Hooker on the Chancellorsville Campaign.

[THE subjoined letter has been kindly furnished to us for publication by Lieutenant Worth G. Ross, son of the late Colonel Samuel Ross, to whom it is addressed. It is believed that it has not before been printed. — EDITOR.]

LOOKOUT VALLEY, TENN., Feb. 28, 1864.

MY DEAR COLONEL: For some reason your letter was a long time in reaching me. When the Eleventh Corps gave way on Saturday, Berry's division and Hays's brigade were dispatched to seize and hold the ground occupied by the left of that corps. Berry double-quicked his men to the point, but was too late. The enemy were already in possession. When this was reported to me I directed my engineers to establish a new line, which was pointed out to them on the map, and at the same time stated to them that we would probably have to move on it as soon as the enemy opened on us in the morning, as his batteries would sweep the plain in front of the Chancellorsville House, and, besides, enfilade the line held by the Second and Twelfth Corps nearly its entire length. Soon after these instructions were given to the engineers, peremptory orders were sent to General Sedgwick to advance over the plank road from Fredericksburg and attack the enemy in front of the Second and Twelfth Corps at daylight. My single object in holding on to the position as long as I did was to hear Sedgwick's guns, which I momentarily expected, of course. General Warren had been sent to guide him. The orders reached him between 10 and 11 o'clock, [he] had but eight miles to march, a bright moonlight night, with only a small force to oppose. Probably had he marched as directed, not a gun would have been fired. With Lee in my front and Jackson on my flank I was unwilling to attempt to force my way through Lee, especially as the roads through the forests would only enable me to present my columns with narrow fronts, which the enemy could cut down as fast as they were exposed. I knew that I could do this, and I gave the enemy credit for being able to do as much as I could, but no more. Had Sedgwick come up on Lee's rear, the latter would have found himself between two armies, and would doubtless have followed Jackson's flank movement, which I desired, as that would throw the enemy off the short road to Richmond and our troops on it. I do not know that you ever heard that I had one and a half millions of rations afloat in the Potomac to throw up the Pamunkey River in view of this contingency.

I recrossed the Rappahannock, expecting to return at or near Franklin's Crossing, where I had elbow room, and at least an even chance for being victorious, and so stated to the President at the time. No general battle was fought at Chancellorsville, for I was unwilling to give battle with such great odds against me. I rejoice that what was not gained was not lost.

We lost no honors at Chancellorsville. With all of our misfortunes the enemies' loss exceeded our own by one-third. Of this I have abundant evidence in the official returns of the enemies' casualties, as they have from time to time been published. If I did not cross the river again it will appear that it was for reasons over which I had no control. The rains had nothing to do with our returning from Chancellorsville, for it had been determined on in my mind long before the rain commenced falling. I do not like to be quoted as authority on this subject until after the official report is published, and for the flattering terms in which you speak of me — *not ever*. I hope that you and yours are well. My kindest regards to Mrs. Ross and my best wishes for yourself.

Your friend,

JOSEPH HOOKER.

COLONEL SAMUEL ROSS,
Commanding Brigade, Twelfth Corps.

Erratum.

A TYPOGRAPHICAL error in General Sherman's "Grand Strategy of the Civil War," in the February number, gave General Thomas's loss at Nashville as 305 instead of 3057 (revised compilation).

Strength of the Confederate Army at Chickamauga.

ON this moot subject an examination of the original returns in the War Department, which I have personally made, shows the following result:

General Bragg's return, 31st of August, 1863, shows under the heading "present for duty," officers and men, 48,998.

This return does not include the divisions of General Breckinridge or General Preston, the brigades of Generals Gregg and McNair, or the reënforcement brought by General Longstreet. The strength of each is accurately given in Confederate official returns. The total Confederate force available for battle at Chickamauga was as follows:

General Bragg's army, 31st of August, 1863, for duty	48,998
Longstreet's command (Hood's and McLaws's divisions), by return of Army of Northern Virginia, 31st of August, 1863, for duty	11,716
Breckinridge's division, by his official report in "Confederate Reports of Battles," for duty	3,769
Preston's division, by his official report in "Confederate Reports of Battles," for duty	4,509
Brigades of Gregg and McNair, by General Bushrod Johnson's official report (So. Hist. Soc. Papers, Vol. XIII.), for duty	2,559
Total	71,551

CINCINNATI, O. *E. C. Dawes.*

TOPICS OF THE TIME.

Shall Fortunes be Limited by Law?

THE leveling instincts of a democracy are apt to answer the question with an emphatic Yes. The equalization of men in their standing before the law, in their political privileges, in their opportunities in the administrative service of the country, in their educational advantages, and in the position of their sects before the State is apt to find in the eyes of many only its next step in the equalization of wealth, or at least in the prevention of the development of extremes. On the other hand, he who pins his faith to the political power of the State, who believes that the State has the right to regulate property because it makes property possible, has only to be convinced that great fortunes are dangerous to the State to echo the democratic answer with another and as hearty an affirmative. The proposal finds even a more favorable soil in our own country for the reason that our whole political system has been consciously set from the beginning against the development of permanent great fortunes, and that with a success in which we have taken considerable pride. Our legislation has aimed at removing every artificial obstacle to the dispersion of great fortunes: primogeniture has been forbidden; entails have been limited; equal division of the property of intestates has become the legal rule; and the result has been, until comparatively recent years, that "from shirt-sleeves to shirt-sleeves were three generations."

The old rule, however, no longer holds good. Representative fortunes have come to be enormously larger—larger, indeed, than were really conceivable fifty years ago; and this one fact has quite altered most of the conditions of the case. Almost any division of the "large fortune" of a half-century ago gave as a result several small fortunes, usually so small as to have in them no power of recuperation and self-increase. But a reasonably equitable division of a fortune of two hundred millions gives at least one fortune whose annual income is so much beyond anything that the heir is at all likely to spend, that its own natural increase will carry the principal up again to its original limit within an ordinary life-time, without any special ability in the owner beyond that of care-taking. The general principle that all the children ought to have a share will no longer suffice to break up and disperse all the fortunes of the republic; the very magnitude of the estates has already given us some of the phases of a system of primogeniture, from which it had been persistently assumed that we had escaped at the Revolution. An entire escape from all its phases can now be found only in a failure of direct heirs or in the succession of an incorrigible spendthrift. And it is a fact too, to be carefully kept in mind, that the succession of incorrigible spendthrifts is no longer so common as it once was. The larger the estate, the more apt is the heir to be a plain, hard-working young man, who shows more signs of uneasiness at assuming the responsibility of managing the property than of elation over his opportunities of squandering it. Every indication goes to show that our very large fortunes, instead of being dispersed, are to hold their own and even to grow from generation to generation until they reach that natural limit placed by the ability of one person to manage an estate.

It is very natural, then, that those who feel that law and social conditions together have failed in the work which they were considered competent to do should every year have a stronger desire to put new legal limitations on the growth of American fortunes. The dangers of enormous accumulations of wealth in the hands of single persons in a republic, the contrast between the daily income of the "plutocrat" and the amount which the long struggle of a workingman's whole life will bring, the passions aroused by the vulgar display affected by so many of the smaller "large fortunes," are all forces bearing in the same direction. The proposals of prohibitory succession duties on inheritances above a limited amount, of prohibitions of gifts above the same amount, unless to public or charitable uses, or of an income tax rising in percentage with the amount of the income to a prohibitory tax on all incomes above a legal limit, are various forms of a single purpose — that the very rich shall become no richer, and that they shall not be permitted to transmit their present wealth undiminished to an indefinite line of successors.

It is well, however, to weigh carefully the fact that, in the mass of cases, wealth means the sum of some service done to the public, which would not have been done but for the reward found in the legal permission to accumulate and transmit wealth. He who has retired with a snug fortune has been engaged in a life-long struggle to provide dry-goods for the public a

cent a yard cheaper than they were before, or to lower freights a tenth of a cent per ton-mile, or to see that the money of bank stock-holders or depositors is loaned to just the persons in the community who will make the best and safest use of it, or to accomplish some one of the public services in which human activity is continually finding its field of operations. We darken many questions hopelessly when we speak, as we always do, of the individual's success in making money, as if he had been engaged in abstracting something from the general pile; there are ugly cases of this kind, but they are the exception, not the rule. He who has "made money" legitimately has done it by leaving the general mass of wealth just so much larger than he found it, by furnishing long years of useful and profitable work to others less well equipped than he for the race of life, and by performing for years some specific service, in addition, to the public at large.

If we acquire the habit of now and then looking at the case from this side, from which we unhappily so seldom look at it, the proposal to put legal limits to the amount of fortunes will take an entirely new aspect. We shall see that we are, in reality, making the definite proposal that our law shall henceforth forbid any citizen to make the world more than so much richer in his life-time, to provide employment for more than a legally limited number of those who need and desire employment, or to be more zealous than the law allows in seeking out commodities or doing any similar service for the general public. Franklin once attempted to reach the common sense of the British public in a pamphlet entitled "Rules for reducing a Great Empire to a Small One." If a second Franklin should address us, must he meet as little success in combating the proposal to put legal limits to the wealth of the country?

If the proposal needed any further illumination, it would be found in the impossibility of limiting the injurious results of its adoption. Human ability is in the habit of taking very fair average care of itself: it persecuted in one city, it will not be slow to seek a refuge and a welcome in another. If New York could place a progressive income-tax on her statute-book prohibiting incomes above a fixed limit, one result would certainly be a diminution of New York incomes; but that would be far from all. The incomes thus limited would rapidly disappear from New York, while Connecticut and New Jersey would show a sudden, surprising, and coincident increase of large incomes. So, if the scheme should be adopted by the whole United States, that country would meet an indefinite dead loss, to the gain of Canada or Europe. Human ability would find its natural refuge and enjoy its natural income somewhere unless the whole world could be united against it as implacably as the Roman Empire used to be against the victim of the Emperor. Until the proposal to limit fortunes by law can be supplemented by a recipe for securing the acquiescence or neutrality of those who are to be most directly affected by it, it must be considered as really outside of the province of discussion. If the great fortune is the result of defiance or prostitution of law, let the law be made to fit the case; but if it is the natural result of human ability, why should it not go on benefiting the community up to the natural limit of human powers of management?

President or King?

DURING the long period through which republicanism stood on the threshold of Europe, knocking for the admission which was peremptorily denied until it was forced through the terrors of the French Revolution, the applicant came in an ill fashion; her name had become synonymous with riot and disorder as an internal condition, and with reckless aggression as an international policy. However urgently the man of republican leanings might deny the accusation, his consciousness that the universal belief of Europe was against him always forced him into an apologetic attitude on this point. And when the issue was at last brought to the arbitrament of force, it was not so much the execution of the king, the massacres of the aristocrats, the overthrow of the Church, on which the Anti-Jacobin relied to make out his case against the French Republic, but rather the irascibility, the unreasonableness, the proneness to make war on few or no grounds, which must, he declared, always characterize a government controlled by the mob. A republican government in the heart of Europe would be a fire-brand, constantly scattering or threatening destruction; and the natural desire for security from such an infliction was the official reason for the renewed and re-renewed confederation of the kings.

There would seem to be considerable reason, *a priori*, for doubting this belligerent disposition of republics; it surely cannot require a profound experience in the art of self-government to teach "the mob" that the soldiers and taxes to support war must be its contribution, and to give it a hearty distaste for military glory. If, however, in spite of theory, there is in republicanism anything of this overbearing tendency to aggression upon neighboring nations, who should personify it if not the President of the United States? He is a politician, chosen for but four years to the highest office open by election to man, and conventionally estopped, at least in modern times, from essaying any other line of public preferment after leaving the presidential office. The popularity to be won by successful warfare would go far to give him at least one reëlection; and the obstacles to indefinite reëlection, however strong they have proved in fact, have never been in themselves more than negative. To the observer of 1787, with his preconceived notions of the bellicose temper of a republic, it must have seemed a most probable result that some military adventurer, enticing the country into war, and thus securing for himself one reëlection after another to the presidency, should gradually change the essence of the government until, as in so many other so-called republics, the President should assume the dignity and title of royalty.

No such result has taken place. On the contrary, the history of the United States has shown that the American chief magistrate, however efficient he may be as a leader and manager after war has once begun, is up to that time not only the most pacific of rulers, but the most pacific organ of his own government. Other departments of his government have shown an occasional disposition to fall under the malignant influence of the war-spirit; but the American president (with perhaps the exception of a single case), whether he has been soldier or civilian by profession, has always seemed to feel himself personally and peculiarly

charged with the duty of maintaining peace. In the midst of perfervid orators, legislative statements of grievances, and even intense popular passion, the President has always thrown the whole weight of his party, personal, and official influence into the scale of peace, and, in the last resort, has usually shown no hesitation in arraying his constitutional prerogatives across the path to war, even though he has thus seemed to peril his own political future.

Time would fail for enumerating all the cases in our history where the office of President has been the direct barrier between the United States and war. The first attack upon Washington's popularity came in 1793, when he interfered publicly and successfully to prevent the country from drifting into war as an ally of France against England. Six years afterward, when the country was ready for war against France, when the President's own party was clamorous for it, and when the first tidings of successful sea-fights were already coming in, John Adams flung himself into the breach and secured peace, though he lost the presidency. Bitterly as he disliked the English Government of that day, Jefferson had but one thought when he heard of the *Leopard's* attack upon the *Chesapeake* in 1807 — to check the popular disposition to answer the outrage by war, and to first exhaust every possible means of peaceable redress. His successor, Madison, struggled more hopelessly for peace, until it became evident that his political fate was to be that of John Adams, when he at last gave way. So one might go on to find in every administration, even in that which has been held responsible for the Mexican War, new instances of the normal bent of the presidential office towards peace. Some of them may not have been successful in securing peace; in others there may never have been imminent peril of war; each of them has at least served to emphasize anew the intense anxiety of all American presidents for peace.

But, it may very well be said, it is the people, not the political system, that has made the American office what it has been. The objection has truth, but it is easy to permit it to disguise as important truths on the other side. If the South American president has not always been so peaceful a figure, is even he, after all, any worse than his dynastic rival who, representing Germans, Austrians, or Russians, is concentrating his thoughts on the power of explosives, the bore of rifles, and the number of cartridges which the soldier can carry? There is strong reason to think that even here the elective ruler would show a tendency to peace such as has not been a marked characteristic of hereditary rulers. Even if the present system of European armament were a really popular movement, a king must find provocations to the use of the national armament in circumstances which would seem of comparatively little significance to a president by election. The hereditary ruler, *ex vi termini*, is limited in the work of ruling by considerations bearing on the family which he represents; his regret at the outbreak of war must be tempered, if the young princes of his house should find in popular applause a substitute for popular election; he breathes a family atmosphere of militarism. He may try to think only of national interests, but his influence will be swayed by other considerations. President Cleveland may be no better, wiser, calmer, or more pacific person than the Emperor William, but his judgment is free from at least one cloud which must always obscure that of the emperor: in the emperor's eyes, every question of peace and war properly affecting Germany alone must be looked at through the mirage raised by the conventional honor of the house of Hohenzollern; in the eyes of the President, the question is one solely of his country's welfare.

It is but a few months since France passed through the crisis which was to decide whether her coming ruler was to be president, emperor, or king. Was there no significance in the rise of stocks, in the "better feeling" in neighboring capitals, and in the reviving confidence in peace, which followed the election of a president? Sadi-Carnot may cease to be president; the French Republic itself may cease to be for the time; but the "European situation" can never escape from the damning stigma of last December — the consensus of the international armament of crowned heads that a president in France was in so far a pledge of peace. Perhaps, if there were more presidents in Europe, there would be fewer wars and a brighter hope of disarmament. As republicanism spreads more widely over the continent, even while a simulacrum of royalty is still retained, it cannot but become more evident from results that the wars of the past were due to other influences than popular passion. Perhaps, before the process is completed, the people of Europe may for once enjoy the spectacle of a war in which the monopoly of actual fighting is reserved for two of the remaining royal families and their respective officers of hereditary influence. One may be pardoned for believing that these two elements are responsible for more wars in the past than all coming presidents will ever have to apologize for.

Postal Savings Banks.

THOSE who are not brought directly into contact with the savings bank do not always appreciate fully the popular work which is done by the system. In these banks we can see practically that which is not always easy to understand in theory — the close relationship of wages to capital, and the possibility of the conversion of the former into the latter. The savings banks of the United States had, in 1887, some $1,200,000,000 of deposits. Almost all this was the savings of labor, the natural result of high wages and growing ambitions. Saved in dribblets, it would have been spent in dribblets and would have passed out of reckoning without doing the world any service, but for the savings banks' unification of countless little savings into this imposing mass of wealth, this $1,200,000,000. To enable themselves to pay interest on these deposits, the savings banks must in their turn loan them, immediately or mediately, to men who wish to borrow the money for use as business capital. That is, the country's generous treatment of labor, its high wages, the hopes of social advancement which it holds forth, and the desire of saving which springs therefrom, have been profitable, even in the lowest sense of the word; they have added to the active capital of the country some $1,200,000,000 which otherwise would never have existed. But it would be telling far less than half the story to leave it on this low level. This mass of wealth has not only served the country as capital; in a higher politi-

cal sense, it has been a pledge of social peace, security, and hope. Those who have saved it are not growing poorer, but richer; they have founded an Anti-Poverty Society of their own. With it, they have put so much the greater interest at stake in the country; while those who have borrowed and are using it have so much the greater respect for those who have saved it. Every savings bank is in its way worth a thousand policemen and several regiments of regular troops, for it builds order on a foundation stronger than force.

This showing of the savings-bank system, however, becomes meager when we begin to realize how small a part of its possible field has been filled. Of the twelve hundred millions of savings just mentioned, nearly eleven hundred millions are the property of New England and the Middle States alone. Indeed, if we except these two sections and California, with her $60,000,000 of savings, the system is practically non-existent in the remainder of the United States. The rest of our people are still practically ignorant of the powers of the system in transforming wages into capital. And it is for this reason,—for its educational advantages rather than for its superiority to individual banks,—it is for the controlling purpose of introducing the system into those sections of the country where it is still practically unknown, that Congress may fairly be called upon to imitate Great Britain's Act of 1861, establishing a system of postal savings banks. Wherever the system is introduced it must commend itself; and then the superiority of banks formed by individual corporators may safely be trusted to hold the Government institutions down to their comparatively narrow field.

There is one section, however, in which the call for such a step seems almost a national duty, instead of a mere question of expediency. If there is any class of our people who should be encouraged to save,—for the sake of their own welfare, for the sake of the higher respect which the known habit of saving will bring them, for the sake of the social security which will find guarantees therein,—it is the Southern negroes. No other class have a more immediate and urgent need of the savings-bank system than they; no other class see so little of it. Indeed, what they have known of it has rather been calculated to make them distrust it; and for this our national legislation is largely responsible. They have not forgotten, if we have, the Freedman's Savings and Trust Company, chartered by Act of Congress of March 3, 1865, which failed in the autumn of 1873 with liabilities of more than $3,000,000. Dealing, as the Act did, with an ignorant and helpless people, the wards of the nation, whose economic future was so largely dependent upon the success of this project, the Act should have been regarded as an act of state rather than a mere charter; and every effort should have been made to give the deposits a character for security as absolute as the pledge of the whole wealth of the country could supply. That was the time for the introduction of the principle of the postal savings-bank system, for reasons of state if for no others; instead, Congress chose to hazard the economic development of the freedmen on the wisdom of random trustees, and the ups and downs of the investments on which that wisdom should decide. In partial compensation for its error of 1865, and for the economic injury thereby done to those whom the nation was bound to care for, let Congress proceed, by establishing postal savings banks throughout the South, to show the negroes that there is a more excellent way than the Freedman's Savings Bank.

Such Government savings banks have their points of inferiority to corporate banks. In order to establish the system, the Government bonds would still be available as an absolutely secure investment for the postal bank deposits; and those who should deposit their half-dollars or multiples thereof at the money-order offices or postal savings banks would really be buying shares of these Government bonds. Corporate banks loan their deposits directly to be used as capital by the borrowers, while the postal savings bank would act only indirectly, releasing for use as business capital the same amount of money which would otherwise have been invested in Government bonds. In other words, the corporate banks not only inculcate the habit of saving, but add to the business capital of the country more directly than the postal banks. If, then, the proposal were to give the Government the same monopoly of the savings-bank business which it has in the post-office, the proposal would be open to serious objections. No such proposal is meant. On the contrary, it is easy to show that the postal bank can do no more than open the way for the more effective corporate bank. The purchase of Government bonds for postal bank investment, at the current market rates, will net only an interest of less than 3 per cent. on the amount invested—in all probability, not more than 2½ per cent. Even if there were no expenses of management, then the postal bank could not offer more than 2½ per cent. interest on deposits, unless the Government should increase the rate as a gratuity, which would hardly be proposed. There would, however, be expenses of management to be provided for; and in practice the postal bank could hardly offer much more than 2 per cent. interest on deposits. The usual rate of the corporate savings bank is 4 per cent.; so that the corporate bank, when established in a place, would at once drive the postal bank out of competition. It seems evident, therefore, that the postal bank would be no real rival to the private or corporate bank—that it would, in effect, be nothing more than introductory to the present corporate system. It would be a convenience, in a town which had no corporate bank: it would teach the people the virtue of saving, and thus stimulate the desire for a corporate bank; but it would not rival or oust the corporate bank.

The proposal that Congress should establish a system of postal savings banks is not dictated, therefore, by any desire to widen Government functions, or to take out of private hands a work which they can do better than the Government agents can. The present savings banks would continue their work without becoming conscious of any change: it is not likely that a single half-dollar would ever be deposited in the New York City post-office if it were made a postal bank. The advantages would come in carrying the old system into new places, in teaching a whole people a system under which one-fourth of their number already have $1,100,000,000 on deposit.

In a former article we discussed the plan for postal savings banks without any interest at all.* The whole question of postal savings banks may have to be de-

* See this magazine for February, 1886.

ferred, we are well aware, till the merit system in the civil service has been much further extended; and in the present condition of the Treasury there are grave doubts as to what wise disposition could be made of the deposited savings.

George Kennan's Siberian Papers.

THE illustrated papers descriptive of the Siberian experiences of Mr. George Kennan, the author, and Mr. G. A. Frost, the artist, will begin in the May number of THE CENTURY. Their appearance has been deferred on account of Mr. Kennan's desire to group in preliminary papers — the last of which is printed in the present number — an account of the conditions and events in Russia directly related to the exile system. This system is now to be minutely described and elaborately pictured; and by way of preface to the first illustrated paper Mr. Kennan will, in a brief statement, answer the question as to how he came to enter upon his arduous and somewhat perilous investigations, and why he and his companion were accorded such extraordinary facilities by the Russian Government itself.

OPEN LETTERS.

The Department of State and the Diplomatic Service.

ONE of the suggestions which President Arthur made in his last message to Congress was that the President should be authorized by law to fix the grade of the diplomatic agents sent by our Government to other powers. The change thus proposed would undoubtedly have been in the right direction. If we are ever to have an organized diplomatic service, it will be necessary that the control of the service, or at any rate of most of its details, shall be left to the Executive and the Department of State to a far greater degree than is now done.

The fact, but little commented on, that the present Administration has made but few changes among the secretaries may perhaps be taken to indicate a disposition on its part to prepare the way for an organized diplomatic service. It is time, therefore, that it should be made clear that the management of such a service by the Department of State will be necessary to its successful operation.

The incessant and capricious meddling of Congress in the affairs of the service has been productive of much harm. The abolition, so common in our legislation, of a mission or a secretaryship one year, to be restored the next, has had no effect but to make the holders of these positions unhappy, to disgust and demoralize other members of the service, and to lower our Government in our own eyes and in those of the world. The matters of which the Department has cognizance are of such a delicate nature that it should not be necessary to submit them to the public criticism of several hundred persons, some of whom will not scruple to make the Government ridiculous if by such action they may gain any advantage for themselves or a little amusement.

But it will not be enough that the control of the diplomats be left to the Executive and the Department. The President and the Secretary of State, however able and patriotic they may be, are not likely to be versed in foreign habits and traditions. The administration of the diplomatic and consular routine should be mainly in the hands of the permanent officers of the Department. These should themselves have had considerable experience of diplomatic and consular life. They should be paid salaries proportionate to the dignity and importance of their duties; and their places should undoubtedly be permanent.

Such a staff of officers would have — partly, at any rate — under their control many important subjects. In the matter of promotions they would give the Secretary the advantage of their knowledge of the men and of the requirements of the posts. It may be asked whether under such an administration of the service there would not be room for favoritism. The answer to this is that favoritism in the administration of human affairs is one of the things inevitable. It is possible to devise no system of administering a service in which favoritism will not play a part. Has there been no favoritism under the old system? But the chance that merit will be considered in making promotions is certainly greater if the service is under the control of responsible individuals, open to public criticism, than if the appointment is the work of a vague syndicate of President, Secretary of State, confirming senators, and appropriation committees.

It is easy to perceive that there are many things which could be left to the discretion of a well-organized department which are not fit to be made matters of public discussion. Take such a question, for instance, as the comparative social fitness of men for some post the demands of which are peculiar. This is often a proper subject for consideration. The discrimination in favor of a person with a peculiar gift for distinguished society need not be of an aristocratic nature. It is not necessary that the man promoted upon this ground should be of distinguished connections. The reverse would be the usual case. A talent of this sort is apt to be inborn. It is particularly so in this country, where the man who suits European standards of manners is as likely to come from one set of people, or from one part of the country, as from another. The quality is apt to exist in men of bright intellects. Fine manners and a fine accent are likely to go with fine perceptions. Then the clever fellows learn rapidly. A little experience does wonders if the material is of the right sort.

The Department, of course, would have ample opportunities for knowing the men whose merits it would have to pass upon. Besides having their work before it, it would know them in person. We should, of course, adopt the excellent custom of other countries. In most services a diplomat begins the career by a period of employment in the Foreign Office, and often returns there, either by an exchange with one of the clerks or otherwise.

As an example of the class of subjects which should be left to the discretion of the Department, I may refer to the matter of dress. This is evidently not a proper matter for the interference of Congress. It happens, indeed, that the present law prohibiting to diplomats any kind of official dress or uniform has certain advantages. These uniforms are expensive, a full equipment, even for an attaché or secretary, costing from five hundred to a thousand dollars. This would be more than a secretary who was receiving a salary of $2000 a year, and who was liable at any time to lose his place, could afford to pay. It might seem to be just as well, therefore, that the diplomat should have the law as an excuse for his not going to this expense. Still, this is obviously not a subject upon which there should be a hard and fast rule.

I am aware that these are suggestions which would not be well received by the American politician of the old style. They are, indeed, of a kind one would not have thought of making a few years ago. The truth is, the spirit of reform has already accomplished so much in this country that it is very cheerful about its prospects of success in the future. It is less and less afraid to support any principle which has justice on its side. I do not believe that it will cease its endeavors until the Government shall be an example in the midst of us of honor, reason, and good taste, which last, as has been said, is only a finer kind of justice.

E. S. Nadal.

An American Diplomacy.

THE questions which have been pressed upon the minds of many citizens by recent incidents of our diplomatic service go much deeper than mere matters of organization and administration. The occasions on which, of late, the service has been brought most conspicuously to the public attention have been the persistent efforts of certain traveling Americans to secure introduction into a certain circle of society into which they claimed a certain indefeasible right, as American citizens, to be introduced by the official representative of the Republic. And this functionary has been seriously criticised in the public press for his course concerning these grave cases, and has been censured for his too great ease in consenting in some cases, in others for his excessive scrupulousness in refusing. But through the whole discussion it seems to be assumed or conceded, first, that the Government of the United States is maintaining a great and costly system of "diplomatic service," one main function of which, in quiet times, is to aid the aspirations of certain citizens to be introduced in a social circle where they are not, as a rule, very much wanted; and secondly, that honorable gentlemen like Mr. Lowell and Mr. Phelps are officially charged with the function of rating the standing in the social scale of their traveling fellow-citizens, and of smelling out the antecedents of republican women who yearn to be presented to royalty. Is it strange that the disinterested spectator of this paltry business should begin to raise some radical questions — as (1) whether the Republic has any interest in aiding its traveling citizens to be presented at court, and (2) whether the business of determining on the eligibility of aspirants to such honors, and of making the incidental inquiries, is a business which ought to be imposed on a gentleman of dignity and honor, and not rather upon some such person as the late Mr. Brown of Grace Church, with such assistance as he might occasionally need from the office of Mr. Pinkerton?

There is serious danger that the people, in their disgust at such exhibitions of the silly side of the diplomatic service as have been witnessed, may rush some time to the extreme measure, which has more than once been urged, of abolishing the diplomatic service, and so solving at a stroke these momentous questions of costume, and eligibility, and fitness for distinguished society, which now perplex the councils of the nation. This would be a pity, for there is no doubt that the Government has business to transact with other governments, from time to time, sufficient to justify the keeping of a competent agent in communication with the office of foreign affairs in each important capital. The Administration which should succeed in rigorously cutting down the whole diplomatic service to this business basis, and should say boldly, the United States, having no "court" at which to receive embassies, is not in a position to send ambassadors to court, but only ministers to "reside near" the Foreign Office, would at once unload itself of a multitude of vexatious and contemptibly paltry questions, and set our Government and our people in a logical, consistent, and dignified relation towards other governments. Let it be added that this measure would be one of appreciable economy and of general popularity. Only Miss Flora McFlimsy and her friends would seriously lament, and the young gentlemen whose talents for distinguished society inspire them with longings for the position of attaché.

Will any one tell us what danger it would involve to the Republic if our business with the British Government should be intrusted no longer to an Envoy Extraordinary and Minister Plenipotentiary near the Court of St. James, but to a competent attorney, like Mr. Phelps, near Downing Street; and if this functionary should be instructed that he had no official duties whatever, either at Buckingham House or at Windsor Castle, and that to the Government which he represented it was a matter of utter indifference where he dined or danced, or whether he dined or danced at all, so long as he behaved himself with propriety and paid strict attention to business?

I am aware that these artless questions will have a barbarian sound to the ear of the average attaché; but none the less they suggest the outlines of the true American Diplomacy.

Leonard Woolsey Bacon.

Moral Teaching in our Schools.

RECOGNIZING the fact that there are serious defects in the moral results of our school training, we have given below certain plans for improving our schools in this respect which have met with much success.

One very good plan is something like the following. From two to four pupils are selected, and it is made the duty of each to look up and copy a short moral sentiment or maxim to be read at the opening of the school in the morning. Another set is selected to present similar maxims the next day, and in this way all the

pupils are selected in turn. When the pupil has read or repeated his sentiment to the school, it is illustrated, or commented upon, by the teacher, till the meaning is not only clear but well impressed. After the reading of the sentiments they are copied on the black-board, where they remain all day, and each pupil in the room copies them into a blank-book. After the first day, the teacher calls upon volunteers to repeat sentiments given on preceding days. Five or six sentiments may be called up in review each day. Some pupils, not much accustomed to general reading, may find it difficult to look up new sentiments; but let it be understood, that if a new one cannot be found, an old one will be accepted. Under judicious management there will be no trouble here. Children do not like to be parrots, repeating the words of their mates; and when review sentiments are presented they will be quite sure to be such as deserve repetition.

This plan leads to several valuable results. It keeps children on the lookout for fine moral sentiments. It often leads to more extensive reading, and quite generally to better reading, and it directs the attention to the moral import of what is read, and thus keeps before the mind high ideals of thought and action. With this plan pursued for a year, the pupils will each have copied into his book five or six hundred excellent maxims.

Most of the shorter and better of these will have been repeated a good many times in the school, and will have become well fixed in the memory of a large number of the pupils. The frequent repetition and illustration of the more striking maxims is of more importance than the number of new ones. Children need the foundation principles of right in a condensed form ready at hand, and as thoroughly inculcated as is the multiplication table. Variety is required to keep up a lively intellectual interest, and the same sentiment found in different authors, couched in different words, will contribute to this variety, and impress the thought more deeply. Occasionally a day, or a week, or a month may be given to anecdotes illustrating the favorite maxims, or to the biographies of men whose lives have illustrated them; or subjects may be chosen and maxims found to embody them; as, for instance, some days may be devoted to patriotism, when pupils will be invited to bring in sentiments that embody this virtue. Truth may be selected for another time, or any other moral attribute. It will be found wise to keep to one subject as long as a lively interest can be maintained. More moral momentum will be acquired in this way than by too frequently changing the current of thought.

Sometimes the sentiments may be restricted to poetry, at other times to prose; sometimes to some particular author,— and what a rich fountain Solomon or Pope would prove,— sometimes to one particular nation, or period in literature. These are only suggestions. A live teacher, determined to lop off vicious excrescences in character, and to train the pupils into a noble manhood and womanhood, will see what is needed, and invent a thousand ways to hold the interest of the children till the sentiment is impressed.

Religious instruction with children had its moral effect, not so much because it was derived from the Bible, as because of the pertinence of the stories and maxims, and the frequent repetition and the serious earnestness the teacher imparted to it. The simple maxim, "Honesty is the best policy," can be heard a good many times with profit, and yet such a worldly-wise maxim will not intrench itself in the imagination of a child as a finer one will, nor will it be heard with quite as much favor.

Ten minutes a day is probably enough to give to explicit moral instruction; children must not be cloyed with it, and an intelligent teacher will have little difficulty in finding something fresh for this short every-day lesson. The work of inculcating good moral principles could probably be accomplished if it was scattered irregularly through the school work and given only as occasions arose; but if there is no especial time set apart for it, the pressure of the lessons is almost sure to crowd it out.

It is far better to make it an essential part of each day's work. The very fact that it is given a definite place invests it with dignity in the child's mind. Just when and how the instruction is given is of little consequence, but it is of imperative importance that there be a determined aim to give a strong and sound moral education in our schools, a determined aim that moral instruction shall have just as recognized a place as any other branch of education, and that teachers shall be held as responsible for their results in this as in arithmetic. This is not impossible, nor even very difficult. The fault is simply that it has not been attempted. Religious instruction has slipped out of our schools, and the public have not called upon teachers to substitute anything in its place. That teachers have not more generally taken up the work themselves seems a singular oversight, resulting probably from the fact that our teachers are accustomed to depend upon text-books, and no text-book of moral instruction has been put into their hands; and just this right one has not been made. A quarter of a century ago, William Ellis, an English political economist, prepared a little digest of moral and civic duties, designed for schools, which developed and explained in a series of questions and answers, in catechism form, our duties in the various relations of life. Though never finding its way into many English schools, the little books, if not just what are needed, have much merit, and are full of hints and suggestions in the right direction. If teachers earnestly begin the work of moral instruction, the needed text-book will soon appear. Many teachers have done more or less of this work, and, in some cases, all the schools of a city have had moral lessons in their programme, but the work has been unorganized and irregular; it has not become permanent,— has not secured its recognized place by the side of spelling, and writing, and arithmetic. In the kindergartens moral instruction has been systematically and effectually begun, and it only needs to be extended to all children and carried on through all grades of school work.

With careful moral instruction permanently established in our schools, our children would have reason to feel that in the public mind a knowledge of right and wrong is of as much consequence as a knowledge of accounts. They do not feel so now. Our greatest educator, Horace Mann, believed if the school, and the home, and the social environment were right, right men and women would be the result; and William T. Harris, only desiring a little element of time added, holds the same view.

Mary E. Beedy.

Christian Union.

It is now very generally believed that there is a tendency towards some organic union of the churches of Christ in the United States. The leading men of the different denominations are, for the most part, declaring themselves in favor of an attempt at some form of union. They clearly perceive that the missionary interests, home and foreign, demand it. The strange thing is that such convictions do not lead to practical results. When one enters the mission field and makes observation of what is going on there, he finds that the rivalry of the societies for the possession of the field, not in the name of Christ, but in the name of sect, is as great as ever it was. For example, there is in the new West a field containing a population of three thousand souls. Nine years ago this became a home missionary field. An effort was first made to establish a Presbyterian church. This having failed, a Congregational church was organized, composed of the Presbyterian and Congregational people in the community, and largely supported by the missionary society of the Congregational church. In the mean time the Methodist, Baptist, Christian, and United Presbyterian societies established successful missions in the same field, and two other societies organized small churches. Recently the Congregational church came to self-support, and seemed in shape to do good work and to make some return by its benevolences to the general work in other fields. But at this point the Presbyterian society came in. It organized its church; called a pastor; made an attempt, which succeeded in part, to build itself up from the membership and congregation of the Congregational church, before that time in a harmonious and prosperous condition; asked for and received from its society a grant of a considerable sum of money; and offered its pastor a salary of one thousand dollars. The result of the movement was to give to a town, already having five very good Christian churches and two weak organizations, an additional church at the expense of the missionary society of the Presbyterian denomination, and also to weaken and discourage the Congregational church, and make its struggle for self-support, for some time to come, a severe one.

In the example cited, it happened that the Presbyterians were the ones to come into the field. In other fields some other denomination might be the one. The writer of this article does not here criticise the Presbyterian denomination, but aims to show that in the mission field the rivalry of sects is the same as formerly. It is not to be expected that a great conviction will work its way into practice in a day, but would it not be a simple and easy matter for the denominations to come to an agreement on union in the mission fields of the country? How foolish to cry about a want of money and ministers for Christ's work when both are wasted in sectarian warfare. Instead of theorizing in papers and magazines about union, let us try some scheme for union regarding the expenditure of our forces in fighting infidelity, worldliness, and vice in the land. The Christian minister who, wherever he works or wherever he makes observations, feels that his work assumes, to a considerable degree, a struggle to keep up the courage and faith of a weak church, in a field which has too many churches, may well question whether he might not more profitably to the Lord and himself engage in some other kind of work than the ministry, for he must labor under great discouragement, his efforts only partly succeed, and his church remain in a measure weak and helpless.

C. A. Wight.

The "Ach!" School of Literature.

One of the most deplorable tendencies in our modern literature is that tone of melancholy resignation which finds its way into much of our prose fiction and criticism, and still more of our poetry. "*Ach!*" exclaims Goethe; and "*Ach!*" repeats Carlyle monotonously after him, with remorseful variations. It seems a pity that when a great writer is dyspeptic, or happens to have seated himself at his desk on a dreary, drizzly day, or has been reviewing his past life with unpleasant results to his self-complacency, he must inflict his blues upon his hundred or thousands of readers, according as he is famous. If Schiller misses the dryads and fauns in his morning stroll, is it kind of him to immortalize his disappointment? How helpless Heine and his brethren would be without their favorite guttural sigh, which not only serves to give the line a vigorous start (Schiller begins five distinct verses thus in the "Götter Griechenlands"), but, quite as expressive in its way as the Frenchman's shrug, embodies a host of dismal reflections, and puts the reader into a proper state of gloom for what is to follow.

It is alarming to observe that the same influence is felt in some of our cheeriest as well as strongest poets on this side the water; while many of the secondary authors are always holding up their little umbrellas, and piteously entreating us to come under them.

"But it does n't rain!"

"*Ach!* but it 's going to."

"And just now the sky seems very bright."

"Then let us keep the sunshine from your weary brows."

Blessed be those who feel it their duty and privilege to bring brightness into the world, rather than clouds. Let us swing our hats for cheery faces and glowing hearts that diffuse gladness and courage wherever they go; that substitute light for gloom, smiles for tears, hope for despair, glad energy of action for stolid resignation. Who can estimate the good accomplished by that masterpiece of Christmas stories, Dickens's "Carol," pervaded as it is by the very spirit of peace on earth and good-will to men?

There are those, to be sure, to whom the minor chords are most grateful. I do not mean by "minor," or by the use of the words "sad," "gloomy," and the like, a mere allusion to some pathetic incident or phase of life; a deep, uncontrollable cry of anguish, such as often breaks from a sensitive heart, and finds echoes in only too many others,— but a morbid tone of despair, over the irretrievable past, the unmitigated unpleasantness of the future, the worthlessness of life in general, and the writer's prospects in particular. Even these desperate sentiments, I was about to say, are eagerly seized upon by a certain honest but unhappy class

in the community, and devoured as the most delectable of morsels.

Akin to these mournful singers and their special admirers are perhaps our good Church friends whose creed is unvarying solemnity in all matters pertaining to their religion. Some one of them, I am certain, invented the strange notion regarding our Master which MacDonald's Alec Forbes treats in characteristic fashion:

"We dinna hear 'at the Saviour himsel' ever sae muckle as smiled," said he.

"Weel, that wad hae been little wonner, wi' what he had upo' 'm. But I 'm nae sure that he dinna, for a' that. Fowk disna aye tell whan a body lauchs. I 'm thinkin' gin ane o' the bairnies that he took upo' 's knee — an' he was ill-pleased wi' them 'at wad hae shewed them awa'— gin ane o' them had hauden up his wee timmer horsie, wi' a broken leg, and had prayed him to work a miracle an' men' the leg, he wadna hae wrocht a miracle maybe, I daursay, but he wad hae smilit, or maybe lauchen a wee, and he wad hae men't the leg some gait or ither, to please the bairnie."

The immediate and practical bearing of this whole tendency towards the lugubrious *Ach* is important. Every editor who has to deal with purely literary contributions will bear witness that nine-tenths of the verses offered by young writers nowadays are of this morbidly melancholy class. To look over the manuscripts in a single morning's mail would lead one to suppose a sort of moral pestilence had jumped the quarantine the night before and descended upon America, depleting its victims' lives of all that was fresh, youthful, hopeful, and pessimizing them, as it were, beyond cure. It is *Ach! Ach! Ach!* over and over again, every translator giving his own version and application. Poems and stories relating to Christmas and Thanksgiving with the true ring of gladness and good cheer in them are rare; while autumn leaves, particularly the "sear" variety, are as popular mediums for the transmission of woes as were the Sibyl's of old.

There is real trouble enough in the world, a pitiful God knows. Let us have words of sympathy, of grave, sweet counsel in our sorrow, you pen-wielders whom we admit to our inmost selves at times when no living presence could be borne. Tell us, if you will, of your own sad experiences, and how you found consolation in them; remind us, and we shall be grateful, that life is a solemn, earnest thing, by no means to be laughed at or lightly tripped through: but do not call upon us to shudder over vaguely impending terrors; do not scrape from your palette the living colors of crimson petal, and golden maple-bough, and the changing sheen of the rainbow, bidding us solace ourselves with mist and ashes of roses. It is the feet of him that bringeth good tidings that are beautiful upon the mountains; he who publisheth peace is the true benefactor of his fellow-men.

Willis Boyd Allen.

BRIC-À-BRAC.

The Postman.

ST. VALENTINE'S DAY.

How fast the postman goes
Laden with joys and woes
Along the street!
Young eyes watch with delight;
Eyes not so young, with quite
As quick pulse-beat.

He carries painted hearts
Transfixed with harmless darts;
Live hearts too hide
Stowed in his swinging bag
And doubtless make it wag
From side to side.

Here, prayer of parted friends
And shaft that malice sends
Elbow for space;
The pang that hurts and stings,
The balm that healing brings,
Run equal race.

A scentless rose, a verse
That hardly could be worse,
A soul's despair,
A tear blot, and a jest,
A happy love confessed,
A laugh, a prayer!

Is he a man or elf?
Pandora's box itself
Could scarce send wide
Such motley crowd and fleet,
Save that gifts fair and sweet
Its ills divide!

Bird-like, he mounts and swoops
Swift up and down the stoops;
He 's drawing near.
Though I may moralize,
I, too, have waiting eyes —
Oh, please stop *here!*

Mary Ainge DeVere.

Love's Dilemma.

WERE ever maidens more unlike?
How shall a lover choose?
One seems to me amusing;
The other seems a muse.

Kate madly laughs at all the men,
May only smiles at one;
Kate fairly dotes on tennis,
May worships Tennyson.

If May could only ride like Kate
If Kate could sigh like May,
Why then I would not hesitate
To wed — but which one pray?

N. P. Babcock.

Stevenson's "Underwoods."

"How do I like 'Underwoods'?"
As I like all piquant foods,—
Drupe and kernel, flavors, scents,
Thorny thick and brake dispense;
Scarlet haws and cherries black;
Ground-nuts that of earth do smack;
Sweet-birch browsings, sassafras;
Strawberries in the sleekest grass;
Sippings from the clover's horn,
On a luscious dew-drowned morn;
May-apples with jellied core,
And the oaks' wild honey store.

How do I like "Underwoods?"
As I like the flickering moods
Sun and wind at evening rouse
Elfishly among the boughs;
Greening showers in fitful drops,
Thrushes singing in the stops;
Stars in daytime, spirit-keen,
Up a glade's sky-window seen;
Lonesome forest sounds unkenned,
That would Grief or Fancy friend,
Straying through the solitudes,—
Thus do I like "Underwoods!"

Edith M. Thomas.

In Bondage.

YOU weep, my Lill, above the page
That tells the "ancient wrong"
Of captives' tears and tyrants' rage,
And weak oppressed by strong:

Your Poet knows a sterner thrall,
A harder yoke he sings—
The bondage of the Very Small,
The Tyranny of Things.

And truly ours is hardest fate,
Our lot more hopeless far,
Who scarcely feel our lost estate,
Or know what slaves we are.

Slaves to Life's thousand small demands,
Its toil, its fret, its care;
Slaves to our homes, our goods, our lands,
Slaves to the clothes we wear!

Slaves to the cherished things we fold
In careful closets shut,
The plate we store, the books we hold
Too choice to read — or cut!

Slaves — ah, to what a host of things!
Poor Gullivers would quake
Beneath a web of threads and strings
We know not how to break!

Give place, O "Tamerlane the Great,"
Sesostris, Ptolemy!
I sing the bond to whose hard weight
Your chains were liberty:

The yoke more strict than despot's thrall,
More stern than rule of kings —
The hardest tyranny of all,
The tyranny of *Things!*

Robertson Trowbridge.

My Songs.

MY songs are like the thistledown
Adrift upon the errant air;
I, like the plant, with face upturned,
May only watch them floating there.

Away — away on fleecy wings
They seem to sail across the blue,
A fleet of wayward, fairy things
That never human trammels knew.

O thistledown! O soaring song!
Ye bear away of us a part —
The life-germ of the mother weed,
The life-blood of the singer's heart.

Ye both to earth must come again,
By some down-drifting current driven —
The thistledown shall lift at last
A thistleblow to bending heaven.

And, song of mine, speed on — speed on,
And to some heart that strives with care
A message take of human love,
And bloom to perfect blossom there.

Charles Washington Coleman, Jr.

Words, Words, Words.

I LOVED a maid (oh, she was fair of face!)
But common words above
Was my true love —
So I was silent for a little space —
Yet, 'gainst the day I meant that she should hear me,
I sought for stately words that might endear me.

My ardent lips, I vowed, should not repeat
What countless lovers swear:—
"Oh, thou art fair!"
I scorned to merely say, "I love thee, Sweet!"
So spent long days with rhetoric and tutor,
In framing sentences I dreamed might suit her.

Oh, how I pondered what she best might hear!
Words should like jewels shine
To make her mine —
No commonplaces must offend her ear:
But while for proper words my passion tarried,
I learned the maiden some one else had married!

Margaret Deland.

To a Fir-Balm Cushion.

DELICIOUS fragrance! Yet my memory thrills
Less through your subtle influence at the thought
Of sunny glades or woods or piney hills,
Where such a gracious miracle was wrought,
Than at remembrance of a city room,
Where some one I love better than a tree
Sat stitching patiently your broidered bloom,
And thinking too, not of the woods, but me.

A. W. R.

Compensation.

"WHO hesitates is lost"
Is an adage old.
Fearful lovers, to their cost,
Learn they must be bold.
But, since nothing new can be
Underneath the sun,
'T is as old and true that she
Who hesitates is — *won.*
